CLIFTON, a village in Breadalbane, near Tyn-drum. There is a lead mine here, on the top of a hill, which was wrought several years ago but afterwards abandoned. The workings have, however, been subsequently renewed by direction of the Marquess of Breadalbane, and, in 1839, above 100 men

were engaged in the works here, under the guidance of a few German miners.

CLIFTON, a decayed village, formerly a chapelry, in the parish of Morebattle in Roxburghshire; 10 miles south-east of Kelso. Clifton hill is a beautiful eminence on the east side of the Beaumont.

CLISHEIM, a mountain in the northern division of the isle of Harris, the loftiest in the Outer Hebrides. Dr. Macculloch calls it Clisseval, and estimates its height at 2,700 feet, which is certainly too low, if his estimate of the altitude of Langa, in its neighbourhood, at 2,407 feet, be correct; for Clisheim is, apparently at least, 800 feet higher.

CLOCH, or **CLOUGH POINT**, a point of land on the south shore of the frith of Clyde, in the county of Renfrew, about 5 miles below the port of Greenock; in N. lat. $55^{\circ} 58'$, and W. long. $4^{\circ} 52'$. There is a light-house here. The light exhibited is white and stationary. It is elevated 76 feet above high water, and seen at the distance of 12 miles in clear weather. It was erected in 1797.

CLOSEBURN,* a parish in Nithsdale, Dumfriesshire; 10 miles in extreme length, and nearly 8 in breadth; bounded on the north by the parishes of Morton and Crawford in Lanarkshire; on the east by Kirkpatrick-juxta and Kirkmichael; on the south by Kirkmahoe; and on the west by Keir and Morton. It contains $20,745\frac{1}{2}$ Scots acres according to Webster's gazetteer; but, according to the Old Statistical Account, 28,000 acres, 1,900 of which were under cultivation in 1793; and according to the New Statistical Account 23,006 acres in pasture; 5,683 in tillage; and 1,500 under plantation. Assessed property, in 1815, £9,220. The rental of the parish has nearly quadrupled since the end of last century. The river Nith forms the western boundary, along which the soil is a fine rich loam; to the eastward the ground rises a little, and the soil becomes light, dry, and sandy, until it merges into extensive moors, unfit for tillage but affording good pasture for sheep. The principal hills are those of Queensberry, Carrick, and Auchinleck. The first of these rises 2,140 feet above the level of the sea. See **QUEENSBERRY**. —Besides the Nith, the Crichup, a small stream noted for its romantic beauties, runs through this parish. The Crichup takes its rise in a moss near the northern extremity of the parish. Not far from its source, it forms a very beautiful cascade, called 'the Gray Mare's tail,' by falling over a precipice of about 80 or 90 feet in height, and almost perpendicular. About half-a-mile below this, the water has, in the course of ages, hollowed out to itself a strait passage through a mass of red freestone, forming a peculiarly romantic linn. This linn, from top to bottom, is upwards of 100 feet; and though 20 deep, it is yet so strait at the top, that one might easily leap across it, were it not for the tremendous prospect below, and the noise of the water running its dark course, and by its deep murmurings affrighting the imagination. "Inaccessible in a great measure to real beings, this linn was considered as the habitation of imaginary ones; and at the entrance into it, there was a curious cell or cave, called the Elf's kirk, where, according to the superstition of the times, the imaginary inhabitants of the linn were supposed to hold their meetings. This cave proving a good freestone-quarry, has lately been demolished, for the purpose of building houses, and from being the abode of elves, has been converted into habitations for men. In the times of

* "The original name of the parish was Kilosburn, or, as it is spelled in a very old deed, Kelosburn, from *Cella Osburni*. It was at first but of small extent, and the church seems to have been intended chiefly for the accommodation of the family of Closeburn and its dependents."—*Old Statistical Account*.

persecution, the religious flying from their persecutors, found an excellent hiding-place in Crichup linn; and there is a seat, in form of a chair, cut out by nature in the rock, which having been the retreat of a shoemaker in those times, has ever since borne the name of 'the Sutor's seat.' Nothing can be more striking than the appearance of this linn from its bottom. The darkness of the place, upon which the sun never shines,—the ragged rocks, rising over one's head, and seeming to meet at the top, with here and there a blasted tree, bursting from the crevices,—the rumbling of the water falling from rock to rock, and forming deep pools,—together with some degree of danger to the spectator, whilst he surveys the striking objects that present themselves to his view,—all naturally tend to work upon the imagination. Hence many fabulous stories are told, and perhaps were once believed, concerning this curious linn."

[Old Statistical Account, vol. xiii. p. 245.] Sir Walter Scott has taken this place for the prototype of the haunts of Balfour of Burley while under hiding.—The limeworks of Closeburn, begun by Sir James Kilpatrick, in 1772, and prosecuted with vigour by the present proprietors, are extensive, and have proved most beneficial to the district, although the nearest coal-pits are at Sanquhar, 14 miles distant. The castle of Closeburn, formerly belonging to the family of Kirkpatrick, but which passed from them in 1783, when the estate was purchased by Mr. Menteath, is an ancient building, surrounded by a fosse which formerly communicated with a small lake now drained. This very ancient fortalice is a square tower about 50 feet high, consisting of a ground-floor, and three series of vaulted apartments. It is still inhabited. Grose has given a drawing of it. Near this castle is a mineral well which has been of service in scrofulous cases. It is impregnated with sulphur. Upon the farm of Kirkpatrick were the remains of an old chapel and burying-ground. There is also near the village of Closeburn a chalybeate spring of considerable strength. The village of Closeburn is $2\frac{1}{2}$ miles south-east of Thornhill. Closeburn hall is a fine modern building in the Grecian style. Population, in 1801, 1,679; in 1831, 1,680. Houses, in 1831, 392.—This parish, with which that of Dalgarno was incorporated in 1697, is in the presbytery of Penpont, and synod of Dumfries. Patron, Sir C. Menteath, Baronet. Stipend £234 19s. 3d.; glebe £19. There are 5 schools, though no properly parochial school, in this parish. The principal school of the parish is that which, in honour of its founder, is called the school of Wallacehall. John Wallace, merchant in Glasgow, a native of Closeburn, in the year 1723, mortified £1,600 for the purpose of erecting this school. The presbytery of Penpont were appointed trustees for the management of the fund, judging of the qualifications of the teachers, and watching over the interests of the school; but in the management the laird of Closeburn was to be consulted. Five patrons were appointed to nominate the rector of the school, viz. John Wallace of Elderslie, Thomas Wallace of Cairn-hill, and Michael Wallace, merchant in Glasgow, three brothers, the minister of Closeburn, and the town-clerk of Glasgow, for the time being. In the election of a rector, it is recommended to the patrons to give a preference to one of the name of Wallace, if equally qualified. Of the money mortified by Mr. Wallace, £200 was laid out in building a school-house and dwelling-house for the rector, and in purchasing 5 acres of ground contiguous to the school, for the rector's use; £1,145 was laid out in purchasing lands at some distance; and the remainder was applied towards enclosing the land and enlarging the rector's house. The branches of education which

the deed of mortification requires to be taught at this school are, English, writing, arithmetic, book-keeping, Latin and Greek. But besides these, French, geography, and mathematics are also taught. The rector is likewise obliged to pay £5 a-year to a person named by the minister, to teach English in a remote part of the parish. These schools are free to the children of the parish.—This parish is celebrated in the annals of curling.

CLOVA, an ancient parish, now annexed to the parish of Cortachy in Forfarshire. The church was rebuilt in 1730, and is about 9 miles distant from the church of Cortachy. The inhabited part of Clova is about 4 miles in length, and its greatest breadth is little more than a mile. It is surrounded on three sides by the Bincinnan branch of the Grampian mountains, which are here of great height, and exhibit a scene of much beauty and grandeur, especially when contrasted with the delightful valley at their base. Loch Brandy is about $1\frac{1}{2}$ mile in circumference, and abounds with pike and trout. On a little eminence near the church are the remains of an ancient castle, formerly the residence of a family of the name of Ogilvy. See CORTACHY.

CLUANY (LOCH), a featureless sheet of water in Inverness-shire, on the road from Invermoriston to Kyle-Rhee, about 25 miles from the former place, and 23 from the latter. There is a small inn here.

CLUDEN, a small village in the parish of Holywood, Dumfries-shire, 3 miles from Dumfries. There are large flour-mills here.

CLUDEN (THE), or CLOUDEN, a river in Dumfries-shire, formed by the confluence of the Cairn and Glenesland, which, after a south-east course of nearly 14 miles, falls into the Nith, a little below the old college of LINCLUDEN: which see. It abounds with trout and salmon, especially in the upper parts of the stream; herlings, and a few pike, are also found in it.

CLUNIE,* a parish in the district of Stormont, Perthshire; bounded on the north by Kirkmichael; on the east by Blairgowrie and Kinloch; on the south-east by Lethendy and Caputh; and on the west and north-west by Caputh and Dunkeld. It extends in length about 9 miles from the summit of a low range of the Grampians, towards the valley of Strathmore; its breadth nowhere exceeds 4 miles. Its superficial area is estimated at 8,000 acres, of which 2,555 were under cultivation in 1791. Assessed property, in 1815, £2,414. The surface is mountainous; the lower parts being about 150, while the highest are not less than 1,800 feet above the level of the sea.† The soil is various; in the

* *Clunie*, which has time immemorial been the name of this parish, is the modern orthography of the old Celtic word *Cluaine*, which signifies 'a Green pasture between Woods.' Such a level green pasture, called the Meadow, lies a little to the north of the church; on the north side of this plain there is still natural wood growing, and on the south side we find vestiges of old trees in a small moss which makes a part of the glebe.—*Old Statistical Account*.

† The following table of the weather, as registered at Clunie manse from 1825 to 1832, was published, with some other Meteorological tables, in the 'Edinburgh New Philosophical Journal,' vol. xiv. p. 309:—

Years.	Fair Days.	Foul Days.	Sunshine Days.
1825	219	146	206
1826	222	143	226
1827	172	193	189
1828	192	174	166
1829	196	169	172
1830	166	199	135
1831	153	212	129
1832	161	205	144
Yearly average }	185 $\frac{1}{2}$	180 $\frac{1}{2}$	170 $\frac{1}{2}$

N. B.—The Fair days include the Sunshine days; and by the Foul days is meant, that, in each, more or less rain, hail, or snow fell.

valleys, however, it is good, and yields tolerable crops. Benachally is the highest mountain. See BENACHALLY. The Craig of Clunie is a trap-rock, about 600 feet in altitude.—There are no rivers in this parish, but some considerable burns or brooks, as the Lornly, the Droothy, the Buckny, and the Lunan. The Lornly flows from the loch of Benachally; runs about 6 miles east-south-east through the hilly parts of the parishes of Clunie, Kinloch, and Blairgowrie; and falls into the river Erich above the Caith, a curious fall of the river, a little above the village of Blairgowrie.—The burn of Droothy rises from the moss of Benachally, separates the barony of Laighwood from the forest of Clunie and the barony of Forneth, and, after a rapid course of about 3 miles to the south-east, empties itself into the Lunan.—The Buckny takes its rise from Loch-na-chat, and falling to the south-east between the mountains of Benachally and Deuchara, forms the Doo loch; thence, increased by the springs of the Doo loch, it thunders down a deep, narrow, rocky den, covered with wild wood, called the Den of Richip, and separating the parishes of Caputh and Clunie, enters the latter in the park of Laighwood, where it unites with the Lunan.—The Lunan is by far the most considerable stream in the parish. Collected from different sources in the Grampians, a little to the north of Dunkeld, it proceeds eastward, and forms the lochs of Craighash, of Lows, of Butterstone, of Clunie, and of Drumelly. From this last, it directs its course to the south-east, and passing by the Roman encampment near Meiklour, it joins the river Isla, at a point about 2 miles north-east of the junction of the Isla and the Tay. The course of the Lunan is about 12 miles, and somewhat resembles a bended bow. The trouts of the Lunan are excellent; in point of size, form, and flavour, they are much superior to those of the hill-brooks described above: this is doubtless owing to its waters being deeper, warmer, and better sheltered; and to its passing over rich, clayey, and marly bottoms. It is difficult, however, to angle upon the Lunan in many places, particularly above the loch of Clunie, on account of the natural wood overhanging the stream.* The district is well-adapted to the researches of the botanist, as in it many rare plants are to be found. The natural-forests are extensive. There are two mineral springs,—one at Milton of Clunie, and the other a little to the east of Bogmile,—valued for their antiscorbutic qualities. The minerals already known are quartz, whinstone, granite, freestone, and barytes; limestone is found in one place, but the want of fuel prevents its being quarried. There is a vein of fine blue slate interspersed with large quantities of copper pyrites; and a deep peat-moss on the very summit of Benachally.—There are vestiges of 5 religious houses, and of several military stations and fortified places, and a number of cairns and tumuli, which are said to mark the places where the Romans under Agricola and the Caledonians engaged, as described by Tacitus.—Forneth, on the north-west side of the loch of Clunie, and Gourdie, about $1\frac{1}{2}$ mile south-east of Clunie castle, are elegant seats. The rich and well-cultivated estate of Delvin, with its magnificent mansion, adds much to the beauty of this parish. Population, in 1801, 913; in 1831, 944.

* At some of the falls of the Lunan are placed arks, or perforated chests, for the purpose of catching eels. These fish run down from loch to loch in vast numbers,—especially with a westerly wind, in the dark nights of October,—and are then taken by hundreds in these arks. The eels are best in that season of the year, and their skins are then valuable to the farmer for making whangs or bindings to his flails. Some of the common people here, on spraining an ankle or a wrist, apply to the wound the skin of an eel, to which they ascribe a peculiar virtue.—*Old Statistical Account.*

Houses 184.—This parish, formerly a vicarage, and to which certain portions of Caputh parish were annexed, *quoad sacra*, in 1728, is in the presbytery of Dunkeld, and synod of Perth and Stirling. Patrons, the Duke of Athole and the Earl of Airlie. Stipend £173 0s. 2d.; glebe £6.—Schoolmaster's salary £34 12s. 4d., with about £12 fees.

CLUNIE (LOCH), a lake in the above parish, about 4 miles south-east of the small loch on the northern side of Benachally, and 700 feet lower in elevation. It is $2\frac{1}{2}$ miles in circumference, and 84 feet in depth. About 200 yards from its western shore is a beautiful little island on which is an old castle, formerly the residence of the Earls of Airlie, built by George Brown, Bishop of Dunkeld, in the 16th century. The walls are 9 feet thick; and around the verge of this island are sprinkled a few old ash-trees and planes, which have withstood the storms of some hundred years, yet still continue to vegetate. These trees have something venerably grotesque in their appearance. The trunk of some of the planes separates and unites again; as do also some of the larger branches. The trees in some places diverge considerably from the land, leaning across the water, over which their aged arms embrace; and the roots of the planes are incorporated with those of the ashes, as if they were determined to stand and fall together. In the sultry heats of summer these trees throw a cool refreshing umbrage over the island. The island itself is a plain carpet of green, interspersed with a few flowering shrubs, where the fairies, in the times of superstition, were thought to hold their moonlight assemblies. In the loch there is plenty of pike, perch, trout, and eel. The eels caught here are of a considerable size. In bright sunny days, when they come out near the shore, and are distinctly seen at the bottom of the shallow water, they are sometimes struck with the eel-spear. The trouts grow from 4 lbs. to 12 lbs. weight, but are seldom taken except on the set line, or in the net. The perches are numerous, but generally small; they are caught in the usual manner with the rod. They take very well here in June, July, and August. The pike-fishing begins about the end of March. Pikes have been killed in this loch of from 12 to 24, or even 30 lbs. weight; but the ordinary size is from 2 lbs. to 6 lbs. Clunie castle contends with that of Elliock, in Dumfriesshire, for the honour of having given birth to the celebrated James Crichton, better known by the epithet of 'The Admirable,' who died in 1581. The island itself is mostly artificial, if not altogether so. It must have been formed with great labour, and in some very distant period, as there is neither record nor tradition with respect to its formation. In papers dated 360 years ago, it is termed 'The Island of the loch of Clunie.' The people in the neighbourhood affirm that it was once joined on the south-east side to the mainland; but this is not at all probable, as the land there lies at a very considerable distance, with deep water intervening. Its surface is a circular plain, of about half-an-acre, raised a few feet above the ordinary level of the loch, and surrounded with a strong barrier of stones thrown carelessly together, and sloping into deep water all around, like the frustum of a cone. That this island has been formed principally by human art seems demonstrable from this, that the ground of which it is composed is evidently factitious; and in digging to the depth of 7 feet, near the centre of the island, nothing like a natural stratum of earth appeared. The foundation of the castle-wall is several feet below the surface of the water, and in all likelihood rests on piles of oak. On the western shore of the loch stands the old castle-hill,—a

large green mound, partly natural and partly artificial, on the top of which are the ruins of a very old building. "Some aged persons still alive remember to have seen a small aperture, now invisible, at the edge of one of the fragments of the ruins, where, if a stone was thrown in, it was heard for some time, as if rolling down a stair-case. From this it seems probable, that were a section of the hill to be made, some curious discoveries might be the consequence. The castle-hill is of an elliptical form, extending in length from north to south about 190 yards at its base, and rising about 50 feet above the level of the loch. A green terrace surrounds the hill; and on the north side one terrace rises above another. The area of the summit approaches to an elliptical plain, a little inclined towards the east; of this plain, the longitudinal diameter, from north to south, is about 90 yards, and the transverse about 40. The old castle has stood on the south end of the summit, commanding a distinct view of the neighbourhood, so as not to have been easily taken by surprise. Some vestiges of it still remain; but neither its form nor dimensions can be traced with any degree of precision. The principal fortifications seem to have run along the land side, and the loch and the declivity of the hill appear to have defended it on the east, where it is probable there has been an easy communication with the island by means of boats; so that, in case of the castle being taken, the island might afford a refuge to the besieged. Concerning this piece of antiquity no written record can be found. According to the tradition of the neighbourhood, it was a summer-palace or hunting-seat of Kenneth Macalpin, who conquered the Picts, and united the Scottish and Pictish kingdoms; and if we suppose this tradition to be well-founded, it is not unlikely that it was he who first formed the island in the loch, as a place of retreat in time of danger." [Old Statistical Account, vol. ix. pp. 263-266.]

CLUNIE (THE), or **CLUANADH**, a stream in the parish of Crathie, Aberdeenshire, which, rising in several head-streams in the mountains which separate Braemar from Perthshire, flows northwards through Glen Clunie, and falls into the Dee at Castleton of Braemar. About 4 miles above its confluence with the Dee, it receives its chief tributary, Calater or Calader burn, flowing from Loch Calater.

CLUNY, a parish in the district of Kincardine O'Neil, Aberdeenshire; bounded on the north by Monymusk and Kennay parishes; on the east by Skene; on the south by Echt, Midmar, and Kincardine O'Neil; and on the west by Kincardine O'Neil and Tough. It is of very irregular outline, and contains about 7,000 acres, of which four-fifths are under cultivation, and is intersected by the burn of Torr, flowing northwards to the Don. Assessed property, in 1815, £1,741. The principal residences in this parish are Cluny castle, a large edifice founded in the 15th century by Sir Alexander Gordon, and Castle-Fraser, an edifice of the same date. Population, in 1801, 821; in 1831, 959. Houses 181. —This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeen. Patrons, the Crown, and Gordon of Cluny, and Fraser of Castle-Fraser, alternately. Stipend £173 16s. 7d.; glebe £20. Schoolmaster's salary £25 13s. 4d., with £14 fees.

CLUNY, a hamlet in the parish of Laggan, and shire of Inverness, 8½ miles south of Pittmain. Here is the seat of the chief of the Macphersons.

CIYDE (THE), a noble river traversing a large part of the western lowlands of Scotland, the third Scottish stream in point of magnitude, the first in

commercial importance, and not the least in natural beauty. Popular opinion represents it as rising in the same hill whence flow the Tweed and the Anan, and indulges the fancy of the three rivers diverging away in nearly regular radii over the face of the lowlands. The Clyde, however—like most large streams whose first waters are gathered amidst the inequalities of a rolling mountain region—may truly be said to have numerous sources. A range of mountains, consisting of the Lowthers, the Leadhills, Queensberry hill, and the heights which connect the last with Hart-Fell, bends elliptically round the southern part of Lanarkshire, and divides it from Dumfries-shire. At short intervals, round all the southern part of this range, arise rills and streamlets which flow onward to various meeting-points to form the Clyde, and almost each of which might advance pretensions to be the parent-river. The original Clyde, of popular opinion and poetic allusion, rises at an elevation of 1,400 feet above sea-level, between four hills, nearly 2 miles south-east of Rodger-Law, and about 4 or 5 miles east of the village of Elvanfoot. But this streamlet is both tiny in bulk, and of brief length, compared to the Daer or Dear, with which, after a course of only 4 miles westward, it mingles its waters,—or to the Powtrail which, 1½ mile to the south, had previously flowed into the Daer. Before the confluence of the reputed Clyde and the Daer, the latter flows over a distance of 14 or 15 miles, taking its rise on the borders of the parish of Closeburn in Dumfries-shire, and flowing generally in a direction due north; while the Powtrail, previous to its confluence with the Daer, traverses a distance of about 9 miles, taking its rise on the border of the parish of Durrisdeer, and flowing toward the east of north. The mountain-district which pours forth these streams and their numerous little tributaries, is lofty, raising various of its summits nearly or quite 3,000 feet above the level of the sea, and nowhere, till the accumulated waters have become a considerable river, shaking off a dress of highland wildness, or wearing a smile of pastoral beauty. All the early waters of the Clyde, or the incipient rivulets which roll themselves together to form it into a river, are, in consequence, simple mountain-streams,—noisy, rapid, and marked occasionally with a dash of the romantic. See article **CRAWFORD**.

At Elvanfoot the Clyde, having first flowed due west, and afterwards bent round on its confluence with the Daer, and flowed nearly northward, receives the waters of the Elvan,—a stream 8 or 9 miles in length, which rises on the Green-Lowther mountain on the western verge of the parish of Crawford, and flows, during about half its course, in a northerly direction, and afterwards sweeps round toward east, preserving throughout the wild and noisy character of its kindred streams. After passing Elvanfoot, the Clyde makes a semi-circular sweep eastward, rolling past the base of several picturesque hills, washing the walls of the sequestered village and ancient little church of Crawford, receiving from the east the tribute of Camps water, and resuming, at the distance of about 4½ miles, its general northerly direction. It now passes a somewhat romantically situated Roman camp, and, nearly a mile onward, is joined from the west by Glengonnar water, which here,—as the Clyde itself afterwards does for about 1½ mile,—separates the parishes of Crawford and Crawfordjohn. For a brief way after its reception of the Glengonnar, the Clyde flows between somewhat sylvan banks,—a scene so different from the rugged and savage character of the mountain-region around, as to refresh the eye, and to invite the tourist to pause; but it soon pours down among

the hollows of heathy uplands, only a degree less dreary than the mountain-land of its origin. Over a distance of $1\frac{1}{2}$ mile, it now separates the parishes of Crawfordjohn and Lamington, and then bends away in a direction to the east of north, and pursues it during a course of 11 miles. While following this course, it divides the parishes of Wiston and Robertson, and of Symington on the north, from those of Lamington and Culter on the south; and receives from the west, the waters of Robertson burn and Garf water, and from the east, those of Wandel burn, Heartside burn, Lamington burn, and Culter water. At its confluence with Robertson burn, it passes the village of Robertson; and from this point onward till it approaches its magnificent falls, it shapes its course by the configuration of the far-viewing range of the Tinto mountains, and receives from the west and south the rills and streams which they pour down upon the plains. Before it leaves Culter parish, it revels for some way through fine lands and pleasing pastoral scenes, and begins to assume its characteristic garb of beautiful and picturesque attraction. At a point about 2 miles west from Biggar, it sweeps somewhat suddenly round from its north-east course, and over a distance of about $4\frac{1}{2}$ miles, flows toward the west, and then, during $5\frac{1}{2}$ miles more—where it forms a confluence with Medwin water—flows toward the west of north. During the early part of this course, it is sweeping round the eastern spurs of the Tinto mountains, and is slow and almost stagnant in its progress, [see article BIGGAR] passing through a morass where, according to a tradition firmly believed by many of the peasantry, Sir Michael Scott, in order to find employment for three familiar spirits who constantly harassed him, except when he enslaved them with labour, endeavoured to change its course, and draw it into the Tweed. From the point of its leaving Culter parish, till it mixes with the Medwin, it touches an angle of Biggar parish on the east; divides the parishes of Covington and Pettinain on the west from that of Libberton on the east; and receives various tiny tributaries, the chief of which is Glade burn. Here its basin, though generally upland and heathy, presents some pleasing pictures to the eye, and embosoms some luxuriant haughs. Coming sluggishly into collision with the Medwin, it is pushed suddenly round from the direction which it had for some time been pursuing, and, over a distance of about 9 miles, flows, with the exception of some brief windings, in a south-westerly direction,—separating the parishes of Pettinain and Carmichael on the south from those of Carstairs and Lanark on the north, and pouring its liquid opulence, or its desolating floods, for the most part, through fine and valuable holm-lands,—at one time impoverishing the farmer, by bursting its banks and washing away soil and produce, and at another enriching him by making luxuriant deposits of slimy mud. In this section of its progress, particularly where it bounds the parish of Carstairs, it has left marked traces of having frequently, at periods more or less remote, changed its channel. One of its devious beds, of somewhat ancient date, has the appearance of an annular lake, or watery garland, circling the south on the property of Westbank; and is, in some places, so matted over with reeds and marshy grass as to have become a sward, capable—when the mower is shod with flat-boards after the fashion of the snow-shoes of Greenland—of being shaven with the scythe; while, in other places, it continues deep and pellucid, forming pools for the pike, and offering a home to the wild-duck. Leaving Carstairs, and touching the parish of Lanark, it first flows sluggishly through a tract of holm-land; then sweeps, with accelerated motion, over an uneven

and rocky channel, and, after again subsiding into quietness, advances, amid scenery of growing interest, to its point of junction with Douglas water. From Robertson to this point, the Clyde traverses a distance of at least 20 miles; yet it moves so circuitously that these two points are geographically asunder not more than $7\frac{1}{2}$ miles. Douglas water comes down upon it from the south, nearly doubles its bulk, gives increased rapidity to its motion, and suddenly turns it from a southerly direction which it had for about $1\frac{1}{2}$ mile been assuming, away round to the north-west; and this new direction the Clyde, with partial and unimportant exceptions, maintains till, having expanded into an estuary, it debouches, about $1\frac{1}{2}$ mile past Greenock, suddenly to the south. See article DOUGLAS.

Over a distance of $7\frac{1}{2}$ miles after receiving the Douglas, it passes along the margin of the parish of Lanark, separating it from the parish of Lesmahagow, and presenting, in its celebrated falls and the scenery of its banks and basin, views of beauty and picturesqueness and grandeur which arouse the sensibilities of even the laggard in sentiment. "The Clyde," says Mr. Robert Chambers, in his 'Picture of Scotland,' [Edn. 1840, pp. 194, 195,] "is here a large and beautiful river. Before arriving at the uppermost fall, about two miles and a half from Lanark, it flows for several miles through a level tract of country with slow and scarcely perceptible motion. It then enters by the Bonnington fall a deep chasm, from which it only escapes about two miles below, after having been forced over two other cascades. Four or five miles of an ordinary channel bring it to the last fall, that of Stonebyres, below which it enters that series of fine alluvial plains formerly alluded to, which terminate at Bothwell bridge. The way to the upper falls from Lanark is through the beautiful grounds of Bonnington, which, by the liberality of the proprietor, are open to the public at all times except on Sunday. At the uppermost fall, called the Bonnington linn or fall, the river pours, in a divided stream, over a ledge of rocks 30 feet in height. It is considered the least beautiful of the falls, on account of its smaller height, and the bareness of the southern bank above it. Still, from the point at which it first bursts upon the view, it is very imposing; and the present proprietor, Lady Mary Ross, by means of a bridge thrown across the north branch of the stream immediately above the precipice, and points of observation happily selected, has secured some charming *coups d'œil* to the admirers of nature. The channel of the river, for about half a mile below this fall, is formed of a range of perpendicular and equidistant rocks on either side, which are from 70 to 100 feet high, and which Mr. Pennant has well characterised as stupendous natural masonry.—At Corehouse, the river encounters another fall, 84 feet in height, denominated Corra linn, generally allowed to be the finest of the whole. Until a few years ago, this splendid cascade could only be seen from above. But fine although it must, ever be, whencesoever contemplated, all former views of it were greatly inferior to one which Lady Mary Ross has opened up. A flight of steps has been formed along the face of the opposite rock. By this the traveller descends into a deep and capacious amphitheatre, where he finds himself exactly in front and on a level with the bottom of the fall. The foaming waters, as they are projected in a double leap over the precipice, the black and weltering pool below, the magnificent range of dark perpendicular rocks 120 feet in height, which sweeps round him on the left, the romantic banks on the opposite side, the river calmly pursuing its onward course, and the rich garniture of wood with which the whole is dressed,

combine to form a spectacle with which the most celebrated cataracts in Switzerland and Sweden will scarcely stand a comparison. On a rock above Corra linn, on the south side of the river, is perched the ruined castle of Corehouse, formerly the property of an old race named Bannatyne. That any one should have thought it necessary, for the sake of security, to live in such a situation, shaken by the dash of the cascade, and damped by its spray, presents a striking idea of the circumstances of our forefathers. In a later age, the old castle seems to have been deserted for a comparatively large house, situated at a little distance from the edge of the precipice, which also has been of late years allowed to go into ruin. The present mansion-house is a very handsome one, in the old English style, the property of Mr. Cranstoun of Corehouse, [lately] a judge of the Court of Session. —About $\frac{1}{2}$ of a mile farther down, the river encounters a third but smaller cascade, called Dundaf linn, where the banks assume a less bold character. After a quiet and gentle run of 3 or 4 miles, the river pours over a precipice 80 feet in height, constituting the Stonebyres fall, so named from the adjacent estate of Stonebyres belonging to the ancient family of Vere. This fall bears a general resemblance to that of Corra, but is generally allowed to be of a less striking character. According to the minister of Lanark, in the New Statistical Account of Lanark, 'The breadth and depth of the river vary at different places. At the broadest, a stone may be thrown across; and there is a spot between the Bonnington and Corra falls, where the whole volume of its waters is so confined between two rocks that an adventurous leaper has been known to clear it at a bound. There are fords which children can wade across, and pools which have never been fathomed.' We must here allow ourselves the pleasure of quoting Dr. Bowring's lines on the Falls of Clyde:—

O! I have seen the Falls of Clyde,
And never can forget them;
For Memory, in her hours of pride,
'Midst gems of thought will set them,
With every living thing allied:—
I will not now regret them!

And I have stood by Bonnington,
And watch'd the sparkling current
Come, like a smiling wood-nymph, on—
And then a mighty torrent!
With power to rend the cliffs anon;
Had they not been before rent.

And I have been in Balfour's cave;
But why hath chisel wrought it,
Since he, the brutal—but the brave,
In sore constraining sought it?
Dark days! when savage fought with slave,—
Heroically fought it.

And I have hung o'er Burley's leap,
And watched the streams all blending,
As down that chasm so dark and steep,
The torrents were descending;
How awful is that chaos deep—
Those rocks so high impending!

And I have worshipp'd Corra Linn,
Clyde's most majestic daughter;
And those eternal rainbows seen,
That arch the foaming water;
And I have own'd that lovely Queen
And cheerful fealty brought her

And I have wander'd in the glen,
Where Stonebyres rolls so proudly;
And watch'd, and mused, and watch'd again,
Where cliff, and chasm, and cloud lie,
Listening, while Nature's denizen
Talks to the woods so loudly.

Yes! I have seen the Falls of Clyde,
And never can forget them;
For Memory, in her hours of pride,
'Midst gems of thought will set them,
With life's most lovely scenes allied:—
I will not now regret them!

Wordsworth too,—a mightier name in English poesy,—has had his muse fired by the beauties of

this portion of the Clyde; and it would almost be doing injustice to the reader to withhold his verses:—

(Written in sight of Wallace's Cave, at Corra Linn.)

Lord of the Vale! astounding flood!
The dullest leaf, in this thick wood,
Quakes—conscious of thy power;
The caves reply with hollow moan;
And vibrates, to its central stone,
Yon time-cemented tower!

And yet how fair the rural scene!
For thou, O Clyde, hast ever been
Beneficent as strong;
Pleased in refreshing dews to steep
The little trembling flowers that peep
Thy shelving rocks among.

Hence all who love their country, love
To look on thee—delight to rove
Where they thy voice can hear;
And, to the patriot warrior's shade,
Lord of the Vale! to heroes laid
In dust, that voice is dear!

Along thy banks, at dead of night,
Sweeps visibly the Wallace wight;
Or stands, in warlike vest,
Aloft, beneath the moon's pale beam,
A champion worthy of the stream,
Yon grey tower's living crest!

But clouds and envious darkness hide
A form not doubtfully described:

Their transient mission o'er,
O say to what blind regions flee
These shapes of awful phantasy?
To what untrodden shore?

Less than divine command they spurn;
But this we from the mountains learn,—
And this the valleys show,—
That never will they deign to hold
Communion where the heart is cold
To human weal and woe.

The man of abject soul in vain
Shall walk the Marathonian plain;
Or thrud the shadowy gloom,
That still invests the guardian pass,
Where stood sublime Leouidas,
Devoted to the tomb.

Nor deem that it can aught avail
For such to glide with oar or sail
Beneath the piny wood,
Where Tell once drew, by Uri's lake,
His vengeful shafts—prepared to slake
Their thirst in tyrant's blood!

During its progress over the falls, and the neighbouring rapids, the Clyde is believed to descend about 230 feet,—its bed, before it approaches the falls, being about 400 feet above the level of the sea. Hitherto basaltic rocks have appeared in the course of the river; but the geological features have now changed, and, with the falls, sandstone in horizontal strata begins to show itself. Leaving the parish of Lanark, the river loses its character of romance, and assumes an appearance of simple but variegated beauty, relieved at intervals by the marks of ministration to manufacturing industry. It widens its breadth of waters,—is looked down upon by a more sloping and a wider expanse of country,—and ploughs its way through alternations of valley and of rolling bank, rich in the loveliness of agricultural cultivation and the shadings of orchard and forest scenery. [See article CLYDESDALE.] Over a distance of 11 miles, it divides the parishes of Carluke, Cambusnethan, and Dalzell on the north, from those of Lesmahagow, Dalsert, and Hamilton on the south; and, intersecting a wing of the last of these parishes over the beautiful grounds of the ducal demesne, it retouches the parish of Dalzell, and passes on to Bothwell. Over the space of a mile, it separates Bothwell from the parish of Hamilton, and, for 4 miles further, separates it from the parish of Blantyre; and here it moves gracefully under the boldness of its banks, and wears a plentiful tufting of forest ornament. [See articles BOTHWELL and BLANTYRE.] Continuing to present the mingled attractions of a cultivated basin, and the activities of busy enterprise, it flows between the parishes of Old

Monkland and the Barony of Glasgow on the right bank, and those of Cambuslang and Rutherglen on the left, till, in the course of 4 miles, it glides into Glasgow.

Hitherto the rich and very various scenery of the Clyde has been foiled, or rather heightened, and occasionally touched with foreign associations, by the presence chiefly of smiling villages, suggesting ideas of rural enjoyment,—gentlemen's seats, and luxurious demesnes, picturing the delights of opulent seclusion from the world,—and yawning ruins of massive castles and the strongholds of monkish despotism in the days of popery, calling up, by contrast, thoughts of the liberty and intelligence of modern times. But at Glasgow, the Clyde—though afterwards resuming its green and its golden dresses of sylvan beauty and mountain grandeur—puts on its aspect of prime importance to the plodding and busy population of Scotland, by becoming a navigable river, and bearing on its bosom swarms of every description of craft, laden with stores of merchandise, and in communication with every nook or hamlet along the shores around its embouchure, or with places trodden only by the savage or the colonist at the ends of the earth. From Glasgow, till it begins to expand into an estuary, it is artificially deepened and pent up within embankments of stone;*

* Considerable difference of opinion exists among scientific men as to the best means of preserving and improving the navigation of this noble river. In September, 1824, Mr. Whitley, the engineer employed in the construction of the Plymouth breakwater, reported to the Clyde trustees that the operations hitherto pursued with the view of improving the navigation of the river, had, in fact, greatly injured it; and would, if persevered in, ultimately ruin the river for commercial purposes. By contracting, as had been done, the width of the river from 1,400 feet, in some places, to 400 feet, Mr. Whitley was of opinion that the scouring effect of the tide would be greatly diminished; and banks and bars would be formed in the channel of the river, even below Port-Glasgow:—"For it stands to reason that if a large body of water is allowed to flow up a river, its body and weight are forced against the river-stream, and that stream is kept higher up in the country, and more water finds its way up; and when it ebbs the greater is the scouring effect, which will be the means of keeping the river deep, and prevent shoals and banks forming. But if the river is contracted, and the tide prevented from flowing into its ancient recesses, the ebb-tide must be reduced in quantity, and be less capable of producing these effects; for all rivers bring down from the country a great quantity of rubble, mud, &c.; and if there is not a sufficient body of back-water to carry the same into deep water, banks and bars will form and destroy the navigation." In Mr. Whitley's opinion, there never ought to have been more done to the Clyde than paring away the points, and filling the deep indents of the shores, so as to have allowed the tide to have flowed along the land without interruption. He also recommended that the dams at the bridges or weirs should be removed, and dug down to the lowest ebbs along the Broomielaw, so as to allow the tide to flow as far above the town as the level of the land above would allow it. This being done, the sand and mud, he thought, should be dug out between the bridges, and also some distance above them, so that the tide might flow freely up, which would produce a large body of back-water, and assist in scouring out the river below. In July 1839, Mr. William Bald gave it as his opinion that "if the natural breadth of a river be narrowed, it will acquire in depth what has been taken from it in width; taking into account the nature of the soil at the bottom and on the sides of the river, and the velocity of the water-current." Among other modes of improving the river any plan that should increase the volume of water into the upper reaches of the Clyde above the city of Glasgow, Mr. Bald thought would be attended with the most beneficial results. "The tide water in the harbour will be increased; the time of high-water will be more early, thereby enabling ships, outward and inward bound, to reach the port sooner, and depart from it earlier. The velocity of the tide of flood and ebb would be increased, not only through the harbour, but also through the whole navigable channel of the Clyde; and even for some distance this scouring power would be felt above Hutchesons' bridge, by which the whole impurities of the sewerage of the city would be washed away downwards by the ebbing tidal current, and which would render Glasgow more healthy, and the water in the harbour more pure. By the removal of the wear at the New bridge, the Clyde could be deepened upwards in such a manner as to allow a volume of water each tide to ascend the Clyde towards Dalmarnock ford, of about 13,200,000 cubic feet, equal to 367,242 tons. The removal of the wear would give a volume of water each tide, into the upper reaches of the Clyde, to the end of the tidal flow above the Glasgow Works, of 20,400,000 cubic feet of water, equal to 567,557 tons. This is nearly equal to a river line of 4 miles long, 4 feet deep, and 242

and, over the whole of this distance, it fluctuates under the flow and ebb of the tide, and, as well as at Port-Glasgow and Greenock, is everywhere overlooked at intervals by the rising hulls or the finished decks of steam-boats and other craft preparing for the launch. Compared with the bulk of its waters, and the breadth of its stream,† it is probably unsurpassed in the world for the quantity and stir of its navigation; not only bearing along ships of heavy burden and deep draught of water, and plentifully dotted with yawls and wherries, but kept in constant foaming agitation by large steam-ships bearing heavy cargoes from the shores of England and Ireland, by numerous coasting steam-vessels careering over its surface with live freights of human beings, and by steam-tug-boats dragging behind them trains of sailing-craft too unwieldy to pilot their own way within its narrow channel. First in the practical working of steam-ship-architecture and steam-navigation, it still retains its eminence above every other river in the world.

Leaving Glasgow, the Clyde intersects the parish and sweeps past the village of Govan, receives from the north the waters of the Kelvin, and about 1½ mile lower down, leaves Lanarkshire, through which it had hitherto flowed; and henceforth, till it rolls into the ocean, it divides Dumbartonshire and Argyleshire on the right, from Renfrewshire, Ayrshire, and Wigtownshire, on the left. Four miles below Glasgow, it is adorned, on its northern bank, by the neat demesne and mansion of Scotstown; and a mile further, on the south bank, it passes, at 200 yards distance, the ancient burgh of Renfrew, and is overlooked by the bustling terminus of the Renfrew and Paisley railway; three-quarters of a mile further, still on the same side, it receives the waters of the Cart, and looks up, at three miles distance, through a richly varied vista, to the spires and loftier buildings of Paisley; and on to Erskine ferry, 9 miles from Glasgow, it flows through cultivated plains, with a pleasing back-ground of mountain-scenery in the north. At Erskine ferry it passes, on its right bank, the cheerful village of Kilpatrick, and a little further down on its left, the well-wooded demesne of Lord Blantyre; and here begins to be closed in for several miles on

feet wide. This immense volume of water ascending and descending each tide, would eminently tend to carry away all impurities which are discharged into the Clyde at Glasgow; indeed, the effects of this scouring power would be felt towards the lower extremities of the river Clyde, as far as the banks opposite Port-Glasgow and Greenock. The removal of the weir would at once open an extent of river, between the New bridge and Hutchesons' bridge, of nearly 23 acres, equal in extent to the whole of the lower harbour; and a deepening of 3 or 4 feet would enable all the smaller craft in the lower harbour to ascend into the very centre of the city, which would be a great relief to the lower port, where the large ships lie. But this upper harbour of 23 acres is quite capable of being so improved, that ships of the largest class might lie in it, and Glasgow would then indeed have the aspect of a great maritime port. To those, Mr. Bald adds, who have visited some of the continental harbours and cities—such, for example, as Amsterdam and Rotterdam—nothing can appear more natural and simple, than to convert the whole of the Clyde, between the New bridge and Hutchesons' bridge, into a large floating harbour. Its position, in the very middle of the city, would confer many advantages on the merchant and trader.

† The following calculation is taken from Dr. Thomson's volume on Heat and Electricity [p. 263]. "The breadth of the Clyde, at the new bridge, Glasgow, is 410 feet, and its mean depth 34 feet. The velocity of the water at the surface is 1.23 inch, and the mean velocity of the whole water is 0.558,132 inch per second. From these data it may be inferred that the quantity of water discharged per second is 768 cubic feet. This amounts to 2,417,760,000 cubic feet, or 473,017,448 imperial gallons, or 1,877,053 tons. The river Clyde drains about one-thirtieth of Scotland, or about one eighty-third part of Great Britain. Hence, if the water discharged into the sea by the Clyde afforded a fair average of the whole island, the total amount of the water discharged annually by all the rivers in Great Britain would be only 155,795,399 tons, which does not amount to 100th part of the excess of the rain above the evaporation."

the north by the spurs of the Campsie mountains, descending with a rapid swoop almost to its verge, and presenting mingled views of precipice and verdant slope, tuftings of plantation and surfaces of rock and heath. Just where these heights close in, or $1\frac{1}{2}$ mile below Erskine ferry, it passes Bowling-bay, the entrance of the Forth and Clyde canal, which is generally dotted over by two or more vessels entering or leaving the river. [See article FORTH and CLYDE CANAL.] A mile below Bowling-bay, it passes on the north the neat hamlet of Dunglass, and is overlooked from a rock on its verge by an obelisk recently erected to the memory of Henry Bell; and 2 miles farther on, it leaves its stone-embankments, rolls past the base of Dumbarton castle, receives the waters of the Leven, and progressively bursts from the limits, and throws off the character of a mere river, or fresh-water stream. Here the scenery beheld from its channel begins to be surpassingly varied, rarely sinking beneath the beautiful, and at intervals rising into the magnificent. Behind Dumbarton castle, which mounts precipitously up from its confluence with the Leven in the form of a huge cleft cone, are seen the town of Dumbarton on the fore-ground, the rich undulating vale of the Leven in the centre, the towering summit of Benlomond, on the back-ground, relieved to the view by a diversity all round of mountainous horizon. In front, the Clyde, through a distance of 9 miles, widens from 6 furlongs to 4 miles; and on both banks or shores, but especially in front, before it makes its sudden debouch to the south, it surprisingly combines the attractions of lowland and of highland scenery, mingling the softness and sylvan beauty of the one, with the grandeur, and at times, the savageness of the other. Port-Glasgow, with its neat appearance and romantic situation,—and Greenock, with its finely-blended character of gorgeous surrounding landscape, and commercial and nautical stir,—these on the south; and the smiling village of Helensburgh, with the diversified slopes and eminences, and tufts of plantation, on the north; and the embowered castle and wooded shores of Roseneath, backed by the savage outlines of the Argyleshire mountains on the west; and the constant movement of ship, and steam-boat, and wherry, on the waters between; and the ever-changing and generally fascinating or brilliant appearance of the drapery of clouds all around;—these form a picture on which the eye of even an ennuyee might hundreds of times gaze, and never become drowsy or tired.

Two miles west of the longitude of Greenock, the Clyde forks round the peninsula of Roseneath, sending up an elongated bay, the Gareloch, about 8 miles to the north-west, and bending round its own channel, now narrowed to less than 2 miles, in a direction due south. Just after having made this debouch, it looks backward to the rear of Roseneath, and sends away nearly due north the mountain-edged stripe of waters, Loch-Long; which, in its turn, sends off to the north-west, a few miles from its embouchure, the stripe forming Loch-Goil. Three miles below Greenock the Clyde opens on the left into the small bay of Gourock, fringed with the graceful swoop of buildings forming the village; and a little to the south, on the opposite shore, it opens, under the overhanging acclivity of the Kilmun hills, into the larger and somewhat romantic bay of Holy-Loch, the quarantine station of its ports. It now, with the straggling, sequestered, and neatly edified village of Dunoon, overlooking it for $1\frac{1}{2}$ mile from the southern headland of Holy-Loch, passes along under the steep, heathy acclivity of the Cowal hills on the west, and rich sylvan slopes, with here and

there a tufted ravine on the east, till, 6 miles below Dunoon, it sends off, round Toward-Point, that magnificent belt of waters, the Kyles of Bute, which opens with the demesne and splendid mansion of Toward castle, looking down upon it from the right, and the semicircular town of Rothesay, in its holiday-dress of back-ground scenery, smiling upon it on the left,—and then sweeps away round the island of Bute, forming a causeway of waters between its gentle beauties, and the rough, coarse, mountain-land of Argyleshire, and sending off at two points to the northward elongated bays to cleave asunder the Argyleshire mountains. Minuter descriptions of the various branches of the frith will be found under the heads, GARELOCH, HOLY-LOCH, LOCH-FYNE, LOCH-GOIL, LOCH-LONG, and KYLES-OF-BUTE.

At the southern point of the entrance to the Kyles, the Clyde has expanded into the width of 5 miles; and it maintains this width over a distance of 3 miles, when it runs abreast of the Cumbrae islands, and separates into two channels,—the narrower about a mile in breadth, sweeping round between the Cumbraes and Ayrshire, and the broader averaging nearly 3 miles, flowing direct onward between the Cumbraes and Bute, and forming the marine highway from the west of Scotland to the Irish channel and the Atlantic. The narrower channel, just when leaving the main body of the estuary, sweeps past the town of Largs; $3\frac{1}{2}$ miles onwards, it breaks through between the Greater and the Lesser Cumbrae, passing the fine village of Millport on the former, and opening a communication with the main channel on the west; while, at the same time, it passes by its direct branch along the eastern shore of the Little Cumbrae, and having rounded the point or headland whence the far-spreading bay of Ayr begins to bend away inland, it looks right forward toward Ailsa Craig, and points the way athwart the centre of the expanse which stretches between Ayrshire and Arran. The broader or main channel of the Clyde past the Cumbraes, after contracting between the Lesser Cumbrae and the southern point of Bute, into a strait, less than 2 miles in breadth, suddenly expands into a frith, averaging about 32 miles in width, and at the distance of 45 or 48 miles, becomes identified with the north or Irish channel, and turning westward round the Mull of Cantire, is lost in the Atlantic. In the northern part of the frith, 4 miles at the nearest point distant from Bute, rises the large, mountainous island of Arran; and north from the most northerly point of this island, the frith sends off the picturesque and magnificent stripe of waters which, flaunting far away to the north, and laying at length the exquisite scenery of Inverary, rejoices justly in the name of Loch-Fyne. All the frith, except the belt which goes round the northern half of Arran, is overlooked by Ailsa Craig, [see AILSA CRAIG,] which rises like a wizard from the centre of its waters, and, as if wielding a spell over every thing which moves on their surface, attracts the prolonged and wearying gaze of the nautical tourist, till he almost forgets to feast himself on the wide range of varied and magnificent scenery within his view. Altogether, from its sources to its embouchure, the Clyde is probably more opulent in every thing truly interesting than any other river, no matter how boasted, of the British Isles.

Majestic Clutha! as a princess moving,
From the pavilion of thy morning rest,
To where the Atlantic sits, with smile approving,
And folds his daughter to his ample breast,
Throned in the sunset, monarch of the west:—
On thee he pours the treasures of his reign,
And wreathes Columbia's riches round thy crest,
The Indies love thy name,—and the long train
Of myriad golden isles, that gem the azure main.

CLYDESDALE, or STRATHCLYDE, the vale—as the name implies—through which the river just described flows. Its topographical features have been sketched in the preceding article; and the reader is referred to our general article on LANARKSHIRE for further information on the agriculture and statistics of the district. In the present article, however, we shall give a brief account of the far-famed Clydesdale orchards. These lie mostly between the bottom of the lowest fall of the river, and the mouth of the South-Calder; or perhaps, from the foot of the Mouse water to Bothwell castle, a distance of 16 miles. At the upper end of this district, the bed of the river is about 200 feet above sea-level; at the lower end it does not exceed 50. This region is well-protected against the cold easterly *haars*, which are so injurious to vegetation; and hoar-frosts or mildews are seldom felt here. The orchards are chiefly of apple-trees, with a mixture of pears and plums. Cherries are more rarely cultivated, being so much subject to the depredations of birds. Few of the orchards are large: many of them are mere cottage-orchards. They were stated in the ‘Agricultural Report’ of 1793, to amount to 200 acres; and in that of 1806, to be upwards of 250 acres; while the total extent of orchards in the county exceeded 340 acres. At present they amount to 1,200 acres, including in this estimate the small gardens and cottage-orchards in and around Hamilton. The produce is very precarious, the fruit being frequently destroyed in the blossom by spring-frosts and caterpillars. In some years, such as 1818, the whole value of the orchards between Lanark and Hamilton has amounted to upwards of £6,000. Even in the years 1801 and 1804, the value of the fruit from the different orchards exceeded £5,000 each year; but this was not so much owing to an increase of fruit from orchards lately planted—few of them having arrived at any perfection of fruit-bearing—as to a gradual rise in the price of fruit, and both those years being very productive ones. A remarkable instance is mentioned of the fruit produced on half-an-acre of ground, in the former year, bringing £150 to the dealer who carried it to market. The value of the fruit is not always in proportion to the number and size of the trees. Those who cultivate the ground around the trees, taking care not to injure the roots, and giving manure from time to time, have finer fruit, and a much greater quantity in proportion, than those who do not. Much also depends on adapting the trees to the soil and exposure. Though the different kinds of apples, &c. are generally engrafted on the same kinds of stocks, each assumes the habits peculiar to the scion. Those who have been attentive in observing this, and choosing the kinds best adapted to their situation, have found their account in it. But it ought not to be understood that the choice of the stock is of no importance. Native crabs are the hardiest, and prove the most durable trees. Codling stocks, and those raised from the seeds of good fruit, generally produce also finer fruit; but the trees seem to be more subject to disease. The causes which produce the phenomena occurring in the orchard are so intricate and incomprehensible, that the most attentive and acute cultivator can neither avert the injuries and maladies to which the trees are liable, nor cure those that are diseased. There is, indeed, no general principle to direct the cultivator of the orchard; all must depend on a long course of topical experience, by which the kinds of fruit-trees which have been found to thrive and bear best in any particular spot may be known and selected. The Clydesdale orchards are mostly planted on steep hanging-banks; on such they have been found to succeed better than

on plains. The abrupt banks of the Clyde, especially on the north side, are ill-adapted for any other agricultural purpose, as the expense of labour and manure would hardly be repaid by the crop. On the other hand, the excellent exposure, and general sharpness of the soil, render these banks an object of importance in the eye of the cultivator of fruit. Most of the orchards are on cohesive soils, and on such the trees have been supposed to be surer bearers than on open sandy soils; yet there are instances of very productive orchards on friable and gravelly soils. The apple-tree in general succeeds on a pretty hard soil, provided the bottom be dry; but when the roots penetrate a subsoil holding stagnant water, or greatly charged with the oxide of iron, the tree fails. The pear-tree requires a soil of greater depth, and more soft and moist; and will thrive in a subsoil where the apple fails. It also yields fruit earlier, lives to a greater age, and arrives at a greater size and more towering height than the apple-tree. A single pear-tree has been known to yield 60 sleeks of fruit, at 50 lbs. per sleek;* and there is a Longueville pear-tree at Milton-Lockhart, said to be 300 years old. The plum-tree does not succeed in the very stiff cohesive soils; it requires a considerable depth of dry friable mould. Its district extends to about 3 miles on either side of Dalserf. All the fruit-trees which have been engrafted are more delicate than those in a natural state, and require a more attentive culture. Plum-trees are generally planted round the verge of the orchard, and are profitable, not only for the fruit they bear, but from the shelter they afford the other trees. All fruit-trees require shelter, and do best when they are embosomed in woods. “Considerable diversity of opinion,” says a writer in the ‘Journal of Agriculture,’ [vol. iv. p. 826,] “prevails in Lanarkshire as to how far the fruit-trees should stand from each other; and errors have been run into both in planting too near and too sparse. In the Dalziel orchards, and some others, the rows of trees are 22 feet apart, and 11 feet distance in the rows. The trees in the orchard at West-Brownlee are closer. In the new orchard on the estate of Wishaw, the rows are at 30 feet distance, and the trees 15 feet from each other in the rows. On the Coltness estate the rows are 27 feet, and the trees 10½ feet from one another in the rows. Some, however, are sparser; and in some of the oldest orchards the trees are irregularly planted. In general, however, they are planted closer than is usually done in the English orchards. It is a common practice in the Clydesdale orchards to plant an early bearer alternately with other trees in the rows; and some plant gooseberry and currant bushes between the trees; while others raise only potatoes, oats,” &c. Upon the whole, though the produce of the orchard is precarious, when the original insignificance of the grounds on which fruit-trees succeed is considered, and the ready sale and high price which the manufacturing towns afford for fruit, an orchard planted with judgment and carefully cultivated is certainly a profitable possession. On the other hand, the depredations committed on the orchards have become more frequent and daring as the manufactures and population of the county have increased, and are a great discouragement to this species of cultivation, particularly that of small orchards, which cannot defray the expense of watching during the night. Besides the larger fruit, great quantities of gooseberries and currants are here cultivated, and, when well-managed, are said to pay very well. The gooseberry and cur-

* A sleek of plums weighs 60 lbs.; and of apples, 40 lbs. The fruit boll contains 20 sleeks. The present average market price of Clydesdale fruit is 50s. per boll.

rant trees are dug around annually, kept on a single stem, and dunged every second year. Many new varieties of small fruit have been introduced; and vast quantities are every year brought to market, in Glasgow, Paisley, Hamilton, and Lanark, to the value, it is supposed, of one-third of the large fruit. The principal orchards are in the possession of their respective proprietors. The Cambusnethan priory orchard extends to 26 acres, and generally fetches on an average £300 per annum. In some years, before the reduction in the prices of fruit, it has brought £1,000. Mauldslee castle orchard, extending to 8 acres, averages £150; in 1822 it brought £500; in 1838 only £38. One of the Brownlee orchards, of 12 acres, has sometimes yielded fruit to the value of £600, and in other years has brought only £10. The glebe of Dalziel has sometimes yielded £250. The importation of fruit from Ireland has tended greatly to reduce the prices of the Clydesdale fruit; but some proprietors have recently established cyder-presses, which may improve the prices. Orchard ground lets at from £6 to £10 per acre.

Clydesdale is also famous for its breed of horses. The superlative animal known all over the Lowlands of Scotland under the appellation of Clydesdale horse, is not of a pure breed, but is of a kind improved by crossing. This improvement, Mr. Wallace of Kelly says, can readily be traced to the importation of black mares from Flanders, which were much in fashion, and put to very frequent use in the coaches of the gentry of Scotland, soon after the use of such carriages became pretty general. There is little doubt of this having been extensively practised in Lanarkshire, and that breeding from black Flanders mares was paid great attention to in that district about 100 years ago. Mr. Wallace thinks that the breed of draught-horses in general, over the West of Scotland, has degenerated; and that due care and attention, in respect of the qualities of the mares bred from, is the main cause of this. "Of late years," he says, "the breeding of draught-horses has greatly extended over the West of Scotland, including portions of the counties bordering on or in the Highlands, where very useful but small-sized mares have been bred from; and to this inferior crossing, may not only fairly be in part attributed the colour complained of, but that want of bone and strength, and of fine broad shape, which any accurate observer will but too generally discover at our horse-markets."

The Duke of Hamilton was created Marquess of Clydesdale in 1643. His eldest son bears the title of Marquess of Douglas and Clydesdale.

CLYNE, a parish on the eastern coast of Sutherland, of which the inhabited part extends in length about 24, and in breadth from 8 to 4 miles. It is bounded on the north by Tongue; on the east by Kildonan; on the south-east by Loth; on the south by the German ocean; and on the west by Golspie. Loch-Brora is a beautiful sheet of water, which discharges itself into the sea by the river of that name, at the entrance of which there is a tolerable harbour. See article THE BRORA. The inhabitants on the coast are mostly fishermen. There is plenty of excellent freestone and limestone, and coal has been formerly wrought in this parish. Assessed property, in 1815, £1,900. There are several Pictish antiquities; in particular, a strongly fortified hill on the south side of Loch-Brora, called Craigar. Upon a rock in the Blackwater of Strath-Beg, about 1½ mile north from the junction of that water with the Brora, stand the ruins of COLES CASTLE: which see. Population, in 1801, 1,643; in 1831, 1,711. Houses 410.—This parish, formerly a vicarage is in the presbytery of Dornoch, and synod of

Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend £144 15s. 7d.; glebe £12. There is a preaching station at Aschorle on Loch Brora.—Schoolmaster's salary £36; fees £15. There is one private school in the parish.

CLYTHE-NESS, a promontory of Caithness, in the parish of Latheron, in 58° 21' N. lat., and 3° 18' W. long. The castle of Easter Clyth, which was formerly of great strength, is situated upon a rock overhanging the sea near this point. It is commonly called Cruner Gunn's castle. Gunn was Coronator, or Justiciary of Caithness, and was basely murdered, with several gentlemen of the same name, in the kirk of St. Teay near Castle-Sinclair, by Keith, Earl Marischal, in 1478. At the hamlet of Clyth is a neat little inn.

COALSTON, an ancient seat of the family of Brown—now represented by the Countess of Dalhousie—in the parish and shire of Haddington; about 2 miles south of Haddington. There is a singular story connected with the family of Coalston, one of the ancestors of which married the daughter of his neighbour, the famous warlock of Gifford, described in Marmion. As they were proceeding to the church—so runs the tale—the wizard-lord stopped the bridal procession beneath a pear-tree, and plucking one of the pears, he gave it to his daughter, telling her that he had no dowry to give her, but that as long as she kept that gift, good fortune would never desert her or her descendants. This must have occurred before 1267, in which year, according to Sir David Dalrymple, Hugh Gifford de Yester died; and the pear is still preserved in a silver box. About two centuries ago, a maiden lady of the family chose to try her teeth upon it, and very soon after two of the best farms of the estate were lost in some litigation: the only misfortune that has befallen the inheritance of the Coalstons in six centuries—thanks, perhaps, to the Warlock pear.

COALTOWNS (EAST and WEST), two adjacent villages in Fifeshire, in the parish of Wemyss, containing about 400 inhabitants; 4 miles north-east of Kirkcaldy, and 1 north of West Wemyss.

COATBRIDGE, a village in the parish of Old Monkland, 23 miles west of Airdrie, on the Monkland canal. Population, in 1831, 741. Inhabited houses 107.—The following statement serves to show the astonishing increase in the price of landed property, in the vicinity of Coatbridge, which is mainly to be attributed to the extension of the iron trade in that flourishing neighbourhood. Some years ago, the father of Mr. R. C. Buchanan, the present proprietor of Drumpeller estate, purchased the lands of Dundyvan, of some 50 acres in extent, for about £3,500. In the year 1833, the Dundyvan Iron company feued part of them from Mr. Buchanan, for which they pay upwards of £200 yearly feu-duty; and Mr. John Wilson, now sole proprietor of Dundyvan Iron works has purchased another part of them, for which he pays £14,000. In addition to this, the Monkland Canal company feued part of the property, which, taken in connection with other feus to smaller holders, has raised the value of the whole to somewhere about £22,000.

COCKBURN-LAW, a mountain in the parish of Dunse, Berwickshire. It rises from a base of at least 6 miles in circumference, to a conical top, which is elevated about 912 feet above the level of the sea. It is encircled by the Whitadder on three sides. On the north side, a little below the middle of the hill, are the ruins of a very old building, called Woden's or Edwin's hall, or Edinshall. It consists of two concentric circles: the diameter of the inner-most being 40 feet; the thickness of the walls 7 feet; and the spaces between the walls 7 and 10

feet. The spaces have been arched over, and divided into cells of 12, 16, and 20 feet. The stones are not cemented by any kind of mortar; they are chiefly whinstone, and made to lock into one another with grooves and projections. It is supposed to have been a building similar to Coles castle, and Dundornadilla in the county of Sutherland. The principal rocks composing this hill are porphyry and granite.

COCKBURNSPATH,* a parish on the sea-coast in the shire of Berwick. It presents angles to the cardinal points of the compass; and is bounded on the north-east by the German ocean; on the south-east by the parish of Coldingham, and part of Oldhamstocks; on the south-west by Abbey St. Bathan's parish; and on the north-west by the shire of Haddington. Its greatest length, from its eastern angle on Redheugh shore, to its western angle near the source of Eye water, is $7\frac{1}{2}$ miles; and its greatest breadth, from its northern angle at Dunglass bridge, to its southern angle at the point where Eye water ceases to bound it, is $4\frac{1}{2}$ miles. At a former period, it was a small parish, but was afterwards—though at what particular date cannot be ascertained—incorporated with the parish of Auldambus. Cockburnspath consists of two sections; the one bleak and mountainous, and the other cultivated and comparatively low and level. The higher or southern section is a continuation of the elevated region of the Lammermoor hills, which, sweeping down upon the parish from the north-east, passes away to meet the sea, a little beyond its boundaries, in the bold promontory of St. Abb's. This elevated tract is, in general, soft in its features; the hills being almost all rounded and broad, and never rising higher than 500 or 600 feet. Between these hills, and onward towards the ocean, are various ravines or narrow valleys, threaded with mountain-streams, and wearing in many places—from the mingling of rock and wood and mimic cascade—an aspect highly picturesque. The lower or northern section of the parish, is, for the most part, well-cultivated; and, intersected with the cleaving and sylvan-fringed streamlets from the south, rises slowly and wavily toward the hills. The coast is uniformly, but especially toward the east, of a rocky, bold, precipitous character; and presents some striking scenes. A beautiful insulated cliff, bored through by the billows, and a towering and magnificent rock, presenting an outline closely similar to that of a cathedral or ancient tower, are a fine foil to the general view; and the vast expanse of ocean beyond, the various forms of the bold headlands in the distance, and the dottings of the waters with vessels of every form and size leaving or entering the frith of Forth, present a general picture of no ordinary attraction.—Of the several narrow valleys of the parish the most remarkable, jointly for its picturesqueness and its other attractions, is Pease dean. Over the stream which flows through it, called the Pease burn, is a remarkable bridge, reckoned a masterpiece of architecture, which carries the public road, high aloft in the air, onward from the north-east toward Berwick-on-Tweed. This bridge was built in 1786; it is 300 feet in length, 15 feet between the parapet walls, and 120 feet above the stream which flows beneath; and it consists of four arches, two of which both rest their inner limbs upon a tall, slender pier, rising from the bottom of the deep ravine. The bridge is visited by many a tourist, and often examined with a curious eye,—the fame attaching to it, of its being the most elevated bridge in the world.—The Cove shore, about $1\frac{1}{4}$ mile from Dunglass-bridge at the

north-eastern limit of the parish, is another object of unusual interest. This is a little bay, surrounded by precipices upwards of 100 feet high, and looking out upon the cliff and cathedral-like rock and extended sea-view which constitute the chief attractions of the coast-scenery. At one part of this romantic bay, the coast is accessible only by a sloping tunnel, hewn out of the soft rock, passing under ground for the space of 60 or 70 yards, and merely wide enough to admit a horse and cart; and here, at the termination of this remarkable approach to the sea, a pier has been erected for the accommodation of fishing-boats.—At Redheugh, somewhat less than a mile from the south-eastern angle of the parish, a spot called Siccar-point also possesses unusual attractions. Celebrated for geological phenomena, it is, at the same time, rich in natural beauty. Scrambling down a lofty headland, which juts suddenly into the sea, or descending a winding footpath which has been erected for his accommodation down the slopes of the precipitous sea-bank, the tourist arrives at a cavern of considerable capaciousness as to both height and area, walks beneath a fretted roof of glittering and variform calcareous stalactitic incrustations, and sees himself guarded in by ranges of cliffs and isolated rocks which so vex and tumultuate and dash into spray the rolling billows as to manufacture a watery veil of no common beauty, suspended over an expanded and interesting sea-view. At the eastern extremity of the Lammermoors, in the high valleys through which the road passes to Ayton, Dr. Buckland discovered, in 1839, traces of moraines disposed in terraces at various elevations. The only stream, except the rills which rise in its own heights, is Eye water, which rises about a mile to the east of it, in Haddingtonshire, and forms its boundary on the south-west as long as it is coterminous with the parish of the Abbey of St. Bathan. During the whole of this part of its course, the river's banks are bare and unattractive. There are several plantations,—patches of forest on the sides of the narrow valleys, the wooded portion of the demense of Dunglass, and Pemeshiel wood, which covers about 100 acres.—Remains of military forts and encampments are numerous in the district,—particularly in the vicinity of the ravines, which, in the unsettled times of early history and of the Border raids, were formidable passes. Several of the fortifications are of British origin,—particularly a very interesting one on the summit of Ewieside hill; and others, if not erected by the Romans, are in the vicinity of some traces of their presence,—many urns and other articles obviously of Roman workmanship, having, in various localities, been unearthed by the plough. In addition to these military vestiges of an early period, this parish contains not a few interesting relics of more recent feudal times,—

—“the mouldering halls of barons bold.”

Dunglass castle, near the northern angle and north-eastern limit of the parish, and the seat of Sir James Hall, Baronet, was originally a fastness of the Earls of Home. See article DUNGLASS.—A more interesting place is Cockburnspath tower, which stands on the edge of a strong pass or ravine nearly in the centre of the parish, nodding, in venerable ruin, over the great road from Berwick to Edinburgh. Though never, apparently, a place of great extent, this tower, owing to its commanding position, was esteemed one of the keys of the kingdom of Scotland; and possessed so early as 1073 by the Earls of Dunbar and March, it figured prominently in the tumultuous scenes of the international wars.—On the coast, about 2 miles from the eastern angle of the parish, stand the ruins of the old church of the

* Formerly the name was Colbrandspath; but it is now corrupted, in vulgar conversation, into Coppersmith.

Incorporated parish of AuldCambus; surmounting a high, overhanging precipice, and commanding an extensive and fascinating view. The building is a specimen of simple Saxon architecture; is supposed to have been erected so early as the seventh century; and was dedicated to St. Helena, the mother of Constantine the Great. Near this ruin there were found, a few years ago, an ancient rosary and numerous coins,—some of the coins comparatively little defaced, and of the reign of Athelstan or Edlstan the Great, grandson of Alfred the Great.—About $\frac{3}{4}$ of a mile from the north-eastern limit of the parish, on the great road north and south, stands the small village of Cockburnspath, $7\frac{1}{2}$ miles from Dunbar, and 20 miles from Berwick-on-Tweed, possessing a population of about 230, and having an annual fair on the 2d Tuesday of August. Population of the parish, in 1801, 930; in 1831, 1,143. Assessed property, in 1815, 8,281. Houses 213.—The parish of Cockburnspath is in the presbytery of Dunbar, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend £245 13s. 3d.; glebe £27. Unappropriated teinds £76 11s. 5d.—There is a United Secession church at the village of Stockbridge.—Schoolmaster's salary £30. There are other two schools, besides the parish-school,—one supported by subscription in the village of Cockburnspath, and the other an endowed one in the district of AuldCambus. The parish-church is a very ancient structure, dating as far back at least as 1163; but it has recently had repairs, and contains sittings for about 400 persons. AuldCambus or Old Cambus anciently belonged to the monastery of Coldingham, as a cell of Durham; the Scottish Edgar having granted to St. Cuthbert's monks of Durham its manor, with the appertaining lands, tolls, shipwrecks, and other customary dues.

COCKENZIE, a village and small sea-port in the parish of Tranent, Haddingtonshire. It lies on the shore of the frith of Forth, on the coast-road from Edinburgh to Aberlady and North Berwick, in the immediate vicinity of the village of Portseaton, and about a mile east of Prestonpans. It consists chiefly of works for the manufacture of salt, and the houses of workmen and fishermen. A railroad from the coal-pits near Tranent leads to the harbour. For the accommodation of the inhabitants, a church was built here, by private enterprise, in 1838. The population of the village, with Portseaton, is about 750.

COCKPEN, a parish in the shire of Edinburgh, lying in a south-easterly direction from the metropolis. It has somewhat of an hour-glass outline; and is bounded on the north by the parish of Lasswade; on the east by the parish of Newbattle; on the south by the parish of Carrington; and on the west by the parish of Lasswade. Its extreme measurement from north-east to south-west, is about $3\frac{1}{2}$ miles; and from north to south nearly 3 miles; but its area is only between 3 and 4 square miles. The South Esk enters the parish from the south, intersects it for nearly $1\frac{1}{2}$ mile, and afterwards forms its boundary with the parish of Newbattle. The banks of this river are here steep, bold, and beautifully fringed with natural wood. The surface of the parish is somewhat uneven; but the soil is a strong clay, and is highly cultivated, abundantly luxuriant, and everywhere shaded by enclosures and plantations. Coal is plentiful, and successfully worked; good freestone abounds; and a sort of moss is found whence copperas has been obtained. The parish has consisted, since the 12th century, of the barony of Dalhousie, originally written Dalwolsie. On the left bank of the South Esk, near the point where that river is crossed by a fine bridge, stood the old baronial castle of Dalhousie. This was anciently an

imposing edifice, of a square form and turreted; and, encompassed by a strong wall, as well as supplied with other means of defence, was a place of very great strength. Latterly it has been denuded of its fortified dress, and, with some traces of antique appearance, has assumed a modern garb. The ancient family of Ramsay, possessing since 1633 the title of Earls of Dalhousie, have for ages been its proprietors. Sir Alexander Ramsay of Dalhousie, who lived in the 14th century, is celebrated as one of the bravest warriors of that age. His gallant behaviour at the battle of Otterburn is recorded by Froissart. He was appointed by his sovereign warden of the borders; and, out of envy, was treacherously murdered by Douglas of Liddesdale. See CASTLETOWN. The mansion of Cockpen belongs also to the noble family of Ramsay; and is situated among fascinating and romantic scenery. The parish is intersected, as far as Dalhousie Mains, by a branch of the Edinburgh and Dalkeith railway; and contains the extensive gunpowder manufactory of Stobbs. Population, in 1801, 1,681; in 1831, 2,025. Houses 326. Assessed property, in 1815, £6,543. Of the population, 1,140 reside in the villages of Prestonholm, Bonnyrig, and Westmill of Lasswade, the last of which lies so near the church of the coterminous parish of Lasswade that the inhabitants generally prefer it to their own. There are 5 other villages; the population of each of which, however, is under 100.—The parish of Cockpen is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, the Earl of Dalhousie. Stipend £157 5s. 3d.; glebe £21. Unappropriated teinds £133 0s. 5d. Schoolmaster's salary between £34 and £35. There are two other schools. Church built in 1820; sittings 625. For several years religious services have been conducted on Sabbath evenings, about once a month, by various dissenters in the village of Bonnyrig, in a schoolhouse capable of containing about 250. During the Scots-Saxon period Cockpen was a rectory, the patronage of which belonged, as at present, to "the Ramsays of Dalwolsie." In 1296 Malcolm de Ramsay, the rector, swore fealty to Edward I., who commanded the sheriff of Edinburgh to restore him to his rights. The church of Cockpen seems to have afterwards been granted to a fraternity of Cistercian monks, who held it till the overthrow of popery at the Reformation.

COE (THE). See GLENCOE.

COICH (THE), or **QUOICH**, a tributary rivulet of the Dee, in the parish of Crathie, Aberdeenshire. It descends from the southern and western slopes of Bennabuir, and pursues a south-easterly course, through the forest of Braemar, till its junction with the Dee, between Mar lodge and Allanmore.

COIGACH (THE AIRD OF), a district in the shire of Cromarty, though locally situated in the shire of Ross. It stretches along the eastern coast of Loch-Broom into the Western ocean, and is comprehended in the parish of Loch-Broom. It contains the beautiful vales of Strathceannard and Ridorch. The population of the district was 1,975, in 1834.

COILTIE (THE), a rivulet flowing along the southern margin of the vale of Urquhart into the west side of Loch-Ness. It is a rapid running stream. Its tributary, the Divach, when in full supply of water, is said to display "a waterfall as high and picturesque as that of Foyers."

COINISH (THE), a streamlet in Argyleshire, falling into the upper part of Loch Linnhe.

COLDINGHAM, a parish on the coast of Berwickshire, of irregular figure and considerable extent. Except a detached portion, about 5 furlongs long and $3\frac{1}{2}$ broad, which is imbosomed to the east in the parish of Eyemouth, it is bounded on the

north by the German ocean; on the east by the German ocean and the parishes of Eyemouth and Ayton; on the south by the parishes of Chirnside and Buncle; and on the west by the parishes of the Abbey of St. Bathans, Oldhamstocks, and Cockburnspath. Its extreme measurement, from east to west, is about $8\frac{1}{2}$ miles, and, from north to south, about 8 miles; and, including its detached section, it embraces an area of about 57,600 imperial acres. Before the Reformation, it comprehended most of the parishes by which it is now bounded, and was called, in its charters, Coldinghamshire. Its surface is, for the most part, very uneven. Several ranges of hills, constituting part of the Lammermoor chain, run through it in parallel lines from west to east, and file off to the north to form the celebrated headland called **ST. ABB'S HEAD**: which see. The hills, however, are of considerable elevation, the highest, Wardlaw bank, being only 640 feet above the level of the sea; and they are cloven into ridges by intervening valleys of considerable extent, watered by the Eye, the Ale, their respective tributaries, and five minor streams, which all, with two unimportant exceptions, traverse the parish from west to east, and generally, near their embouchure, turn northward to fall into the ocean. Most of the flat lands are enclosed and arable; but upwards of 5,000 acres, which form what is called Coldingham common, are moorland, and in a state of sterility. A mile south-west of St. Abb's Head is Coldingham loch, 30 acres in superficial area, and 300 feet above the level of the sea, though only about 300 yards distant from the shore, and so bleakly situated that an attempt to tuft its sloping banks with plantation has proved abortive. This lake is of a triangular form, pellucid in its waters, several fathoms in depth, and, though neither fed by any rill, nor discharging itself by any outlet, is not observed to be subject to fluctuation. The extent of sea-coast in the parish is $6\frac{1}{2}$ miles in a direct line; but, along its wide and numerous windings, is $8\frac{1}{2}$ or 9 miles. A considerable part of the shore, particularly at Coldingham sands, and the farm of Northfield, is smooth and of easy access, and, though nowhere embosoming a harbour, is rife with fishing-boats. But, in the neighbourhood of St. Abb's Head, the coast is rocky and dangerous, abounding in caves and fissures, once the retreat of smugglers, which are inaccessible by land, and can be approached by sea only at low water, and in the calmest weather. On the hills to the west and south of it, about a mile distant, are remains of ancient camps; two of these are of British origin,—the one on Ernsheuch, surrounded on three sides by lofty precipices,—and the other on Wardlaw bank, encompassed with four trenches. Three miles to the west of St. Abb's Head, on a peninsular rock, stand the ruins of **FAST CASTLE**: which see. At Renton, at Houndwood, at West Preston, and at East Preston, were fortalices or castles, belonging to Logan of Fast castle, all of which were demolished during the last century, to afford building materials for other purposes.

About $2\frac{1}{2}$ or 3 miles from St. Abb's Head, on the south side of the town of Coldingham, are some remains of the celebrated priory of Coldingham. A few years ago, the ruins were very extensive; but they were rapidly dilapidated by the peasantry carrying away the stones for the erection of their cottages. Only those parts of it now remain which form the north wall and east gable of the present parish-church; and these are remarkable for chasteness of design, and impart a flattering idea of the style of architecture during the transition from the Norman to the early English period. At a short distance from the vestiges of the south wall are an

ancient building called Edgar's walls,—some fragments of what were known as 'the King's stables,' and a fountain, called St. Andrew's well, which supplied the priory with water; in various places in the vicinity formerly stood stone crosses, the sites of which are still known by the names Cairncross, Friarscross, Crosslaw, Whitecross, and Applincross. The priory of Coldingham was founded in the year 1098 by Edgar, king of Scotland, who, aided by William Rufus to regain his kingdom, and fighting under the banner of St. Cuthbert, gifted to him by the monks of Durham, believed himself indebted more to the saint's influence than to the swords of Rufus' soldiers, and knew not how munificently to express his gratitude by the donation of lands and the erection of religious houses. In the fervour of his superstitious piety, he built the church of St. Mary of Coldingham, gave possession of it to a colony of monks from Durham, attended in person the ceremony of its dedication, and opulently endowed it with mulcts upon the villagers of Swinton, with the lands of Fishwick and Horndean, and with the lands, the waters, and "the men" of Paxton. Malcolm IV., William the Lion, and Alexander II., severally confirmed the privileges bestowed by Edgar, and added others. In 1127 Robert, Archbishop of St. Andrews, within whose diocese the priory was situated, importuned by David I., and probably influenced by Archbishop Thurston, and other dignities of the English and the Scottish churches, granted to this priory exemption from the exactions and interference of the ministers of prelatic authority; and this privilege, as powerfully perhaps as opulence and greatness of monastic influence, contributed, in the circumstances of the period, to exalt the inmates of the priory to a high place among the agents who moulded the interests of the nation. Subsequent diocesan, however, abridged or attempted to revoke the exemption, and made demands or inroads upon the priory, which frequently placed the monks in ambiguous and embarrassing positions, and occasioned disastrous appeals to the popes and to conciliar interference. The priory was enthralled, too, by its colonial connexion with the monks of Durham; the latter wielding the power of electing its prior, and exercising a right concurrent with that of its own inmates over its possessions. So arrayed in the trappings of worldly glory was the office of its prior, that, unlike any other ecclesiastic in the kingdom, he maintained a retinue of seventy functionaries, who bore titles, sustained appointments, and shared a curious division of labour more befitting the magnificence of a princely court than the mortified retirement of a cloister. The priors of Coldingham mingled much in the political intrigues of their country, and figure somewhat flauntingly on some pages of its history; yet, they could not prevent the rebound upon themselves of detrimental and even devastating interferences from at once freebooters, nobles, kings, and popes. Their priory, on account of its patron saint, being venerated highly and alike on both sides of the Border, suffered less from the raids of its vicinity than other establishments of its class in a similar position. But it was devoted to plunder by King John, as unappeased by slaughter and unsatiated with prey, he retired from Lothian in 1216; and in 1305, it was handed over, as to all its revenues and immunities, by Pope Benedict XI., to Hugh, bishop of Biblis, who had been expelled by the Saracens from the Holy Land. Escaping, through the interference and protection of the English crown, the strangely intended infliction of the Pope, the priory, during the regency of the Duke of Albany, in the feeble reign of Robert III., passed, by the act of its own inmates, under the surveillance of Alexander,

the laird of Home, as underkeeper of it for the powerful family of Douglas; and it, in consequence, soon became limited in its resources and shorn of its authority, and eventually acknowledged the family of Home as the lords of all its possessions. James III. attempted to suppress the priory, and to annex its property to a chapel at Stirling; and he not only obtained his parliament's sanction to the project, but, with their concurrence, sent envoys to Rome to procure the assent of the Pope. But the Homes, enraged at the attempt, conspired with the Hepburns, under the auspices of the Earl of Angus, to dethrone the king, and eventually, on the 11th of June, 1488, achieved his death in a fray near Stirling. During the reign of James IV. the priory continued to be oppressed or rather appropriated by the Homes. In 1509 it was, by the pope's authority, detached from the superiority of the monks of Durham, and placed under the abbey of Dunfermline; but it was now lorded over, first by Alexander Stewart, the king's natural son, who already held the archbishopric of St. Andrews and the abbacy of Dunfermline, and who soon after fell in Flodden, fighting by the side of his father,—next by David Home, Lord Home's seventh brother, who continued to be prior till he was assassinated by James Hepburn of Hailes,—next by Robert Blackadder, who, with six domestics, was assassinated by Sir David Home,—next by William Douglas, Lord Angus' brother, who seized the office by mere intrusion, and successfully resisted all efforts to expel him,—next by Adam, who, in 1541, was removed to Dundrinnan, to make way for John Stewart, the infant and illegitimate son of James V. During John Stewart's infancy, the king enjoyed the revenues; but found his possession of them less undisputed and luxurious than any of his ecclesiastical predecessors. In November, 1544, the church and tower, after being seized by the English, were successfully fortified against the Regent, Arran; and in September, 1545, the abbey, during the devastating incursion of the Earl of Hertford, was burnt to the ground. After the death of John Stewart, who now in his maturity drew the revenues, John Maitland was appointed to the commendatorship, and retained its rich endowment till 1568, when he was created a senator of the College of Justice. James VI. then bestowed it on Francis Stewart, the eldest brother of the former commendator, and, with his usual imprudence, afterwards created him earl of Bothwell, abbot of Kelso, constable of Haddington, sheriff of Berwick, bailie of Lauderdale, and high-admiral of Scotland, giving him at the same time vast estates, and receiving in return no expression of feeling but accumulated vexations and treasons, which at last, in 1595, occasioned the turbulent ingrate to be expelled the country. The possessions of the priory were now bestowed first on the Earl of Home, and next—after the former's death in 1619—on John, the banished Earl of Bothwell's second son, who was the last commendator of Coldingham. Tradition says that when the abbey was destroyed, the sonorous bell of the church was carried to Lincoln, and that it still lulls the breezes around that city with its powerful tones.

The village of Coldingham is 2 miles from Press inn; 11 from Berwick; and 18 from Dunbar. It is a burgh-of-barony under the Earl of Home. It stands in a valley, having a small rivulet of excellent water running upon each side of it, and is about a mile distant from the sea. It is surrounded with rising fields of gentle ascent; but there are no prospects from the village beyond half-a-mile's distance. It appears from old writings, and by parts of the foundations of old buildings, that several of the crofts about the town, now arable, had been anciently the

sites of houses and gardens: it must, therefore, have been much more populous than it is at present.—The other villages are West Reston about 2½ miles from the south-eastern extremity of the parish, with a population of 222; and Auchincraw, 1½ mile to the south-west, with a population of 161. Population of the parish, in 1801, 2,391; in 1831, 2,668. Houses 532. Assessed property, in 1815, £18,729.—Coldingham is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £267 2s. 11d.; glebe £25. Unappropriated teinds £492 15s. 5d. Two parochial schoolmasters have each £25 salary, and about £20 school-fees; and one has about £60 or £70 from endowed sources. There are 10 schools, wholly supported by school-fees. The parish-church is supposed to have been built about the 12th century, and has been frequently repaired, but never enlarged; sittings 827. It is situated in Coldingham village, 1 mile from the nearest boundary of the parish, and 7 miles from the most remote. But a large part of the parish was, in October, 1836, erected into a parish *quoad sacra*, and has its own place of worship. See HOUNDWOOD. In the village of Coldingham, also, is a place of worship, and a congregation of considerable standing, connected with the United Secession synod. Sittings 609. Minister's stipend £129, with £20 for house-rent.—According to a survey, in 1837, by the parochial minister, there were, in this parish, belonging to the Established church, 1,657 persons, and belonging to other denominations 1,162.

COLDSTONE. See LOGIE-COLDSTONE.

COLDSTREAM,* a parish in the county of Berwick; bounded by Ladykirk on the east; by Simprin, now united to Swinton, on the north; by Eccles on the west; and by the Tweed, which separates it from England, on the south. Placing the foot of a compass at Lennel church, and taking 4 miles for a radius, a semicircle described on the north of the Tweed will give a general idea of the extent and form of the parish. The length from east to west is from 7 to 8 miles; the average breadth 4 miles. The general appearance of the country is flat. The soil for the most part is rich and fertile; near the Tweed it is light; but it inclines to clay as it falls back from the river. A broad slip of barren land—called the Moorland—runs through the parish from east to west. Coldstream is situated at nearly equal distance from the Cheviot and Lammermoor hills; and when the weather is showery, especially if the wind be westerly, the clouds usually take the direction of one or other of these ranges of hills, pour down their contents upon them, and leave this district untouched. Much more rain falls at Dunse and Wooler than at Coldstream. The elevation of Coldstream bridge is 61 feet above Berwick pier. The river Tweed here produces trouts, whit-

* The ancient name of the parish was Lennel or Leinhall; and the ruins of Lennel church stood on the north bank of the Tweed, ½ mile distant from Coldstream. Eastward from this church, there was formerly a village called Lennel, which was so entirely destroyed in the Border wars, that the site of it is not now known. According to Chalmers, the parish of Leinhall appears in charters as early as the year 1147. When Cospatrik, Earl of Dunbar, founded the Cistercian nunnery at Coldstream, he gave it the church of Layn-el, with half-a-carucate of land at Layn-el, and another half-carucate at Birgham. And Derder, his countess, granted to the same nunnery the church of Hirsle, and a carucate of land, which the Earl confirmed. In this manner were the churches of Leinhall and Hirsle invested in the same religious house; but the church of Hirsle came afterwards to be considered only as a chapel, subordinate to the church of Leinhall. The church of Hirsle stood on the lands of Hirsle, which form the south-western part of the parish. The church of Leinhall continued in the possession of the prioress of Coldstream, till the Reformation; and it preserved its ancient name for a century and a half after that epoch. In 1716 a new parish-church was built at the village of Coldstream, and the designation of the parish was afterwards taken from the Kirk-town.

ings, grilse, salmon, and all other kinds of fish common to the rivers in the south of Scotland. Its tributaries in this parish are Graden burn, and the Shiells burn. The Leet flows for a part of its course through the parish. The gross rent of the parish, in the end of last century, was about £6,000 sterling. The rent of the fishings, £93. The value of assessed property, in 1815, was £14,592. According to the New Statistical Account, the present rental of the parish is about £12,000. Population, in 1801, 2,269; in 1831, 2,897. Houses 471. The language spoken here is distinguishable from that spoken on the other side of Tweed, by the soft sound of the letter R. From that river to a considerable distance southward, the people universally annex a guttural sound to the letter R, which in some places goes by the name of 'the Berwick burrh.'—"The town of Coldstream," says an old writer, "hath given title to a small company of men, whom God made the instruments of great things; and, though poor, yet honest as ever corrupt nature produced into the world by the no-dishonourable name of Coldstreamers." They were formed by Monk from the two regiments of Fenwicke and Hesilrige, when, in 1650, the conquering armies of the Parliament were led by Cromwell against the Northern Presbyterians. They were chiefly Borderers; tried and hardy men, who cared little for the cause of either King or Commons, but loved their leader, and followed him with blind and obstinate obedience through all his changes of opinion and fortune. It was, however, the fashion of the soldiers of the Commonwealth to be austere and addicted to praying and preaching, and in this the men of the Coldstream corps, it appears, were not backward, for we have the undeniable testimony of Bishop Burnet in their favour. "I remember well," said he, "these regiments coming to Aberdeen; there was an order, and discipline, and a face of gravity and piety amongst them, that amazed all people." At the head of these soldiers Monk went up one side of Scotland and down another; storming castle after castle, town after town, discomfiting and dispersing all enemies of the Commonwealth, from Berwick to Dundee, and from Dundee to Dumfries. The Coldstream guards remained, on the whole, ten years in Scotland: during that period they were recruited chiefly by Scottish republicans. When confusion ensued on the death of Cromwell, Monk marched at their head, dispersed the army of Lambert, entered London, dissolved the Commonwealth, and restored King Charles. Macpherson relates, that Monk reviewed his men on the arrival of the King; desired them to ground their arms, and consider themselves disbanded; then he commanded them to take them up and consider themselves no longer the soldiers of the Commonwealth, but of the Crown. The history of the Coldstream Guards has been recorded in a recent publication by Colonel Mackinnon.—This parish is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Earl of Haddington. Stipend £233 7s. 2d.; glebe £40. Church built in 1795; sittings 1,100. Schoolmaster's salary £34 4s. 4d., with £75 fees, and £30 10s. other emoluments. There were 5 private and 2 boarding-schools in this parish in 1834.—There is a United Associate synod church, and a Relief church in the town of Coldstream. Stipend of the Secession minister £150 with manse and garden; of the Relief minister £115.—The principal villas in this parish are Lennel house, a seat of the Earl of Haddington; Lees, near the junction of the Leet and Tweed; and Hirsell, a seat of the Earl of Home.

COLDSTREAM, a town in the above parish, upon the north bank of the Tweed, within the baronies

of Coldstream and Hirsell, having the Leet flowing past it on its western quarter. It is $9\frac{1}{4}$ miles east of Kelso; $10\frac{1}{2}$ south-west of Dunse; and $14\frac{1}{2}$ west of Berwick. The road from Edinburgh to Wooler, by Cornhill, crosses the Tweed at Coldstream by a bridge of 5 arches. Cornhill is 1 mile, Wooler $15\frac{1}{2}$, and Newcastle-on-Tyne 61 miles distant from Coldstream. There are two roads from Coldstream to Berwick, one on either side of the Tweed. The town formerly derived consequence from a ford over the Tweed, the first of any importance which occurs in following the stream upwards from Berwick. By this passage, Edward I. entered Scotland in 1296; and many other, both Scottish and English armies, before the union of the crowns, have made their way by this passage, to ravage the country of their respective enemies. It was last used by a Scottish army, as an entrance into England, in 1640. The bridge of Coldstream is a furlong from the east end of the town, and commands a fine view up and down the woody banks of the river. On the last Thursday of every month, there is a cattle-market held here, which is chiefly resorted to by dealers from the north of England. From December till May, between 600 and 700 cattle are shown at this fair, and from 500 to 600 sheep, principally Leicesters and half-breds. There is also a corn-market every Thursday. Coldstream is a burgh-of-barony. The two superiors, the Earl of Haddington and the Earl of Home, appoint the bailie, who has a salary of £21 from his superiors. Coldstream, like Gretna-Green, enjoys an infamous celebrity for its irregular marriages. Previous to the Reformation this place could boast of a rich priory of Cistercian nuns, founded by Cospatrick, Earl of March; but of this building not a fragment now remains. Population, in 1834, 2,081. Houses worth £10 and upwards, 106; worth from £5 to £10, 72. The town is lighted with gas.

COLE'S CASTLE, an ancient and remarkable fortification upon a rock in the Blackwater of Strathbeg, about $1\frac{1}{2}$ mile north from the junction of that river with the water of Brora. It is a circular building, 54 yards in circumference round the base on the outside, or 18 in diameter; 27 yards in circumference, and 9 yards diameter within; the walls are $4\frac{1}{2}$ yards, or $13\frac{1}{2}$ feet thick in the base, built of large stones, well-connected, without any cement. The building has a batter or inclination inwards of 9 inches in every 3 feet in height. The door on the south-east side is $3\frac{3}{4}$ feet high, and $2\frac{1}{2}$ feet broad. In the middle of the wall, on each side of the passage by the door to the interior, is a small apartment, about 6 feet square and 5 feet high, as if intended for a guard to watch the entry. It has been greatly injured by the wantonness of cow-herds throwing the materials off the walls into the river. Beyond this building, and 6 feet from the wall, are the remains of an outer wall which surrounded the castle, and an oblong garden of 27 yards long and 18 yards broad. This wall seems to have been joined by large flags to the wall of the castle, leaving a passage of 6 feet broad by 7 feet high between the two walls, where it is said the inhabitants kept their cattle in the night time. In the face of the rock is an oblong seat, where tradition says, Cole used to rest himself, fronting the meridian sun, and that there he was slain with an arrow from the bow of an assassin. When Cole felt the wound, he struck his hand upon the rock, which made such an impression that it remains there to this day. A ditch appears to have carried the water of the river round to the land side, which is now filled up with rubbish.

COLINSBURGH, a thriving village in the parish of Kiltonquhar, Fifeshire; 4 miles east of Kirkcaldy; 2 north of Ely; 4 west of Pitten-

weem; and 10 south of Cupar. The Commercial bank has an agency here; and justice-of-peace and circuit small debt courts are held here five times in the year. It has a weekly corn-market on Wednesday, and two annual fairs, on the 2d Friday in June and October. The road to Anstruther and Crail passes through it. It contains about 570 inhabitants. This place is a burgh-of-barony under the Balcarres family, and received its name from Colin, 3d Earl of Balcarres. Balcarres house is in the vicinity; near it rises Balcarres craig, a rock of 200 feet altitude. There is a Relief meeting-house in the village. Colinsburgh is a remarkably healthy place. Not long ago there were 18 individuals in its small population whose united ages amounted to 1,552 years.

COLINTON, or COLLINGTON,* a parish south-west of Edinburgh, at the base of the Pentland hills, in Mid Lothian. It is bounded on the north by the parishes of Corstorphine and St. Cuthberts; on the east by the parishes of Libberton and Lasswade; on the south by the parishes of Lasswade, Glencorse, and Pennicuik; and on the west by the parishes of Currie and Corstorphine. Its greatest length from north to south is about 4 miles; and its greatest breadth from east to west about $3\frac{1}{2}$ miles. The surface is beautifully varied, descending from the northern range of the northern Pentlands towards the plain of Corstorphine in diversified and occasionally bold undulations. Along its southern limit the Pentlands rise in the different summits 1,450, 1,550, and 1,700 feet, above the level of the sea; and toward the north-east are the picturesque heights of the Fir hill and Craig-Lockhart hill. Over a distance of 3 miles the parish is intersected by the water of Leith, plunging its way through well-wooded and romantic banks, and turning the wheels of numerous water-mills. Three rivulets or rills also enrich it with their waters,—Murray-burn, Braid-burn, and Burdiehouse-burn. In the 17th century this parish appears to have been a wild and uncultivated tract; and so late as 1709, it contained only 318 examinable persons. Now, however, it is in general in a state of high cultivation, its lands beautifully enclosed with hedge-rows, and tufted with plantation; and even on the acclivity of the Pentlands, at an elevation of 700 feet above the level of the sea, some lands have recently been rendered arable. The elegant mansion of Lord Dunfermline is the principal seat. The Roman road from York to Carriden, near Abercorn, passed along a section of the parish. In 1666 the Covenanters, marching from the west, spent the night of the 27th November in the village of Colinton; and next day marched toward the Pentlands, and fought in the skirmish of Rullion-Green. The village of Colinton is situated on the water of Leith, near the centre of the parish; and is the site of several extensive paper-manufactories, and of the parish-church. Population of the parish, in 1801, 1,397; in 1831, 2,232. Houses 396. Assessed property, in 1815, £13,886.—Colinton is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patron, Dunlop of Brookloch. Stipend £207 11s. 3d.; glebe £40; unappropriated teinds £207 11s. 3d. Schoolmaster's salary £34 4s. 4½d., with about £25 or £30 of other emoluments. There are, besides the parish school, four schools attended by about 130 children. The parish-church was built in 1771, repaired in 1817, and enlarged in 1837. It is situated about a mile from the nearest, and upwards of $2\frac{1}{2}$ from the remotest limit of the parish; and it is now comfortable and commodious, containing sittings for about 660 persons. In the small

village of Slateford, on the verge of the parish, at its northern angle, is a United Secession place of worship, erected in 1784, containing sittings for 520, and noted as the scene of the early pastoral labours of the late Dr. John Dick. See SLATEFORD.

COLL, one of the western isles annexed to Argyleshire, and making part of the parish of Tiree. It lies off the western coast of Mull, and is divided from Tiree by a narrow sound. It is about 14 miles in length, and $2\frac{1}{2}$ in breadth, on an average; containing 9,999 acres. Assessed property, in 1815, £7,068. Two-thirds of this extent are hills, rocks, shifting-sands, lakes, and morasses; the other third is pasture, meadow, or corn land. Its surface is diversified with eminences, and covered with a very thin stratum of earth, which in many places is wanting, so that a grey, stony surface, without herbage of any kind, presents itself to the eye; but in other quarters the sandy soil is covered during spring and summer with an enamelled carpet of brilliant and odorous plants. Coll abounds with shallow lakes, of which several contain trouts and eels. Rabbits are very numerous. There are a great many black cattle fed on the island, 200 head of which are annually exported. The inhabitants employ themselves chiefly in fishing and agriculture. Population, in 1801, 1,162; in 1834, 1,450. Houses, in 1831, 236.—A district church was built here about 37 years ago; sittings 250. Service is here performed in Gaelic by the assistant-minister, who is appointed by the minister of the parish, with consent of the proprietor of Coll. Stipend £62 2s. There is also a catechist officiating in the island. The Gaelic society have an itinerating school here, and the General Assembly and Society for propagating Christian knowledge, have each also schools here.—Dr. Johnson visited Coll during his tour in Scotland, and seems to have been much satisfied with his entertainment. This account of the island is curious, and is here quoted as illustrative, when compared with the memoranda of more recent tourists, of the progress of the western isles:—"We were at Coll," says he, "under the protection of the young laird, without any of the distresses which Mr. Pennant, in a fit of simple credulity, seems to think almost worthy of an elegy by Ossian. Wherever we roved, we were pleased to see the reverence with which his subjects regarded him. He did not endeavour to dazzle them by any magnificence of dress; his only distinction was a feather in his bonnet; but, as soon as he appeared, they forsook their work, and clustered about him; he took them by the hand, and they seemed mutually delighted. He has the proper disposition of a chieftain, and seems desirous to continue the customs of his house. The bagpiper played regularly when dinner was served, whose person and dress made a good appearance, and he brought no disgrace upon the family of Rankin, which has long supplied the lairds of Coll with hereditary music. Life is here, in some respects, improved beyond the condition of some other islands. In Skye, what is wanted can only be bought, as the arrival of some wandering pedler may afford an opportunity; but in Coll there is a standing shop, and in Mull there are two. A shop in the islands, as in other places of little frequentation, is a repository of every thing requisite for common use. Mr. Boswell's journal was filled, and he bought some paper in Coll. To a man that ranges the streets of London, where he is tempted to contrive wants for the pleasure of supplying them, a shop affords no image worthy of attention; but in an island it turns the balance of existence between good and evil. To live in perpetual want of little things, is a state not indeed of torture, but of constant vexation. I have in Skye had some difficulty

* The ancient name was Hailse, from the plural of a Celtic word which signifies a mound or hillock. A gentleman's residence on the site of the old church retains the name.

to find ink for a letter; and if a woman breaks her needle, the work is at a stop. As it is, the islanders are obliged to content themselves with succedaneous means for many common purposes. I have seen the chief man of a very wide district riding with a halter for a bridle, and governing his hobby with a wooden curb. The people of Coll, however, do not want dexterity to supply some of their necessities. Several arts which make trades, and demand apprenticeships in great cities, are here the practices of daily economy. In every house candles are made, both moulded and dipped: their wicks are small shreds of linen-cloth. They all know how to extract from the cuddy-fish oil for their lamps. They all tan skins and make brogues. Of taxes here is no reason for complaining; they are paid by a very easy composition. The malt-tax for Coll is 20s.; whisky is very plentiful; there are several stills in the island, and more is made than the inhabitants consume. The great business of insular policy is now to keep the people in their own country. As the world has been let in upon them, they have heard of happier climates and less arbitrary government; and if they are disgusted, have emissaries among them ready to offer them land and houses as a reward for deserting their chief and clan. Many have departed both from the main of Scotland and from the islands; and all that go may be considered as subjects lost to the British crown; for a nation scattered in the boundless regions of America resembles rays diverging from a focus; all the rays remain, but the heat is gone; their power consisted in their concentration; when they are dispersed they have no effect. The inhabitants of Coll have not yet learned to be weary of their heath and rocks, but attend their agriculture and their dairies without listening to American seducements. The disposition to pompous and expensive funerals—which has at one time or other prevailed in most parts of the civilized world—is not yet suppressed in the islands, though some of the ancient solemnities are worn away, and singers are no longer hired to attend the procession. Nineteen years ago, at the burial of the laird of Coll, were killed 30 cows, and about 50 sheep. Mr. Maclean informed us of an old game, of which he did not tell the original, but which may perhaps be used in other places where the reason of it is not yet forgot. At New-year's eve, in the hall or castle of the laird, where, at festal seasons, there may be supposed a very numerous company, one man dresses himself in a cow's hide, upon which other men beat with sticks. He runs with all this noise round the house, which all the company quit in a counterfeited fright; the door is then shut. At New-Year's eve there is no great pleasure to be had out of doors in the Hebrides. They are sure soon to recover from their terror enough to solicit for re-admission; which, for the honour of poetry, is not to be obtained but by repeating a verse, with which those that are knowing and provident take care to be furnished.—Very near the house of Maclean stands the castle of Coll, which was the mansion of the laird till the house was built. It is built upon a rock, as Mr. Boswell remarked, that it might not be mined. It is very strong, and having been not long uninhabited, is yet in repair. On the wall was, not long ago, a stone with an inscription, importing, 'That if any man of the clan of Maclonich shall appear before this castle, though he come at midnight with a man's head in his hand, he shall there find safety and protection against all but the king.' This is an old Highland treaty made upon a very memorable occasion. Maclean, the son of John Gerves, who recovered Coll, and conquered Barra, had obtained, it is said, from James II., a grant of the lands of Lochiel, forfeited, I suppose,

by some offence against the state. Forfeited estates were not in those days quietly resigned; Maclean, therefore, went with an armed force to seize his new possessions, and, I know not for what reason, took his wife with him. The Camerons rose in defence of their chief, and a battle was fought at the head of Loch Ness, near the place where Fort-Augustus now stands, in which Lochiel obtained the victory, and Maclean, with his followers, was defeated and destroyed. The lady fell into the hands of the conquerors, and being found pregnant, was placed in the custody of Maclonich, one of a tribe or family branched from Cameron, with orders, if she brought a boy, to destroy him, if a girl, to spare her. Maclonich's wife, who was with child likewise, had a girl about the same time at which Lady Maclean brought a boy; and Maclonich, with more generosity to his captive than fidelity to his trust, contrived that the children should be changed. Maclean being thus preserved from death, in time recovered his original patrimony; and, in gratitude to his friend, made his castle a place of refuge to any of the clan that should think himself in danger; and, as a proof of reciprocal confidence, Maclean took upon himself and his posterity the care of educating the heir of Maclonich. This story, like all other traditions of the Highlands, is variously related; but, though some circumstances are uncertain, the principal fact is true. Maclean undoubtedly owed his preservation to Maclonich; for the treaty between the two families has been strictly observed; it did not sink into disuse and oblivion, but continued in its full force while the chieftains retained their power. The power of protection subsists no longer; but what the law permits is yet continued, and Maclean of Coll now educates the heir of Maclonich. There still remains in the islands, though it is passing fast away, the custom of fosterage. He who lives in Coll, and finds himself condemned to solitary meals and incommunicable reflection, will find the usefulness of that middle order of tacksmen, which some, who applaud their own wisdom, are wishing to destroy. Without intelligence man is not social, he is only gregarious; and little intelligence will there be, where all are constrained to daily labour, and every mind must wait upon the hand." From hence the travellers were conducted by the young laird of Coll to Mull, Ulva, and Sir Allan Maclean's at Inch-Kenneth. Dr. Johnson adds: "We now parted from the young laird of Coll, who had treated us with so much kindness, and concluded his favours by consigning us to Sir Allan. Here we had the last embrace of this amiable man, who, while these pages were preparing to attest his virtues, perished in the passage between Ulva and Inch-Kenneth."

COLLACE, a parish in Gowrie, on the north of the Sidlaw hills, in the shire of Perth. It is bounded on the north by the parish of Cargill; on the east by the parishes of Cargill and Abernethy; on the south by the parish of Kinnaird, and an isolated portion of the shire of Angus; and on the west by the parish of St. Martin's. It is somewhat upwards of 2 miles in length, and about the same in breadth; and contains an area of nearly 5 square miles. The northern division is flat, and consists, in some parts, of a light black loam, and in others, of sandy and mossy tracts. The southern division is a rapid acclivity, and rises into a section of the Sidlaw hills of considerable elevation. These hills, with the exception of Dunsinnan, are covered with heath: yet, in their northern declivity, they, in some places, are under culture, and in others, afford tolerable pasturage. All the ground in the lowlands of the parish is in a state of the highest cultivation. [See DUNSINNAN.] In the parish are the villages of

Collace and Kinrossie. Two considerable markets were formerly held in the latter of these; but the village is now nearly abandoned by trade, and is tenanted chiefly by weavers, and retains only its ancient market-cross to tell of its departed importance. Population of the parish, in 1801, 562; in 1831, 730. Houses 141. Assessed property, in 1815, £2,306.—Collace is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend £155 15s. 1d.; glebe £15. Unappropriated teinds £68 11s. 5d. Schoolmaster's salary £34 4s. 4½d., with about £30 10s. of other emoluments. Collace was formerly a rectory. The present church is a fine Gothic structure, erected in 1813, standing on an elevated spot, surrounded with plantation, and containing sittings for upwards of 400 persons.

COLLESSIE,* a parish on the north side of 'the Howe' or vale in the centre of Fifeshire. It is bounded on the north by a detached part of the parish of Newburgh, and by the parishes of Abdie and Monimail; on the east by the parishes of Monimail and Cult; on the south by the parish of Kettle; and on the west by the parishes of Falkland and Auchtermuchty, and a detached part of the parish of Abernethy. Its extreme measurement is 8 miles in length, and about 5 miles in breadth. The southern division is remarkably flat, very various in soil, and entirely free from stones, great or small. The northern and north-western divisions slope upwards towards a range of heights which form the boundary, and having a fine southern exposure and a good deep soil upon a whinstone bottom, are in a state of high cultivation, and extremely fertile. The central division is in general light and sandy, and is covered to the expanse of several square miles with fir-plantations; and though, on account of its timber, far from being valueless, has resisted assiduous attempts to bring it into an improved state. In 1740, Rossie loch, a sheet of water covering upwards of 300 acres, was drained; and its bed is now excellent meadowland and pasturage. The river Eden runs for about 3 miles along the margin of the parish, flowing from west to east, and dividing it from the parishes of Falkland, Kettle, and Cults. It abounds with fine trout, but is never here more than 25 feet broad. Both here and farther on its course, it gives name to the strath which forms its basin, and glides noiselessly along through 'the Howe of Fife.' Formerly, in spring and autumn, it used to overflow its banks, and do considerable damage; but about 1787 it was diverted along into a straight channel, so as to offer no repetition of injury to the adjacent property. Excellent whinstone is found in the parish, and extensively used in building; sandstone, though found, is not worked; and marl, both shell and clay, is abundant. The climate is remarkably salubrious. Not far from the village, on the west, are the remains of two castles, supposed to have been erected for securing the pass from Newburgh to central Fifeshire. Near the eastern one, which was anciently encompassed by a ditch, have been found coins of Edward I. of England, struck in mints at London, Canterbury, and York, as well as an urn containing human bones, and various relics of antiquity. Among the eminent men connected with Collessie, were Sir James Melville, who figured as a courtier in the reign of Mary, and was the proprietor of an estate in this parish,—and Dr. Hugh Blair, who commenced his ministry here, and was inducted to it in September, 1742. The village of Collessie is situated about

a mile south of the northern angle of the parish, a little northward of the road from Auchtermuchty to Cupar. It is a confused agglomeration of thatched houses, and a place of small importance. About a mile to the west of it is the modern hamlet of Trafalgar inn. Population of the parish, in 1801, 930; in 1831, 1,162. Houses 242. Assessed property, in 1815, £6,490.—Collessie is in the presbytery of Cupar and synod of Fife. Patron, Johnston of Lathrisk. Stipend £223 4s. 9d.; glebe £15. Unappropriated teinds £367 18s. 4d. Schoolmaster's salary £35 12s. 10½d., with about £30 of other emoluments. There are three schools besides the parish school. Collessie was formerly a vicarage. The parochial church is a very old building.

COLLISTOWN and OLD-CASTLE, two adjacent fishing-villages in Aberdeenshire, in the parish of Slains, containing together about 430 inhabitants.

COLMONELL, a parish in the district of Carrick, Ayrshire; bounded on the north by the frith of Clyde; on the east by Girvan and Bar; on the south by Minnigaff, Penningham, and Kirkcowan; and on the west by Ballantrae. It is 19½ miles in length, and on average 6 in breadth. From the sea, for 4 miles inland, the surface is hilly; the rest of the parish, though elevated, is pretty level. The soil is thin and light; on the banks of the Stinchar, and some of its tributary streams, it is loamy and fertile. Assessed property, in 1815, £9,029. There are several small lakes. One of the hills, called Knockdolian, rising in a conical shape to a considerable height, is a conspicuous landmark to vessels when they enter the frith of Clyde. A great part of the parish is enclosed, and agriculture is now much attended to. The village of Colmonell is a neat thriving place, with four annual fairs. Population 300. It is on the north bank of the Stinchar; 5 miles above Ballantrae.—Craignell is a fine ruined fortalice of the 13th century. There are a number of ancient forts and cairns, concerning the erection of which tradition itself does not even hazard a conjecture.—Population, in 1801, 1,306; in 1831, 2,213; of whom 1,619 belonged to the Establishment. Houses in 1831, 402.—This parish is in the presbytery of Stranraer, and synod of Galloway. Patron, the Duchess de Ovigny. Stipend £256 18s. 9d.; glebe £15. Unappropriated teinds £260 16s. 11d. Church built in 1772; sittings 500.—There is a Reformed Presbyterian congregation in the village; and a chapel in connexion with the Establishment at the village of Barrhill, which is nearly in the centre of the parish, with a population of 100; also an Original Seceder congregation, established about 1760; church built in 1800. Stipend £50, with a manse and garden.—Schoolmaster's salary £34 12s. 4½d., with about £20 fees. There are 5 private schools.

COLONSAY, one of the Hebrides, belonging to Argyshire. As it is separated from Oronsay only by a narrow sound, which is dry at low water, we may almost consider these two as one island. They lie nearly 9 miles north by west of the northern extremity of Islay; and from the south end of Oronsay to the north end of Colonsay, are 12 miles long, and from 1 to 3 broad. The surface is unequal, having a considerable number of rugged hills covered with heath; but none of the eminences deserve the name of mountains. They contain about 9,000 acres, of which 3,000 are arable. The soil is light, and along the shore it inclines to sand, producing early and tolerable crops. "The first sight of Colonsay is very unpromising, and would not lead a traveller to expect the fertile and pretty extensive valleys which he meets with in traversing the island. Although there are no hills of any consequence, or which exceed an elevation of 800 feet above the level of the

* The ancient as well as the modern name, so far as can be ascertained, is Collessie, and appears to have been derived from the Gaelic; *Col*, in that language, signifying a bottom, and *lessie*, a den, or hollow; and the village of Collessie being situated at the bottom of a glen.

sea, yet their tops are bare and weather-beaten, and convey the idea of hopeless barrenness and desolation. These hills are scattered irregularly over the island; and, in fact, it is from the decomposition of their materials that the soil of the valleys is formed, and it is their shelter which affords warmth and fertility to the cultivated grounds. The soil is various. In some parts, especially at the two extremities, and in some bays on the west side, it is light and sandy; then alternates with moorish or mossy ground, clay, gravel, loam, or till; but, as Dean Monroe says, it is 'ane fertile isle' upon the whole, and has of late years by good management made a conspicuous figure among the improved Hebrides. Black talc—the Mica lamellata, *Martialis nigra* of Cronsted—is found here, both in large detached flakes, and immersed in indurated clay; also rockstone formed of glimmer and quartz; and an imperfect granite is not unfrequent. The dip of the rocks is from south-west to north-east, as is very often the case in the adjacent isles." [Macdonald's 'General View of the Hebrides,' London, 1811, 8vo., p. 640.] The breed of cattle is excellent. Near the centre of Colonsay is a fresh water loch called Loch Fad. The remains of several Romish chapels are to be seen in Colonsay, where was also a monastery of canons regular of St. Augustine, founded by the Lord of the Isles, who brought the monks from Holyroodhouse. The remains of the abbey were taken down some years ago in erecting a farm-house. The priory of this monastery, the walls of which—about 60 feet by 18—are still standing, is in Oronsay; and, next to Icolmkill, is esteemed the finest relic of religious antiquity in the Hebrides. The remains of these ruins are very interesting, but no accounts are remaining of their revenues or establishments. Martin says: "There is an altar in this church, and there has been a modern crucifix on it, in which several precious stones were fixed; the most valuable of these is now in the custody of Mac-Duffie, in Black Raimused village, and it is used as a catholicon for diseases. There are several burying-places here, and the tombstones, for the most part, have a two-handed sword engraven on them. On the south side of the church within, lie the tombs of Mac-Duffie, and of the cadets of his family; there is a ship under sail, and a two-handed sword engraven on the principal tombstone, and this inscription, 'Hic jacit Malcolumbus Mac-Duffie de Collonsay: his coat-of-arms and colour-staff is fixed in a stone, through which a hole is made to hold it. There is a cross at the east and west sides of this church, which are now broken; their height was about 12 feet each: there is a large cross on the west side of the church, of an entire stone, very hard; there is a pedestal of three steps, by which they ascend to it; it is 16 feet high, and a foot-and-a-half broad. There is a large crucifix on the west side of this cross; it has an inscription underneath, but not legible, being almost worn off by the injury of time; the other side has a tree engraven on it. About a quarter of a mile on the south side of the church there is a cairn, in which there is a stone cross fixed, called Mac-Duffie's cross; for when any of the heads of this family were to be interred, their corpses were laid on this cross for some moments, in their way toward the church. The natives of Collonsay are accustomed, after their arrival in Oronsay isle, to make a tour sunways about the church, before they enter upon any kind of business. My landlord having one of his family sick of a fever, asked my book, as a singular favour, for a few moments. I was not a little surprised at the honest man's request, he being illiterate: and when he told me the reason of it, I was no less amazed, for it was to fan the patient's

face with the leaves of the book: and this he did at night. He sought the book next morning, and again in the evening, and then thanked me for so great a favour: and told me, the sick person was much better by it; and thus I understood that they had an ancient custom of fanning the face of the sick with the leaves of the Bible." Population, in 1801, 805; in 1831, 893.—These islands are parochially connected with Jura, and are under the charge of an assistant-minister in Colonsay. Church built in 1802; sittings 400. Stipend £50. There is a school of the society for propagating Christian knowledge, attended by about 50 children.

COLONSAY (LITTLE), a small island of the Hebrides, situated betwixt Staffa and Gometra. It in many places exhibits specimens of basaltic pillars similar to those of Staffa, and is inhabited by one family, who look after a few sheep.

COLVEND,* a parish on the coast of Kirkcudbrightshire. It is of an irregular elliptical figure; and forms on the south a sort of peninsula, protruding, from the boundary waters of the Urr and the Southwick, onward into the sea. It is bounded on the north, by the parishes of Kirkgunzeon and Newabbey; on the east by the parish of Kirkbean; on the south-east, south, and south-west, by the sea; and on the west by the estuary and the parish of Urr, and the parish of Kirkgunzeon. Its greatest length, from Thorter-Fell on the north to Castle-Hill Old Fort on the south, is nearly 9 miles; and its greatest breadth, from Torrorie meeting-house on the east to the confluence of Shennan creek and Urr water on the west, is $7\frac{1}{2}$ miles. The surface is extremely rough and irregular; and is in general wild, hilly, and merely pastoral. Much labour has been employed to overcome the obstacles of heath and rock; and, meeting occasionally with a good substratum of soil, it has been rewarded in the subjugation of valuable patches to the plough. But a constant undulation of rugged hills seems to forbid extensive improvement. Along the northern verge the heights are considerably elevated, and form summits of the range which terminates in the far-seeing mountain of Criffel, at the northern limit of the continuous parish of Kirkbean. The sea-coast is extremely bold and rocky, rising up in almost perpendicular precipices, and presenting a variety of grand and magnificent views. The sea or Solway frith, which intervenes between it and Cumberland, is here 9 or 10 miles wide. When the tide ebbs, it leaves dry a large tract of flat sand, from which may be viewed, along the coast, high and pointed spires, perforated at the base with natural tunnels: there may also be seen spacious amphitheatres, and entrances to caverns so spacious as to have been hitherto unexplored. Toward the east, however, approaching the mouth of Southwick water, the coast becomes entirely flat. Urr water, so far as it bounds the parish, is an estuary; being 3 furlongs broad where it comes in contact with it, and 2 miles where it leaves it for the sea. See URR. Shennan creek rises within the limits of the parish, and, near its source, begins to form the boundary line, for one mile, till its confluence with the Urr. Southwick water, receiving a number of tributaries which flow from the northern heights of the parish, and traverse its central district, forms, for a considerable way, its boundary on the east. Other streams, of small size and local origin, intersect the district from north to south, and flow into the sea. There are, in the western division, 5 lakes, 3 of which are severally

* The ancient name appears to have been Culwen,—derived from Joannes de Culwen, the ancestor of the family of Curver in Cumberland, who married a daughter of the Stuarts, Lords of Galloway.

about half-a-mile in length. Colvend, according to tradition, was once a continuous forest; and it is still tufted, in some spots, with natural wood, as well as with recent plantation. At Fairgarth, near the centre of the parish, is a copious spring of excellent water, arched over, and called St. Laurence well; and near it are the vestiges of a chapel, surrounded by a burying-ground, now occupied as a barn-yard. At the south-west corner of the parish, on a lofty promontory, are traces of what appears to have been a Danish fort, the fosse of which is still very apparent. Population, in 1801, 1,106; in 1831, 1,358. Houses 262. Assessed property, in 1815, £5,600.—Colvend is one of 10 parishes which, though within the shire of Kirkcudbright, are in the presbytery, synod, and commissariat of Dumfries. Patron, the Crown. Stipend £234 14s. 6d.; glebe £20. Unappropriated tithes £234 14s. 6d. There are 2 parochial, and 2 private schools. The first parochial schoolmaster's salary is £31 6s. 6 $\frac{1}{2}$ d., with about £30 fees; and that of the second, £20, with about £17 or £18 additional emoluments. The suppressed parish of Southwick is incorporated with Colvend, and sometimes occasions the united parishes to be designated Colvend and Southwick. It formed the eastern division of the district. Though the ruins of its church still exist in a very romantic small strath about a mile north-west of the embouchure of Southwick water, not a tradition remained, even before the close of last century, of any circumstance relating to it as a separate charge. The present parochial church is situated about a mile from the south-west limit of the parish, and is large and commodious. Colvend was formerly a vicarage; but Southwick church belonged to the Benedictine nunnery of Lincluden.

COLZEAN CASTLE—sometimes written Culzean or Cullean—a noble mansion in the parish of Kirkoswald, the seat of the Marquess of Ailsa, founded by David, 10th Earl of Cassillis, in 1777. This noble castellated edifice is situated upon a basaltic cliff projecting into the sea, of about 100 feet in height, and almost perpendicular. The plan and design were by Robert Adam; and such is the style of the architecture, the execution of the work, and the beauty of the stone, that, more than any other building in Ayrshire, it impresses the mind with ideas of elegance, order, and magnificence. At a short distance from the castle stand the stables and farm-houses, planned by the same architect, and executed upon the same scale. The entire buildings, with the bridge of approach to the castle, cover four acres of ground. The castle commands, from the principal apartments, a delightful prospect of the whole frith of Clyde, with a full view of the rock of Ailsa. On the land side, and immediately below the castle, are the fine gardens belonging to the old house of Colzean, formed in three terraces, and long celebrated for their beauty and productiveness. The remainder of the old gardens has been formed into pleasure-grounds and gravel walks, which are kept with great care. Round the castle, and the adjoining buildings, lies an extensive policy of about 700 acres, interspersed with ancient trees and thriving plantations. Near to the castle, and immediately under some of the buildings, are the Coves of Colzean. These coves or caves are six in number. Of the three towards the west, the largest has its entry as low as high water mark; the roof is about 50 feet high, and has the appearance as if two large rocks had fallen together, forming an irregular Gothic arch. It extends inwards about 200 feet, and varies in breadth. It communicates with the other two, which are both considerably less, but of the same irregular form. Towards the east are the other

three coves, which likewise communicate with each other. They are nearly of the same height and figure with the former. It has been matter of dispute whether these coves are natural or artificial. The largest of the three westmost coves has a door, or entry, built of freestone, with a window three feet above the door, of the same kind of work; and above both these, there is an apartment, from which stones and other missiles might be hurled on the assailants of the door. This last circumstance seems to indicate that at least this part of the coves has been at one period or another the abode of man.

COMRIE, a large parish in the county of Perth, bounded by Killin, a detached part of Weem, and Kenmore on the north; by Monzie, Monievairst, Strowan, and Muthil, on the east; by Muthil, part of Strowan, and Callander on the south; and by Balquhider and Killin on the west. It is about 16 miles long and 12 broad. It consists of the strath at the head of Strathearn, and of four glens, with rivulets which pour their waters into the Earn. The soil in the low grounds is in general light and gravelly; but in some parts, especially in the glens, it is deeper, and swampy. On the sides of the strath, to the east of Lochearn, and even along the loch itself, is a continued ridge of hills, some of them elevated to a great height. The principal rivers are the EARN, and the LEDNOCK: which see. **LOCH EARN** lies wholly within this parish: see also that article. The hilly part is covered with flocks of sheep. Few districts afford more variety of wild Highland scenery than Comrie. There is a good slate-quarry near the forest of Glenartney; and an excellent limestone quarry at the west end of Lochearn. There are the remains of three Druidical temples, and the distinct profile of a Roman camp, occupying 16 acres, in the plain of Dalginross, in the neighbourhood of Comrie.* Near Lochearn, on the north side of the river, is Duneira, an elegant hunting-seat of Viscount Melville. Population, in 1801, 2,458; in 1831, 2,622. Houses 438. Besides the village of Comrie, there are the adjacent villages of Dalginross, with a population, in 1834, of 337; and Ross, with a population of 154; and the village of ST. FILLAN'S: which see.

COMRIE is delightfully situated on the left or north bank of the Earn, near the junction of the Lednock, over which is a substantial stone bridge at this place. It is 6 $\frac{1}{2}$ miles west of Crieff; 12 $\frac{1}{2}$ east of Lochearnhead; and 11 north-east of Callander by Glenartney. It is a thriving place, and consists of a street about two-thirds of a mile in length, a large distillery, and a woollen manufactory; and carries on a considerable trade in cotton weaving. The

* This is supposed by some antiquaries—amongst whom is Gordon—to mark the site of the battle fought betwixt Agricola and Calgacus. "An old translation of Rapin's History of England, says in his notes, that the battle was fought within a mile of the church of Comrie." Mr. Alexander Gordon, an intelligent antiquarian, who examined all the north of Scotland, published his researches in 1726. In this work, he endeavours to prove, that Dalginross-moor was the real field of battle. In plate 5, we have a distinct draught of both camps, especially of the largest. How much the inundations of the Ruchill have diminished the other, cannot now be fully ascertained; but nearly one-half seems to have been taken away. No place in the Highlands of Scotland could be more fit for a great and general engagement, than that extensive plain, which tradition still points out as the scene of a bloody battle. Tacitus says, that Agricola placed the legions before the trenches, thinking it would mightily add to his glory, if he could gain a victory without the effusion of Roman blood. Gordon thinks that 8,000 foot, and 3,000 horse, were encamped in Dalginross; and he declares, that the two camps would exactly contain that number. The same historian asserts, that 10,000 fell on each side; that Agricola retired with his army to Angus (Fife). But, under whatever circumstances, it is certain no Roman general or army ever visited the moor of Dalginross a second time." [From Sketches in MS. by the late Rev. Mr. M'Diarmid of Comrie.] Pennant also has given a plan and description of this camp.

parish-church is a large and handsome building, with a lofty spire. Population, in 1834, 978. There are here a savings bank and subscription library. It has five annual fairs, viz. on 3d Wednesday in March, 2d Wednesday in May and July, 8th November, and 1st Wednesday in December. There is a fine granite obelisk, 72 feet in height, erected to the memory of the late Lord Melville on Dunmore, in the neighbourhood of this village.—This parish is in the presbytery of Auchterarder, and synod of Perth. It comprises the old parishes of Comrie and Dundurn, the greater part of Tulliekettle, together with portions of Muthil, Monievairst, and Strowan, which were annexed in 1702 by the commission of teinds. At the same time a portion of the parish was annexed, *quoad sacra*, to Balquhider. Patron, the Crown. Stipend £250 9s. 1d.; glebe £15 10s. Church built in 1804; sittings 1,026. There is a chapel-of-ease at Dundurn, which was rebuilt in 1770, and renovated in 1834; sittings 400. It is 7 miles distant from the manse. The minister has a salary of £60. English is the language most generally understood in this parish; but there are Gaelic services at both the church and chapel.—There is a United Secession church at Comrie, with sittings for 500. Minister's stipend £90, with manse and garden. Schoolmaster's salary £34 12s. 4½d., with about £45 fees. There were 8 private schools in 1834.

The village of Comrie enjoys the unenviable distinction of being more frequently visited by earthquakes, and subterranean noises and convulsions, than any other spot in the British isles. The greatest shock ever experienced here occurred on the evening of October 23d, 1839, about 14 minutes past 10 o'clock. It was felt over a great part of the island, but nowhere so violently as at Comrie and the adjacent districts. A reporter at Monzie—a gentleman's seat a few miles from Comrie—thus describes what was experienced at that place and its neighbourhood:—"At thirteen minutes past ten in the evening we heard a sound like that of a numerous body of cavalry approaching at full gallop along a grassy sward. When this had continued a few seconds, we felt two or more abrupt concussions, as if a solid mass of earth had struck against a body more ponderous than itself, and rebounded. The rattling of furniture combined with the subterranean thunder, and the reeling of what we had hitherto deemed *terra firma*, communicated at this moment a feeling of the terrific that must have made the stoutest heart quail. The sound passed off as before, far to the east, carrying fear into other districts. In a number of houses the bells rang; one house of three stories, situated in Crieff, has been rent from the chimney-top half-way down the gable; and we have heard that a number of corn-stacks have been thrown down. At Comrie the consternation was such that the people ran out of their houses, and, late as was the hour, many assembled for prayer in the Secession meeting-house, where religious exercises were continued until 3 in the morning. There was a second shock at 20 minutes to 11 o'clock; and a third somewhat later, but both inferior to the first." Mr. David Mylne, in a paper read before the Royal Society of Edinburgh, states that this shock was perceived in all the central and southern parts of Scotland, and extended to the north, as far as Dingwall on the east coast, and Appin on the west; and that it, as well as several preceding shocks, emanated from one central point situated about 2 miles north-west of Comrie. There appeared to have been probably two undulations, and certainly one consisting of an interior swell and a posterior hollow, which caused houses situated on soft or hollow ground to

rock like boats on the swell of the sea. The velocity of the undulation must have been immense, as it occurred throughout the whole country to which it reached at one and the same instant. Houses situated on rock were not so sensibly affected, and the shocks were in all cases felt more in the upper than in the lower flats. The shocks were transmitted to greater distances in the direction of east-north-east from Comrie than in other directions. Mr. Mylne is of opinion that these phenomena are caused by fractures or ruptures in the earth's crust at a great depth. He considers that the phenomena can be better explained on this assumption, than by supposing—as many philosophers do—that the earth's crust is floating on molten lava. The vibrations caused by those subterranean ruptures, would rise vertically as well as obliquely upwards, and create at some places the sensation of the shock coming directly from below, and at others of its moving forward along the surface. As to the cause of these ruptures, and their frequent occurrence near Comrie, Mr. Mylne is of opinion that the earth's crust is there intersected by great lines of fractures; that these lines are nearly parallel east-north-east; and that there have been frequent outbursts of igneous rocks in them. It appeared that for a month before the commencement of the earthquakes, and for some time after they were perceived, an almost unprecedented quantity of rain had fallen in Perthshire, notwithstanding which it was observed of the Earn, the Airdle, and other streams near Strathearn, that they were not flooded as might have been expected. The fact of these earthquakes being in some way connected with the rain is rendered probable by the fact that, in former years, they have been almost always preceded by rainy weather, and it is known that if water has percolated to the depth of one mile and a-half into the earth's crust, it will, in consequence of the subterranean heat, generate steam which might cause ruptures. It was further shown, that for a month before the commencement of the earthquakes, the atmospherical pressure was less than it had been for several years; whereby any volcanic forces beneath would be enabled to press or push towards the earth's crust with unusual effect, and thus facilitate the percolation of water in its fissures.—Another but apparently less tenable theory of these phenomena has been propounded by an ingenious resident in Comrie, Mr. James Drummond. He is of opinion that the central point from which the various shocks have hitherto appeared to proceed is on the banks of the Lednock, a little to the north of Comrie, at a place where considerable excavations have been made, and from which a quantity of the stones—with which the village of Comrie is built—have been taken. According to Mr. Drummond, the earthquakes are intimately connected with the overflowing of the Lednock, and, in particular, are dependent on the circumstance of the spot which he considers the centre of the shocks being laid under water. He states that the commencement of the earthquakes towards the end of last century corresponds with the time at which the excavations on the spot in question had been brought to a level with the stream, and were immediately preceded by a considerable flood. So far as he has been able to learn, every earthquake which has taken place here has been preceded by floods. This was the case as to the earthquakes of 1839. It was the case in those which took place about 12 years ago; and it was also the case in the first earthquakes with which the village was visited. His idea is, that the power which occasions the earthquake is of the nature of galvanism; and in order to prove his point, he states that the rocks at the point

where the excavations already referred to, have been made, are composed of large blocks of granite, separated by a sandy porous substance, and are placed over each other exactly after the manner of a galvanic pile. The only way, therefore, in which the water of the flood can produce the extraordinary effects which have been lately experienced, Mr. Drummond maintains, is by supposing that the water, after sinking into the porous veins, converts the entire mass of the rock into one immense galvanic battery, which, by and by, becoming fully charged, gives forth shocks powerful enough to shake the whole country around.

CON (LOCH), or **CHON,** a lake in the parish of Aberfoyle, forming one of the series of lochlets, in the vale of Aberfoyle, which discharge their waters into Loch Ard. It is about 2 miles to the west of Upper Loch Ard. Its length is somewhat more than 2 miles; and its breadth about 1. It is bounded on the south by a precipitous mountain, finely fringed towards the west with aged birches, and on the north with woods of ash and oak. There is a heronry on a small island in this lake.

CONAN (THE), a river in Ross-shire, which rises in a small lake called Loch Chroisk or Chroisg, in the parish of Contin, about 35 miles north-west of its mouth. It flows eastwards from its source through Strathbran; and after receiving the Gradie from Loch Fannich, flows into Loch Luichart or Lichart; issuing thence, it is precipitated over a ledge of rock, and flows in a south-east direction, and receives the Meig or Meag flowing from Loch Benachan north-eastwards through Strathcoran; 5 miles below this it receives, on the north side, the Garve, which rises on the confines of Lochcross, and flows east-south-east; 2½ miles east of its junction with the Garve, while sweeping in a semicircular form round the finely-wooded grounds of Castle-Brachan, it receives the Orrin from the south-west; and then turning north, at Conan house, flows into the western extremity of the frith of Cromarty. Its breadth at its mouth is about 50 yards, but it is comparatively shallow here, although throughout much of its course it is a deep dark-coloured stream. The Conan is a fine trouting-stream, and there are valuable salmon-fisheries upon it. All the Strathbran lakes—which are very numerous—are celebrated for the sport which they afford to anglers. In the Conan is found the river-mussel, the *Mya margaritifera* of Linneus; and fine pearls have occasionally been obtained from them.

CONAN (BRIDGE OF), a village 2½ miles south of Dingwall: so named from a stone bridge of five arches, with a water-way of 265 feet, which was here erected over the Conan by the parliamentary commissioners in 1809, at an expense of £6,854; and over which the road from Beaully to Dingwall is carried.

CONNAL FERRY, a narrow channel of Loch-Etive; 3 miles from Dunstaffnage. A ridge of rugged and uneven rocks here runs across two-thirds of the channel, and occasions, at certain periods of the ebbing or flowing tide, such a rapid current that no vessel even with a fresh breeze can stem it. In the beginning of the flood, the tide runs up with great rapidity, and Loch-Etive being at once swelled with the spring-tide from the ocean, and the water of Loch-Awe, as soon as the former begins to ebb, discharges itself with a violence and noise unequalled by the loudest cataract, and which may be heard at the distance of many miles. This celebrated fall of salt water seems to be alluded to by Ossian:—

“These are not thy mountains, O Nathos!
Nor is that the roar of thy climbing waves.

The ferry of Connal, though in appearance very formidable, is safe, owing to the skill of the boatmen.

CONNICAVEL. See **EDENKELLIE.**

CONTIN,* a parish in the centre of Ross-shire. It is bounded on the north by Lochbroom; on the east by Urray and Fodderty; on the south by Kilmorack and Urray; and on the west by Gairloch and Lochcarron. It measures, along the parliamentary road which passes through it, 33 miles; and it is supposed to be little less in breadth; so that, as to extent of area, it is one of the largest parishes in Scotland. It is, in general, mountainous and barren; yet imbosoms numerous glens and valleys, which are well-watered, and, though of light and shallow soil, are in good cultivation. The principal streams are the Conan, the Meig, and the Rasay, which rise near the western or north-western verge of the parish, and all traverse it eastward, to make a junction, and fall, under the name of the Conan, into Cromarty frith, a few miles from the town of Dingwall: See **CONAN.** Perennial springs are abundant; and several are strongly impregnated with iron. Lakes are numerous,—most of them mossy in their waters, but all abounding with fish. Loch Fannich is 12 miles long, and 1 broad; Loch Chroisg, 5 miles long, and 1 broad; Loch Luichart, 6 miles long, and ½ mile broad. Loch Achilty is about 2 miles in circumference, pure in its waters, very deep, and discharging its surplus contents by a subterranean canal into the river Rasay, about a mile to the north-east. In this lake is an artificial island, accessible by a drawbridge, and formerly the site of a house and garden, which were used as a retreat from danger. Loch Kinellan has also an artificial or floating island, buoyant on a timber base, where formerly the family of Seaforth had a fortified residence; and it contrasts the green cultivated field on one of its sides very picturesquely with the wild upland scenery on the other. At one period, natural plantation appears to have covered the greater part of this parish; and even yet it exists in considerable patches. All the straths are subject to wasteful inundations; and the climate, though generally mild and dry, is insalubrious. On the eastern bank of Loch Achilty is a Druidical temple, or circle of stones; and a quarter of a mile to the east of Loch Kinellan is a place called *Blar' na'n Ceann*, or ‘the field of heads,’ where there was a fierce conflict between the Mackenzies of Seaforth, and the Macdonnells of Glen-garry,—the Macdonnells having made an inroad to revenge some old quarrel, and being routed and pursued with great slaughter by the Mackenzies, and eventually driven headlong into the water and drowned at the confluence of the Conan and the Rasay. On the farm of Kinellan is an echo which repeats distinctly an entire sentence, and is believed to be unequalled, except by an echo in Wales, and another in Staffa: see **STAFFA.** At Coul, in the eastern section of the parish, is an elegant mansion, the seat of Sir George Mackenzie, Bart., built in 1821, and surrounded by a beautiful well-wooded demesne. At Contin inn, on the Rasay, fairs are held on 13th January, O. S.; on 23d May, O. S.; and on 23d August, if a Wednesday, if not, on the Wednesday after; and here there is a ferry across the river; and about 3 miles to the west, at a place called Little Seatwell, is a ferry across the Conan.—Population, in 1801, 1,944; in 1831, 2,023. Houses 430. Assessed property, in 1815, £3,481.—

* The name is supposed to be derived from the Gaelic *Continn*, signifying ‘the Meeting of the waters,’ and alluding to the forkings of the river Rasay which here form a small island inamemorably the possession and residence of the parish-minister.

Contin, formerly a vicarage, is in the presbytery of Dingwall, and synod of Ross. Patron, the Crown. Stipend £265 6s. 7d.; glebe £16. Schoolmaster's salary £80, with about £10 fees. Besides the parochial school, there is one supported by a society, and another supported by the parishioners. The parochial church, situated about 2 miles from the eastern verge of the parish, is an antiquated, comfortable structure, repeatedly repaired, but continuing to be inconvenient. Two parliamentary churches are in the parish,—one at Ceanloch-Luichart, erected in 1825,—and the other in Strathconnon.

CONVETH. See KILTARLITY.

COPAY, one of the Hebrides, in the shire of Inverness. It constitutes part of the parish of Harris, and is situated in the sound. It is uninhabited.

COPENSAY, or COPINSHA, one of the Orkneys, and part of the parish of Deerness. This island is about a mile long, and half-a-mile broad. In the summer-months, its lofty rocks are covered with wild fowl of various kinds, which, with their eggs and feathers, constitute the principal article of its traffic. Copensay is in N. lat. 58° 55', and W. long. 2° 26'. Population, in 1821, 10; in 1831, 7.

COQUET (THE), a river, whose sources, course, and embouchure, are all in England, but which forms, for about a mile, the south-east boundary line of the parish of Oxnam in Roxburghshire. It rises a little to the south of this parish, in the heights which divide Scotland from England, and afterwards glides along the margin of its southern wing; but it then bends away eastward into Northumberland, and after traversing that county and receiving numerous tributaries, falls into the sea at Alnwick.

COREHOUSE. See THE CLYDE.

CORGARF, or CURGARF, a wild mountainous district in the upper part of the parish of Strathden, about 8 or 9 miles in length, and well-known to sportsmen for its excellent shootings. There is a missionary stationed here, who has under his charge about 690 people; a considerable proportion of the inhabitants of the district are Roman Catholics. Church built in 1836; sittings 350. The mission is supported by Royal bounty.—Corgarf castle, supposed to have been originally built by one of the Earls of Mar, is a military station on the road from Edinburgh to Fort-George; 21½ miles distant from Castleton of Braemar. The present erection is a small oblong building of four stories, with wings, and surrounded by a wall. It was purchased by Government from Forbes of Skellater, in 1746. The old castle of Corgarf, which stood on the same site, was burnt by Sir Adam Gordon in 1551, when 27 persons, among whom were the wife and children of Alexander Forbes, perished in the flames:—"Subsequent to this tragical affair, a meeting for reconciliation took place between a select number of the heads of the two houses, in the hall of an old castle in these parts, probably Drimminor. After much argument, the difference being at length made up, and a reconciliation effected, both parties sat down to a feast in the hall, provided by the Forbes's chief. The eating was ended, and the parties were at their drink—the clansmen being of equal numbers, and so mixed, as had been arranged, that, every Forbes had a Gordon seated at his right hand. 'Now,' said Gordon of Huntly to his neighbour chief, 'as this business has been so satisfactorily settled, tell me if it had not been so, what it was your intention to have done.' 'There would have been bloody work—bloody work,' said Lord Forbes—'and we would have had the best of it. I will tell you: see, we are mixed one and one, Forbeses and Gordons. I had only to give a sign by the stroking down of my beard, thus, and every Forbes was to have drawn

the skein from under his left arm, and stabbed to the heart his right hand man;' and as he spoke, he suited the sign to the word, and stroked down his flowing beard. 'God Almighty!' exclaimed Huntly, 'what is this?'—for in a moment a score of skeins were out, and flashing in the light of the pine-torches held behind the guests. In another moment they were buried in as many hearts; for the Forbeses, whose eyes constantly watched their chief, mistaking this involuntary motion in the telling of his story, for the agreed sign of death, struck their weapons into the bodies of the unsuspecting Gordons. The chiefs looked at each other in silent consternation. At length Forbes said, 'This is a sad tragedy we little expected—but what is done, cannot be undone, and the blood that now flows on the floor of Drimminor will just help to sloaken the auld fire of Corgarf!'—Picken's 'Traditionary Stories of Old Families.'

CORKINDALE-LAW, a hill, or range of hills rather, in the parish of Neilston, Renfrewshire, which rises to about 850 feet above sea level, and commands a fine view of the dale and the frith of Clyde.

CORNCAIRN, a village, and burgh-of-barony, in the parish of Ordiquhill, Banffshire. The Cornhill markets are held in the neighbourhood of this village.

CORPACH, a village in the parish of Kilmalie, Inverness-shire; 2½ miles north of Fort-William; at the southern extremity of the Caledonian canal. The parish-church is situated here; and there is a school supported by the General Assembly.

CORRA-LINN. See THE CLYDE.

CORRAN-ARDGOUR, a ferry across the mouth of Loch Eil, where it branches off from the Linne loch. There is a strong current here.

CORRIE,* an ancient parish, now comprehended in the parish of Hutton, Dumfriesshire. There are now no traces of a place of worship at Corrie, except the burying-ground. In 1727 the sum of £280 was bequeathed to Corrie by Edward Moffat of Exeter, a native of this parish, as a salary for a schoolmaster here. To this bequest another sum of £20 per annum was added in 1820, by a grand-nephew of the original endower, and the heirs also have added a sum of £8 6s. 8d. annually.—The ancient tower of Lun, situated on the water of Milk at Corrie-mains, was formerly a place of great strength; but has probably been little inhabited since the family of Johnstone acquired the estate of Corrie, by marriage with the daughter of Sir Thomas Corrie. There are still some remains of a deer-park on the farms of Penlaw, and Parkcleugh-foot. See HUTTON.

CORRIEVREKIN, or CORYBRECHTAN, a dangerous whirlpool between the islands of Jura and Scarba, occasioned, it is supposed, by the tide-stream being opposed, in its passage to and from the sound of Jura, by a pyramidal rock which shoots up to within 15 fathoms of the surface from a depth of about 100 fathoms. The vicinity of this rock is carefully shunned by small craft; but it is only during high and strong tides, or violent gales, that it is at all formidable to large vessels. The name, we are informed by Campbell in his notes to 'Gertrude of Wyoming,' signifies 'the whirlpool of the Prince of Denmark.' And there is a tradition that a Danish prince once undertook for a wager to cast anchor in it. He is said to have used woollen instead of hempen ropes for greater strength, but perished in the attempt. "On the shores of Argyleshire," the poet adds, "I have often listened with great delight to the sound of this vortex, at the distance of many leagues. When the weather is calm, and the adjacent sea

* The word *corrie* signifies, in Gaelic, 'a narrow glen'; and is of frequent occurrence in Gaelic topography.

scarcely heard on these picturesque shores, its sound—which is like the sound of innumerable chariots—creates a magnificent and fine effect.” The lines in Campbell’s noble poem in which allusion is made to this whirlpool are as follows:

But who is he, that yet a dearer land
Remembers, over hills and far away?
Green Albyn! What though he no more survey
Thy ships at anchor on the quiet shore;
Thy pillocks rolling from the mountain-bay;
Thy lone sepulchral cairn upon the moor;
And distant isles that hear the loud Corbrechtan roar!

The superstition of the islanders has tenanted the shelves and eddies of this whirlpool with all the fabulous monsters and demons of the ocean. Among these, according to a universal tradition, the mermaid is the most remarkable, and there is a Gaelic legend—versified by Leyden, in the ‘Border Minstrelsy’—which relates how Macphail of Colonsay, while passing the Corrievrekin, was carried off by one of these sea-maidens, and detained for several years in a pleasant kind of captivity, in a grotto beneath the sea. Therefore, mariners,

“As you pass through Jura’s sound
Bend your course by Scarba’s shore,
Shun, O shun! the gulf profound
Where Corrievrekin’s surges roar.”

So sings the poet; couching his advice, however, in somewhat ambiguous language, for the sea generally exhibits a state of greater turbulence on the Scarba than on the Jura side of the gulf.

CORRISKIN (LOCH), a deep, dark, lonely sheet of water imbosomed in the Coolin or Cuchullin mountains, on the western coast of Skye, which discharges itself by a rapid stream into a bay of Loch Slavig. It is about 2 miles in length, and half-a-mile broad, and is said to be of profound depth. Sir Walter Scott has described it in both prose and poetry in ‘The Lord of the Isles.’ We shall present our readers with the poetical description, of which the accomplished artist, Mr. J. W. Turner, whose pencil has been employed in delineating the scene for the last edition of Sir Walter’s works, declares, “No words could have given a truer picture of this, one of the wildest of Nature’s landscapes.”

A while their route they silent made,
As men who stalk for mountain-deer,
Till the good Bruce to Ronald said,
“St. Mary! what a scene is here
I’ve traversed many a mountain-strand,
Abroad and in my native land,
And it has been my lot to tread
Where safety more than pleasure led;
Thus, many a waste I’ve wander’d o’er,
Clove many a crag, cross’d many a moor,
But, by my halidome!
A scene so rude, so wild as this,
Yet so sublime in barrenness,
Ne’er did my wandering footsteps press,
Where’er I happ’d to roam.”

No marvel thus the monarch spake;
For rarely human eye has known
A scene so stern as that dread lake,
With its dark ledge of barren stone.
Seems that primeval earthquake’s sway
Hath rent a strange and shatter’d way
Through the rude bosom of the hill,
And that each naked precipice,
Sabie ravine, and dark abyss,
Tells of the outrage still.
The wildest glen, but this, can show
Some touch of Nature’s genial glow;
On high Benmore green mosses grow,
And heath-bells bud in deep Glencroe,
And corpse on Cruachan Ben;
But here,—above, around, below,
On mountain or in glen,
Nor tree, nor shrub, nor plant, nor flower,
Nor aught of vegetative power,
The weary eye may ken.
For all is rocks at random thrown,—
Black waves, bare crags, and banks of stone
As if were here denied
The summer sun, the spring’s sweet dew,
That clothe with many a varied hue
The bleakest mountain-side.

And wilder, forward as they wound,
Were the proud cliffs and lake profound.
Huge terraces of granite black
Afforded rude and cumber’d track;
For from the mountain hoar,
Hurld headlong in some night of fear,
When yell’d the wolf and fled the deer,
Loose crags had toppled o’er;
And some, chance-poised and balanced, lay,
So that a stripling arm might sway
A mass no host could raise,
In Nature’s rage at random thrown,
Yet trembling like the Druid’s stone
On its precarious base.
The evening mists, with ceaseless change,
Now clothed the mountains’ lofty range,
Now left their foreheads bare,
And round the skirts their mantle furld,
Or on the sable waters curld,
Or on the eddying breezes whirl’d,
Dispersed in middle air.
And oft, condensed, at once they lower,
When, brief and fierce, the mountain-shower
Pours like a torrent down,
And when re-turn the sun’s glad beams,
Whiten’d with foam a thousand streams
Leap from the mountain’s crown.

“This lake,” said Bruce, “whose barriers drear
Are precipices sharp and sheer,
Yielding no track for goat or deer,
Save the black shelves we tread,
How term you its dark waves? and how
You northern mountain’s pathless brow,
And yonder peak of dread,
That to the evening sun uplifts
The grisly gulfs and slaty rifts,
Which seam its shiver’d head?”—
“Corriskin call the dark lake’s name;
Coolin the ridge, as bards proclaim,
From old Cuchullin, chief of fame.”

This lake is perhaps more generally described under the name Loch Coruisk. Macculloch, in the 1st vol. of his ‘Description of his Western Islands,’ [pp. 282–284,] has described it with great beauty: “Passing the river which runs foaming over a sheet of smooth rock into the sea, a long valley suddenly opens on the view, enclosing the beautiful lake Coruisk, on the black surface of which a few islands covered with grass appear with the vividness of emeralds amid the total absence of vegetable green. On every side the bare rocky acclivities of the mountains rise around, their serated edges darkly projected on the blue sky or entangled in the clouds which so often hover over this region of silence and repose. At all seasons and at all times of the day darkness seems to rest on its further extremity: a gloom in which the eye, discerning but obscurely the forms of objects, pictures to itself imaginary recesses and a distance still untermiuated. A remarkable contrast is hence produced in viewing alternately the two extremities from any central point. The entrance, less obstructed by mountains, presents the effect of morning rising to illuminate the depths of the opposite extremity, which appears as if perpetually involved in the shadows of night. Silence and solitude seem for ever to reign amid the fearful stillness and the absolute vacuity around: at every moment the spectator is inclined to hush his footsteps and suspend his breath to listen for some sound which may recall the idea of life or of motion. If the fall of a cascade is by chance heard, it but serves by its faint and interrupted noise to remind him of its distance, and of the magnitude of the mountain boundary; which, though comprehended by a glance of the eye, and as if within reach of the hand, is everywhere too remote to betray the course of the torrent. The effect of simplicity and proportion in diminishing the magnitude of objects is here distinctly felt, as it is in the greater efforts of architecture: those who have seen the interior of York Cathedral will understand the allusion. The length of the valley is nearly four miles, and its breadth about one; while the mountains that enclose it rise with an acclivity so great, that the spectator situated

at their base views all their summits around him; casting his eye over the continuous plane of their sides, as they extend upwards in solid beds of rock for nearly a mile, and present a barrier over which there is no egress. Yet on entering it he will probably imagine it a mile in length, and fancy the lake, which occupies nearly the whole, reduced to the dimension of a few hundred yards. It is not till he has advanced for a mile or more, and finds the boundary still retiring before him unchanged, and his distant companions becoming invisible, that he discovers his error, and the whole force and effect of the scene becomes impressed on his mind. He who would paint Coruisk must combine with the powers of the landscape-painter those of the poet: it is to the imagination, not to the eye, that his efforts must be directed."

CORRY, a village in the district of Mull, and parish of Morvern; 8 miles south-west of Inversanda; at the western extremity of a lake to which it gives names.

CORRYARRICK, a mountain in the parish of Laggan, Inverness-shire, along which the old military road from Fort-Augustus to Garviemore is carried. It is extremely steep on the south side, and appears at a distance to rise almost as perpendicular as a wall. The ascent to the summit of this mountain on the south side, is by a road of seventeen traverses; and on the north side, the long descent to the level ground is carried on by traverses, resembling, in some respects, those on the south side. As there are several gullies and brooks on the south side, bridges have been thrown across, over which the road is carried. These tortuosities, rendered absolutely necessary from the nature of the ground, greatly increase the real distance, which, from base to base, does not exceed 5 miles. Skrine thus describes the features and perils of the road through this, the highest pass in Great Britain: "Our road soon growing inexpressibly arduous, wound round the rocky hills overhanging Fort-Augustus and Loch-Ness; and elevated us to a height truly terrific,—springing sometimes from point to point over Alpine bridges,—and at others pursuing narrow ridges of rock, frightfully impending over tremendous precipices. With a perpetual succession of these laborious inequalities and their corresponding scenery, we passed the mountain Coryuragan, crossed the two sources of the Tarff, and began to ascend the mightier base of Coriaraich. The wildest and most dreary solitude of Siberia cannot display a scene more desolate than that which extended round us, as far as the eye could reach on either side; no vestiges of living creatures or their habitations enlivening the desert, and nothing appearing but disjointed rocks, broken torrents, and the tops of more distant mountains. The road alone bore the form of being a human work; and as it began to ascend the furrowed side of the Coriaraich, high stakes placed at equal distances marked its progress, to prevent the inevitable destruction which must await those hardy travellers, who venturing over this pass in times of snow, might deviate from the regular track. The unusual display of their high points, bleached with perpetual storms, sometimes extending in a long line of ascent athwart the mountain, and at others rising in a zigzag direction over terraces almost parallel, could not fail to astonish and confound a stranger, with the height before him to be surmounted. The road grew more laborious, and the precipice more tremendous, as we approached the summit, broad patches of snow filling the clefts and hollows around us on each side: the weather also, which had gradually declined from its morning splendour, assumed now a tempestuous aspect; the rain beat furiously

against us, with terrific gusts of wind; and a thick fog, still more alarming, whirling round the summit of the mountain, frequently enveloped us in a temporary obscurity. Drenched with the wet, as we did not dare to continue in our carriages, at length we reached a circular spot, traced out on the highest point of the mountain, and immediately began to descend, by a dangerous and rapid zigzag, from terrace to terrace, with incessant turnings, so short and so narrow as to require the utmost circumspection in compassing them. It may easily be imagined how wonderfully precipitate this singular descent is, when I add, that in the progress of little more than 2 painful miles, we unravelled the whole labyrinth of that eminence, which it cost us so much labour, and 9 miles of tedious ascent to attain. At the bottom, however, we rested a while from our labours; and the fog in some measure dispersing, though the rain was unabated, we were able to survey the country into which we were translated as it were from the clouds. Behind us the great mountain from which we had escaped rose like a perpendicular bulwark, on which we were unable to trace the angular course by which we had worked our passage; and the only track we could distinguish on its front was the chain of cataracts, tumbling in successive falls, which forms the source of the great river Spey. Other mountains, capped with eternal snows, and inferior only in height to that which we had passed, frowned over us on each side; while a long channel appeared worked by the impetuous stream between their bases, through a hollow valley, over which the road hung suspended on a narrow shelf. A broader glen succeeded to this, and the torrent became a rivulet, which after a variety of stages increasing in magnitude, swelled at length into a river, ravaging the little plain it formed, and fretting with furious impetuosity over the numberless asperities with which the feet of the precipices were strewed. With such violent convulsions was the birth of this mighty river attended amidst its native mountains, whose impetuous stream emerging from the chaos it has created, desolates a vast tract of country in its descent to the sea, which it falls into near Fochabers, where we first crossed it. Relieved from many of the horrors which attended the former part of our course, we pursued the declivity on a road rendered inexpressibly rough by the broken fragments of rock with which it was strewed, till crossing the Spey, we arrived at the solitary inn of Garvamore, after traversing a desert of 18 long miles, which it cost us eight hours to surmount. During this whole course our eyes had not encountered a single human being, or even the vestiges of an animal; those quadrupeds which are the natural inhabitants of mountains shunning these barren deserts, where there is nothing to sustain them; and no birds, except the eagle, being hardy enough to frequent their cliffs." [‘Three Successive Tours,’ London, 4to., 1795, pp. 141—144.]—When General Cope marched north from Stirling to meet the advancing forces of Prince Charles, in the latter end of August, 1745, he hesitated to attempt the passage of Corryarrick in the face of the Highland forces, then 3,000 strong, whom he understood to be in possession of the summit. As the mountain was peculiarly fitted for the operations of Highlanders, it is evident that in attempting to cross Corryarrick, Cope, if attacked, would labour under every disadvantage; for while his men could not leave the road in pursuit of their assailants, the latter could keep a running fire from numerous positions, from which it would be impossible to dislodge them. Cope was warned by President Forbes of the dangers he would run; and his fears were not a little increased by a

report that, on arriving at the bridge of Snugborough, a dangerous pass on the north side of the mountain, he was to be opposed by a body of Highlanders; and that, while this party kept him employed, he was to be attacked in his rear by another body, which was to be sent round the west end of the hill. Alarmed at the intelligence he had received,—distracted by a variety of reports as to the strength of the enemy, and disgusted with the apathy of those on whose support he had relied,—Cope called a council of war at Dalwhinnie, on the morning of the 27th of August, to which he summoned every field-officer, and the commanders of the different corps of his little army. He would have acted more judiciously had he convened a council at Dalnacardoch, when he first received intelligence of the advance of the Highlanders. At this meeting, Cope laid before his officers the orders he had received from the secretary-of-state to march to the north, which were too positive to be departed from without the most urgent necessity. After some deliberation, the council were unanimously of opinion, that the original design of the general of marching to Fort-Augustus over Corryarrick, was, under existing circumstances, quite impracticable. Having abandoned the design of crossing Corryarrick, the council next considered what other course should be adopted. The wisest course certainly, if practicable, would have been to have marched back to Stirling, and to have guarded the passes of the Forth; but against this proposal it was urged, that the rebels, by marching down the side of Loch Rannoch, would be able to reach Stirling before the king's troops, and that, by breaking down the bridges, they would intercept them in their retreat. As it was impossible to remain at Dalwhinnie, no other course therefore remained, in the opinion of the council, but to march to Inverness. This opinion, which was reduced to writing, and signed by all the members of council, was delivered to Sir John Cope, who, acquiescing in its propriety, immediately issued an order to march.

CORRYVREKAN. See CORRIEVREKIN.

CORSEWALL POINT, a headland on the north-west coast of Wigtownshire, near the entrance of Loch-Ryan; in N. lat. 55° 1' and W. long. 5° 10'. A lighthouse was erected upon this point in 1817. It shows a bright and red light alternately every two minutes, which is seen in clear weather at the distance of 15 miles. The building is 92 feet in height; and the lantern is elevated 112 feet above high-water.

CORSKIE. See GARTLY.

CORSOCK, a small village in the parish of Par-ton, Kirkcudbrightshire; near the water of Urr. An extension church was opened here in October, 1839.

CORSTORPHINE,* anciently CROSTORFYN, a parish in the shire of Edinburgh; 4 miles in length, by about 2 in breadth; bounded on the north by Cramond parish; on the east by St. Cuthbert's; on the south by Colinton, Currie, and Rath; and on the west by Kirkliston. The surface is in general level, and, over a great part of its extent, spreads

into a smooth plain. The grounds of greatest elevation are those which go by the name of Corstorphine-hill,—an appellation they hardly could have gained unless from being in a manner insulated in the midst of rich valleys. This hill, or rather ridge, on the south and west sides, rises from the plain to the height of 474 feet above sea-level, by an easy ascent; on the east side, it is more precipitate, and runs north, in an indented cristated form, into the boundaries of the parish of Cramond. There are no metals or minerals dug in this parish; but there are very fine quarries of freestone, which was formerly much in request for buildings in Edinburgh. There are also, on the lands of Clermiston, inexhaustible quarries of trap or blue whinstone. This parish is watered by the Gogar, a branch of the Almond, and by the water of Leith. There is a sulphureous mineral spring near Corstorphine, which once conferred on that village considerable celebrity. When it was in repute, about the middle of last century, Corstorphine was a place of fashionable resort for the citizens of Edinburgh, and had its balls and other amusements common to watering-places.—The village of Corstorphine is about 4 miles west of Edinburgh, on the road from Edinburgh to Glasgow. It is a pleasant, well-sheltered village, but somewhat in its decadence, the sites of numerous houses which once stood here being now converted into gardens; and its attractions as a summer-residence for the citizens of Edinburgh having dwindled before those of Newhaven and other coast-localities. We believe it has also lost its reputation for a once-celebrated delicacy called 'Corstorphine cream.' The mystery of its preparation is thus described in the Old Statistical Account:—"They put the milk, when fresh drawn, into a barrel, or wooden vessel, which is submitted to a certain degree of heat, generally by immersion in warm water: this accelerates the stage of fermentation. The serous is separated from the other parts of the milk, the oleaginous and coagulable; the serum is drawn-off by a hole in the lower part of the vessel; what remains is put into the plunge-churn, and, after being agitated for some time, is sent to market as Corstorphine cream." There is growing near the village a sycamore-tree, one of the largest in Scotland, which, in the end of May and beginning of June, exhibits an appearance of the most striking beauty. That side which is exposed to the sun is of the richest vivid yellow hue; hence this tree is easily distinguished at a great distance. A few slips which have been taken from it, are thriving very well in other parts of the country. The population of this parish, in 1801, was 840; in 1831, 1,461. Houses 248. Assessed property, in 1815, £13,165.—This parish is in the synod of Lothian and Tweeddale, and presbytery of Edinburgh. It includes part of the ancient parish of Gogar, and also a part of St. Cuthbert's united to it in 1633. Patron, Sir Robert Keith Dick, Baronet. Stipend £242 8s. 5d.; glebe £30. The church is an ancient building, of Gothic architecture, in the form of a Jerusalem cross. The present church was founded near the parish-church of this place, by Sir John Forester of Corstorphine, Lord-high-chamberlain of Scotland, in 1429, and dedicated to St. John the Baptist, for a provost, 5 prebendaries, and 2 singing-boys. It was a collegiate church, to which belonged those of Corstorphine, Dalmahoy, Hatton, Cramond, Collington, &c. The teinds of Ratho, half of the teinds of Adderton, and of Upper-Gogar, were appropriated to the revenues of this college. The first provost was Nicholas Bannatyne, who died in 1470, and was buried in the church, where his epitaph still remains. The coat-of-arms of the family

* This parish, it is thought by some, obtained its name from the circumstance of a golden cross—Croix d'or fin—having been presented to the church by some French nobleman; hence Corstorphine; and there is some obscure tradition of this kind. According to others, the name signifies 'the Milk-house under the hill.' Others derive it from *corrie*, 'a large hollow,' or 'round glen'; *stoir*, 'steps through a wet place'; and either *foann*, 'white,' or *fein*, 'the Fingobans.' The name might thus signify 'the Hollow with the white steps,' or 'the Glen of the Fingoban steps.' Or perhaps the termination *fin*, may have come from *foansi*, 'wells' or 'fountains.' Other antiquaries have supposed that Corstorphine was by the Romans called *Curia Storphinorum*, from a band of soldiers of the name of Storphini having been stationed there; while Chalmers considers the name to mean 'the Cross of Torphin.'

of Forester is everywhere dispersed over the building; and within the church, in niches, are several monumental remains of this family, with effigies cut in stone, as large as life. The male figures are covered with complete armour, and the female appear richly ornamented according to the fashion and dress of the times. The roof is supported by strong arches, and formed by large stone flags. The whole building seems to have suffered little by the waste of time. The stipend of the parish-schoolmaster is £34, with about £20 fees. He has amongst other emoluments, a small piece of ground or glebe, near the extent of an acre, contiguous to the village; and besides this, an acre of ground upon the side of the water of Leith, near Coltbridge, which is called the Lamp-acre; its proceeds having been destined for defraying the expenses of a lamp which hung in the east end of the church of Corstorphine. There are various conjectures concerning the use this lamp was intended to serve. Some say that it was in honour of the Virgin, before whose statue it was lighted up; others, and with more probability, think, that it served as a beacon to direct travellers from Edinburgh, along a road which, in those times, was both swampy, difficult, and dangerous.—There is in this parish another place of worship, but which appears not to have been used for that purpose since the Reformation. It is a small chapel at Gogar, now annexed to Corstorphine: there is a burying-ground around it, which is still used for this purpose. There are also a few acres of ground there which belong to the minister of Corstorphine.

CORTACHY AND CLOVA, two united parishes which occupy a very extensive portion of the northern part of the county of Forfar. Cortachy is about 13 miles in length, and varies from 2 to 8 miles in breadth. Clova is nearly 10 miles in length by 7 in breadth. The two districts are bounded by Aberdeenshire, and the parish of Lochlee on the north; by Lethnot and Tannadice on the east; by Kirriemuir on the south; and by Glen-Isla on the west. The South Esk rises in a multitude of small streams in the north-west part of the district of Clova; flows south-east through that district, and enters Cortachy about $1\frac{1}{2}$ mile below the kirk-town of Clova; receives numerous tributaries, chiefly on the northern side, while flowing through Cortachy; and from Cross Bog till its junction with the Prosen water, divides Cortachy from Tannadice: see article **SOUTH ESK**. The soil is in general poor, with a wet and cold bottom. A part, however, of the haugh-ground on the banks of the Esk, is a light early soil, interspersed with frequent patches of moss. The united parishes include a part of the Grampians, and from this circumstance are calculated principally for pasture. Some of the mountains, especially those in the district of Clova, are of great height, and many places are beautifully romantic and picturesque. There are three small lakes in the district, which abound with trout and pike. Whinstone is found in great quantity; but no freestone or any valuable mineral has been yet discovered. The bridge of Cortachy, at the issue of the South Esk from the Grampians, is founded on mica-schistose rock, exhibiting masses of jasper varying in colour from a bright yellow to a deep red, and susceptible of a fine polish. Behind the bridge, a remarkable vein of indurated claystone is seen to intersect the schistose rocks. It is generally of a white or greyish colour, and contains thin scales of lime spar. Cortachy castle, the property of Lord Airlie, and Clova-house, are the only seats. Population, in 1801, 906; in 1831, 912. Houses 178. Assessed property, in 1815, £5,929.—This parish, formerly a vicarage, is in the presbytery of Forfar, and synod of Angus and Mearns.

Patron, the Earl of Airlie. Stipend £172 19s.; glebe £15. Unappropriated teinds £184 8s. 2d. There is a missionary stationed at Clova. Schoolmaster's salary £34 4s. 6d. There are 3 private schools. See article **CLOVA**.

CORUISK. See **CORRISKIN**.

COTTS LOCH. See **URQUHART**.

COULL, a parish in the district of Kincardine O'Neil, Aberdeenshire; at the head of Strathcromar; bounded on the north by Farland and Leochel; on the east by Lumphanan; on the south by Aboyne; and on the west by Logie-Coldstone. Its shape is somewhat triangular; the longest side measuring about 5 miles, and the others about $3\frac{1}{2}$. Coull, and the rest of the strath of Cromar, is flat, but sheltered by high hills on each side. None of the hills rise to a great height. A considerable bog, which lies to the west of the Mouse, is, in rainy seasons, converted into a lake, which is often covered with aquatic fowls. Several old Scottish silver coins have been dug up amongst the ruins of the castle of Coull, an ancient edifice of vast dimensions. Population, in 1801, 679; in 1831, 767. Houses 161. Assessed property, in 1815, £1,284.—This parish is in the presbytery of Kincardine O'Neil, and synod of Aberdeenshire. Patron, Sir John Forbes, Baronet. Stipend £161 5s. 7d.; glebe £7.—Schoolmaster's salary £26; with £8 fees, and the Dick bequest, which, in 1832, amounted to £29 3s.

COULTER (Loch), a small lake in the parish of St. Ninian's, Stirlingshire, about 2 miles in circumference, which discharges its water into the Bannockburn. During the great earthquake at Lisbon, in 1756, the waters of this loch were violently agitated, and sunk to a lower level, by about 10 or 12 feet, which left dry great quantities of shell marl, particularly at the west end of the loch.

COUPAR-ANGUS. See **CUPAR-ANGUS**.

COUSLAND, a village in the shire of Edinburgh and parish of Cranston; $3\frac{1}{2}$ miles east of Dalkeith. The manor and chapelry of Cousland were annexed to the parish of Cranston about the time of the Reformation. The chapel stood on the south side of the village of Cousland, where its remains may still be traced, with its almost forgotten cemetery; it was probably dedicated to St. Bartholomew. In 1547, Cousland was burned by the Duke of Somerset, when he invaded Scotland with a powerful army to enforce the marriage of the Princess Mary with Edward, King of England.

COVE, a fishing-village to the south of Nigg bay, in the shire of Kincardine and parish of Nigg; 5 miles south-south-east of Aberdeen. There is a natural harbour or cove here. Here is a school for the accommodation of the more distant part of the parishioners, the master of which has a small gratuity, and a house and garden.

COVE (THE). See **COCKBURNSPATH**.

COVE-A-CHIARAN, a cave on the coast of Kintyre, about 4 miles from Campbelton, in which St. Chieran, the apostle of Kintyre, is said to have taken up his abode. It is only approachable at half-tide. In the middle is a circular basin which is always full of pellucid water, supplied by the continual dropping from the roof of the cave. There is a rudely sculptured cross on a stone in the cave.

COVINGTON AND THANKERTON, a parish in the county of Lanark; about 3 miles in length, and rather more than 2 in breadth; bounded on the east by Libberton; on the south by Symington and Wiston; on the west by Carmichael; and on the north by Pettynain. The surface is partly meadow-ground on the banks of the Clyde, and partly mountainous. Tinto is partly in this parish: see article **TINTO**. The hilly part of the parish is

covered with heath, but the rest of the soil is fertile and well-cultivated. There is a small village, called Thankerton, beautifully situated on the Clyde, over which there is a bridge at this place. Within this small district numerous relics of antiquity are to be met with, particularly four circular camps. There is also a fine ruin of a fortification, built by Lindsay of Covington, in 1442. Population, in 1801, 456; in 1831, 521. Houses 114. Assessed property £1,720. — This parish is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patrons, Sir N. M. Lockhart, and Sir W. C. Anstruther. Stipend £208 13s. 7d.; glebe £17 10s. — Schoolmaster's salary £28, with about £16 fees.

COWAL, a district of Argyleshire, forming a peninsula or point of land stretching north-east and south-west, between the frith of Clyde and Loch Fyne; and comprehending the parishes of Dunoon, Inverchaolain, Kilfinan, Kilmodan, Kilmorich, Lochgoilhead, Strachur, and Strathlachlan. The north-east part of the district, which borders with Perthshire, presents a rugged and broken surface. The mountains become gradually lower and the surface less rugged, as you advance to the south-west; and towards the extremity, comparatively speaking, the land is low and level. The hills afford excellent pasture for sheep and black cattle. This district is intersected by three arms of the sea, Loch-Ridden, Loch-Streven, and Loch-Eck, and is watered by the rivers Cur and Eachaig. The coast is partly flat, and partly bold and rocky, presenting numerous creeks and small harbours. Here are the ruins of the royal castles of Dunoon and Carrick. Campbell of Strachur, Campbell of South-hall, and Lamont of Lamont, have extensive estates in this district. Population, in 1831, 7,943; inhabited houses 1,394. Families 1,475.

COWCADDENS, a suburb of Glasgow; in the Barony parish.

COWDENKNOWS, an estate and barony on the east bank of the river Leader, in the parishes of Earlstoun and Melrose; 32 miles from Edinburgh; 12 from Kelso; 3 from Melrose; and 1 from Earlstoun. Every one has heard of

— "the broom, the bonny, bonny broom,
The broom of the Cowdenknows."

But the broom-sprinkled braes and haughs of Cowdenknows have been sadly stripped of their golden adornments of late years by the progress of the turnip husbandry; and of the song to which the ancient and beautiful little air of one strain, known as 'The Broom of Cowdenknows,' was here united, only four lines of the chorus remain; but the air itself is fortunately still preserved an object of less poetical associations. The ancient 'Hanging tree' of Cowdenknows is also to be numbered now only amongst the things that were. This venerable relic of ancient days and vanished customs, whose dark and knotted trunk, and fantastically twisted boughs, threw a gloomy kind of feeling over every spectator who knew its history in the days of feudal barbarism, has been cut down. It had been called, time out of mind, 'the Hanging tree;' and the local tradition—without any probability of right foundation—is, that it was employed, in the "persecuting times," to hang the covenanters in the days of Charles and James. The persecution was not very fierce over the Merse, and little more than fines were inflicted upon the conventiclers. There may be less doubt, however, of its being employed by the older Border-chief to assert his authority over his vassals, or to inflict his vengeance upon his enemies. In all the old feudal charters there was granted the power of the 'pit and gallows' (*fossa et furca*), as irrespon-

sible judges. It cannot have been less than from 200 to 300 years since it bore such ghastly fruits on its doddered boughs; and probably its age must have been much more, as it appeared far the most ancient of all its brethren of every species. When it was sawed across, however, a little above the root, the concentric layers, carefully counted, did not amount to more than 140. Outside of that there was a considerable thickness of whitish wood, in which the rings were altogether indistinguishable. The tree was of the elm-species; and this fact may indicate a peculiarity in the character of that species, which does not belong to others, in which these layers, to the number of three or four or more hundreds, are often distinguishable. There can be no doubt of its having braved the storms of 400 or 500 winters.

COWIE (THE), a small river in the county of Kincardine, which rises on the eastern skirts of the Wedder hill, in the parish of Fetteresso, and after running a south-east course of 9 or 10 miles, in which it passes the villages of Ury and Cowie, falls into Stonehaven bay.

COWTHALLY. See CARNWATH.

COYLTON, or COYLSTON, a parish in the district of Kyle, Ayrshire. It is bounded on the north by the parish of Ayr; on the east by Ochil; on the south by Dalrymple; and on the west by Dalrymple and Ayr. It stretches from the Doon to Ayr water; and is 7 miles in length, and about 2 in average breadth. Its surface is in general flat; though, at one point toward the south, it rises to a gentle elevation. The holms near the rivers Ayr and Coyl are fertile and dry, and most other parts of the parish have a clayey and productive soil. Coal, lime, and marl are abundant. Coyl water traverses the district from south-east to north-west, and falls into the Ayr. There are three lakes, the largest of which, Martnahaim, is a mile in length. The parish, and the stream which intersects it, are said, by tradition, to derive their name from a fabulous king, called Coilus, or Coil, who is reported to have been slain in battle, at Coylesfield, 5 miles south of Coylston, and buried at the parish-church. A large stone is still regarded as monumental of 'Auld King Coil.' There are, in this parish, several small villages,—the chief of which, Coylston, stands on Coyl water. Population, in 1801, 848; in 1831, 1,389. Houses 222. Assessed property, in 1815, £7,144.—The parish, formerly a prebend, is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £254 8s. 4d.; glebe £12. Schoolmaster's salary £30, with about £30 additional emoluments. There are 3 other schools.

CRAGGIE (LOCH), a fresh water loch in the parish of Tongue, in Sutherlandshire, lying immediately to the north of Loch Loyal, which discharges its waters into it, while itself flows into Loch Slam, whence the Borge conveys the united waters of the three lochs to Torrisdale bay. All these lochs abound in trout, pike, and char.

CRAIG,* a parish on the coast of Forfarshire. It is bounded on the north by Montrose basin; on the east by the sea; on the south by the sea, a detached portion of Maryton parish, and the parish of Lunan; and on the west by the parishes of Kinnell, Farnwell, and Maryton. Its eastern division forms a peninsula between Montrose basin and the sea. The extreme length of the parish, from the guard-house on the north-east to its south-west angle near West Coteton, is nearly 6 miles; and its extreme breadth, from Baldovie on the north-west, to

* The ancient name was Loch Brioch, a name still retained by an islet belonging to the parish, and meaning, in Gaelic, 'the Island of Trout.' Two-thirds of the rich fishing-ground along the coast of the parish is known by the kindred name of the Trout-shot.

the promontory of Boddin lime-works on the south-east, is 3 miles. Superficial area 3,308 Scots acres. The small island called Inch Brioch, in the embouchure of the basin, or of the river South Esk, belongs to this parish. On the coast, Dunninald is the highest ground; in the centre, Govanhill; and on the west, Pittarishill and Mountbay,—all of which overlook expansions of beautiful scenery, though the loftiest of them is only about 400 feet high. The surface of the parish is undulating, well tufted with plantation, and, in several places, dotted with small lakes. The coast is rocky, slightly romantic, and, toward the south, precipitous. At the north-east extremity of the parish are the ruins of a square earthen fort, 50 feet in length, 50 in breadth, 16 feet thick in its walls, of uncertain date, but traditionally reported to have been used in the time of Cromwell. Rossie, overlooking the basin of Montrose, is a beautiful modern mansion. The villages are Rossie island, Usan, and Ferryden, the last of which is of some importance. See FERRYDEN. Population, in 1801, 1,328; in 1831, 1,552. Houses 252. Assessed property, in 1815, £9,365.—Craig, formerly a vicarage, is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, St. Mary's college, St. Andrews. Stipend £257 6s. 3d.; glebe £24. Unappropriated tithes £101 8s. 9d. Schoolmaster's salary £34, with about £30 other emoluments. There are 3 schools supported by the parishioners; and a fourth, situated within the limits of Maryton parish, but just on the border of Craig, is endowed by a lady of the latter parish, and designed for its benefit. Craig comprises two titularities or parishes, Inchbrayock or Craig, and Dunninald or St. Skeoch, which were united in the year 1618. The parish-church is a beautiful structure, with a square tower, situated about a mile from the basin, commanding from a gentle acclivity an extensive view of watery and sylvan landscape, looking down upon the smiling town of Montrose begirt with its lagoon, and seeing away northward over scenery exquisitely diversified, to the eminences beyond the North Esk. It was built in 1799.

CRAIG-ALVIE, a mountain in Strathspey, in the south-west part of Morayshire.

CRAIG-ANN, a mountain in Breadalbane, 16 miles north-west of Perth.

CRAIG-BENYON, a mountain in Perthshire, in Monteath, 3 miles north-east of Callander.

CRAIG-CLUNIE, a lofty precipitous rock, to the east of Castleton of Braemar, which afforded shelter to Farquharson of Clunie, for several months after the wreck of his prince's hopes in the battle of Culloden.

CRAIGCROOK. See CRAMOND.

CRAIG-DAIMVE, an inlet lying off the Point of Keils in Knapdale.

CRAIG-DAVID. See BERVIEBROW.

CRAIGDOW. See KIRKOSWALD.

CRAIG-ELLACHIE, a picturesque hill, about a mile to the north of Aviemore. See AVIEMORE.

CRAIGELLACHIE. See ABERLOUR, Banffshire.

CRAIGEND. See NEW-ABBEY.

CRAIGGILLAN. See CARSPHAIRN.

CRAIGGAG-POINT, a promontory on the east coast of Sutherlandshire, in the parish of Loth; 8 miles south-west of the Ord of Caithness, and 18 miles north-north-east of Dornoch.

CRAIGGRANDE. See AULTGRANDE.

CRAIGHALL, a village in the parish of Inveresk, near the railway from Edinburgh to Musselburgh. See INVERESK.

CRAIGIE, a parish in the district of Kyle, Ayrshire, to the north-west of Ayr. It is somewhat

of a triangular figure, and is bounded on the north by the parishes of Dundonald and Riccarton; on the east by the parishes of Galston and Mauchline; on the south-east by the parish of Tarbolton; and on west by the parishes of Monkton and Symington. Its extreme length is 7 miles, and its average breadth $1\frac{1}{4}$ mile. Most of the surface is level, arable, fertile, and well-enclosed. The eminences are not high, and afford fine pasturage. From a hill 500 feet above the level of the sea, a spectator looks round on a richly cultivated beautiful expanse of 100 square miles, and sees Benlomond, and several of the Grampians, raising their lofty summits toward the north, and the ridges of Jura serrating the horizon on the west, and the hills of Ireland dimly merging from the sea on the south. Coal is worked, and limestone abounds. Much attention is paid to the dairy. The chief antiquity is the ruins of the old castle of Craigie. Population, in 1801, 786; in 1831, 824. Houses 123. Assessed property, in 1815, £8,511.—Craigie, formerly a vicarage, is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, Campbell of Craigie. Stipend £247 7s. 10d. Unappropriated tithes £360 4s. 1d. Schoolmaster's salary £34 4s. 4d., with £18 school-fees. There is a school not parochial. Craigie includes part of the suppressed parish of Barnwell.

CRAIGIE, a village half-a-mile to the south of Perth, occupying the site of the old castle of Craigie, and containing about 250 inhabitants. It is divided into Upper and Lower Craigie.

CRAIGIE-BARNS, a hill in Perthshire, near Dunkeld, rising to about 1,000 feet above the level of the sea. The top of this hill commands a prospect extremely rich and diversified. To the south is the vale of the Tay as far as the Ochils, with the hill of Birnam in the foreground; on the left hand, to the eastward, is the valley of Stormont, with a beautiful chain of lochs, six in number. To the west and north is seen the Tay flowing in majestic grandeur through a narrow vale, with the high mountains of Athol, Sechallion, and Bengloe, on the north.

CRAIGIEVAR, an old square fortalice, with projecting turrets, in the parish of Leochel, Aberdeenshire.

CRAIG-LEITH, a small island in the frith of Forth, about a mile north of North Berwick, to which it belongs. It supports a few rabbits.

CRAIGLEITH, the largest freestone quarry in Scotland. It is the property of Ramsay of Barnton, and is situated about 2 miles north-west of the New town of Edinburgh, on the Queensferry road. When first opened, it was rented at about £50 per annum; during the great building years in Edinburgh, from 1820 to 1826, it yielded £5,500 a-year. A cubic foot of Craigie stone weighs 148 lbs. It is of two kinds; one of a fine cream colour, called liver-rock, of which the south front of the Register office in Edinburgh is built; the other, of a greyish white, called 'feak-rock.' Stones are raised from the strata in this quarry chiefly by means of wedges. The monolithic columns in front of the College in Edinburgh, each 23 feet high, and 3 in diameter, were obtained from this quarry.

CRAIGLIOCH. See BLAIRGOWRIE.

CRAIG-LOCKHART, a hill in the parish of Colinton, about 2 miles south-west of Edinburgh. It is beautifully wooded. Towards the north-west the rock exhibits lofty basaltic columns; and on the south-east side another range appears in which the columns are still more distinct than in the former, but of smaller diameter. The summit of the hill is elevated 540 feet above sea-level.

CRAIG-LOGAN, a promontory of Wigtonshire,

on the north-west extremity of Loch-Ryan, 10 miles north-north-west of Stranraer.

CRAIGLUSH (LOCH), a lake in the district of Stormont, in Perthshire, from which the Lunan takes its rise.

CRAIGMILLAR CASTLE, a fine old ruin in the parish of Libberton, about 3 miles south of Edinburgh, crowning a gentle eminence on the left of the road from Edinburgh to Dalkeith, and commanding a noble view of the south side of the city, the frith and opposite coast, and Aberlady bay. It consists of a square keep, or tower, several stories high, encompassed by a square embattled wall, which has had circular towers at each angle, and the whole surrounded by another rampart-wall, and in some places with a deep moat. On the principal gate is the date 1427. Whether this is meant to record the time that part was built, or an after-repair, is uncertain. There are a great variety of apartments; the great hall is large, and well-lighted, considering the mode of ancient times; it has a semicircular ceiling, and measures in length 36 feet, in breadth 22; and, at the east end, has a chimney 11 feet wide. The ascent of the keep is by an easy flight of broad stone stairs. On the east side of the outer walls are the arms of Cockburne of Ormiston, Congalton of that ilk, Moubray of Barnbogle, and Otterburn of Redford, with whom the Prestons of Craigmillar were nearly connected. Over a small gate, under three unicorns' heads couped, is a vine press and a tun, a rebus for the word Preston. There are a variety of armorial bearings all over the outside of this building. The apartment shown as Queen Mary's, is in one of the upper turrets; it measures only 5 feet in breadth, and 7 in length: but has, nevertheless, two windows, and a fire-place. The name of this place occurs pretty early in the national records, in a charter of mortification, in Haddington's collections, granted in the reign of Alexander II. A. D. 1212, by William, son of Henry de Craigmillar; by which he gives, in pure and perpetual alms, to the church and monastery of Dunfermline, a certain toft of land in Craigmillar, in the southern part, which leads from the town of Nidreif to the church of Libberton, which Henry de Edmonton holds of him. Craigmillar afterwards became the property of John de Capella, from whom it was purchased by Sir Simon Preston in 1374. William, a successor to Sir Simon, was a member of the parliament which met at Edinburgh June 1, 1478. He had the title of Domine de Craig-Miller. This castle continued in the possession of the Prestons almost three hundred years; during which time that family held the highest offices in the magistracy of Edinburgh. In 1477, the Earl of Mar, younger brother to King James III., was confined here a considerable time. It was also the residence of King James V. during his minority, when he left Edinburgh castle on account of the plague: and here the queen-dowager, by the favour of the Lord Erskine, his constant attendant and guardian, had frequent interviews with the young monarch, whilst the Duke of Albany, the governor, was in France. A. D. 1554, this castle, with that of Roslin, and the town of Leith, were burned and plundered by the English. Probably most of the present buildings were erected since that time; at least, their style of architecture does not seem much older than that period. Queen Mary, after her return in 1561, made this castle her residence. Her French retinue were lodged at a small village in the neighbourhood, which, from that circumstance, still retains the appellation of Petit France. In the month of November, 1566, Queen Mary was residing here when the celebrated 'Conference of Craigmillar' was held, in which a divorce between her and

Darnley was projected by the ambitious and daring Bothwell. About the time of the Restoration, this castle came into possession of Sir John Gilmour, lord-president of the court of session, who made some additions to it, and whose descendants are still in possession of it. Grose has preserved two views of it, taken in 1788.

CRAIGNEIL. See COLMONELL.

CRAIGNETHAN CASTLE, the archetype of Sir Walter Scott's castle of Tullietudlem, a magnificent ruin in the parish of Lesmahagow, surmounting a steep promontory, encircled by the Nethan on the east, and on the west by a craggy turbulent torrent. Tradition relates that it was built by one of the early forefathers of the present family of Hamilton, but the strength of the fortifications having awakened the suspicions of the Scottish king, the builder was apprehended, and, according to the summary proceedings of ancient times, immediately executed, upon suspicion of meditated rebellion. The site is naturally very strong, and before the invention of artillery, the bulwarks must have been almost impregnable. A high and solid wall of hewn stone great part of which is still standing, flanked with massy towers, and perforated with loop-holes pointing in all directions, surrounded the principal building, enclosing within its ample compass a court-yard, intersected with a deep moat faced on each side with hewn stone, over which was thrown a drawbridge, defended by two parallel vaults, which are still accessible, though deeply buried in the rubbish where-with the moat is filled. The buildings are much dilapidated, great part of the wall being entirely swept away, having been used as a quarry for the neighbouring farm-houses. The two towers which remain are crowned with a thick coppice of rowan-tree, bourtrees, hazel, ash, briers and hawthorn; and—what will tend to convey some idea of the extraordinary massiness of the structures—several bushes of sauch flourish in great luxuriance on the top of the walls, and are cut every third or fourth year by the coopers, as excellent hoops. A large vaulted hall is still shown, called the queen's room, wherein it is said the ill-used Mary lodged a few nights, about the period of the disastrous battle of Langside; and in a subterraneous vault, there is a circular well, beautifully built of polished stone, which one tradition reports to have descended to a level with the bed of Nethan, and communicating with that rivulet, to have supplied the garrison with water during a siege; while, according to another, it formed the entrance of a tier of lower vaults, in which those wretches who incurred the displeasure of their feudal tyrant were hopelessly confined. Be these accounts as they may, the well is now almost choked up, several of the large stones of its mouth have been thrown in, while every visitor to the castle takes the liberty of throwing down the well a blazing bunch of broom, or some other combustible substance, that he may see the depth and construction of this curious remnant of antiquity. Over the entrance to the principal building is seen a much effaced escutcheon, in which it is still possible to trace the armorial supporters of Hamilton; and the arms of the Hays, and of some other families which formerly had possession of this castle, are yet to be seen on various places of the walls. The Nethan, after leaving the castle, forces its way through a deep ravine, on one side clothed with hanging wood, and, on the other side, presenting wavy broom-clad slopes.

CRAIGNISH, a parish on the coast of Argyleshire, opposite the island of Scarba, and the gulf of Corrievrekin; measuring 7 miles in length by about 2 in breadth. Part of it is peninsular, stretching southward between Loch Craignish and the sea, and

terminating in Craignish point. Around it, or imbedded in the arm of the sea which indents it, and bears its name, are upwards of 20 islands, and numerous rocks and islets, serried round with romantic cliffs, washed with the spray and tintured with the hues of the vexed waters in their narrow channels, bearing aloft picturesquely situated trees, and commanding, as well as contributing to form, brilliant and diversified expanses of scenery. In the channel to the west the tide, pouring along from the sound of Jura, and obstructed by the peninsula of Craignish and its neighbouring islands, dashes itself into impetuosity and foaming violence, and, even in the calmest weather, makes chase upon the life of any fisherman or tourist who has been tardy to anticipate its approach. The surface of the parish is, in general, flat; but though the soil consists of a mould in which clay predominates, and which promises abundance to the cultivator, it is bleak, subject to destructive storms, and, on the whole, unproductive. Fortified eminences, rude in construction, and supposed to be of Danish origin, are numerous; and two farms bear evidently Danish names. The strath of this parish is traditionally reported to have been the scene of an engagement between the Danes and the natives, in which Olaus, a royal prince of Denmark, was slain; and it contains, among numerous cairns and other artless monumental records of former times, a mound or tumulus, now modernized into a burying-ground, which is still called Dunan Aul, or the Little mount of Olaus. Population, in 1801, 904; in 1831, 892. Houses 179. Assessed property, in 1815, £1,359.—Craignish, formerly a vicarage, is in the presbytery of Inverary and synod of Argyll. Stipend £169 10s.; glebe £18. Unappropriated teinds £90 17s. 8d. Schoolmaster's salary £25 13s., with £22 10s. other emoluments. There is a school not parochial.

CRAIG-OWL, one of the Sidlaw hills, in the parish of Tealing, Forfarshire. It rises to 1,600 feet above sea-level, and is the highest summit in the range.

CRAIG-PHADRIC, a steep but finely-wooded hill in the neighbourhood of Inverness; rising 420 feet above the level of the Ness, which flows at its foot. It is noted for the remains of one of those fortifications, which, from the vitrified appearance of the stones, and the marks of fusion which they exhibit, have received the name of vitrified forts. That on Craig-Phadric is by far the most complete and extensive one in Britain. The summit of this hill is flat, and has been surrounded by a wall in the form of a parallelogram, the length of which is about 80 yards, and the breadth 30 within the wall. The stones are all firmly connected together by a kind of vitrified matter resembling lava, or the scoræ or flag of an iron-foundry; and the stones themselves in many places seem to have been softened and vitrified. The greater part of the rampart is now covered with turf, so that it has the appearance of an earthen mound; but, on removing the earth, the vitrified matter is everywhere visible, and would seem to have been in some places of great height. On the outside there is the appearance of a second rampart, but not so regular as the first. Considerable masses of vitrified matter are also found in this second structure, under which is the natural rock, chiefly a fine granite, with some breccia or pudding-stone, in a cement of argillaceous and quartzose matter. Within the area is a hollow, with a small spring of water. The ruins of similar vitrified forts are to be seen on the summits of other hills in the Highlands. On Knockfarrel and Castle-Finlay, in Ross-shire; on Dunevan in Nairnshire; and there is another, near the south-west extremity of the island of Bute.

Opinions concerning these ruins are very conflicting. Some maintain that the vitrification is the effect of a volcano; others, the work of art; Mr. Fraser Tytler, in the second volume of the 'Transactions of the Royal Society of Edinburgh,' endeavours to show that this vitrification is the result of accident,—the ruins of ancient forts destroyed by fire. For a more particular account of this remarkable appearance, we refer the reader to a work by Mr. Williams, entitled 'An account of some remarkable ancient ruins lately discovered in the Highlands of Scotland;' and to the 'Philosophical Transactions' for 1777.

CRAIGROSTAN. See BEN-LOMOND.

CRAIL, a parish in the south-east angle of Fifeshire, commonly called 'the East Nook o' Fife.' It is bounded on the north by the parishes of Denino and Kingsbarns; on the east by the sea; on the south by the sea and the parish of Kilrenny; and on the west by the parishes of Kilrenny and Carnbee. It is of very irregular outline, varying in breadth from 2 furlongs to 2½ miles, and stretching westward from Fifeness to a length of 6½ miles. The surface is, in general, flat, naked, and uninteresting; it rises abruptly at the coast to an elevation of from 20 to 80 feet; and it thence swells gently to the west, with hardly a hedge to fill its thin dress, and without an declivity or a lake or stream to relieve the monotony of its aspect. Coal-mines, which formerly enriched the country, have long been exhausted. Limestone is abundant, but lies too deep to be productively worked. Population, in 1801, 1,652; in 1831, 1,824. Houses 344. Assessed property, in 1815, in the burgh, £1,391; in the parish, £7,234.—Crail is in the presbytery of St. Andrews, and synod of Fife. Patron, the Earl of Glasgow. Stipend £280 11s.; glebe £30. Unappropriated teinds £624 3s. Schoolmaster's salary £34 4s. 4½d., with upwards of £30 school-fees. When the scholars exceed 90, an usher is employed, who receives £12 from the burgh, and from one-fourth to one-third of all the fees. Two schools, not parochial, are partially endowed or encouraged by the town-council. This parish claims Kingsmuir and the island of May; the former as bearing its proportion of parochial burdens, and the latter as sharing its ecclesiastical privileges.

CRAIL, a royal burgh of great antiquity in the above parish; 4 miles east of Anstruther; 2 west of Fifeness; 10 south-east of St. Andrews; 19 from Cupar; and 29 north-east of Kinghorn. It was anciently called Caryle or Carraile, and is mentioned by old historians as a town of considerable note, as early as the middle of the 9th century. Ada, mother of Malcolm IV., gave to the monks of Dryburgh a toft of houses in her burgh of Crail. The church, an ancient fabric, still entire, is a fine specimen of pointed architecture. It consists of a central nave, with aisles, divided by two rows of pillars, one on each side. This church belonged to the Cistercian nunnery of Haddington, and was made collegiate, in 1517, at the desire of the prioress of Haddington, for a provost, a sacrist, and 10 prebendaries. John Knox preached here on Sunday the 19th May, 1559, and next day marched off with a mob at his heels, to destroy the monuments of idolatry at St. Andrews. The celebrated James Sharp, archbishop of St. Andrews, was once minister of this church. There are some vestiges of a chapel which was dedicated to St. Rufus. There is a small United Secession church within the burgh; and two schools,—a parish and a burgh school. A little to the east of the harbour, on the top of the cliff are some traces of an old castle in which David I. occasionally resided. The town consists of two streets, and two or three small lanes. The northmost street is broad and spacious, and con-

tains some good houses of a massive and antique description, but the whole place bears evident marks of having "seen better days." The harbour is small and inconvenient.* Crail used formerly to be a great rendezvous for boats employed in the herring-fishery, and immense quantities of herrings were then cured here; but scarcely any have been caught here of late years; even the white fishing is now neglected. Formerly they used to cure haddocks in a peculiar way, without splitting them, which went by the name of 'Crail capons,' but this mode is now almost given up. This burgh received its charter from Robert Bruce, in 1306, which was successively confirmed, with new grants, by Robert II. in 1371, Mary, in 1553, James VI., and Charles I. and II. It was formerly governed by 3 bailies, a treasurer, and from 11 to 15 councillors. It is now governed by a chief magistrate, 2 bailies, a treasurer, and 17 councillors. It joins with Cupar-Fife, St. Andrews, Kilrenny, East and West Anstruther, and Pittenweem, in returning a member to parliament. Its parliamentary and municipal constituents were 54 in 1839. Corporation revenue £228. A fair was at one time held here annually in the month of March, but it has fallen into desuetude. About 1810, the magistrates feued to the late Earl of Kellie, the out-tennds and customs, anchorages, and shore dues of Fifeness, Cambo sands, and Kingsbarns, for £5 of yearly rent, which was afterwards reduced to £2. Crail once possessed an extensive common, part of which has been feued-off, so that the revenue of the town is inconsiderable. There is a golfing-club in this town, who find scope for their manly game in the adjacent links. Crail, and 'the East Neuk o' Fife,' figure conspicuously in Drummond's "Polemidiina."—Balcomie castle, a little to the east of Crail, now the property of Sir David Erskine, was the ancient residence of the Balcomies of that ilk. During the reign of James IV. it was acquired by the Lairmonds of Dairsie. In 1705, the estate was purchased by Sir William Hope; and it is now, by purchase, the property of the Earl of Kellie. It has at one period been an extensive and massive building. A great part of it was taken down by the late Earl of Kellie; but a lofty tower still remains, and forms a well-known sea-mark.—Below Balcomie is a small cave, where, tradition says, King Constantine was beheaded by the Danes in 874. There is a curious dike, or perhaps natural ridge of stones, about half-a-mile in length, and stretching from the frith of Forth on the south-west, to the German ocean on the north-east, so as to enclose a triangular space of ground forming the Ness. Tradition attributes this work to the Danes. A few years ago several rude stone coffins were discovered on the farm of East Wormiston, within view of the place where the skirmish between the Scots and Danes took place in 874; and, from its being without 'the Danes' dyke,' it is supposed these coffins may have contained the relics of the Scottish warriors who fell in this engagement. They were 25 in number, and were arranged side by side, the skeletons being divided by only a single stone, which thus formed the side of two coffins.

* A creek, a quarter of a mile eastward of the present harbour, called the harbour of Roome, could, at a comparatively small expense, be converted into an excellent harbour capable of containing 200 sail of vessels; having, in ordinary tides, from 20 to 22 feet water, and at high spring-tides 29 feet; which would admit ships of war. This harbour is sheltered from all winds but the south; and may be entered, with the wind at any point, at 1½ hours flood, by vessels drawing 10 feet water. It would also be of the most essential service to the trade in the frith, and the whole eastern and northern coast of England and Scotland, as, from its central situation, it would always be a place of safety during storms from the north and east; and in case of strong westerly winds, vessels might run in here so as to avoid being blown out of the frith.

CRAILING, a parish in Roxburghshire, of a somewhat circular form, lying on both sides of the Teviot. It is bounded on the north by Roxburgh parish; on the east by Eckford; on the south by Jedburgh; and on the west by Ancrum and Roxburgh. Its extreme measurement, from north to south, is 4 miles; and, from east to west, 3½. The Teviot divides it into two nearly equal parts, flowing in beautiful windings from west to east, and impressing upon the district the general feature of a rich basin, deeply stained with green, and ornamented with most of the softer forms of beauty. Oxnam water again divides its southern section into two not very unequal parts, flowing down upon it from the acclivity of the border-mountains, and threading its way through verdure and plantation till it falls into the Teviot. Another streamlet, after sweeping round from the east upon its south-eastern extremity, turns northward on its touching the parish, and forms, till its confluence with the Teviot, the boundary between Crailing and Eckford. Nearly the whole of the land is arable, rich, and well-cultivated, consisting generally of a light loam; and with the interspersions of 300 acres of plantation, the shadowing on the west of three isolated and considerable hills, and the brilliant movements and opulent dress of the intersecting Teviot, it presents to the lover of landscape pictures delightfully attractive. On the central one of the three hills, that called Piniel-heugh, there rises to the height of 150 feet, a fine cylindrical column, which commands a view of nearly all the richly picturesque valley of the Teviot, and overlooks some of the most golden scenes on the Tweed, and lifts the eye upward among the grand acclivities and varied outlines of the Cheviots, and away north-eastward over all Berwickshire to the German ocean. This column is ascended by a spiral staircase, and was built by the sixth Marquis of Lothian, in commemoration of the battle of Waterloo.† On the summit of Piniel-heugh are also vestiges of two encampments which are conjectured to have belonged to the Romans. Through the west of the parish formerly passed a Roman road or causeway, the course of which can still be traced. The great road through Teviotdale traverses the southern section of Crailing, at about mid-distance between the Teviot and the boundary of the parish, passing all the way along under a delightful shading of beech, ash, and elm. The northern section—all the property of the Marquis of Lothian—is presided over by the plain but ancient mansion of Mounteviot, now in the course of being superseded by an erection in the form of three parallelograms, romantically situated on the banks of the Teviot, at the base of Piniel-heugh. The southern section formerly constituted the estate of Crailing, long the property of the noble family of Cranston; but it is now chiefly the property of Paxton of Crailing, whose mansion stands on a gentle eminence, overlooking the meanderings and the sylvan-sloping banks of the Oxnam. Crailing is the lowest, warmest, and most fertile portion of Teviotdale, and is remarkably salubrious. Half-a-century ago, an inhabitant attained the age of 106 years, and left behind him several healthy survivors upwards of 80. There are three small villages, Nisbet, Upper Nisbet, and Crailing. The last of these was at one time considerable, but has latterly been falling into decay. It is situated on the Oxnam, at the point where it is crossed by the Carlisle and Berwick road; and here an elegant bridge was erected in the

† It is strongly constructed of whinstone quarried on the spot, and bears this inscription: "To the Duke of Wellington and the British Army, William Ker, VI. Marquis of Lothian, and his tenantry, dedicate this monument, 30th June, 1815."

summer of 1833. Population, in 1801, 669; in 1831, 733. Houses 133. Assessed property, in 1815, £8,355.—Crailing is in the presbytery of Jedburgh and synod of Merse and Teviotdale. Patrons, the Crown and the Marquis of Lothian. Stipend £251 10s. 11d.; glebe £32 10s. Unappropriated teinds £1,068 15s. 1d. Schoolmaster's salary £29, with £22 of other emoluments. There is a school not parochial. Crailing is called, in the records of presbytery, the united parishes of Crailing, Nisbet, and Spital; Crailing and Nisbet were distinct parishes, the former on the south, and the latter on the north of the Teviot; and Spital is said to have been an hospital belonging to the abbey of Ancrum. A few tombs overgrown with shrubs and weeds still mark the site of Spital church, and point out the present place of sepulture for the inhabitants on the northern side of the Teviot. Even Crailing-proper, or the southern part of the modern parish, formed, in the reign of David I., two distinct parishes, each having its manor, church, and village. The church is situated on an eminence near the confluence of the Oxnam and the Teviot. It was built about 80 years ago, and accommodates 300. Dissenters, though possessing no local place of worship, have long been numerous in this parish.

CRAMOND, a parish situated on the south side of the frith of Forth, partly in the county of Linlithgow, but by far the greater part in Mid-Lothian; bounded by Kirkliston and Dalmeny on the west; by Corstorphine and St. Cuthberts on the south; and by St. Cuthberts on the east. It is watered by the Almond, which divides it from Linlithgowshire. The sides of this river are beautifully ornamented, from about Craig-hall to where it falls into the Forth: see article ALMOND. The whole extent of the parish, from Almond toll-bar to Wardie, is from 6 to 7 miles in length; while the breadth varies from 1 to 2. Towards the north and east the surface is flat, interspersed with gentle eminences. The neighbourhood of Edinburgh affords a ready market for the produce, and furnishes plenty of excellent manure for the farms. The southern and western part of the parish is more hilly and broken. Corstorphine-hill is partly in this parish. To it also are annexed the two small islands of Cramond and Inchmickery: the former of which, forming part of the estate of Barnton, is accessible on foot at low-water. It contains about 19 acres, and affords pasturage for a few sheep. The road from Edinburgh to Queensferry passes through the parish, crossing the Almond at Cramond bridge, $4\frac{1}{2}$ miles west of Edinburgh, and $1\frac{1}{2}$ mile above the mouth of the river. The old bridge of Cramond is a little below this point. It consists of 3 arches, each about 40 feet; the breadth within the walls being only 14 feet. The oyster-beds on the coast of this parish, and around the islands of Cramond and Inchmickery, have been almost destroyed from over-fishing; and the Almond, which once abounded with salmon and trout, is now almost deserted by these fish. The principal manufacture carried on within the parish is the forging of iron and working of steel by the Cramond Iron company. Ironstone is found along the coast, and there are numerous seams of coal; but, though pits have been frequently sunk, they have been given up on account of the badness of the coal. There is a mineral spring on the lands of Marchfield, called the well of Spa, containing a sufficient quantity of sulphate of magnesia to render it highly purgative. John Strachan, Esq. of Craigh-crook, in this parish, about the year 1720, mortified his estate, of above £300 per annum, to certain managers, to be applied by them in relieving the necessities of "poor old men, women, and orphans." The annual produce of this mortification has greatly

increased, and the amount is dedicated to the payment of annual sums of about £8 each to a number of poor old men and women in the city of Edinburgh. The mansion of Craighcrook has been long known to the literary world as the residence of the aristarch of critics, Francis Jeffrey. Among other fine villas are Barnton, Granton, Cramond house, and Caroline park, formerly called Royston.—The parish of Cramond has given birth to several men who have become eminent by their talents or their virtues. Of these may be mentioned, John, second Lord Balmerinoch, noted for his spirited opposition to Charles I., and for being the best friend of the Covenanters, having spent the greatest part of his fortune in support of that cause;—Sir Thomas Hope of Granton, a celebrated lawyer at the Scottish bar;—Sir George Mackenzie, first Earl of Cromarty, well-known as an able writer, and a great persecutor;—Dr. Cleg-horn, professor of anatomy in the university of Dublin, who may be considered as the founder of the school-of-medicine in that university. To these may be added John Law of Lauriston, one of the most remarkable characters this or any other country has ever produced. He was born at Lauriston in the year 1671. Disgusted with some treatment he had received in this country, he went over to France, where he was raised, in 1720, to the high rank of comptroller-general of the finances of France; and obtained liberty to erect a national bank, which was attended with the most beneficial effects. He afterwards planned the Mississippi scheme, which proved to France,—what the South Sea company afterwards was to Britain—only a bubble, threatening to involve the nation in ruin. Law ended his chequered life in 1729, in Italy, in a state of indigence, after having astonished all Europe with his abilities, his projects, his success, and his ruin. Population, in 1801, 1,411; in 1831, 1,984. Houses, in Edinburghshire, 256; in Linlithgowshire, 18. Assessed property, in 1815, £16,491. Besides the village of Cramond, there are, in this parish, the village of Davidson's Mains, or Muttonhole, and several minor hamlets.—This parish, formerly a vicarage, is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patron, Ramsay of Barnton. Stipend £271 2s. 8d.; glebe £20. Unappropriated teinds £237 13s. 10d.—Schoolmaster's stipend £34 4s. 4 $\frac{1}{2}$ d. There were, in 1834, 5 private schools within this parish.—The village of Cramond is $5\frac{1}{2}$ miles west of Edinburgh, and 1 north of Cramond bridge. It is situated on the eastern side of the Almond, where it discharges itself into the frith of Forth, opposite Dalmeny park. It contains upwards of 340 inhabitants, who are mostly employed in the ironworks carried on in the neighbourhood, which were established in 1771. The Almond is navigable for small vessels nearly a quarter of a mile from the Forth, forming a safe and commodious harbour—specified in the records of the Exchequer as a creek belonging to the port of Leith. To this harbour belong 8 or 10 sloops, employed by the Cramond Iron company. This village was an important Roman station. According to Boece, and Sir John Skene, Constantine IV. was slain in battle here by Kenneth, son of Malcolm I. The bishops of Dunkeld, to whom Robert Avenel transferred one-half of the manor of Cramond, occasionally resided here. In the month of May, 1543, the expedition under the Earl of Hertford landed at Caroline park in this parish, near the spot where the Duke of Buccleuch has recently built Granton pier.

CRANSHAW, or CRANSHAW, a parish at the middle of the northern verge of Berwickshire; but consisting of two parts, the larger lying south of the smaller at the average distance of $1\frac{1}{4}$ mile. The

northern part is bounded on the north and west by East Lothian, and on the east and south by the parish of Longformacus; and is of nearly a square figure, measuring from angle to angle, both southward and westward, about $2\frac{1}{2}$ miles. On the north and east, round nearly one-half of its limits, this section has for its boundary line Whitadder water. The southern section is bounded on the north and east by Longformacus, on the south by Westruther, and on the west by Lauder and Longformacus; and is of an oblong form, measuring $4\frac{1}{2}$ miles in extreme length, and $2\frac{1}{4}$ in extreme breadth. This section has for its boundary line on the north and partly on the east Dye water; and it is traversed from west to east by Watch water; which, just when leaving it, falls into the Dye. The whole parish is a sea of hills, forming part of the Lammermoor range, and is wild and pastoral. The greatest elevation is Man-slaughter-Law, situated in the northern section, which is traditionally reported to have received its name from its having been the scene of a sanguinary onslaught, and on whose summit is a mound or tumulus apparently commemorative of the event. The climate is cold, sharp, and extremely foggy; yet decidedly salubrious. Near the centre of the northern section stands the castle of Cra'shaws, now used as a shooting-box by Mr. Watson of Saughton, but formerly a fastness of a kinsman of the Douglasses; and it seems to have been the original of Sir Walter Scott's pictured Ravenswood castle, in his graphically tragic story of 'The Bride of Lammermoor.' Population, in 1801, 166; in 1831, 136. Houses 24. Assessed property, in 1815, £783.—Cra'shaws, formerly a rectory, is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, Watson of Saughton. Stipend £158 6s. 7d.; glebe £17 10s. Unappropriated teinds £36 19s. 5d. The church stands at the eastern verge of the northern section, in the vale or basin of the Whitadder. It was built in 1739, and contains 120 sittings.—Schoolmaster's salary £34 4s. $4\frac{1}{2}$ d., with £12 other emoluments.

CRANSTON, a parish on the eastern verge of Edinburghshire; bounded on the north by Inveresk and Haddingtonshire; on the east by Haddingtonshire; on the south by Crichton, Borthwick, and Newbattle; and on the west by Newbattle and Dalkeith. It is of very irregular outline, measuring about 5 miles in extreme length, and about 3 miles in extreme breadth, though over half its length it is hardly 1 mile broad; and it embraces an area of nearly $7\frac{1}{2}$ square miles. The river Tyne—here only a rivulet—intersects it from south to north, meandering its way amid groves and picturesque declivities, and overlooked by handsome and noble seats, particularly the magnificent structures of Oxenford castle and Prestonhall. The surface is undulating, cultivated, well-enclosed, and full of beauty; and, from some of its higher grounds, commands prospects both rich and extensive. Coal, limestone, and sandstone are abundant. At Crichton-Dean kilns 24,000 bolls of lime are annually sold; at Cousland quarry, 16,000 bolls. A small section of the parish lies apart from the main body, imbosomed in the parish of Crichton. In this section is Cakemuir tower, square in form, four stories in height, and winged with projecting battlements, in which is "Queen Mary's room, an apartment said to have been occupied by her when escaping, in male apparel, from the investment of Borthwick castle by Lord Home. The villages are Cousland, Chesterhill, and Preston. See COUSLAND. Near Prestonhall stood the old manse, which is said to have been a resting-place for the religious on their way to Melrose, and over one of the windows of the manse is the inscription, "Diversorium infra, Habitaculum supra." Population, in

1801, 895; in 1831, 1,030. Houses 221. Assessed property, in 1815, £8,531.—Cranston, formerly a vicarage, is in the presbytery of Dalkeith and synod of Lothian and Tweeddale. Patron, Sir J. H. Dalrymple of Cousland, Bart. Stipend £260 6s. 6d., glebe £27. Unappropriated teinds £260 6s. 6d. The parish church is an elegant Gothic edifice. It was built in 1826; sittings 375.—There are 2 schools. Parochial schoolmaster's salary £34 4s. 4d., with about £21 10s. school-fees.—Cranston, in the 12th century, was written Cranestone,—signifying the territory or resort of the crane; and it was then divided into the two manors of Upper Cranston and Nether Cranston, afterwards denominated New Cranston and Cranston-Ridel. The latter manor obtained its cognomen from Hugh Ridel, who received it as a grant from Earl Henry, and who bestowed upon the monks of Kelso the church and ecclesiastical property of Cranston, as the purchase of their prayers for the souls of Earl Henry and David I. Cranston-Ridel passed, in the reign of David II., through the Murrays to the Macgills, who were raised to the peerage under the title of Viscounts Oxenford and Lords Macgill of Cousland. Cranston gives title, from their ancient possessions in the parish, to the noble family whose ancestor, Sir William Cranston, captain of King James VI.'s guards, was raised to the peerage in 1609.

CRATHY and BRAEMAR, an extensive united parish, situated in that district of Aberdeenshire called Marr, and supposed to be more elevated above the level of the sea, and farther removed in every direction from the coast, than any other parochial district in Scotland. The length of the inhabited part is about 30 miles; the breadth varies from 8 to 10; but, taking in the mountainous and waste district, the whole district is upwards of 40 miles in length, and 20 in breadth. The principal features of the district have been already described under the article BRAEMAR. In the low grounds the soil is various, but in a favourable season it produces good crops. By far the greater part is covered with mountains,—some of which are the highest in Scotland, with the exception of Bennevis: the highest are LOCH-NA-GAR, MUCKLE GLASHAULT, BENNABUIRD, and BENMACDHU. See these articles. Nearly the whole of Crathy and Braemar has been originally covered with wood, which was called the forest of Marr; and, with those of the Duke of Athol in Perthshire, and the Duke of Gordon in Badenoch and Glenaven, constituted the principal part of the Great Caledonian forest. In the deepest mosses within this immense range of forests, there are still found large logs and roots of trees. In Braemar, a great part of the wood still remains. Besides the natural wood, there are very extensive plantations of fir and larch. The Dee takes its rise in the forest of Braemar, and runs through the whole extent of this district. The principal lakes are Loch Callader and Loch Brotachan, which contain trout, salmon, and eels. Glen Callader is interesting to geologists from its numerous displays of the association of granite with slaty primitive rocks. The great military road from Blairgowrie to Fort-George passes through the whole extent of the district. The village of CASTLETON of BRAEMAR is situated on this line of road. see that article. Population of the united parishes, in 1801, 1,876; in 1831, 1,808. Houses 424. Assessed property £4,646.—This parish is in the synod of Aberdeen, and presbytery of Kincardine O'Neil. Patron, the Crown. Stipend £233 10s. 8d.; glebe £8. Unappropriated teinds £172 19s.—Schoolmaster's salary £26, with £8 fees, and house and garden. There are 3 schools within this district supported by the Society for propagating Christian knowledge.

CRAWFORD,* sometimes called **CRAWFORD-DOUGLAS**, a parish forming the southern extremity of Lanarkshire; in extreme length about 18 miles, and 15 miles in extreme breadth. Superficial area, about 76,000 acres; of which not above 1,000 acres are arable. It is bounded on the east by a ridge of hills which divide it from Tweedsmuir and Moffat, and from which the Tweed, the Annan, and the Clyde, take their rise; on the south by Closeburn and Kirkpatrick-Juxta; on the south-west by Sanquhar, Durisdeer, and Maxton; on the west by Crawford-John; and on the north by Lamington. The Louthers, of which the elevation above the level of the sea is 2,500 feet, are chiefly in this parish. The declination of the surface is towards the north-west. The greater part of the district, forming what Heron, we think, was the first to denominate 'the Southern Highlands of Scotland,' consists of hills and moors, some of which are fit for pasture; but many are bleak and scarcely exhibit marks of vegetation. In the valleys, the soil is generally light and spongy; in some places there is clay. The intelligent Robert Heron visited this district in 1792, and his remarks are worth quoting: "Agriculture," he says, "is little used here. Some spots of ground scattered here and there are indeed sufficiently susceptible of cultivation, and not without fertility to reward the labour of the husbandman; but, even on these, it is so very late before grains are ripened, that they are commonly shaken by winds, withered by frost, or rotten by rains, before they can be cut down and gathered in. These mountains are then appropriated chiefly to the purposes of pasture. They are divided into large farms; the rents of which—although at a very trifling rate for the acre—are, however, commonly from £200 to £300 for each farm. A considerable part of the stock of every farmer in these parts, formerly consisted in black cattle. But these have, by degrees, given place to sheep. Sheep are now the favourite stock of the farmers of Crawford-muir; and I have reason to believe that they are the most skilful and successful shepherds in Scotland. The sheep which they are accustomed to rear, are those commonly named among them 'short sheep,' having black faces and black feet. [These are still retained in the higher districts; but Cheviots, and crosses with Cheviots, are bred more common in the lower districts.] The value of a sheep's grass, for a-year, is estimated at 2s. [It is now 4s. 3d.] The best of these are sold at 12s. or 15s. a-head. Their wool is coarse, and brings only from 5s. to 7s. a-stone. Sheep of a different breed, and bearing finer and more valuable wool, have been lately recommended to the shepherds through Scotland, by a society formed for the improvement of British wool. The sheep fed on the Cheviot hills in Northumberland are of this breed. Their wool brings from 12s. to 15s. a-stone. But, of this wool a greater number of fleeces are required to make up the stone; and at all the English markets, the short sheep are purchased in preference to these last, because their flesh is confessedly more delicate, and of a better flavour. Conversing with one farmer in these parts—who was avowedly an advocate for the Cheviot breed—he could not avoid acknowledging the inferiority of the flesh of these, but insisted, that to his own taste, it was but very slight. The turn of the farmers of these parts to the rearing and management of sheep has contributed, in a considerable degree, to the depopulation of the country. The population of the parish of Crawford is asserted to be one-half less than it was forty years

ago; an assertion which confirms the inference I have deduced from the number of the ruinous and desolate cottages by which I had occasion to pass. The price of labour has risen greatly in this neighbourhood, within these last thirty years. A maid-servant has now £2 for the wages of her labour in the summer half-year, who at the distance of thirty years backwards would hardly have obtained £1. [They have now from £4 to £8.] A ploughman living in his master's house, has from £6 to £8 of yearly wages. [At present their wages vary from £6 to £12.] A shepherd living in his own cottage, and tending his master's flock, gets from £10 to £12 in the year. [Shepherds are now paid in this district by being allowed to keep what is called a pack of ewes—generally from 40 to 50—with their lambs; they have also a cow's keep, and from 40 to 50 stones of oatmeal.] In this country of sheep and shepherds, dogs are the favourite domestic animals, and are highly useful by their services. They are trained by their masters to the exercise of surprising sagacity. Each shepherd is attended by his dog. Remaining himself in the vale, he sends his dog up the hill, to gather in or drive forward his sheep. The dog having executed his commission, returns for new orders from the master. They converse in a set of vocal signs; and the dog has intelligence to comprehend and submission to obey very complicated commands. This country is well-known to have been within the limits of the Roman province of Valentia.—Within this district are yet to be seen the remains of two Roman roads; and the sites of three camps, supposed to be Roman, but so entirely effaced, that this cannot be with certainty determined. I had an opportunity of surveying the castle of Crawford, now desolate and ruinous, situate close upon the river, opposite to the village of Crawford. Its walls still stand. It is surrounded with trees; and by the structure, appears to have been intended not less for protection, than for accommodation. Tower-Lindsay, a more ancient edifice, built on the same site, was famous in the days of our renowned Wallace. Being occupied by an English garrison, that hero took it by storm; killing fifty of the garrison in the assault. For security, the farm-houses on Crawford-muir were anciently stone-vaults: and of these some still remain. In these strongholds, the inhabitants lurked, when invaded by the plundering rapacity of the Douglasses from Clydesdale, and the Jardines and Johnstones from Annandale. Various hills within this neighbourhood still retain the name of Watches, having been anciently the stations of scouts, who watched the approach of enemies, and in case of danger, lighted fires to spread the alarm through the country.—It was in the minority of James VI. that a German mineralogist visited these hills in search of ores. Among the sands of the rivers of Elvan and Glengonar—both rising from those hills in the bowels of which veins of lead ore have since been opened—he gathered some small quantities of gold dust. A place where he washed this gold, still retains the name of Gold-scour, derived from that circumstance. Verses are still repeated among the neighbouring inhabitants, which import, that this mineralogist, by his successful searches, accumulated a large fortune. An account of his labours and discoveries, written by himself, is yet preserved in the Advocates' library. The attempt to gather gold on these hills, was, not very many years since, renewed by the order of the late Earl of Hopetoun; but being found less profitable than common labour, was, very wisely, soon discontinued. It is still occasionally found on the tops of the rocks, in small particles, seldom exceeding in size the point of a small pin." ['Observations made in a Journey,' &c. vol. ii. pp

* This name is supposed to be a corruption of two Celtic words, *croth* and *phort*, pronounced *cro-fort*, and signifying 'a sheltering-place for cattle.'

40—45.]—The district is very rich in minerals. At Leadhills, in this parish, are the most extensive mines in the kingdom: see LEADHILLS. The DAER, the CLYDE, the ELVAN, and GLENGONAR, intersect this parish: see these articles. The great road from Glasgow to Carlisle runs through the middle of the parish. Population, in 1801, including Leadhills, 1,671; in 1831, 1,840. Houses 384. Assessed property £16,016.—The village of Crawford is 18 miles south of Lesmahago, and 3 north of Elvanfoot inn. Population, in 1831, 150. It is of considerable antiquity, and consists of freedoms granted to the feuars by the neighbouring proprietors. Each freedom consists of 6 acres of croft-land, and enjoys the privilege of feeding a certain number of horses, cows, or sheep, on the hill or common. The houses are at such a distance from each other that they have the appearance of being dropped on the road. There is a chain-bridge of 75 feet span over the Clyde at this village. On the opposite side of the Clyde, are the ruins of Crawford-Lindsay castle, the ancient seat of the Earls of Crawford. A portion of this parish, on the north-west, was held, during the reign of Malcolm IV. by John, step-son of Baldwin de Bigger; from him it was called Crawford-John, and afterwards formed the parish of that name. The more extensive part, forming the parish of Crawford, was held by William de Lindsay and his successors for several centuries, from which circumstance it came to be called Crawford-Lindsay. The family of Lindsay was ennobled in 1399, under the title of Earls of Crawford. David de Lindsay, the 4th Earl, having been a supporter of James III., lost this property in 1488, when it was bestowed on Archibald, Earl of Angus, and came to be called Crawford-Douglas. Prior to the Reformation, the monks of Newbottle, by grants from the Lindsays, possessed considerable privileges in the parish of Crawford.—This parish, formerly a vicarage, is in the presbytery of Lanark, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £233 13s. 7d.; glebe £12 10s. Unappropriated teinds £623 9s. 11d. Church repaired in 1835; sittings 320. There is a chapel at Leadhills. Two farms in this parish are annexed, *quoad sacra*, to Moffat parish.—Schoolmaster's salary £34 6s. 4½d., with about £16 fees. There are 2 private schools.

CRAWFORD-JOHN, a parish in Lanarkshire, of an irregular figure, extending 12 miles in length, and generally to about 6 in breadth; bounded on the north by Douglas parish; on the east by Wiston and Lamington; on the south by Crawford; and on the west by Dumfries and Ayr shires. Superficial area 21,123 Scots acres. The surface of this district is hilly, and adapted for sheep-pasture, with a few patches of arable land in the valleys between the hills. There are limestone, white freestone, and an appearance of coal in this parish; and a lead mine is now working at Snar. In other parts of the parish are the marks of former mines, which, report says, were wrought in search of gold. Cairntable, the north-west corner of this parish, is 1,650 feet above sea-level. On the top of Netherton hill, opposite to the house of Gilkerscleugh, are the vestiges of an extensive encampment; and at Mosscastle, Glendorch, and Snar, are the ruins of two ancient castles. A small river, named Duneaton water, takes its rise at the foot of Cairntable, on the borders of Ayrshire, and runs through the whole extent of the parish from west to east; besides which, there are several smaller rivulets. Population, in 1801, 712; in 1831, 991, of whom 316 belong to the three small villages of Abington, Crawford-John, and Netherton. Houses 169. Assessed property, in 1815, £5,014.—This parish, formerly a rectory, is in the presbytery of Lanark, and

synod of Glasgow and Ayr. Patron, the Crown. Stipend £233 13s. 7d.; glebe £16. Unappropriated teinds £167 5s. Church enlarged in 1817; sittings 209.—Schoolmaster's salary £32 10s., with about £26 fees. There is a private school at Abington.

CRAWFURDSDIKE. See CARTSDIKE.

CRAWICK (THE), a beautiful stream in Dumfriesshire, which rises within the boundaries of Lanarkshire, and dividing the parish of Sanquhar from Kirkconnel, after a south-west course of about 8 miles, falls into the Nith near Sanquhar manse. This river, near its head, receives two more streams more copious than itself: viz., the Wanlock from the south-east, and the Spango from the north-west. It winds between pleasant green hills, till the scenery gradually changes to finely-wooded banks and cultivated lawns.

CRAWICK-MILL, a village in the parish of Sanquhar, on the above stream, about half-a-mile north-west of the town of Sanquhar. It has a population of about 124 inhabitants, who are chiefly employed in a large carpet and tartan cloth manufactory.

CREACHBEN, a mountain in Argyleshire, in the parish of Ardnamurchan, which attains an altitude of 2,439 feet above the level of the sea.

CREANMULL ISLES, two small islets, which constitute part of the parish of Barra, but are uninhabited.

CREE (THE), a river which rises on the south-east skirts of Carrick, in two streams; the one issuing from Loch Dornal, and known as the Cree proper; the other rising on the southern skirts of Eldrick hill, receiving an augmentation from Loch Moan, and flowing south, under the name of the Minnock water, till its junction with the Cree, where it expands into Loch Cree, about 1½ mile below the Bridge of Cree. From the High or Upper Bridge of Cree, till it falls into Wigton bay by a considerable estuary, the Cree divides Wigtonshire from Kirkcudbright. In the upper part of its course it runs through a bleak and dreary country, but is soon considerably increased by several streams, and, instead of holding its course through rocks and muirs, glides slowly and beautifully for some miles through a rich valley abruptly bounded on each side by banks covered with wood. It is navigable for several miles up, and has been the chief source of all the agricultural improvements which have been made in this part of the country. It produces excellent fish of different kinds; salmon in considerable quantities. The smelt, or sparring, a very rare fish, is also found in the Cree. It is found only in one other river in Scotland, viz. the Forth at Stirling. The sparlings make their appearance in the Cree only during a few days in March, at which time they are often caught in great quantities. They taste and smell strongly of rushes; but this flavour is to most people agreeable.

CREETOWN, or FERRYTOWN OF CREE, a village in the parish of Kirkmabreck, stewartry of Kirkcudbright; 7½ miles south-east of Newton-Stewart, and 11 west of Gatehouse. It is beautifully situated near the mouth of the Cree, on the east side of its estuary. It has a good anchorage, and is chiefly supported by its coasting-trade; a few vessels belong to the place. Creetown was erected into a burgh-of-barony by the proprietor and superior. The parish-church is situated here. It contains upwards of 400 inhabitants.

CREGGAN-FERRY, a point of transit across Loch Fine at Strachur. In the summer of 1829, Mr. D. Napier started a steam-carriage for the conveyance of passengers from Loch Eck to this ferry, a distance of 5 miles. It had four wheels, having the body in front, and two boilers, with two engines

of four horses' power each, placed behind. The cistern was placed under the boilers, which were double, and so constructed that a vent for the smoke was left between them, through which also fuel was supplied to the furnace. The driver or engineer had a seat on the top, at the extremity of the carriage, where an index-wheel was placed to steer the fore wheels. The body of the carriage had eight seats on each side for passengers, and carried the luggage on the top. It went at the rate of 12 miles an hour on a hard road, but was found not to answer on a soft sandy track such as that between Loch Fine and Loch Eck.

CRERAN (Loch), an arm of the sea in Argyleshire, going off to the south-east from Loch Linnhe, in the district of Appin. The main coast-line of road crosses it at Shean ferry.

CRICHTON, a parish in the county of Edinburgh; bounded on the north by Cranston; on the east by Fala and Humberie; and on the south by Borthwick. It is about $5\frac{1}{2}$ miles in length, by $4\frac{1}{2}$ in breadth. The village of Crichton is situated 11 miles south-east of the metropolis; and 5 south by east of Dalkeith; on the middle road to England by Coldstream and Cornhill, which is here carried over the dell of the Tyne by a magnificent bridge, lately finished, consisting of 5 arches, each of 50 feet span, and 80 feet in height. It is a thriving place, and contains, with the immediately adjoining village of Pathhead, 750 inhabitants. The parish contains about 3,900 Scots acres, of which five-sixths are well-adapted for tillage, having a rich deep soil, capable of producing heavy crops. The remainder is overgrown with moss, on a wet soft sand of clay bottom. In the New Statistical Account it is stated that the surface of this district seems to be in a state of movement, "spaces of whole acres are visibly sinking from their former level, and forming large hollows which but a short time ago could scarcely be noticed." The river Tyne rises in the upper part of this parish, from which it slowly descends into the fertile vale of East Lothian. There is a limestone quarry wrought to a considerable extent, nearly 4,000 bolls being annually sold. Coal has been discovered, but hitherto no pits have been opened. At Longfaugh is a circular camp or intrenchment, the vallum of which is very distinct.—The castle of Crichton is a very ancient and magnificent building. It overhangs a beautiful little glen through which the Tyne slowly meanders. It is a square massive building, with a court in the centre; and appears to be composed of parts built in different ages, yet upon a systematic plan. Sir Walter Scott refers the tower on the north-western angle to the 14th century. The walls of the central part exhibit diamond-shaped facets; and the soffits of the principal staircase are likewise covered with elaborate and curious work, presenting twining cordage and rosettes. Some of the rooms are still in a great measure entire in the general outline. On the forfeiture of William, 3d Lord Crichton, this castle was granted to Sir John Ramsay of Balmain; from whom it afterwards passed, by forfeiture, to Patrick Hepburn, chief of that name, and 3d Lord Hales, ancestor of the celebrated Earl of Bothwell. On the forfeiture of this last nobleman in 1567, Crichton became the property of the Crown, but was granted to Francis Stewart, Earl of Bothwell. It has subsequently passed through the hands of a dozen proprietors, from one of whom, Hepburn of Humberie, who acquired it about the year 1649, it has derived a designation by which it is not unfrequently known among the common people of the district—'Humberie's Wa's.' Sir Walter Scott, in the 4th canto of 'Marmion,' has thus minutely described this relic of feudal ages:

"That castle rises on the steep
Of the green vale of Tyne;
And far beneath, where slow they creep,
From pool to eddy, dark and deep,—
Where alders moist, and willows weep,—
You hear her streams repine.
The towers in different ages rose;
Their various architecture shows
The builders' various hands;
A mighty mass, that could oppose,
When deadliest hatred fired its foes,
The vengeful Douglas bands.

Crichton! though now thy miry court
But pens the lazy steer and sheep;
Thy turrets rude, and totter'd keels,
Have been the minstrel's loved resort.
O! have I traced within thy fort,
Of mouldering shields the mystic sense,—
Scutcheons of honour, or pretence,
Quarter'd in old armorial sort,
Remains of rude magnificence,
Nor wholly yet has time defaced
Thy lordly gallery fair;
Nor yet the stony cord unbraided
Whose twisted knots, with roses laced,
Adorn thy ruin'd stair.
Still rises unimpaired below
The court-yard's graceful portico
Above its cornice, row and row
Of fair hewn facets richly show
Their pointed diamond form;
Though there but houseless cattle go
To shield them from the storm;
And, shuddering, still may we explore,
Where oft whilom were captives pent,
The darkness of thy Massy-moore;
Or from thy grass-grown battlement,
May trace, in unobscuring line,
The sluggish mazes of the Tyne."

Population, in 1801, 923; in 1831, 1,325. Houses 300. Assessed property £6,702.—This parish, formerly a vicarage, is in the presbytery of Dalkeith, and synod of Lothian and Tweeddale. Patron, Burn Callender, Esq. Stipend £264 Os. 1d.; glebe £15. Unappropriated tithes £43 18s. 6d. The church, which is a venerable building in the form of a cross, the western end having been left unfinished, was made collegiate on the 26th of December, 1449, by Sir William Crichton, Chancellor of Scotland, with consent of James Crichton of Frendraught, Knight, his son and heir, for a provost, 8 prebendaries, and 2 singing-boys, out of the rents of Crichton and Locherworth, and a mensal church, belonging to the archbishop of St. Andrews; reserving to the bishop the patronage of the prebends of Vogrie, Arniston, Middleton, and Locherworth. After the Reformation, the church-lands of Crichton, and the parsonage-tithes which belonged of old to the rectory of Crichton, were acquired by Sir Gideon Murray, the last provost of the collegiate church, who obtained a grant converting those collegiate lands into temporal estates. Sir Gideon was treasurer-depute to James VI., and died in 1621, leaving those estates to his son, Patrick, who was created Lord Elibank in 1643. The church has been thoroughly repaired, and seats about 600. A considerable number of the parishioners are dissenters, and attend a Secession church in Pathhead.—Schoolmaster's salary £34 4s. 4½d. with about £30 fees. There is an infant-school in Pathhead.

CRICHUP (THE). See CLOSEBURN.

CRIECH, or **CREICH**, a parish in the north-east of Fifeshire, extending in length about 3, and in greatest breadth about 2 miles; bounded on the north by Flisk; on the east by Kilmany and Moonzie; on the south by Monimail; and on the west by Dunbog and part of Abdie. The surface rises towards the north, but on the south is nearly level; the soil is sandy and thin. The superficial area is 2,314 imperial acres. There are two villages in the parish, Luthrie near the centre, and Brunton towards the north. The estate and castle of Crieich, on the north end of this parish, anciently belonged to the Bethunes, of which family was Janet Bethune, the

Lady Buccleuch celebrated in 'the Lay of the Last Minstrel,' and Mary Bethune, one of "the Queen's four Maries." The Rev. Alexander Henderson, celebrated for his staunch opposition to episcopacy, and who has found an able biographer in the Rev. Mr. Aiton of Dolphinton, was born in this parish in 1583. The Rev. John Sage, the first of the post-revolution bishops, was also a native of this parish. On a little eminence near the church are the vestiges of a Roman camp, with two lines of circumvallation. There is another of the same kind on a higher hill, to the west of the former. Both are about a mile distant from the Tay. Population, in 1801, 405; in 1831, 419. Houses 74. Assessed property £2,534.—This parish, anciently a vicarage, is in the presbytery of Cupar-Fife, and synod of Fife. Patron, Grant of Congelton. Stipend £227 14s. 1d.; glebe £7. Unappropriated teinds £18 17s. 5d. The church, which is at Luthrie, was built in 1830-2. It is a handsome structure in the pointed style. The ruins of the old church near the northern extremity of the parish, indicate considerable antiquity.—Schoolmaster's salary £34, with about £16 fees.

CRIECH, an extensive parish in the county of Sutherland. It stretches from within 4 miles of Dornoch on the east coast, to Assynt on the west coast, a distance of at least 40 miles. It is bounded by Rogart and Dornoch parishes on the east; by the Dornoch frith, and the Oykel river, which separate it from Ross-shire, on the south; by Assynt on the west; and by Lairg on the north. The length of the inhabited part of the district is reckoned at about 24 miles, the breadth is unequal, varying from 2 to 10 miles. About one-thirtieth part of the district only is cultivated; the rest being hilly, and covered with moory ground. A vast number of sheep and black cattle are reared on the heathy grounds. The arable soil is light and thin, except at the east end, where there is a deep loam. There are some meadows on the banks of the Oykel, and the rivulets which run into it. The two rivers Shin and Cassly run through the parish, into the Oykel. There are also several lakes abounding with trout, of which the largest are Loch Migdall and Loch Ailsh. A ridge of hills runs parallel to the frith, the highest of which, in the north-western extremity, is called Benmore Assynt. There is a great deal of natural wood, principally of oak and birch; and there are several plantations of fir. At Invershin, near the confluence of the Shin with the Oykel, is a fine cataract. An excellent iron bridge of one arch, spanning 150 feet, has been erected at Bonar, under the auspices of the parliamentary commissioners: who have also made a capital line of road from the ferry here over the Dornoch frith, passing by Skibo to Golspie, a distance of upwards of 16 miles; together with another road from hence, through the middle of Sutherland, to Tongue on the north coast, a distance of 50½ miles. The Crieich ferry is about 150 yards wide at low water, and twice as much at high water; and the communication is nearly as safe and easy as by a bridge. That kind of apparatus is adopted which is in use upon the Clyde at Renfrew; where the ferry-boat is furnished with falling ends for the admission of horses and carriages, and a chain fixed to each bank is passed along the side of the boat on pulleys, whereby the boat is easily moved across the river. Near the church is an obelisk, 8 feet long and 4 broad, said to have been erected in memory of a Danish chief who was interred here. On the top of the Dun of Crieich is a fortification, which is said to have been erected about the beginning of the 12th century by an ancestor of the Earl of Ross. Population, in 1801, 1,974; in 1831, 2,562. Houses 519. Assessed property £4,106.—This par-

ish, formerly a vicarage, is in the presbytery of Dornoch, and synod of Sutherland. Patrons, the Crown, and the Duke of Sutherland. Stipend £208 18s. 9d., glebe £5. Unappropriated teinds £86 17s. 9d. Schoolmaster's salary £31; pupils about 40. In 1834 there were 7 private schools in this parish, but the greatest number of pupils in attendance at these was 73, and the minister reported that there were 406 children of both sexes in the parish who could not read, being resident at great distance from any school.

CRIEFF, a small central parish of Perthshire, in the district of Strathearn; of which the principal division is bounded by Monzie on the north-west and north; by Foulis-Wester, and Madderty, on the east; by the Earn, which divides it from Muthill, on the south; and by Monivaird, from which it is divided by the Turret, on the west. This parish is divided by the intersection of the parish of Monzie, into two districts of naturally different features,—highland and lowland; of which the latter division—of which the boundaries have now been given—is the larger. The highland division consists chiefly of the strath of Glenalmond, with a population of 230; and is ecclesiastically attached to Monzie. It abounds with game. The soil of the lowland division, extending to 3,800 acres, is chiefly light and gravelly; in the vicinity of the town of Crieif it is loam. There is a good bridge of 4 arches over the Earn at the town; at the other end of which the thriving village of Bridgend has been built. Population of the town and parish, in 1801, 2,876; in 1831, 4,786. Houses 649. Assessed property, in 1815, £8,605.—This parish, formerly a vicarage, is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patroness, Lady Willoughby D'Eresby. Stipend £182 14s.; glebe £10. Church built in 1786; repaired in 1827; sittings 966. A handsome extension church was founded in 1837; sittings 1,000. There are also a United Secession congregation, which was established in 1765; church rebuilt in 1837 at an expense of £600; sittings 533; a Relief church; an Original Secession church; and a small body of Roman Catholics. About one-fourth of the parishioners are dissenters. Schoolmaster's salary £34 4s. 4½d. There were 11 private schools in 1834. Mr. Thomas Morrison, builder in Edinburgh, has bequeathed a sum now amounting, it is thought, to £20,000, for erecting and endowing an academy, which it was at one time thought would be established in Crieif, but the trustees have not yet decided on its site.

The town of Crieif is 56 miles north-west of Edinburgh; 17 west of Perth; 21 north of Stirling; 10 south of Amulrie; and 6½ east of Comrie. It is built on a gently rising ground, crowned with firs, half-a-mile north of the Earn, and near the foot of the Grampians. It has a fine southern exposure, and a delightful prospect of hills, woods, valleys, and rivers, to the west. Cnoc Mary, Turlum, Tomachaistal the Cnoc of Crieif, and Glowero'erhim, isolated hills in this quarter, are leading features in the landscape. Crieif is the second town in Perthshire, and is much resorted to in the summer-months by invalids, being considered the Montpelier of Scotland. It has a small jail and town-house, a decent spire containing a clock; also a large and elegant assembly-room. There are a subscription and a circulating library in the town; a subscription reading-room; a handsome masonic lodge; and a branch of the Commercial bank. It has no regular government, but the funds are administered by the baillie of Lord Willoughby, and a committee of the inhabitants named by his lordship. The superiors of the town are Lord

Willoughby D'Eresby, Murray of Crieff, and M'Laurin of Broich, who appoint baron-bailies. The chief manufacture is making a kind of thin linen called Silesias, and weaving cotton goods for the Glasgow manufacturers. There are about 500 weavers' looms in the parish. A woollen manufactory has recently been established here. There are also several distilleries and tanneries, and extensive flour-mills. An abundant supply of water is conveyed from Coldwells spring into St. James's square in the centre of the town, whence it is distributed from a reservoir over the other quarters of the town. The town has greatly increased of late; a number of new houses have been built on the south and west sides. As Crieff is on the line of the great military road, it is much frequented by travellers and Highland drovers. Until the establishment of the Falkirk trysts in 1770, Crieff was the great Scottish market for the sale of black cattle. Nine annual fairs are now held at Crieff. During the civil wars Crieff was the headquarters of Montrose. It was burnt in 1715 by the Highlanders, and narrowly escaped the same fate in 1745; the Highlanders, it appears, bearing an old and inveterate grudge to "the kind gallows o' Crieff," on which so many of their marauding forefathers had been suspended by the stewards of Strathearn, who held their courts here. There is a curious old cross about 50 yards east of the town-house. Fern-tower, about a mile distant from Crieff, and Monzie-house, about 3 miles distant, are handsome and interesting edifices. The town of Crieff contained, in 1776, 1,532; in 1811, 3,000; and in 1835, 3,835 inhabitants.—A railway between Perth and Crieff has been talked of.

CRIFFEL, or CRIFFLE, a ridge of mountains in Dumfries and Galloway shires, the highest of which is elevated 1,895 feet above the level of the sea. The Criffle district of granite and syenite, exhibits many interesting appearances of apparent fragments of cotemporaneous veins and transitions into porphyry. The rocks which rest immediately on the granite, or syenite, are fine granular compact gneiss, slaty syenite, hornblende rock, and compact felspar rock. These rocks alternate with each other, and sometimes even with the syenite or granite; and cotemporaneous veins of granite are to be observed shooting from the granite into the adjacent stratified rocks.

CRIMOND, a parish in the district of Buchan, Aberdeenshire. It lies upon the coast, nearly at an equal distance from the towns of Frazerburgh and Peterhead. Its outline is triangular: the base being nearly 3 miles, and the height of the triangle about 5½. It contains 4,600 acres, of which 3,000 are arable; the remainder is occupied by mosses and downs. About a quarter of a mile from high-water-mark, there is a steep hill stretching along the shore, and presenting a face almost perpendicular, and nearly 200 feet in height. From the summit of this ridge, the ground gradually descends into a low flat valley, at the bottom of which is the lake of Strathbeg, partly in this parish, partly in that of Lonmay, covering 550 acres. Near the east end of the lake of Strathbeg is a small hill called the Castle-hill, where Cumyru, Earl of Buchan, had a castle. About a quarter of a mile south of this eminence, formerly stood the burgh of Rattray, which is said to have enjoyed all the privileges of a royal burgh, except sending members to parliament. Population, in 1801, 862; in 1831, 879. Houses 172. Assessed property, in 1815, £2,543.—This parish, formerly a vicarage, belonging to the chapter of Aberdeen, is in the presbytery of Deer, and synod of Aberdeen. Patron, the Earl of Fife. Stipend £204 7s. 10d.; glebe £6. Unappropriated teinds £58 16s.—School-

master's salary £35, with about £12 fees. There are 5 private schools.

CRINAMIL. See CREANMULL.

CRINAN CANAL, a work at the head of the peninsula of Kintyre in Argyle, intended to afford a communication between Loch Gilp, or Loch Fyne, and the Western ocean, so as to avoid the difficult and circuitous passage of 70 miles round the Mull of Kintyre. This canal was undertaken in the year 1793, by subscription of shareholders, under an act of parliament; and was opened on July 18, 1801. The original estimate by the late Mr. Rennie was £63,678, and the sum subscribed by the proprietors, and first expended upon it, amounted to upwards of £108,000. This sum, however, proving to be totally insufficient for its completion—chiefly in consequence of the intersection of the line by whinstone rock and peat-moss—subsequent advances were made by Government, at different periods, under the authority of Parliament, to the extent of nearly £75,000; to secure which sum, the canal was transferred on mortgage to the barons of exchequer in Scotland, and their functions have since devolved on the lords of the treasury. The latest advance was made in 1817, and the act which authorized it, provided that it should be expended under the superintendence of the commissioners for the Caledonian canal, who, at the desire of the treasury, undertook to continue the management of the canal after the expenditure of the grant; and, under their direction, it has subsequently remained. The canal is about 9 miles long; contains 15 locks; 13 of which are 96 feet long, 24 feet wide, and about 12 feet deep; and 2 are 108 feet long, and 27 wide. It is navigable by vessels of 200 tons burden. Of the locks, 8 are used in ascending from Loch Gilp or Ardrisshaig, at the east end; and 7 in descending to Crinan at the west end. It is chiefly used by small coasting and fishing-vessels, and by the steam-boats which ply between Inverness and the Clyde, which are made inconveniently narrow to pass through it. Since this canal was first opened to the public, the revenues arising from the tolls have, on an average, been scarcely sufficient to cover the annual expenses of the establishment and of the repairs; and no dividend or interest has ever been paid, either to the original proprietors, or to government. The revenue of this canal during 1838 is stated to have been £1,903, the expenditure £1,671, leaving a surplus of £232. As respects balance, this is a favourable statement compared with former years, in which, on an average, the expenditure and receipts were nearly equal. In 1839, the dues received amounted to £1,950, of which £322 arose from steam-boats; the expenditure during the same year was £1,833. The trade during the last fifteen years has increased, but not above £200 or £300 on an average of several years; so that in the financial view, the Crinan and Caledonian canal are much upon a par. The dilapidated state of the works,—the frequent insufficiency of the depth of water,—the difficult nature of some parts of the navigation,—and the absence of many facilities which might be afforded, have been mentioned as the principal causes of the canal not being much frequented. Mr. Walker, in his report, and Mr. Thomson, the resident engineer, in his evidence, have suggested various alterations, estimated to cost about £9,000, which would materially tend to improve the present line. A committee of the house of commons reported in 1839 that, "from the best information they could obtain, it appeared that it is to the originally defective construction and insufficient dimensions of the canal, that its failure must mainly be attributed. Your committee have not been able to obtain any correct estimate of the sum

that would be necessary to reduce the summit-level and to deepen and widen the canal, so as to render it navigable by the same class of vessels which frequent the Caledonian canal; your committee, however, entertain great doubts whether any great further outlay on this canal would be advisable, and they are strongly of opinion that it would not be so, unless the Caledonian canal were first placed in a state of efficiency. To the north-western coast of Scotland, and especially to the districts in its immediate neighbourhood, the benefits arising from the Crinan canal are very considerable; but so long as the present system of management is maintained, and the government lien is continued, no improvement can be expected to arise from the exertions of those resident parties who ought naturally to be most interested in its prosperity. On the one hand, the shareholders, by reason of the government mortgage, are deprived of all control in the management of the canal, and will, obviously, make no advance for further improvements; on the other hand, the commissioners under whose direction the canal nominally rests, take very little, if any, charge of it; and the whole management, during nearly 20 years, has devolved, apparently, upon the resident engineer, almost without check or control. This want of attention to the affairs of the canal is stated to have arisen from an expectation which has prevailed that other arrangements would be made for the management, either by Government taking it into their own hands, or by the proprietors resuming possession, on the Government abandoning their mortgage. In the opinion of your committee, nothing can be more objectionable than the position in which the affairs of the canal at present stand, and they see no prospect of the Government obtaining any return of their advances; neither is there any ground for expecting that the traffic on the canal will increase under the present management, or that its revenues will become sufficient to meet those improvements which are the most obviously requisite to advance the prosperity of the undertaking. Your committee therefore recommend, that any doubts which may exist of the right of the Government to foreclose their mortgage, should be removed by a declaratory act, authorizing the Treasury to take such steps for the future support and management of the canal as they may deem advisable, either by postponing the Government security now held, so as to induce private enterprise to embark in its improvement, or by foreclosing the mortgage, and absolutely disposing of the property.* The idea of a railway by the side of the canal has been suggested; by this—even if worked by horses—passengers might be conveyed in an hour with greater certainty than they now are in four.* A steamer of proper dimensions for passengers would work from Glasgow, &c., to Ardrishhaig, and from Crinan to Inverness. For cheap passengers and heavy goods, the present steam-boats going less frequently than at present would suffice. That this would increase the despatch and character, and therefore the extent of communication, cannot be doubted; but the increase must be great to warrant such an establishment of steam-packets, which would of course be a private concern. Mr. John Gibb of Aberdeen reports, with reference to this canal, under date January 20, 1838, that “until lately, Inverness, as well as the north-western districts of this county, together with Ross-shire, were supplied with groceries, and almost every other description of merchandise, by communication

with the eastern coast; but since the extension of steam-navigation, and that by other traders, through these canals, the connection has been gradually changing; and the beneficial improvements which have been effected on the river Clyde, enabling vessels of every class to get up to the Broomielaw quays at Glasgow, with the rapidly increasing population and trade of this great city, as also the numerous towns of growing importance in the vicinity of the Clyde, create an additional demand, not only for the produce of the Highlands, but also of Baltic produce, for which the proper channel for economical conveyance is through these canals. Therefore the reciprocal exchange of merchandise by those formerly depending and subjected to the various delays consequent on navigating along the rugged shores of the German ocean, by the eastern coast, is now extending its connection by the western coast; and from merchants from Inverness, Dingwall and the northern ports now receive their supplies from Glasgow, which by steam-navigation through the Caledonian and Crinan canals would arrive almost with the certainty of a mail-coach, at a comparatively small expense and at little risk, were these canals maintained in a perfect working order. Another important feature in this conveyance is the cheapness to passengers by it; a cabin-passenger paying only 30s., and a steerage passenger only 15s., from Glasgow to Inverness. A merchant therefore from any of the towns on the route can, with little time lost or expense incurred, make the selection of goods for himself; and thus the revenue must be greatly increased at Glasgow, with a comparatively small capital from the dealer. These vessels, it is true, require three days in passing from Inverness to Glasgow; but this is partly occasioned by what may be called a trading voyage, and partly by the restriction generally imposed at the Crinan canal, of not allowing vessels to pass during the night. It is customary, during favourable weather, after leaving Inverness, to reach Corpach, the western entrance to the Caledonian canal, in one day, when the business of that district, and that of Port-William, is transacted. The second day, after calling at Corran ferry, and the thriving town of Oban, they reach the Crinan canal, landing and receiving on board goods and passengers. After leaving Ardrishhaig, the eastern entrance of the Crinan canal, they call at West-Tarbet, Rothsay, Gourack, Greenock, and Port-Glasgow, reaching Glasgow the evening of the third day after leaving Inverness. These boats generally remain at Glasgow about three days; allowing, therefore, sufficient time for discharging and loading cargoes, and for the various dealers who accompany them to transact their business, and return again by the same conveyance. It will be obvious, that in the foregoing description, reference is made chiefly to the traffic carried on by the regular traders; but it ought to be mentioned, that there are, especially during the summer-season, occasionally other steamers which prosecute the same voyage, but these are more for the purpose of pleasure-parties, besides those which carry on regular business, independent of the other trade. It should likewise be noticed, that in addition to the towns already mentioned, these boats receive goods and passengers from numerous other places, especially amongst the islands which lie between the Crinan canal and Corpach, the western entrance of the Caledonian canal, which, before this passage was established, could only hold any communication with the towns in the south by the most tedious route; whereas, by the trade now opened—and which it is to be hoped will gradually increase—an interchange will take place which must in time prove of the greatest advantage to all con-

* A large proportion of the steerage passengers landing at Ardrishhaig and Crinan, prefer, from motives of economy, to walk the length of the canal, which they can easily do at present in much less time than the boats take to pass through.

cerned. But this change cannot be expected to go on with that degree of rapidity with which it would do in the midst of a populous and manufacturing community. The inhabitants of the Islands and the Highlands, like those of every other district, can only purchase in exchange for what they sell; and this having been hitherto in a great measure confined to their wool and lean cattle, enabled them to do so in a very limited degree. But now that they can send fresh fish, fat cattle, pigs, sheep, and poultry to market, fit for immediate use, it will have the effect of very much improving their condition. It must, however, be kept in view, that unless this business is managed in the outset with fostering care, and without being subjected to heavy imposts, either by trafficking on the canals or roads, it could not rise to that importance which it is to be hoped it would otherwise do. The advantages which have already been secured to the islands by the roads executed under the direction of the Parliamentary commissioners, are so well-known that they need hardly be noticed here, were it not to show the importance of their connection with the canals, as affording the means of conveying the various products of the country to the shipping-places. In short, it has been truly said, "that the works conducted by the Parliamentary commissioners since 1803, have done more for the civilization of the Highlands than all other attempts for that purpose during the preceding century." In conjunction with the communication with the Clyde by the Caledonian and Crinan canals, it is necessary to consider the state of the harbours, especially of Ardrishhaig, at the eastern entrance of the Crinan canal, from Loch Gilp, where, independent of vessels intending to pass through the canal, besides occasional traders, at least one steam-boat arrives, and another departs, every day, with goods, passengers, cattle, sheep, pigs, poultry, &c.; and during the herring-fishing season about 100 large boats are engaged in the herring-fishery, which dispose of their fish to the buyers and curers, who were waiting them for that purpose."

Comparative Annual Statement of the Number of Passengers conveyed through the Crinan canal by steam-boats, and of the revenue derived from them, from 1818 to 1838, inclusive:—

Years.	Passengers.	Revenue. £ s. d.
1820,	2,400	
1821,	3,444	187 9 7½
1822,	6,122	269 13 8
1823,	6,939	286 18 7½
1824,	8,332	215 11 6
1825,	12,603	456 7 4½
1826,	9,694	357 10 0
1827,	13,824	541 1 0
1828,	14,777	338 1 0
1829,	8,416	369 3 0
1830,	12,435	464 10 3
1831,	6,571	318 19 6
1832,	9,594	360 18 9
1833,	12,777	478 0 0
1834,	18,972	546 4 2
1835,	11,344	405 2 8
1836,	17,862	500 14 9
1837,	21,406	557 5 3
1838,	11,506	343 4 0
1839,	19,672	

CRINAN (Loch), an arm of the sea, which gives name to the above canal, opening from the sound of Jura, and running in a south-east direction into North Knapdale. The scenery at the entrance is wild and beautiful; but greatly inferior to that of the neighbouring loch, on the north, Loch Craignish.

CROE, a district in the parish of Kintail, Ross-shire, watered by the Croe, and separated from Glenelchaig by the Boar hill. The Croe rises in a number of small streams in the mountains, and falls into the eastern extremity of Lochduich. It at one

time abounded in salmon, but that fish is not now so plentiful here.

CROMAR, a division of the district of Marr, in Aberdeenshire, comprehending the parishes of Coul, Tarland, Migvy, Logie-Coldstone, and part of Tulloch.

CROMARTY, a very small county, washed on three sides by the friths of Cromarty and Moray, and bounded on the west by the county of Ross. Its extreme length is about 16 miles; and it is, on an average, about 6½ or 7 miles in breadth; but it is intersected by a large tract of common called the Mulbuie, or Mulbuy, which belongs to Ross-shire, and by the district of Ferintosh, which is in the county of Nairn. The whole peninsula has the name of Ardrineanach, or the Black Isle; and the Cromarty part is called 'the old shire of Cromarty.' This district was in very early times a sheriffdom, hereditary in the family of Urquhart of Cromarty. It comprehended, 1st, The whole parish of Cromarty. 2d, The parish of Kirkmichael, with the exception of the farm of Easter Balblair, and perhaps Kirkmichael—which form a tract of nearly one mile in length, and half-a-mile in breadth, situated on the point of land at Invergordon ferry, and which is considered as a part of Ross-shire: Aud 3d, The farm of Easter St. Martin's, in the parish of Cullicuden. Thus, the old shire was a tract, whose greatest length was 10 miles, and average breadth 1½. The area, therefore, was only 17½ square miles. To the south of this district, and in the middle of the peninsula, lies the extensive common moor, named the Mulbuie, in which the county of Cromarty has an undoubted share; but, until a division be made, it is impossible to ascertain any boundary in it. Beginning on the shore of the Moray frith, at the burn of Eathie or Craighouse, about 3 miles south of Cromarty, the boundaries of the old shire follow this burn to its source, and then run westward, in the same direction, to the Fortrose road to Invergordon ferry; by this road they run so as to include the White bog, or Glen Urquhart, till we arrive at the turn towards Cromarty, and the burn of Killeen or the Black stank, where we meet the Mulbuie moor, in which the boundary is uncertain. On the north of this moor, we may proceed from the junction of the Fort-George and Kessock roads to Invergordon, directly west, between Brea and Easter St. Martin's, to the bridge across the burn of Newhall, between East and West St. Martin's, then northwards, between the farms of Cullicuden and Resolis, until we arrive at the frith of Cromarty, about 1½ mile west of the ferry of Alness. We must again cut off that piece of the ferry point of Invergordon, called Easter Balblair, as being in Ross-shire. It is nearly triangular, extending on the north-west shore about half-a-mile, and on the east about one mile from the point. "How this little patch came to be excluded from the shire of Cromarty," says Sir George Mackenzie in his 'General Survey of Ross and Cromarty,' [London, 1810. 8vo. pp. 12, 13.] "I cannot explain. It is alluded to in the old valuation-roll of the county, taken in 1698, in these words;—'Sir Alexander Gordon, in vice of St. Martins, for all the lands he bought of St. Martins, except Wester St. Martins, Kirkmichael, and Easter Balblair, which is in Ross, £894 Os. Od.' From this, I am inclined to think, we should also include the farm of Kirkmichael in Ross, Wester St. Martin and Easter Balblair being confessedly so, and accordingly are so valued in the cess-books. We would thus bring the boundary of this part of Ross-shire down to the mouth of the burn of Newhall. But I believe Kirkmichael is reckoned as part of Cromarty. Had the word 'is,' in the above entry,

been 'are,' we might have supposed it decisive." The rest of this county consists of nine detached portions scattered up and down in various parts of Ross-shire, containing in all about 344 square miles, or 220,586 acres. George, Viscount Tarbat, afterwards Earl of Cromarty, who was secretary of state, and clerk to the parliament of Scotland, in the reign of James II., William and Mary, &c. procured an act, in 1685, annexing several lands to the shire of Cromarty. This act being afterwards repealed, another was procured in 1698—of which an extract is here inserted in a Note—annexing some part of his lands to the shire of Cromarty.* By this extraordinary annexation, the shire of Cromarty has now a territory fifteen times its former extent; and its valued rent has been increased threefold. But these annexations consist of so many detached parts, that a description of their boundaries would be exceedingly irksome. It has been found necessary, in all bills relating to roads, bridges, &c., to include the whole of these annexations in Ross-shire; although, from their being thus kept in the back-ground, very great inconvenience has been often felt, both by the counties of Ross and of Cromarty. A great part of this shire now belongs to the Andersons of Udal, and the family of Ross of Cromarty. The face of the country is pleasant. A long ridge of hills extends the whole length, in the middle of the county, having a fine declivity on either side towards the shores of the friths. The higher grounds are mostly covered with heath; but towards the shores the soil is light and early. Cromarty contains only one town—from which the county takes its name—which was formerly a royal burgh, and 5 parishes. The language spoken is generally Gaelic; but many speak that broad Scottish which is commonly called the Buchan or Aberdeenshire dialect. Freestone, granite, and reddish-coloured porphyry, are almost the only minerals, if we except topazes similar to those of Cairngorm, which are found in the parish of Kincardine. Fisheries are very successfully carried on, and pearls of considerable value are sometimes found in the frith of Cromarty, where the river Conal falls into that bay. The district is comprehended in the sheriffdom of Ross-shire; and a sheriff-substitute holds courts every alternate Friday at the town of Cromarty. It now joins with the county of Ross in returning a member to parliament. Constituency in 1839, 103. Cromarty gave the title of Earl to a branch of the Mackenzies of Seaforth. The family came into favour in the reign of James VI., and having been raised to a baronetcy, was, in the reign of James II., elevated to the viscountcy of Tarbet. Lord Tarbet was created Earl of Cromarty in 1702; but the title was attained in the person of George, the 3d Earl, on account of his having engaged in the rebellion of 1745. He was surprised and defeated by

the Earl of Sutherland's militia, near Dunrobin castle, on the day before the battle of Culloden; and being sent to London, was tried, and condemned to be executed, but by great intercession his life was spared, though his estate and honours were forfeited. His son entered the Swedish service. He was commonly known as Count-Cromarty, and died in 1789. At present the peerage is claimed by Sir Alexander Mackenzie of Tarbet, Bart. The valued rent of Cromarty shire is £12,897 Scots; the real land rent may be estimated at £7,000 sterling. Population, in 1801, 3,052; in 1811, 5,481. In all the more recent returns this shire is included with that of Ross: which see.

CROMARTY, a parish in the above county; about 7 miles in length, and from 1 to 4 in breadth; bounded by the frith of Cromarty on the north; by the Moray frith and the parish of Rosemarkie on the east and south; and by Resolis on the west. The burn of Ethie defines the southern limits of this parish. It flows in some places through a deep picturesque ravine. On the banks of the frith the surface is level; but a ridge about 2 miles from the coast, extends the whole length of the parish, above which the ground is covered with heath and moss. The soil is wet and moorish, which makes the seasons late, and the crop uncertain. The coast towards the east is bold and rocky: some of the cliffs being nearly 250 feet perpendicular towards the sea; the rest is flat and sandy. Population of the parish, in 1801, 2,413; in 1831, 2,901. Houses 518. Assessed property, in 1815, £3,569. Estimated rental £3,300.—This parish is in the presbytery of Chanonry, and synod of Ross. Patron, the Crown. Stipend £251 12s. 6d.; glebe £15. Unappropriated tithes £395 18s. 5d. There is a Gaelic church, the minister of which has a stipend of £50 from Government.

CROMARTY, a neat and clean, but irregularly built, town in the above parish; 19½ miles north-east of Inverness; 11 south of Tain; 10½ north-east of Rosemarkie; 21 east of Dingwall; and 175 north by west of Edinburgh. It is situated upon a low point of land which stretches out into the sea in a picturesque manner. The sea has made considerable encroachments on the east end of the town. It was formerly a royal burgh, but was disfranchised by an act of the privy-council of Scotland, in consequence of a petition by Sir John Urquhart, proprietor of the estate of Cromarty. The harbour of Cromarty, inferior perhaps to none in Britain for safety, and a commodious quay, were built at the joint expense of Government and the proprietor of the estate of Cromarty, in 1785. Vessels of 350 or 400 tons may lie in it in perfect security. A considerable trade in sack cloth has been long established in Cromarty and the neighbourhood. In 1807, this town sent to London goods to the amount of £25,000. In the same year Cromarty exported 112 tons of pickled pork and hams, and 60 tons of dried cod fish. Its staple trade was, until lately, the catching and curing of herrings. The town has a weekly market on Fridays, and an annual fair. Here is a branch of the Commercial bank. A large rocky cavern under the South Sutor, called Macfarquhar's Bed, and a cave which contains a petrifying well, are amongst the natural curiosities. The hill of Cromarty is celebrated for the grandeur and extent of the prospect from it. Population of the town, in 1801, 1,993; in 1831, 2,215. Cromarty unites with Wick, Dingwall, Dornoch, Kirkwall, and Tain, in returning a member to parliament. It is governed by a provost, 2 bailies, and 7 councillors. Parliamentary and municipal constituency in 1839, 49. A steam-boat from Leith touches here once a-week.

* "Considering that, by act of parliament 1685, the barony of Tarbat and several other lands in Ross-shire were dissolved from it, and annexed to the shire of Cromarty, but, in 1688, this said act of annexation was rescinded, on pretence that it included lands not belonging to the Viscount Tarbat, in whose favour the said annexation to Cromarty was made, and now, the said Viscount desiring that only the said barony of Tarbat, and other lands in Ross-shire, which belong to him in property, and are presently possessed by him, or by his brother, or mother-in-law, in liferent, and by some wadsetters of his property, should be annexed to the shire of Cromarty: their Majesties, in favour of the said Viscount and his successors, did, with consent, &c., rescind the said act 1686, and, of new, annexed the said barony of Tarbat, and all other lands in Ross-shire, belonging in property to the said Viscount, and possessed, as said is, to the shire of Cromarty in all time coming, and to all effects; and as to any other lauds contained in that act 1685, not being of the barony of Tarbat, and not being his other proper lands, and possessed in manner foresaid, they are to remain in the shire of Ross as formerly, notwithstanding of this or the other act passed in the year 1685; but pre-judice of the said Viscount, his other jurisdictions in these lands, as accords," &c.

CROMARTY FRITH (THE), called by Buchanan the *Portus salutis*, is one of the finest bays in Great Britain. It is divided from the Moray frith by the county of Cromarty, and washes the southern shore of the county of Ross. It is about 17 miles in length; and from 3 to 5 in breadth. Its average depth is from 9 to 12 fathoms. The entrance is between two twin promontories or headlands called the Sutors of Cromarty, two bluff wooded hills, which are about $1\frac{1}{2}$ mile distant from each other; above which the frith expands into a beautiful bay of about 6 miles in length and in breadth. There is fine anchoring-ground, after passing the Sutors, for several miles up the bay, with deep water on both sides almost close to the shore, forming, in the language of old Stowe, "an exceeding quiet and safe haven." A ferry-boat is established across the bay from the Ross to the Cromarty side.

CROMBIE, an ancient parish now comprehended in that of Torryburn, Fifeshire. Crombie-Point, in this district, about $6\frac{1}{2}$ miles north-west of North Queensferry, and 3 miles east of the village of Torryburn, is a calling-place of the Newhaven and Stirling steamers. See **TORRYBURN**.

CROMDALE, a parish composed of the three ancient but now united parishes of Cromdale, Inverallan, and Advie; situated in the counties of Inverness and Elgin; bounded by Knockando on the north; by Inveraven and Kirkmichael on the east; by Abernethy on the south; and by Duthil on the west. Its extent is considerable, being in length 17 miles; while, in some places, the breadth is 10 miles. It is intersected throughout its whole length by the river Spey. The soil is in general dry and thin, with the exception of the haughs on the banks of the Spey, which, in point of fertility, are equal to any in the neighbourhood. The hills and level grounds are generally covered with heath. Granton, a village erected about 70 years ago, is in this parish, on the western side of the Spey, in the shire of Elgin. See **GRANTON**. At Lochindorb, a thick wall of mason-work, 20 feet high, surrounds an acre of land within the lake, with strong watch-towers at every corner. The entrance is by a magnificent gate of freestone; and the foundations of houses are to be distinctly traced within the walls. Population, in 1801, 2,187; in 1831, 3,234. Houses in Inverness-shire, in 1831, 484; in Elgin 117. Assessed property in Inverness-shire £3,975; in Elgin £686.—This parish, formerly a rectory, with the ancient vicarage of Inverallan and Advie united, is in the presbytery of Abernethy and synod of Moray. Patron, the Earl of Seafield. Stipend £249 4s. 7d.; glebe £22. Unappropriated teinds £315 4s. 9d. Church built in 1812; sittings 900. There is a mission at Granton embracing the old parish of Inverallan, established in 1835. Salary £80. There is also a small Baptist congregation at Granton. The low grounds on the south banks of the Spey have been rendered famous by a song,—‘The Haughs of Cromdale’—composed, in consequence of a skirmish which took place here, in 1690, betwixt the adherents of King William, under the command of Sir Thomas Livingston, and the supporters of the house of Stuart, under Major-General Buchan, in which the latter were defeated. Livingston was, at the end of April, lying within 8 miles of Strathspey, on the grounds of the laird of Grant, where he received notice from a captain in Grant’s regiment, who, with a company of men, held possession for the government of Balloch—now Grant castle—in the vicinity of Cromdale, that Buchan was marching down Strathspey. Desirous of attacking him before he should have an opportunity of being joined by the country people, Livingston marched off towards the Spey, in the afternoon, and continued

his march till he arrived within 2 miles of Balloch castle. As it was already dark, and the night far advanced, and as a difficult pass lay between him and the castle, Livingston proposed to encamp during the night; but not finding a convenient place, he, by the persuasion of one of his officers who was acquainted with the pass, and who undertook to conduct him safely through it, renewed his march, and arrived at the Dairade or top of the hill above the castle at two o’clock in the morning. Buchan’s men were then reposing in fancied security near Lethindie, on the adjoining plain of Cromdale, and the fires of their camp—which were pointed out by the captain of the castle to Livingston—showed him that he was much nearer the enemy than he had any idea of. Mackay says, that had Livingston been aware that the Highlanders were encamped so near the pass, he would not have ventured through it during the night, having little confidence in the country people; nor would the enemy, had they suspected Livingston’s march, left their former station and encamped upon an open plain, a considerable distance from any secure position, ‘just as if they had been led thither by the hand as an ox to the slaughter.’ As several gentlemen of the adjoining country had sought an asylum in the castle on hearing of Buchan’s advance, the commander, in order to prevent any knowledge of Livingston’s approach being communicated to the Highlanders, had taken the precaution to shut the gates of the castle, and to prohibit all egress; so that the Highlanders were as ignorant of Livingston’s arrival as he had previously been of their encampment at Cromdale. Such being the case, the commander of the castle advised him to attack the Highlanders without delay, and he himself offered to conduct the troops into the plain. Livingston’s men were greatly fatigued with their march; but, as the opportunity of surprising the enemy should not, he thought, be slighted, he called his officers together, and, after stating his opinion, requested each of them to visit their detachments and propose an attack to them. The proposition having been acceded to, the troops were allowed half-an-hour to refresh themselves, after which they marched down through the valley of Auchinarrow, to the river. Finding a ford below Dellachaple, which he approached, guarded by a hundred Highlanders, Livingston left a detachment of foot and a few dragoons to amuse them, while, with his main body, led by some gentlemen of the name of Grant on horseback, he marched to another ford, through a covered way a mile farther down the river, which he crossed at the head of three troops of dragoons, and a troop of horse, a company of his Highlanders forming the advanced guard. After he reached the opposite bank of the Spey, he perceived the Highlanders, who had received notice of his approach from their advanced guards at the upper ford, in great confusion, and in motion towards the hills. He thereupon sent orders to a part of his regiment, and another troop of horse to cross the river and join him; but, without waiting for them, he galloped off at full speed towards the hills, so as to get between the fugitives—the greater part of whom were almost naked—and the hills, and intercept them in their retreat. The cavalry were accompanied by the company of Highlanders which had crossed the river, and who are said to have outrun their mounted companions,—a circumstance which induced the flying Highlanders, on arriving at the foot of the hill of Cromdale, to make a stand; but, on the approach of Livingston and the remainder of his dragoons and horse, they again took to their heels. They turned, however, frequently round upon their pursuers, and defended themselves with their swords and targets

with great bravery. A thick fog, which, coming down the side of the mountain, enveloped the fugitives, compelled Livingston to discontinue the pursuit, and even to beat a retreat. According to Mackay, the Highlanders had 400 men killed and taken prisoners, while Livingston did not lose a single man, and only seven or eight horses; but Balcarras states his loss at about 100 killed, and several prisoners; and the author of the 'Memoirs of Dundee' says, that many of Livingston's dragoons fell. A party of the Camerons and Macleans, who had in the flight separated from their companions in arms, crossed the Spey the following day; but, being pursued by some of Livingston's men, were overtaken and dispersed on the moor of Granish near Aviemore, where some of them were killed. The rest took shelter in Craigellachie, and, being joined by Keppoch and his Highlanders, made an attempt to seize the castle of Lochinchan in Rothiemurcus, but were repulsed with loss by the proprietor and his tenants.

CROOK (THE), a small inn, 34½ miles from Edinburgh, and 15½ from Moffat, on the post-road from Edinburgh to Dumfries, by way of Moffat. This is a favourite haunt of anglers; the head-streams of the Tweed affording fine trouting in the neighbourhood.

CROOK-OF-DEVON, a small village in Perthshire, in the parish of Fossaway, on the river Devon; 18 miles east of Stirling, and 6 west of Kinross. It is a burgh-of-barony; and has a fair in May, and another in October. The village takes its name from a sudden turn or crook which the river Devon takes at this place: see article **THE DEVON**.

CROOKSTON CASTLE, an interesting relic of feudal times, crowning the summit of a wooded slope overhanging the southern bank of the White Cart, in Renfrewshire; about 3 miles south-east of Paisley. When Crawford wrote, this building consisted of a large quarter, and two lofty towers, with battlemented wings. Much of it has since crumbled into further ruin; but a portion of the walls, about 50 feet in height, yet remains, and the moat and rampart may be still distinctly traced. The surrounding scenery is pleasingly broken in its outline, and the view from it is very commanding. John Wilson, the author of a poem entitled 'Clyde,' which Leyden has thought worthy of a place in his collection of 'Descriptive Poems,' has these lines:—

"Here, raised upon a verdant mount sublime,
To Heaven complaining of the wrongs of time,
And ruthless force of sacrilegious hands,
Crookston, an ancient seat, in ruins stands;
Nor Clyde's whole course an ampler prospect yields,
Of spacious plains, and well-improven fields;
Which, here, the gently-swelling hills surround,
And, there, the cloud-supporting mountains bound;
Now fields with stately dwellings thronger charged,
And populous cities, by their trade enlarged."

An anonymous poet has much more beautifully apostrophized Crookston castle in the following lines:—

Thou proud memorial of a former age,
Time-ruined Crookston; not in all our land
Romantic with a noble heritage
Of feudal halls, in ruin sternly grand,
More beautiful doth tower or castle stand
Than thou! as oft the lingering traveller tells
And none more varied sympathies command;
Though where the warrior dwelt, the raven dwells,
With tenderness thy tale the rudest bosom swells.

Along the soul that pleasing shades steals
Which trembles from a wild harp's dying fall,
When Fancy's recreative eye reveals
To him, lone-musing by thy mouldering wall,
What warriors thronged, what joy rung through thy hall,
When royal Mary—yet unstained by crime,
And with love's golden sceptre ruling all—
Made thee her bridal home. There seems to shine
Still o'er thee splendour shed at that high gorgeous time!
How dark a moral shades and chills the heart
When gazing on thy dreary deep decay!

Robert Croc, a gentleman of Norman extraction, held the barony of Crookston in the 12th century, and in 1180, founded here an hospital for infirm men, and a chapel. In the 13th century, this barony was carried by a female heiress into the illustrious family of Stewart, whose regality now comprehended Crookston, Darnley, Neilston, Inchinnan, and Tarbolton. In 1565, Henry, Lord Darnley, eldest son of Matthew, Earl of Lennox, became the husband of Mary, Queen of Scots; and some traditions say that it was at Crookston that ill-fated betrothment was arranged. "Another traditional report," says Mr. Ramsay, in his interesting *Descriptive Notices of Renfrewshire*, "represents Crookston as the place from which Mary beheld the rout of her last army at Langside. This report, and a kindred superstition which still lingers among the peasantry, have been finely embodied in the following lines by Wilson:—

"But dark Langside, from Crookston viewed afar,
Still seems to range in pomp the rebel war.
Here, when the moon rides dimly through the sky,
The peasant sees broad dancing standards fly;
And one bright female form, with sword and crown,
Still grieves to view her banners beaten down."

The same report having been adopted by Sir Walter Scott, not only in a historical romance, [*The Abbot*,] but even in the sober pages of history itself, [*History of Scotland*, Vol. II. p. 131.] it has attained a currency almost universal. Now Crookston castle lies 4 miles west from the field of battle, and the swelling grounds which intervene prevent the one place from being seen from the other. Apart from this consideration altogether, it is quite incredible that the Queen could be at Crookston castle on the occasion in question. It will be recollected, that she had just escaped from Loch Leven, and fled to Hamilton, from whence she was proceeding, under the protection of an army, towards the castle of Dumbarton as a temporary place of safety, when her troops were confronted and utterly defeated by the Regent Murray, at Langside, which is about 2 miles south of Glasgow, and nearly parallel with that city. The belief that the Queen was at Crookston during the battle necessarily infers the supposition that she had needlessly endangered her personal safety, by proceeding 4 miles in advance of the troops, which were expressly called together for her protection. As has been mentioned in a previous notice, it was from an eminence in the neighbourhood of Cathcart castle, and rather in the rear of her army, that Mary beheld the decisive struggle; and as on its termination she fled to the south, it is evident that on that disastrous day she could not be any nearer to the castle of Crookston. Sir Walter Scott having been informed of the error into which he had been led, he at once admitted it in a note to the revised edition of '*The Abbot*,' expressing, at the same time, his unwillingness to make the fiction give way to the fact, in this particular instance, from a persuasion that the representing Mary as beholding the battle from Crookston tended greatly to increase the interest of the scene in the romance.* Unfortunately, the error has hitherto been allowed to pass uncorrected in his popular *History of Scotland*. On the whole, having searched in vain for any contemporary authority on the subject, we are constrained to rest satisfied with the only probable form of the tradition, that, namely, which bears in general terms, that the Queen and Darnley passed some days at the castle of Crookston soon after their nuptials. This has been

* The Abbot, edition 1831, Vol. II. p. 339. The reader who is unacquainted with the locality will be embarrassed by Sir Walter's having inadvertently said, in the note here referred to, (p. 340,) that he had "taken a liberty in removing the actual field of battle somewhat to the eastward," whereas the removal made by him was to the westward.—*Note by Mr. Ramsay.*

incidentally stated by Sir Walter Scott in his historical work; and akin to it is the statement which he represents the good Lady Fleming as making in the romance, that here the Queen held her first court after the marriage.—On a small mount, close to the east side of the castle, there stood a stately yew, called, 'The Crookston Tree,' the situation of which was such that it for ages formed a conspicuous object for many miles round. Under the ill-omened branches of this funereal tree, Mary and Darnley were accustomed to sit during the brief period of sunshine which they enjoyed. In 1710, Crawford spoke of it as a 'noble monument,' of a large trunk, and 'well spread in its branches,' and so it continued to be within the recollection of some persons yet living. In 1782, the trunk, to the height of 7 feet from the ground, measured 10 feet in circumference. Shortly before that time, the tree was unfortunately pruned, by way of experiment, in consequence of which the growth upon the top was retarded, and the tree itself gradually withered and died. Blasted and leafless, it formed a dismal, and therefore not unmeet, memorial of the unhappy pair with whose melancholy story it was connected. Its extinction was accelerated by relic-collectors, who, 'undisturbed by conscientious qualms,' cut down and carried away large portions. At length, the worthy proprietor, Sir John Maxwell, in order that he might secure his right to what was left, found it necessary to root out the stump, and take it into his own immediate possession. This he did in the year 1817. The greater part of the wood having remained sound, fragments of this celebrated tree are to be found dispersed over the country, some as female ornaments, and others in less appropriate forms, such as snuff-boxes and drinking-cups. Connected with the old tree there is a popular error, which some writers of good repute have followed. In the reign of Mary, there was struck a silver coinage of three sizes, bearing on the reverse the figure of a tree, crowned, with the motto, 'Dat Gloria Vires.' It is generally believed that this tree represents the Crookston yew, and that it was put upon the coin in order to commemorate the meeting of Mary and Darnley under its branches: accordingly, the coin of the largest size goes under the name of 'The Crookston dollar.' Now, to show the groundlessness of this story, it is only necessary to refer to the order of the Privy council for the formation of the coinage in question, dated 22d December, 1565. By that order, it is expressly enjoined, that the coinage shall bear 'on the ane side, *ane pulm-tree*, crownit;' and, in conformity to this, the tree upon the coin is found to resemble a palm and not a yew."—After the death of Darnley, the estates and honours of Lennox were conferred upon Charles Stewart, 2d son of Matthew, Earl of Lennox, on whose death without issue, they passed to Robert Stewart, Bishop of Caithness, who resigned them to the Crown on succeeding to the Earldom of March. King James then conferred them on Esmé Stewart, Lord D'Aubigny, created Duke of Lennox in 1581. Having once more fallen to the Crown, the Lennox titles and estate were conferred by Charles II. on his natural son Charles, Duke of Lennox and Richmond, who afterwards sold his Scottish estates to the Duke of Montrose. In 1757, the castle and lands of Crookston were bought from William, 2d Duke of Montrose, by Sir John Maxwell of Nether-Pollock, in whose family they have since continued.

CROSBY, an ancient chapelry in the parish of Dundonald, Ayrshire. There are the remains of a place of worship here; the burial-place surrounding which is still used by the inhabitants of Troon. Its situation is very retired and beautiful.

CROSS, a parish in the island of Sanday, Orkney; to which is annexed, *quoad sacra*, the parish of Burness. Population, exclusive of Burness, in 1811, 423; in 1831, 541. Houses, in 1831, 76.—This united parish—with which North Ronaldsay was also united until 1831—is in the presbytery of North Isles, and synod of Orkney, Patron, the Earl of Zetland. Stipend £210; glebe £19. Unappropriated tithes £27 0s. 4d. Worship is performed alternately at Cross and at Burness.—Schoolmaster's salary £46, with £10 fees. See articles BURNES and SANDAY.

CROSS-BASKET. See EAST KILBRIDE.

CROSSFORD, a village in Fifeshire; $\frac{1}{2}$ mile west of Dunfermline; on the road to Culross and Alloa. It is chiefly inhabited by table-linen weavers.

CROSSGATES, a village in Fifeshire; $\frac{3}{4}$ miles east of Dunfermline; 10 south of Kinross; and 5 north from Queensferry.—The roads from Perth to Edinburgh, and from Kirkcaldy to Dunfermline, intersect each other here. There is a Secession meeting-house, built in 1801–2; sittings 531. Several fairs are held here, and there is an annual exhibition of cattle and horses. Population, in 1836, 420.

CROSS ISLE, one of the Shetland isles, constituting part of the parish of Dunross-Ness.

CROSSHILL. See KIRKMICHAEL.

CROSSMICHAEL, a parish in the centre of the stewartry of Kirkcudbright. It is of a rectangular form, extending in length about 5, and in breadth about 4 miles. Superficial area 7,696 acres. It is bounded on the east by the Urr, which divides it from the parishes of Kirkpatrick-Durham and Urr; and on the west by the Dee, which divides it from Balmagie; on the north-west it has Parton parish; and on the south-east Buittle and Kilton. From the two rivers, the ground rises into a fertile ridge, beautifully diversified with gentle eminences. Towards the northern border, there is a small part covered with heath; along the rivers are extensive meadows. There are two lakes in the parish, called Engrogo and Rohn, abounding with pike and perch. There are two ferries over the Dee in this parish, which is here from 700 to 2,200 feet in width; and the great military road to Portpatrick passes through it. There are several Pictish monuments of antiquity, and the remains of ancient fortifications. Near the kirk of Crossmichael, at a place called Crofts, is a very beautiful oval camp, occupying the summit of a hill, and commanding the river immediately below. The village of Crossmichael is a pleasing little place, with a population of 229. Here stood, in ancient times, a cross dedicated to St. Michael, around which the peasantry of the neighbourhood were wont to assemble at Michaelmas to a fair. The cross has disappeared, but the fair is still held. Population, in 1801, 1,084; in 1831, 1,325. Houses 242. Assessed property, in 1815, £10,429.—This parish, formerly a prebend of Sweetheart abbey, is in the presbytery of Kirkcudbright, and synod of Galloway. Patroness, Mrs. Gauld. Stipend £269 15s. 10d.; glebe £24. Church built in 1751; enlarged in 1822; sittings 596.—There are two parochial schools. Salary of the first master £31 6s. 6 $\frac{1}{2}$ d., with about £30 fees; of the second £20, with £11 11s. 3d. from a fund mortified in 1735, by William Gordon, merchant in Bristol, in consequence of which he is not entitled to school-fees. There are also 2 private schools.

CROSSRAGUEL, or CROSSREGAL,* a celebrated Cluniac abbey, now in ruins, in the parish of Kirkoswald in Ayrshire, 2 miles south-west of Maybole. It is situated on a broad ridge of ground which rises

* Written also Crossraguel, Crossregal, Crossragmol, Crossregall, Crossreguil, and Cross-ragwell.

considerably above sea-level, but on a part of the ridge which sinks somewhat under the level of the immediate environs, and amidst marshy ground. The walls have greatly crumbled down, and it has long been unroofed, but it still presents an imposing front to the passer-by on the highway towards the east, and is one of the most entire ecclesiastical edifices of the period. This abbey was founded by Duncan, Earl of Carrick, about the year 1240. The last abbot was the celebrated Quentin Kennedy, who died in 1564. Grose has given three views of the ruins, and a minute description of them as they existed in 1796,—supplied by a gentleman resident in the neighbourhood,—of which the following is an extract. “Entering the precincts from the north, where the principal gate stood, you have in front what I shall call the cathedral of the abbey, which stands due east and west; the walls are almost entire, about 164 feet long, and 22 feet high; the architecture in the same Gothic taste which is common in structures of the same period; the stones in general not very large. There is but one door in all this north side and front of the cathedral, which is near the west end of it, considerably ornamented, of a conic shape, 9 feet high, and at the bottom 5 feet broad. The ground along the whole of the building, for about twenty paces from the wall, is enclosed with a bad stone dyke, and set apart for a burying-place; but is now seldom used.—Leaving the above-mentioned door, you turn to the west end of the cathedral, and go about thirty paces south-west, which brings you to what is called the Abbot’s new house. It is an oblong tower about 30 feet high; below it there is a large arch, through which you pass before you get to the door of the house, which is immediately on the south-east side of the arch; this door leads you up a winding narrow stair built to the tower, and consisting of three flights of steps; the first flight brings you to a room 13 feet by 11, lighted by two windows, 3 feet high, and 2½ feet broad, the one looking to the south, the other to the north. The second flight brings you to another room of exactly the same dimensions and lighted in the same manner. The third brings you to the top of the tower, which is surrounded by a parapet wall. On the top of the staircase is a small building, higher than the tower, which is said to have been a bell-house.—From the west side of this tower, and at right angles with it, there has been a row of buildings, which are now a heap of ruins. At the south end a dovecot of a very singular construction is still extant; the shaft of it is circular, and surrounds a well of excellent water; above 5 feet from the ground it begins to swell, and continues for 6 or 7 feet, then contracts as it rises, till it comes to a point at the top; in shape therefore it resembles a pear, hanging from the tree, or rather an egg standing on the thickest end. You enter it by a small door on the north, about 5 feet from the ground; the floor is of stone, and serves also as a covering to the well beneath; the sides within are full of square holes for pigeons; it is lighted from the top by a small circular opening, and is still perfectly entire, 16 feet perpendicular, and where widest 8 feet in diameter.—Returning to the door of the Abbot’s house, you go about ten paces due east, along the inside of an high wall, which joins to the other buildings of the abbey; here has been a gate, now in ruins; entering by the place where the gate stood, you find yourself on the south-west corner of a court 52 feet square. Round this court there has been a covered way; vestiges of the arches by which the covering was supported are still visible: in the midst of the court was a well, which is now filled up with rubbish. Walking along the west side of the court,

you find nothing but a strong wall, till you come to the north-west corner, where is a small arched door, the sides of which are much broken down; this door leads into a kind of gallery, 18 feet broad, and 72 feet long; lighted only by three narrow slips to the west.—Turning from this door, you walk 72 feet along the south wall of the cathedral, which forms the north side of the court; in this you find three doors, one almost at the north-west corner of the court, and two near the north-east. These doors are nearly of the same dimensions, 9 feet high, 5 feet broad at the bottom, and semicircular at the top. The door at the north-west corner of the court is almost opposite the door in the front or north wall of the cathedral, which we have already mentioned, and leads into the choir. This forms the west part of the cathedral, is of an oblong figure, 88 feet long, and 25 feet broad within the walls, lighted by five windows, with pointed arches, 10 feet high, and 3 feet broad at the bottom; there is but one small window to the south, at the head of the wall, which has received the light over the covering of the court; on the north wall and near the north-east corner of the choir, is a niche in the wall, semicircular at the top, 8 feet broad, and 4 feet high, where it is probable the image of the patron-saint formerly stood.—The partition which divides the choir from the church, or east part of the cathedral, is pretty entire, and has been furnished with a pair of bells. Precisely in the middle of the partition is a door, with a pointed arch, 9 feet high, and 5 feet broad at the bottom, which leads into the church; this still retains something of its ancient magnificence, is of the same breadth with the choir, but only 76 feet long; the east end of it is semicircular, or rather triangular, adorned with three large windows, with pointed arches, 11 feet high and 7 feet broad at the bottom. There are six other windows to the north, and one to the south, of the same shape and height, but only six feet broad. Immediately below the south window, and near the south-east corner of the church, stands the altar, which has been greatly ornamented, but is now defaced; no vestiges of any inscription remain here, or in any part of the abbey. The altar is 7 feet broad, and 4 feet high, square, but fretted at the top a little to the left from it. Below the most southerly of the largest windows, there is a niche in the wall 4 feet high and 2 broad, concave at the top, but almost without ornament. In the bottom are two hollows made in the stone, like the bottom of a plate; this is supposed to have been a private altar, perhaps that of the family of Cassilis. A little to the right of the principal altar is a small door leading to a ruinous stair which we shall have occasion to mention immediately. Still farther to the right of the altar, on the same wall, is a larger door, 7 feet high and 6 broad, with a pointed arch, which leads into a high arched room, with a pillar in the middle, and a stone bench round the sides, 20 feet long and 15 broad, said to be the place where the consistorial court was held. It is lighted only by one window from the east; on the left hand, as you enter the room from the church, there is a door which opens on the ruinous stair already mentioned. This stair has led into a room immediately above the consistory, precisely of the same length and breadth, but now level with the floor. From this room you descend a few steps into the Abbot’s hall, which is 20 feet square, lighted by two small windows to the east, and one to the west looking in the court.—Returning from the Abbot’s hall into the church, by the same door, we find the door in the south-west corner of the church, the dimensions of which have been already given. Going out at this door we find ourselves in the

north-east corner of the court; walking five paces from this we come to a door, semicircular at the top, 8 feet high and 5 broad, which opens into a room arched in the roof, immediately below the Abbot's hall, of the same breadth and length, and lighted from the east by two small windows. Proceeding from this room to the south-east corner of the court, you find a ruinous arch, about 24 feet long, 10 feet high, and 9 broad, with a stone bench on both sides; this seems to have led to a number of cells, which are now a heap of ruins. Turning from this arch you walk along the south side of the court, where there is nothing observable but several small doors, leading into ruinous cells; what number of these there may altogether have been, it is now impossible to determine, as the greatest part of them are buried under the rubbish of their own walls. The Abbot's old house, as it is called, is the only building of the abbey we have not hitherto mentioned. This stands immediately to the south-east of the ruinous cells above described. It has been an oblong tower; but the east side, in which the stair has been built, is now fallen down, which prevents its dimensions from being accurately taken; they seem, however, to have been nearly the same with the dimensions of the Abbot's new house."

CROULIN ISLES, a groupe off the coast of Ross-shire, near the entrance of Loch Carron. The largest is about a mile in length.

CROVIE, a small fishing-village on the Moray frith; in the parish of Gamrie, Banffshire; 6 miles west by north of Aberdeen.

CROY, a parish partly in the county of Nairn, and partly in that of Inverness. The extreme length is about 21 miles; it is so intersected by the parishes of Petty, Daviot, and Inverness, that its breadth cannot be exactly ascertained, but it reaches in some points to 9 miles. The river Nairn runs through the parish for 8 miles, and its strath, with the seats of Kilravock, Holme, and Cantray, forms a scene of true rural amenity and beauty; the remainder including Culloden moor, [see **CULLODEN**,] is indifferently cultivated, and has a bleak and naked appearance. There is one small loch, called the Loch of the Clans. Valued rental £2,961 16s. 4d. Scots. Assessed property, in 1815, £4,500. Population, in 1801, 1,601; in 1831, 1,664. Houses in Nairnshire, in 1831, 140; in Inverness-shire, 206.—This parish, formerly a rectory with the vicarage of Dalcross annexed, is in the presbytery of Nairn, and synod of Moray. Stipend £239 3s. 10d.; glebe £11. Unappropriated teinds £240 4s. 10d. Patrons, the Earl of Cawdor, and Rose of Kilravock. Church built in 1757; repaired in 1829; sittings 527. There is a catechist in the parish.

CRUACHAN. See **BEN-CRUACHAN**.

CRUACH-LUSSA, or **CRUACH LUSACH**, that is, 'the Mountain of plants,' a mountain in the district of Knapdale, Argyshire. It stretches over a great extent of country, being about 8 miles broad at the base. It has never been exactly measured, but is thought to exceed 3,000 feet above the level of the sea. From its summit, in a clear day, a fine view may be obtained of Islay, Jura, and other islands of the Hebrides, and of the island of Rathlin off the Irish coast.

CRUDEN, a parish situated in that district of Aberdeenshire called Buchan; bounded by Longside and Peterhead parishes on the north; by the North sea on the east; by Slaines and Logie-Buchan on the south; and by Ellon on the west. It extends about 8 or 9 miles along the coast, and about 7 or 8 miles inland. An immense quantity of peat-moss stretches along the northern boundary. There are 4 fishing-villages in the parish, at one of which,

Ward, a tolerable harbour might be made. Slaines castle, the seat of the Earl of Errol, is in this parish. "We came in the afternoon to Slaines castle," says Dr. Johnson, "built upon the margin of the sea, so that the walls of one of the towers seem only a continuation of a perpendicular rock, the foot of which is beaten by the waves. To walk round the house seemed impracticable. From the windows, the eye wanders over the sea that separates Scotland from Norway; and when the winds beat with violence, must enjoy all the terrific grandeur of the tempestuous ocean. I would not, for my amusement, wish for a storm; but, as storms, whether wished or not, will sometimes happen, I may say, without violation of humanity, that I should willingly look out upon them from Slaines castle."—The **Bullers of Buchan**, and other stupendous rocks and precipices on this coast, are much admired for the awful grandeur they exhibit. See **BULLERS OF BUCHAN**.—About a mile west of the church are the remains of a druidical temple.—In this parish was fought, in the beginning of the 11th century, a battle between Malcolm II. and Canute, son of Sueno, afterwards king of England and Denmark. The site of the field of battle, about a mile west of Slaines castle, has been ascertained by the discovery of human bones left exposed by the shifting or blowing of the sand. From the circumstance of a chapel having been erected in this neighbourhood dedicated to St. Olaus—the site of which has become invisible, by being covered with sand—the assertion of some writers that a treaty was entered into with the Danes—who were then Christians—by which it was stipulated, that the field of battle should be consecrated by a bishop as a burying-place for the Danes who had fallen in battle, and that a church should be then built and priests appointed in all time coming to say masses for the souls of the slain, seems very probable. Another stipulation it is said was made, by which the Danes agreed to evacuate the Burghhead of Moray, and finally to leave every part of the kingdom, which they accordingly did in the year 1014. Population, in 1801, 1,934; in 1831, 2,120. Houses 479. Assessed property £4,634.—This parish, formerly a rectory belonging to the chapter of Aberdeen, is in the presbytery of Ellon, and synod of Aberdeen. Patron, the Earl of Errol. Stipend £204 7s. 9d. Unappropriated teinds £651 16s. 10d.—There is a neat Episcopal chapel at the village of Cruden.—Schoolmaster's salary £26, with £18 fees.

CRUGLETON. See **SORBIE**.

CRYSTON. See **CHRYSTON**.

CUCHULLIN MOUNTAINS. See **SKYE**.

CULINTRIVE FERRY. See **KILLMODAN**.

CULAG, a rivulet in Assynt, Sutherland, which rises in a series of small lochs to the north-west of Canisp, and runs into the sea at Loch-Inver, where there is an excellent fishing-station, and a small village of the same name.

CULHORN CASTLE. See **STRANRAER**.

CULLEAN CASTLE. See **COLZEAN**.

CULLEN, a parish in Banffshire, lying between the districts of the Boyne and the Enzie, and consisting of Cullen-*Proper*, with an annexation, *quoad sacra*, from the parish of Rathven. It is bounded on the north—about a mile in extent—by Cullen bay, in the Moray frith; on the east by Fordyce; on the south by Deskford; and on the west by Rathven parishes. From the sea, southwards, Cullen-*Proper*, intersected by the Cullen burn, extends, inland, about 2 miles; and from east to west, 1 mile. The annexation from Rathven extends about 3 miles in length and 2 in breadth; and the whole parish is in the form of a quadrant, having straight

lines on the north and east, and on the west and south a segment of a circle. Assessed property of parish and burgh, in 1815, £1,312. In 1801, the population was 1,076; in 1831, 1,593. Houses, in 1831, 340.—The soil of this parish, near the shore, is sand with gravel; elsewhere, a few fields are strong clay; others, light loam upon a tilly bottom; but in general the soil is a fine rich loam upon a bottom of soft clay. It is well-drained and cultivated, and is suitable to the production of any kind of crop, except perhaps flax, which, though grown here, has always been a precarious crop on the east coast of Scotland. This parish is, on the whole, so dry, and the hills in the adjoining parishes of Rathven and Deskford so steadily attract the clouds and vapours from the sea, that the air of Cullen is pure, and extremely salubrious. The fields in general have a gentle slope towards the north and east; but only one eminence, the *BIN OF CULLEN*, [which see,] merits the name of hill or mountain. Previous to 1744, *Bin-hill* was covered with heath, but it was then richly planted to the very summit by the Earl of Findlater and Seafield, chief proprietor of the domain, whose seat, named *Cullen-house*—an ancient but princely mansion, rich in valuable paintings—stands in the low grounds, behind the town of Cullen, having a beautiful prospect to the south, and a fine view of the Moray frith to the north. It is picturesquely elevated on a perpendicular rock, along the southern base of which, the *Cullen burn*, which animates the beautiful landscape, passes here within a hollow rocky channel 64 feet deep beneath the mansion walls. Over this brook an excellent single-arched stone-bridge of 82 feet span, connects the woods, parks, gardens, and pleasure-grounds, with the mansion. The plantations, within the umbrageous recesses of which the mansion is embowered, consist of lofty ash, and a great variety of other valuable wood, beneath the shady foliage of which a good bridle-road, besides many delightful serpentine foot-walks, wind, by the easiest acclivities, to the summit of the *Bin*, whence the surrounding country may be viewed, to a wide extent. Great additional improvements have been made on these beautiful policies since their first formation; and in particular the gardens and parks have been extended by the literal removal of the old town of Cullen, which has been rebuilt in a regular form at some distance. *Cullen-house* now belongs to the family of Grant, Lord Seafield.—Not far from *Cullen-house* is the vestige of a building in which Elizabeth, queen of Robert the Bruce, is said to have died.—Near the town of Cullen, and overhanging the sea, is an eminence called the *Castlehill*, where are the remains of an ancient fort—without historical record—whence numerous vitrified stones have been extracted. In this quarter of the parish there are three remarkable masses of flinty rock, lofty and spiring, named ‘the Three Kings of Cullen.’—The parish is in the presbytery of Fordyce and synod of Aberdeen. Stipend £156 5s. 8d.; glebe £27. Patron, the Earl of Seafield. There were originally two churches or chapels here: those of St. Mary and St. Anne. The latter was a prebend. The present church is compounded of the two former. It is a fabric of respectable antiquity, having been built previous to the Reformation, and enlarged about 60 years ago; but its exterior appearance and situation impress the idea of its being but a part of the offices of *Cullen-house*. Sittings 800. The population of the *quoad sacra* parish, as ascertained in 1835, was 2,562, of whom 1,500 resided in the burgh of Cullen, and 750 in the village of Portknockie. Schoolmaster’s salary £36; fees £15, with a share of the Dick bequest.

The royal burgh of *CULLEN*, in the above par-

ish, is the second in importance in Banffshire. It stands on the post-road from Fochabers to Banff, near *Cullen-bay*, and east by south of *Cullen-burn*, over which the road is carried by a bridge at the western end of the town. It is 6 miles west of Portsoy; 12½ east of Fochabers; 14 west by north of Banff; and 58½ north-west of Aberdeen. From its situation at the mouth of the *Cullen* or *Culan burn*, it was anciently called *Inverculan*. That part of the town nearest to the mouth of the burn, however, is at present called *Fishtown*. The main part, called the old town, stood more inland: it was meanly built, and of little comparative value or importance, and some years ago was utterly demolished, in order to make way for the improvements of *Cullen-house*. The new town, by which it was replaced, stands nearer than the old did to *Fishtown*, being close to its eastern extremity. It is a very neat little town. The houses are good, and the streets laid out on a regular and tasteful plan, according to the design of which but a moiety is yet erected. The Boundary commissioners observe, however, that, “being favourably situated for fishing, and in a well-cultivated district, it may be expected to increase.” In the middle of *Seafield-street*, and apparently intended as the centre of the future town, is an open market place. Upper *Castle-street*, running south-west, parallel to *Seafield-street*, and at right angles with the street leading through the market to the burying-place, at the north-eastern extremity of the ground-plan of the town, is another principal street. The length of *Seafield-street* is about 400 yards, and of Upper *Castle-street* 300 yards: the street running to the burying-ground, though as yet only built for half its length, extends to between 500 and 600 yards, according to the plan. The Banff and Fochabers post-road branches off through the two first streets, forming between them, at their south-eastern extremities, near *Cullen-house*, an angular area of ornamental ground at the entrance to the town. The symmetrical form of the new town—which enjoys a circle of genteel society, consisting of persons of moderate incomes—presents a curious contrast to the contiguous unusually ‘awkward squad’ of fishermen’s houses constituting *Fishtown*, and which display a total independence even of anything like partial subordination to the ‘rank and file’ of streets. A natural local disadvantage of Cullen is the want of a plentiful supply of good water. There is but one good spring; and to the *Cullen burn* there is considerable difficulty or access, from the steepness of its banks. The town, however, has been supplied through pipes from the *quoad sacra* annexation from Rathven parish. There is a harbour placed in a convenient position, and belonging to the *Seafield* family, now the chief proprietors of the whole domain; but it is said to be of no great use. There is little trade, except in fish, such as cod, skate, ling, and haddocks, with which not only the town and district are plentifully supplied, but a considerable quantity is cured and dried, for sale at Montrose, Arbroath, Dundee, and Leith, to which they are carried in the *Cullen* fishing boats. There is at present no manufacture of any consequence, although a late Earl of Findlater, about the year 1748, introduced the linen and damask manufacture, which flourished to a considerable extent, and is still carried on, together with the bleaching of linen goods. Besides coal, which may be imported at the harbour, the inhabitants are abundantly supplied with moss and peat, obtained in the vicinity, and from *Deskford* parish. The town has fairs on the 3d Friday in May and the last Tuesday of September, for cattle and horses.

Though Cullen is now principally a modern town,

it is a burgh of considerable antiquity, as is proved by a charter of James I., dated 6th March, 1455; ratifying another of Robert I., by which were granted to this burgh the usual liberties, privileges, and advantages. Similar to Banff, it was at one time a constabulary, of which the Earl of Findlater was hereditary constable, by virtue of an ancient right. He ultimately became hereditary chief-magistrate, without either the Scotch title of provost or the English dignity of lord-mayor, but merely under that of preses. Thus far the old constitution of this royal burgh was peculiar. The acting magistracy consisted of 3 bailies, a dean-of-guild, a treasurer, and 21 councillors; in all 26; the jurisdiction extending over a district of about 2 miles from east to west, and 2 from north to south; but for many years no burgh-courts were held. There have been here no corporations; every one being entitled to buy, sell, and manufacture as he chose. Burgess-ship was constituted simply by giving a 'Burgess act.' Merchant-councillors were chosen from the sellers of goods, trades' councillors from handicraftsmen. The burgh is now governed by a provost, and 19 councillors. Municipal constituency, in 1839, 30. The territory over which the jurisdiction of the burgh is now exercised extends from the burn-mouth of Cullen, along the bay, to Maiden-paps; thence due south to the Loggie road; thence, in straight lines, to the point at which the Deskford and the Banff roads meet; thence to the point at which the Seafield and the Slacks roads meet; and thence to the bridge over the Cullen-burn, the boundary terminating at the burn-mouth. Though the sheriff-court be within a few miles, and town-courts at the door, the amity and good feeling of the inhabitants are stated, in the old Statistical report, to have been so great, that "hardly such a thing as a lawsuit is heard of among them." The only place of confinement is a lock-up house, erected about 18 years ago for the short imprisonment of petty delinquents, and, in case of need, for the safe custody of prisoners on their way to the county-jail at Banff. This lock-up house consists of 3 cells, vaulted, paved, and light, but without fire-place or airing-ground. The property of this burgh was in ancient times considerable; but it was alienated to the Seafield family. There had been no alienations during 40 years previous to 1833. The property recently consisted of feu-duties, houses, and money. The value of the feu-duties, in 1833, was nearly £411 3s. 4d., and the sums of money amounted to £325 10s., of which £250 were lent to the curator of the Earl of Seafield. The revenue of the burgh, in 1833, was £73 0s. 1½d.; expenditure £42 3s. 11d. There were no debts. In 1838-9 the revenue was £67 8s. 9d. The appointment, during pleasure, of the dean-of-guild, procurator fiscal, treasurer, town-clerk, and town-officer, with almost nominal salaries, constitutes all the offices under the patronage of the burgh; but there are two mortifications said to be under the management of the magistrates and kirk-session—these are Lorrimer's and Latta's bursaries; the first for educating a student at the university of Aberdeen; the second for educating a boy at the school of Cullen. The permanent assessments are land-tax, stent, burgh-mail, and cess and land cess. Cullen unites with Elgin, Banff, Kintore, Peterhead, Macduff, and Inverury, in returning a member to parliament. The parliamentary constituency, in 1839, was 30. The parliamentary borough-boundaries are not nearly so extensive as the royalty.

CULLICUDDEN, an ancient rectory, belonging to the Chapter of Ross, now comprehended in the parish of KIRK-MICHAEL: which see. The church

is demolished, but the churchyard is still in use. It is 10½ miles west-south-west of Cromarty. The Gaelic name of this parish is *Couill-Chutigin*, i. e. 'The Creek of Cuddies,'—a small, delicate species of fish well-known on all the coasts of Scotland, and which, during summer and the beginning of harvest, are caught in great numbers along the frith of Cromarty, and particularly in a small creek a little above the old kirk here.

CULLODEN, a large moory ridge in the parish of Croy, from 3 to 5 miles east of Inverness, memorable for the total defeat of Prince Charles's army, on the 16th April, 1746, by the King's troops under the Duke of Cumberland. It is sometimes called Drum-mossie moor. The spot selected by Charles for the engagement was about 1½ mile to the south of Culloden house, on a ridge of the moor declining towards the river Nairn on the south. Immediately to the south of his position was a square enclosure of stone which extended to the banks of the Nairn, and the northern wall of which covered his right flank. In his front the moor was marshy and soft; and on the left, though at a considerable distance, were the woods of Culloden house.

The Highland army was drawn up by Sullivan in three lines. The first, or front line, consisted of the Athole brigade, which had the right, the Camerons, Stewarts of Appin, John Roy Stewart's regiment, Frasers, Mackintoshes, Farquharsons, MacIachlans, and Macleans, united into one regiment; the Macleods, Chisholms, Macdonalds of Clanranald, Keppoch, and Glengary. The three Macdonald regiments formed the left. Lord George Murray commanded on the right, Lord John Drummond in the centre, and the Duke of Perth on the left, of the first line. There had been, a day or two before, a violent contention among the chiefs about precedence of rank. The Macdonalds claimed the right as their due, in support of which claim they stated, that, as a reward for the fidelity of Angus Macdonald, Lord of the Isles, in protecting Robert the Bruce for upwards of nine months in his dominions, that prince, at the battle of Bannockburn, conferred the post of honour, the right, upon the Macdonalds,—that this post had ever since been enjoyed by them, unless when yielded from courtesy upon particular occasions, as was done to the chief of the Macleans at the battle of Harlaw. Lord George Murray, however, maintained that, under the Marquis of Montrose, the right had been assigned to the Athole men, and he insisted that that post should be now conferred upon them, in the contest with the Duke of Cumberland's army. In this unreasonable demand, Lord George is said to have been supported by Lochiel and his friends. Charles refused to decide a question with the merits of which he was imperfectly acquainted; but, as it was necessary to adjust the difference immediately, he prevailed upon the commanders of the Macdonald regiments to waive their pretensions in the present instance. The Macdonalds in general were far from being satisfied with the complaisance of their commanders, and, as they had occupied the post of honour at Gladsmuir and Falkirk, they considered their deprivation of it, on the present occasion, as ominous. The Duke of Perth, while he stood at the head of the Glengary regiment, hearing the murmurs of the Macdonalds, said, that if they behaved with their usual valour, they would make a right of the left, and that he would change his name to Macdonald; but these proud clansmen lent a deaf ear to him.—The second line of the Highland army consisted of the Gordons under Lord Lewis Gordon, formed in column on the right, the French Royal Scots, the Irish piquets or brigade, Lord Kilmarnock's foot

guards, Lord John Drummond's regiment, and Glenbucket's regiment in column on the left, flanked on the right by Fitz-James's dragoons, and Lord Elcho's horse-guards, and on the left by the Perth squadron, under Lords Strathallan and Pitsligo, and the Prince's body-guards under Lord Balmerino. General Stapleton had the command of this line.—The third line, or reserve, consisted of the Duke of Perth's and Lord Ogilvy's regiments, under the last-mentioned nobleman. The Prince himself, surrounded by a troop of Fitz-James's horse, took his station on a very small eminence behind the centre of the first line, from which he had a complete view of the whole field of battle. The extremities of the front line and the centre were each protected by four pieces of cannon.—The English army continued steadily to advance till within a mile of the position occupied by the Highland army, when the Duke of Cumberland ordered a halt, and, after reconnoitring the position of the Highlanders, again formed his army for battle in three lines, and in the following order:—The first line consisted of six regiments, viz., the Royals, (the 1st,) Cholmondeley's, (the 34th,) Price's, (the 14th,) the Scots Fusileers, (the 21st,) Monro's, (the 37th,) and Barrel's (the 4th). The Earl of Albemarle had the command of this line. In the intermediate spaces between each of these regiments were placed two pieces of cannon, making ten in whole. The second line, which consisted of five regiments, comprised those of Pulteney, (the 13th,) Bligh, (the 20th,) Sempil, (the 25th,) Ligonier, (the 48th,) and Wolfe's, (the 8th,) and was under the command of General Huske. Three pieces of cannon were placed between the exterior regiments of this line and those next them. The third line, or corps de reserve, under Brigadier Mordaunt, consisted of four regiments, viz., Batareaux's, (the 62d,) Howard's, (the 3d,) Fleming's, (the 36th,) and Blakeney's, (the 27th,) flanked by Kingston's dragoons (the 3d). The order in which the regiments of the different lines are enumerated, is that in which they stood from right to left. The flanks of the front line were protected on the left by Kerr's dragoons, (the 11th,) consisting of three squadrons, commanded by Lord Anerum, and on the right by Cobham's dragoons, (the 10th,) consisting also of three squadrons, under General Bland, with the additional security of a morass, extending towards the sea; but thinking himself quite safe on the right, the Duke afterwards ordered these last to the left, to aid in an intended attack upon the right flank of the Highlanders. The Argyle men, with the exception of 140, who were upon the left of the reserve, were left in charge of the baggage.

The dispositions of both armies are considered to have been well-arranged; but both were better calculated for defence than for attack. The arrangement of the English army is generally considered to have been superior to that of the Highlanders; as, from the regiments in the second and third lines being placed directly behind the vacant spaces between the regiments in the lines respectively before them, the Duke of Cumberland, in the event of one regiment in the front line being broken, could immediately bring up two to supply its place. But this opinion is questionable, as the Highlanders had a column on the flanks of the second line, which might have been used either for extension or eschelon movement towards any point to the centre, to support either the first or second line. In the dispositions described, and about the distance of a mile from each other, did the two armies stand for some time gazing at one another, each expecting that the other would advance and give battle. Whatever may have been the feelings of Prince Charles on this occasion,

those of the Duke of Cumberland appear to have been far from enviable. The thoughts of Preston and Falkirk could not fail to excite in him the most direful apprehensions for the result of a combat affecting the very existence of his father's crown; and that he placed but a doubtful reliance upon his troops, is evident from a speech which he now made to his army. He began by informing them, that they were about to fight in defence of their king, their religion, their liberties, and property, and that if they only stood firm he had no doubt he would lead them on to certain victory; but as he would much rather, he said, be at the head of one thousand brave and resolute men than of ten thousand if mixed with cowards, he added, that if there were any amongst them, who, through timidity, were diffident of their courage, or others, who, from conscience or inclination, felt a repugnance to perform their duty he requested them to retire immediately, and he promised them his free pardon for doing so, as by remaining they might dispirit or disorder the other troops, and bring dishonour and disgrace on the army under his command. As the Highlanders remained in their position, the Duke of Cumberland again put his army in marching order, and, after it had advanced, with fixed bayonets, within half-a-mile of the front line of the Highlanders, it again formed as before. In this last movement the English army had to pass a piece of hollow ground, which was so soft and swampy, that the horses which drew the cannon sunk; and some of the soldiers, after slinging their firelocks and unyoking the horses, had to drag the cannon across the bog. As by this last movement the army advanced beyond the morass which protected the right flank, the Duke immediately ordered up Kingston's horse from the reserve and a small squadron of Cobham's dragoons, which had been patrolling, to cover it; and to extend his line, and prevent his being outflanked on the right, he also at the same time ordered up Pulteney's regiment, (the 13th,) from the second line to the right of the royals; and Fleming's, (the 36th,) Howard's, (the 3d,) and Batareaux's, (the 62d,) to the right of Bligh's, (the 20th,) in the second line, leaving Blakeney's, (the 27th,) as a reserve. During an interval of about half an hour which elapsed before the action commenced, some manœuvring took place in attempts by both armies to outflank one another. While these manœuvres were making, a heavy shower of sleet came on, which, though discouraging to the Duke's army, from the recollection of the untoward occurrence at Falkirk, was not considered very dangerous, as they had now the wind in their backs. To encourage his men, the Duke of Cumberland rode along the lines addressing himself hurriedly to every regiment as he passed. He exhorted his men to rely chiefly upon their bayonets, and to allow the Highlanders to mingle with them that they might make them "know the men they had to deal with." After the changes mentioned had been executed, his royal highness took his station behind the royals, between the first and second line, and almost in front of the left of Howard's regiment, waiting for the expected attack. Meanwhile, a singular occurrence took place, characteristic of the self-devotion which the Highlanders were ready on all occasions to manifest towards the Prince and his cause. Conceiving that by assassinating the Duke of Cumberland he would confer an essential service to the Prince, a Highlander resolved, at the certain sacrifice of his own life, to make the attempt. With this intention, he entered the English lines as a deserter, and being granted quarter, was allowed to go through the ranks. He wandered about with apparent indifference, eyeing the different officers as he

passed along, and it was not long till an opportunity occurred, as he conceived, for executing his fell purpose. The Duke having ordered Lord Bury, one of his aides-de-camp, to reconnoitre, his Lordship crossed the path of the Highlander, who, mistaking him, from his dress, for the Duke, (the regimentals of both being similar,) instantly seized a musket which lay on the ground, and discharged it at his Lordship. Fortunately he missed his aim, and a soldier who was standing by immediately shot him dead upon the spot. In expectation of a battle the previous day, Charles had animated his troops by an appeal to their feelings, and on the present occasion he rode from rank to rank encouraging his men, and exhorting them to act as they had done at Preston-pans and at Falkirk.

The advance of Lord Bury, who went forward within a hundred yards of the insurgents to reconnoitre, appears to have been considered by the Highlanders as the proper occasion for beginning the battle. Taking off their bonnets, the Highlanders set up a loud shout, which being answered by the royal troops with an huzza, the Highlanders about one o'clock commenced a cannonade on the right, which was followed by the cannon on the left; but the fire from the last, owing to the want of cannoneers, was after the first round discontinued. The first volley from the right seemed to create some confusion on the left of the royal army, but so badly were the cannon served and pointed, that though the cannonade was continued upwards of half an hour, only one man in Bligh's regiment, who had a leg carried off by a cannon-ball, received any injury. After the Highlanders had continued firing for a short time, Colonel Belford, who directed the cannon of the Duke's army, opened a fire from the cannon in the front line, which was at first chiefly aimed at the horse, probably either because they, from their conspicuous situation, were a better mark than the infantry, or because it was supposed that Charles was among them. Such was the accuracy of the aim taken by the royal artillery, that several balls entered the ground among the horses' legs, and bespattered the Prince with the mud which they raised; and one of them struck the horse on which he rode two inches above the knee. The animal became so unmanageable, that Charles was obliged to change him for another. One of his servants, who stood behind with a led horse in his hand, was killed on the spot. Observing that the wall on the right flank of the Highland army prevented him from attacking it on that point, the Duke ordered Colonel Belford to continue the cannonade, with the view of provoking the Highlanders and inducing them to advance to the attack. These, on the other hand, endeavoured to draw the royal army forward by sending down several parties by way of defiance. Some of these approached three several times within a hundred yards of the right of the royal army, firing their pistols and brandishing their swords; but with the exception of the small squadron of horse on the right, which advanced a little, the line remained immovable. Meanwhile, Lord George Murray, observing that a squadron of the English dragoons and a party of foot, consisting of two companies of the Argyle-shiremen, and one of Lord Loudon's Highlanders, had detached themselves from the left of the royal army, and were marching down towards the river Nairn, and conceiving that it was their intention to flank the Highlanders, or to come upon their rear when engaged in front, he directed Gordon of Avochy to advance with his battalion, and prevent the foot from entering the enclosure; but before this battalion could reach them, they broke into

the enclosure, and throwing down part of the east wall, and afterwards a piece of the west wall in the rear of the second line, made a free passage for the dragoons, who formed in the rear of the Prince's army. Upon this, Lord George ordered the guards and Fitz-James's horse to form opposite to the dragoons to keep them in check. Each party stood upon the opposite sides of a ravine, the ascent to which was so steep, that neither could venture across in presence of the other with safety. The foot remained within the enclosure, and Avochy's battalion was ordered to watch their motions. This movement took place about the time the Highlanders were moving forward to the attack.

It was now high time for the Highlanders to come to a close engagement. Lord George had sent Colonel Kerr to the Prince, to know if he should begin the attack, which the Prince accordingly ordered; but his Lordship, for some reason or other, delayed advancing. It is probable he expected that the Duke would come forward, and that by doing so, and retaining the wall and a small farm-house on his right, he would not run the risk of being flanked. Perhaps he waited for the advance of the left wing, which, being not so far forward as the right, was directed to begin the attack, and orders had been sent to the Duke of Perth to that effect; but the left remained motionless. Anxious for the attack, Charles sent an order by an aid-de-camp to Lord George Murray to advance, but his Lordship never received it, as the bearer was killed by a cannon-ball while on his way to the right. He sent a message about the same time to Lochiel, desiring him to urge upon Lord George the necessity of an immediate attack. Galled beyond endurance by the fire of the English, which carried destruction among the clans, the Highlanders became quite clamorous, and called aloud to be led forward without further delay. Unable any longer to restrain their impatience, Lord George had just resolved upon an immediate advance, but before he had time to issue the order along the line, the Mackintoshes, with a heroism worthy of that brave clan, rushed forward enveloped in the smoke of the enemy's cannon. The fire of the centre field-pieces, and a discharge of musquetry from the Scotch Fusileers, forced them to incline a little to the right; but all the regiments to their right, led on by Lord George Murray in person, and the united regiment of the Macclachlans and Macleans on their left, coming down close after them, the whole moved forward together at a pretty quick pace. When within pistol-shot of the English line, they received a murderous fire, not only in front from some field-pieces, which for the first time were now loaded with grape-shot, but in flank from a side-battery supported by the Campbells, and Lord Loudon's Highlanders. Whole ranks were literally swept away by the terrible fire of the English. Yet, notwithstanding the dreadful carnage in their ranks, the Highlanders continued to advance, and, after giving their fire close to the English line, which, from the density of the smoke, was scarcely perceptible even within pistol-shot, the right wing, consisting of the Athole Highlanders and the Camerons, rushed in sword in hand, and broke through Barrel's and Monroe's regiments, which stood on the left of the first line. These regiments bravely defended themselves with their spontoons and bayonets, but such was the impetuosity of the onset, that they would entirely have been cut to pieces had they not been immediately supported by two regiments from the second line, on the approach of which they retired behind the regiments on their right, after sustaining a loss in killed and wounded of upwards of two hundred men. After breaking

through these two regiments, the Highlanders, passing by the two field-pieces which had annoyed them in front, hurried forward to attack the left of the second line. They were met by a tremendous fire of grape-shot from the three field-pieces on the left of the second line, and by a discharge of musquetry from Bligh's and Sempill's regiments, which carried havoc through their ranks, and made them at first recoil; but, maddened by despair, and utterly regardless of their lives, they rushed upon an enemy whom they felt but could not see, amid the cloud of smoke in which the assailants were buried. The same kind of charge was made by the Stewarts of Appin, the Frasers, Mackintoshes, and the other centre regiments upon the regiments in their front, which they drove back upon the second line, which they also attempted to break; but finding themselves unable they gave up the contest, but not until numbers had been cut down at the mouths of the cannon. While advancing towards the second line, Lord George Murray, in attempting to dismount from his horse, which had become unmanageable, was thrown; but, recovering himself, he ran to the rear and brought up two or three regiments from the second line to support the first; but although they gave their fire, nothing could be done,—all was lost. Unable to break the second line, and being greatly cut up by the fire of Wolfe's regiment, and by Cobham's and Kerr's dragoons, who had formed *en potence* on their right flank, the right wing also gave up the contest, and turning about, cut their way back, sword in hand, through those who had advanced and formed on the ground they had passed over in charging to their front. In consequence of the unwillingness of the left to advance first as directed, Lord George Murray had sent the order to attack from right to left; but, hurried by the impetuosity of the Mackintoshes, the right and centre did not wait till the order, which required some minutes in the delivery, had been communicated along the line. Thus the right and centre had the start considerably, and quickening their pace as they went along, had closed with the front line of the English army before the left had got half way over the ground that separated the two armies. The difference between the right and centre and the left was rendered still more considerable from the circumstance, as noted by an eye-witness, that the two armies were not exactly parallel to one another, the right of the Prince's army being nearer the Duke's army than the left. Nothing could be more unfortunate for the Prince than this isolated attack, as it was only by a general shock of the whole of the English line that he had any chance of a victory. The clan regiments on the left of the line, apprehensive that they would be flanked by Pulteney's regiment and the horse which had been brought up from the corps de reserve, did not advance sword in hand. After receiving the fire of the regiments opposite to them, they answered it by a general discharge, and drew their swords for the attack; but observing that the right and centre had given way, they turned their backs and fled without striking a blow. Stung to the quick by the misconduct of the Macdonalds, the brave Keppoch seeing himself abandoned by his clan, advanced with his drawn sword in one hand, and his pistol in the other; but he had not proceeded far, when he was brought down to the ground by a musket-shot. He was followed by Donald Roy Macdonald, formerly a lieutenant in his own regiment, and now a captain in Clanranald's regiment, who, on his falling, entreated him not to throw away his life, assuring him that his wound was not mortal, and that he might easily join his regiment in the retreat; but Keppoch refused to listen to the solicita-

tions of his clansman, and, after recommending him to take care of himself, the wounded chief received another shot, and fell to rise no more.

Fortunately for the Highlanders the English army did not follow up the advantages it had gained by an immediate pursuit. Kingston's horse at first followed the Macdonalds, some of whom were almost surrounded by them, but the horse were kept in check by the French piquets, who brought them off. The dragoons on the left of the English line were in like manner kept at bay by Ogilvy's regiment, which faced about upon them several times. After these ineffectual attempts, the English cavalry on the right and left met in the centre, and the front line having dressed its ranks, orders were issued for the whole to advance in pursuit of the Highlanders. Charles, who, from the small eminence on which he stood, had observed with the deepest concern the defeat and flight of the clan regiments, was about proceeding forward to rally them contrary to the earnest entreaties of Sir Thomas Sheridan and others, who assured him that he would not succeed. All their expostulations would, it is said, have been vain, had not General O'Sullivan laid hold of the bridle of Charles's horse, and led him off the field. It was, indeed, full time to retire, as the whole army was now in full retreat, and was followed by the whole of Cumberland's forces. To protect the Prince, and secure his retreat, most of his horse assembled about his person; but there was little danger, as the victors advanced very leisurely, and confined themselves to cutting down some defenceless stragglers who fell in their way. After leaving the field, Charles put himself at the head of the right wing, which retired in such order, that the cavalry sent to pursue upon it could make no impression.

"The battle was fought on a ridge of the moor just where its general surface begins to incline towards the river Nairn. A new carriage road from Inverness has recently been made through it, which touches the principal line of graves at their northern extremity. Before reaching them, the castle of Dalcross, which had been seen raising its square massive form a little to the left of a wood which terminates the moor on the east, disappears from the view, and shortly afterwards, in the very opposite direction, the pine-clad conoidal summit of Dun Daviot comes in sight, closing in the vista on the south-west. Then, where a considerable portion of the road before the passenger—about $\frac{1}{4}$ of a mile in length—leads the eye directly to the top of a tabular rocky hill bearing south-east, at the distance of 5 or 6 miles, it will be found that a straight line drawn from Dun Daviot, just mentioned, to Fort-George, which is seen rising at the termination of a long peninsula jutting out into the Moray Frith, will cut across the public road just at the collection of graves sought for. They consist of two or three grass-covered mounds, rising slightly above the adjoining heath, at the distance of about 200 or 300 yards from a small patch of corn-land and a cluster of cottages, between which and them a marshy hollow also intervenes. On all sides the prospect is here bleak and dreary; while the general smoothness of the ground points it out as favourable for the movements of cavalry and artillery, but proportionably ill adapted for the protection or defence of the foot soldier. Such is the nature of the ground on which Prince Charles Edward ventured to peril his cause against the disciplined troops of England. His army was drawn up a little to the west of the graves, in a line right across the moor inclining towards the parks of Culloden house." [Anderson's 'Guide to the Highlands,' London: 1834. pp. 107, 108.]—We close this article on a locality most deeply interesting,

to every Scotsman by quoting two stanzas from an Ode on Culloden, by the late John Grieve, first published in Hogg's *Jacobite Relics* :—

"Culloden, on thy swarthy brow
Spring no wild flowers or verdure fair;
Thou feel'st not summer's genial glow,
More than the freezing wintry air!
For once thou drank'st the hero's blood,
And war's unhallowed footsteps bore;
The deeds unholy Nature viewed,
Then fled and cursed thee evermore!

* * * * *
"Shades of the mighty and the brave,
Who, faithful to your Stuart, fell;
No trophies mark your common grave,
Nor dirges to your memory swell!
But generous hearts will weep your fate,
When far has rolled the tide of time;
And bards unborn shall renovate
Your fading fame in loftiest rhyme!"

CULLODEN HOUSE, in the parish of Inverness; 4 miles north-east by east of Inverness, the seat of the ancient and respectable family of Forbes. Prince Charles lodged here the night before the memorable battle, on the 16th of April, 1746. By a curious coincidence, the important and decisive battle of Culloden was fought on the moor of the paternal estate of that great and good man, Lord-president Forbes, whose influence in the Highlands, and unwearied perseverance during the two preceding years, made the suppression of a very alarming insurrection comparatively easy to Government. The mansion-house of Culloden has been renewed since 1745. It stands on the verge of the moor, surrounded by plantations, and commanding a noble view of the Moray frith, and of the mountains on the opposite side of the Nairn. Captain Burt, in his well-known 'Letters from a Gentleman in the North of Scotland'—which were written, from personal observation, about the year 1730—describes the old house of Culloden as being "a pretty large fabric, built with stone, and divided into rooms, among which the hall is very spacious. There are good gardens belonging to it, and a noble-planted avenue, of great length, that leads to the house, and a plantation of trees about it. This house—or castle—was besieged, in the year 1715, by a body of the rebels; and the laird being absent in parliament, his lady baffled all their attempts with extraordinary courage and presence of mind. Nearly adjoining are the parks—that is, one large tract of ground, surrounded with a low wall of loose stones, and divided into several parts by partitions of the same. The surface of the ground is all over heath, or, as they call it, heather, without any trees; but some of it has been lately sown with the seed of firs, which are now grown about a foot and a half high, but are hardly to be seen for the heath. An English captain, the afternoon of the day following his arrival here from London, desired me to ride out with him, and show him the parks of Culloden, without telling me the reason of his curiosity. Accordingly we set out, and when we were pretty near the place, he asked me,—'Where are these parks?' For," says he, 'there is nothing near in view but heath, and, at a distance, rocks and mountains.' I pointed to the enclosure; and, being a little way before him, heard him cursing in soliloquy, which occasioned my making a halt, and asking if any thing had displeased him. Then he told me, that, at a coffee-house in London, he was one day commending the park of Studley, in Yorkshire, and those of several other gentlemen in other parts of England, when a Scots captain, who was by, cried out—'Ah, sir! but if you were to see the parks at Culloden, in Scotland!' This my companion repeated several times with different modulations of voice; and, then, in an angry manner, swore, if he had known how gross-

ly he had been imposed on, he could not have put up with so great an affront. But I should have told you, that every one of the small divisions above-mentioned is called a separate park, and that the reason for making some of the inner walls has been to prevent the hares, with which, as I said before, the country abounds, from cropping the tender tops of these young firs." The Culloden estates were for upwards of thirty years under trust management. Some curious particulars respecting this trust are given in 'Tait's Magazine' for May 1840. On the 6th of April, 1841, they came into the free possession of Arthur Forbes, Esq. of Culloden.

CULROSS,* a parish belonging to Perthshire, though locally disjoined from it by the intervention of Clackmannanshire, and politically conjoined with the shires of Clackmannan and Kinross. It forms nearly a square of 4 miles, containing 8,145 Scots acres; and is bounded on the west by Tulliallan; on the north-west by Clackmannan; on the north by Saline; on the east by Torryburn; and on the south by the frith of Forth. The barony of Kincardine was disjoined from this parish in 1672, and united to Tulliallan. The surface is level, if we except the abrupt ascent from the shore. The northern part of the parish consists of a large moor which is planted with wood; the southern is fertile, and particularly that part of it which is intersected by the Bluther, which, uniting with another streamlet called the Grange, falls into the sea at Newmill bridge, where it forms the eastern boundary of the parish. It abounds with freestone, ironstone, ochre, and a species of clay highly valued by potters and by glass-manufacturers. Coal, the chief mineral product, was wrought here at a very remote period by the monks of Culross abbey, to whom it belonged. Colville, commendator of the abbey in 1575, let the coal to Sir George Bruce of Blairhall, who resumed the working of it, and was the first in the island who drained coal-pits by means of machinery. Below the house of Castlehill, about a quarter of a mile west of Culross, are still some remains of the masonry employed in the erection of an Egyptian wheel—commonly called a chain and bucket—for draining the pits. Sir George carried on these coal-works with great spirit. A pit was sunk here, which entering from the land, was carried nearly a mile out into the sea: the coal being shipped by a moat within sea-mark, which had a subterranean communication with the pit. This pit was reckoned one of the greatest wonders in the island, by Taylor, an English traveller, who saw it in the beginning of the 17th century. There is a tradition, that James VI., revisiting his native country after his accession to the English crown, made an excursion into Fife; and, resolving to take the diversion of hunting in the neighbourhood of Dunfermline, invited the company then attending him to dine along with him at "a collier's house," meaning the Abbey-house of Culross, then belonging to Sir George Bruce. Being conducted, by his own desire, to see the works below ground, he was led insensibly by his host and guide to the moat above-mentioned, it being then high water; and, having ascended from the pit, and seeing himself, without any previous intimation, surrounded by the sea, he was seized with an immediate apprehension of some plot against his liberty or life, and hastily called out, "Treason! Treason!" But his faithful guide quickly dispelled his fears, by

* The name Culross is evidently of Gaelic origin, and is compounded of *cul* and *ross*; the first, signifying 'back,' or, more properly, what is expressed by *cunis* in Latin; and *ross*, 'a peninsula.' The peninsula here referred to being the whole district between the friths of Tay and Forth, and which formerly went under the general name of Ross.—*Old Statistical Account*.—The name is pronounced *Cuross*.

assuring him that he was in perfect safety; and, pointing to an elegant pinnace that was made fast to the moat, desired to know whether it was most agreeable to his majesty to be carried ashore in it, or to return by the same way he came; upon which the king, preferring the shortest way back, was carried directly ashore, expressing much satisfaction at what he had seen. It is certain, that at that time the king was sumptuously entertained at the Abbey-house. Some of the glasses then made use of in the dessert are still preserved in the family; and the room where his majesty was entertained retains the name of 'the King's room.' The great coal-pit of Culross was destroyed by a violent storm, which, in the month of March, 1625, washed away the stone bulwark, and drowned the coal. From this catastrophe the Culross collieries never recovered; and the stones of the rampart were afterwards sold to the magistrates of Edinburgh, who employed them in repairing the pier of Leith.—Valleyfield house, in the eastern part of the parish, is a splendid mansion; as is also the house of Blair. The house of Castlehill is built on the site of an ancient castle of the Macduffs, called Dunne-marle, where it is said Macbeth murdered the wife and two children of that nobleman. There are also the vestiges of two Danish camps in this parish. Population, in 1801, 1,502; in 1831, 1,488. Houses, in 1831, 263. Assessed property, in 1815, £5,497. Besides the burgh of Culross, the parish contains the villages of Valleyfield and Blairburn.—This parish is in the presbytery of Dunfermline, and synod of Fife. The charge is collegiate. Both charges are at present in the patronage of Lady Keith and Lady Baird alternately. Stipend of 1st charge, £156 6s. 10d., with glebe of the value of £20; of the 2d, £116 9s. 2d., with glebe of the value of £25.—Salary of parish-schoolmaster £34 4s. 4½d., with £28 10s. fees. There are two private schools. Besides what are properly called the parish-funds, there are the following hospitals and charitable foundations belonging to Culross, or in which it has an interest. In 1637, Thomas, Earl of Elgin, son of Lord Bruce of Kinloss, founded and endowed an hospital in the east part of the town of Culross, for the maintenance of 12 aged persons of the borough and parish of Culross, to be presented by him and his successors, and commissioners appointed for that effect, reserving power to him and his heirs to nominate others, though not of the parish of Culross. In 1639, George Bruce of Carnock founded and endowed an hospital in the west part of the town, for the maintenance of 6 decayed poor and aged women, widows of colliers or salters, some time workers in Culross or Kincardine; and, if these be deficient, to other decayed poor and aged widows in the parish of Culross. They had a house and garden for their accommodation, and 24 bolls of meal for their support.—Robert Bill, M.D., who was born at Culross, and died in London in 1738, mortified the sum of £600 sterling; the interest to be applied to the relief of 4 decayed tradesmen, and 2 decayed tradesmen's widows; the education and putting to apprenticeship young persons of the borough of Culross; and the maintenance of a bursar at the university. The trustees are, the ministers, magistrates, dean-of-guild, and schoolmaster.

CULROSS, a royal burgh in the above parish, 4 miles east of Kincardine, 6 west of Dunfermline, and 22 west by north of Edinburgh, is a place of considerable antiquity. It was erected into a royal burgh by James VI. in 1588; and was governed by 3 bailies, a dean-of-guild, a treasurer, and 15 councillors; and is now governed by a chief-magistrate and 19 councillors. The revenue, in 1832, amounted to £118 11s. 5½d., chiefly arising from feu-duties

and shore-dues; the expenditure was £93 9s. 10½d. Revenue, in 1838-9, £52 13s. About 80 acres of the common, muir are feued to Sir James Gibson Craig, and upwards of 500 to the Dundonald family. The amount of cess annually raised is £7 5s. 2½d. The burgh joins with Dunfermline, Inverkeithing, South Queensferry, and Stirling, in returning a member to parliament. Parliamentary constituency, in 1839, 22. The town is built on the face of a brae; the principal street running north-east from the shore, and the other buildings being irregularly scattered along the shore. It presents a pleasing appearance from the sea; but the houses, with a few exceptions, are of a mean appearance, though some of them appear to be of great antiquity. It formerly carried on a great trade in salt and coal; at present this trade is wholly annihilated. At one period there were above 50 salt-pans here, which made about 100 tons of salt weekly; and before the Union, there have been 170 foreign vessels in the roads at a time, loading coal and salt. About 60 years ago, the Earl of Dundonald erected very extensive works here for the extraction of tar, naphtha, and volatile salt, from coal; but, being an unproductive concern, it was given up, and the works are now in ruins. The remains of an old pier are visible; but the harbour would never have been a good one, and now a landing can only be effected here at high-water. The fishing on the coast has been nearly destroyed by the floating down of peat-moss. Culross, by virtue of two royal grants from James IV. and Charles II., enjoyed the exclusive privilege of making girdles, a kitchen utensil well-known in Scotland for baking cakes; but in 1727 the court of session found that no monopolies of this kind could be granted in prejudice of any other royal borough, and before this decision, and the more general use of ovens, besides the cheaper mode of casting girdles, the manufacture has long since ceased to be of any value.* The chief occupation of the inhabitants now is the weaving of linen for the Dunfermline manufacturers, and of muslins for the Glasgow merchants. The population of the burgh is about 700.—At the north end of the town, on the Kincardine road, is the parish-church, which was formerly the chapel of the monastery. The chancel and tower are still entire, but the transept and body of the church are in ruins. Adjoining to the north wall of the church is an aisle, the burial-place of the Bruce family, in which is a fine white marble monument of Sir George Bruce, his lady, and several children. In this aisle was found enclosed in a silver box, the heart of Lord Kinloss, who was killed in a duel in Flanders by Sir Edward Sackville, as related in the *Guardian*, No. 133.—At a small distance to the eastward of the church stands the Abbey-house, built by Edward, Lord Kinloss, in 1590, and so called, perhaps, from its being built in the vicinity and of the materials of the ancient abbey. It is a very large building, in a delightful situation, and commanding an extensive prospect of the frith of Forth, Stirlingshire, and the Lothians. This house was nearly demolished after it became the property of Sir Robert Preston, but was afterwards rebuilt by him.—The abbey of Culross was founded in 1217, by Malcolm, Thane of Fife, and dedicated to the Virgin Mary and St. Serf. It lies at the head of the town, on a rising ground commanding a beautiful and extensive prospect of the frith. Considerable remains of it are yet to be seen. On the north side was the

* The burgh of Culross had the custody of the coal-measures of Scotland, by act 1663, Charles II. c. 17. The chalders were of two kinds: the great chalders, which contained, as near as can be computed, 405 stone Dutch, and the small, which contained 162 stone, or two-fifths of the great chalders.

Abbey church, which had a tower or steeple in the middle, still entire, as is also a part of the church now made use of—as already noticed—for the parish-church. Grose has preserved a view of it. At the Reformation, the rental of this abbey amounted to £768 16s. 7d. Scotch, in money; 3 chalders, 3 bolls wheat; 14 chalders, 10 bolls, 2 firlots barley; 13 chalders, 12 bolls, 3 firlots, 3½ pecks oats; 1 chalders, 2 bolls salt; 10 wedders, 22 lambs, 7 dozen of capons, 28½ dozen poultry, 7½ stone of butter; 79½ stones of cheese, and 8 trusses of straw. At that time, there were nine monks of the Cistercian order in the convent.—At the east end of the town, on the sea-coast, the high road only intervening, are the remains of a chapel called St. Mungo's chapel, of which tradition relates, that it was erected on or near the place where St. Mungo, or Kentigern, was born. He is said to have been the son of Eugenius III., King of the Scots, by a daughter of Lothus, King of the Picts. His mother Thametis finding herself with child, in apprehension of her father's wrath, stole privately away; and, entering into a vessel which she found on the nearest coast, was, by the winds and waves, cast on land at the spot where the town of Culross is now situated, and there was delivered of a son. Leaving the child with a nurse, she returned home; and his parents being unknown, the boy was brought to St. Servanus, who baptized and brought him up. This Servanus, or St. Serf, lived at that time in an hermitage where the monastery was afterwards built. After various peregrinations, he departed this life at Culross, of which town he became the tutelar saint; and, in honour of him, an annual feast was formerly solemnized by the people here. This was attended with a variety of ceremonies, particularly parading the streets and environs of the town early in the morning, with large branches of birch and other trees, accompanied with drums and different musical instruments, and adorning the cross, and another public place called the Tron, with a profusion of flowers formed into different devices. The last abbot of this place was Alexander, son of Sir James Colville of Ochiltree. Sir James, brother to the said Alexander, was raised to the dignity of Lord Colville of Culross in 1604, at which time the king made him a grant of this dissolved abbey.

CULSALMOND,* a parish in the county of Aberdeen, about 3½ miles in length, and 3 in breadth; bounded on the north by Forgue and Auchterless; on the east by Rayne; on the south by Oyne; and on the west by Inch. The surface is level, with the exception of Corsdow and Culsalmond,—two small hills about the middle of the parish. The soil is deep and fertile, especially on the banks of the Urie, the only river in the parish. The only fuel is peat and turf, of which there is great abundance. There are some quarries of a fine blue slate within this district. Newton-house is the principal residence in the parish. Population, in 1801, 730; in 1831, 1,138. Assessed property, in 1815, £2,242. Houses, in 1831, 210.—This parish is in the presbytery of Garioch, and synod of Aberdeen. Patron, Sir John Forbes, Bart. Stipend £166 2s. 1d.; glebe £10.—Schoolmaster's salary £30, with share of the Dick bequest, and £21 fees.

CULTER, a parish chiefly in the county of Lanark, but partly in Peebles-shire; about 8 miles in length, and, on an average, 4 in breadth. It is bounded on the north by Symington and Biggar parishes; on the east by Kilbucho and Glenholm parishes; on the

south by Crawford; and on the west by Crawford, Lamington, and Symington parishes. The Clyde skirts the north-western boundary of the parish. Along its banks a fine fertile plain extends for 2 miles to the foot of the hills which occupy the southern part of the parish, and rise into high mountains, the loftiest of which is Culterfell, or The Fell, having an altitude of 2,430 feet.† Culter water, a tributary of the Clyde, flows through the whole length of the parish from south to north. The hilly district is partly covered with a rich verdure well-adapted for sheep-pasture, and partly by a forest of natural wood. There are the remains of several circular encampments, and of an artificial mound of earth on the banks of the Clyde. Ironstone of excellent quality abounds here; and most of the springs are impregnated with that mineral. Population, in 1801, 369; in 1831, 497. Assessed property, in 1815, £2,769. Houses, in 1831, 97.—This parish, formerly a rectory, is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patrons, Baillie of Lamington, and Dickson of Kilbucho. Stipend £217 3s. 9d.; glebe £30 12s.—Schoolmaster's salary £34, with £20 fees.

CULTER (THE), a stream in Aberdeenshire, which takes its rise from a lake in the parish of Skene, and, after receiving several smaller streams, falls into the Dee, about 6 miles above Aberdeen, near the church of Peterculter.

CULTER. See **PETERCULTER**.

CULTS, a parish in the centre of the county of Fife; in ancient writings called Quilts or Quilques; extending in length about 2½, and in breadth 1½ miles; bounded on the north-west by the Eden, which divides it from Collessie and Monimail; on the east by Cupar and Ceres; and on the south and west by Kettle. Its general surface is flat, declining from the south—where there are a few hills—to the Eden. The eastern part is well wooded. The soil is light, and in some places—particularly on the banks of the Eden—gravelly; but towards the south it is a strong clay. The superficial area is about 2,100 Scots acres, of which about 1,800 are under cultivation. A number of hands are here employed in weaving coarse linens. There are numerous freestone and limestone quarries of excellent quality; there is also plenty of coal. There are remains of a Roman encampment upon Walton hill in this district. The celebrated Sir David Wilkie, the painter, was a native of this parish, of which his father was minister. Population, in 1801, 699; in 1831, 903. Houses 174. Assessed property £3,567.—This parish, formerly a vicarage, is in the presbytery of Cupar, and synod of Fife. Patron, the United College of St. Andrews. Stipend £162 5s. 7d.; glebe £11. Church built in 1793; sittings 490.—There is a Secession church at the village of Pitlessie, which contains above 500 inhabitants. See **PITLESSIE**.—Schoolmaster's salary £34 4s. 4d., with £25 fees. There are 2 private schools. Besides the village of Pitlessie, there are the hamlets of Crossgates, Walton, Cults mill, and Hospital mill in this parish. Near the north-east extremity of the parish, on the site of an old house, Lady Mary Lindsay Crawford, sister and heiress of George, 20th Earl of Crawford, erected a splendid mansion in 1813, called Crawford castle and priory. The Fifeshire property of this family was obtained from the Keiths, in exchange for Dunottar castle, in the 14th century, by Sir William of the Byres, younger brother of the ancestor of the first fourteen Earls of Crawford, of whom the Earl of Balcarres, chief of the name, is heir-male and representative. Lady Mary died in

* Pronounced *Culsaman*. Huddleston, in his erudite notes on 'Toland's History of the Druids,' [Edit. 1814. p. 276.] says this name "is merely a corruption of the Gaelic *Cill-saman*, and signifies 'the Temple of the Sun.'"

† The height of Culterfell is stated at 1,700 feet according to some authorities; at 2,440 feet according to Playfair; and 2,330 feet according to others

November, 1833. She was the last of a direct line which for nearly five centuries had flourished in Fifeshire, and whose deeds, for good or for evil, have been enrolled on many pages of the chronicles of Scotland. Her remains repose in a mausoleum on Walton hill, where also rest the ashes of her brother. The Earldom of Lindsay will belong to the person who can prove himself heir-male-general of George, the last Earl. The Earldom of Crawford is claimed by the Earl of Balcarres.

CUMBERNAULD, a parish in the county of Dumbarton, though locally in that of Lanark; extending about 7 miles in length, and 4 in breadth; bounded on the north by Stirlingshire; on the east by Stirling and Lanark shires; on the south by Lanarkshire; and on the west by Kirkintilloch parish. Area 17,260 English acres. The surface is beautifully diversified with small hills and fertile dales. The highest part is called Fannyside moor, producing nothing but heath and furze. On the south east side of this moor are two lochlets, each about a mile long, and one quarter of a mile broad. The remainder of the parish is mostly arable, with a deep clay soil, and tolerably fertile. Lime, coal, and freestone, abound. Considerable remains of Antoninus's wall are to be seen here, on the northern skirts of the parish, nearly in the course of the Great canal which connects the Clyde and the Forth.—The village and burgh-of-barony of Cumbernauld is 13 miles east of Glasgow; 9 west of Falkirk; and 13 south of Stirling. It is pleasantly situated in a valley almost surrounded with the pleasure-grounds of Cumbernauld-house, the estate of Lord Elphinstone. The new road from Glasgow to Falkirk passes close to the village, near which is built a large and commodious inn. The inhabitants are chiefly employed in weaving for the Glasgow manufacturers. It has an annual fair on the 2d Thursday in May. Population of the parish and village in 1801, 1,795; in 1831, 3,080. Houses in 1801, 393. Assessed property, in 1815, £6,144.—This parish, formerly a vicarage, and which, prior to 1649, formed part of Kirkintilloch, is in the presbytery of Glasgow and synod of Glasgow and Ayr. Patron, Lord Elphinstone. Stipend £264 3s. 2d.; glebe £17 10s. Unappropriated tithes £694 11s. 10d. Church repaired in 1810; sittings 660.—There is an original Burgher congregation. Chapel built in 1743; rebuilt, in 1825, at the cost of about £1,000; sittings 576. Stipend £100, with manse and garden.—There is also a United Secession church, which was early established here. Stipend £70, with manse and garden.—An extension church and *quoad sacra* parish have recently been formed here.—Schoolmaster's salary £25, with £26 fees. There is a school at the village of Condorat, and another at Garbethill.—Professor Low, in his 'Illustrations of the Breeds of the Domestic Animals of the British Islands,' [London: 1840. fol.] says, "John Leslie, bishop of Ross, who wrote in 1598, states that the wild ox—*Bos sylvestris*—was found in the woods of Scotland; that it was of a white colour, had a thick mane resembling a lion's, that it was wild and savage, and, when irritated, rushed upon the hunters, overthrew the horses, and dispersed the attacks of the fiercest dogs. He says that it had formerly abounded in the Sylva Caledonia, but was then only to be found at Stirling, Cumbernauld, and Kincardine. Hector Bruce, in his History and Chronicles of Scotland, bears testimony to the like effect;—'At this town—namely Stirling—began the gret wod of Caledon. This wod of Caledon ran fra Striveling throw Menteith and Stratherne to Atholl and Lochquair, as Ptolome writtis in his first table. In this wod wes sum time quhit bullis, with crisp

and curland mane, like feirs lionis, and thought thay semit meek and tame in the remanent figure of thair bodyis thay wer mair wild than any uthir beiztis, and had sich hatrent aganis the societe and company of men, that they come nevir in the wadis nor lesuris quhair thay fand any feit or haind thairof, and moy dayis eftir, thay eit nocht of the herbis that wer twichit or handillitt be men. Their bullis were sa wild that thay wer nevir tane bot slight and crafty laubour, and sa impatient that, eftir thair taking, thay deit for importable doloure. Als sone as any man invadit thir bullis, thay ruschit with so terrible preis on him, that thay dang him to the eord, takand na feir of houndis, scharp lancis, nor uthir maist penitrive wapintiris. And thought thir bullis wer bred in sindry boundis of the Caledon wod, now, be continewal hunting and lust of insolent men, thay ar destroyit in all party of Scotland and nane of thaim left bot allanerlie in Cumarnald.'" Here, however, they were also subjected to persecution; and "in a remarkable document written in 1570-71, the writer, describing the aggressions of the king's party, complains of the destruction of the deer in the forest of Cumbernauld, 'and the quhit ky and bullis of the said forrest, to the gryt destructione of polecie, and hinder of the commonweil. For that kynd of ky and bullis hes bein kept thir money zeiris in the said forest; and the like was not mantenit in any uthir partis of the Ile of Albion.'" Mr. Low then adduces various arguments to prove, that neither as respects their white colour, nor their peculiar habits, are these wild cattle to be regarded as a species distinct from the domesticated oxen.

CUMBRAYS* (THE), two islets in the frith of Clyde, distinguished as the Greater and the Less, or the Big and the Little Cumbray. They belong to the county of Bute, and lie between the island of Bute and the coast of Ayrshire. The Greater or Big Cumbray is 4 miles east of the south-east part of Bute, and 2 miles west of Largs in Ayrshire. The Little Cumbray lies to the south of it, being separated from it by a channel of about three-quarters of a mile in breadth. The two Cumbrays are a link in the geological chain which connects Bute with the adjoining mainland.

The larger of the two Cumbrays corresponds in geological structure with the middle—old red sandstone—district of Bute, and is chiefly interesting, in a scientific point of view, from the enormous trap-dykes with which it is traversed. The New Statistical Account mentions that the more remarkable of these "are two on the east side of the island, running nearly parallel, and from five to six hundred yards distant from each other. The one to the north-east measures upwards of 40 feet in height, nearly 100 in length, and in mean thickness from ten to twelve feet. The one to the southward is upwards of 200 feet in length, from 12 to 15 in thickness, and from 70 to 80 feet in height; and when viewed in a certain direction, exhibits the distant resemblance of a lion couching, hence it is sometimes called The Lion." These dykes are of a highly crystalline structure, and have withstood the effects of the atmosphere and of the sea; whilst the red sandstone on both sides of the dyke, being more easily decomposed, has been wasted away. The local name of these dykes is Rippel walls. They re-appear in Ayrshire, and traverse that and the whole of the neighbouring county of Galloway. The zoology and botany of this small island are abundant and interesting. It is $3\frac{1}{2}$ miles in length from north-east to south-west, and about 2 miles in breadth. Super-

* The name Cumbray, Cumbray, Cimbray, or Cimbraes, is said to be derived from the Gaelic, and to imply 'a Place of shelter,' or 'refuge.'

ficial area 5,100 square acres, of which about 150 are under wood, and about 3,000 are arable. Assessed property, in 1815, £1,569. Valued rent, £1,087 8s. 2d. Scots. It is intersected by a range of hills called the Sheughends, or Shoughends, which run from north to south, and attain near the centre of the island a height of nearly 450 feet. There are two lochlets near this highest point, from which a small stream issues. About two-thirds of the island are the property of the Earl of Glasgow; the other third belongs to the Marquess of Bute. The population, in 1750, was 200; in 1801, 506; in 1831, 912; in 1839, according to the New Statistical Account, 1,075, of whom 932 resided in the thriving village of MILLPORT: which see. The number of houses on the island, in 1831, was 134; and in 1839, 169.—This island, with that of the Little Cumbray, forms a distinct parish in the presbytery of Greenock, and synod of Glasgow and Ayr. Patron, the Earl of Glasgow. Stipend £159 4s. 8d.; glebe £8 10s. The old church, built in 1612, was rebuilt in 1802, at Kirktown, a place about half-a-mile distant from Millport. In 1837, a new and handsome parish-church was erected at Millport.—It would appear from the following curious extract from the minutes of the Privy-council of Scotland, that this island was at one time famous for its breed of hawks: “February 2d, 1609,—Sir William Stewart, capt. of Dumbartane castle, complains ‘That Robert Hunter of Hunterston, and Thomas Boyd, provost of Irwyn, had gone to the Isle of Comra, with convocation of the leidges, and tane away all the hawks thereon.’ The lords of secret council declare, ‘That all the hawks quhilk bred on ye said ile do propirly belong to the king, and ocht to be furth cumand to his majeste, and that the capitane of Dumbartane castle intromet tharewith yeirle, and deliver the same to his majeste, and discharges the said Robert Hunter, and all vtheris, from middling tharewith.’”—About the beginning of last century, according to the tradition of the island, there was a family of the name of Montgomery, who then possessed the greater part of the land now belonging to Lord Glasgow, and had a mansion-house at Billikellet. Among the last of this family was Dame Margaret Montgomery, joint-patrons of the kirk, who, being on horseback at the green of the Largs, is said to have been thrown-off amidst a crowd of people; but, being a woman of high spirit, she pursued the horse, and received a stroke of his foot, which proved instantly fatal. “The arms of this family”—it is stated in the Old Statistical Account—“are upon the end of the kirk, and were lately to be seen on a part of the ruins of Billikellet. About a quarter of a mile from Billikellet, there is a large stone set up on end: about 6 feet of it is above the ground. It appears to have been the rude monument of some ancient hero. There is also a place which the inhabitants point out as having been a Danish camp, though no vestiges of it now remain.”

The Lesser Cumbray is about a mile in length, and half-a-mile in breadth; and is separated from the mainland of Ayrshire by a sound of about 3 miles in breadth. It lies, like the larger island, in the parallel direction to Bute, from south-west to north-east. The strata of the rock of which it is composed are distinctly marked by nature. When viewed at a distance, they seem to lie nearly horizontal; but, upon a nearer approach, they appear to incline to an angle of some elevation. They begin from the water's edge, receding backwards from, and rising one above another to the height of 650 feet, like the steps of stairs. Upon the south side are a few dwelling-houses, and an old square tower, which is situated directly opposite to another of the same

kind upon the mainland. Concerning the antiquity of this castle, nothing can now be learned; and no date or inscription, from which it might be ascertained, has ever been discovered. It seems to have been a place of some strength, and is surrounded by a rampart and a fosse, over which there has been a drawbridge: it was surprised and burned by the troops of Oliver Cromwell. The island was then in the possession of the family of Eglinton, in which it has continued ever since. There are still the ruins of a very ancient chapel here, which is said to have been dedicated to St. Vey, who lies interred near it: and which was probably a dependency of the celebrated monastery of Icolmkill.—Upon the highest part of this island, a lighthouse was erected, about the year 1750, which proved of great benefit to the trade; but, from its too lofty situation, it was often so involved in clouds as not to be perceptible, or but seen very dimly. The commissioners therefore judged it necessary to erect another, in 1757, upon a lower station, with a reflecting lamp, which is not liable to the inconvenience attending the former, and affords a more certain direction to vessels navigating the frith in the night time. This lighthouse is in N. lat. 55° 43', and W. long. 4° 55'. The height of the building is 28 feet, and of the lantern 106 feet above high water. It shows a fixed light, to the distance of 15 miles in clear weather.—The population of this island, in 1831, was 17.

CUMBRIA, an ancient British principality which existed till the beginning of the 10th century, and comprehended Strathclyde, the province of Galloway, Kyle, Carrick, and Cunningham, besides the large archbishopric of Glasgow, which extended through the greater part of Cumberland. It was at last partly subdued by the English, who, in order to attach the Scottish king to their interest, made a present of it to Malcolm, prince of Scotland, to be held as a fief depending on the crown of England, and in 975 the Scots subdued the remaining parts of this province. The name of the people is still preserved not only in Cumberland, but in the islands of Cumbrays and in many places of Clydesdale.

CUMINESTOWN, a village in Aberdeenshire, in Monquhitter parish, founded in 1760 by Cumine of Auchry, and containing about 600 inhabitants. There is a small Scotch Episcopal congregation here. Stipend £53 10s.

CUMMERTRES,* a parish in the district of Annandale, Dumfries-shire, situated on the coast, at nearly equal distances from the mouths of the Nith and the Sark. It is bounded on the north by St. Mungo and Hoddam; on the east by the parish of Annan; on the south by the Solway frith; and on the west by Ruthwell and Dalton. With the exception of two considerable protuberances on the east, and three or four inconsiderable ones on the west, it has nearly the form of a regular parallelogram: its length being from north to south, and its breadth from east to west. It measures diagonally about 5½ or nearly 6 miles, lengthways 5 miles, and at one point, from Floss on the west to an angle eastward of Spittle-ridding-hill, 4½ miles in breadth. Its area contains upwards of 8,000 Scotch acres. Its surface is, for the most part, nearly flat, rising with a slight in-

* Chalmers, in his *Caledonia*, derives the name from three British words, *Cum-ber-tres*, which signify ‘the Hamlet at the short alley.’ The name probably referred to a village now extinct; but still, as to its vestiges, remembered by some of the older inhabitants, and situated at the end of a short valley formed by the converging streams of one of the local rills and the Pow. “From the name of the parish,” too, says the writer in Sir John Sinclair’s *Statistical Account*, “there is little doubt of it [the parish] having been formerly covered with timber. Considerable tracts of natural wood still remain, besides the subterranean forests of oak, fir, and birch, with which the mosses are everywhere replenished.”

clination from the Solway towards the north. The highest elevation is a hill, on which stands the Tower of Repentance, about $\frac{3}{4}$ of a mile from its northern boundary, and scarcely 200 feet above sea-level. From this hill, the ground slopes rapidly toward the river Annan, by which the northern boundary of the parish is traced. The soil, towards the north, is a loam above freestone; in some of the central parts, is a loam above limestone, remarkably rich and fertile; along the coast, is sandy; in many parts, is a thin wet clay over hard till, requiring much manuring and cultivation; and in some is an improved and meadowy bog, formerly flowmoss, but recently reclaimed at great expense and with much labour. Its coast-line is flat, and uninteresting, and indented only with a small bay called Queensberry, in which vessels of light burden can take shelter from north and north-west winds. Into this bay, overlooked by the small village and sea-bathing quarters of Queensberry, and situated a little to the eastward of the middle of the southern boundary line, and about 3 miles westward of the embouchure of the river Annan, a small stream, called the Pow [see Pow], or the Cummertrees Pow, debouches, after traversing the parish south-eastward from Flish. Over a distance of $2\frac{1}{2}$ miles, the Annan washes the limits of the parish, dividing them from those of St. Mungo and Hoddam, and here produces salmon, salmon-trouts, and a species of small fish called hirlings. The last of these are about the size of good burn-trout, are of two kinds, red and white, are sometimes caught in large quantities, and are believed to be peculiar to the rivers which discharge themselves into the Solway frith. Three rills rise in the parish, two of them running southward into the Pow, and the third flowing south-eastward into a small lake of about $\frac{3}{4}$ of a mile in circumference, which is situated on the eastern boundary. The Solway frith suddenly widens, on the Cumberland side, opposite the south-east angle of Cummertrees, and becomes 7 miles broad; but, at low water, or during the hours of its recess, [see SOLWAY FRITH.] forms one Sahara-like waste of level and naked sand, intersected by forking branches—known as the Scotch and the English channels—of the united streams of the Annan, the Sark, the Esk, and the Eden. Here the Solway tide rolls impetuously forward with its celebrated breast or wall of waters,—tumbling headlong at the speed of 8 or 10 miles in the hour,—hoarsely roaring with a voice which is heard over all the parish, and, at times, 12 or 15 miles farther to the north,—and whirling aloft a warlike banner of spray which glitters and undulates in the breeze to announce the march of the careering and invincible invasion of waters. But the Solway is enriching to the inhabitants, both by its raising the temperature higher than in the parishes inland, and by its furnishing large supplies of flounders and cod, and occasional takes of soles and turbot. A mineral spring near Cummertrees-mill, at the north-west angle of the parish, is sometimes, for its medicinal properties, recommended by physicians. Nearly 1,300 acres of the parish, or about one-fifth of its area, is covered with plantation. The climate, though humid and changeable, is remarkably salubrious, and seems to have the property of nearly exempting the population from epidemics. Limestone is abundant, about 30 feet in thickness, and is so unusually rich as to yield 96 per cent. of carbonate of lime. Sandstone also is plentiful: in the southern district, it is soft, and lies under sand, gravel, or moss,—but, in the northern, it occasionally looks out from the surface, and is nearly as hard as some primitive rocks. The proprietor of five-sixths of the soil is the Marquis of Queensberry, who possesses here a beautiful

seat, called Kinmount-house, built at the expense of £40,000.—There are three small villages or hamlets, Cummertrees, Queensberry, and Kilhead. The first of these is one of the most beautiful in Dumfries-shire. The parish is, at its middle, intersected, from north-west to south-east, by the great line of road from Dumfries to Carlisle; from west to east, near the shore, by the south road from Dumfries to Annan; from north to south, through its middle, by a line of road from Cummertrees-mill to Powfoot or the village of Queensberry; and transversely, in various directions, by no fewer than 5 or 6 connecting lines of road.—Hoddam castle, situated nearly half-way between the river Annan and the Tower of Repentance, was built in the 15th century by Lord Herries, from the stones of an ancient chapel; and stands on a site commanding one of the most beautiful views in Annandale. It is remarkable chiefly for its thickness of wall, and consequent strength; and, greatly improved with repairs and with additional buildings, is maintained in as comely a state as any edifice of its class in Scotland. The old castle is said to have been inhabited about the beginning of the 14th century by a branch of the family of Robert Bruce, and to have been demolished some time after by a border-law. The family of Herries was very powerful, and possessed a vast extent of country. About the year 1627, the barony of Hoddam was acquired from the last Lord Herries, by Sir Richard Murray, of Cockpool; which family being afterwards created Earls of Annandale, the estate stood vested in John, Earl of Annandale, in 1637. By the Earl of Annandale the estate was conveyed to David, Earl of Southesk, about the year 1653; and, in 1690, Charles, Earl of Southesk, sold the barony and castle to John Sharpe, Esq., in whose family it has continued ever since. Grose has preserved two views of this castle. In the walls about it are divers Roman altars and inscriptions which were discovered at the station at Birrens, in the parish of Middlebie. On the hill formerly mentioned, and south of Hoddam castle, stands the erection—remarkable alike in name, in structure, and in situation—called the Tower of Repentance. This building is square, 25 feet high, extraordinarily thick in its walls, and commands a view, on all sides, over a distance of at least 30 miles. On its top is an arena where, evidently, watch-fires formerly burned, announcing to the inhabitants of the far-stretching plain which it overlooks any menacing movements which, previous to the union of the crowns of Scotland and England, occurred on the English side of the border. Various traditions are afloat respecting the origin of its name, and the motives for erecting it; the chief of which is, that Lord Herries, returning from a murderous foray in Cumberland, and, after having massacred a numerous body of prisoners, and thrown them into the sea, built it, to appease his conscience, and conciliate his diocesan superior, the bishop of Glasgow.—On the farm of Hurlkedale, in this parish, there was discovered, in 1833, a number of ancient silver coins, much decayed, but supposed to be of Alexander III. of Scotland, and Edward I. of England.—Population of the parish, in 1801, 1,633; in 1831, 1,407. Houses 238. Assessed property, in 1815, £7,459.—Cummertrees is in the presbytery of Annan, and synod of Dumfries. Patron, the Crown. In its present form, it comprehends, in addition to the original parish, the chaplainry of Trailtrow, which was annexed to it in 1609. The parochial church is one of those which Robert de Bruce, in the 12th century, when, in an age of superstitious liberality and popish ostentation, he wished to display his munificence, conferred on the monks of Giseburn; and after, upon the abolition of episcopacy, it ceased to be controlled by the bishop of

Glasgow, it reverted, as to its patronage, to the Crown. The chapel of Traillrow stood upon the eminence which is now surmounted by Repentance tower; and is commemorated by a burying-ground, still in use, within which the tower is situated. Minister's stipend £158 6s. 7d.; glebe £18. There are two parochial schools, and one nonparochial. Salary of the first parochial schoolmaster £30, with £27 other emoluments; of the second £8 11s., with school-fees amounting to about £15.

CUMNOCK,* (OLD CUMNOCK,) a parish in the eastern section of the district of Kyle in Ayrshire. It is bounded on the north by Auchinleck and Muirkirk; on the east by Dumfries-shire; on the south by New Cumnock; and on the west by Ochiltree and Auchinleck. It is of an oblong figure, and about 10 miles in extreme length, by about 2 in average breadth: stretching, as to its length, from east to west. The surface is in part flat, and in part hilly. The soil in general is clay upon a strong till; but in some places is bog, and in the holms is a light and dry mixture of sand and gravel. The river Lugar intersects the parish from east to west, drinking up several rivulets in its course, and eventually emptying itself, near Barskimming, into Ayr water; and it abounds in trout, and furnishes an occasional banquet of eels. On the southern confines of the parish are three lakes which jointly have an area of about 100 acres, and which, though communicating with one another, discharge their waters south-eastward, though the rivulet Aith into the Nith, and north-westward, through another rivulet, into the Lugar. The uplands—hilly but not mountainous, though partly covered with heath—are in general verdant, abound in a coarse grass called sprit, and exhibit some volcanic appearances intermixed with basalt. In the beds of the rivulets, petrifications of shells and fish are thrown up from the strata. In an extensive lime-quarry belonging to the Marquis of Bute, are beds abounding with a species of coral. The limestone in this quarry is, in some places, mixed with shells and spar, takes a beautiful polish, and is capable of being dressed into a pleasing bluish marble. A vein of lead-ore likewise runs through it, and was found, on trial at the lead-mines of Wanlockhead, to yield 65 pounds per cwt. Free-stone abounds, is of easy access, and has contributed largely to the walls of neat and comfortable dwellings. Coal is supposed, with a covering or crumb-cloth of strata, to carpet the parish; but has been worked chiefly in subordination to the burning of lime. Very recently a bed of what is called black ironstone, 2½ feet thick, has been discovered here. Hugh Logan, Esq., 'the Laird of Logan,' and celebrated wit of Ayrshire, was a native of this parish. Here also, within the precincts of the burying-ground, are the remains of the famous Alexander Peden, of covenanting, and, as the vulgar say, of prophesying memory,—remains which were originally interred in the aisle of Lord Auchinleck,—which, after forty days, were exhumed by a body of dragoons, who intended to hang them up on a gallows,—and which, in yeldance with the entreaties of the Countess of Dumfries and other influential personages, were eventually allowed to rest along with the remains of other martyrs, at the Gallowsfoot of Cumnock. Around the dust of Peden, as well as on the estate of Logan, and on the moor which forms the south-

west boundary of the parish, is the dust of martyrs, who, in popular phrase, sacrificed themselves to the covenant of Scotland, but who may be allowed to have surrendered their lives in the cause of heaven. The principal proprietor is the Marquis of Bute and Earl of Dumfries, who acquires from the parish his title of Baron. Dumfries-house, the seat of the Marquis, is situated in the north-west part of the parish, near the banks of the Lugar, and is surrounded with a fine demesne park, extending on both sides of the river, is connected by an elegant new bridge at the most accessible point from the mansion. The other mansions in the parish are Garallan, Logan, and Glasnock, the last of which, situated on the stream whence it derives its name, is a recent and elegant edifice, built of white freestone. Within the demesne of Dumfries-house stand the ruins of Terringzoan castle, whence the present Countess of Dumfries—Countess in her own right, though Marchioness of Bute by matrimonial alliance—still derives the title of Baroness. Some traces, in the southern division of the parish, exist of an old keep called Boreland castle, and also of a Catholic chapel, which gives to the farm on which it stands the name of Chapel-house. This parish is traversed, south-eastward, by the great line of road from Glasgow to Dumfries, and, in various directions, by minor lines; and it boasts no fewer than 16 bridges. Population, in 1801, 1,991; in 1831, 2,763. Houses 454. Assessed property, in 1815, £7,287.—The parish is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Bute. Stipend £218 0s. 7d.; glebe £20.—There are 3 schools, one parochial and 2 nonparochial. Salary of the parish schoolmaster £34 4s. 4½d., with £45 other emoluments. The parish-church, built in 1754, and situated in the village, at a distance of 5½ miles from the most remote limit of the parish, has from 600 to 700 sittings. A United Secession meeting-house, also situated in the village, has 900 sittings. More than one-third of the parishioners are dissenters. Cumnock was dislocated, early last century, into its present form, and that of the parish of New Cumnock. Originally it was a rectory; but in the 15th century it became a prebend of the cathedral of Glasgow, and afterwards a vicarage.

CUMNOCK, a village in the parish just described, situated in a deep sheltered hollow, at the confluence of the Lugar and the Glisnock, 10½ miles south-west of Muirkirk, 6½ south-east of Mauchlin, and 16 east of Ayr, on the main road from Glasgow to Dumfries. It was, in the year 1509, made a burgh-of-barony by James IV., and consists principally of a sort of square, or rather triangle, which occupies the area of what was anciently the burying-ground. A remarkable circumstance is that, situated in a sort of mimic basin, it can, from any point of the compass, be entered only by a declivity. Its subsistence is weaving, which, when trade is good, keeps 120 looms at work; hand-sewing, which is a common employment with both adult and young females; the manufacture of thrashing-mills, which are in high esteem throughout the west of Scotland, and are, in considerable numbers, exported to Ireland; a pottery, which, from clay of the best quality found in the parish, produces a superior brown-ware; and the manufacture of wooden snuff-boxes, which, throughout Scotland, have, for their inimitable beauty, rendered—among snuff-takers, at least—the village surpassingly celebrated. In the last of these sources of support, Cumnock is competed with only by Laureneckirk and Montrose. An ingenious mechanic of the name of Crawford, seized—from a box which had been made at Laureneckirk, and which was sent to him to be repaired—the first idea of the celebrated Cum-

* "The name of Cumnock," says the author of 'Caledonia,' "is derived from the British *cym*, a hollow or valley, and *cnoe*, a hill, which was usually pronounced 'Cumnock.' The British *cym*, in the prefix of the name, applies exactly to the hollow or valley in which the church and village of Old Cumnock stand, on the bank of Glasnock rivulet, which falls into Lugar water; but, whether the *cnoe*, in the termination of the name, applies to the small hill at the village, or to some other hill in the vicinity, is not quite certain."

neck manufacture. Improving upon the pattern which was produced by previous inventors, he, or his successors, contrived to execute so delicately the hinge of the snuff-box, as to make the name of Cumnock essential to the vest-pocket's storehouse of most in Scotland who are politely "led by the nose." "A few years ago," says a writer in the *New Statistical Account of Scotland*, "a solid foot of wood, that cost only 3s., could be manufactured into boxes worth £100 sterling, and then the workmanship increased the original value of the wood nearly 700 times; but at present a solid foot of wood, will only yield, in finished boxes, about £9 sterling." The great falling-off is to be accounted for chiefly by the satiating of the passion for novelty,—snuff-takers being as curious in the *recherché* of their box, as antiquarians are in the high date and freshness of their discoveries; and, in a degree, by the sharpness of competition from the quarters whence the idea of the 'Cumnock snuff-box' was originally obtained. In addition to the area already mentioned, Cumnock consists of very narrow lanes; and, on the whole, it is irregularly built. Yet it occupies a picturesque site, is clean and healthful, overlooks some beautiful woodlands in the parish, is romantically interspersed with fine old trees, and altogether presents a picture on which the eye of the traveller may delight to rest. The village contains good shops in all departments, a gas-work, and branch-offices of two banking companies; and, owing to its advantageous position in relation to the surrounding country, transacts much retail business. Of the 16 bridges in the parish, 3 are in the village. Four annual fairs are held here, respectively in February, in May, in July, and in October, O.S. Here, also, are 2 public libraries, 3 friendly societies, and a savings-bank. Population of the village in 1801, apart from the parish, 1,798.

CUMNOCK (New), a parish, in the district of Kyle, forming the south-eastern limb of Ayrshire. It is bounded on the north by Auchinleck, Old Cumnock, and Ochiltree; on the east by Dumfries-shire; on the south by Galloway; and on the west by Dalmellington. It has an outline of very nearly an oblong square; is 12 miles in length from east to west, somewhat more than 8 in breadth, and contains an area of upwards of 100 square miles, or about 30,000 acres. Its surface is dotted with hills, and, in its southern division, is warded with mountains. Its highest elevations are Black-craig, about $\frac{1}{2}$ a mile from its eastern boundary, rising 1,600 feet above the valley of Nith, and Black-Larg-hill, on its southern boundary, which rises 2,890 feet above sea-level; but these elevations are excelled in interest by the Knipe, to the south, 1,260, and especially by the Corsancone, 872, which, owing to its position, commands a beautiful and extensive view. Indeed the whole southern division of the parish is lifted upwards by elevations, Craigharroch, Saddlehagg, Coptaw-Cairn, Benly-Cowan-hill, Chang-hill, High-Chang-hill, Enoch-hill, Blackstone-hill, Craig-hill, and several other heights. The lowest ground is the valley of the Nith,—a river which, rising in the south-west extremity of the parish, intersects it from west to east, flows here about 500 feet above sea-level, and, on leaving the parish to irrigate Dumfries-shire, begins to form, in that county, the district of Nithsdale. The Nith is here shallow and sluggish, highly tintured with moss, and about 15 feet broad. Flowing northwards, of local origin, and falling into the Nith, the small stream called the Afton, forms a beautiful valley, and is overlooked by richly sylvan banks. There are, on the northern confines of the parish, 3 small lakes, averaging about $\frac{1}{2}$ a mile in circumference; but abounding in perch, pike, and water-fowl. Carboniferous limestone oc-

curs in abundance, lies in beds 12 feet thick, and is wrought, at Benstone, Mansfield, and Polquhorthor. Improved limekilns have been erected by the enterprising and judicious Monteith of Closeburn, Dumfries-shire. Freestone, for the most part of a dingy white colour, and coarse in the grain, is plenteous. Ironstone is found in bands and balls, but has never been wrought. Alternate seams of smith's coal and cannel coal appear to pavement the eastern district, and are in considerable request; the former for making gas in Dumfries and Catrine, and the latter, for less chemical purposes, in Ayr, Kilmarnock, and other places. Plumbago, or black-lead, is found in the coal-formation, and has, for a considerable period, been wrought. It is, however, of very inferior quality to that of Borrodale in Cumberland. There are, in the parish, 3 villages, or hamlets, Path-head, Afton-Bridge-end, and New Cumnock; which had, in 1831, a population,—the first, 361; the second, 242; and the third, 161. Two great roads traverse the district, both through New Cumnock, the one from north to south, along the valley of the Afton; and the other, the great road from Glasgow to Dumfries, a short way due south, and then from east to west, making an extraordinary debouche in consequence of the hilly configuration of the surface. Population, in 1801, 1,381; in 1831, 2,184. Houses, 454. Assessed property, in 1815, £8,538.—New Cumnock is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Marquis of Bute. Stipend, £194 11s. 8d.; glebe, £24. This parish was originally a section of that of Cumnock, or Old Cumnock, and shared in its ecclesiastical history. Its present church is of recent structure, and accommodates 1,000 sitters.—Connected with the Reformed Presbyterians, there are here about 120 individuals, who have a local place of worship. There are also nearly 200 members or hearers of the United Secession, who attend their place of worship in the village of Old Cumnock.—Schoolmaster's salary, £32, with school-fees of from 2s. to 3s. per quarter, and other emoluments, £4 10s. There are 2 schools non-parochial.

CUNNINGHAM, the northern district of Ayrshire; bounded on the east by Renfrewshire; on the north and west by the frith of Clyde; and, on the south, separated from Kyle by the river Irvine. Its length from north to south may be about 18 miles; its breadth from east to west 12 miles. It includes the following parishes:—Ardrossan, Beith, Dalry, Dreghorn, part of Dunlop, Fenwick, Irvine, Kilbirnie, West Kilbride, Kilmarnock, Kilmaurs, Kilwinning, Largs, Loudoun, Stevenston, and Stewarton. The total number of inhabited houses in the district in 1831, was 7,602; of families 13,047. Of these, 2,212 families were employed in agriculture, and 7,457, in trade, manufactures, and handicrafts. The total population was 63,453. Cunningham is pleasantly diversified with hill and dale; but cannot be said to have any mountains. It is watered by numerous streams, the chief of which are the ANNOCK, CAAF, GARNOCK, IRVINE, and RYE: which see. In it are several populous towns and villages: as ARDROSSAN, BEITH, DALRY, IRVINE, KILWINNING, LARGS, SALTCOATS, STEWARTON, &c.: which see. The whole district abounds with coal, limestone, and freestone. It is, however, mostly in the hands of great proprietors, and is, of consequence, ornamented with few seats. EGLINTON CASTLE and KELBURNE are the chief: which see.—This district is celebrated for its dairy husbandry, which has reached greater perfection here than in any other quarter of Scotland. Full milk cheese was first begun to be made in the parishes of Beith, Dunlop, Stewarton, and others, soon after the middle of last century. It was

made in the parish of Kilmarnock about the year 1756, and became common in Cunningham by about 1770. Some traditional accounts, however, represent it as of much earlier introduction into the dairies of this district. [See article DUNLOP.] The question of the origin of this famous kind of cheese is still matter of keen dispute. About the year 1760, the cows in the district of Cunningham were not superior to those now in Bute, Arran, or Kintyre. They were poor ill-shaped starvelings, which, when fattened, did not weigh more than from 13 to 15 stones, county weight. But, about 1750, the Earl of Marchmont purchased from the Bishop of Durham, six cows and a bull of the Teeswater breed,—all of them flecked brown and white, and considerably heavier than the Ayrshire cows at that period. Bruce Campbell, Esq., of Milnriggs—who was then factor on his Lordship's estate in Ayrshire—brought some of that breed to his byres at Sornbeg, and from these many calves were reared in that part of Ayrshire. John Dunlop, Esq., about the same time, brought some cows of an improved breed to his estate of Dunlop; and the Earls of Loudon and Eglinton, Mr. Orr of Barrowfield, and others, all procured such cows, and placed them on their estates in Cunningham. These were at that time called Dutch cows, and they were of the same colour as those brought to Sornbeg. The dairy-breed on the Clyde have the colour, and partly the shape of the Ayrshire breed, and are upon the whole a handsome species of stock; but they are too round in the chest, too heavy in the fore-quarters, and far less capacious in their hinder parts, than the improved Ayrshire breed. They are well-fitted for the grazier, but inferior to the Cunningham breed for milkers.—The district of Cunningham was, until the abolition of feudal jurisdiction, a bailiwick under the Earl of Eglinton. Many of its leading families,—such as those of Eglinton, Glencairn, and Loudon,—took a leading part in the affairs of the kingdom during its most agitated times. The ancient family of De Morville, the constables of Scotland, were at one time proprietors of almost all the district. It was to Hugh de Morville the church owed the celebrated abbey of Kilwinning, which was endowed so amply by him and others of his family as to have a yearly revenue equal to £20,000 of our present money. Yet it is singular that there is no certainty as to their place of residence in this district. Mr. George Robertson, in his 'Genealogical Account of the Principal Families in Ayrshire, more particularly in Cunningham,' [Irvine: 2 vols.] gives the names of two places supposed to have been their residence,—Glengarnock castle, in the parish of Kilbirnie, and Southannan in Largs,—now in Kilbride. Glengarnock appears to have been one of the most ancient buildings in the district, and its ruins show that it has been one of the most extensive, and far beyond what the proprietor of the small barony of Glengarnock would have reared for himself. When

"The castle-gates were barr'd,
And o'er the gloomy portal arch,
Tuning his footsteps to a march,
The warder kept his guard,"

he could see from the tower the greater part of Cunningham lying below him, and would have a view of the frith of Clyde, thus overlooking the movements of foreign as well as internal enemies. The fact, however, cannot be ascertained with certainty, and we may place it along with that assertion which makes Glengarnock the residence of Hardy-knute.

CUNNINGSBURGH, or **KING'S-BURGH**, on the mainland, and in the shire of Orkney and Shetland; formerly a vicarage, now constituting part of the union of Dunross-Ness: see DUNROSS-NESS.

CUPAR-ANGUS, or **COUPAR-ANGUS**, a parish

partly in Perthshire, partly in Forfarshire; extending about 5 miles in length from south-west to north-east; and from 1 to 1½ mile in breadth. It is bounded by Bendochy and Meikle on the north; by Kettins on the east; by Cargill on the south; and Blairgowrie and Bendochy on the west. A considerable extent of haugh-ground lies on the banks of the Isla, which skirts its western side, and is here frequently greatly swollen by rains. The soil in general is a clay loam; but, wherever the ground rises into eminences, a gravelly soil makes its appearance. Besides the town of Cupar-Angus, there are the villages of Balbrogie, Caldharn or Cadam, and Wellton, of which the largest contains about 100 inhabitants.—There are still visible near the town of Cupar-Angus the vestiges of a Roman camp said to have been formed by Agricola in his 7th expedition. On the centre of this camp Malcolm IV. in 1164, founded and richly endowed an abbey for Cistercian monks. Its ruins show that it must have been a house of considerable magnitude. In 1561, the revenues of this house were: Money £1,238 14s. 9d.; wheat 7 ch. 13 bolls 1 fir.; bear 75 ch. 10 bolls 3 fir. ½ peck; meal 73 ch. 4 bolls 3 fir. ¾ pecks; oats 25 ch. 4 bolls 2 fir. 2 pecks. The Hays of Errol, next to the Scottish kings, were the principal benefactors to this monastery. Its last abbot was Donald Campbell of the Argyle family. Upon the distribution made by James VI. of the lands which came to the Crown on the dissolution of the religious houses, his majesty erected this abbey into a civil lordship, in favour of James Elphinston, 2d son of James, Lord Balmerino, in 1606; but he dying without issue, in 1669, the honour descended to the Lord Balmerino who was attained in 1745.—Very recently there was discovered in a field on the estate of Mungo Murray, Esq. of Lintrose, near Cupar-Angus, a cave of about 27 feet in length, 7 feet broad, and 5 feet high, strongly but rudely built of stone and lime. In the cave are two small fire-places, in which were found various pieces of charcoal, and in the bottom of the cave a parcel of human bones. There seems little doubt that this cave had been one of the hiding-places of the Covenanters of this district, in the days of 'the bloody Claverhouse;' and it would appear that it had become the resting-place of some of those persecuted men of old. "Not above 40 years ago"—says the writer of the Old Statistical Account of this parish, written at the close of last century—"the broad blue bonnet, with a coat of home-manufacture, was universally worn by the men; the tartan plaid, applied closely over a head-dress of linen, was in use among the women. At present, few servant-lads are to be seen at church without their coats of English cloth, hats on their heads, and watches in their pockets. At the period just referred to, a watch, an eight-day clock, or a tea-kettle, were scarcely to be met with. At present, there are few houses without one or other of these articles; perhaps one-half of the families in the parish are possessed of all of them." Population, in 1801, including the town of Cupar, 2,416; in 1831, 2,615. Houses, in 1831, 383. Assessed property, in 1815, £10,325.—This parish, formerly a vicarage, is in the presbytery of Meikle, and synod of Angus and Mearns. Patron, the Crown. Stipend £239 4s. 4d.; glebe £25. Unappropriated tithes £139 4s. Church rebuilt in 1780; enlarged in 1830; sittings 850. It stands on the Angus side of the town of Cupar-Angus.—There is a United Secession church, which was built in 1790; sittings 522; stipend £120, with a manse and garden.—There are also a Relief congregation; church built in 1789; sittings 700; stipend £100; with manse and garden;—

a small Episcopalian congregation established in 1824; stipend £45;—and an original Secession congregation; church built in 1826; sittings 400; stipend £80, with a manse.—Estimating the population of the parish at 2,600, the parish-minister calculates that 1,550 belong to the Established church, and 1,000 to other denominations.—Parochial school-master's salary £34 4s. 4½d., with fees, and emoluments averaging £20 annually. There are 3 private schools.

CUPAR-ANGUS, a neat and considerable town in the above parish; 15 miles north-west of Dundee; 12½ east by north of Perth; and 5 south of Blairgowrie. Though designated of Angus, by far the greater part of this town is in the county of Perth. It is situated near the Isla, and is divided by a rivulet into two parts; that part which lies south of this rivulet is all that belongs to the county of Angus. The streets are well-paved and lighted, and the town has much improved of late years. There is a steeple which serves as a town-house and prison, on the spot where the prison of the court-of-regality stood. Small debt, and circuit small debt, courts are held here. The linen manufacture is carried on here to a considerable extent. There is also a considerable tannery; and in the immediate neighbourhood a large bleachfield. Cupar-Angus gave the title of Baron Coupar to James Elphinstone, created Lord Coupar in 1609. The title merged in that of Balmerino, and suffered extinction with it. The number of inhabitants in 1793 amounted to 1604; they are now about 2,200.

CUPAR-FIFE,* a central parish of Fifeshire, about 9 miles distant from the sea-coast on the three sides of the peninsula of Fife; of a very irregular form, but measuring 4½ miles in its greatest length from north to south, and 3 miles in its greatest breadth from east to west. It is bounded on the north by the parishes of Kilmany and Dairsie; on the east by Kemback; on the south by Ceres and Cults; and on the west by Monimail and Moonzie. The surface is finely undulated, and well-wooded. The river Eden flows slowly through the parish from south-west to north-east, between green and fertile banks of varied beauty.† The town of Cupar, and about two-thirds of the parish, are on the northern side of the Eden. The Lady-burn, or St. Mary's burn, a small tributary, flowing from the north-west, after fetching a circuit through the northern suburbs of the burgh of Cupar, joins the Eden to the east of the town. The soil to the north and east of the burgh is a friable loam on a gravelly subsoil; to the south and west the soil is more inclined to sand. The average rent of land is about

* So called to distinguish it from Cupar-Angus; but most commonly designated by the single term *Cupar*, which appears in ancient writings under the several forms of *Cupir*, *Culpyre*, *Cypre*, *Cyprum*, *Cotopar*, and *Coupar*. The etymology of the name is uncertain, but the word is apparently Celtic; as the names of various other places in the parish certainly are: such as *Pittencrieff*, that is, *Pitnam-craobh*, 'the Dale'; *Kilmaron*, that is, *Cill-mha-roin*, 'the Cell of St. Ron.'

† It was suggested, many years ago, that a navigable canal might be formed, nearly in the course of the Eden, as high as Cupar. That river falls into the sea about 9 miles below the town; and the tide rises as high as Lydox mill, little more than 3 miles from Cupar. The fall from the town is very gradual; to the place to which the tide rises, not more than 24 feet. It has lately been proposed to carry a railroad through Fifeshire, commencing at Burntisland or Kinghorn, and passing Kirkcaldy and Cupar to Newport, with a branch to Newburgh. The placid stream of the Eden, and the scenery which diversifies and adorns its banks, long since touched the imagination of the poet Johnstone, and found a place in his song:

"Arva inter memorisque umbras, et pascua laeta
Lene fluens, vitreis, labitur Eden, aquis."

Attracted by the pleasant and healthful situation of the vale in which the town stands, our kings, says tradition, when they lived in the neighbouring palace of Falkland, placed the family-nursery at Cupar.

45s. per acre. Assessed property of the parish, in 1815, £7,503; of the burgh £6,553. Total real rental of the parish, in 1829, £9,977 11s. 9d.—There are 3 mills for spinning yarn within the parish; viz., Russell mill, with 600 spindles, on the Eden, 3 miles west of Cupar; Cupar flax-mills, with 336 spindles; and a mill at Lebanon for twisting thread as well as spinning yarn. The principal kind of cloth manufactured is dowlas; sheetings and Osnaburghs are also largely made; and there are now above 600 looms in the parish. In 1796, the number of looms was 223. There are also extensive flour, corn, and barley mills, several quarries, and a snuff mill.—Besides the county-town, this parish contains the village of SPRINGFIELD at the western end, and that of GLAIDNEY, an extension of Ceres village, at its southern end: see these articles.—Kilmaron castle, 1½ mile north-west of Cupar, the seat of J. A. Cheyne, Esq., is the finest mansion in the parish. It is in the castellated style, from a plan by Gillespie.—To the south of Kilmaron, and about a mile south-west of Cupar, is the ancient house of Carslogie, for many generations the family-seat of the Clephanes. This family, in times of feudal strife, were leagued with the neighbouring ancient family of the Scots of Scotstarvet, who inhabited a strong tower—which is still entire—situated on a lower ridge of Tarvet hill, about 2 miles south from Carslogie. On the appearance of an enemy, tradition relates, horns from the battlements of the castle from which the hostile force was first descried, announced the approach of danger, and the quarter from whence it was advancing; and both families, with their dependents, were instantly under arms for mutual protection. The family have been in possession, from time immemorial, of a hand made in exact imitation of that of a man, and curiously formed of steel. This is said to have been conferred by one of the kings of Scotland, along with other more valuable marks of his favour, on a laird or baron of Carslogie, who had lost his hand in the service of his country. When Dr Campbell wrote the account of this parish in the Old Statistical Account, in 1796, there still existed, in a field adjoining to the house of Carslogie, and near to the public road which leads from Cupar to the west, the stately and venerable remains of an ash which for several centuries had retained the name of the Jug tree. The iron jugs, in which the offenders on the domains of Carslogie suffered punishment, fell from the hollow body of this tree, in which they had been infixed, only in 1793. The ancient tree itself was blown down some years ago.—A mound of earth, rising considerably above the adjoining grounds, and extending a great length on the north side of Cupar, is called the Mote, or, as some write it, the Moat-hill. They who use the latter orthography contend that this rampart is formed of artificial earth; and that it originally extended as far as the castle, and was constructed to defend the town from any sudden attack from the north, as the river, in some measure, secured it on the south. There is no doubt, however, that it ought to be styled the Mote-hill, as it was probably the place where, in early times, the justiciary of Fife held his courts, and published his enactments for the regulation of the country. The Latin name, by which this hill is sometimes mentioned, seems to decide the controversy, 'Mons placiti,' which may be translated 'Statute-hill.'—"The parish of Cupar and the surrounding district," says Mr. Leighton, in his 'Fife Illustrated,' "is rich in localities connected with events, circumstances, or individuals never to be forgotten, and affording subjects of thought and reflection to even the most ordinary minds. From the top of Tarvit hill, or, as it is now called, Wemyss-

hall hill, these objects attract our attention in every direction. In the distant west, at the bottom of the Lomond hills, we see all that remains of the royal palace of Falkland, where so many of Scotland's sovereigns of the Stewart race sought pleasant retirement from the cares of governing a turbulent kingdom, or of attempting to reconcile the differences of a still more turbulent nobility. How often have these grey walls resounded with music and dancing! How often been the scene of hospitable feast, and long protracted, yet merry wassail! Over these fields which skirt the Eden—then a royal forest—our ancient kings followed the chase with hound and horn, or flew the hawk at its winged prey. At one time the only sound heard throughout these forest-glades was the wild buck's bell, or the call of the various birds which then frequented them to their mates; at another they were the scene of mirth and sport. There the proudest names in Scotland's history followed their prince in peaceful and animating sport. There beauty took the field, hawk on arm, and knightly valour bowed subservient to its influence. But, alas! Falkland palace was not always a scene of joy; we think on James IV., James V., and the beautiful Mary; and we think of crime, of folly, of misery, captivity, and early death! Nearer us, in the same direction, appears the manse of Cults. There the great painter of our age, the poetic yet graphic Wilkie, was born and spent his early years. Amid these gently sloping hills and sweet valleys, he studied nature, and imbibed that love of truth and simplicity which he has since, so beautifully in some instances and so grandly in others, developed. Still nearer us in the same direction is the ancient tower of Scotstarvet. There resided Sir John Scott of Scotstarvet, one of the directors of the Chancery in the reign of Charles I., 'who was,' says Nisbet, 'a bountiful patron of men of learning, who came to him from all quarters, so that his house became a kind of college.' Among others, he encouraged Pont in his survey of the whole kingdom, gave him great literary assistance, and was at the expense of the publication; and in yonder old tower he wrote his curious work,—'Sir John Scott of Scotstarvet's Staggering State of Scots Statesmen.' Along the slope of this hill, under the duke of Chatelherault and M. D'Oysel, lay at one time the army which was intended by Mary of Guise to crush the efforts of the reformers. On the opposite bank were stationed those who had determined to die rather than that popery should longer lord it over the consciences of men; and on this hill, where we now stand, the treaty was subscribed, which, though soon broken through by the queen-regent, gave time to the reformers, and ultimately led to the establishment of the Presbyterian religion in Scotland. To the north rises the Mount, the patrimonial possession of 'Sir David Lindsay of the Mount, Lord Lyon, king-at-arms,' during the reign of James V.; and there he wrote those bitter biting satires which delighted the people, and paved the way for the Reformation. The house in which he lived has now disappeared, but the place is still interesting, and the hill is now crowned with a monument erected to the memory of the late Earl of Hopetoun, one of the deliverers of Europe from the all-grasping power of the late emperor of the French. Almost immediately below us is the school-hill of Cupar, a portion of which formed the play-field of the burgh, and there the dramas of Sir David Lindsay were exhibited so early as 1535. At a far earlier period, however, when the castle of Cupar was the residence of Macduff, the lord or Maormore of Fife, it was the scene of that horrid tragedy, the murder of his wife and children by Macbeth, which led to the inveterate hatred

of Macduff, and finally to the establishment of Malcolm Ceanmore on the throne; and of which the poet has made such a beautiful use in his play of Macbeth. To the east upon the sea-coast is the venerable city of St. Andrews, the seat of an ancient bishopric, and the earliest seat of learning in Scotland. With how many great names of Scotland are these hallowed ruins associated! and how intimately connected is its history with the early civilization and improvement of our country! To the south beyond the vale of Ceres is Craighall, the seat of Sir Thomas Hope, king's advocate to Charles I., and one of the greatest lawyers of his time. In Ceres churchyard repose in peaceful silence many of the proud race of Lindsay of the Byres, and some of the kindred race of Crawford. There is the grave—although the spot is now unmarked—where rests that rude lord, who, when the unfortunate Mary hesitated to sign her abdication, did not scruple to crush her gentle hand with his iron glove, nor to force her by rude speech and still ruder threats, unwillingly to execute the deed which deprived her of a crown, and consigned her for the rest of her life to a prison; and a little to the east in the same valley lies Pitscottie, the residence of Lindsay the homely yet picturesque relater of a portion of Scotland's history. In a word, we know no place more capable of calling up more varied recollections, or of elevating the mind and exciting the fancy, than the top of Tarvit hill." [Vol. ii. pp. 4, 5.]

This parish is in the synod of Fife, and the seat of a presbytery. The district of Cupar formed a parish in early times, when the great parochial divisions of Crail, Kilrenny, Kilconquhar, St. Andrews, Leuchars, and a few others, comprehended all the eastern part of the county of Fife. The small parish of St. Michael's of Tarvet, lying on the south of the Eden, was joined to that of Cupar in 1617. The church belonging to St. Michael's parish stood on that beautiful spot now known by the name of St. Michael's hill. Human bones are still occasionally discovered here when the operations of husbandry are going forward.—The ruins of a small chapel, situated near the eastern boundary of the lands of Kilmaron, were to be seen near the close of last century.—The parochial church of Cupar, in early times, stood at a considerable distance from the town towards the north, on a rising ground, now known by the name of the Old Kirk-yard. The foundations of this ancient building were removed in 1759; and many human bones, turned up in the adjoining field by the plough, were then collected and buried in the earth. In 1415 this structure had become ruinous, or incapable of accommodating the numbers who resorted to it. In the better of that year the prior of St. Andrews, for the better accommodation of the inhabitants of the town of Cupar, and that the rites of religion might be celebrated with a pomp gratifying to the taste of the age, erected within the royalty a spacious and magnificent church. This church was built in the best style of the times, of polished freestone, in length 133 feet, by 54 in breadth. The roof was supported by two rows of arches extending the whole length of the church. The oak couples were of a circular form, lined with wood, and painted in the taste of the times. In 1785, this extensive building being found to be in a state of total decay, the heritors of the parish resolved to pull down the old fabric, and to erect on the same site a church on a more convenient plan. This they carried into execution at a considerable expense, in 1785. It is to be regretted that the new building was not joined to the spire of the old church which still stands. The vestry or session-house, by intervening between the church and spire, gives a detached appearance to

both. The spire has always been considered handsome, and appears light and elegant when viewed from the east or west. It was built by the prior of St. Andrews in 1415, only up to the battlement: all above that was added in the beginning of the 17th century, by Mr. William Scot,* who was for many years minister of Cupar. The church accommodates 1,300. Within it, in a niche in the west wall, is a monument erected to Sir John Arnot of Fernie, who fell in the last crusade. It presents the recumbent figure of a knight in armour. In the same circle there is a marble tablet to the memory of the late Dr. Campbell, one of the ministers of the parish, and father of the present attorney-general of England. In the churchyard is a plain upright stone, bearing the following inscription: "Here lies interred the heads of Laur. Hay, and Andrew Pitulloch, who suffered martyrdom at Edinburgh, July 13th, 1681, for adhering to the Word of God, and Scotland's covenanted work of reformation; and also one of the hands of David Hackston of Rathillet, who was most cruelly murdered at Edinburgh, July 30th, 1680, for the same cause." On the other side are the following rude lines:—

" 1680.
 " Our persecutors filled with rage,
 Their brutish fury to aswage,
 Took heads and hands of martyrs off;
 That they might be the people's scoff;
 They Hackston's body cut asunder,
 And set it up a world's wonder
 In several places, to proclaim,
 These monsters gloried in their shame!"

The charge is collegiate. The stipend of each charge is £259 7s. 9d.; but the 1st minister has a glebe of the value of £21, while the second has neither a manse nor a glebe. Unappropriated teinds £1,016 7s. Both livings are in the patronage of the Crown.—A new church, called St. Michael's, was erected in the burgh of Cupar in 1837, at an expense of about £1,800, raised by subscription shares. It accommodates 810; and public worship is performed in it by the parish-ministers alternately.—There are two Relief congregations within this parish. The first was established in 1776, in which year their church was built, which accommodates 750. The minister's stipend is £100, with a manse and garden. The church of the 2d Relief congregation was opened in 1830. It cost £1,000; and has 454 sittings. Stipend £130.—A United Secession church was built in 1796, at a cost of £1,100, and enlarged in 1830, at a further cost of £250; sittings 480. Stipend £120.—A Free communion Baptist congregation was established in 1815; and a place of worship for their use was built in 1821, at a cost of £40; sittings 370. Stipend £50.—An Original Burgher congregation was established in 1817. Their place of worship cost £900, and accommodates 540. Stipend £100.—An Episcopalian congregation has existed here since 1688. Chapel built in 1820, at a cost of £3,000. Sittings 152. Stipend £100, with interest of a bequest by Dr. Bell of £450.—There are also small Glassite and Independent churches.—There is no parochial school strictly speaking; there were, however, two burgh-schools so early as the reign of Charles I., which were, about 1822, merged into the Cupar academy, conducted by four teachers, with which the Madras academy, founded by the late Dr. Bell, was joined in 1834. The united academy has 7 teachers; three of whom have a salary of £40

each; two others have £25; another, £30; and a female teacher £15 per annum.† The patronage of the academy is vested in the magistrates, and in subscribers to the amount of £10, besides certain patrons *ex officio*; and the whole management and direction is centred in the general body of the patrons and their committee of directors. The school-rooms are provided and half of the schoolmasters' salaries are paid by the town; the other half of the salaries and all incidental expenses, out of the general subscription fund. The school-furniture and a chemical apparatus, purchased at considerable expense, belong to the subscribers. The teachers have been appointed by the general body of management. The regulations made for the academy at its institution by the patrons and a committee of directors, have been, from time to time, altered and improved according to circumstances. No matriculation book is kept; but the number of scholars attending the academy varies from 150 to 200 annually. No funds mortified for the purpose of education are under the control of the council alone.—The late Dr. Gray of Paddington, in the county of Middlesex, left £500, the interest of which he directed to be applied in payment of a salary to a female teacher in Cupar, and the management is vested in the provost, clergymen, and schoolmaster of the parish for the time being.—Dr. Bell conveyed his estate of Egmore to trustees, consisting of the lord-lieutenant of the county, the lord-justice-clerk, the sheriff of the county, the provost, the dean-of-guild, and the two established clergymen of Cupar, for the purpose of founding an establishment for tuition on the Madras system. There are two female boarding-schools; one of which is on the foundation of Dr. Gray. There are also a female school of industry, an infant school, and 8 other private schools.

The royal burgh of CUPAR is pleasantly situated on the north bank of the Eden, nearly in the centre of the parish, on the great road from Edinburgh to Dundee; 10 miles west of St. Andrews; 22 miles north-east of Kinghorn; and 31 miles from Edinburgh by Kirkcaldy. It is a place of some antiquity, but contains many new houses, and presents the appearance of a thriving modern town, well-built, and cleanly kept. It contains three principal streets: viz., the Bonnygate, running east and west; the Crossgate, running north and south, in a direction nearly parallel with the Eden; and St. Catherine street, which is a continuation of the Bonnygate. Several lanes and alleys branch-off in various directions from these main lines; and there is a large irregular suburb on the north side of St. Mary's burn; besides a considerable line of houses on the Edinburgh road, on the east side of the Eden. All these suburbs are included within the parliamentary boundaries of the burgh. The parish-church stands in Kirkgate-street, at the entrance of the North road from Ferry bank. St. Michael's church is at the west end of the Bonnygate. The Episcopal chapel is near, or upon, the site of the ancient monastery. The town-house stands at the junction of St. Catherine-street and Crossgate. It is a plain neat

* This gentleman was of the ancient family of Balwearie, possessed of a considerable estate, and a great favourite with Archbishop Spotswood, with whom he passed much of his time in the neighbouring retreat of Dairsie. He died in 1642, in his 85th year; and his remains were interred in a handsome tomb at the west end of the churchyard, the inscription on which is no longer legible.

building, surmounted by a cupola and belfry. The county-buildings in St. Catherine-street, present a neat though plain facade. They contain the county-hall, sheriff-court room, and offices for the public clerks. In the county-hall there is a fine portrait of the late John, Earl of Hopetoun, by Sir Henry Radwin; and another of Thomas, Earl of Kellie, by Sir David Wilkie. The jail is a neat building on the left hand of the middle bridge crossing the Eden, and on the south side of the river. But it has been reported as totally unfit for its original purpose, and as "having more the appearance of a gentleman's seat than of a receptacle for persons who have injured society."

The earliest charter of the burgh of Cupar of Fife is granted by David II., in 1363, conferring the privileges of trade upon the burgesses, in like manner as upon the inhabitants of burghs generally. These privileges were confirmed, and various grants of lands conferred upon them, by a charter granted by Robert II., dated Dunfermline, 28th June, 1381; by a charter of James I., dated at Perth, 28th February, 1428-9; by another of the same reign, dated 30th October, 1436; by a charter of King James V., dated 13th March, 1518; by an act and warrant of James VI., dated at Holyrood house, 1573, and by a charter of feu-farm by King James VI., dated Edinburgh, 4th June, 1595. The old sett of the burgh consisted of a provost, 3 bailies, a dean-of-guild, a treasurer, 13 merchant-councillors, a convener, and 7 deacons of trades: in all 27. It is now governed by a provost, 3 bailies, and 24 councillors. The municipal constituency, in 1839, was 259. The revenue, in 1832, was £554 13s. 11½d., of which £321 arose from land-rental, and £120 from feu-duties. The expenditure in that year was £751 12s. 9d., of which £223 was interest of money borrowed. The debt of the burgh at the same period was as follows:—

	£	s.	d.	£	s.	d.
Heritably secured	4,022	10	0			
Money borrowed on personal security	2,944	2	1			
				6,966	12	1
Accounts unpaid				474	14	0
Value of the annuities at present £32 13s.				130	12	0
Value of the bursaries per annum £30				600	0	0
				8,171	18	1
The whole property of the town is valued at	13,528	8	2			
Free value of property	£5,356	10	1			

The revenue, in 1838-9, was £221 4s. 11½d. The property of the town consists of lands, feu-duties, customs, and market-dues. The property in land was at one time very extensive, stretching 3 miles to the westward, and extending perhaps to 1,000 acres. Compared with this its present extent is very limited. The lands seem to have been chiefly feued out about a century ago, at a time when they were in a state of nature and at very low feu-duties, the highest is believed to be 1s. per acre, and without any purchase-money. Although the great part of the landed property seems to have been alienated more than a century ago, there have been very considerable alienations of the town's property within the last 50 years. No local tax is levied in Cupar except the petty customs. The cess, or burgh land-tax, is levied upon property and the profits of trade within the royalty of the burgh. It is allocated by stent-masters chosen from among the merchants of the burgh by the council, by whom the collector is also annually appointed. The jurisdiction of the magistrates is confined to the burgh and burgh-acres. The royalty of Cupar is very narrow towards the north, being bounded on that side by the Lady burn. Immediately to the north of this burn, and within the parliamentary

boundary, there have arisen of late years several villages where there is no police-establishment of any kind, and which are beyond the jurisdiction of the magistrates. These villages are called Braehead and Newtown—both on the lands of Pittencrieff—and Burnside, Lebanon, and Bank street. Even more directly within the precincts of the town, and in the principal street, called St. Catherine-street, there are houses which are not within the royalty, although completely surrounded by it. In the street called the Millgate, the west side of the street holds burgage, and is within the royalty, and the east side is beyond it and holds of the Earl of Rothes. Burgh-courts are held on stated days for the despatch of business; but as the sheriff-courts, both ordinary and under the small debt act, are held within the burgh, little business is brought before the burgh-court. The cases disposed of before the magistrates have generally been petty assaults and other breaches of the peace, which are decided in a summary way. Cases of a graver nature are either reported to the Crown-officers or taken up by the sheriff of the county.—Cupar is conjoined, in the election of a member of parliament, with St. Andrews, Crail, Killrenny, East and West Anstruther, and Pittenweem. Previous to the Reform bill, it was rather anomalously associated with Perth, Dundee, Forfar, and St. Andrews. Parliamentary constituency in 1839, 333. In an ancient document, styled 'A Brief View of Scotland in the Sixteenth Century,' printed by Pinkerton, in his 'History of Scotland,' [Vol. II. p. 501.] from a MS. in the Cottonian library, it is said, "Most borrows are at the devotion of some noblemen, as Cowper in Fife managed by the Earl of Rothes." Among those who represented Cupar in the Scottish parliament, appears Sir David Lindsay of the Mount. He repeatedly was commissioner for the burgh.

Being the county-town, Cupar is principally inhabited by practitioners in the legal courts, members of banking-establishments, and persons connected with the agricultural interest. It is chiefly distinguished for its trade in corn, and the mills, brewing, and such establishments dependent on that species of market. There are, however, several extensive spinning-mills in the neighbourhood; and there is a considerable trade in the weaving of coarse linens, and in home-manufactures, such as leather, candles, and snuff. Its printing-establishments, too, have been justly celebrated for the production of some beautiful specimens of excellent typography, and the publication of many useful works. Cupar has been long known as a leading and important market-town. There is a weekly corn-market, which is held on Thursday, and is well-attended. Besides these there are ten general fairs or markets for the sale of grain and farm-stock, held at different fixed periods throughout the year. At these, domestic utensils, agricultural implements, and various other articles are exposed to sale. Cupar is also a post-town; and has two sub-offices under it, those of Osnaburgh, and Leuchars. The mail from the south was formerly carried round by Perth and Dundee; but by a recent arrangement, a mail-coach carrying the bags for the towns north of the Tay, now passes through Fife, and brings with it the letters for Cupar direct. The coach also carries passengers between Edinburgh, Dundee, and Cupar. Two stage-coaches pass through the town every lawful day, between Edinburgh and Dundee, affording with the mail every facility for intercourse with these important towns. Another coach leaves Cupar for Dundee, every market-day; and one between Cupar and St. Andrews twice a week. During the summer months a coach runs to Largo, between which place and Newhaven a steam-

boat regularly plies. Carriers' carts leave Cupar regularly for the conveyance of heavy goods to and from Edinburgh, Glasgow, Dundee, and all intermediate towns and villages. Cupar contains a public library, instituted in 1797, which now contains considerably above 6,000 volumes. It is supported by the annual subscriptions of the proprietors, and of occasional monthly or yearly readers. Many scarce and curious books were bequeathed to this library, by the late Dr. Gray of Paddington Green, London. The lawyers of Cupar have begun recently to form a law-library, which it is expected will soon become valuable to that body. There is also a circulating library. There is a public news-room, supported by yearly subscription, where a well-selected supply of the leading London and provincial journals is received, besides a few monthly publications. A mechanics' reading-room has also been recently instituted, in which the working classes are accommodated with newspapers at a very cheap rate. Two newspapers are published in the town.—A branch of the bank of Scotland was opened here in 1787; and in 1792 the British Linen company also established a branch. In 1802, the Cupar bank was formed, which gave up business in 1814; another bank, which also began business here in 1802 under the name of the Fife bank, continued in operation till 1825. In 1812, the Commercial bank opened a branch here. The banks now in operation in Cupar are the British Linen company's branch, and the Commercial bank branch. There is a savings bank.

Cupar, as already stated, is a place of considerable antiquity. At an early period the Macduffs, thanes of Fife, had a castle here, in the midst of the marshy grounds which bordered the Eden and St. Mary's burn. It continued the seat of the court of the stewardry of Fife, until the forfeiture of Albany, Earl of Fife, in the reign of James I., when that court was removed to Falkland. During the darker ages, theatrical representations, called *Mysteries* or *Moralities*, were frequently exhibited here. The place where these entertainments were presented, was called the *Playfield*. "Few towns of note," says Arnot, in his '*History of Edinburgh*,' "were without one. That of Edinburgh was at the Greenside-well; that of Cupar in Fife was on their Castle-hill." The pieces presented in the *Playfield* of Cupar, however, seem not, at the era of the Reformation, to have had any connection with religious subjects, but were calculated to interest and amuse, by exhibiting every variety of character and every species of humour. To illustrate the manners which prevailed in Scotland in the 16th century, and as a specimen of the dramatic compositions which pleased our fathers, Arnot, in the appendix to his *History*, gives a curious excerpt from a manuscript comedy, which bears to have been exhibited in the *Playfield* at Cupar, and which had been in the possession of the late Mr. Garrick. That part of the excerpt only, which relates to the place where the play was presented, is here transcribed:

"Here begins the proclamation of the play, made by DAVID LINDSAY of the Mount, knight, in the *Playfield*, in the month of _____, the year of God 1555 years."

"*Proclamation made in Cupar of Fife.*"

"Onr purpose is on the seventh day of June,
If weather serve, and we have rest and peace,
We shall be seen into our playing place,
In good array about the hour of seven.
Of thriftiness that day, I pray you cease;
But ordain us good drink against allein.
Fail not to be upon the Castlehill,
Beside the place where we purpose to play
With gude stark wine your dragons see you fill,
And had yourselves the merriest that you may."

"*Cottager.* I shall be there, with God's grace,
Tho' there were never so great a price,
And foremost in the fair;

And drink a quart in Cupar town,
With my gossip John Williamson,
Tho' all the nolt should rair!" &c.

During the residence of our kings in Scotland, Cupar often received visits from royalty. Almost all the Jameses, and the unfortunate Mary, repeatedly visited it, and were entertained within the town. The last royal visit was made by Charles II. on the 6th of July, 1650, when on his way from St. Andrews to Falkland. He was entertained at dinner by the magistrates in the town-hall; then forming part of the tolbooth or gaol. "He came to Cowper," says Lamont, "where he gatt some desert to his foure houres: the place where he sattu doune to eate was the tolbooth. The towne had appointed Mr. Andro Andersone, scholemaester ther for the tyme, to give him a musicke songe or two, while he was at table. Mr. David Douglysse had a speech to him at his entrie to the towne. After this he went to Falklande all night. All this tyme the most part of the gentelmen of the shyre did goe alonge with him." From an ancient plan of the town, 1642—lately engraved from the original in the Advocates' library, by the Abbotsford club—it appears that Cupar had anciently gates or ports. One of these stood at the west end of the Bonnygate, called the West port; one at the middle of the Lady wynd, called the Lady port; one below the castle, called the East port; one at the bridge, called the Bridge port; one at the Millgate, called the Millgate port; and another at the end of the Kirkgate, called the Kirkgate port. It is curious to observe, from this plan, how little alteration has since taken place in the streets of the town; and that the names of both streets and lanes are still the same they then were. The principal alteration—with the exception of buildings in the suburbs—is the taking down of the old jail and town-house at the Cross, and opening up St. Catherine-street. Where the markets are still held, opposite the town-house, at the junction of Crossgate and Bonnygate, the ancient cross of Cupar once stood. It was an octagonal building, with a round pillar rising from it, surmounted by a unicorn, the supporter of the royal arms of Scotland. When the jail was taken down, this structure was also removed, and at the request of Colonel Wemyss, the pillar was presented to him, when he caused it to be re-erected on the top of Wemyss hall-hill, where it still remains marking the spot on which the famous treaty between Mary of Guise and the Lords of the Congregation was subscribed.

CUPAR-GRANGE, a village in the shire of Perth, and parish of Bendothy; 2 miles north-east of Cupar-Angus. It is famous for a particular kind of seed-oats. Here is a ferry over the Eroch for foot-passengers. Near this village was discovered a repository of the ashes of sacrifices which our ancestors were wont to offer up in honour of their deities. "It is," says Pennant in his *Second Tour*, "a large space of a circular form, fenced with a wall on either side, and paved at bottom with flags. The walls are about 5 feet in height, and built with coarse stone. They form an outer and an inner circle, distant from each other 9 feet. The diameter of the inner circle is 60 feet, and the area of it is of a piece with the circumjacent soil; but the space between the walls is filled with ashes of wood, particularly oak, and with the bones of various species of animals. I could plainly distinguish the extremities of several bones of sheep; and was informed that teeth of oxen and sheep had been found. The top of the walls and ashes is near 2 feet below the surface of the field. The entry is from the north-west, and about 10 or 12 feet in breadth. From it a path-way, 6 feet broad, and paved with small stones, leads eastward to a large free-stone, standing erect

between the walls, and reaching 5 feet above the pavement, supported by other stones at bottom. It is flat on the upper part, and 2 feet square. Another repository of the same kind and dimensions was discovered at the distance of 300 paces from the former. From the numbers of oak-trees that have been digged out of the neighbouring grounds, it would appear that this was anciently a grove."

CUPINSHAY. See COPENSAY.

CUR (THE), a river in the district of Cowal, Argyleshire. It takes its rise in the mountains which border on Lochgoilhead, between Glaslet hill and Benulei. Its course for 2 miles is rough and rapid, forming, as it descends from the mountains, several fine cascades; but when it has reached the plains of Strachur it runs smoothly, making a number of beautiful turns. The banks are generally of a deep soil, partly of loam and clay; but the crops are frequently much damaged by the sudden rising of its waters. After a course of about 9 or 10 miles, it falls into the head of Loch Eck.

CURGARE. See CORGARF.

CURGIE, a small port and village in the parish of Kirkmaiden, on the western side of the bay of Luce; 3 miles north of the Mull of Galloway.

CURRIE,* a parish in Mid Lothian, about 6 miles south-west of Edinburgh. Its extent is about 5 or 6 miles in every direction; but in one quarter it measures from east to west 9 miles. The situation is very elevated; Ravelrig, about the middle of the parish, is 800 feet above the level of the sea. The soil is a tough clay, which requires much dressing; about one-third of the whole is hill and moss. The river Leith takes its rise in the western extremity of the parish, at a place called Leith-head, from three springs, which receive various additions in their progress, particularly at the village of Balerno where they are joined by Bavelaw burn. Limestone is abundant, but is not wrought, as there is no coal at a nearer distance than 8 or 9 miles. Freestone abounds, a quarry of which has been wrought for building many of the houses in the New Town of Edinburgh. There is plenty of iron-stone, and a rich vein of copper. The Edinburgh and Glasgow railway intersects the parish.—On an elevated situation, above the bank of the water of Leith, is an old castle called Lennox tower, said to have belonged to the family of Lennox, and to have been occasionally the residence of Queen Mary in her youth,—

"When love was young, and Darnley kind."

It became afterwards, according to the same tradition, a seat of the Regent Morton. It stands on a very elevated situation above the bank of the river, —commands a beautiful prospect of the frith of Forth,—and must have been a place of very considerable strength, being inaccessible on all sides. It had a subterraneous passage to the river. The extent of the rampart, which goes round the brow of the hill, is about 1,212 feet.—Not far from this castle, on the opposite side of the river, are the ruins of another ancient edifice, the mansion of the Skenes of Curriehill, the date of whose creation, as Baronets of Scotland, is unknown; but they possessed very extensive

property in this parish. The family of Balmerino, originally, had here also a considerable domain.—On the top of Ravelrig-hill, there are to be seen the remains of a Roman station, or exploratory camp, which affords a farther confirmation of the name of this parish having been originally derived from the Latin. It is on the summit of a high bank, inaccessible on three sides, defended by two ditches, and faced with stone, with openings for a gate. It is named by the country people Castle-bank. Farther east are the appearances of another station or post, which commands an extensive view of the strath towards Edinburgh, and is styled the General's Watch. They are both very distinctly marked, in an old plan of the Ravelrig estate, but are now much defaced; former proprietors having carried off the greater part of the stones to build fences. Population of the village and parish, in 1801, 1,112; in 1831, 1,883. Houses, in 1831, 322. Assessed property, in 1815, £12,884.—The village of Currie is 6 miles south-west of Edinburgh, on the north bank of the water of Leith. The road to Lanark passes through it.—The parish seems originally to have belonged to the collegiate church of Corstorphine, and to have been a benefice of the archdeacon of Lothian. Even so late as the reign of Charles I. it does not appear to have been a separate parish, for no mention of it is made in the royal decree of the erection of the see of Edinburgh, though all the adjoining parishes are noticed. That Currie, however, though not perhaps a separate parish, had very anciently been a place of religious worship, the writer of the Old Statistical Account thinks "is clear from this proof, that in digging for the foundation of the present church, on the site of the old one, there was discovered a round hollow piece of silver, having the remains of gilding on it, and which seems evidently either a part of the stalk of a crucifix, or of an altar-candlestick. It has a screw at each end. Its length is $7\frac{3}{4}$ inches, and its diameter $1\frac{1}{4}$ inch. In a spiral scroll from top to bottom, there is the following inscription:—'Jesu Fili Dei miserere mei.' The letters—which are Saxon—are very well engraved, and each $\frac{3}{4}$ of an inch large. It is at present in the museum of the Society of Antiquaries in Edinburgh."—This parish is in the presbytery of Edinburgh and synod of Lothian and Tweeddale. Patrons, the Town-council of Edinburgh. Stipend £264 9s. 10d.; glebe £16. Schoolmaster's salary £34 4s. 4½d.; fees £32. There are 3 private schools.

CUSHNIE, a small parish, formerly a vicarage, in Aberdeenshire, which, in 1798, was annexed to the neighbouring one of Leochel, so that they now form one parochial charge. See LEOCHEL-CUSHNIE.

CUTHBERT'S (St.), or WEST CHURCH, a parish of Mid-Lothian, lying on the north and west sides of the metropolis, and comprehending a large tract of valuable land in the immediate vicinity of Edinburgh. This parish—which anciently contained the city of Edinburgh, the burgh of Canongate, and the parishes of Corstorphine and Libberton—must be considered as, *quoad civilia*, partly a town and partly a country-parish. The suburbs of Portsburgh, Potter-row, and the Pleasants, with the other streets and squares on the south side of the town, compose the former. The latter—which at present is very extensive—was anciently much more so; it contains above 9,000 acres, and is contiguous to the city of Edinburgh on the north, west, and south sides. A great part of the New Town is within this district—which also contains the suburbs of Broughton, and Water of Leith, the Borough-Moor, and Watson's hospital; also the Charity workhouse. The greatest length of the parish *quoad civilia* is 5 miles; greatest breadth 3 miles.

* From its name—anciently *Koria*, or *Coria*—it seems to have been one of those districts which still retain their ancient Roman appellation. This conjecture is supported by the following authors, who give an account of the ancient and modern names of places in Scotland: 1. Johnston, in his 'Antiquitates Celo-Normannicæ,' for the *Koria* of Ptolemy, places Currie. 2. Dr. Stukely, in his account of Richard of Cirencester's map and itinerary, for the *Koria* of Richard, fixes Corstanlaw in the neighbourhood of Currie. 3. Sir Robert Sibbald, in his Roman Antiquities of Scotland, conceives it to have been in the plain near the manor of Ingles-ton, from a pillar dug up there, which place is likewise in the vicinity of Currie. These circumstances tend to prove that it must have originally been a Roman station,—traces of which have lately been found in the neighbourhood.—*Old Statistical Account.*

Quoad sacra it is now divided into 9 parishes: viz., St. Cuthbert's, St. Bernard's, Buccleuch, St. David's, Dean, Morningside, St. Paul's, Roxburgh, and Newington. In 1831, the population of the whole district was 70,887. See article EDINBURGH.

CUTTLE, a hamlet in Haddingtonshire, adjoining to Prestonpans, where an extensive pottery, saltwork, and magnesia manufactory, were formerly carried on.

CYRUS (ST.), or ECCLESCRAIG, a parish, forming the southern extremity of Kincardineshire; bounded by Marykirk, Garvock, and Benholm on the north; by the German ocean on the east; and by the North Esk river, which separates it from Forfarshire, on the south and south-west. It is 5 miles in length, by 3 in breadth. There are two villages in the parish: viz., Milton on the coast, and St. Cyrus to the south-west of Milton. The latter is $5\frac{1}{2}$ miles north by east of Montrose. The modern and familiar name of this parish is St. Cyrus; but in former civil and ecclesiastical records, Ecclescraig, or Ecclesgreig, is the name generally used. The surface is uneven, and is intersected with several dens and

rivulets; upwards of three-fourths of the whole are arable and well-cultivated; the remainder being moor or moss. The soil is in general a deep clay. In the river North Esk are several valuable salmon-fishings. The burn of Den-Fenel forms here a grand and beautiful cascade, especially when increased by rain falling over a perpendicular rock 63 feet in height. There are several good stone and lime quarries in the parish. Population, in 1801, 1,622; in 1831, 1,598. Assessed property, in 1815, £10,039. Houses, in 1831, 352.—This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Stipend £247 17s.; glebe £11. Unappropriated teinds £56 1s. 9d.—Schoolmaster's salary £33; fees £33. There were 4 private schools in 1834. Several years ago, the church of Ecclesgreig stood below the heughs of St. Cyrus on the shore, near the mouth of the North Esk; and the churchyard still continues there. In 1832, this very inconvenient situation of the church was changed, and a new one built on an eminence a little above the heughs, more convenient to the parish, from its easy access and central situation.

CAPE WRATH.

D

DABAY, a small island of the Hebrides, annexed to the county of Inverness. It is about a mile long, and half-a-mile broad; fertile in corn and grass, but liable to be blasted by the south-west winds.

DAER, or **DEAR**, a stream in the upper ward of Lanarkshire, taking its rise in the mountains bordering on Dumfries-shire. It has been contended by many—and not without show of reason—that the Daer is the origin of the Clyde, in so far as the streamlet which bears the latter name is insignificant in size as compared with the former at the point at which the confluence of their waters takes place. It affords the title of Lord Daer to the eldest son of the Earl of Selkirk, the residence of which noble family is at St. Mary's Isle, in the stewartry of Kirkcudbright, and their principal possessions are also situated in that neighbourhood.

DAFF, a village in Renfrewshire, in the parish of Innerkip, about 3 miles west of Greenock.

DAILLY,* a parish in the centre of the district of Carrick, Ayrshire. It is bounded on the north by Kirkoswald; on the east by Kirkmichael and Straiton; on the south by Barr and Girvan; and on the west by Girvan. It is of an irregular oblong figure, stretching from north-east to south-west; and measures, in extreme length, nearly 7 miles, and in breadth from 4 to 6. Its area probably contains upwards of 17,000 acres. The parish is intersected, in its extreme length, and along its central division, by Girvan water; which, all the way, is a beautiful pastoral stream, and here receives, on both banks, several rills of local origin. The surface, at first, rising gently and variedly from the banks of the river, and, afterwards soaring into hills of considerable height, is a basin abounding in the beauties of landscape. The lowlands are fertile, well-cultivated, and richly wooded; and the uplands, though naturally heathy and bleak, are partly reclaimed; and nearly all afford good pasturage. The beds of the indigenous rills are, for the most part, deep, well-wooded, picturesque glens. The soil, in the holms and meadows along the banks of the Girvan, is light but very productive; on the south side, is light and dry, resting on a bed of gravel; on the north side, is clayey and retentive; and, on the hills, is thin, wet, and spongy, consisting in many places of moss. Coal, limestone, and freestone abound. The coal-bed is believed to be a wing of the great coal-field which stretches from the vicinity of Edinburgh into Ayrshire, and is here worked in 5 seams, of from 4 to 14 feet in thickness. Limestone is worked at Blairhill, near the south-eastern extremity of the parish, and at Craighead, near the north-western extremity. Argillaceous marl is found in most parts, and has been successfully employed as manure. Numerous small chalybeate springs welling up in different parts of the parish, seem to indicate the existence of strata of ironstone. The climate, in the valley, is generally dry and mild, but on the high grounds is moist and chilly; and though everywhere subject to heavy showers during westerly winds, is rarely loaded with fogs. The parish is divided among 7 landowners, 5 of whom have mansions within its limits. At Kilkerran and Penkill are ruins of fortified castles. Near the lower extremity of a wild and

romantic glen once stood a chapel dedicated to the Virgin Mary, whence the locality is still called Lady-glen. At a place called Machry-kill are vestiges of a small church or chapel, probably dedicated to St. Macarius. At the southern termination of the western heights is an oval and doubly enclosed encampment, 100 yards by 65, commanding an extensive and uncommonly brilliant view, and probably raised during the wars of Robert Bruce. There is only one village, that of New Dailly, situated on the Girvan, substantially and singularly built, and, of late years, greatly improved. There are here a library, a friendly society, and a savings bank. Across the Girvan are 4 bridges, 3 public and one private. Population of the parish, in 1801, 1,756; in 1831, 2,074. Houses 314. Assessed property, in 1815, £7,887.—Dailly is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £348 7s. 9d.; glebe £15 10s. The old church which stood at Old Dailly, about 3 miles from the present church and village, was granted by Duncan, the first earl of Carrick, to the monks of Paisley; but was afterwards transferred by Robert I. to the monks of Crossraguel, and remained with them till the Reformation. In 1653, an extensive tract of the original parish of Dailly, lying on the south-east among the upper branches of the Stinchar, was detached in order to form the modern parish of Barr. Dailly, however, received, at the same time, a small addition on the north-east from Kirkoswald. Though nowhere touching the sea-coast, the parish includes also the romantic rock of Ailsa, in the centre of the frith of Clyde. See **AILSA CRAIG**. The present church was built in 1766, and cost £600. Sittings 650. There are 4 schools, 3 of them nonparochial. Parish schoolmaster's salary £30, with £30 other emoluments.

DAIRSIE, a parish in Fifeshire; bounded on the north by Kilmany, Logie, and Leuchars parishes; on the east by Leuchars; on the south by Kemback, from which it is divided by the Eden; and on the west by Cupar. It is of an irregular form, extending from south-east to north-west $2\frac{1}{2}$ miles; and from south-west to north-east 2 miles. Superficial area 2,306 acres, of which only 15 are waste land. Its general appearance is that of a gently rising ground: the inclination being towards the south and south-east. There are in it two hills of a moderate height, from which are very extensive prospects. The one is called Foodie, the other Craifoodie, and both of them are remarkable for bearing crops nearly to their summit. The soil is for the most part fertile, and in many places rich and deep. The high road from St. Andrews to Cupar passes through the southern part of the parish. The church, a handsome building, and the bridge of 3 arches across the Eden here, were built by Archbishop Spottiswood, when proprietor of Dairsie. In an old castle, near the church, he is said to have compiled his Church history. This castle was once a place of considerable strength, and a parliament was held in it in 1355. It is now greatly dilapidated; but a view of it is given in the edition of Sir Robert Sibbald's *History of Fife*, published at Cupar in 1803. The principal village is that of Darsiemuir, sometimes called Osnaburg, which is of recent erection. There is a spinning mill at Newmiln, and another at Lydiamiln, both on the Eden. A part of the popu-

* The name is probably descriptive of the central stripe, or *dale*, of the parish. The ancient name was *Dalmaolkeran*, signifying the 'Dale of St. Keran.'

lation is employed in weaving linens for the Cupar manufacturers. Population, in 1801, 550; in 1831, 605. Houses 133. Assessed property, in 1815, £4,827.—This parish is in the synod of Fife, and presbytery of Cupar. Patron, Innes of Sandside. Stipend £250 19s. 5d.; glebe £11. Unappropriated tithes £101 13s. 3d. Church seated for 319.—Schoolmaster's salary £34 12s. 4½d. The parish-school is near Middlefoodie. There is a female school at Osnaburg, and a small school at Foodieash.

DALAROSSIE, or DALFERGUSSE, that is, 'Fergus's valley,' a district in the shire of Inverness, formerly a vicarage, now united to the parish of Moy. Church rebuilt in 1790. See DYKE and MOY.

DALAVICH, in the district of Lorn, and shire of Argyle, an ancient parish now united to the parish of Killchrenan. It is 17 miles south-west of Dalmally. The population, in 1801, was 486; and, in 1811, was 426. Near Loch Avich, in this district, lay the scene of an ancient Celtic poem, translated by Dr. Smith, called 'Cath-Luina,' or 'The Conflict of Luina;' in the lake, is an island, the scene of another poem, called 'Laoi Fraoich,' or 'The Death of Fraoich;' and many places in this neighbourhood are still denominated from Ossian's heroes. See article AVICH (Loch).

DALBEATTIE, a village in the parish of Urr and stewardry of Kirkcudbright. It is situated on Dalbeattie burn, 3 or 4 furlongs above its confluence with Urr water. The village was commenced about the year 1780, and advanced rapidly in prosperity. It is built of a lively-coloured granite, and offers high advantages, as to both garden-grounds and the right of cutting peats, to feuars; but is surrounded with a country bleak, barren, and, in many respects, unpropitious to manufacture or commerce. Though vessels of small burden can come up from the sea, Dalbeattie is not likely to become ever of commercial importance.

DALCROSS. See CROY.

DALGAIN, the ancient name of the parish and village of Sorn, in the district of Kyle, Ayrshire, and still occasionally applied to the village. An estate in the parish also retains the name. The village, consisting of one row of houses, is situated on the north side of the road from Ayr to Muirkirk, in a beautiful holm, having the river Ayr in front, and overhung from behind by a winding bank covered with natural wood. It has annual fairs on the second Tuesday of March, O. S., and on the first Monday of November, N. S. Its inhabitants are chiefly agricultural labourers, colliers, and quarriers. Population about 300.

DALGARNOCK, a suppressed parish in Dumfriesshire, incorporated with CLOSEBURN: which see. The old parish nearly surrounded Closeburn, and was annexed to it in the 17th century. There was here, in former times, a considerable village, the burgh of the barony. Though not a single house of it remains, a fair or tryst seems still to be held on its site. Says Burns,

"I gae'd to the tryst of Dalgarnock,
And wha but my fine fickle lover was there?"

DALGETY, a parish in the county of Fife; bounded by the parish of Aberdour on the east and north; by Inverkeithing on the west; and by a small part of the parish of Dunfermline on the north-west. On the south it is bounded by the frith of Forth, along which it extends in a straight line about 3 miles; but as the coast in this place runs into numerous small bays, its circuitous extent is considerably more. It is of an irregular form, but approaches nearest to the triangular; being about 4 miles long from south to north; its breadth gradually diminishing towards the north, until in some places

it scarcely exceeds half-a-mile. The soil in some quarters is a light dry loam; but the greater part of the parish consists of a deep strong loam. The ground, in most places, rises considerably above the level of the coast; the few hills in the parish are neither high nor rocky. The highest ground in the parish is about 450 feet above sea-level. There is a small loch at Otterston, about a mile from the coast, which is much admired. It is not quite a mile in length, nor above a quarter of a mile in breadth, but its banks are finely wooded. Near it, on the grounds of Fordel, is a fine waterfall. The house of Donibristle—a seat of the Earl of Moray—was formerly the residence of the abbot of St. Combe, but it has since been greatly enlarged and improved. Donibristle was, in 1592, the scene of the cruel murder of 'the bonny,' or the handsome Earl, whose personal attractions and accomplishments, it is alleged by some historians, had impressed the heart of Anne of Denmark, and excited the jealousy of her royal spouse. This at least was the popular notion of the time:

"He was a braw gallant,
And he play'd at the glove;
And the bonny Earl of Murray,
Oh! he was the queen's love."

Political reasons, according to Bishop Percy, were given for his arrest; but more than arrest seems to have been intended, for the commission was intrusted to his inveterate enemy Huntly, who, with a number of armed men, surrounding the house in a dark night, set it on fire, on Murray's refusal to surrender. He escaped the flames, but was unfortunately discovered by a spark which fell on his helmet, and was slain, telling Gordon of Buckie, who had wounded him in the face, "You have spilt a better face than your awin!"* "Hard by it," says Sibbald, "is Dalgatie, the dwelling of the Lord Yester; it was repaired and beautified with gardens by Chancellor Seaton, Earl of Dunfermling, who lyes interred in the church there." Little of it now remains. Opposite to the eastern extremity of the parish, and within a mile of the shore, is the island of St. Combe: see INCHCOLM. The church itself is a very ancient building. The exact period of its erection cannot be ascertained; but there are documents which show that a grant of the ground on which it stands, was made to the abbot of St. Combe as far back as the 14th cen-

* Various accounts of this transaction are given by Balfour, Spittiswood, Moyse, Calderwood, Wodrow, and Gordon. Balfour says in his 'Annales of Scotland,' "The 7 of Februarij this zeire, 1592, the Earle of Murray was cruelly murdered by the Earle of Huntly, at his house in Dunibrisell, in Fifeshire, and with him Dumbur, Shrieve of Murray; it [was] given out, and publicly talked that the Earle of Huntly was only the instrument of perpetrating this facte, to satisfie the Kinges jealousy of Murray, quhom the Queene, more rashlie than wyslie, some few dayes before had commended in the Kinges heiringe, with too many epithets of a proper and gallant man. The reasons of these surmises proceedit from proclamatione of the Kinges the 18 of Marche following, inhibiting the younge Earle of Murray to persue the Earle of Huntly for his father's slaughter, in respecte he being wardit in the castell of Blacknesse for the same murder, was willing to abyde his tryell; averring that he had done nothing, bot by the King's maiestie commissione; and so was neither art nor part of the murder." In Wodrow's 'Analecta,' preserved in the Advocates' library, [vol. iv. p. 117.] is the following passage: "The horrible murder of the Earle of Murray, and burning the house of Dunibrisel, is noticed by our historians. It was generally charged on the House of Huntly. After King Charles' accession to the throne, the Scots nobility came up to London to wait on him, and Gordon of Huntly among others. On the King heard of Huntly, he refused peremptorily to see him, and said his concern in the matter of Dunibrisel was so villanouse that he could not allow him to come to his presence. On this was told to Huntly he pressed the more to be admitted, and said he was able presently to satisfy his majesty in yt matter. Wt much difficulty he was at lenth admitted. When he came in the King reproached him for yt barbarous act. Ye Earle kneeling drew out of his bosom K. Ja: ye 6th original warrand for qh he had done to the Earle and his house, and presented it to the king. The king looked on it, and after reading it, said, 'My lord, this was wrong given, and worse executed.'"

ture. Additions, however, have been made to it, which bear marks of a later date. There is no particular branch of trade in this parish, except what arises from the coal and salt-works here, carried on to a considerable extent on the estate of Fordel. The greatest part of the coal and salt is exported from St. David's, a harbour at the western extremity of the parish, in Inverkeithing bay, where vessels of a burthen not exceeding 500 tons can load in safety. The distance from the pits to the shore is 4 miles, along which the coals are carried on a railway. The annual export is about 70,000 tons; and the coal is reckoned of a very superior quality. The salt is chiefly made at St. David's, a village of 150 inhabitants. The village of Crossgate in this parish has a population of 180. The valued rent, according to the old valuation, is £5,394 Scots. Assessed property, in 1815, £4,203. In the New Statistical Account the total value of the yearly produce of this parish is estimated at £38,000, of which £28,000 is from coal, and £1,600 from salt. Population, in 1801, 890; in 1831, 1,300. Houses 212.—This parish, formerly a vicarage, is in the presbytery of Dunfermline, and synod of Fife. Patron, the Earl of Moray. Stipend £227 7s. 1d.; glebe £20.—There are 2 schools in the parish. Salary of parochial schoolmaster £34 4s. 4½d. Fees £18.

DALGINROSS. See COMRIE.

DALHOUSIE. See COCKPEN.

DALKEITH,* a small parish in the county of Mid-Lothian, being only about 2 miles square, lying on the banks of the North and South Esk rivers; bounded on the north by Newton and Inveresk parishes; on the east by Inveresk and Cranston; on the south and west by Newbottle and Lasswade; and on the west by Lasswade and Newton. Its greatest length is 3½ miles; greatest breadth 2½ miles. The surface is gently undulated, but in no quarter rises into hills; indeed the whole might be considered a plain, did not the steep banks of the rivers give it an uneven and broken appearance. The soil is light on the lower grounds, and, on a deep clay, well-adapted for raising either fruit or forest-trees, which arrive here at great perfection.—Adjoining to the town is Dalkeith park, of 800 Scots acres, within which, about half-a-mile from the town, is Dalkeith house, the seat of the Duke of Buccleuch, erected about the beginning of the last century, on the site of the old castle of Dalkeith. In ancient times, Dalkeith castle appears to have been a place of considerable strength, and to have stood some sieges. It was situated on a perpendicular rock of great height, and inaccessible on all sides, except on the east, where it was defended by a fosse, through which the river is said to have formerly run. It was, for some centuries, the principal residence of the noble family of Morton; and history records, that James, last Earl of Douglas, exasperated against John Douglas, Lord of Dalkeith, for espousing the cause of James II., who had basely murdered William, Earl of Douglas, at Stirling, laid siege to the castle of Dalkeith, binding himself by a solemn oath not to desist till he had made himself master of it. It was, however, so gallantly defended by Patrick Cockburn and Clerkington, that the Earl of Douglas, and his followers, found themselves unable to reduce it, and were obliged to raise the siege. On the defeat of the Scotch army at Pinkie, in 1547, many fled to the castle of Dalkeith for refuge, among whom was James, Earl of Morton, afterwards regent of Scotland, and Sir David Hume of Wedderburn.

It was besieged by the English, and defended for some time; but as it contained not a sufficient store of provisions for such a number of men as had fled to it, and as the besieged had no hopes of succour against the victorious army, it was obliged to surrender; in consequence of which, the Earl and Sir David were made prisoners. "Morton's character," says Gilpin, "is marked in history with those vices which unbounded ambition commonly ingrafts upon the fiercer passions, cruelty and revenge; to which we may add an insatiable avarice. Popular odium at length overpowered him, and he found it necessary to retire from public life. This castle was the scene of his retreat; where he wished the world to believe he was sequestered from all earthly concerns. But the terror he had impressed through the country during his power was such, that the common people still dreaded him even in retirement. In passing towards Dalkeith, they generally made a circuit round the castle, which they durst not approach, calling it, the lion's den. While he was thus supposed to be employed in making his parterres, and forming his terraces, he was planning a scheme for the revival of his power. It suddenly took effect, to the astonishment of all Scotland. But it was of short continuance. In little more than two years, he was obliged to retreat again from public affairs; and ended his life on a scaffold." When Morton was executed, the barony of Dalkeith was included in his attainder, and although the estate was finally restored to the Earl of Morton, yet the castle seems long to have been considered as public property, and to have been used as such. It was General Monk's residence while in Scotland. In the year 1642, the estate of Dalkeith came into the possession of the family of Buccleuch by purchase from the Earl of Morton. According to Chalmers, the Douglasses of Lothian obtained in early times a baronial jurisdiction over many lands, in several shires, which was called the Regality of Dalkeith. In 1541, James, 3d Earl of Morton, obtained a charter from James V., confirming this regality. In January 1682, George, Earl of Dalhousie, was appointed bailie of the regality of Dalkeith. After the death of the Duke of Monmouth, James, his son, was created Earl of Dalkeith. His mother, Anne, Duchess of Buccleuch and Monmouth died, in 1732, aged 81, when she was succeeded by Francis, her grandson. On the abolition of hereditary jurisdictions, in 1747, the Duke claimed £4,000 for the regality of Dalkeith; but was allowed only £3,400. The beauty of the situation is greatly heightened by the serpentine windings of the two Esks, which unite in the park about half-a-mile below the house, and the fine woods with which it is surrounded. "It stands on a knoll," says Gilpin, "overlooking a small river. The knoll is probably in part artificial; for an awkward square hollow hard by, indicates that the knoll has been dug out of it. Beyond the river are woods; and a picturesque view of the town and church of Dalkeith. But the house fronts the other way, where it is not only confined, but the ground rises from it. It might have stood with great advantage, if it had been carried two or three hundred yards farther from the river; and its front turned towards it. A fine lawn would then have descended from it, bounded by the river, and the woods. We often see a bad situation chosen; but we seldom see a good one so narrowly missed. There are several pleasing pictures in Dalkeith house; one of the most striking, is a landscape by Vernet, in Salvator's style. It is a rocky scene through which a torrent rushes: the foaming violence of the water is well expressed. I have not often met with a picture of this fashionable master which I liked better. And yet it is not entirely free

* *Dal-cath*, or *keith*, that is, 'the Narrow dale,' according to Chalmers. Some suppose *keith* equivalent to *cath*, signifying 'Battle'; in which case *Dalkeith* would mean 'the Field of Battle.'

from the flutter of a French artist.* Stoddart says of Dalkeith house, in his 'Remarks on Local Scenery and Manners in Scotland,' [Vol. i. pp. 123-125.]: "The front view is by no means good, as the ground, rising from it, is soon bounded by the trees. The architecture is of the Corinthian order, and has the formal grandeur of the period when it was built,—the latter part of the seventeenth century. On the opposite side, it appears much more picturesquely seated, on an almost perpendicular bank, overhanging the river. It is said, that the castle was originally a place of great strength, inaccessible on all sides, except the east, where it was defended by a fosse, now filled up. The rock too has been partly covered with earth, gently sloped down to the river, and decorated with shrubberies; yet this part of the improvements has not been executed with much taste: there is a formality, both in the disposition of the ground, and in the planting, which but badly suits the rapid Esk, and the wild wood on the opposite side. To the north of the house is a stone bridge, of a single arch, 70 feet wide, and 45 high, exceedingly heavy in its effect. At its first erection, two stags—the supporters of the Buccleuch arms—were placed on it, as ornaments; but they frightened the horses which passed them so much, that it was found necessary to remove them. From this bridge the house would appear to advantage, if the shrubberies, above which it rises, were in better taste. The park is a noble piece of ground, containing about 8,000 Scotch acres, planted with a number of fine old oaks, and other venerable trees, and watered by the two Esks, the North and South, whose streams unite about half-a-mile below the house. The South Esk has a pleasing wildness, being almost entirely overshadowed by the dark hangings of the ancient wood: the North Esk comes into more open day; but has several very pleasing walks on its banks, with views of the town and church of Dalkeith, &c. In this park were formerly kept some of the native wild cattle of Scotland described by Pliny, [see article CUMBERNAULD]; but the Duke and his son having experienced a dangerous attack from them, they were destroyed." The park is well-stocked with deer.—Population of the parish, in 1801, 3,906; in 1831, 5,586. Houses, in 1831, 567. The two villages of Lugton and Bridgend had a population, in 1838, of 284. Assessed property, in 1815, £11,911.—This parish, to which the barony of Lugton was annexed in 1633, is in the synod of Lothian and Tweeddale, and is the seat of a presbytery. Patron, the Duke of Buccleuch. Stipend £316 9s. 2d.; glebe £40. Unappropriated tithes £610 11s. 11d. The old church accommodates 1,130. An additional church has been built by the Duke of Buccleuch at the west end of the town; sittings 1,000.—There are two United Secession congregations. The 1st of these was established in 1744; church built in 1812; sittings 880. Stipend £100, with manse and garden. The 2d was established, and the church built in 1749; sittings 436. Stipend £100, with a manse.—A Relief congregation was established here in 1768. Church seats 685. Stipend £139, with manse.—An Independent church was formed here in 1804.

* The same tourist adds: "Here, and in almost all the great houses of Scotland, we have pictures of Queen Mary; but their authenticity is often doubted from the circumstance of her hair. In one it is auburn, in another black, and in another yellow. Notwithstanding, however, this difference, it is very possible that all these pictures may be genuine. We have a letter preserved, from Mr. White, a servant of Queen Elizabeth, to Sir William Cecil, in which he mentions his having seen Queen Mary at Tutbury castle. "She is a goodly personage," says he, "hath an alluring grace, a pretty Scottish speech, a searching wit, and great mildness. Her hair of itself is black; but Mr. Knolls told me, that she wears hair of sundry colours."

Chapel accommodates 300. Stipend £85.—A Wesleyan Methodist chapel was built in 1789; sittings 240.—Parochial schoolmaster's salary £34 4s. 4½d. a house and garden, &c., with an average fee of 15s. for each pupil; average number of pupils 100. There are 10 private schools in this parish.

DALKEITH, a town in the above parish, 6½ miles south-east of Edinburgh, and 18½ north-west of Lauder, on the Great south road from Edinburgh. Population, in 1838, 4,642. It is situated on a narrow stripe of land between the two Esks, the banks of which are here beautifully fringed with wood. The principal street is broad and spacious, containing a number of elegant houses, and the whole town may be considered as well-built. One of the greatest markets in Scotland for grain is held here every Thursday. It is the most extensive ready-money corn-market in Scotland. The quantities of the different kinds of grain exposed for sale in the market-place of Dalkeith in the year ending on the 1st July, 1839, were as follows:—Wheat, 10,220½ qrs.; barley, 15,803 qrs.; oats, 43,630½ qrs.; pease and beans, 1,821½ qrs.—in all 71,475½ quarters; while the aggregate quantity sold in Haddington market—supposed to be next in magnitude—during the same period was 42,361 qrs. It is to be observed, however, that 1838-9, being a year of comparative scarcity, neither of these returns can be taken as a fair representation of the quantity brought to market in ordinary seasons, which in the case of Dalkeith, it is thought, may be moderately stated at 100,000 qrs.—There is another market of considerable extent held every Monday for the sale of meal, flour, and pot-barley, a considerable portion of the supplies brought to which come from the more southern parts of the county, and from the neighbouring counties of Roxburgh, Berwick, Peebles, and Selkirk.* Dalkeith is also remarkable for the number of its shops and the extent of business done in them. Favoured by its extensive markets and convenient situation, the shopkeepers of this place contend successfully with those of the neighbouring metropolis in supplying with their peculiar commodities the inhabitants of the south and western parts of the country, and they have thus contributed in no slight degree to the present comfort and respectability of the place. Though well-adapted for the prosecution of manufactures,

* In the Old Statistical Account of the parish of Dalkeith, published in 1794, it is stated that "The village is abundantly supplied with excellent butcher-meat, which may be had in great perfection on the Thursdays and Saturdays. The butchers here contribute considerably to the supply of the Edinburgh market, and some of them sell there the whole of what they kill. During the season of winter and spring, the price of beef is 4d. the lb. aurodupois; veal, 5d.; mutton 5d.; and pork, 4d. From the month of September till about the middle of January, the price of beef and mutton is 3d. or 3½d. the pound; but during the rest of the year it is not lower than what has been mentioned above. In the summer season, chickens sell at about 3d. the pair, and hens from 16d. to 18d. In summer, the price of butter is 10d. the lb. Butter is sold here by iron weight 22 oz. to the lb.; in winter it rises sometimes to 1s. or 1s. 1d. The wages of labourers in husbandry, during the summer-season, are from 1s. to 1s. 3d. the day. Mowers receive from 1s. 5d. to 2s. Gardeners from 1s. 2d. to 1s. 6d. In winter, common labourers receive from 8d. to 10d., and gardeners 1s. The wages of domestic female-servants, a year, are from £2 10s. to £3." The reader will be interested in comparing these prices and wages with those now current in Dalkeith. Very little butcher-meat is now sent from Dalkeith to the Edinburgh market; the London mart is the great object of attention. In the winter of 1838, Mr. Plummer of Dalkeith sent butcher-meat of different kinds to London to the value of £10,000; and, on an average, the amount sent from Dalkeith to London may be £15,000 per annum. Ewe mutton now averages, from October to January, about 5d. per lb.; and from January to October, 6d. Wedder mutton fetches about 1d. per lb. more. Beef sells at the same price as mutton. Veal fetches 7d. per lb. from October to January; and 9d. from January to October. The price of poultry is nearly the same as in 1793. The price of butter varies greatly from year to year. Perhaps 10d. per lb. for Scottish salt-butter has been the average price for a series of years. Male agricultural labourers get from 10s. to 12s. per week all the year round; female labourers, about 5s. per week.

the opposition of the extensive landed proprietors in the neighbourhood has hitherto—except in one instance—prevented their introduction into the parish. Extensive corn and flour mills have been erected by His Grace the Duke of Buccleuch on the North Esk,—and on the South Esk there is a smaller erection of the same kind, belonging to the Marquis of Lothian. A few manufactures have been introduced; but these have not been carried to any considerable extent.—A gas light company was formed in 1827. There are here branches of the Royal bank, the National bank, the Commercial bank, the Edinburgh and Leith bank, and the Leith bank.—Fairs are held here on the 1st Thursday after Rutherglen May fair, and the 3d Tuesday of October.—In July 1640, a National security savings bank was established by the desire of the Scientific association, for the benefit of the working-classes, and there is every prospect at present of the institution being, ultimately, successful. In 1835, an association was formed to provide for the delivery of popular lectures on the more interesting branches of physical and economical science. The subjects which it has succeeded in bringing before the inhabitants are chemistry, natural philosophy, geology, zoology, botany, and political economy. In 1837, a library of scientific works was begun in connexion with the association. During the summer-season, Dalkeith is much resorted to by parties of pleasure from Edinburgh. The church is a Gothic fabric, founded by James Douglas, Earl of Morton, in the reign of James V. The town is governed by a baron-bailie under the Duke of Buccleuch. Originally the baronial right belonged to the family of Graham, and subsequently to that of Douglas. In 1642, it was acquired by the family of Buccleuch. Previous to 1759, Dalkeith, like other burghs of barony, was entirely regulated by the superior and his bailies; but, in that year, a statute was obtained appointing certain trustees to superintend the paving, cleaning, and lighting of the streets, and to supply the inhabitants with water; and providing a revenue for these purposes by imposing a small tax on the ale, porter, and beer consumed in the parish. The powers conferred by this act have been continued and extended by subsequent statutes, which acknowledge—and, to some extent, preserve—the influence of the feudal superior, by investing the baron-bailie, for the time being, with the powers of a trustee. The direct and proper jurisdiction of the baron-bailie is very limited, extending only in criminal affairs to the imposition of small fines, or to imprisonment for one night; and, in civil matters, to granting warrants at the instance of landlords for the sale of their tenants' furniture in order to recovery of rent. More serious cases are referred to the sheriff of the county, and all matters of local police regulation are taken up by the trustees. Vacancies occurring in the office of trustee are filled up by the surviving members, who are understood to select for this distinction individuals who have been nominated by, or are believed to be agreeable to the bailie. Being self-elected, and holding the office during life, the trustees are obviously in the utmost degree independent of the inhabitants over whose affairs they preside, and, in times of political excitement, the appointments to this office have generally been found to assume an anti-popular complexion; yet it must be stated to the honour of the trustees, that, as a body, they have never interfered with politics, and that the prudence and attention with which they have discharged their gratuitous duties could scarcely have been increased by any amount of popular control. Indeed, it may be truly affirmed that Dalkeith is one of the cheapest and best governed towns in the country. The customs are

leased from the superior by trustees under local acts, at a rent of £100. Their produce is about £250. The trustees administer a revenue of about £600.

Few things have contributed more to the health and enjoyment of the inhabitants of Dalkeith than the formation of the railway between that place and the metropolis. This undertaking was commenced in 1827, and opened for the conveyance of passengers to Edinburgh and Fisherrow in 1831. Leith was connected with the main line by a branch, in 1835; and, in the end of 1838, another branch was carried forward from the south line near Newbattle to the town of Dalkeith, by the Duke of Buccleuch. The views of the company were originally limited to the conveyance of coal, and other mineral produce, and manure, &c., between the mines of Mid-Lothian, and Edinburgh, Dalkeith, Leith, and Fisherrow. Passengers were not thought of in the original estimates of the railway, although they have become the chief source of profit. Their number averages now about 300,000 per annum, and the tonnage about 120,000 per annum. The main line and the Fisherrow branch are the property of the original subscribers. The Leith branch is a separate concern, belonging to a different set of subscribers; and the Dalkeith branch is the exclusive property of the Duke of Buccleuch. These railways are worked by horses, which are considered the most economical power for short distances in a populous country where stoppages are very frequent. There have been run upon this railway about 12,000,000 of miles, and carried about 2,000,000 of passengers, from its opening in July, 1831, up to October, 1840, that is, 9½ years, without one fatal accident, and none others of a serious nature.—Amongst the many useful and enterprising works commenced by the present Duke of Buccleuch, there are few more magnificent in point of pictorial effect than the bridge now in progress over the Esk, on the south-east of Dalkeith. The arches are 5 in number, of 120 feet span each, constructed of built beams of timber abutted upon stone piers of tasteful architecture, and thrown across one of the most beautiful turns of this beautiful stream. The appearance of the bridge is light, airy, and exceedingly elegant, while the different views through the arches into the fine grounds of Woodburn, and up the valley of the Esk, are of the most picturesque description. This bridge is to connect an extensive coal-field on the property of the Duke at Cowden with the Dalkeith railway; but it rarely happens that beauty and usefulness are so felicitously blended as in the present instance. When finished, this bridge will be an object of great attraction to all who visit the romantic scenery of the Esk. It is within ten minutes' walk of the Dalkeith railway station.

DALLAS, or DOLLAS, a parish in the centre or the shire of Elgin; bounded on the north and north-east by the parish of Elgin; on the east and south-east by the parishes of Rothies and Birnie; on the south and south-west by those of Knockando and Cromdale; and on the west and north-west by Bassord and Edenkillie. It extends about 12 miles from east to west, and 9 from north to south; but its mean breadth, taken across from the southern side of the hill of Melundy, measures only about 6 miles. It is surrounded by hills so as to form a valley or strath, almost equally divided from south-west to north-east by the small river Lossie, which issues from a small loch in the south-western extremity of the parish, due south of the manse. Several burns or rivulets, rushing down from the hills on both sides, join the Lossie nearly at right angles to its course. A part of Dallas—the estate of Craigmill—lies in the southern end of the valley of Rafford parish.

Through this estate the stream of the Lochty,—a tributary to the Lossie,—runs eastward through a narrow cut in the rocky hill, to loiter in the vale of Pluscarden. This cut appears as if made merely for the passage of the Lochty, and it would be easy to turn it northward by Rafford church, if that was not its original course. The greater part of Dallas parish, however, lies on the south side of the hill of Melundy, which is stretched between the courses of the Lochty and the Lossie. A great part of the plain on the south side of the hill of Melundy must have been a lake, when the Lossie occupied a channel about 3 feet higher than the bottom of its present bed; and, except a pool still covering a few acres, the whole of this plain is now a deep extensive bed of pure peat earth: thence probably arose the Gaelic name *Dale-Uisk*, 'the Water-valley.' The live produce is generally sent to market for sale at Elgin, Forres, &c., to which towns, also excellent peats are sent from the inexhaustible mosses in this parish. There are considerable plantations of fir, oak, &c., here, and excellent quarries of freestone, with great abundance of grey slate. There are some chalybeate springs. During summer there is good fishing in the Lossie for fine small trout; and, in September and October, for finnac or white trout, and a few small salmon. During the risings of this river, almost a third of the population were at times impeded in their attendance at the church, till a wooden suspension bridge was erected. Population, in 1801, 818; in 1831, 1,153. Houses 240.—This parish is in the presbytery of Forres, and synod of Moray. Upon the annexation of Altyre to the parish of Rafford—and which formerly belonged to Dallas—Killes, and part of the parish of Elgin, was annexed to Dallas. This took place in 1657. Patron, Cumming of Altyre. Stipend £158 6s. 8d.; glebe £11. Previous to 1794, when the present church was built,—the church-service was performed in a very ancient fabric, thatched with heath, and without windows, save two or three narrow slits which yawned to a very undue width within; the effigy of St. Michael, the patron, stood weather-beaten in a niche near the top of the eastern gable without. In the churchyard a neatly cut stone column, 12 feet high, terminated by a well-formed fleur-de-lis for its capital, was then used, and afterwards remained in use as the market-cross, for the sale of bankrupts' effects, cattle, &c. The present church and manse are commodious buildings, though, being near the Lossie, both are in some danger of being swept away. Sittings in the church 404. Schoolmaster's salary £34 14s. 4½d., with from £10 to £12 fees, and a share of the Dick bequest. There were 3 private schools in 1834, one of which, at the east end of the parish, was built by the Earl of Fife for the education of his tenants' children.

DALLINTOBER. See CAMPBELLTON.

DALMAHOY. See RATHO.

DALMALLY, a small village in the parish of Glenorchy, Argyshire, situated at the head of Loch Awe; 16 miles north-east of Inverary, and 12½ west of Tyndrum. Heron, who visited this place in 1792, writes: "Among other spots to which the landlord of the inn at Dalmally conducted me in the morning, was a height called Barhassland, the residence of Mr. M'Nab, the representative of a family of blacksmiths, who have occupied this station since the middle of the 14th century. The progenitor was, at that time, invited hither by Sir Colin Campbell of Lochow, to fabricate the iron-work necessary in the construction of the neighbouring castle of Kilchurn, and to work as smith to the family and to the tenants upon the estate. A line of his posterity have ever since continued to practise his craft on the spot where he was

settled. The present representative of this ancient family of blacksmiths is a very decent, intelligent man. He received us kindly,—carried us round his little demesne,—talked with a degree of modest pride of the antiquity of his family, and of the ancient respectability of the blacksmiths in this country,—and at last carried us into his house, where his wife, with true Gaelic hospitality, entertained us with the most delicious milk I have ever drunk. He carefully pointed out to my observation the remains of some rude fortification which had once stood on this height. Much of it has been demolished, and the materials removed. The earth has risen over some other parts; but the line of the walls may still be traced, and the lowest layers of its stones have not been altogether carried away. Those stones are vast masses, worn smooth by the action of the air and rain, and partly covered over with moss. They seem to have been joined by no cement. The fortress has been round, and of considerable extent. This was indeed a natural enough situation for a fortress,—in the pass between Glenurquhie and Lochow. In the days of civil disorder, when every petty chieftain was a sovereign; and when the multitude of separate interests, and the ferocious manners of the times, kept up a perpetual warfare in the land, it was absolutely necessary to bar up such passes as this against hostile invasion. This old fortress seems to be of earlier foundation than the settlement of the family of Macnabs here. Mr. Macnab and his neighbours wished to persuade me that it was Pictish. But, as it is not probable that the Picts ever occupied Argyshire, I was not inclined to adopt their idea. I saw here, also, another monument of ancient manners: a coat of mail, with two head-pieces of different fashions, which have been long preserved by this family as specimens of the workmanship of their ancestors. Where every Highlander was a soldier, and wore arms, a blacksmith was necessarily a man of high consequence. In the simple state of all the mechanic arts among this people, that of the blacksmith who could forge armour, was by far the most complex, and the most highly improved. The demand for his productions was universal. They were employed, too, for the most honourable of all purposes. When all the most honourable persons in the society were soldiers, he who furnished the soldier with his weapons for war could not be a mean or despised man." ['Observations,' vol. i. pp. 293—295.]

DALMELLINGTON, or DAMELINGTON,* a parish at the southern angle of the district of Kyle, Ayrshire. It is bounded on the north by Ochiltree; on the east by New-Cumnock; on the south-east by Kirkcudbrightshire; on the south-west by Loch Doon and Doon water, which divide it from Straiton; and on the west by Dalrymple. It has nearly a triangular figure, the longest side being from north-west to south-east along the Doon; and it measures, in extreme length, 10 miles, in average breadth about 3. Along the Doon, over a distance of 3 miles, a plain or very gentle slope stretches inward, of nearly the figure of a crescent, narrowed to a point at both extremities, and measuring about a mile at its central or greatest width. Behind this plain the whole parish rises upward in continuous eminences or mountain ridges. The ridge nearest the Doon closes that river closely in at the north-western angle of

* The writer in the Old Statistical Account says: "The true orthography of Damlington is said to be 'Dame Helen's Town,' after a lady of rank and fortune, of the name of Helen, who built a castle near this place." Chalmers, in his *Caledonia*, however, derives the name from two Gaelic words, *dal*, a valley; *mailan*, a mill, and the common Saxon termination, *town*, or *ton*,—and thus makes it mean 'the Town of the Valley of the mill.'

the parish, extends away eastward, limiting the lowlands, and abruptly terminates to the north-east of the village, in a splendid colonnade of basalt, 300 feet in height, and 600 in length. Two other ridges run south-eastward and southward, and are connected at the north end by a ridge coming down upon them westward from the parish of New-Cumnock. Though the hills are in general easy of ascent, and in only three places are, for a short way, precipitous, yet they form gorges and mountain-passes of fascinating interest, and, in one or two instances, of peculiar grandeur. Along the road from the village of Dalmellington to Carsphairn in Kirkcudbrightshire, two ridges approach for upwards of a mile, so nearly to an embrace as to leave at their bases barely sufficient space for the public road and the bed of a mountain-rill. At the extremity of the range, also, where the river Doon issues from its picturesque mountain-cradled lake, [see Doon, Loch,] rocky, perpendicular elevations, whose summits rise 300 feet above the level of the river, are, for about a mile, so brief a space asunder, as to seem cloven by some powerful agency from above, or torn apart by some convulsive heave beneath their base. The narrow, stupendously walled pass between is called the glen of Ness, and opens, at its north-western extremity, into the lowlands, or crescent-figured plain, of the parish. The river Doon escapes from the loch by two narrow channels in the naked rock, dashes impetuously along the glen of Ness, and afterwards moves slowly forward among meadowy banks, receiving, in its progress, the waters of several rills, or occasionally swollen and inundating torrents, from the inland heights. The springs of the parish are pure and limpid, and flow, for the most part, from beds of sand and gravel. Nearly a mile from the south-eastern boundary, and surrounded by heathy moorland, is a small lake of about 25 or 30 acres in area, the waters of which are dark, and very deep, and abound in black trout. The soil, on the plain along the Doon, is a strong, rich, clayey loam; around the village, is dry and gravelly; and behind the Doon, or lower range of hills, is moss or moorland. About $\frac{3}{4}$ of a mile below the village is a morass of about 150 acres, resting on a spongy bed, and imbosoming some oaks of considerable size. Coal—the most southerly of the Ayrshire field, but prime in quality—is worked from deep seams, and affords a supply to places in Galloway even 30 miles distant. Sandstone abounds; and lime and ironstone are not infrequent in occurrence. The parish is traversed by two great lines of road parallel to the Doon, one of them the coach-road from Ayr to Dumfries; and by a line of road north-eastward, leading from the village of Dalmellington to that of New-Cumnock; and it is abundantly accommodated with bridges for these and for by-roads, there being 6 across the Doon, and 9 or 10 across the smaller streams. A very old house in the village, bearing the inscription 1,003, is called Castle-house, owing, as is supposed, to its having been built of materials taken from an ancient castle in the vicinity, called Dame Helen's castle. Between the village and the site of that castle is a beautiful moat, surrounded with a deep, dry fosse. On a precipitous cliff in a deep glen, protected on three sides by the perpendicular rock, and on the fourth by a fosse, stood formerly a fastness, which, from some storied connection with Alpine, king of Scotland, gives to its site the name of Lacht Alpine. In the uplands were, at one time, three very large cairns, one of them upwards of 100 yards in circumference, and all covering vast masses of human bones. A Roman road, coming up from Dumfrieshire and Kirkcudbrightshire, and measuring 10 or 11 feet broad, formerly traversed the parish from

south-east to north-west, and passed from it into Dalrymple. Dalmellington figured largely in the affecting scenes of the persecution under the Stuarts, and abounds in traditions respecting the sufferings of the Covenanters. Wodrow represents it as having been watched and oppressed with such large bodies of troops, that, at one period, they must have been more numerous than the inhabitants; and, while giving detailed accounts of the heavy and multifarious local grievances which they inflicted, he says, "Had materials come to my hand as distinctly from the rest of the country as from this parish, what a black view we might have had!"—The village of Dalmellington is snugly situated, on the road from Ayr to Dumfries, in a recess of the plain of the parish, sheltered by the hills, and about $\frac{3}{4}$ of a mile north-eastward of the Doon, or of a stripe of waters $\frac{1}{4}$ of a mile broad, and called Bogton loch, into which the Doon, during about a mile of its progress, expands. It is a neat, thriving place,—and has two woollen mills, a carpet manufactory, and a considerable number of private looms. Here are a subscription library, a reading-room, a savings bank, 7 inns, 3 schools, and the parish-church. Belonging to the village are 2 commons, which afford pasturage to from 50 to 60 cows. Annual fairs are held on Eastern's E'en, Halloween, and the first Friday after Whitsunday, all old style. The village is a burgh-of-barony. Population of the parish, in 1801, 787; in 1831, 1,056. Houses 189. Assessed property, in 1815, £2,566.—Dalmellington parish, formerly a vicarage of chapel-royal of Stirling, is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £158 6s. 8d.; glebe £20.—The parish-church was built in 1766; sittings 400. Parish-schoolmaster's salary £34 4s. 4d., with £10 fees. There are two schools non-parochial.

DALMENNOCK BAY. See LOCH RYAN.

DALMENY,* a parish in the north-east of Linlithgowshire, consisting of a main body and a detached portion. The former is bounded on the north and north-east by the frith of Forth; on the east by Cramond; on the south by Edinburghshire and Kirkliston; and on the west by Abercorn. It has a figure somewhat resembling the outline of a violin; and measures, in extreme length, from Cramond bridge on the east to an angle near Totting Well on the west $5\frac{1}{4}$ miles; and in extreme breadth, from Mound Point on the north to a bend in the Almond near Wheatlands, $3\frac{1}{4}$ miles. The detached portion lies a mile south-west of the main body; is bounded on the north by Abercorn, on the east by Kirkliston, and on the south and west by Ecclesmachan; and is, in its greatest length, $1\frac{3}{4}$ mile, and in its greatest breadth 1. The surface is high in the central district, declines somewhat to the west, has a very considerable declivity to the south, and slopes still more rapidly to the north, where it terminates in a bold bank upon the Forth. Toward the east are three rocky ridges or hills, covered with wood, called Mons, Dundas, and Craigie. The summits of all these, but especially that of Mons-hill, place an observer in the midst of a vast and most beautiful and varied panorama, bounded only by the limits of vision or the hazily seen summits of the great mountain ranges of Scotland. The Forth, with its thousand attractions, glitters in nearly all its length before the view; the Lothians and the most cultivated districts of conterminous counties, are spread out with the distinctness of a map; and the spectator, delightfully

* Dalmeny or Dalmenie, is a corruption of Dumanie. In ancient charters, the name is written in the Latin form, Dumanyn. Dumanie is said to mean, in Gaelic, 'a Black heath;' and may probably be descriptive of the original appearance of a large portion of the parish.

perplexed with the importunings of competing beauties which everywhere crowdedly demand his notice, finds no repose to his eye till it rests on the heights of Lammermoor or the far-seen cap of Ben-Lomond. Immediately beneath him, in the parish itself, is a landscape of no common beauty. The plantations of the Earl of Roseberry, his antiquated but picturesque castle, situated within sea-mark, and his charming park of Barnbogle, with its bold undulations of height and lawn, constitute, with the other attractions of the district, a truly fascinating picture. Nearly the whole parish is well-cultivated, well-enclosed, sheltered and beautified with plantation, and cheerfully productive; and it is adorned, not only by the mansion and grounds of Lord Roseberry, but by those of Craigie hall, of Dundas castle, and of Duddingstone. The soil of the higher grounds, and of the detached portion of the parish, is, in general, a shallow clay on a cold bottom; on the declivities and the low grounds, it is a rich loam; and, in a few spots, it is what has been termed perpetual soil, requiring little manure, and exceedingly fertile. On the coast is a vast bed of prime freestone, which has been extensively worked to supply places far distant with materials for ornamental building. Limestone and ironstone also are found. At the west end of Queensferry, close by the shore, are vestiges of a monastery, founded about the year 1330, by one of the lairds of Dundas, for Carmelite friars. Farther west, upon a high sea-bank, there were 90 years ago, interesting ruins, consisting of a large carved window, a square pillar, and a considerable quantity of hewn stones, probably the remains of a Roman speculatorium. Here were found silver medals of Marcus Antoninus, with a Victory on the reverse. But greatly the most interesting antiquity is the parish church; which, from the Saxon, or mixedly Greek and Gothic style of its architecture, seems to be 700 or 800 years old. The church of Warthwick, in England, near Carlisle, built before the times of William the Conqueror, strikingly resembles it, but is greatly inferior in richness and elaboration of embellishment. William Wilkie, D.D., the author of 'The Epigoniad,' and professor of natural philosophy at St. Andrews, was a native of Dalmeny. Population of the parish, in 1801, 765; in 1831, 1,291. Houses 217. Assessed property, in 1815, £13,745.—Dalmeny is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patrons, the Earl of Roseberry and the Earl of Hopetoun. Stipend, £264 2s. 1d.; glebe, 5½ acres. Unappropriated teinds, £45 10s. 11d. Schoolmaster's salary £34 4s. 4½d., with about £65 other emoluments. There are 2 schools nonparochial,—one of them a boarding-school, kept by the minister of Queensferry. The church of Dalmeny was formerly a vicarage of the monks of Jedburgh; and had several altars with distinct and appropriate revenues. The detached portion of the parish is called Auldcaithie, and, previous to the Reformation, was a separate parish. Its church was of small value, and has entirely disappeared. In 1636, the territory co-extensive with the burghal limits of South Queensferry, was detached from Dalmeny, and constituted a separate parish. An ancient chapel stood in this territory, built by Dundas of Dundas, the ruins of which might recently have been traced by antiquarian search.

DALMULLIN, in the district of Kyle, Ayrshire. Here was a monastery of Gilbertines, founded by Walter, Lord-high-steward of Scotland; but the air of the country not agreeing with the monks and nuns—who had been brought from Sixhill, in the county of Lincoln—they returned into England, whereupon all their rents were disposed by the said Walter to the monastery of Paisley, and the buildings went to

decay. Walter also founded here a convent of Black or Benedictine nuns.

DALNACARDOCH, a stage inn in the parish of Blair-Athole, Perthshire, on the Great Highland road from Edinburgh to Inverness, 86 miles from Edinburgh, and 70 from Inverness.

DALNOTTER. See **KILPATRICK**.

DALPATRICK. See **DALSERF**.

DALQUHARRAN. See **THE GIRVAN**.

DALQUHURN. See **CARDROSS**.

DALRIADS, a name given to the Scoto-Irish, a branch of the great Celtic family, who are generally supposed to have found their way into Ireland from the western shores of North Britain, and to have established themselves at a very early period in the Irish Ulladh, the Ulster of modern times. They appear to have been divided into two tribes or clans, the most powerful of which was called *Cruithne* or *Cruithnich*; a term said to mean eaters of corn or wheat, from the tribe being addicted to agricultural pursuits. The quarrels between these two rival tribes were frequent, and grew to such a height of violence, about the middle of the third century, as to call for the interference of Cormac, who then ruled as king of Ireland; and it is said that Cairbre-Riada, the general and cousin of king Cormac, conquered a territory in the north-east corner of Ireland, of about thirty miles in extent, possessed by the *Cruithne*. This tract was granted by the king to his general, and was denominated *Dal-Riada*, or 'the Portion of Riada,' over which Cairbre and his posterity reigned for several ages, under the protection of their relations, the sovereigns of Ireland. [See O'Flaherty's *Ogygia*; *Ogygia vindicated*, pp. 163, 4 and 5, and O'Connor's *Dissertation*, pp. 196, 7.] The *Cruithne* of Ireland and the *Picts* of North Britain being of the same lineage and language, kept up, according to O'Connor, a constant communication with each other; and it seems to be satisfactorily established that a colony of the *Dalriads* or *Cruithne* of Ireland, had settled at a very early period in Argyle, from which they were ultimately expelled and driven back to Ireland about the period of the abdication by the Romans, of the government of North Britain, in the year 446. In the year 503, a new colony of the *Dalriads* or *Dalriadini*, under the direction of three brothers, named Lorn, Fergus, and Angus, the sons of Erc, the descendant of Cairbre-Riada, settled in the country of the British *Epidii*, near the Epidian promontory of Richard and Ptolemy, named afterwards by the colonists *Ceantir* or 'Head-land,' now known by the name of *Cantyre* or *Kintyre*. History has thrown but little light on the causes which led to this settlement, afterwards so important in the annals of Scotland; and a question has even been raised whether it was obtained by force or favour. In proof of the first supposition it has been observed, [Chalmers' *Caledonia*, Vol. i. p. 275,] that the head-land of Kintyre, which forms a very narrow peninsula and runs far into the Deucaledonian sea, towards the nearest coast of Ireland, being separated by lofty mountains from the Caledonian continent, was in that age very thinly peopled by the Cambro-Britons; that these descendants of the *Epidii* were little connected with the central clans, and still less considered by the Pictish government, which, perhaps, was not yet sufficiently refined to be very jealous of its rights, or to be promptly resentful of its wrongs; and that Drest-Gurthinmoch then reigned over the *Picts*, and certainly resided at a great distance beyond Drum-Albin. It is also to be observed, in further corroboration of this view, that Lorn, Fergus, and Angus, brought few followers with them; and though they were doubtless joined by subsequent colonists, they were, for some time, occupied with the necessary

but uninteresting labours of settlement within their appropriate districts. Ceantir was the portion of Fergus, Lorn possessed Lorn to which he gave his name, and Angus is supposed to have colonized Ila, for it was enjoyed by Muredach, the son of Angus, after his decease. Thus these three princes or chiefs had each his own tribe and territory, according to the accustomed usage of the Celts; a system which involved them frequently in the miseries of civil war, and in questions of disputed succession. There is no portion of history so obscure or so perplexed as that of the Scoto-Irish kings and their tribes, from their first settlement, in the year 503, to their accession to the Pictish throne in 843. Unfortunately no contemporaneous written records appear ever to have existed of that dark period of our annals, and the efforts which the Scotch and Irish antiquaries have made to extricate the truth from the mass of contradictions in which it lies buried, have rather been displays of national prejudice than calm researches by reasonable inquirers. The annals, however, of Tigernach and of Ulster, and the useful observations of O'Flaherty and O'Connor, along with the brief chronicles and historical documents, first brought to light by the industrious Innes, in his 'Critical Essay'—a work praised even by Pinkerton—have thrown some glimpses of light on a subject which had long remained in almost total darkness, and been rendered still more obscure by the fables of our older historians. Some of the causes which have rendered this part of our history so perplexed are thus stated by Chalmers in his *Caledonia*. "The errors and confusion which have been introduced into the series, and the history, of the Scottish kings, have chiefly originated from the following causes:—1st. The sovereignty was not transmitted by the strict line of hereditary descent. There were, as we shall see, three great families, who, as they sprung from the royal stock, occasionally grew up into the royal stem; two of these were descended from Fergus I. by his grandsons, Comgal and Gauran; the third was descended from Lorn, the brother of Fergus. This circumstance naturally produced frequent contests and civil wars for the sovereignty, which, from those causes, was sometimes split; and the representatives of Fergus and Lorn reigned independently over their separate territories at the same time. The confusion which all this had produced can only be cleared up by tracing, as far as possible, the history of these different families, and developing the civil contests which existed among them. 2d. Much perplexity has been produced by the mistakes and omissions of the Gaelic bard, who composed the *Albanic Duan*, particularly in the latter part of the series, where he has, erroneously, introduced several supposititious kings, from the Pictish catalogue. These mistakes having been adopted by those writers, whose object was rather to support a system, than to unravel the history of the Scottish monarchs, have increased, rather than diminished the confusion." Although the Dalriads had embraced Christianity before their arrival in Argyle, they do not appear to have been anxious to introduce it among the Caledonians or Picts. Their patron-saint was Ciaran, the son of a carpenter. He was a prelate of great fame, and several churches in Argyle and Ayrshire were dedicated to him. The ruins of Kil-keran, a church dedicated to Ciaran, may still be seen near Campbellton in Kintyre. At Kil-kieran in Ilay, Kil-kieran in Lismore, and Kil-keran in Carrick, there were chapels dedicated, as the names indicate, to Ciaran. Whatever were the causes which prevented the Dalriads from attempting the conversion of their neighbours, they were destined at no distant period from the era of the Dalriadic settlement, to receive the

blessings of the true religion, from the teaching of St. Columba, a monk of high family descent, and cousin of Scoto-Irish kings. See *ICOLMKILL*.

DALRIE. See *KILLIN*.

DALRUADHAIN. See *CAMPBELLTON*.

DALRULZEON. See *CAPUTH*.

DALRY,* a parish near the centre of the district of Cunningham, Ayrshire. It is bounded on the north and north-east by Kilbirnie; on the east by Beith; on the south by Kilwinning; on the south-west by Ardrossan; on the west by West Kilbride; and on the north-west by Largs. Its extreme length, from north to south, is about 10 miles; and its breadth varies from $1\frac{1}{2}$ to 9. It is narrowest in the middle; is nearly dismembered toward the north by the parish of Largs; sends out an arm 3 miles northward from its main body; and is, in consequence, of extremely irregular outline. The surface consists principally of four vales, with their intervening and overshadowing uplands. The principal vale stretches south-westward along its eastern division, and varies from a mile to $\frac{1}{2}$ a mile in breadth. This vale is watered by the meanderings of the river Garnock, and abounds in fertility and the beauties of agricultural landscape. The other parts of the parish, though well-watered with the Rye, the Gaaf, and other streams flowing south-eastward and falling into the Garnock, are in general hilly, and in some parts, especially toward the north, almost mountainous. Bedland-hill, between the Gaaf and the Rye, rises 946 feet; and Carwinning-hill, to the eastward of the Rye, rises 634 above the level of the sea. At Auchinskich, 2 miles from the village, in a romantic and sylvan dell, is a natural cave, 183 feet in length, and from 5 to 12 in breadth and height, stretching away into the bowels of a precipitous limestone crag, and ceiled and panelled with calcareous incrustations which give it the appearance of Gothic arched work. Coal, at a comparatively inconsiderable depth, is, in three places, worked from seams of from $2\frac{1}{2}$ to 5 feet thick. Limestone abounds in strata of unusual thickness, and in general imbosoms numerous petrifactions. Iron-stone frequently occurs. Agates have been found in the Rye. In the holm-lands of the parish the soil is a deep alluvial loam; along the base of the hills it is light and dry; in some districts the soil is clayey and retentive; and in others it is reclaimed and cultivated moss. The parish is intersected by the Glasgow and Ayr railway, and is in other respects well-provided with means of communication. On the summit of Carwinning-hill are vestiges of an ancient fortification, two acres in area, and formed of three concentric circular walls. Near the end of the village is a mound called Courthill,—one of those moats, so common in Scotland, on which justice was administered. Urns and other antiquities have, in various localities, been dug up. In this parish the insurrection of 1666 broke out against the Privy council's measures for the erection of episcopacy. Dalry was the birth-place of Sir Bryce Blair, who resisted the usurpation of Edward I., and the home of Captain Thomas Crawford, who captured Dumbarton castle in the reign of Mary.—The village of Dalry is beautifully situated on a rising ground on the right bank of the Garnock, immediately below the confluence of the Rye with that river, and not far above the confluence of the Gaaf. It commands an extensive view to the south and the

* Chalmers derives this name—which was formerly written Dalrye—from the Gaelic *Dal*, 'a valley,' and *Rye*, the name of one of the streams by which the parish is intersected. But the writer in the New Statistical Account prefers a derivation from *Dal* and *Righ*, 'a king,' making the name mean 'the King's valley;' and he observes that a part of the site of the village is still called Croftan, which he supposes to be a corruption of *Croft an Righ*, 'the Croft of the king.'

north-east; and, owing to the peculiar nature of its site, and the liability to inundation of the mountain streams by which its environs on three sides are washed, it has sometimes the appearance of lifting its head from a lake, and being seated on an island. It is 16 miles from Paisley, 14 from Kilmarnock, 5 from Beith, and 9 from Salcoats. Of no higher origin than the beginning of the 17th century, and long existing as a mere hamlet, it has eventually attained considerable prosperity, and at present contains a population of upwards of 2,000. There are five streets three of which converge, and form a sort of square or open area near the centre of the town. The streets indicate the want of police, yet enjoy the luxury of being lighted up at night with gas. The principal manufacture is weaving, which employs about 500 individuals. Nearly 50 persons are employed also in a woollen carding and spinning-mill. Here are the parish-church, two dissenting churches, three schools, and a number of inns and other appurtenances of village importance. There are 6 annual fairs, the chief of which is held on the last day of July. The town as well as its vicinity will probably now rise rapidly in prosperity, from its being touched by the Glasgow and Ayr railway. Population of the town and parish, in 1801, 2,815; in 1831, 3,739. Houses 503. Assessed property, in 1815, £13,141.—Dalry is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, Blair of Blair. Stipend £231 10s. 6d.; glebe £24. Unappropriated teinds £575 9s. 10d. The parish-church was built in 1771. Sitings 941. Before the Reformation the church belonged to the monastery of Kilwinning, and was served by a vicar. On a rising ground to the east of the Garnock, about a mile from the present village, formerly stood a chapel, vestiges of which have not long ago disappeared. At a greater distance from the village are still some ruins of another ancient chapel.—One of the meeting-houses in the village belongs to the United Secession, and the other to the body of Original Burghers, part of whom recently became reunited to the Established church. Sitings in the former 508; in the latter 282. Stipend of the former £110; of the latter £70. According to a survey made in 1835, there were 2,762 in connection with the Establishment, and 927 dissenters within the parish.—There are in the parish 4 schools, 3 of which are nonparochial. Parish-schoolmaster's salary £32 15s. 9d., with £65 school-fees.

DALRY, a parish in the north-east verge of Kirkcudbrightshire; bounded on the north by Ayrshire and Dumfries-shire; on the east by Dumfries-shire; on the south-east by Balmacellan; on the south-west and west by Kells; and on the north-west by Carsphairn. It is of the form of a triangle, having a small parallelogram resting on its northern angle, and presenting its apex, or greatest angle, to the east. Its greatest length, from the confluence of Grapel burn with Ken water on the south, to a point north-eastward of Black-Larg-hill on the north, is 14 miles; and its greatest breadth, from the confluence of Deugh water and Ken water on the west, to the point where Cairn water leaves it on the east, is $7\frac{1}{2}$ miles. Over a distance of 15 miles, following the sinuosities of the stream, Ken water forms its north-western, western, and south-western boundary; and over the southern half of that distance it flows through a fine vale, richly tufted with natural woods. But even behind this vale, as well as through all the other districts, the parish is almost entirely pastoral and hilly. Toward the north, and along the eastern boundary, it is very mountainous; and it terminates northward in the towering eminence of Black Larg, which rises 2,390 feet above the level

of the sea. Grapel burn, which flows south-westward into Ken water, and Cairn water, which flows north-eastward into Dumfries-shire, along with an intermediate boundary-line of only about a mile, divide the parish from Balmacellan, or form one of the sides of its triangle. Numerous mountain-brooks rise in the interior; a few of which flow southward into Capel burn, and the most westward into Ken water. Lochinvar, near the centre of the southern division, is a sheet of water little less than 3 miles in circumference; and, as well as the smaller lakes, Boston, Knocksting, and Knockman, contains excellent trout, and is much frequented by fishers. Pike, trout, and salmon abound in the Ken. The salmon, however, except in high floods, cannot ascend higher than to a linn or cascade at Earlstoun, and they there often excite observation by repeated and exhausting, though generally vain leaps, to surmount the water-spouts which repel their further progress. The parish is traversed by only three roads; one along its western limit, down the vale of the Ken; another, along its south-western limit, chiefly on the banks of the Capel and the Cairn; and one, among the mountain-gorges from east to west, about midway between the northern and the southern extremities. In Lochinvar are the remains of an ancient fortified castle which belonged to the Gordons, formerly knights of Lochinvar, and recently viscounts of Kenmure. There are several moats, cairns, and curious places of defence. In the farm of Altaye, near the top of a hill, whence a distant view is commanded through the mountain-passes, is an artificial trench capable of accommodating 100 persons, reported to have been a hiding-place of the persecuted Covenanters, and—in derivation from the epithet by which that suffering people were most commonly known—bearing the designation of the Whighole. Dalry, in common with the contiguous mountain-districts, was the scene of not a few eventful occurrences under the persecutions of the Stuarts. In the churchyard of Dalry one gravestone covers the dust of Major Stewart, of Ardoch, and of John Grierson, who were shot in 1684, by Graham of Claverhouse, and after being buried in the family-cemetery belonging to Ardoch, were dug up, by Graham's orders, and finally reinterred in the north-west corner of the churchyard of Dalry.—The village of Dalry is beautifully situated on a bend of the Ken, near the southern angle of the parish. The houses, though irregularly scattered over a considerable space of ground, produce a fine effect to the eye. The little crofts lying around them are all carefully cultivated; and the gardens are neatly surrounded with hedges, and sheltered by rows of trees. Here are the parish-church, and an United Secession meeting-house. Population of the parish, in 1801, 832; in 1831, 1,246. Houses 211. Assessed property, in 1815, £5,889.—Dalry is in the presbytery of Kirkcudbright, and synod of Galloway. Patron, Forbes of Callander. Stipend £217 12s. 2d.; glebe £20. Unappropriated teinds £180 4s. 6d. The church having formerly been dedicated to St. John the Baptist, the village, till recently, was called St. John's clachan, and a large stone, shown to strangers as an object of curiosity, is called St. John's chair. Before the establishment of Carsphairn parish in 1640, Dalry comprehended the mountainous and extensive tract between the Ken and the Deugh, and it anciently had several chapels, all subordinate to the mother or parochial church. During episcopal times the parson was a member of the chapter of Galloway. The present church was built in 1832; sitings 700. The United Secession church was built in 1826; sitings 200. Stipend £70. There are 3 schools; 1 parochial, 1 endowed, and 1 supported wholly by

the parishioners. Parochial schoolmaster's salary £25 13s. 3^d., with school-fees. The endowed school has 2 masters, whose combined salaries amount to £15. There is a mortified fund of £1,000 for a free-school.

DALRY (WESTER), a hamlet, once a populous village, about a mile west from Edinburgh, on the Lanark road. The hamlet of Easter Dalry is now diminished to two or three cottages.

DALRYMPLE,* a parish along the southern verge of the district of Kyle, Ayrshire. It is bounded on the north by Ayr and Coylton; on the east by Dalmellington; on the south by Straiton and Kirkmichael; and on the west by Maybole. It is of an oblong figure; measuring from east to west 7 miles; having an average breadth of 2 miles, and containing an area of about 12 square miles. Nearly its whole surface rolls or undulates in numerous cultivated knolls, or little moundish hills, around most of which is hung out the extensive, varied, and enchanting panorama of the frith of Clyde and the lowlands south of Benlomond and the Grampians. One of the elevations commands a view of even the mist-veiled coast of Ireland. Along the whole southern and western boundary the Doon moves amidst alternations of bold sylvan banks and rich fertile haughs, dividing the parish from Carrick, and fringing its verge in the softest forms of beauty. Four lakes—Martinham, Kerse, Snipe, and Linds-ton—enrich the soil and the scenery, and abound in pike, perch, eel, and waterfowls. Martinham, the largest, only protrudes into the northern division of the parish, and belongs mainly to Coylston: it is about 1½ mile in length, and a furlong in breadth, and has its surplus waters carried off south-westward by a rivulet to the Doon. The soil is, on a few of the eminences, a barren clay; on others, a loamy clay; and around the beds of the streams and lakes, a sandy, gravelly, or alluvial loam. Plantations of almost all varieties cultivated in Scotland beautify hill and vale. At Skeldon, on the Doon, are six oaks believed to be 300 years old. The ancient Roman road, connecting the friths of Solway and Clyde, traversed Dalrymple from east to west. On a rising ground at the western boundary are vestiges of three small circular British forts. In various localities ancient coins and memorials of Roman civilization have been found. More than half of the parish belongs to the Marquis of Ailsa. The barony of Dalrymple, however, was held in ancient times by a family to whom it gave name. During the reign of David II. it was divided between two Dalrymples, who probably were the descendants of a common progenitor. In the reign of Robert II. the whole barony was acquired by John Kennedy of Dunure; and it continued to belong to his descendants till the reign of Charles II. The Dalrymples, or ancient proprietors and their off-shoots, figure largely in history as lawyers, as statesmen, and as warriors. The village of Dalrymple is beautifully situated in a vale on the Doon, and has a neat and smiling appearance which attracts and pleases a tourist. In 1811 it contained a population of upwards of 200. Population of the parish, in 1801, 514; in 1831, 933. Houses 161. Assessed property, in 1815, £5,343.—Dalrymple is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Crown. Stipend £229 17s. 2d.; glebe £12 10s. 4d. The parish-church, situated near the village, at the south-west angle of the parish, was built in 1764. A short period before the Reformation the parish was attached as a prebend to the

chapel-royal of Stirling, and was served by a curate. Parish schoolmaster's salary £30, with £29 other emoluments. There is a school not parochial.

DALSERF, a parish on the west bank of the Clyde, in the middle ward of Lanarkshire. It is bounded on the north and north-west by the parish of Hamilton; on the west and south-west by the Avon and the Calder, which separate it from the parish of Stonehouse; on the south and south-east by Lesmahagow; and on the north and north-east by the river Clyde, by which it is divided from the parishes of Carluke and Cambusnethan. Its greatest length is about 6½ miles, and its greatest breadth 4½; but in certain parts of the parish the breadth does not exceed 2 or 3 miles. It contains upwards of 5,725 Scots acres, or about 7,219 imperial acres. The parish is intersected by three great lines of road: viz., the road from Glasgow to Carlisle, the road from Glasgow to Lanark by the Clyde, and the new road from Edinburgh to Ayr, which crosses the river at Garion bridge. The soil of the parish is generally fertile and well-cultivated. There are valleys of different breadths between the Clyde, and the banks on each side of the river, and from these narrow plains the banks rise often with a bold and abrupt ascent, and occasionally precipitous hollows are to be met with not devoid of a romantic character. The village of Dalserv is considered to be situated 120 feet above the level of the sea; and the highest land in the parish has been computed at 400 feet in elevation. Fruit cultivation is of great antiquity in the district of which Dalserv forms a part, and it lies almost in the very centre of the luxuriant range of the Clydesdale orchards. From failing crops, however, and the facilities now afforded for the importation of fruit from England, Ireland, and the continents of Europe and America, the local cultivation has not been so remunerative as it used to be, and orchard-planting is not, therefore, on the increase. See **CLYDESDALE**. Coal abounds in every part of the parish; and there are numerous collieries in full operation, the produce of which is disposed of on moderate terms to the adjoining districts. Ironstone is known to abound on the Avon, but it has not yet been worked; and freestone quarries are in full activity on the Clyde, from which excellent blocks may be cut of any size. There are several villages in the parish: viz. **LARKHALL** [which see,] Pleasance, Millheugh, Rosebank, and Dalserv. The majority of the population is employed in weaving, or mining and quarrying. Population, in 1801, 1,660; in 1831, 2,680; but of later years it has greatly increased. Houses, in 1831, 423. Assessed property, in 1815, £5,355.—This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, the Duke of Hamilton. Stipend £264 12s. 6d.; glebe £37 10s. Unappropriated tēinds £63 12s. 4d. The parish-church was built in 1655, but has been three times repaired since, and now affords accommodation for 550 sitters. A new church has been built at Larkhall, to which a parish, *quoad sacra*, has been allocated.—There is also at Larkhall a Relief church, with 400 sittings, and an Independent congregation.—There are two parochial schools, one principal and a district one; the salary of the principal master is £34 4s. 4^d., with £12 of school-fees, and £25 of other emoluments. The other parochial schoolmaster has a salary of £5, with a house, school-room, and garden. There are various private schools in the parish.—Dalserv parish was in early times a chapelry, which belonged to the ancient parish of Cadzow (now Hamilton). It was designated the chapelry of Machan, and the district was called Machanshire. Upon the accession of Robert the Bruce to the throne of Scotland, the territory of Machan

* The name is derived from Gaelic words which signify 'the Vale of the crooked pool,' and it exactly describes the site of the village.

was forfeited by Sir John Cumyn, and was granted by Bruce to Walter, the son of Gilbert, the predecessor of the Hamilton family. It was made a barony in the 14th century; and was afterwards called the barony of Machan. The church of Cadzow with its chapel of Machan was constituted a prebend of the cathedral church of Glasgow, and formed the benefice of the dean. The chapelry of Machan was subsequently established as a separate parish; but the precise time when this took place has not been ascertained. A parish-church having been built at the village of Dalsersf, the same name was given to the parish, probably about the period of the Reformation. For a lengthened series of years, from the time of Robert the Bruce downward, the most of the property in this parish belonged to the Hamiltons, and its major part still belongs to the ducal house or cadets from it. The ancient residences of the Hamiltons of Dalsersf, the Hamiltons of Raplock, and the Hamiltons of Broomholm, have now almost, or altogether, disappeared. As vassals of the Hamilton family, many of the gentlemen of this parish were deeply involved in the troublous scenes which alike distinguished and disturbed Scotland, previous to the junction of the crowns under James VI. Gavin Hamilton of Raplock, and commendator of Kilwinning, was present at the battle of Langside, in the army of the Queen; he was also one of Mary's commissioners at York in 1570, and was included in the treaty of Perth of 1572. John Hamilton of Broomhill was wounded, and taken prisoner in the same battle; and about two years afterwards, his house of Broomholm was burned down by Sir William Drury, the governor of Berwick.

DALSWINTON, a village in the parish of Kirkmahoe; $4\frac{1}{2}$ miles north of Dumfries. The ancient castle of Dalswinton, which was long the chief seat of the family of Cumming, having fallen to decay, an elegant and commodious mansion was erected on its site by Patrick Miller, Esq., the well-known steam-boat projector.

DALTON,* a parish in the southern part of the district of Annandale, Dumfries-shire. It is bounded on the north by Lochmaben and Dryfesdaie; on the east by St. Mungo and Cummertrees; on the south by Ruthwell; and on the west by Mousewald and Lochmaben. It is, on the whole, a parallelogram, stretching from north-west to south-east; but has a deep, though narrow indentation near the middle of its northern side, and thence, to its north-eastern angle, considerably protrudes. Its greatest length is nearly 6 miles, and its average breadth about $2\frac{1}{2}$; and it contains an area of nearly 11 square miles. The surface in the north-western division is slightly hilly, and has two elevations.—Holmains and Almagill, rising 500 feet above sea-level; but in the other parts of the parish it is flat. The Pow, or Cummertrees Pow, rises in the uplands, and traverses the parish in a direction east of south, leaving it near Gilbrae. The northern boundary is formed for about 3 miles by the river Annan, which here abounds in salmon, grilse, sea-trout, and the fish—believed to be peculiar to the Solway rivers—called herling. The Annan is supposed, at a remote period, to have flowed through this parish, entering it at Dormont, where it at present begins to form its boundary, and pursuing its way past Dalton church, till it fell into what is now the channel or bed of the Pow. Along this course are extensive alluvial deposits, and ridges of sand and gravel, which appear to have been thrown out by a flood of waters. During a swell the Annan still

breaks over its bank at Dormont, lays all the flat grounds along its supposed ancient road under inundation, and opens a communication with the Pow. In the uplands the soil is sand and gravel; along the banks of the Annan it is a light alluvial loam; along the ancient course of that river it is chiefly meadow or reclaimed bog; and, in some parts of the interior, it is a cold clay on a till bottom. On Almagill hill is a fine old circular camp, commanding a view along nearly the whole vale of the Annan, the ancient possession of the royal family of Bruce. Dormont-house, on the Annan, and Rammerscales near the north-east angle of the parish, are fine modern mansions. The village or hamlet of Dalton, situated near the centre of the parish, is rural and unimportant. Population of the parish, in 1801, 691; in 1831, 730. Houses 123. Assessed property, in 1815, £5,438.—Dalton is in the presbytery of Lochmaben, and synod of Dumfries. Patron, Macrae of Holmains. Stipend £171 12s. 11d.; glebe £10. Unappropriated tithes £59 1s. 10d. The parish-church was built in 1704. Sittings about 300. The present parish comprehends the old parishes of Meikle Dalton and Little Dalton, which were united immediately after the Reformation. In 1609 they were both united to Monsewald; but in 1633 were disjoined from it, and erected into their present form. The church of Little Dalton was demolished, and that of Mickie Dalton made the united parochial church. Mickie Dalton, the predecessor of the modern hamlet, was of old the seat of the baronial courts. There are two schools, one of them not parochial. Parish-schoolmaster's salary £34 4s. 4d., with £20 school-fees.

DALVADDY. See CAMPBELLTON.

DALWHAT WATER, a small stream in the north-west of Dumfries-shire. It rises between Black hill and Bunbrack hill, in the boundary mountain ridge of the county, and flows in a south-easterly direction along the parish of Glencairn, forming, in the lower part of its course, a beautiful, well-wooded dale, amidst general scenery, upland, heathy, and bleak. Having flowed $\frac{3}{4}$ of a mile past Minnyhive, it forms a confluence with the recently united waters of Castlefearn and Craigdarroch, and along with them forms, or is thence called, the Cairn. Its entire course is about 9 miles.

DALWHINNIE, a stage-inn in Badenoch, Inverness-shire, on the Great Highland road to Inverness; $99\frac{1}{2}$ miles from Edinburgh, and $56\frac{1}{2}$ from Inverness. It was built by Government.

DALZIEL, a parish in the middle ward of Lanarkshire. It is bounded on the east by the parish of Cambusnethan; on the west by the parish of Hamilton and the river Calder; on the south by the parish of Hamilton and the river Clyde; and on the north by the river Calder and the parish of Hamilton. It is about 4 miles in length and 3 in breadth, and contains 2,283 Scotch acres. The figure of the parish is extremely irregular, in consequence of a part of it lying on the south of the Clyde, and two parts of the parish of Hamilton being indented into the territory of Dalziel. In the old Statistical Account it is stated, "There is a tradition that this part was disjoined from the parish of Dalziel on account of the misdeemeanors of a curate, who was then the incumbent. Why it was not restored to his successor is not known. It would have been convenient that it had been so; for the living is very small." The land of the parish is low, and the surface even and regular, excepting in the few parts where it is slightly varied by rising grounds. It rises very gently from the Clyde and Calder, and there is little of it more than 150 feet above the level of the sea. The soil of the parish is mostly a heavy clay, which is under the usual rotation of cropping. There are many thriving

* *Dal-tun*, in the Anglo-Saxon language, means 'the dwelling in the Dale'; and seems as a name to have been applied to the two villages around the ancient parish-churches, from their topographical situation.

plantations in the district, and no inconsiderable portion of it on the banks of Clyde is formed into orchard-grounds, the produce of which in point of quality has not been surpassed by that of any of the adjacent fruit-growing parishes. See CLYDESDALE. Coal abounds in the parish, but it is not extensively worked. There is also clay-slate, and some excellent flag-stone; the latter is principally worked at Craigneuk quarry, and is frequently carried for use to a considerable distance. Hamilton is the nearest town, and is situated about a mile distant. The road from Glasgow to Lanark by Carluke passes through the parish for about 4 miles, and that from Hamilton to Edinburgh about 1. The Wishaw and Coltness railway—which will extend from the station of the Monkland and Kirkintilloch railway, in the parish of Old Monkland, to the estates of Wishaw, Coltness, and Allanton, which are supposed to contain some of the most valuable coal-fields in Scotland—will, when completed, pass through the parish of Dalziel for a considerable distance.—There are three villages in the parish, viz., Motherwell—which contains about the half of the population—Windmill-hill, and Craigneuk: see MOTHERWELL. The parish of Dalziel is understood to have received its name from the title of the old parish-church, which stood near the Clyde; but the ancient orthography is Delyell, and in all probability the *z* has crept in as a corruption of the letter *y* in the old Scottish writings. Population, in 1801, 611; in 1831, 1,180. Houses 200. Assessed property £2,751.—This parish is in the presbytery of Hamilton, and synod of Glasgow and Ayr. Patron, Hamilton of Dalziel. Stipend £155 11s. 3d.; glebe £60. The church is a substantial building in a convenient part of the parish, erected in 1798. There is no dissenting place of worship in the parish, although a large number of Dissenters reside in it. The salary of the parochial school-master is £34 4s. 4½d. per annum, with £18 of school-fees, and £4 15s. of other annual emoluments. The church of Dalziel, with its tithes, was granted to the monks and abbots of Paisley in the 12th century, and it was afterwards conveyed to the dean and chapter of Glasgow, whose common property it continued till the Reformation. Subsequent to this event the patronage and tithes of the parish were given by Queen Mary to the college of Glasgow, and they remained in their possession in 1702, when Hamilton of Wishaw wrote his account of Lanarkshire, but afterwards they came into the family of Hamilton of Dalziel, by whom they are now retained.—The most ancient family connected with this parish were the Dalziels, who afterwards became Earls of Carnwath; but after various transferences, though principally to members of the same family, the larger portion of the Dalziel estate was sold in 1647 by the Earl of Carnwath to Hamilton of Boggs, whose descendant is still in possession. When the lands of Bothwell-haugh were sold by General Hamilton—the grandfather of the present proprietor of Dalziel—to the Duke of Hamilton, he presented his Grace with the gun with which James Hamilton of Bothwell-haugh shot the Regent Murray in Linlithgow, and in whose family it had been retained as a relic of antiquity. This parish was celebrated as having been intersected from east to west by the principal branch of the Great western Roman road, or Watling-street, as it has been called. The present road from Glasgow to Lanark by Carluke, has been for a considerable way formed upon it, and the march of recent improvement has almost entirely effaced every trace of this great pathway of the Romans, although but a few years have passed away since it was plainly

discernible, and even the cinders of the Roman forges remained untouched. At the north-west boundary of the parish there is a bridge of a single span over the Calder, evidently of great antiquity, and which is usually understood to have been constructed by the Romans at the time they possessed this part of the country. Upon a steep bank of the Calder, near this bridge, there were formerly situated the remains of a pretorium or Roman encampment, but here also the hand of improvement has been busy in obliterating those landmarks which for more than a thousand years had existed to mark the early location of the conquerors of the world. In another part, near the centre of the parish, and upon a bank overlooking the Clyde, was situated a second Roman encampment, or outpost. To mark the spot, one of the predecessors of the present proprietor built a little temple or summer-house, cut terrace-walks along the bank, and planted fruit and forest trees in tasteful positions,—altogether rendering it a fairy spot, which embraces one of the sweetest views in Clydesdale. The mansion-house of Dalziel is situated upon the burn or brook of that name, and in one of the most beautiful parts of the glen through which it meanders. It was built by Mr. Hamilton of Boggs in 1649, two years after the estate came into his possession, and it is in verity a beautiful specimen of an old baronial residence. Hamilton of Wishaw calls it “a great and substantial house.” Attached to it is an old tower or peel-house, the age of which is not known, but it is evidently of great antiquity. It is 50 feet in height, and the walls are 8 feet in thickness, having recesses which were wont to be used as sleeping-places. It is of limited extent. In an apartment used as a kitchen in this peel is suspended from the roof a lustre composed of large stag horns, connected with iron, with metal sockets for the candles.

DAMSA, or DAMSAY, one of the Orkneys, constituting part of the parish of Firth. This is a beautiful little island, scarcely a mile in circumference, in the bosom of the bay of Firth. From the singular beauty of its appearance, it has sometimes been styled the Tempe of the islands. It formerly contained a castle reputed to be of great strength. There was also a church here, said to have been dedicated to the Virgin Mary, by whose influence—according to the credulity of ancient times—many wonders were here performed. This fabric, with all its miracles, has almost sunk into oblivion; and the island is now applied to the pasturing of a few hundreds of sheep.

DANESHALT—corrupted Dunshelt—a small village in the parish of Auchtermuchty, Fifeshire; about a mile south of Auchtermuchty, and 2½ north of Falkland. The road to Falkland, Kirkcaldy, and Kinghorn, lies through this village, which is supposed to be the place where the Danes first halted after their discomfiture on Falkland moor.

DANIEL-TOWN, a village in the parish of Melrose. See MELROSE.

DANSKINE, an inn in the parish of Garvald; 5½ miles south-east by south of Haddington, on the road to Dunse. There is a small loch here.

DARNAWAY CASTLE, in the parish of Dyke in Elginshire, the ancient seat of the Earls of Moray.—A modern mansion was built here about 30 years ago. It is nobly elevated, with great range and variety of prospect; and adjoining to it is retained, of the old castle, a princely hall, built by Earl Randolph, Regent of Scotland during the minority of David Bruce. Its length is 89 feet, and its breadth 35 feet; the arched oaken roof is superb, and somewhat resembles that of the Parliament-house of Edinburgh. Mary, Queen of Scots, held her court here in 1564. Among the

pictures is one of 'The Fair,' or 'Bonny Earl of Murray,' as he is commonly called, who was murdered at Donibristle. See DALGETY. There is also a portrait of Queen Mary, disguised, by way of a frolic, in boy's clothes,—in long scarlet stockings, black velvet coat, black kilt, white sleeves, and a huge ruff.

DARNICK. See DERNOCK.

DARNLEY. See EASTWOOD.

DARUEL (THE), a stream in the district of Cowal, Argyleshire, which has its rise at the hill of Barnish, and, after a course of some miles through Glendaruel, falls into the head of Loch Striven, opposite the north end of Bute.

DARVAL. See DERVAL.

DAVAR ISLE. See CAMPBELLTON.

DAVEN (LOCH), a small sheet of water in the parish of Logie-Coldstone in Aberdeenshire. It is situated on the south-western border of the parish, and is about $2\frac{1}{2}$ miles in circumference. It is formed by three rivulets, two of which partly bound the parish, and a third, from its north-western extremity passes through it to the north-east of Broom-hill, where it forms another still smaller loch than the Daven, before falling into the latter. It abounds with pike, some of them of a very large size.

DAVID'S (St.), a village in the parish of Dalgety, on the north coast of the Firth of Forth, 2 miles east of Inverkeithing, and the same distance west of Aberdeen. It carries on a considerable manufacture of salt, and exports an immense quantity of coal. See DALGETY.

DAVIOT—commonly pronounced DAVID—a parish in the district of Garioch, Aberdeenshire, 19 miles north-west from Aberdeen. It is bounded on the north by Fyvie parish; on the east by Fyvie, Old Meldrum, and Bourtrie parishes; on the south and south-east by part of Chapel of Garioch parish; and on the north-east by Ryne parish. Its boundaries are principally natural, being defined by the courses of rivulets, the largest one of which, on the eastern side, is joined by various tributaries from the neighbouring parishes, and runs southwards to the river Urie, which is divided from Daviot by its north-eastern bank in Chapel of Garioch. The form of Daviot is irregular,—it tapers to a point both towards the north and south. It extends to about $3\frac{1}{2}$ miles in length and 2 in breadth, exclusive of its *quoad sacra* limits. Assessed property, in 1815, £1,974. The soil is various, consisting partly of strong clay, partly of rich loam, but in general fertile. Its exposure is chiefly to the south and south-east, and the land is undulating with few hills. About 500 acres were first enclosed in 1792, and a considerable portion of the whole is now enclosed and well-cultivated. A distillery has long existed in the parish. The principal fuel is peat from the moss and turf from the muir. The village of Daviot stands nearly in the centre of the parish. Fingask and Mounie stand on the eastern side, Glack on the western, and Lethenty at the southern extremity. Population, in 1801, 1,974; in 1831, 691. Houses, in 1831, 131. There are two Druidical temples here, one of which makes part of the churchyard.—This parish was formerly a parsonage in the diocese of Aberdeen, to the bishop of which it was given as an alms-gift by Malcolm Canmore. It is now in the presbytery of Garioch, and synod of Aberdeen. Several lands in the parishes of Chapel and Fyvie were, towards the end of last century, annexed to it, *quoad sacra*, by act of Assembly; so that the whole under the minister's charge is nearly 5 miles in length and 4 in breadth. Stipend £159 0s. 9d.; glebe £12. Patron, the Crown. The church is situated at the village of Daviot. Schoolmaster's salary £30, with £20 of fees.

DAVIOT, a parish chiefly in the county of Inverness, but partly in that of Nairn. It was, in 1618, united to Dunlichty, and forms a parochial district of great extent, being about 23 miles in length on both sides of the Nairn, its breadth varying from 2 to 4 miles. It lies nearly due east and west; and is bounded on the north by Croy; on the east by Moy; on the south by Kingussie; and on the west by Durrus. The appearance of the district is wild and romantic in the highest degree. In the low grounds there are large tracts of peat-moss, incapable of cultivation, but which seem, in general, well-calculated for the growth of forest-trees. Among the mountains are several lakes, of which Loch Ruthven, Loch Clachan, and Loch Dundelchack are the chief,—all abounding with trout of a delicious flavour. Limestone has been observed on the banks of the Nairn; the vein contains numerous cubical crystallizations, which, when analyzed, have been found to contain lead. Assessed property, in 1815, £2,604. Under the auspices of the parliamentary commissioners, an excellent line of road has been made from near the kirk of Daviot, on the Moy road, a little south of the water of Nairn, through Strath-nairn to the bridge of Inverfarikag and Loch Ness, with a small branch westward near Toredaroch,—a distance of $19\frac{1}{2}$ miles. At the south end this road extends about half-a-mile from the bridge of Inverfarikag to Loch Ness side, where a small natural cove in the rock is improved by a pier for landing manure and shipping the produce of the country; thus furnishing a ready communication with the Caledonian canal. At the Mains of Daviot were, some years ago, the ruins of a castle built by the Earl of Crawford in the beginning of the 15th century. It was of great extent, but the stones have been taken away to build a modern house near its site. Population, in 1801, 1,818; in 1831, 1,738. Houses in Inverness-shire 352; in Nairnshire 37.—This parish, formerly a rectory, is in the presbytery of Inverness, and synod of Moray. Patrons, the Crown, and the Earl of Cawdor. Stipend £186 14s. 2d.; glebe £10. The churches of Daviot and Dunlichty are 7 miles distant. Service is performed alternately in them every Sunday.

DAWICK, a suppressed parish in Peeblesshire. Before the Reformation it was a vicarage of the rectory of Stobo. It lay chiefly on the right bank of the Tweed; but partly also on the left bank. In 1742, its larger section was incorporated with Drummelzier, and its smaller with Stobo. In the north-east of the present parish of Drummelzier, are still places called East Dawick and West Dawick, which occupy the sites of ancient hamlets. The ruins of Dawick church stood on Scrape Burn, about $\frac{1}{4}$ of a mile south of New Posso.

DEAD RIGGS. See ECCLES.

DEAD WATER. See CASTLETOWN.

DEAL. See HALKIRK.

DEAN (THE), formerly a hamlet on the water of Leith, now a suburb of Edinburgh, remarkable for its romantic appearance, and its exquisitely beautiful bridge of 4 arches, each 96 feet in span, by which the road to Queensferry is carried across the deep ravine through which the water of Leith here flows, at a height of 106 feet above the rocky bed of the stream. The total length of this bridge—which was erected chiefly by the enterprise of one individual—is 447 feet; breadth between the parapets 39 feet.

DEAN (THE), a deep running river in the county of Forfar. It takes its rise from the lake of Forfar, runs south-west, and, receiving the water of Gairie, near Glammis castle, falls into the Isla about a mile north of Meigle, after a course of about 12 miles. In its course through the parishes of Kinnettles and

Glamis, it runs nearly in the line of the Newtyle and Forfar railway.

DEAN CASTLE. See KILMARNOCK.

DEANSTON. See KILMADOCK.

DEE (THE), a large river in Aberdeenshire, which takes its rise in Braemar, in the bosom of the Cairngorm grouse, chiefly from two sources,—the northern of which rises between the ridge of Braeriach on the west, and Loch Aven on the east, and, running a course nearly due south through Glen-garrochory for 4 miles, is there joined by another small stream called the Guisachan, flowing from the west, when it assumes the name of the Dee. Flowing on in the same direction through a deep glen for 6 miles further, it receives the Geauly or Giouly, its southern head-branch, at Dubrach. The Geauly has its source from the base of Cairneilar, whence also issues the Tarf, a branch of the Tilt, which flows southward to the Tay, and the Feshie, which running northward, falls into the Spey. After the junction of the two waters, the Dee becomes a considerable stream, and bends its course, through a rocky channel, east-north-east, shortly after which it forms a cascade, or a series of four small falls, known as the Linn of Dee, where it flows through a deep chasm in mica slate rocks, over which an Alpine wooden bridge is thrown. A writer in 'Chambers's Journal' [Vol. ii. pp. 163, 164.] has given a very lively and interesting description of this linn, and the course of the Dee from this point to its well-head, with the insertion of which our readers will be gratified. "The Linn of Dee you will hardly find to be what you probably expected—a lofty waterfall. The fall is indeed very insignificant, and it is over a sloping bank, from which there is no leap; but in no waterfall, not even in the princely Foyers, do we behold such a terrible specimen of the imprisoned power of the watery element. Here it has got itself entangled in a complete nest of impenetrable granite rocks, which alternately confine and enlarge the noble stream, sometimes allowing its waters to sweep indignantly round and round some large black basin, then again compelling them to exhaust their rage in cleaving their way betwixt two ledges, so near each other, that it is very easy—and a very common practice with those who have sound clear heads—to step across. Here the dead white of the foam contrasts strongly with the blackness of the turbulent cauldrons, and the still blacker recesses of the caverns under the rocks, which an occasional commotion of the surface more violent than usual sometimes exhibits. It is said by the people in the neighbourhood, that the body of any living being which finds its way into the linn, can never be recovered, and—making allowance for generalities—we can easily imagine that in most cases they find their way into these abhorred caverns. We recollect, in the time of a flood, thinking the Linn of Dee would be a fine sight: we went, and were rather disappointed. The water had risen above the narrow broken part of the rocks, and its surface had a wider channel: it darted betwixt the banks with the velocity of the lightning, smooth and unruffled. But of what description must have been the working beneath! Come along, you will gaze into those black surgy depths till your eyes are fascinated and your head giddy: you will have opportunity for the exercise of fortitude elsewhere, for we are just entering the desert. There are two strange-looking hovels, a mile or so beyond the linn, with each its piece of cultivated land about it, to supply the necessities of life, unfenced, and unprovided with any thing to distinguish it from the uncultivated hills but the freshness of its colour. Gradually what was something like a road, dies away; and you are now compelled to pick your way among the stones, and

through the long heather, occasionally meeting with one of the small tracks worn by the deer, and used by such scanty travellers as may pass through that savage wilderness. There is a peculiar effect of loneliness you may never perhaps have experienced before, on entering this wilderness. The hills are at first distant, and the glen wide and hollow; but a dead stillness reigns on every thing, except on the clattering river, which still flows on in no unstately bulk. Wandering on, mile after mile, the glen gradually narrows, and gets more savage in its aspect; great black rocks, which look like the stone walls of some antediluvian city of the giants, begin to run themselves up on each side; they approach more and more towards each other; and at last the solitary spectator feels as if they impeded his breath, although they are some miles, perhaps, from each other. It is time we should tell him exactly where he is. Yonder singular looking peak, with shaggy precipitous sides, towards the west, is Cairntoul; proceeding from its side—as a wall seems to proceed from the angle of a turret—is a vast black mass of perpendicular rock; that is the ridge of Braeriach, said, by an eminent calculator of altitudes, to have 2,000 feet of sheer precipice; that 2,000 feet of precipice is the object which it now almost aches your eyes to look upon—a flat black mass, streaked with snow, and sometimes intruded on by a cloud, which divides the upper regions from the lower. It is probable that now, in mid-day, a hot sun gilds its black front, and mocks its streaks of snow, while a dead unearthly silence pervades the mass. It is not so at all times; for here is the workshop of storms—here the elements, when they prepare themselves to come down with destruction on the fruitful valleys below, exercise their strength and do no harm; then the scene is different from the stillness of the present; but with your leave, reader, it is a change we do not wish to witness. Returning to the description of our glen: right a head, and almost protruding into it, is the well-known Cairngorm; and towards the east, stretched the loftier Benmuichdhu, now admitted to be the highest hill in Britain. Now, after having heard the names of these mighty objects, let us request you to indulge yourself in the feeling of striking loneliness and disconnection with the world which every thing you view seems to impose on you; and if you may not have perceived it before, you will now feel the full expressiveness of the terms in those lines by Hogg, where he says,

Beyond the grizzly cliffs which guard
The infant-hills of Highland Dee,
Where hunter's horn was never heard,
Nor bugle of the forest-bee;
Mid wastes that durn and dreary lie,
One mountain rears its mighty form,
Disturbs the moon in passing by,
And smiles above the thunder storm.

Queen's Wake, 95, 6.

"The Dee is still a respectable stream, but we are gradually running it to earth. Ascending its brawling course, where it toils over large stones, and winds round the bases of rocks, we suddenly reach a mound of great round stones, from which it issues, gurgling and boiling at several outlets, seeming with difficulty to force itself through. Ascending the mound of stones, where we hear a deep hollow gurgling beneath our feet, we find on its summit a small, round, deep green lake, whose pure cold surface is here and there slightly disturbed by the bubbling up from the bottom of numberless springs. The water is of a beautiful pale green,—so clear that you can see the sand and stones at the bottom, almost as distinctly as through the air, where the water must be some fathoms deep. This pool of water, then, reader, so singularly placed in the midst of the wilderness, is

the source of that Dee which carries civilization, fruitfulness, and commerce, through a great district of Scotland, waters many a broad acre of wood and corn, and harbours the shipping of a great commercial city."

About $1\frac{1}{2}$ mile below the linn, at the farm of Dallavonar, some signs of cultivation begin to appear on the banks of the Dee; but it soon after enters Mar forest, through which it flows to CASTLETON OF BRAEMAR, [see that article,] a distance of 11 miles, receiving in its course the LUI and the QUOICH, from the north; and the INVEREY and the CLUNIE or CLUANADH, from the south, [see these articles,] and passing Mar lodge on its northern bank. From Castleton the Dee pursues its course through the Mar and Invercauld forests to the bridge of Ballater. About $1\frac{1}{2}$ mile above which it is joined by a large affluent, the water of GAIRDEN, from the north, and the MUICK from the south: See articles BALLATER, GAIRDEN, and GLENMUICK. The scenery of the Dee, in the Braemar forests, has been described in our article BRAEMAR. Passing Pannanich and Dee castle, the Dee flows eastwards through a gradually widening, though still narrow valley, receiving numerous small tributaries on both banks, and forcing its way through an alluvium composed of rolled masses of coarse and fine granular, grey and red granite, gneiss, porphyry, primitive greenstone, and hornblende. About $1\frac{1}{2}$ mile below Kincardine O'Neil, where Potarch bridge crosses the Dee, there is a magnificent vein of red felspar porphyry, traversing gneiss, and varying in breadth from 6 to 20 feet. Below Potarch, the Dee enters Kincardineshire, through which it flows eastward for about 12 miles, receiving in this part of its course the Aven, sometimes called the Feugh: See article BIRSE. From the point where it touches on the south-west corner of Drumoak parish in Aberdeenshire, till its confluence with the sea at Aberdeen, it forms the dividing line betwixt Aberdeenshire and Kincardineshire. Its banks, throughout this distance, are rather tame and unpicturesque,—the hills lumpish and heath-covered, and presenting few cliffs, and the haughs narrow, except for the last 5 or 6 miles of its course. Its total length of course is about 96 miles; and its tributaries drain nearly 1,000 square miles of country. Its mouth forms the entrance to the harbour of ABERDEEN, [see that article,] which is an artificial basin between New Aberdeen and the suburb of Footdee, on the north, and the river Dee on the south. It abounds with salmon; and the most valuable fishings in Scotland—the Tay and the Spey excepted—are on this river, the yearly produce of the Dee being estimated at nearly £8,000 sterling: See article ABERDEEN. The Midchingle fishery, from 1815 to 1821, averaged 116½ barrels of salmon and grilse in the year; but from 1829 to 1834, only 50 barrels. The Culter fishery averaged, from 1815 to 1821, 23½ barrels; from 1829 to 1835, only 8½. The Raik fishery, which is held of the town of Aberdeen under a charter from the Crown, is the most valuable fishery on the Dee. It extends from the upper end of Aberdeen a mile to the northward, and not quite a mile to the south of the breakwater. It is both a coast and river fishery. In 1782, there were but 1 barrel of grilse, and 301 of salmon killed on it; in 1832, there were 398 barrels of grilse, and 217 of salmon. In 1835, the total take was 19,194 fish; or 253 barrels; but the average from 1829 to 1835 was 427 barrels.* All the upper fishings on this river have

greatly decreased; but there has been an increase from the beach-fisheries. The alteration on the harbour has injured the fishings greatly, by rendering the water at the mouth of the river comparatively stagnant, and by the consequent accumulation of silt and gas-refuse. The greater part of the salmon shipped at Aberdeen are the produce of the Dee and Don; but fish from the Spey and the Findhorn, and some other rivers, are also shipped here. The river Dee and adjacent sea-coast is fished by net and coble, by stake-nets, and bag-nets. It may be fished by net and coble from top to bottom. There are no mill-dams upon it. The Dee has much decreased in size within the last twenty years, owing, doubtless, in great measure, to the improvement and drainage of the country. In making a comparison of the soil on the banks of the Dee and Don, the latter has manifestly the advantage. Hence the old rhyme:

"A rood o' Don's worth twa o' Dee;
Unless it be for fish and tree."

DEE (THE), a river in Kirkcudbrightshire, traversing the whole length of the stewartry, and dividing it into two nearly equal parts. Its sources are about a dozen rills, some pursuing an independent course, and some passing through Long Loch or Loch Dee, and all arising in the broad mountain-range which separates Kirkcudbrightshire from Carrick. The highest, and strictly the parent-stream, rises about a mile from the boundary, and before receiving the surplus waters of Loch Dee, flows circuitously about 6 miles, under the names of Sauch burn and Cooran lane. Assuming now the name of the Dee, it flows 17 miles north-eastward, receiving numerous rills from the uplands in its course, and dividing the parishes of Minigaff, Girthon, and Balmaghie on the south, from that of Kells on the north. Over the whole of this distance it is a petty stream, winding its way among broad flats of heath, or hills destitute both of verdant beauty and of grandeur. But at the point of leaving Kells its character is entirely changed. Falling there into Loch Ken, it usurps the titles and the tributes of the larger and beautiful river by which that lake is formed; and thence it rolls proudly along to the sea, rich in the wealth of waters, and gay in the dress of its surrounding scenery. Over a distance of 9 or 10 miles it describes the arc of a circle, bending round from the direction of south-east to that of south-west; and the latter direction it maintains over 13 miles, till it falls into the sea. During this part of its progress, it divides the parishes of Balmaghie, Tongueland, Twineham, and Bogue on the west, from those of Dalry, Crossmichael, Kelton, and Kirkcudbright, on the east. After falling into Loch Ken, it expands over a distance of 5 miles into three successive elongated lakes, of about $\frac{1}{4}$ of a mile of average breadth. Its course is afterwards rapid, chiefly over a rocky bottom, and beneath steep and rugged banks adorned with copsewood and plantation. Opposite the church of Tongueland it tumbles over a declivity of rocks, and forms a series of foaming and impetuous cataracts. A little below, it is spanned by a magnificent bridge of one arch of 110 feet, whence a fine view is obtained of the falls. This bridge is constructed of huge blocks of free-stone from the island of Arran, and was built by the gentlemen of the stewartry at an expense of about £7,000. Three quarters of a mile farther down, the Dee receives the waters of the Tarff, and becomes considerably widened. Two miles further, it sweeps past the burgh of Kirkcudbright; and thence over a distance of 5 miles, till it loses itself in the Solway frith, forms an estuary at first $\frac{3}{4}$ of a mile, and afterwards $1\frac{1}{2}$ mile, of average breadth. Its

* A barrel is 400 lbs. Dutch or 436 lbs. imperial English. The expense of taking a barrel of salmon at the Raik, in 1824, was £3 3s. 1½d; and of conveying it to the London market, including ice and boxes, £1 14s.

entire course, from the origin of Sauch burn till the embouchure of the river, is about 46 miles. In floods, the Dee sometimes rises 8 feet above its ordinary level. As the grounds around its sources abound in mosses, its waters are of so dark a hue as to render it difficult—in places where there is not a considerable current—to distinguish between a pool and a shallow. Its salmon, too, are of a darker colour, and much fatter than those of most rivers in the south of Scotland. The Dee is navigable to Tongueland, or about 7 miles from the Solway; and but for its cataracts, or with the aid of a canal to enable vessels to surmount them, might be the medium of an inland navigation to the very centre of the stewartry.

DEER, or OLD DEER, a parish partly in Aberdeenshire, partly in Banff, situated almost in the centre of Buchan; extending in length 12 miles from north to south, and in mean breadth $5\frac{1}{2}$ miles. It is bounded by Strichen parish on the north; by Longside on the east; by Cruden and Ellon on the south; and by New Deer on the west. The high road from Aberdeen to Frazerburgh cuts it longitudinally; and it is intersected by the road from Banff and Old Meldrum to Peterhead. It is watered by two rivulets,—the Deer and the Strichen,—which afterwards form the Ugie. The surface consists of irregular ridges of rising ground, running in various directions, and forming a number of valleys of unequal extent. The tops of some of these ridges are covered with heath, some with plantations, and many of them are cultivated. Round the village is a plain of considerable extent, ornamented with the woods and pleasure-grounds of Pitfour. A considerable quantity of home-grown flax, spun into fine yarn, is annually exported; and a large bleachfield with extensive machinery exists here in the neighbourhood of Stewartfield. Besides the village of Old Deer, there are also other two populous villages: STEWARTFIELD and FETTERANGUS: which see. There are large quarries of excellent limestone, of which nearly 20,000 bolls are annually sold. On the south-west of the parish is great abundance of quartz or feld-spar, and pieces of the purest rock-crystal are met with occasionally. A fine dark blue, and a very white granite, are used for building. There are several Druidical circles, and the ruins of a small irregular village, supposed to have been inhabited by the Druids. Population, in 1801, 3,552; in 1831, including that part of the parish which is in Banffshire, 4,110. Houses, in 1831, in Aberdeenshire, 863; in Banffshire, 124. Assessed property in Aberdeenshire, £5,866; in Banffshire, £977.—The village of Deer is pleasantly situated on the north bank of the Deer; $10\frac{1}{2}$ miles west of Peterhead, 4 south of New Deer, and 26 north of Aberdeen. Not far from this village stand the remains of the abbey of Deer, built in the beginning of the 13th century by Cummin, Earl of Buchan, for some monks of the Cistercian order. It has been an extensive building, but is now very much in ruins. The revenues of this place at the Reformation were in money £805 8s. 6d.; wheat 14 bolls; bear 13 chaldrons, 10 bolls; meal 65 chaldrons, 7 bolls, 1 firiot, 3 pecks. In 1587, the lands belonging to it were erected into a temporal lordship in favour of Robert, son of William, 6th Earl Marischal, by the style and title of Lord Altrie.—This parish, formerly a prebend of Aberdeen, is in the presbytery of Deer, and synod of Aberdeen. Patron, the Crown. Church built in 1789; sittings 1,150. Stipend £219 2s. 8d.; glebe $29\frac{1}{2}$ acres of good land. Unappropriated teinds £67 14s. A portion of the parish of St. Fergus was annexed to it in 1618.—There is an Episcopal congregation at Old Deer, which has existed since before the Revolution. Cha-

pel built in 1766; sittings 500. Stipend £82, with a manse.—There is also an Independent church at Old Deer, established in 1801. Chapel built in 1801; seats 300. Stipend £68, with manse and garden.—At Clola there is an Original Seceder congregation, established in 1769; church built in 1784; sittings 392. Stipend £70, with manse and glebe.—At Stewartfield there is a United Secession congregation, established in 1821; church erected in 1822; sittings 440. Stipend £90, with manse and glebe.—According to a census taken by the parish-minister in 1835–6, the population amounted to 4,488, of whom 1,731 were in communion with the Establishment, and 642 with other denominations.—There are 3 parochial schools. The 1st master has a salary of £31 6s. 7½d., with £24 10s. fees; each of the others has £10, with about £20 fees.

DEER (NEW), an extensive parish in the north-east of Aberdeenshire. It is of an oblong form, extending from north to south 14 miles, and, at a medium, 6 miles from east to west. The surface is flat, there being scarcely a hill or even a spot that may be called an eminence. Towards the north-east and south-east the appearance, for 7 or 8 miles, is almost one continued corn-field, interspersed with pieces of sown grass and turnip, and terminated by a gently rising ground in the form of an amphitheatre; towards the west the soil is shallow, and the surface covered with heath. The public road from Aberdeen, by Udry and Tarves, divides the parish from south-east to north-west. Limestone abounds. About 2 miles from the church stands an old castle called Fedderatt, which appears to have been a place of considerable strength. It is surrounded partly by a morass, and partly by a fosse; and has been accessible by a drawbridge, part of which still remains. Water has been conveyed to it by means of pipes, pieces of which have, at different times, been torn up by the plough. There are a few remains of Druidical temples: and several tumuli, which have been opened and found to contain urns enclosed in stone-coffins. On a field called Aiky or Oaky-brae, Edward Bruce, brother of King Robert Bruce, defeated the Cummys, Earls of Badenoch, in the year 1308. Aiky market, which is held on the 2d Tuesday, Wednesday, and Thursday, in July, O. S., is said to have been established in commemoration of this battle, and to be held on the spot where it was fought. Population, in 1801, 2,984; in 1831, 3,525. About 313 of the population are in the village of New Deer. Assessed property, in 1815, £4,719. Houses, in 1831, 765.—This parish, anciently called Auchreddy, was disjoined from Old Deer in the beginning of the 17th century. It is in the presbytery of Deer, and synod of Aberdeen. Patron, the Crown. Stipend £219 2s. 8d.; glebe £20. Unappropriated teinds £737 17s. 6d. By a census made by the parish-elders in the end of 1835, the population was estimated at 3,622, of whom 3,008 were in connexion with the Establishment, and 614 with other denominations. A census by the Dissenters returned the population at 3,712. Old parish-church built in 1622; sittings 900.—A chapel was erected at Savock, in the south part of the parish, and 6 miles from New Deer, with sittings for 658, in 1834.—There is a United Secession congregation at New Deer, and another at Savock. The former had a church built in 1828; sittings 310; the church belonging to the latter was built in 1804; sittings 380. The stipend of the former is £75, with a manse and glebe. There is also a United Secession congregation at Whitehill; sittings 450. Stipend £90, with a manse.—There are 3 parochial schools; salary of each master £21 7s. 9d.; school-fees collectively £62 10s. There were also, in 1834, 8 private schools.

DEER (THE), a river in Aberdeenshire, which takes its rise in the parish of New Deer, and, after a course of about 16 miles, unites with the water of Strichen, a tributary of the Ugie; which see.

DEER ISLAND, or **MULDONICH**, one of the Hebrides, a little to the south of the island of Barra.

DEERNESS AND ST. ANDREWS, a parish in the island of Pomona, and shire of Orkney and Shetland. The united parish had a population of 1,548 in 1821; and 1,550 in 1831. Houses 323. Assessed property, in 1815, £268. It is in the presbytery of Kirkwall, and synod of Orkney. Patron, the Earl of Zetland. Stipend £208 6s. 8d.; glebe £6. Unappropriated teinds £47 10s. 6d.—Schoolmaster's salary £26. There were 3 private schools in 1834.—The district of Deerness forms a peninsula, which, from the Mullhead to the isthmus that divides it from the district of St. Andrews, is in length upwards of 4 miles, and varies in breadth from 1 to 3, as the large and beautifully winding harbour of Deer sound enlarges or contracts. This harbour runs nearly in the direction of north-east and south-west; it is 4 miles long, and from 1 to 2½ miles broad. Its entrance is from the north; and as it is surrounded with land on every side, and has a bottom of clay mixed with sand, and a sufficient depth of water, it constitutes an excellent harbour. The population of Deerness, in 1801, was 660; in 1831, 661. Houses, in 1831, 141. Assessed property £63. Around the shores the soil is mostly sandy; higher up, it is loam and clay; the middle of the parish is extremely boggy and wet. Here are several tumuli, and near the end of the isthmus which unites St. Andrews to Deerness, are the remains of a very large Pict's house, commonly called Dingy's howe, or Duncan's height. Deerness is very conveniently situated for a fishing station. On the sand and shores are seen myriads of plovers, curlews, sea-larks, sea-pies, and a large grey bird with a hoarse cry, called by the inhabitants the Horra goose. This district is connected with the mainland only by a narrow and sandy isthmus. Here very strong ropes, calculated for different purposes in husbandry, are made of the shoots of the crowberry heath, or *Empetrum nigrum*. The ropes for hanging the caseys, or baskets, over the horses' backs, are made of the fibrous roots of the sea-reed, or *Arundo arenaria*. Tethers and bridle-reins are made of long meadow-grasses, such as *Holcus lanatus*, which here receive the name of pounce, or puns.—There is a parliamentary church here. Stipend £120; glebe £1.

DEER'S CASTLE. See **DURISDEER**.

DELNABO. See **KIRKMICHAEL**, Banffshire.

DELORAINÉ, certain lands in the shire of Selkirk, and parish of Etterick; 17 miles south-west of Selkirk. In 1706, Henry Scott, 2d son of the Duke of Monmouth, and Countess of Buccleugh, was created Earl of Deloraine. In 1807 this title became extinct.

DELTING, a parish in Shetland, on the north coast of the mainland; bounded on the north by Yell sound; on the east by Nesting and Lunnasting; on the south by Weedale and Sandsting; and on the west by Sulemvoe and St. Magnus bay. It is so intersected by arms of the sea, that no accurate idea can be given of its extent. In the report of the parliamentary commissioners, it is stated to be 14 miles in length, by about 4 in average breadth; by Edmonston it is said to be about 10 miles long and 8 miles broad. The surface is hilly, bleak, and barren; but the small part on the coast which is under culture produces tolerable crops of oats and barley. Fishing is the principal support of the inhabitants. The chief harbours are St. Magnus bay, Altha firth, Bustavoe, South Voeter, and Sulemvoe. Popula-

tion, in 1801, 1,449; in 1831, 2,070. By census in 1837, 2,200. Houses, in 1831, 375. Assessed property £929.—This parish is in the presbytery of Shetland, and synod of Orkney. Patron, the Earl of Zetland. Stipend £151 1s. 6d.; glebe £10. There are two parish-churches. That of the south district, or Olua frith kirk, was built in 1714; that of the north district in 1811. Number of sittings in both churches 1,130.—Schoolmaster's salary £25 13s. 3½d. There are 2 private schools supported by the General Assembly.—The two inhabited islands of Muckle Roe and Little Roe belong to this parish; the former containing 210 persons, and separated from the mainland by a very narrow sound dry at low water; the latter containing 12 persons, and about a mile from the mainland. There are also the three islets of Brother Isle, Fishholm, and Bigga.

DEMYAT. See **DUNMYAT**.

DENHOLM, a village beautifully situated on the right bank of the Teviot, in the parish of Cavers, Roxburghshire. The body of it is a square, compactly built on the four sides with neat houses, the central space, including about 9 acres, being, with the exception of the site of the parish school-house, enclosed and laid out in pasture. From the angles, roads or openings branch off, those on one side being on the main road through the village, and those on the other leading through brief streets or alleys, to a suspension-bridge for the accommodation of foot-passengers across the Teviot. The village has recently, at considerable expense, been much improved, as to the neatness of its appearance and the comfort of its inhabitants, by James Douglas, Esq. of Cavers. It is 5 miles from Hawick, and the same distance from Jedburgh, and stands on the great road between Berwick and Carlisle. It is inhabited principally by stocking-weavers. Here are an Independent chapel, having nearly 300 sittings, and a well-selected and well-plied public library. Denholm was the birth-place of Dr. John Leyden. Population 500. See **CAVERS**.

DENINO. See **DUNINO**.

DENNY, a parish in the shire of Stirling, formerly a vicarage of the parish of Falkirk, from which it was separated in 1618. Its greatest length is computed at about 6 miles, its breadth at about 4; and it is supposed to contain 6,016 acres. It is bounded on the north by the Carron, which separates it from the parishes of St. Ninian's and Dunipace; on the south by the parish of Kilsyth, by that of Cumbernauld in Dumbartonshire, and by Falkirk.—Bonny water flowing between it and the two latter parishes; on the west by the parish of Kilsyth; and on the east by Dunipace and Falkirk. Besides the village of Denny, it contains those of Hags, Denny-Loanhead, and Bankier. The north road from Edinburgh to Glasgow—which passes through Falkirk—runs along the southern part of the parish. The surface of this parish, like that of most of the districts in the eastern part of Stirlingshire, is gently undulating. The most prominent feature is Larrich hill, or the Hill of Oaks, near the north-western extremity. The stone-fences, which nearly universally prevail here, and the almost entire want of trees and hedgerows, give the landscape an unusually bleak and uninteresting aspect. The northern and western parts, which are more elevated than the southern, are principally occupied as sheep-pastures. The soil in the northern part belongs to the class known by the name of dryfield, and is light, sandy, and not very fertile. The cultivation, however, has, within the last few years, been greatly improved, and by the extensive application of draining and other improved methods of agriculture, very fair crops are now raised. Some of the land in the north-eastern part of the par-

ish is of greatly superior quality, and lets—we have understood—at as high a rate as the best carse-land in the country. Coals are found here in abundance, and from the colliery of Banknock a considerable quantity is exported by the Forth and Clyde canal to Glasgow. Ironstone is also found to some extent. The numerous falls of the Carron in this parish have furnished excellent situations for mills of various kinds. On the banks of that rivulet there were formerly not less than nine grain mills. There are now, however, only three, of which two are meal and barley mills, and the other for the grinding of flour. In addition to these, there are two char mills,—a mill for chipping dye-woods, and the preparation of other dye-stuffs,—two large paper-mills, in one of which fine white paper, and in the other coarse pasteboard is manufactured. In a paper-mill in this parish, a large quantity of the cartridge-paper used in the army during the late war was manufactured. There are three wool-spinning mills. Besides these, we may mention a large bleachfield and a printfield, both of which, though in the adjoining parish of Dunipace, yet from their immediate vicinity to the town of Denny, may more appropriately be viewed in connection with the subject of the present article. There is a distillery in the town of Denny,—a meal and barley mill on Bonny water, in the south-eastern part of the parish,—and two chip-mills for drysalting operations on Browster water.* The Forth and Clyde canal, and the line of the Edinburgh and Glasgow railway now executing, pass through the parishes of Falkirk and Cumbernauld, close by the southern confines of the parish of Denny. This parish—like a few others in Stirlingshire—is remarkable for the number of small properties which it contains, occupied by vassals, or *portioners* as they are here called, holding of a subject superior. This peculiarity is said to have arisen from the alarm of an Earl of Wigton at the time of the Union in 1705, who, from a belief that that event would prove fatal to the prosperity of his country, disposed of the whole of his large estates in this and the neighbouring parishes of Cumbernauld and Kirkintilloch to his own tenants, on condition of their paying for ever the rents of that time. The number of heritors is about 150, the principal being William Forbes, Esq. of Callendar. There are no families of any distinction in the parish. A considerable tract of land, known by the name of Temple Denny, is supposed to have belonged in former times to the Knights Templars. The assessed property, in 1815, was £6,631. Population, in 1801, 2,033; in 1831, 3,843.—The village of Denny is situated in the north-eastern part of the parish, within a few hundred yards of the boundary between this and the parish of Dunipace. It is $7\frac{1}{2}$ miles north-east from Stirling, and the high road from that town to Glasgow passes through it. Two branch-banks have recently been established here,—one in connection with the Commercial bank of Scotland, and the other with the Clydesdale bank in Glasgow. Fairs for cows are held on the Wednesday before the 12th of May, O. S., and on the Wednesday after the 11th of November.—There are scarcely any remains of antiquity connected with this parish. A stone-coffin was found many years ago at Woodyett, on the north-eastern extremity. It is said to have borne the date of 1301, and contained human bones.—There was a very old bridge over the Carron near Denny. The ancient and principal arch of this

old bridge was built in the form of four arched rings or couples, upon which the whole superstructure appears to rest. There is only one bridge in this neighbourhood, built in a similar way; namely, that unique looking bridge over the Devon, near Tullibody, the two original arches of which are built with rings or couples; but in this case the arches are pointed like the Gothic windows in some of our churches, whereas in Denny bridge the arches were semicircular or Saxon. This bridge was about 12 feet wide, and very high; a new one 32 feet wide, and 10 feet lower, has been recently substituted for it.

The parish of Denny, including the new *quoad sacra* parish of Hags, is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, the Crown. Stipend £250 3s. 3d.; glebe £9 13s. 4d. Unappropriated teinds £449 0s. 10d. The stipend has, in 1840, been raised to 19 chalders. The church, which is situated in the town of Denny, was built in 1813; sittings 768. A new church—modelled on that of Camelon—has recently been erected at the village of Hags, containing 600 sittings. There are also two United Secession congregations in this parish. The one at the village of Denny was established in 1797. The church was purchased in 1796, and was greatly enlarged in 1817; sittings 554. Stipend £100. The minister has also a house and garden of about £16 annual value, and a small park worth about £3. The other Secession congregation is at Denny-Loanhead. It was established in 1738; and its history is closely connected with the rise of the Secession.† Church built in 1815; cost £1,400; sittings 731. Stipend £168, with manse and garden.—The parochial schoolmaster has a salary of £34 4s. 4½d., with about £24 school-fees. Average number of scholars 49. There are 7 other schools, with an average attendance of about 408. The population of the parish, by a more recent census, was 4,027, of which 2,290 belonged to the Establishment, and 1,678 to other denominations.

† This parish was the scene of a famous non-intrusion contest upwards of a century ago; of which the following brief but impartial outline may be instructive in these times:—In 1733, the parish of Denny having become vacant by the death of their pastor, a presentation was given to Mr. James Stirling; and the laird of Herberthshire—who appears to have acted as patron on behalf of the Crown—caused intimation to be made to the moderator of the presbytery of Stirling, that a presentation had been given and accepted, and requested that the presbytery would take the presentee on trials for ordination. The parishioners opposed this summary mode of proceeding, and petitioned that a moderation might be granted for the people at large, without any reference to the presentation given. From the presbytery the matter was carried to the synod of Perth and Stirling, who found that the presentation was null and void, on account of its not having been presented to any judicatory in due time, by any person having a commission from his Majesty for that purpose; and it was finally agreed, among all the parties concerned, that the presentation being laid aside, a call should be moderated in the kirk of Denny. On the day of moderation, the former presentee was proposed on the part of the patron, and another candidate was proposed on the part of the people; and the roll of voters being called, few or none of the heads of families voted for the patron's candidate. Of the heritors, 52 gave him their support, and of these the greater part were either non-residents, or not in the communion of the church; while for the popular candidate there were 74 heritors, the whole of the session, and 138 heads of families. Though the voice of the parish was thus most unequivocally expressed against the presentee, and though the call given to the nominee of the people was—with the exception of the heritors mentioned—almost unanimous, yet the two ministers who conducted the moderation, refused to attest the call; they referred it to the presbytery; and the presbytery, without judging in it, referred it to the synod. The synod, after hearing all the parties, gave a decision, by a large majority, in favour of the parishioners, and ordered the presbytery to proceed with the settlement of the person whom they had called. Against this decision the friends of the presentee protested, and carried the cause by appeal before the supreme court. The assembly remitted the settlement of it to their commission. The commission delayed the consideration of the Denny case till the next meeting of assembly; and the assembly at length gave the case a hearing, but again remitted it to the commission. The commission, after making several unsuccessful attempts to effect a reconciliation betwixt the parties, thought proper—at the close of one of their meetings, when the greater part of their members had gone away, and when there was scarcely a quorum of

* For the supply of the mills on the Carron, a large reservoir existed for some time on the Earls burn, in the parish of St. Ninian's; but this having been almost completely destroyed in 1839—from the effects, as was supposed, of the earthquake noticed in our article COMRIE—it is the intention of those connected with the mills to apply to parliament for leave to construct a new reservoir on the Earls burn, and a dam-head on the Carron.

DERNOCK, or **DARNOCK**, or **DARNWICK**, a small stirring village in Roxburghshire, near the south bank of the Tweed, about a mile above Melrose. It stands on the road from Edinburgh to Carlisle by way of Jedburgh, and on that between Melrose and Selkirk. Its appearance is smiling and comfortable, and indicates prosperity and content. It was one of the villages of the halidom of Melrose abbey, and still retains some ruinous towers which must have been occupied by rich vassals of the abbot.

DERVAL, or **DERVILLE**, a regularly built, prosperous, manufacturing village, on Irvine water, at the southern verge of the parish of Loudon, Ayrshire. It is 9 miles east of Kilmarnock, on the road between that town and Strathaven. In 1811, it contained about 400 inhabitants; in 1836, 150 houses, and 1,160 inhabitants. The lands of Derval anciently belonged to the Knights Templars, and were independent of tenure, not even holding of the Crown.

DESKFORD, a parish in Banffshire, bounded on the north by Cullen; on the north-east and east by Fordyce; on the south by Grange; and on the west

their number present—to reverse the sentence of the synod, and order the settlement of the presentee to take place. Against this sentence the people, of course, reclaimed, and once more appeared at the bar of the assembly. But the sentence of the commission was affirmed; and the presbytery of Stirling enjoined to take the necessary steps for ordaining the intruder. Yet the same assembly, on the following day, agreed to an act, in which they declared, “that it is, and has been since the Reformation, the principle of this church, that no minister shall be intruded into any parish contrary to the will of the congregation.” The business, however, did not stop here. The presbytery refused to execute the sentence of their own church. This refusal, on the part of the presbytery, occasioned another complaint to be made to the assembly by the presentee’s friends. Whereupon the venerable court appointed a committee of 21 members to prepare an overture on the whole affair; and at a subsequent sederunt, an overture was brought in, and approved of, declaring the dissatisfaction of the assembly with the conduct of the presbytery, in neglecting or refusing to fulfil the appointment of the assembly [1736]; and enjoining the presbytery to proceed immediately with the trials of Mr. Stirling, and to have the whole finished before the 1st of September next. And, lest the presbytery should still prove contumacious, the synod of Perth and Stirling were ordered to take him upon trials, and to proceed, so as to have the settlement completed before the 1st of March. It was further declared, that any 10 or more of them might proceed to ordain Mr. Stirling, even though all the rest of their brethren should be opposed to the execution of the act; and that “in case the synod, or such number of them as above-mentioned, shall not, before the 1st of November next, enter upon trials the said Mr. Stirling, or before the 1st of March next finish the same, the assembly empower a special commission of this general assembly, to convene at Edinburgh, in the Old kirk aisle, on the third Wednesday of November or March respectively, with power to adjourn themselves as they shall think fit, in order to take trials, and ordain Mr. Stirling as minister of Denny.” In the meantime, Mr. Stirling, the presentee, died before his trials for ordination could be completed. Upon an application made to the presbytery, a new moderation was appointed to take place among them. One candidate was proposed on behalf of the few who had hitherto supported the claims of the patron,—and another on behalf of the congregation; but when the votes were about to be taken, none of the elders were permitted to vote on the ground that they were not qualified to the present civil government; the heads of families were degraded to the same privilege, inasmuch as it was alleged that they had no right to it, by the laws either of the church or of the state; and the votes also of heritors were refused, unless they were infected in their possessions, and unless they paid cess. Notwithstanding these arbitrary measures, a call to the popular candidate was subscribed by a large majority of the congregation, and presented to the presbytery at their first meeting, by whom it was rejected, while the call of their opponents was sustained, and their candidate ordered to be taken on trials for ordination. Against this decision the people protested, but did not think proper to appeal to any higher court. They, however, were resolved that they would not tamely submit to the intruder. On the day set apart for the ordination, 117 heritors, elders, and heads of families, went publicly to the kirk of Denny, and after sermon, immediately before the imposition of hands, entered a solemn protest against the proceedings of the presbytery, declaring that the person whom they were now pretending to set apart to the office of the ministry, was not, nor could be, regarded as lawful minister of the congregation, to whom they could submit in the Lord. Having made this declaration, and having taken instruments in the hand of a notary-public, they withdrew, and soon after connected themselves in a body with the then infant Secession church.

by Rathven, parishes. From the last it is separated by the Altmore and Darbriech burns. It is nearly in the form of a parallelogram, and is about 5 miles in length from north to south, and 2 to 3 in breadth from east to west. It consists of a valley running from south-west to north-east, between two ranges of hills, whence numerous rivulets descend through small ravines or glens which are beautifully fringed with hazel and birch. These rivulets from both sides unite in the valley with the burn of Deskford, whose primary source is at the head of the valley, in the adjoining southern parish of Grange. It runs north-east through the Cullen burn to the sea. As the banks of the Deskford burn are also finely bordered with natural wood, the parish altogether constitutes “one of the most beautiful little straths in the whole country.” There are cascades in many of the rivulets which, in the summer-floods and winter-thaws, descend with great impetuosity through the trees, and exhibit many romantic and picturesque scenes. The Linn is the most remarkable cascade in the parish. It has a very fine fall of almost 30 feet. The soil of the lower land in the valley is loam resting on strong deep clay; but towards the hills it is a light black mossy soil upon clay and gravel. It is stated in the New Statistical Account that, of land, either cultivated or occasionally in tillage, there are 2,800 imperial acres;—waste or in pasture 5,100;—of which 250 might be profitably cultivated:—under-wood 600:—average rent of arable land 17s. 6d. per acre. The average gross amount of raw produce raised in the parish, as nearly as can be ascertained, is stated to be £6,062 8s. In 1752, the then Lord Deskford—afterwards Earl of Findlater and Seafield—established a bleachfield in the north end of the parish, where about 1,500 pieces of cloth and 1,700 spyndles of thread yarn were annually whitened; but a few years since, from the decay of the linen manufacture, and household spinning here, the bleaching also fell off, and was given up. There is no market-town in this parish. Cullen, 4 miles distant, is the nearest. A very excellent turnpike road has been recently made from Cullen to Keith.—Near the centre of the parish was formerly the tower of Deskford, an ancient castle, said to have been built by the Sinclairs, the immediate predecessors of the Ogilvies, in the property of the lordship of Deskford. Its remains were a few years ago pulled down; but Cordiner has preserved a view of it. In the same vicinity also is the castle of Skuth, which has now also become ruinous. It is a striking object to passengers. In the institution at Banff is a curious antiquity consisting of a brazen swine’s head, with a wooden tongue moved by springs. It was found about 25 years ago in a mossy knoll at Liechestown, near the farm of Inalterie, which is supposed to mean the place of the altar, and where there are remains of a very old and massive but anomalous structure, in one part of which there is a deep circular hole enclosed by a wall rising to a considerable height in the interior of the building. Close to it is a vault with a stair descending into it. In the immediate vicinity, also, there stood till recently an artificial conical eminence named the Law-hillock—said to have been the ancient seat of justice. Another artificial hillock stands within view of this on the other side of Deskford burn. There is no modern or other edifice of any note in this parish. The assessed property, in 1815, was £1,882. Houses, in 1831, 189. Population, in 1801, 610; in 1831, 828.—This parish is in the presbytery of Fordyce, and synod of Aberdeen. It was originally part of Fordyce, and was afterwards included in Cullen. Patron, the Earl of Seafield. Stipend £193 12s. 10d.; glebe £8. Unappropriated

teinds £74 16s. 1d. The church adjoins the site of Deskford tower. There is no date on the church, but one pew bears the date 1627, another 1630. Schoolmaster's salary £34 4s. 4½d., with £12 fees. There is one private school.

DESKRY (THE), a tributary to the river Don. This rivulet rises to the south of the Don, and runs northwards through a glen of 2 miles in length and about ½ a mile in breadth, in the parishes of Towie and Migvy, till it falls into the Don at the north-western extremity of the glen, where the parish of Migvy lies on both sides of the water. There is a stone bridge of one arch across it at Rippachy, on the highway from Strathdon to Aberdeen. The trout of Deskry water are small but excellent.

DEUCALEDONES. See **CALEDONIANS**.

DEUCALEDONIAN SEA, the name given by Ptolemy, and the ancient geographers, to the ocean which washes the western coasts and isles of Scotland.

DEUGH (THE). See **CARSPHAIRN**.

DEVIRON (THE), or **DOVERAN**, a river which has its main head-stream in the parish of Cabrach, in Aberdeenshire, and after a course of about 60 miles through fertile and highly cultivated plains, falls into the ocean at Banff. It forms the boundary betwixt Aberdeenshire and Banff for many miles, and in its course receives many rivulets, particularly the Bogie, which falls into it at the town of Huntly [see **AUCHINDOIR**] and the Isla a little above Rothiemay: see article **ISLA**. Upon its banks are found frequent specimens of plumbago, and symptoms of lead-ore have been observed. It is well-stored with trout and salmon. There is a shifting bar at the mouth of the river which varies with gales of wind. In 1834 the mouth was entirely shut up by it, but broke out 600 yards further to the eastward. Hence arise frequent disputes amongst the cruive owners as to the line of the bed of the river. The produce both of the upper and lower fisheries of the Deviron has greatly decreased of late years.

DEVON (THE), a small river which rises in the western part of the Ochils, a little to the east of Sheriffmuir, and in the parish of Blackford, Perthshire. Its course is at first in an easterly direction. After flowing for about 2 miles through the parish of Blackford, and immediately on being joined by another streamlet from the south, it forms the boundary between the last-named parish and those of Tillicoultry and Glendevon. It then enters the parish of Glendevon, near Cleugh burn, and continues its eastward course till it arrives at the small village of Miltown at the eastern extremity of Glendevon. A little below Miltown it makes a decided bend toward the south-east, forming the boundary of the parishes of Glendevon and Muckhart on the west, and the parish of Fossaway and the shire of Kinross on the east, till it reaches the village known by the name of Crook of Devon, where, turning abruptly to the south-west, it flows onward in this direction, between the parishes of Muckhart and Fossaway, through those of Dollar and Tillicoultry, along the southern boundary of Alloa, and finally entering Alloa parish, and making a sharp turn to the south, it falls into the Forth a little above the town of Alloa, after a course of fully 30 miles in length. The Devon has been celebrated by Burns, and from the romantic scenery which adorns its banks, it is indeed well-worthy of being honoured in the poet's song. Its waters are beautifully pure, and the scenery in the Rumbling bridge and the Caldron linn, near the Crook of Devon, where several remarkable cataracts are formed, is of the most sublime and extraordinary kind.—Passing through the village called the Crook of Devon, we keep the river on our right

for about a mile, and then descend along its rocky bed, when we soon approach the Falls of the Devon,—the first of which, called the Devil's mill,* is heard, but not seen. This forms the least considerable of the falls. The Devon here falls into an excavation in the solid rock with a noise resembling that of water falling on a mill-wheel. Near this spot is a cavern named the Pigeon's cave. About 350 yards lower down the Devon, is a small arch, spanning a deep and gloomy chasm, called the Rumbling bridge. It is so named from the hollow brawling of the water while forcing its way among huge fragments of impending rocks; and as it hurries along, boiling and foaming in wildest tumult, the whole scenery adjacent is characteristic of that fantastic rudeness which Nature delights in exhibiting amid the roar of cascades and the thunder of cataracts. On looking down the Devon from the bridge,—a giddy height,—the prospect beneath the eye is truly sublime. The high, projecting, and impending precipices on either hand are wooded in all the capricious varieties of form and ramification of hazel, willow, birch, and mountain-ash; from among which, midway among the craggy steeps, daws, kites, and other birds that delight in solitude, are seen sailing in security and freedom. The southern bank of the Devon forms the middle ground, and a peep of the Saline hills closes in the distance. The whole is exceedingly picturesque and magnificent. In order to command a view of the wooded cliffs over which the Rumbling bridge is thrown, it is necessary to come round by the south bank of the river. The best station is about a gunshot from the brink of the water, on a gentle eminence immediately opposite the bridge. Here the deep and gloomy chasm through which the Devon forces its way is seen in one vast cleft, torn as it were asunder by some terrible convulsion of nature. The small arch, half-seen through the hanging branches which wave wildly over the face of the rugged steeps, gives an air of grandeur suitable to the solemn dignity of the scene. The whole is striking and impressive.† From the Rumbling bridge to the Caldron linn, or linns, the Devon glides gently along; until, about a mile below the former, the bed of the river suddenly contracts its channel, and as we approach the falls, the distant roar of the waters becomes imposing and awful. The upper fall is inconsiderable, yet sufficient to arrest the attention. Soon after comes into view the chasm through which the river boils and foams from caldron to caldron,—for such are the circular excavations called which the incessant workings of the waters in the course of ages have caused. In the upper caldron, the water has so much the appearance of boiling, that it is difficult to divest one's self of the idea that it is really in a state of violent ebullition. From this caldron the water finds its way into a circular cavity, in which it is carried round and round, though with much less violent agitation: this second caldron is always covered with a foam or froth. From this

* "The country people," says Garnett, "call it the Devil's mill, because it pays no regard to Sunday, and works every day alike." The noise it makes is supposed to be occasioned by the water falling over a small cascade into a deep cavity in the rock below. The water tossed round with great violence, and constantly beating on the sides of the rock, causes a clacking noise, similar to that of a mill at work, which is very distinctly heard when the water has force enough, by its quantity, to beat on the rock with violence, and when it is not so high as entirely to cover the cavity.

† Where the old arch is thrown across, the banks are 86 feet above the water. The span of the arch is 22 feet, and its width 12 feet. It was built in the year 1713, by William Gray, a native of the parish of Saline. Having no parapet defences, it required some fortitude to walk across this bridge even in the day-time; yet it was used, for upwards of a hundred years, by persons both on foot and horseback, by night and by day. In 1816 a substantial modern bridge was built over the old arch,—which still remains—the height of which from the water is 120 feet. There is an excellent inn in the immediate vicinity of the Bridge.

boiler the water runs into another, larger than either of the other two, the diameter of it being 22 feet. The water in this cavity is not agitated like the others, but calm and placid. When the river is low, these caldrons communicate with each other, not by the water running over at their mouths, but by apertures made, by the force of the waters, in the course of time, through the rocks which separate them at, perhaps, the middle depth of the caldrons. From the lower caldron, the whole body of the stream rushes perpendicularly over a rock into a deep and romantic glen, forming a fine cascade, particularly when viewed from the bottom of the glen, to which there is access by a zigzag path. This cascade is 84 feet below the first fall above the caldrons, and is 44 feet in height. The rocks which compose the linn are about twice as high; so that it appears as if the water had worn its way from the top to its present situation, which most probably has been the case. It falls in one unbroken sheet, without touching the rock, and the whiteness of the dashing water is finely opposed to the almost black colour of the rocks, which are formed of coarse grained basaltes. "While we were contemplating this beautiful scene," says Dr. Garnett, "the sun happened to shine upon it, and the spray, which arises from it to a considerable height, by refracting the rays of light, exhibited the appearance of a luminous vapour, in which the different prismatic colours were easily discernible." Having come round by the foot of the south bank of the river, and crossed it in front of the precipice over which the water rushes, we command a complete view of the great fall of the Devon. A stupendous pile of solid rocks, over which in one full, rapid, and powerful torrent, the river precipitates itself, presents its rugged front; while fragments of rock which from time to time have been torn from the face of the craggy steep lie scattered around in every direction, and in fine harmony with the rude and fantastic forms of the deep and wooded dell through which the Devon, as if tired of exertion, seeks silence and repose in its route to gain the windings of the Forth near Stirling.* The Devon is of no great breadth, and is not navigable, although Mr. James Watt, who made a survey of it in 1766, reported that it was quite capable of being made so for several miles above its confluence with the Forth, at an expense of about £2,000.

DEVON (THE SOUTH OR BLACK). See CLACK-MANNANSHIRE.

DEWAR, a hamlet in the shire of Edinburgh, and parish of Heriot; $6\frac{1}{2}$ miles south of Middleton. On the march between the parishes of Heriot and Inverleithen, on the farm of Dewar, there is a grave called the Piper's grave, of which tradition reports that it covers the remains of a whilom piper of Peebles; who having engaged for a certain wager, to blow from Peebles to Lauder, failed in the attempt, died here, and was buried on the spot. On Dewar hill, not far from this grave, there is a remarkable large stone called Lot's wife; but the reason of its title

* There is another Rumbling bridge on the BRAN: see that article. About 40 years ago, the late James Harrower, Esq. of Inzievar, had a most extraordinary escape at the Caldron linn. Where the river falls down into the first cavity, there is an upright rock, in the middle of the current, by which persons have sometimes passed from the one side of the stream to the other. In endeavouring to spring on to this, Mr. Harrower's feet slipped on the slimy top of the rock, and he was precipitated headlong into the upper caldron. He had presence of mind to cling firmly to some protuberances on the sides of the rock, until his companions procured ropes from a neighbouring farmhouse, by means of which he was extricated from his awful situation. Some years previous to this incident a pack of hounds, eagerly pursuing a fox, were led by reward along the banks of the Devon till he came to the linn, where he crossed; but in attempting to follow him, not being so well-acquainted with the passage, the dogs fell one after another into the caldron and perished.

is unknown. At a little distance from hence is the Wolf cleuch, of which traditional story asserts that this cleuch was once inhabited by a wolf which laid waste the country around for a series of years, until a person of the name of Dewar having encountered the animal, killed it, and received for his reward a gift of the adjoining lands.

DICHMOUNT. See CAMBUSLANG.

DICHMOUNT LAW, a hill in the parish of St. Vigean, and about 3 miles from the coast, in Forfarshire. It rises about 670 feet above the level of the sea, and has on its summit a large cairn, hollowed in the middle, and now covered with grass, where anciently certain barons held their courts.

DICHTY (THE), a small river in the south of Forfarshire, of about 15 miles in course. It rises in four head-streams, three of them from small lakes, among the Sidlaw hills in the west of the parish of Lundie. Flowing—with the exception of brief sinuosities—nearly due east, it traverses the parishes of Auchterhouse, Strathmartine, and Mains, intersects the eastern wing of Dundee, where it receives the tribute of Fishy water, and after advancing half-way through Monifeith, debouches suddenly to the south, and falls into the frith of Tay 2 miles east of Broughty ferry. During its course it drives several mills, and it contains trout and a few salmon.

DILTY-MOSS, a morass in the parishes of Carmylie and Guthrie, Forfarshire, about 2 miles long, and $1\frac{1}{2}$ broad. It is remarkable for giving rise to two streams which, though both eventually finding their way into the German ocean, traverse Forfarshire from near its centre in opposite directions. At its north-east end rises the Elliot, which pursues a course to the south of east, and falls into the sea in the parish of Arbirlot; and at its south-west end rises a rivulet which flows to the north of west till it falls into the Dean, and then, as identified with that stream, flows westward till its leaves the county. See CARMYLIE.

DINART (THE), a river in Sutherlandshire, which takes its origin from Loch Dowl, a small lake in the Dire More, or 'Great forest;' and after a northerly course of 15 miles, along the base of the Conval and Tonvarn mountains, falls into Durness bay between Farout-head and Cape Wrath. It produces plenty of salmon.

DINGWALL,† a parish in the county of Ross, at the west end of the frith of Cromarty. It is bounded on the east by the parish of Kiltarn; on the north by the vast mass of Benwyvis; and on the west and south by the parish of Fodderty. That part of the parish of Urquhart, called Ferintosh, lies on the skirt to the south-east; but from it Dingwall parish is divided by the river Conan, which, at high water, is widened to about half-a-mile by the influx of the sea. Excluding a small district, peopled by few inhabitants, and divided from the rest by a high hill, this parish forms an oblong peninsula of $1\frac{1}{2}$ by 2 miles. It consists partly of a pretty extensive valley, and partly of the sloping sides of hills a great portion of which is in a high state of cultivation. The waste ground is not very considerable, and there are no commons in the parish; the great bulk of the land is in culture; and the whole forms a beautiful interchange of hill and valley, wood and water, corn-fields and meadows. The soil over the whole parish is abundantly fertile, and the greater part uncommonly rich. There are some rivulets in the parish, but no river except the CONAN: which see. About 2 miles to the south-

† The name was formerly *Dingnawal* or *Dignavallis*, and took its origin from the richness and fertility of the soil of the lower grounds which form a considerable part of the parish. [Old Statistical Account.]—Others consider the name to be of Scandinavian origin. The Gaels call it *Inverfeoran*, marking its situation at the mouth of the Peffer.

west of the town is a small lake, called Ousie. The sea, at high water, washes a considerable part of the parish on the south-east, running in apparent canals along the side of the town, and forming a beautiful variety of islets and peninsulas; but, even at high tide, it is very shallow for several miles down the frith; and, at low water, it recedes to the distance of nearly 4 miles, leaving nothing but a slimy strand. It is thought that about 200 acres of ground might easily be reclaimed in this quarter. About 1,400 acres are under wood, and 2,400 are in tillage. The land rent of the parish, at the close of last century, was about £1,200. The value of assessed property, in 1815, was £3,967, exclusive of the burgh-property. In the New Statistical Account, the average gross amount of raw produce is estimated at £15,854. Population, in 1801, 1,418; in 1831, 2,124. Houses, in 1831, 355. Gaelic is still the language of the lower orders here.—This parish is in the presbytery of Dingwall, and synod of Ross. Patron, the Crown. Church built in 1801; sittings 800. Stipend £244 8s. 11d.; glebe £30. Unappropriated teinds £54 14s. 10d.—There is a small Episcopalian chapel.—Schoolmaster's salary £34 4s. 4½d.; with £25 4s. fees. There were 4 private schools in 1834.

DINGWALL, a royal burgh in the above parish, is pleasantly situated at the mouth of the fertile valley of Strathpeffer, at the head of the Cromarty frith, and on the Great north road; 19 miles north of Inverness by Beauly; 13½ by Kessack; 26 south-west of Tain; 7 east of Contin; and 174½ miles west-north-west of Edinburgh. It chiefly consists of a main street running east and west on the old Strathpeffer road. At the west end of this street, a small street runs north towards the Peffer; and at the east end, a large street, called Castle-street, extends from Castle hill, or from the canal afterwards noticed, on the north, to the school-house on the south. The town stands on a piece of level ground, scarcely 4 feet above high flood-mark. It was erected into a royal burgh by Alexander II. in 1227, and its privileges were further confirmed by a charter granted in the reign of James IV., and confirmed by James VI. in 1587. It was entitled by these charters "to all the privileges, liberties, and immunities possessed by the burgh of Inverness." It was and is still governed by a provost, 2 bailies, a dean-of-guild, treasurer, and 10 councillors, and joins with Tain, Dornoch, Wick, and Kirkwall, in sending a member to parliament. Municipal electors 87. Parliamentary constituency 87. Revenue, in 1838-9, £263 1s. 8d. "Dingwall had at one time a considerable extent of landed property, which does not, however, appear to have been turned to much account while in the possession of the burgh, nor to have produced any considerable revenue. The town property began to be feued out, and far the greater part was so alienated, more than forty years ago. In most cases the grants were made to persons connected with or influential in the burgh, and without any competition or publication. But although, in such circumstances, the interests of the community were sometimes sacrificed, on other occasions the alienation of a large tract affording only pasture was sufficiently compensated by a very small permanent revenue, joined to the advantage arising from the extensive plantations or agricultural improvements of the vassals. Within the last forty years the management of the town-property has been comparatively pure; and latterly, alienations have taken place only after public advertisement, and by public sale, except in a very few instances, where small plots of ground, for erecting warehouses, or other such purposes, have been granted on the petition of individuals, for an annual duty fully equal to the value of the land.

The burgh now retains only seven or eight acres in property, which, with the superiority of certain lands held feu of the burgh, and fishings in the river Conan and the Dingwall frith, produce altogether an average rental of £273 7s. 2d. sterling." [Parliamentary Report on Municipal Corporations in Scotland. Part I. p. 189.] The annual expenditure of the burgh amounted, in 1832, to £181 14s. 10d. The debts of the burgh amounted, in 1832, to £2,367 10s. The lands within the royalty are stated at a supposed rental of 338 bolls, 2 firlots; and according to the proportion held by each proprietor, he is stented for payment of the cess or land-tax now levied, and a sum of £45 yearly in commutation of the statute-labour, under the acts 6° Geo. IV. c. 90, and 9° Geo. IV. c. 102. These are the only local taxes now levied. The jurisdiction of the magistrates, which extends over the royalty, is in practice confined to the trial of assaults and other petty crimes, and to the decision of actions of debt, processes of removing, sequestration, enforcement, and other civil causes to a very limited extent. Their whole functions as judges are rapidly passing into the hands of the sheriff, who has a resident substitute holding regular courts at Dingwall. The magistrates and council have no patronage except the appointment of the town-clerk, at a salary of 10 guineas; two burgh-officers, at £5 each; the keeper of the town-clock, at £5; and a kirk-officer, at a salary of 5s. annually. There are no incorporated trades claiming exclusive privileges within this burgh. Persons carrying on merchandise within the burgh must, however, take out their freedom as burgesses, the expense of which varies from 5 to 15 guineas, according to the nature and probable extent of the trade to be carried on; or they may obtain a temporary licence from the magistrates to open shop at the rate of 5s. a-day or less. From many circumstances, it would appear, that anciently this town was much greater than at present. Causeways and foundations of houses have been found some hundred yards from where the town now stands. It is however much improved of late. Above the town, the Peffer used to spread itself into a small morass, which has been successfully drained. A mile below the bridge and town, coasting-vessels used to be loaded and unloaded on the mud at low-water, their cargoes being carried on a bad road to and from the east end of the town. This inconvenience has been remedied by shaping the lower end of the Peffer into a regular canal 2,000 yards in length, with two wharfs at which vessels of 9 feet draft of water find accommodation. The expense of these improvements—which were executed in 1815-17—amounted to £4,365, of which £1,786 were furnished by the Highland road commissioners, and £600 by the convention of burghs. The average income of the harbour is £137. As the centre of an agricultural district, and the point of union of the Highlands of Wester Ross with the more fertile country on its eastern sea-coast, this burgh is of some consequence. It is also well-situated for trade, but as yet no particular branch of manufacture has been introduced. The burgh of Dingwall contains nearly 1,800 inhabitants.—Near the town is a vestige of the ancient residence of the Earls of Ross. It was built close to the shore, and was at one time almost surrounded by the Peffer, into which the tide flowed at high water. What was not surrounded by the sea had a deep ditch and a regular glacis. The site of this castle is now occupied by a modern mansion. The Earls of Ross were the most powerful of the northern barons, and many of the ancient families in Ross-shire held their estates by charters from them, dated, "apud castrum nostrum de Dingwall."—Near the church is an obelisk, 57 feet high, though only

6 feet square at the base. It was erected by George, 1st Earl of Cromarty, and was intended to distinguish the burying-place of the family.—About a mile to the north of the town is the finely-wooded hill of Tulloch, rising to the height of 800 feet; and between it and the town is Tulloch castle with its pleasure-grounds.

DINLABYRE, an ancient chapelry in the parish of Castletown, Roxburghshire. The chapel is demolished, but many grave-stones remain near its site. It is on the eastern side of the Liddel.

DINWOODIE. See **APPLEGARTH**.

DIPPEN. See **KILLMORY**.

DIPPLE, an ancient rectory, now comprehended in the parish of Speymouth; $1\frac{1}{4}$ mile west of Fochabers. The church, which is now demolished, was dedicated to the Holy Ghost; but the churchyard is still in use. At the stile of the churchyard, there formerly stood a small house commonly called 'The House of the Holy Ghost;' around which, following the course of the sun, the people usually made a tour with the corpse at burials, nor could they be restrained from this superstition, until the walls of this edifice were quite destroyed. The parson of Dipple was titular of Rathven in the district of Strathbogie. Here is a mortification of £666 13s. 4d. to the poor; and of £333 6s. 8d. to the school, together with 2 bolls of meal annually, by the late William Duff, Esq.

DIRLET CASTLE. See **HALKIRK**.

DIRLETON, a parish in East Lothian, on the south coast of the frith of Forth, measuring from the mouth of the Peffer burn, at the head of Aberlady bay, its extreme western point, to its junction with North Berwick parish, at a point of the coast opposite Lamb islet, its extreme eastern point, $5\frac{1}{2}$ miles in a direct line. Its coast-line, however, is much greater, owing to its sinuosities. Its greatest breadth from north to south is $4\frac{1}{2}$ miles. It is bounded on the north by the frith of Forth; on the east by the parishes of North Berwick and Preston; on the south by Athelstaneford and Aberlady; and on the west by Aberlady bay, and the frith. Along the coast, and within a short distance of the shore, are three little rocky islets, viz., Fiddrie or Fetteray, Eyebrook, and the Lamb. The coast presents a broad strip of flat sandy holms or links, edged on the landward side by richly-cultivated fields, and to seaward by a fine sandy beach. Dirleton common, which lies between the village and the sea, is perhaps the finest coursing-field in Scotland. The soil is a dry sand, covered with a smooth short sward, without any admixture of stones. It is likewise free of fences. The greyhounds of this parish, and the neighbouring one of North Berwick, are highly esteemed by sportsmen. Towards Gulane point, the coast is rocky; and considerable encroachments have been made upon the arable land in this quarter by the blowing of the sand. The total superficial extent of the parish is 7,500 Scots acres, of which about 5,300 are arable, and nearly 2,000 are occupied with links and sandy hillocks. The valued rent is £10,262 Scots. The real rent, towards the end of last century, was £6,000. It is now nearly double of that sum. Assessed property, in 1815, £16,768.—The village of Dirleton, situated near the centre of the parish, on the road from Edinburgh to North Berwick, is one of the most beautiful in Scotland. Mrs. Hamilton Nisbet Ferguson, the principal proprietor in the parish, has rebuilt the greater number of the houses here in the cottage ornée style. Each cottage is surrounded with its own plot of flowers and shrubs; and the whole are scattered along two sides of the village green, of which a third side is occupied with the magnificent remains of Dirleton castle, and its fine garden and bowling-green. Dirleton has a po-

pulation of 92 families.—The next village in point of importance is Gulane, or Godyn, which gave name to the parish until 1612. It lies about 2 miles to the west of Dirleton, and is nearly surrounded with sandy links. It is well-known to gentlemen of the turf for its training establishments for race-horses.—The other hamlets are Fenton, Kingston, and Congleton.—In the 12th century, the Anglo-Norman family of De Vallibus or De Vaux, obtained a grant of the manors of Godyn and Dirleton, with part of Fenton. During the reign of William the Lion, William de Vaux bestowed the church of Godyn—rated at 80 marks in the Taxatio—on the monks of Dryburgh. In the same reign there was a chapel dedicated to St. Nicholas on Fiddrie isle in this parish. In 1298, De Vaux's castle at Dirleton was besieged by Antony Beck, the martial bishop of Durham, in behalf of Edward I., to whom it surrendered after a desperate defence. During the reign of Alexander III., a chapel was founded at Dirleton by Alexander de Vallibus; and, in 1444, a collegiate church was founded at Dirleton by Sir Walter Halyburton, who, in 1392, had succeeded his father in the estate of Dirleton, which had passed into the family by a female heiress during the reign of David II. Sir Walter married the daughter of the regent Albany, and, in 1440, was created Lord Dirleton. The eldest daughter of Patrick, 6th Lord Dirleton, who died in 1506, carried the title and estate into the family of Ruthven. The castle and estate, says Sir Walter Scott, in his 'Border Antiquities,' "was the bribe which the last unhappy Earl of Gowrie held out to the cupidity of Logan, his associate in the memorable conspiracy. It seems to have been coveted by that person in the highest degree. 'I care not,' says Logan in his correspondence, 'for all the other land I have in the kingdom, if I may grip of Dirleton, for I esteem it the pleasantest dwelling in Scotland.' But Dirleton, included in Ruthven's forfeiture, passed to other hands, and was bestowed on Sir Thomas Erskine, who had lent the King active assistance against the efforts of the conspirators. He was created Viscount Fenton and Baron Dirleton. In the civil wars, Dirleton was for a time occupied by a party of the Scottish guerilla, called then moss-troopers. Monk marched against them with four pieces of ordnance and a mortar; he was joined by Lambert, and besieged the place, which having surrendered at discretion, the captain of the moss-troopers—one Waite—and two of his followers, were executed by martial law. This was in the year 1650. Dirleton castle, became, after the Restoration, the property of Sir John Nisbet, king's advocate. His male line having become extinct in the person of the late Mr. Nisbet of Dirleton, the property descended to his daughter, the present Mrs. Ferguson of Raith." Its massive structure, and the peculiar and praiseworthy care taken to preserve it from rude encroachment, by the tasteful proprietor, are likely to preserve this noble and graceful relic of feudal ages to many future generations. The whole has been enclosed with a handsome wall, which includes within its circuit, not only the whole of the ruins, but also a fine bowling-green, and a handsome flower-garden, to all of which access is readily granted to visitors of respectable appearance and deportment. Grose has given a poor view of Dirleton castle. It has had more justice done it in the 'Border Antiquities.' We know not a lovelier scene than is presented by this village,—with its fine green, its noble pile of ivy-clad ruins, and the distant rock-gemmed frith,—especially in a summer eve, or when the light—

"The silver light, which, hallowing tree and bower,
Sheds beauty and deep softness on the whole,"—

is resting upon the fading landscape. The castle

might be aptly enough apostrophized in the words of an anonymous poet :—

"The grandeur of the olden time
Mantled thy towers with pride sublime,
Enlivening all who near'd them;
From Hippocras and Sherris sack,
Palmer, or pilgrim, turn'd not back,
Before thy cellars cheer'd them.
Since thine unbroken early day,
How many a race hath passed away,
In charnel-vault to moulder!—
Yet Nature round thee breathes an air
Serenely bright and softly fair,
To shame the awed beholder.
The past is but a gorgeous dream,
And time glides by us like a stream,
While musing on thy story;
And sorrow prompts a deep alas!
That like a pageant thou should pass
To wreck all human glory!"

—This parish is in the presbytery of Haddington, and synod of Lothian and Tweeddale. Patroness, Mrs. Ferguson. Stipend £293 18s. 1d.; glebe 10 acres. Unappropriated teinds £335 2s. 4d. Schoolmaster's salary £34 4s. 4d., with £33 fees. There are 2 private schools.

DIVIE (THE), a small river in the county of Moray. Its principal branch rises on the borders of Strathspey. After a rapid course, it falls into the Findhorn river. "The scenery of the Divie," says Mr. Anderson, "from the spot where it leaps into its glen, in a wild waterfall, to its junction with the Findhorn, is exquisitely beautiful."

DOCHART (LOCH), a lake in Perthshire, in the parish of Killin. It is about 3 miles in length from east to west, and contains a floating islet, 51 feet long, and 29 broad. It appears to have been gradually formed—like others of the same kind—by the natural intertexture of the roots and stems of some water-plants. It moves before the wind, and may be pushed about with poles. Cattle going unsuspectingly to feed upon it are liable to be carried on a voyage round the lake. On another, but stationary island, stand the ruins of a castle, the ancient residence of the Campbells of Loch Awe. It is embowered with wood, and has a very romantic appearance. The river Fillan runs into the west end of the loch. The river Dochart issues from the east end of the loch, and running east about 8 miles through Glen-Dochart, joins the Lochy at Killin, when both fall into Loch Tay.

DOLLAR, a parish in the shire of Clackmannan; bounded on the north by the parish of Glendevon; on the east by Muckhart and Fossaway parishes; on the west by the parish of Tillicoultry; and on the south by the parish of Clackmannan. Its length from north to south is about 3 miles, and its greatest breadth about $1\frac{1}{4}$ mile. Its general aspect is that of a beautiful plain or valley, having the Ochils for its northern boundary, and a gently rising ground confining it on the south. The river Devon runs through it in a meandering course from east to west. The central part of the parish, in which the town is situated, forms a somewhat large and slightly sloping plain, with a southern exposure, and beautifully interspersed with hamlets, farm-houses, and enclosures. The soil of that portion of the parish which extends from the hills to near the Devon is light and gravelly; on the banks of the river the land is more moist and clayey. The Ochils afford excellent pasture for sheep, and the mutton and wool produced here are of a superior quality. The parish abounds in excellent coal, which is worked in several places and exported in large quantities to considerable distances in Perthshire. Iron also abounds, and veins of copper and lead were formerly wrought in the Ochil hills a little way above the town of Dollar. The

ores are said to have been exported to some extent to Holland. Silver has likewise been found in a glen to the west of Castle-Campbell, and pebbles of some value are occasionally picked up on the top of a hill called the White Wisp. A large bleachfield on the banks of the Devon has existed since 1787. Fairs are held at Dollar on the 2d Monday of May, the 3d Thursday of June, the 2d Monday of August, and the 3d Monday of October. The greater part of the parish formerly belonged to the Argyle family, but in 1605 the whole property was feued out with the exception of Castle-Campbell and two neighbouring farms. Two ancient sepulchral tumuli are situated at a short distance from the town of Dollar. One of them, on being opened about fifty years ago, was found to contain two urns filled with human bones. The most interesting remain of antiquity, however, is **CASTLE-CAMPBELL**: which see.—The town of Dollar is pleasantly situated on a rising ground in the eastern part of the parish, and is 12 miles north-east from Stirling, and about the same distance north-west from Dunfermline, and south-west from Kinross. The road from Stirling to the latter town passes through it. Population of the parish in 1801, 693; in 1831, 1,447. Assessed property £1,629. The population is not increasing. By a census taken in 1836 it had fallen to 1,367, of which 1,036 belonged to the Establishment and 274 to other denominations.—The parish of Dollar is in the presbytery of Stirling, and synod of Perth and Stirling. Patron, Tait of Harvieston. Stipend, £158 10s. 7d.; glebe £18. Church built in 1775; sittings 340.—An Original Seceder congregation was established here in 1827. Church built in 1829 at a cost of about £400; sittings 264. Stipend, £80, without manse or glebe.—The parochial schoolmaster has a salary of £25 17s. 9 $\frac{1}{2}$ d., with £12 school-fees, and £6 14s. of other emoluments. Average attendance 35.—The principal educational institution in the parish, however, is the Dollar academy, which was established in 1819, by a fund amounting, it is said, to nearly £80,000, left by Captain John M'Nabb of Mile-end, Stepney, in the county of Middlesex. The academy is an elegant building. It is conducted by seven teachers and three assistants, and the branches taught are English, writing, arithmetic, Latin, Greek, modern languages, mathematics, drawing, and sewing. The number of scholars attending the academy in 1834 was 212. The management of the academy is vested in the minister and kirk-session of Dollar.*

* The parish of Dollar is distinguished as having been the scene of the labours of one of the early Scottish martyrs. Thomas Forrest, who suffered death on the Castle-hill in Edinburgh, in 1538, was vicar of Dollar. The following account of this interesting person is given by Dr. M'Cree: "The other person who suffered at that time was Thomas Forrest, commonly called the vicar of Dollar. I shall add some particulars concerning this excellent man, which are not to be found in the common histories. He was of the house of Forrest, or Forest, in Fife, and his father had been master-stabler to James IV. After acquiring the rudiments of grammar in Scotland, he was sent abroad by the kindness of a noble woman, and prosecuted his education at Cologne. Returning to his native country, he was admitted a canon regular of St. Colme's Inch. It happened that a dispute arose between the abbot and the canons, respecting the allowance due to them, and the latter got the book of foundation to examine into their rights. With the view of inducing them to part with it, the abbot gave them a volume of Augustine's works which was in the monastery. 'On happy and blessed was that book to me,' did Forrest often say, 'by which I came to the knowledge of the truth!' Having applied himself to the reading of the scriptures, he was the means of converting a number of the young canons; 'but the old bottles,' he used to say, 'would not receive the new wine.' The abbot frequently advised him to keep his mind to himself, else he would incur punishment. 'I thank you, my lord,' was his answer, 'ye are a friend to my body, but not to my soul.' He was afterwards admitted to the vicarage of Dollar, in which situation he rendered himself obnoxious to his brethren, by his diligence in instructing his parish, and his benevolence in freeing them from oppressive exactions. When the agents of the pope came into his bounds to sell indulgences, he said, 'Parish-louers, I am bound to speak the truth to you. There is no

DOLLAR-LAW, a mountain on the boundary-line of Drummelzier and Manor parishes in Peebles-shire. It rises 2,840 feet above the level of the sea, and commands an extensive view over the Lothians, Berwickshire, and Northumberland.

DOLLAS. See **DALLAS**.

DOLPHINSTON, a hamlet in the shire of Haddington, and parish of Prestonpans; 2 miles west of Tranent; on the high road from Edinburgh to Haddington. Here are the ruins of a family-seat of the Earls of Hyndford.

DOLPHINTON, a parish situated in the eastern part of the upper ward of Lanarkshire. It is bounded on the north by the parish of Dunsyre; on the west by Walston; and on the south and south-east by Linton and Kirkurd in Peebles-shire. It is a small parish, extending three miles in length, from east to west, by $2\frac{1}{2}$ in breadth, and contains 2,926 statute acres. It is in a high-lying district, and contains a mountain named Dolphinton-hill, which is computed to rise 1,550 feet above the level of the sea; and which may be considered to form one of the links of the great mountain-chain which binds the island from St. Abb's Head to Ailsa Craig. With the exception of a conical mount named Keir-hill, and Dolphinton above named, the most of the parish is arable, although the most of it lies at the elevation of from 700 to 800 feet above the level of the sea. The soil is generally of a dry friable earth or sandy loam. It is intersected by the road from Biggar to Edinburgh, and by the road to Peebles by Linton. Formerly, a weekly market and two annual fairs were held at Dolphinton; but these have long since fallen into desuetude; the corn, lint, wauk-mills, &c., which once existed in the parish, have also passed away; and, altogether, by comparing the present reality with charters still in existence, it would appear that the parish is now a place of much less consequence than it was in the olden time. Population, in 1801, 231; in 1831, 305.—Dolphinton is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Stipend £158 6s. 7d.; glebe £27 10s. The church is a very old building; sittings 140. Patron, Lord Douglas. The salary of the parochial schoolmaster is £26 per annum, with £12 of school-fees.—Dolphinton is understood to have received its name from the acquirement of the property by Dolphine, the eldest brother of Cospatrick, 1st Earl of Dunbar, sometime in the reign of Alexander I. How long it remained in the possession of Dolphine's descendants is not known, but it is certain that at an early period the manor and patronage of the church became a pertinent of the baronial territory of Bothwell. After remaining for a time in the possession of the house of Douglas, Dolphinton reverted to the Crown. In 1483, James III. presented it to Sir James Ramsay, one of the most accomplished of his favourites. After the assassination of James, Ramsay was denuded of the property, and James IV. conferred it, in 1488, on the master of his household, Patrick Hepburn, Lord Hales. In 1492, Hepburn exchanged Dolphinton and other lands, with the Earl of Angus, for certain territories in Liddesdale, including the important castle of Hermitage; but the superiority was still retained by the Hepburns till 1567, when it was for-

pardon for our sins that can come to us, either from the pope or any other, but only by the blood of Christ.' He composed a short catechism. It was his custom to rise at six o'clock in the morning and study to mid-day. He committed three chapters of the Bible to memory every day, and made his servant hear him repeat them at night. He was often summoned before the bishops of Dunkeld and St. Andrews. These facts were communicated by his servant, Andrew Kirkie, in a letter to John Davidson, who inserted them in his account of Scottish martyrs. An amusing account of the vicar's examination before the bishop of Dunkeld may be seen in Fox; and an interesting account of his trial in Pitscottie.—*Life of John Knox*, p. 388, last edition.

feited along with the other domains of the ambitious and unprincipled Earl of Bothwell. It afterwards passed into the hands of Francis Stewart, Earl of Bothwell, but again reverted to the Crown upon his attainer in 1593. Soon after this the ancestors of the present house of Douglas became proprietors of the manor. During a long series of years subsequently, however, and up till the middle of the 18th century, the most of the parish was owned by a family of the name of Brown, who were succeeded by marriage, in 1755, by Mr. Kenneth M'Kenzie. It is worthy of notice that Major Learmont, one of the pious and devoted soldiers of the covenant, possessed the property of Newholm, in the parish of Dolphinton, and was an elder in the congregation. After the battle of Pentland Hills—in which he commanded the horse, and only escaped after feats of the most desperate valour—his property was forfeited, but it was bought back by his relative, the laird of Wishaw, for behoof of his family. Notwithstanding that Learmont was one of those who were "hunted like partridges upon the hills," it was his lot eventually to escape his enemies, and he died peacefully in his 88th year in 1693. His remains rest in Dolphinton churchyard.*

DOLPHISTON, a small village in the shire of Roxburgh, parish of Oxnam. It is on the banks of the Jed, at the distance of $5\frac{1}{2}$ miles south-south-east of Jedburgh. Here is an ancient tower said to have been built by one Dolphus, from whom it took its name. The walls are from 8 to 10 feet thick, built of hewn stone, and so closely cemented with lime that it is found more difficult to obtain stones from it for building than from a quarry. It has been extensive, and divided into small apartments by stone partitions. Several vaulted apertures are in the middle of the walls, large enough for a small bed, and some of them so long as to be used by the tenants for holding their ladders. On a rising ground, a little to the south, there is an area of a chain square, which is said to have been a watch-tower or light-house, and seems to imply that Dolphiston tower had been used as a fort or place of refuge.

DON (THE), a river in Aberdeenshire, next to the Dee in note and magnitude; though, like it also, of little commercial importance. It rises on the skirts of Ben Aven, 6 miles west of Curgarff, amongst the mountains which bound Aberdeenshire on the south-west, at the head of Strath-Don, and which divide it from the head of Strath-Deveron in Banffshire. Its source is considerably lower than that of the Dee: the altitude is 1,640 feet above sea-level. Its course to a great distance, though not far from that of the Dee, is more towards the north where the country is more level: hence it assumes a character in almost every respect the reverse of the Dee. Running eastward in a very sinuous and by no means rapid course, through the whole breadth of the country, it flows into the German ocean on the north

* Regarding the perils and adventures of this pious soldier, the following facts are related: "For sixteen years every endeavour was made to secure the major's person, but he had a vault dug under ground which long proved the means of safety to him. It entered from a small dark cellar, which was used as a pantry, at the foot of the inside stair of the old mansion-house, descended below the foundation of the building, and issued at an abrupt bank of the Medwin, 46 yards distant from the house, where a feal-dike screened it from view. When the noise of the cavalry reached the major's attentive ear, the blade of the tongs was applied to a small aperture fitted for the purpose of raising a flat stone, which neatly covered the entrance to the vault; and before a door was opened the covenanters were safe. Tradition says that the man-servant was three times led out blindfolded to be shot, because he would not betray the secret. Learmont having again taken the field at Bothwell brig, exposed himself anew to the fury of the persecutors. By the treachery of a maid-servant he was at last apprehended, and ordered for execution; but the sentence of death was commuted for imprisonment on the Bass." [Note to New Statistical Account.]—The stones of this vault were long afterwards taken to build the garden wall, and no trace of it was of course found when Newholm-house was last rebuilt.

side of Aberdeen. Its whole course is about 62 miles; though, in a direct line from its source to its termination, the distance is only 41 miles. In its originative course through the parish of Strathdon, which it nearly divides into two equal parts, it is joined, from both sides, by 7 or 8 minor rivers or burns, separated from each other by considerable hills, and most of them running through deep hollows and glens. The principal of these are the Earnon and the Nochtie. All these burns abound with excellent trout; and salmon is even here very frequently found in the Don, at least towards the lower end of this parish. Turning northwards, and dividing for a short distance the parish of Glenbucket from part of Migvie, it receives from the latter the Deskry, and from the former the Bucket. Then again flowing eastwards, it passes through the parish of Towie; and winding northwards, reinforced by other tributaries, round Gorieshill, it at once becomes remarkably enlarged near Westside, after which it resumes its eastern route, dividing various parishes, particularly Forbes and Alford, from the latter of which, on the south, it derives the waters of the **LOCHEL**, the most considerable tributary it has yet received: see that article. In passing hitherto through the high parts of the district of Alford, the Don flows through a narrow gullet amongst the western mountains, while its banks are now partly wooded. Perpetually changing its course to the north and even the west, to the east and then through Monymusk parish to the south, the next considerable tributary which there enlarges it is the Ton burn from the south, when immediately it turns to the north again between Kemnay and part of Chapel-Garioch parishes, and arrives at a point a little to the south of the royal burgh of Inverury, where, on its northern bank, stands the Roman Catholic college of Aquhories, a beautiful and delightfully situated edifice. This point is about 16 miles from the mouth of the river, and its vicinity constitutes, perhaps, the most interesting as well as important part of its whole course. Here, at the Bass, a conical mount of considerable elevation standing in the midst of the confluence, it is joined by its principal tributary the river Urie, from the district of Strathgibie. See articles **BASS OF INVERURY** and **THE URIE**.

The Don, here very much increased by the water of the Urie, notwithstanding the previous diversion of a large portion of its waters into the Inverury canal, flows southward from the Bass, between the parish and the low lands of Kintore on the south, and the mountainous part of Keithhall with Kinkell on the north. It divides, for a short distance, into two branches, which reunite, enclosing a river-island to the north of the royal burgh of Kintore. Between Fintry and Dyce it is bordered by mountains on both sides, with valuable plantations on the northern or Fintry side. It then runs southwards, still dividing the parishes on its line, to old Machar parish in the freedom of the city of Aberdeen, whence it turns to the east, by the city or old town, to its confluence with the sea, little more than a mile to the northward of the Dee, where it forms a kind of harbour, into which small craft may enter in safety, but where no trade of any importance can be carried on.*

As this river runs with considerable rapidity during the last 8 miles of its course, and as the rocks at its mouth confine it to a narrow channel, and give it

there a gloomy aspect, the idea of its flowing rapidly through a rugged and mountainous country, where no space is left for forming even a commodious road along its banks, is at first induced; but after passing upwards for about a mile beyond the rocky chasm where was built the spacious, stately, and attractive Gothic arch, constituting the celebrated **BRIG O' BALGOWNIE** [which see] and up to whose locality alone the Don is navigable even for small craft, the hills recede so far from the river as to form spacious haughs or level valleys on either side, through which it winds in a slow majestic course for many miles. Nor is the prospect here uniform, but agreeably diversified; the hills above Inverury approach close to the river, which seems to have forced its way with difficulty through them, but all at once it opens into another spacious plain, from which the hills recede on either hand to a great distance, and then close again; and, after another temporary confinement among rocks and hills and woods, the river once more waters another plain of great extent. Such is the general character of the Don,—nowhere rapid, but in general flowing through level fields so little elevated above its usual surface, that, when violent rain falls, it bursts its bounds at once, and covers a great extent of country, which then appears to be an immense body of water interspersed with islands, houses, trees, and other rural objects. Too often on these occasions it commits extensive and calamitous depredations,—sweeping off whole fields of corn, and leaving nothing behind but want and desolation. The havoc it occasioned in August, 1829, will not be soon forgotten. Yet still its vales are so fertile, and the crops they yield so early and so excellent, since 'a rood o' Don'—as our readers have already been informed—is 'worth twa o' Dee,'—that the husbandman is again and again tempted to risk his all on these precarious fields.

The Don has some valuable salmon-fishings, though by no means so valuable as those of the Dee. A statement of the actual quantity caught in either river, apart from the produce of the sea in this vicinity, cannot however be given, as the Don fishings are held by individuals who have also other fishings, and are without any particular motive for distinguishing the portion contributed by each. The fishing of a small space of the Don's banks, however, not more than 300 or 400 yards in length, was not long ago rented at £2,000. The coast of Don river is fished by cruives, hang-nets, net and coble, stake-nets, and bag-nets. The average produce of the salmon and grilse fisheries on this river, for seven years previous to 1828, was 299 barrels; but the average for the seven subsequent years rose to 419 barrels. Between the years 1790 and 1800, the yearly average number of salmon and grilse, caught in the Don, amounted to 43,240; while 36,240 was the average number caught in the Dee during the same period. But between 1813 and 1824, while the average number of fish caught in the Don was 40 677, the average of the Dee fishings was 51,862.

DONAN CASTLE. See **KINTAIL**.

DOON (THE), a river which traverses Ayrshire, and, during the whole of its course in that county, forms the boundary-line between the districts of Carrick and Kyle. It is popularly said to originate in Loch Doon, but really rises in two mountain-streams from which that lake receives its principal surplus waters. One of these streams, called Gal-

* "About a century ago," says Mr. Kennedy in his 'Annals of Aberdeen,' "the channel of the Don near the town was altered, and the stream diverted straight into the sea about a mile further northward than its ancient efflux." In a note, he adds, "Probably at some very remote period, Don had continued its former course still further southward down the hollow of the links, till it united with Dee in the harbour, and both together

would form one stream into the ocean. Such conjecture is in some measure confirmed by the works of Ptolemy and Richard of Cirencester, there being no such river as Don delineated in their maps, or even mentioned in their tables, while Diva (Dee) and Ituna (Ythan) in the district of the Taixali, are particularly noticed. In the earlier records of the burgh, the river Don is distinguished solely by the name of Aqua Borealis."

low-lane, wells up among the broad boundary mountain-ridge of Kirkcudbrightshire, within half-a-mile of the remote source of the Galloway Dee; the other, called Eagton-lane, issues from Loch Enoch, at the boundary between Kirkcudbrightshire and Ayrshire; and both pursue a northerly course of about 7 miles, till, at its southern extremity, they fall into Loch Doon. At the northern extremity, whence the united streams now called the Doon emerge, two tunnels, cut out of the solid rock, receive the river, [see next article,] and pour it impetuously down into a deep gorge 300 feet deep, only about 30 feet wide, and a mile in length. For 2 miles from the loch, the river flows due north; and it then bends gradually round, and, for about 7 miles, flows to the north-west. Over all this distance, with the exception of the fine vale of Dalmellington on its northern bank, the grounds which press upon its verge are, for the most part, heathy or unwooded knolls and hills of chilly and uninviting aspect. About 2 miles below Patna it again bends, and, over a distance of 5 miles, flows westward; and then, a little below Cassilis-house, flows northward and to the north of west, till it falls, 3 miles south of Ayr, into the frith of Clyde. But, over its whole course from below Patna to its embouchure, it describes numerous curvatures, sinuously wending round many a sylvan knoll, and rioting at will among the beauties of a dely and undulating landscape. Here its channel is, for the most part, ploughed into a huge furrow from 10 to 200 feet, and, at the top, from 30 to 150 yards wide, the sides of which are richly clothed in natural wood and plantation. Such especially is its appearance both above and below the point where the river is spanned by 'the Auld Brig o' Doon,' and flows past 'the haunted kirk of Alloway,' and over all the space which was most familiar to the eye of the Ayrshire bard.

DOON (LOCH), a lake in Ayrshire, about 22 miles from the town of Ayr, and 4 miles from the village of Dalmellington. It discharges its waters by that romantic stream, the water of Doon, whose 'banks and braes' have been rendered classic by the poetic pen of our Scottish bard; and near the margin of which his countrymen have reared a monument to his memory worthy of one of Scotland's greatest sons. Loch Doon is about 8 miles in length, and from half-a-mile to three quarters in breadth. Its form is nearly that of the letter L; the head of the lake corresponding with the top of the letter, and its lower extremity—where it discharges its waters—with the end of the horizontal line at the bottom. The shores of this lake are wild and solitary, and almost entirely devoted to sheep-pasture. The mountains which enclose it are in many places of considerable height, especially at the top of the lake where they may be said to be lofty, and where their outline is varied and beautiful. These are the Star mountains, on the borders of the stewardry of Kirkcudbright, and from the base of which on this side, the Doon may be said to take its rise; while the Dee, which flows into the Solway frith, takes its rise on the opposite side.* The level of the waters of this lake has been considerably lowered from what it formerly was by the operations of the proprietors, and a portion of its bed laid dry. This—as in the case of Loch Leven in Kinross-shire—has lessened unquestionably the beauty of the scenery, by the exposure of tracts of barren sand and gravel, formerly covered with water; and—like the operations in Kinross-shire—has afforded no very useful result,

* There is a singular coincidence between the names of these two rivers, the Doon and the Dee, which thus have their origin so near, and those of the Don and the Dee, neighbour streams in Aberdeenshire.

so far as the ground on the shores of the lake is concerned. But, unlike those of Loch Leven, the operations on Loch Doon were not for the purpose of receiving ground; they had a more useful object in view, and have been attended with more beneficial results. Along the banks of the river Doon there are some very extensive tracts of meadow-ground, which were, after heavy rains, liable to be overflowed by the accumulated waters from the lake. By perforating a bed of rock over which the lake used to discharge itself, and forming tunnels, the usual level of its waters has been lowered; and, by erecting sluices, the proprietors are enabled to regulate the quantity of water which flows into the river, and thus to prevent the damage to the grounds upon its banks which used formerly to occur. These operations were executed by the Earl of Cassillis, and the late Mr. M'Adam of Craigengillan, the proprietors of the lands on either side of the lake.—On a small island at the head of Loch Doon are the ruins of an ancient castle: it is constructed of large square stones, and appears to have been a lofty tower of an octangular form. Of the history of this structure, or its origin, we have not been able to obtain any satisfactory account. The island, however, which is nearest to the Carrick side of the lake, now belongs to the Earl of Cassilis. In the early part of the 13th century, the lands of Straiton—which are bounded by a part of the lake—were held by John de Carrick, a son of Duncan, Earl of Carrick. This baron was engaged, in 1235, in a rebellion of the Gallowaymen, and committed injuries on several churches within the diocese of Glasgow, which subsequently cost him a grant of part of his lands, and the patronage of the church of Straiton; but whether he or his successors had any connection with the castle on the island, we have been unable to ascertain. In 1823, several boats or canoes of great antiquity were found sunk in the lake near this island. They were all formed entirely from a single oak-tree, hollowed out; and were shaped somewhat like a fishing-cobble. Three of them were raised, and two of them are still preserved here; and for that purpose have been sunk in a pool of water, a short way from the margin of the lake. One of these measured 20 feet in length, by 3 feet 3 inches broad; the second, 16½ feet, by 2 feet 16 inches; the third, 22 feet, by 3 feet 10 inches. They are supposed to have lain in the water between 800 and 900 years. These having been found near the castle, would lead us to suppose that they had been in some way connected with it; but their construction is certainly to be attributed to an earlier people than those by whom the castle was built. After leaving the lake, the water of Doon flows for about a mile through a narrow gully or ravine, the scenery of which is very remarkable. A lofty ridge of hills seems here to have been rent asunder to afford an exit to the waters of the lake; and the rocky walls, which enclose this singular hollow, yet exhibit marks on either side of their former proximity. A walk has been constructed along the edge of the river, throughout the whole length of this ravine, by which an easy opportunity is given to strangers of viewing its romantic and picturesque scenery. On either hand, the rocks rise to a great height, almost perpendicular, but rugged and broken, and having their sides and their summits magnificently festooned and ornamented with a great variety of copse and trees. The scenery is all of a close character, but varied and interesting, changing with every turn of the walk; now presenting a rude vista of rock and wood, and again a mural precipice which seems to bar farther progress; while the effect of the whole is heightened by the music of the river rushing along its broken channel,

and the winds among the branches of the trees, which, "in the leafy month of June," almost exclude a sight of the sky.

DORARY, a piece of hilly ground in the shire of Caithness, though locally situated in the shire of Sutherland. It belongs to the parish of Thurso, although it is not within 4 miles of any part of that parish. It is a part of the bishop's lands, and was a shieling belonging to the bishops of Caithness. The walls of the old chapel, called Gavin's Kirk, or Temple-Gavin, are still standing. The view from its summit is very grand, and extensive.

DORE HOLM, one of the Shetland isles; constituting part of the parish of Northmaven. It is situated in a spacious bay to the southward; and derives its name from a remarkable arch which passes through its centre, which is so lofty and capacious as to admit the boatmen to fish under it, and is lighted by an opening at the top.

DORES, a parish in Inverness-shire, on the banks of Loch Ness, which bounds it on the west side. On the north it has Inverness; on the east Daviot; and Boleskine on the south. It extends 25 miles in length, and about 3 in average breadth. A district of the parish, containing about 20 inhabitants, lies territorially within the parish of Boleskine. The surface is mountainous, having a narrow valley running nearly the whole length of the parish. The soil is light. The proportion of arable land is very small, by far the greater part being fit only for sheep-pasture. Besides **LOCH NESS**, [see that article,] which with its environs furnishes a beautiful landscape, there are two or three smaller lakes in the district which abound with trout. At the distance of 3 miles from Loch Ness are the vestiges of a fort called Dun-Richuan, or 'the Castle of the King of the Ocean,' a name which it is supposed to have received at a period when the king of Norway and Denmark was master of the sea. A little to the east of this fort there are several cairns, and one almost equal in size to all the rest: Tradition says, that Fingal here engaged in battle Ashi, the son of the king of Norway, and killed him, which gave the name of Drum-Ashi, or 'Ashi's hill,' to the scene where this event happened. About 9 miles distant, there is another fort called Dun-Dardell, which is said to have been one of the many forts in the great valley, extending from the German ocean at Inverness, to the Atlantic at Fort-William, that were intended for making signals, by fire, of the enemy's approach, during the times of the Danish and Norwegian incursions. The rocky ground under this fort is particularly grand. Population, in 1801, 1,313; in 1831, 1,736. Assessed property, in 1815, £3,264. Houses 365.—This parish is in the presbytery of Inverness and synod of Moray. Patron, the Earl of Cawdor. Stipend £141 2s. 8d.; glebe £8 3s. 4d. Unappropriated tithes £18 17s. 9d. Church built in 1827–28; sittings 500. There is a preaching-station at Torness, in the district of Stratherrick, in the south-western extremity of the parish.—Schoolmaster's salary £30, with £10 fees. There are 2 private schools.

DORLIN FERRY. See **MORVERN**.

DORNIE. See **KINTAIL**.

DORNOCH,* a parish in the county of Suther-

land, extending 9 miles along the frith of Dornoch, and from north-west to south-east about 15 miles. It is bounded on the north by Rogart, and by the Loch of Fleet, which separates it from Golspie; on the south-east and south by the Dornoch frith; and on the west by Crieich. The district of Kainauld and Rhimusaig is isolated from the rest of the parish by the Fleet, and surrounded by the parishes of Golspie and Rogart. The shores are flat and sandy, but the surface gradually rises as it approaches the hilly districts towards the north and west. The soil is sandy, approaching to loam as it recedes from the coast. The small river Evlix or Evelicks, which rises in Strath Achvaich, and falls into the frith near the Meikle-ferry, after a course of 9 miles, affords a few salmon and trout. In the hilly district there are three or four small lakes, the largest of which is about a mile in length. There are several quarries of whinstone, and one of excellent freestone near the town of Dornoch. Upon an eminence not far from the Little ferry, is the old castle of Skelbo. Not far from the Earl's cross, mentioned in a previous note, is the spot where an unhappy creature was burned in 1722, for the imaginary crime of witchcraft, in transforming her daughter into a pony, and getting her shod by the Devil! This was the last instance of these frantic executions in the North of Scotland; as that, in the South, was at Paisley, in 1697.† Population of the town and parish in 1801, 2,362; in 1831, 3,380. Houses, in 1831, 628. Assessed property £3,484. Besides the town of Dornoch, there are two villages within the parish,—the fishing village of Embo, with a population of about 200, and the inland village of Clashmore, which is not so large.—This parish is in the presbytery of Dornoch and synod of Sutherland and Caithness. Patron, the Duke of Sutherland. Stipend £266 15s. 4d.; glebe £10. The parish-church is the renewed cathedral church of Dornoch described in the following article. Sittings 900.—Schoolmaster's stipend £36 6s. There are 6 private schools.

DORNOCH, a royal burgh in the above parish, is situated on the north coast of the frith of Dornoch, nearly opposite to the burgh of Tain, which lies on the south side of the frith. It is 201 miles north by west of Edinburgh; and 12 south-west of Golspie. The population, in 1831, was 504; the number of houses 109; and the assessed property, in 1815, £3,180. Although within a mile of the Great North road, the municipal commissioners report that "there appears to be no inducement for so altering the line as to make that road pass through the town." It is

While he singled out the Danish general, and gallantly fought his way onward, the Thane being by some accident disarmed, seized the leg of a horse which lay on the ground, and with that despatched his adversary. In honour of this exploit, and of the weapon with which it was achieved, this place received the name of *Dorniech*, or Dornoch, as it is now called. This tradition is countenanced by the horse-shoe, which is still retained in the arms of the burgh. In memory of the same event, a stone pillar was erected on the spot, supporting at the top a cross encompassed by a circle, which went under the name of the Earl's cross. Standing on a sandy hillock, it was gradually undermined by the winds; several years ago it tumbled down, and was broke to pieces; at present, only scattered fragments of it remain." [Old Statistical Account.]—This cross has recently been repaired and re-erected.

† Neither England nor Ireland was much in advance of Scotland in respect of this miserable superstition. In 1698, a girl, nineteen years of age, in the town of Antrim, having eaten a loaf of sorrel which she got from a woman reputed to be a witch, fell into convulsions and vomiting. She is said to have vomited horse-dung, needles, pins, feathers, bottoms of thread, pieces of glass, nails, an iron knife above a span in length, egg-shells, &c. The accused was immediately committed to the county-prison, and at the assizes held soon after, only nine years of age! were hanged at Huntingdon, for selling their souls to the Devil, and tormenting and destroying their neighbours, by making them vomit pins, and raising a storm! The act against witchcraft was repealed in England and Scotland about 1750, but not in Ireland until 1821!

* "The town and parish of Dornoch derive their name from the Gaelic words *Dorn-Eich*, which signifies 'a horse's foot' or 'hoof;' concerning which the current tradition is as follows. About the year 1259, the Danes and Norwegians, having made a descent on this coast, were attacked by William, Thane or Earl of Sutherland, a quarter of a mile to the eastward of this town. Here the Danish general was slain, and his army beaten, and forced to retire to their ships, which were not far distant. The Thane greatly signalized himself upon this occasion; and appears, by his personal valour and exertion, to have contributed very much to determine the fate of the day

literally a village, consisting of a church, a gaol, and a very few houses; and has been decreasing for several years, although it is the county-town, and the seat of the sheriff-depute. By charter of Charles II., dated July 14th, 1628, Dornoch was erected into a royal burgh, with the ordinary privileges, but a reservation in favour of the Earl of Sutherland's hereditary rights. The town-clerk reports that "the family of Sutherland have, and especially of late have claimed, as interjected superiors, a right to certain feus within what is termed the royalty of the burgh of Dornoch, but the declarant has no access to know on what written title this right is founded; and it consists with his knowledge that there are various tenements within the burgh who still hold by written titles, in burghage of and under the magistrates as superiors, and in feft by hasp and staple." The revenue of the burgh is £3 15s. To manage this large income, there are 14 councillors, over whom the Duke of Sutherland, the wealthiest nobleman in Britain, is provost! It was formerly governed by a provost, 4 bailies, a dean-of-guild, treasurer, and 12 councillors. Along with Tain, Dingwall, Wick, Cromarty, and Kirkwall, it unites in sending a member to parliament. Its parliamentary constituency, in 1839, was 22. The property of the burgh consists of the links in the neighbourhood, which, for the year 1832-3, were let by public roup, for the sum of £2 1s. A right to a salmon-fishing appears also to have been claimed, but never to have been rendered effectual. The rest of the annual income is derived from custom and market-dues. Small, however, as the revenue is, no debts are owing by this burgh; and no taxes or assessment are imposed. A claim is made for a very extensive and apparently undefined royalty, greatly exceeding the parliamentary boundaries; but the territory over which jurisdiction has been exercised is understood to be limited to what may be called the burgh proper. The magistrates appoint the town-officers and gaolers. The salaries are, town-clerk, £5 3s. 4d.; head-gaoler, £20; and under-gaoler, £15. These salaries are paid out of the common good, as far as it will go; but, it being inadequate, the difference has for many years been made up by the Duke of Sutherland. The burgh has no church or school patronage. There being no privilege attached to burghship, there are no burgesses.—Dornoch was formerly the seat of the bishop of Caithness. The precise time of the erection of the see is not ascertained. Andrew, bishop of Caithness, is witness to a donation by David I. to the monastery of Dunfermline. He was bishop here in 1150, and is probably the first of whom there is any authentic account. In 1222 Gilbert Murray was consecrated bishop here. While yet a young man, and a canon of the church of Moray, Murray greatly distinguished himself in behalf of the independence of the Scottish church. Attempts had been made to bring the clergy of that church under the jurisdiction of the Archbishop of York. The project was not only patronized by the King of England, but favoured by the Pope's legate, who held a convention on the subject at Northampton, in presence of the Kings of England and Scotland, in 1176. Murray was one of the inferior clergy, who attended the Scottish bishops cited by the legate on this occasion. After the legate had addressed a speech to the convention, warmly recommending the measure in contemplation, a long silence ensued,—the bishops of Scotland being intimidated by the legate's presence and authority. At length, Murray arose, and asserted the independence of his church, in terms of such manly determination and vigorous eloquence as at once revived the courage of his associates, and extorted the applause of his adversaries; whereupon

the legate, apprehending that he had spoken the prevailing sentiments of his country, broke up the assembly. The young orator was, on his return home, universally caressed, and afterwards promoted to the see of Caithness. He built the cathedral of Dornoch; and died at Scrabster, in Caithness,—where the bishops had also a residence—in 1245. A statue of him is still shown in the church here, under the name of St. Gilbert; but it is not entire. The last bishop, Andrew Wood, was translated here from the Isles, in 1680, and remained till the Revolution.—Some writers tell us, that Dornoch was also the seat of one of the monasteries of the Trinity, or Red Friars, otherwise called Mathurines,—from their house at Paris dedicated to St. Mathurine. The great professed object of the institution of this order appears to have been the redemption of Christian captives; to which purpose a third part of their revenue is said to have been destined. "Tertio vero pars," says their constitution, "reservetur ad redemptionem captivorum, qui sunt incarcerationati, pro fide Christi, a Paganis." Of 13 of these monasteries, which are said to have subsisted in Scotland at the Reformation, one was at Dornoch, founded in 1271 by Sir Patrick Murray. Not the smallest vestige of the building, however, can now be traced; the very site of it is unknown at this day. The lands belonging to the ministry of Berwick were given to this place, after that city had fallen into the hands of the English.—Here stand the ruins of the bishop's castle, which appears to have been a stately and sumptuous edifice. The two upper stories of an old tower, formerly a part of the palace, have been converted into a county-gaol.—About the year 1567, George, Earl of Caithness, who claimed the wardship of Alexander, Earl of Sutherland, then a minor, had got the person of the latter into his possession. A tribe of Murrays, inhabiting this part of the country, who were firmly attached to the noble family of Sutherland, and beheld the conduct of Caithness with a jealous eye, contrived to get the minor conveyed from Caithness, and put under the protection of the Earl of Huntly. Caithness in revenge invaded this country, by his son John, who invested the town and castle of Dornoch, of which the Murrays had possessed themselves. Several skirmishes took place with various success. The Murrays, no longer able to maintain the ground they had occupied, retired to the castle. Upon this the master of Caithness burnt the town and cathedral; but the besieged defended themselves in the castle for a month longer. At length, however, they were obliged to capitulate, having undertaken to depart out of Sutherland within two months, and delivered three hostages into the hands of the conquerors. The Murrays fulfilled their engagement; yet the hostages were treacherously murdered.—The fine church of Dornoch stands in the centre of the little town. It is as nearly as possible a fac simile of the old cathedral, the proportions and elaborate decorations having been carefully copied. It cost £6,000, which was solely defrayed by the Duchess-countess of Sutherland. Unfortunately, it has so loud an echo inside, that the minister's voice is nearly unintelligible to a part of the congregation.

DORNOCH FRITH (THE), sometimes called the frith of Tain, is that arm of the sea which divides the southern parts of Sutherland from the county of Ross. The entrance of this frith is nearly 15 miles wide, but gradually becomes narrower, till, about 3 miles west of the town of Dornoch, its breadth is not more than 2 miles. Here is a ferry called the Meikle-ferry. After this it becomes much wider, forming an inner harbour or bay where another ferry is established, called the

Little-ferry. At this ferry is an excellent roadstead, where vessels of considerable burden can lie at anchor; but a bar runs across the entrance. On the Sutherland coast, too, in calm weather, vessels of small burden may lie in safety; but a formidable bar extends from this coast almost to the south side of the frith, called, from the incessant noise, the Gizzing Briggs. The banks, however, forming this bar, are not so closely connected but that vessels may enter with safety under the direction of a pilot. The shores produce shell-fish, and the banks abound with cod and haddocks; but no vigorous exertion has been made to render these fisheries an object of importance.

DORNOCK,* a parish on the Solway frith, in the district of Annandale, Dumfries-shire. A small part of it, in the form of a pentagon, and containing an area of about a square mile, is detached from the main body, and lies about $\frac{1}{2}$ a mile to the north, bounded on the west by Annan, and on the other three sides by Kilpatrick-Fleming. The main-body, which also is pentagonal, is bounded on the north-east by Kirkpatrick-Fleming; on the east, by Gretna; on the south by the Solway frith; and on the west and north-west by Annan. The extreme length of the parish, including both parts, but not the intermediate space, is 4 miles; its extreme breadth $2\frac{1}{2}$ miles; and its area 3,880 acres. Nearly the whole surface is cultivated, and well-enclosed. The soil, in general, is loam on brick earth; and, though rather damp in winter, is productive of luxuriant crops. Neither coal nor limestone has been found; but freestone is plentiful. A brook rises in Robgill-moss, a small bog in the northern or detached part, and traverses the main-body through nearly its centre. Perennial springs of the purest water abound. Kirtle water washes the north-east boundary, and contains a few trouts, eels, pike, and perch. The coast is about $2\frac{1}{2}$ miles in extent, and is low and sandy. The Solway frith is here 2 miles wide, and fordable during the recess of the tide. Fearful accidents, however, are liable to assail any passenger not intimately acquainted with the peculiarities of the path. The tide flows with the rapidity of a race-horse, and comes careering along with a breast of waters 4 or 5 feet high. Great quantities of salmon, grilse, and flounders, are here caught, chiefly by means of trap-stake-nets, and sent off to the market of Carlisle. The parish is traversed from east to west by the great road from Carlisle to Port-Patrick; and is otherwise well-provided with means of communication. As to antiquities, there are remains of a Roman military road, a druidical temple, and a strong square tower,—the last is on the estate of the Marquis of Annandale. Various and remarkable tomb-stones, one or two of considerable antiquity, are to be seen in the burying-ground. On what was anciently a moor in the parish, a battle is traditionally said to have been fought between the Scotch and English, the former commanded by Sir William Brown of Coalston, and the latter by Sir Marmaduke Langdale and Lord Crosby. The English, it is said, were defeated, and both of their commanders slain, and afterwards interred in Dornock churchyard. Two stones, each $6\frac{1}{2}$ feet long, 2 broad, and raised in the middle like a coffin, mark the place of the reported interment. On the sides of these tombs are cut hieroglyphics, like the broad leaves of plants, and other antique figures quite unintelligible. A spring-well on the spot where the battle was fought, is still called Sword-well, and probably acquired the

name from some swords of the defeated having been found in its vicinity. The village, or hamlet of Dornock, a poor and unimportant place, stands on the great highway, $\frac{3}{4}$ of a mile from the shore. Population of the parish, in 1801, 788; in 1831, 752. Houses 148. Assessed property, in 1815, £4,135. —Dornock, formerly a rectory, is in the presbytery of Annan, and synod of Dumfries. Patron, the Duke of Buccleuch. Stipend £208 3s. 6d.; glebe £25. Church built in 1793; sittings 300.—Schoolmaster's salary £34 4s., with £24 other emoluments. There are 2 schools non-parochial.

DOUGLAS, a large parish in the upper ward of Lanarkshire; bounded by the parish of Lesmahagow on the north and north-west; Carmichael and Wiston on the east; Robertson and Crawfordjohn on the south-east and south; and Muirkirk in Ayrshire on the west. In length it extends upwards of 12 miles, and varies from 4 to 7 in breadth. According to the New Statistical Account, its superficial area contains about 28,004 Scots acres, of which 3,816 are arable, 22,376 pasture, 1,492 wood, and 320 flow-moss. It is watered by the Douglas, which rises in Cairntable, and after a course of about 16 miles, falls into the Clyde, and greatly swells the volume of its waters. The Douglas water in its course receives several streamlets, which lend beauty if not fertility to the parish; the names of which are the Peniel, Monks, Podowrin, Kinnox, Glespin, Parkburn, and Craighburn. The aspect of the parish is one which possesses in a considerable degree the elements of rural loveliness, presenting as it does all the pleasing alternations of hill and dale, woodland and streamlet. Cairntable rises to the height of more than 1,600 feet above the level of the sea, and generally the parish is high-lying, none of it being at a lower elevation than 650 feet above the sea-level, and nearly 40 miles distant from the coast in every direction. As has been stated, by far the larger portion of the superficies of the parish is laid out for pasture, and the stock of sheep which it maintains is estimated at nearly 16,000 head. "The winds generally blow impetuously about the time of the equinox, and frequently in autumn shake a deal of corn. They blow mostly from the south-west, which being the direction of the river, and the banks high on each side, what would be accounted a moderate breeze in other places, is here often a kind of hurricane." [Statistical Account of 1792.]—But although this is a district of which it may be occasionally said, that

"Winter lingering chills the lap of May,"

it is an extremely healthy one, and instances of longevity among the inhabitants are frequent. The parish is rich in mineral wealth, and such is the thickness and abundance of the seams of coal, that the supply, it has been stated, will be exhaustless for centuries. Much of it is sold out of the parish to a considerable distance. Limestone and freestone are worked, and the presence of ironstone has been ascertained. In the year 1792 a small cotton spinning and weaving factory was established at Douglas village, by a Glasgow company. After having been in existence for a few years, it was discontinued; but a manufacturing connexion having been then formed with Glasgow, it is still kept up, and the greater portion of the inhabitants of the village of Douglas are employed in the trade of handloom weaving. In early times the village of Douglas, in addition to being a burgh-of-barony, was a place of considerable importance, and its magistrates possessed the power of life and death over culprits; but, like many other towns in Scotland which basked in the sunshine of a feudal chief, it has survived its pristine dignity. The post road from Edinburgh to Ayr by Carnwath,

* The name is derived either from the Gaelic *Durnoched*, which signifies 'the bare or naked water,' or from *Dor* or *Dor*, 'an oak,' and *noek*, 'a knoll or hill,' signifying jointly, 'an oak-covered eminence.'

Muirkirk, and Cumnock, passes through the parish from east to west; and the Great London road from Glasgow to Carlisle runs through it for 7 miles from north-west to south-east. The most prominent feature in the parish is Douglas castle, the princely residence of Lord Douglas. It was built by the last Duke of Douglas, shortly after the conflagration of the former castle, in 1760. At the time of his lordship's death only one wing had been completed; but even in this state the building is a stately one, and has a noble appearance. Independently of the intense historical interest which must ever attach to the residence of "the Douglas," there is a melancholy association connected with Douglas castle, as being the scene of "Castle Dangerous," the last novel of Sir Walter Scott, and the last place to which he made a pilgrimage in Scotland. The preface to this work was transmitted by Sir Walter from Naples in 1832, and contains the following passage:—"The author, before he had made much progress in this, probably the last of his novels, undertook a journey to Douglasdale, for the purpose of examining the remains of the famous castle, the kirk of St. Bride of Douglas, the patron-saint of that great family, and the various localities alluded to by Godscroft, in his account of the early adventures of Good Sir James; but though he was fortunate enough to find a zealous and well-informed *cicerone* in Mr. Thomas Haddow, and had every assistance from the kindness of Mr. Alexander Finlay, the resident chamberlain of his friend Lord Douglas, the state of his health at the time was so feeble that he found himself incapable of pursuing his researches, as in better days he would have delighted to do, and was obliged to be contented with such a cursory view of scenes, in themselves most interesting, as could be snatched in a single morning, when any bodily exertion was painful. Mr. Haddow was attentive enough to forward subsequently some notes on the points which the author had seemed desirous of investigating; but these did not reach him until, being obliged to prepare matters for a foreign excursion in quest of health and strength, he had been compelled to bring his work, such as it is, to a conclusion. The remains of the old castle of Douglas are inconsiderable. They consist, indeed, of but one ruined tower, standing at a short distance from the modern mansion, which itself is only a fragment of the design on which the Duke of Douglas meant to reconstruct the edifice, after its last accidental destruction by fire. His Grace had kept in view the ancient prophecy, that, as often as Douglas castle might be destroyed it should rise again in enlarged dimensions and improved splendour, and projected a pile of building, which, if it had been completed, would have much exceeded any nobleman's residence then existing in Scotland; as, indeed, what has been finished, amounting to about one-eighth* of the plan, is sufficiently extensive for the accommodation of a large establishment, and contains some apartments the extent of which are magnificent. The situation is commanding; and though the Duke's successors have allowed the mansion to continue as he left it, great expense has been lavished on the environs, which now present a vast sweep of richly undulated woodland, stretching to the borders of the Cairntable mountains, repeatedly mentioned as the favourite retreat of the great ancestor of the family in the days of his hardships and persecution. There remains at the head of the adjoining *bourg*, the choir of the ancient church of St. Bride, having beneath it the vault which was used,

till lately, as the burial-place of this princely race, and only abandoned when their stone and leaden coffins had accumulated, in the course of five or six hundred years, in such a way that it could accommodate no more. Here a silver case, containing the dust of what was once the brave heart of Good Sir James, is still pointed out; and in the dilapidated choir above appears, though in a sorely ruinous state, the once magnificent tomb of the warrior himself."—The old church of Douglas was called St. Bride, from being dedicated to St. Bridget or St. Bride. It is a place of great antiquity, and the spire and aisle which was used as the burying-place of the family of Douglas, are still preserved. The new burying-place is beneath the present church, and contains the coffins of the last Duke and Duchess of Douglas, the late Lord Douglas, and others of his kindred. The monuments in the old kirk of St. Bride's are said to have been wantonly mutilated by a party of Cromwell's troopers, who made the edifice a stable for their horses, and at a still later period by the mischievous propensity of the boys of the place, who for a length of time had free access to the aisle. Even in their mutilated state some of the monuments are exquisitely beautiful, and Sir Walter Scott says of the tomb of the Good Sir James, that "the monument, in its original state, must have been not inferior in any respect to the best of the same period in Westminster abbey." The parish of Douglas is celebrated in another respect than from its association with the noble family of that name; for it was upon Auchinsnaugh hill, within its bounds, that the covenanters met, on the 26th of July, 1712, and engaged in a formal renewal of the solemn league and covenant. It was in this place, too, that the Cameronian regiment—now the 26th of the line—was imbodyed in defence of the Protestant government of the Prince of Orange. They were mustered on a field near the town of Douglas, in April, 1689, under the command of Lord Angus, eldest son of the Marquis of Douglas.—Douglas forms part of the presbytery of Lanark, and synod of Glasgow and Ayr. According to the earliest record, this parish belonged to the monks of Kelso, from whom it passed into the hands of the Douglas family, and the patronage has been retained by them from the 12th century to the present time.—Lord Douglas being proprietor of nine-tenths of the parish. The rectory of the parish was established as a prebend of the cathedral church of Glasgow, previous to 1500, and at the Reformation was held by Archibald Douglas, at which time the benefice was valued at £200 yearly. This person was actively concerned in the murder of David Rizzio, and afterwards obtained a pardon for his crime. In 1568 he was appointed a lord of session by the Regent Murray, in the room of Leslie, Bishop of Ross, who was dismissed. Population, in 1801, 1,730; in 1831, 2,549, of whom about one-half reside in the village. The valued rental is £3,989 3s. 6d.; the real rental nearly £8,450. It is made up as follows: £3,816 from arable land; £4,134 from pasture; and about £500 from minerals. Stipend £250 7s. 6d. Unappropriated tithes £135 11s. 2d. Patron, Lord Douglas. The manse was built in 1828. There is a Secession church,* and a Cameronian meeting-house in the parish. The salary of the parochial teacher is £34 4s. with school-fees. There are 3 other schools, not parochial, in the parish.

The whole family of Douglas, "whose coronet so often counterpoised the crown," and which has so closely linked the district of Douglasdale to Scottish story, is said to have been founded by Theobald, a Fleming, who acquired these lands at a very early period. The first great man of the house, however,

* It is possible that in this statement Sir Walter may have been mistaken or misinformed, for in the New Statistical Account, the minister of the parish states the portion erected comprises two-fifths of the original plan.

was "the Good Sir James," who was the friend and companion of Robert the Bruce in his valorous efforts to achieve the independence of Scotland. His own castle of Douglas had been taken and garrisoned by the troops of Edward I., and he resolved to take it, and at the same time inflict signal chastisement on the intruders. History tells us that a beautiful English maiden, named the Lady Augusta de Berkely, had replied to her numerous suitors that her hand should be given to him who should have the courage and the ability to hold the perilous castle of Douglas for a year and a day; and Sir John de Walton, anxious to win by his valour such a lovely prize, undertook the keeping of the castle by consent of Edward. For several months he discharged his duty with honour and bravery, and the lady now deeming his probation accomplished, and not unwilling perhaps to unite her fortunes to one who had proved himself a true and valiant knight, wrote him an epistle recalling him. By this time, however, he had received a defiance from Douglas, who declared that despite all his bravery and vigilance, the castle should be his own by Palm Sunday; and De Walton deemed it a point of honour to keep possession till the threatened day should pass over. On the day named Douglas having assembled his followers, assailed the English as they retired from the church, and having overpowered them took the castle. Sir John de Walton was slain in the conflict, and the letter of his lady-love being found in his pocket, afflicted the generous and good Sir James "full sorely." The account of this taking of the Castle of Douglas, given in 'the History of the Houses of Douglas and Angus, by Master David Hume of Godscroft,' is somewhat different from the above, and states that Sir James had drawn Sir John de Walton, by an ambuscade, out from the castle into the open country, where he fell on his band, killed their leader, and took the castle. The stronghold was more than once taken, retaken, burnt, and rebuilt, during the life of the Good Sir James, and the account of one of these successful assaults upon it, given by the same veracious chronicler—David Hume—is as follows: "The manner of his taking it is said to have been thus—Sir James taking with him only two of his servants, went to Thomas Dickson of whom he was received with tears, after he had revealed himself to him, for the good old man knew him not at first, being in mean and homely apparel. There he kept him secretly in a quiet chamber, and brought unto him such as had been trusty servants to his father, not all at once, but apart by one and one, for fear of discoverie. Their advice was, that on Palm Sunday, when the English would come forth to the church, and his partners were convened, that then he should give the word, and cry 'the Douglas slogan,' and presently set upon them that should happen to be there, who being despatched the castle might be taken easily. This being concluded, and they come, so soon as the English were entred into the church with palms in their hands, (according to the custom of that day,) little suspecting or fearing any such thing, Sir James, according to their appointment, cried too soon, (a Douglas, a Douglas!) which being heard in the church, (this was St. Bride's church of Douglas,) Thomas Dickson, supposing he had been hard at hand, drew out his sword and ran upon them, having none to second him but another man, so that, oppressed by the number of his enemies, he was beaten downe and slaine. In the meantime, Sir James being come, the English that were in the chancel kept off the Scots, and having the advantage of the strait and narrow entrie, defended themselves manfully. But Sir James, encouraging his men, not so much by words as by deeds and good example,

and having slain the boldest resisters, prevailed at last, and entering the place, slew some twenty-six of their number, and took the rest, about ten or twelve persons, intending by them to get the castle upon composition, or to enter with them when the gates should be opened to let them in; but it needed not, for they of the castle were so secure that there was none left to keep it, save the porter and the cooke, who knowing nothing of what had hapned at the church, which stood a large quarter of a mile from thence, had left the gate wide open, the porter standing without, and the cooke dressing the dinner within. They entred without resistance, and meat being ready, and the cloth laid, they shut the gates and took their refection at good leasure. Now that he had gotten the castle into his hands, considering with himself (as he was a man no lesse advised than valiant) that it was hard for him to keep it, the English being as yet the stronger in that country, who if they should besiege him, he knew of no relief, he thought it better to carry away such things as be most easily transported, gold, silver, and apparel, with ammunition and armour, whereof he had greatest use and need, and to destroy the rest of the provision, together with the castle itselfe, than to diminish the number of his followers there where it could do no good. And so he caused carry the meale and meat, and other cornes and grain into the cellar, and laid all together in one heape: then he took the prisoners and slew them, to revenge the death of his trustie and valiant servant, Thomas Dickson, mingling the victuals with their blood, and burying their carcasses in the heap of corne: after that he struck out the heads of the barrells, and puncheons, and let the drink runn through all; and then he cast the carcasses of dead horses and other carrion amongst it, throwing the salt above all, so to make all together unuseful to the enemy; and this cellar is called yet the Douglas lairder. Last of all he set the house on fire, and burnt all the timber, and what else the fire could overcome, leaving nothing but the scorched walls behind him."—In 1312-13, Sir James took the castle of Roxburgh, and the following year commanded the centre of the Scottish army at the battle of Bannockburn. In 1317, the English were defeated by him, under the Earl of Arundel. In 1319, Sir James, in conjunction with Randolph, Earl of Murray, entered England by the west marches with 1,500 men, routed the English under the archbishop of York, eluded Edward II., and returned with honour to Scotland. When Robert the Bruce was on his deathbed, in 1329, he sent for his true friend and companion in arms the Good Sir James, and requested him, that so soon as his spirit had departed to Him who gave it, he should proceed with his heart and deposit it with humility and reverence, at the sepulchre of our Lord at Jerusalem. Douglas resolved to carry the request of the dying king into execution, and it appears that for this purpose he received a passport from Edward III., dated September 1, 1329. He set sail in the following year with the heart of his honoured master, accompanied by a splendid retinue. Having anchored off Sluys, he was informed that Alphonso XI., the king of Leon and Castile, was engaged in hostilities in Grenada with the Moorish commander Osmyn; and this determined him to pass into Spain, and assist the Christians to combat the Saracens, preparatory to completing his journey to Jerusalem. Douglas and his friends were warmly received by Alphonso, and having encountered the Saracens at Theba, on the frontiers of Andalusia, on August 25, 1330, they were routed. Douglas eagerly followed in the pursuit, and taking the casket which contained the heart of Bruce, he threw it before him, exclaiming, "Onward, brave heart, that never failed,

and Douglas will follow thee or die!" The Saracens rallied, however, and the Good Sir James was slain. His companions found his body upon the field along with the casket, and mournfully conveyed them to Scotland. The heart of the Bruce was deposited at Melrose, although his body was interred in the royal tomb at Dunfermline. The remains of Sir James were buried at Douglas, and a monument erected to him by his brother Archibald. The old poet Barbour, after reciting the circumstances of Sir James' fall in Spain, tells us—

"Quhen his men lang had mad murnyn,
Thai debowlyt him, and syne
Gert scher him swa, that mycht be tane
The flesch all haly fra the bane,
And the carioun that in haly place
Erdyt, with rycht gret worschip, was.
"The banyas have thai with them tane;
And syne ar to thair schippis gane;
Syne towart Scotland held thair way,
And thar ar cummyn in full gret hy.
And the banyas honorably
In till the kirk off Douglas war
Erdyt, with dull and mekill car.
S-hyr Archibald has sone gert syn
Off alabastre, bath fair and fyne,
Or save a tumber so richly
As it behowyt to swa worthy."

The family was raised to an earldom in 1357 by David II.; and during this reign and the two which succeeded, the house of Douglas rose to a degree of power scarcely inferior to that of royalty itself; and, as has been remarked by an old historian, it became a saying that "nae man was safe in the country, unless he were either a Douglas or a Douglas man." The Earl went abroad with a train of 2,000 men, kept a sort of court, and even created knights. In 1424, Archibald, the 5th Earl, became possessed of the duchy of Touraine in France, for services which he had rendered to Charles VII. the French king. William, the 6th Earl, raised the family power to a most formidable height; their estates in Galloway—where they possessed the stronghold of Thrieve—Annandale, and Douglas, afforded them an amount of revenue and enabled them to raise an army not inferior to that of their sovereign. It was at this time, however, the policy of Crichton—one of the ablest of those who had the direction of affairs during the minority of James II.—to humble the overgrown power of the nobles, and accordingly Earl William, having been decoyed into the castle of Edinburgh, was subjected to a mock trial for treason, and beheaded, Nov. 24, 1440, along with his brother David, and a faithful follower named Malcolm Fleming. The duchy of Touraine now reverted to the French king. After a brief period of depressed fortune, the family rose to a still greater degree of power than ever, in the person of William, the 8th Earl. He was at first a favourite of James II., but having fallen into partial disgrace he went abroad, and his castle of Douglas was demolished during his absence by orders of the king, on account of the insolence of his dependents. Upon the return of the Earl he came under obedience to the king, but this was not meant to be sincere. He attempted to assassinate Crichton the chancellor, and executed John Herries in despite of the king's mandate to the contrary. "By forming a league with the Earl of Crawford and other barons, he united against his sovereign almost one-half of his kingdom. But his credulity led him into the same snare which had been fatal to the former earl. Relying on the king's promises, who had now attained to the years of manhood, and having obtained a safe-conduct under the great seal, he ventured to meet him in Stirling castle. James urged him to dissolve that dangerous confederacy into which he had entered; the Earl obstinately refused:—'If you will not,' said the enraged monarch, drawing his dagger, 'this shall!' and stabbed him to the heart. An ac-

tion so unworthy of a king filled the nation with astonishment and with horror. The earl's vassals ran to arms with the utmost fury, and dragging the safe-conduct, which the king had granted and violated, at a horse's tail, they marched towards Stirling, burnt the town, and threatened to besiege the castle. An accommodation, however, ensued; on what terms is not known. But the king's jealousy, and the new earl's power and resentment, prevented it from being of long continuance. Both took the field at the head of their armies, and met near Abercorn. That of the earl, composed chiefly of borderers, was far superior to the king's both in number and in valour; and a single battle must in all probability have decided whether the house of Stewart or the house of Douglas was henceforth to possess the throne of Scotland. But while his troops impatiently expected the signal to engage, the earl ordered them to retire to their camp; and Sir James Hamilton of Cadzow, the person in whom he placed the greatest confidence, convinced of his want of genius to improve an opportunity, or of his want of courage to seize a crown, deserted him that very night. This example was followed by many, and the earl, despised or forsaken by all, was soon driven out of the kingdom, and obliged to depend for his subsistence on the king of England." [Robertson's History of Scotland.]—The overgrown strength of this family was destroyed in the year 1455, and the earl, after enduring many vicissitudes, retired in his old age to Lindores abbey in Fife, and died there in 1488. The title of Earl of Douglas, of this the first branch of the family, existed for 98 years, giving an average of 11 years to each possessor. The lands of the family reverted to the Crown; but they were shortly afterwards bestowed on the Earl of Angus, the head of a junior branch of the old family, and descended from George Douglas, the only son of William 1st Earl of Douglas by his third wife, Margaret countess of Angus, who, upon his mother's resignation of her right, received her title. This family assisted in the destruction of the parent-house, and it became a saying, in allusion to the complexion of the two races, that the *red* Douglas had put down the *black*. This family produced some men who have occupied a prominent position in Scottish story, such as Archibald, the 5th Earl, who was known by the soubriquet of Bell-the-cat; and Archibald, the 6th Earl, who, marrying Margaret of England, widow of James IV., who fell at Flodden, was the grandfather of the unfortunate Henry Lord Darnley, the husband of Queen Mary, and father of James VI. This Archibald, during the minority of his step-son James V., had all the authority of a regent. From the accession of the second Douglas line, after the forfeiture of the first, the possessions of the house were held by the family in uninterrupted succession till the death of the Duke of Douglas in 1761. William, the 11th Earl of Angus, was raised to the marquissate of Douglas, in 1633, by Charles I. This nobleman was a Catholic and a royalist, and inclined to hold out his castle against the covenanters, in favour or the king; but he was surprised by them, and the castle taken. He was one of the best of the family, and kept up to its fullest extent the olden princely Scottish hospitality. The king constituted him his lieutenant on the borders, and he joined Montrose after his victory at Kilsyth, escaped from the rout at the battle of Philliphaugh, and soon after made terms with the powers that be. The first Marquis of Douglas was the father of three peers of different titles, viz. Archibald, his eldest son, who succeeded him as second Marquis; William, his eldest son by a second marriage, who became 3d Duke of Hamilton; and George, his second son by the same mar-

riage, who was created Earl of Dumbarton. Archibald, the 3d Marquis, succeeded to the peerage in 1700, and was created Duke of Douglas in 1703. In the rebellion of 1715 he adhered to the ruling family of Hanover, and fought as a volunteer in the battle of Sheriffmuir. He died childless at Queensberry-house, Edinburgh, in 1761, when the ducal title became extinct. The Marquisate of Douglas devolved, through heirs-male, to the Duke of Hamilton, on account of his descent from the 1st Marquis; and the title of Marquis of Douglas and Clydesdale, is now conceded by courtesy to the eldest son of that ducal house. The real and personal estate of the Duke of Douglas was inherited by his nephew, Archibald Stewart, Esq., who was served his nearest lawful heir, September 3, 1761. This gentleman assumed the surname of Douglas, and was created Baron Douglas by George III. in 1796, and his titles and estates are now enjoyed by his son the present peer.*

* The death of the Duke of Douglas, and consequent assumption of the estates by his nephew, Archibald Stewart, mentioned in the context, led to one of the most extraordinary lawsuits ever known in the kingdom, and which has been termed *par excellence*, the 'Great Douglas Cause.' Lady Jane Douglas, sister to Archibald Duke of Douglas, was one of the handsomest and most accomplished women of her age; but her fortunes were clouded in early life by the interruption of a nuptial agreement which was all but concluded between her and the Earl of Dalkeith, afterwards Duke of Buccleuch. In August 1746, being then 48 years of age, she was secretly married to Mr. Stewart, afterwards Sir John Stewart of Granatilly. They resided abroad, principally in France, from 1746 till the end of December 1749. At the latter date they returned to this country, and took up their residence in London, bringing with them two male children, of which they gave out that Lady Jane had been delivered in Paris, at a twin-birth, in the month of July 1748. The youngest of the twins, who was named Sholto Thomas Stewart, died on the 14th May, 1753; and, in November following, the unfortunate mother died at Edinburgh, after having repeatedly but in vain sought a reconciliation with her brother. In the year 1759, Mr. Stewart, succeeding by the death of his brother to the estate and title of Granatilly, executed, as the first act of his administration, a bond of provision in favour of the surviving twin, Archibald, for upwards of £2,500, wherein he designed him as his son by Lady Jane Douglas. Meanwhile, the Duke of Douglas continued obstinate in his refusal to acknowledge him as his nephew; and in the year 1758, he entered into marriage-ties. On the 11th of July, 1761, the Duke, on his death-bed, executed an entail of his whole estate in favour of the heirs of the body of his father James Marquis of Douglas, with remainder to Lord Douglas Hamilton, brother to the Duke of Hamilton, &c. &c. And of the same date, he also executed another deed, setting forth, that as, in the event of his death without heirs of his body, Archibald Douglas, alias Stewart, a minor, and son of the deceased Lady Jane Douglas, his sister, would succeed to him in his dukedom of Douglas; he therefore, by that deed, appointed the Duchess of Douglas, the Duke of Queensberry, and several other noble and honourable persons, to be his tutors and guardians. The youth's guardians proceeded, immediately after the duke's death, to have him put in possession of the estate of Douglas. He was served heir before a jury to the late duke, after the examination of a great body of evidence, the examination or inquest having been attended by counsel on the part of the Duke of Hamilton, who claimed the Douglas estate as heir-male. The guardians of the Duke of Hamilton, however, were not convinced of the legitimacy of Douglas, and, with the view of expiating the truth, despatched Mr. Andrew Stuart, one of their number, to Paris. Mr. Stuart's discoveries, in his own opinion, and that of his colleagues, amounted to no less than a demonstration that the whole story of the pretended delivery of Lady Jane while in Paris, as set forth in the service of Mr. Douglas, was a fiction. In these circumstances, three actions of reduction of that service were respectively raised at the instance of the Duke of Hamilton's guardians—Lord Douglas Hamilton and Sir Hew Dalrymple of North Berwick—which actions were afterwards conjoined by the Court of Session. The effect of the conjoined action, if successful, would have been to declare that Mr. Douglas was not the son of Lady Jane, and, consequently, to set him aside from the estate.

The proofs adduced for Mr. Douglas consisted of:—1st, The depositions of several witnesses, that Lady Jane appeared to them to be with child while at Aix-la-Chapelle, and other places.—2dly, the direct and positive testimony of Mrs. Hewit, who accompanied Lady Jane to Paris, to the actual delivery at Paris upon the 10th July, 1748.—3dly, The depositions of other witnesses with regard to the claimant's being owned and acknowledged by Lady Jane and Sir John Stewart to be their child, and the habit and repute of the country.—4thly, A variety of letters which had passed betwixt Sir John Stewart, Lady Jane Douglas, Mrs. Hewit, and others, respecting the claimant's birth.—5thly, Four letters said to have been written by Pierre la Marre, who, according to the defendant's account,

DOUGLAS (THE), a river which takes its rise at the foot of Cairntable; 9 miles above the village of Douglas; flows from west to north-east, and, receiving the waters of several small rivulets in its course, falls into the Clyde, about 7 miles below Douglas. See above article.

DOUGLAS (THE), a small stream in Selkirkshire, which falls into the Yarrow near a rocky crag, called Douglas craig.

DOUGLASDALE, a name of the middle ward of Lanarkshire. Formerly it was almost entirely the property of the Earls of Douglas; and Lord Douglas, the representative of that family, is still the principal proprietor.

DOUNE, a small village in the parish of Kilma-dock, Perthshire. It is beautifully situated on the banks of the Teith, 8 miles north-west from Stirling. It consists of one large street, and two smaller ones branching off from it. Doune was formerly distinguished for its manufacture of Highland pistols. Its inhabitants have, however, during the last 40 years, been occupied with pursuits of a more pacific ten-

was the accoucheur to the delivery of Lady Jane, and which were presented as so many true and genuine letters. Add to these, that a few days before his death, which happened in June, 1764, Sir John Stewart emitted a solemn declaration in presence of two ministers and one justice-of-the-peace, declaring and asserting, as stepping into eternity, that the defendant and his deceased twin-brother were both born of the body of Lady Jane Douglas, his lawful spouse, in the year 1748. Mrs. Hewit, who was charged with being an accomplice in the fraud, died during the law-plea of a lingering illness, but to the last persisted that all she had sworn about the birth of the defendant was truth, excepting some mistakes and errors as to names and dates, which she corrected in a letter to a reverend gentleman of the Episcopal communion. The pursuers maintained: 1st, That Lady Jane was not delivered upon the 10th of July, 1748, by the evidence of various letters written by Sir John Stewart and Mrs. Hewit upon the 10th, 11th, and 22d July, 1748.—2dly, That Lady Jane Douglas was not delivered in the house of a Madame la Brune, nor in the presence of a Madame la Brune and her daughter; under which head they brought various circumstances to show that no such persons as the Madame la Brune in question, or her daughter, ever existed.—3dly, That Lady Jane Douglas could not have been delivered either upon the 10th of July, or in the house of a Madame la Brune, because, upon that date, and during several days preceding and subsequent to the 10th of July, Lady Jane Douglas, with her husband and Mrs. Hewit, resided at the Hotel de Chalons, kept by Mons. Godofroi, where it is acknowledged she was not delivered; and this alibi the plaintiffs asserted to be clearly proved by the testimony of Mons. and Madame Godofroi, as well as by certain books kept by them.—4thly, The falsehood of the delivery in the house of a Madame la Brune upon the 10th July, the pursuers argued might be proved by Lady Jane's situation, upon her arrival at the house of Madame Michelle, and by incidents which happened during her continuance there.—5thly, They argued for the evidence of imposture in the studied concealment and mystery at Paris in July, 1748, when Sir John and Lady Jane, with their confidante Mrs. Hewit, carried with them from Paris to Rheims one child; and from their repetition of the same concealment and mystery, upon their return to Paris in November, 1749, when the same three persons brought from Paris to Rheims a second child.—Lastly, the plaintiffs brought proof, that at Paris, in the month of July, 1748, a male child, recently born, was carried off from his parents of the name of Mignon; that, in the month of November, 1749, another male child, born in the year 1748, was carried off from his parents of the name of Saury; that both these children were under false pretences carried off from their parents by certain persons then in Paris,—and that these British persons were Sir John Stewart, Lady Jane Douglas, and Mrs. Hewit.

To these arguments were added a most critical examination of the defendant's proof of Lady Jane's pregnancy, and a contrary proof brought to redargue it; and a proof of the non-existence of the Pierre la Marre, whom the defendant affirmed to have been the accoucheur, with a proof of the forgery of the letters attributed to him.

On the 7th July, 1777, the case came on for judgment in the Court of Session, and so important was the cause deemed, that the fifteen judges took no less than eight days to deliver their opinions. The result was, that seven of the judges voted to sustain the reasons of reduction, and other seven to assize the defender; the Lord-president—who has no vote but in such a dilemma—voted for the reduction, by which Douglas, alias Stewart, lost both name and estate. An appeal from this decision having been taken to the House of Peers, the judgment of the Court of Session was reversed in the year 1789; and Archibald Douglas declared to be the son of Lady Jane, and heir of the Duke of Douglas. Archibald Douglas was created Lord Douglas by George III. in 1796. His son is the present peer of that name, and now enjoys the princely family-estates.

dency,—the large cotton-works at the neighbouring manufactory of Deanston giving employment to a great part of the population. [See KILMADOCK.] Large cattle-fairs are held here on the 2d Wednesday of February, the 2d Wednesday of May, the last Wednesday of July, the 1st Tuesday, 1st Wednesday and Thursday, and 4th Wednesday of November, and the last Wednesday of December.—The only object of much interest here is the ancient castle of Doune, which is situated close by the village, on a mound apparently artificial, and surrounded by beautiful wooded banks. The Teith flows immediately under its walls, and is joined a little below the castle by the water of Ardoch. The period of its erection has not been ascertained. Tradition ascribes its foundation to Murdoch, Duke of Albany, who, along with his two sons, fell beneath the axe of the executioner at Stirling in 1425, during the glorious but iron reign of James I. This account, however, is obviously quite false, for although it was undoubtedly possessed by Albany, it had been for nearly a century before his time the seat of the Earls of Menteith. The custody of Doune castle was granted by James V. to James Stewart, ancestor of the Moray family. It afterwards fell into the full possession of his son, who was created Lord Doune in 1581, and since that period it has continued in the possession of the Earls of Moray. This ancient stronghold is of prodigious size and strength. It forms a square pile, the sides of which are 96 feet in length, the walls being 40 feet high, and 10 in thickness. Considering its immense age, it presents wonderfully few marks of the injuries of time. The tower, which stands at the north-east corner, is massive and lofty, being 80 feet high. The great hall is 63 feet long, and 25 wide. There are several other spacious apartments in that portion of the building which appears to have constituted the family-residence, and the whole of them exhibit striking proofs of former grandeur. From the south-east corner of what seems to have been the dining-room, a narrow stair descends into a subterranean passage which leads into a small dark cell, obviously intended for the purposes of a dungeon. Its roof is vaulted, and contains a small hole,—probably for lowering scanty pittance of food to the unhappy captive. There are other vaults and prisons on the ground floor on each side of the entry, all of them of the same frightful description. The building has formerly been covered with stones or slates; but no part of the roof now remains. Doune castle was occupied for the last time as a place of defence in 1745, by the adherents of Prince Charles, who planted a twelve-pounder in one of the windows, and several swivels on the parapets. John Home, the author of 'Douglas,' and Dr. Witherspoon, afterwards distinguished as a presbyterian divine, were confined along with other prisoners taken by the Pretender's forces. Many of our readers will remember the graphic account of their escape, given by Home in his 'History of the Rebellion.' Grose has given a view of Doune castle. Several modern views of it have been painted by Stevenson and others.

DOUNIES. See BANCHORY-DAVINICK.

DOWALLY, formerly a chapelry in the parish of Caputh in Perthshire, but disjoined from it in 1500, and now annexed to the parish of Dunkeld, the minister of which preaches here one diet in the afternoon of every second Sabbath in summer, and every third Sabbath in winter. The old church of Dowally—which was built by Bishop Brown in 1500—was a long, narrow, inelegant structure. A new church was built in 1820; sittings 210. The population of this district, in 1801, was 672; in 1831, 596. It is 5 miles north by west of Dunkeld, and contains

about 11,580 acres, stretching along the eastern bank of the Tay. At the upper extremity, the barony of Dalcapon, which extends along the north bank of the Tummel—here crossed by a ferry—for three-quarters of a mile, is separated from it by an intervening part of the parish of Logierait. The hills afford pasture to numerous flocks of sheep; some of them are covered with natural forests, well-stocked with red and roe deer, and game of various kinds. The rocky hills of CRAIGIE BARNS [which see] and Craigiebennan, on the lower boundary of Dowally, present a very precipitous and picturesque appearance towards the east. The King's pass, between Craigie Barns, and a large rocky, wooded hill, called the King's Seat, derives its name from the circumstance of its having been the place where the Scottish monarchs placed themselves, in order to direct their shafts with advantage at the flying deer, when driven that way for their amusement; and, according to a story told by William Barclay in his treatise 'Contra Monarchomachos,' a chase of this kind had very nearly prevented the future miseries of the unhappy Mary Stuart. The road, which passes through Dowally to Athole, has been cut with great labour and expense along the bottom of the King's Seat, which overhangs the river so closely, and at such a height, that the timid traveller, who looks over the wall that has been built to support it, is little disposed to linger on his way. The Gaelic language is commonly spoken here, though all the inhabitants understand the English more or less perfectly; and it is curious, that the hills of King's Seat and Craigie Barns, have been for centuries the separating barrier of these languages. In the first house below them, the English language is, and has been long spoken; while the Gaelic invariably prevails in the first house above them, and at not more than a mile distant. See DUNKELD.

DOWALTON (LOCH), a fine fresh-water lake on the north-west boundary of the parish of Sorbie, Wigtonshire. It has its name from the family of M'Dowall, the proprietor of the lands in which it is imbosomed; but is also sometimes called Longcastle Loch. On the north, it sends out a stream which, flowing eastward over a course of $4\frac{1}{2}$ miles, and intersecting the parish of Sorbie, falls into the sea at Garlieston. The lake is about 3 miles in circumference, and from 5 to 20 feet deep. On its western side it has an island of about 30 acres in area, on which are traces of an old building called Longcastle.

DOWNE-HILL, in the parish of Edenkillie, in Morayshire, an apparently artificial elevation which appears to have been a fortress of great antiquity. It is of a conical shape, round a considerable part of which runs the rapid Divie, in a deep rocky channel; and, where not defended by the river, it is encircled by a deep ditch with a strong rampart, the stones of which bear marks of fusion.

DRAINY, a parish in Elginshire, bounded on the north by the Moray frith; on the east by the river Lossie, which divides it from the parishes of St. Andrews and Urquhart; on the south by the site of the once beautiful loch of Spynie, which divides it from the parish of Spynie, though it is now drained into a stagnant morass; and on the west by the parish of Duffus. Before Loch Spynie was drained, this parish consisted of a peninsula formed by it, the Lossie, and the Moray frith, stretching east and west, about 4 miles in length along the coast, and 2 to 3 in breadth. The name of the parish is supposed to have originated from the draining of swamps and marshes in the vicinity. This part of the country, in general, is low and flat. There are only two small eminences meriting the name of hills. The soil is partly a rich

loam or clay, and partly a light black sandy mould,—very fertile and well-cultivated. On the moor lands there is good pasturage. The soil of the old bed of Spynie loch, which partly belongs to this parish—and from the draining of which, about the year 1807, at an expense of £10,800, great profit was anticipated—has not yet been found to be of much value. It is deeply impregnated with sulphur and iron, and only affords some coarse pasturage, neither wholesome nor nutritious, and possessing, it is affirmed, the property of converting the colour of the black cattle which prevail here into grey! The draining, however, has redeemed some rich and valuable clay lands near its margin. This loch discharged itself into the Lossie, about a mile from the sea. A canal now runs a little from the north of Spynie castle, on the site of Spynie loch, through Drainy parish to the Lossie, a little above Lossiemouth. Through the low plains, on each side of the Lossie, as it runs from Elgin along the eastern border of this parish to the sea, large embankments of earth have been raised at great expense, in order to prevent a recurrence of the calamitous inundation which happened in 1829, of which a very interesting description is given in Sir Thomas Dick Lauder's 'Account of the Great Floods in Morayshire.' The two small eminences or hills in this parish abound with white and yellow freestone, which is in great request for building over all this quarter of the country. In the Coulart hill, between Lossiemouth and Stotfield, there are appearances of lead; but an English adventure entered into shortly previous to the publication of the Old Statistical Account, at an expense of £500, entirely failed. The hill of Causea, or Cave-sea, consists of one continuous mass of freestone, upwards of a mile in length, and forming a bold shore, cut and excavated by the surge into curious arches, caves, and pyramids. The scenery here is grand and picturesque. At Lossiemouth, also, a natural cave, about 10 feet square, called St. Gerardine's cave, was adorned with a handsome Gothic door and windows, and a medicinal spring issuing from the rock above the hermitage: but in the course of working the quarries, it has been totally destroyed.—Lossiemouth, at the efflux of the Lossie, is the principal village. It is situated near the point of Stotfield-head, in the north-east corner of the parish, and is a port for small shipping. It stands 5 miles north-east of the royal burgh of Elgin. There are fishing hamlets at Causea and Stotfield.—Population of Lossiemouth, in 1831, 535; of Stotfield, 168: of the parish, in 1801, 1,057; in 1831, 1,296. Houses 272. Assessed property, in 1815, £7,832.—This parish is in the synod of Moray, and presbytery of Elgin. It consists of the two ancient parishes of Kinnedder and Ogstown, which were united soon after the Restoration, and received the name of Drainy from the erection of a new central church on its lands at the annexation. Minister's stipend £242 7s. 5d. Patron, Cumming of Altyre. Church built about the end of the 17th century.—Salary of parochial schoolmaster £36 7s. 1½d., with about £7 fees, &c. There are 4 private schools in the parish.

DREGHORN,* a parish in the southern part of the district of Cunningham, Ayrshire. It is an irregular stripe, about 8 miles long, and from $\frac{3}{4}$ of a mile to 2 miles broad, stretching from south-west to north-east. On three sides its boundary is marked by streams; on the east by Garrier or Gawrier burn, which divides it from Kilmaurs; on the south by Irvine water, which divides it from Dundonald; and on the west and north-west by Annock water, which

divides it from Irvine and Stewarton; and on the north-east the parish is bounded by Fenwick. At the south-west end—which is distant only a mile from the coast—the surface is a dead flat very slightly above sea-level; but it thence rises, in gentle undulations, toward the east and north-east, and both in the interior, and especially along the banks of the Annock, wears a pleasing appearance. In the flat grounds, the soil is sandy and gravelly; but in the other districts, it is a fine deep loam, remarkably fertile. The whole parish, except a few acres of meadow-land, is under cultivation, well-enclosed, and judiciously interspersed with plantation. Coal and limestone are worked; and freestone is found. The parish is intersected eastward by the road from Irvine to Kilmarnock, and north-eastward by the road from Irvine, through Stewarton to Glasgow; and is provided with numerous cross or subordinate roads. The village of Dreghorn is situated in the south-west district of the parish, on the first gentle acclivity above the flat grounds, and commands a fine view of the frith of Clyde, and the coast of Ayrshire. The houses stand in irregular lines, and, being interspersed with trees, and whitewashed, make a fine rural grouping to the eye. The village is 2 miles from Irvine, on the highway between that town and Kilmarnock; and has about 300 inhabitants. Population of the parish, in 1801, 797; in 1831, 888. Houses 149. Assessed property, in 1815, £11,895.—Dreghorn is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend £176 13s. 10d.; glebe £3. Unappropriated tithes £826 14s. 10d. The church was built in 1780, and is situated in the village. Sittings 427. From a fourth to a third of the parishioners are Dissenters, most of whom are connected with congregations in Irvine.—Schoolmaster's salary £29 18s. 10½d., with £60 other emoluments. There are 2 schools nonparochial.—Dreghorn, in its present form, comprehends the ancient parishes of Dreghorn and Pierce-town, which were united in 1668. The churches of both parishes anciently belonged to the monks of Kilwinning, and were served by vicars. In 1603, the patronage of the church of Pierce-town, with the tithes and church-lands, were granted to Hugh, the Earl of Eglinton.

DREINICH, a small island in Loch Linnhè, near the island of Lismore.

DREM, a small farm-village, 4 miles north of Haddington, in the parish of **ATHELSTANFORD**: which see. On the abolition of hereditary jurisdictions, John Hamilton was paid £500 for the regality of Drem.

DRHUM (THE), an exquisitely beautiful portion of the strath of the Beaully, on the grounds of Lord Lovat.

DRIMMITORMENT. See **DUNNICHEN**.

DRIMODUNE. See **ARRAN**.

DRON, a parish in the south-eastern part of Perthshire. It is bounded on the north by the parish of Dunbarnie; on the south by the parishes of Forgandenny and Arngask, and the water of Farg, which separates it from Fifeshire; on the west by Dunbarnie and Forgandenny; and on the east by the parish of Abernethy, from which it is partly separated by Farg water. It is $3\frac{1}{2}$ miles in length, from east to west, and about 3 miles in breadth, being one of the smallest and most thinly peopled parishes in the county of Perth. The high road from Queensferry to Perth passes through the eastern part of the parish. The southern part of the parish is occupied by the Ochils, and from these eminences to near its northern boundary the parish forms a sort of sloping plain. The northern part of the parish forms a ridge of small elevation running from west

* In early charters, the name was written *Dregern*; and it is probably derived from the British *Tre-quern*, which signifies the town or habitation by the swamp, or by the alder-trees.

to east. The soil in the low grounds is principally of clay, till, and loam. The Old Statistical Account gives the following account of an extraordinary occurrence which took place in this parish about the end of last century: "In that part of the Ochils which fronts the house of Ecclesiamagirdle, a very singular phenomenon took place about 7 years ago. After a long series of rainy weather, the hill, about 100 paces from the summit, burst open with a loud explosion like thunder, which was heard at the distance of two miles across the valley. A violent and rapid torrent, mixed with earth and stone and broken rock, issued from the opening, and rushed down with an impetuosity which swept all before it. The inhabitants of some houses which stood immediately below, alarmed at once with the noise and torrent, which directed its course full towards them, were preparing to flee for their safety, when happily the torrent deviated into a different tract, and after continuing to flow for 10 or 12 hours, it ceased, without having done any material injury, and has remained quiet ever since."—A portion of this parish, known by the name of Ecclesiamagirdle, is isolated from the rest, being surrounded by the parish of Dunbarnie on the north and east, and the parish of Forgandenny on the south and west. The etymology of the name has defied the ingenuity of antiquaries, but it probably bore some reference to a small chapel which formerly stood in this part of the parish, and of which some ruins, along with a burial-ground, still remain. The only other relic of antiquity in the parish is a remarkable rocking stone which stands on the south descent of the hill opposite to the church and manse of Dron. "It is," says the author of the Old Statistical Account, "a large mass of whinstone, of an irregular figure, about 10 feet in length, and 7 in breadth, and stands in a sloping direction. On gently pressing the higher end with the finger, it has a perceptible motion, vibrating in an arch of between one and two inches, and the vibration continues for some time after the pressure is removed."—Population, in 1801, 428; in 1831, 464. Assessed property £3,862.—The parish of Dron is in the presbytery of Perth, and synod of Perth and Stirling. Patron, the Crown. Stipend £166 19s. 6d.; glebe £9, with £4 10s. per annum in lieu of coals. The parochial school is the only place of elementary instruction in the parish. The salary of the master is £34. Average attendance, in 1836, 18.

DRON, a hill in the parish of Longforgan, Perthshire, elevated to the height of 667 feet above the level of the sea.

DRONGS, a stupendous rock near Hillswick in Northmaven. It is cleft in three places nearly to the bottom, and when seen obscurely through a fog, conveys the idea of a huge ship under sail.

DRONLAW. See **ATCHTERHOUSE**.

DROOTHY (THE). See **THE CLUNIE**.

DRUM (LOCH). See **BANCHORY-TARNAN**.

DRUMALBINN. See **CALEDONIANS**.

DRUMBLADE, a parish in the north-western part of Aberdeenshire. On the north and east it is bounded by the parish of Forgue; on the south and south-west by Insh, and part of Gartly parishes; and on the east and north-east by Huntly parish. It is principally divided from the surrounding parishes by rivulets. Its length, from north to south, is from 5 to 6, and its breadth, from east to west, 4 to 5 miles: its circumference is about 18 miles. Superficial area about 5,000 acres. Its form is triangular. According to the Old Statistical Account, it "somewhat resembles the body of a fiddle." Its ancient name was Drumblait, which signifies, in Gaelic, 'Hills covered with corn.' The surface is composed

of small hills and valleys. The soil of the latter is deep loam; that of the higher ground is thin and gravelly, but fertile. Some of the hills are covered with firs, but most are arable. The valleys produce excellent crops. There is abundance of a very fine yellow-brown clay here, called clay-marl, and used as a compost for manure: very little sand appears in it. The district possesses large quantities of coarse limestone, freestone—here called paissy-whin—and moor-stone, with some slate. The fuel commonly used is peat, turf, heath, &c. English coal is procured from Banff or Portsoy. Population, in 1801, 821; in 1831, 978. Houses 169. Assessed property, in 1815, £3,058.—The principal seat or residence in the parish is Lessendrum. There are three tumuli here; at the largest of which, called Meet-hillock, near Slioch, Bruce encamped, after having defeated Cumyn at Inverury. A small hill above this tumulus is called Robin's height, and had on the top large stones with inscriptions on them.—Drumblade is in the synod of Aberdeen, and presbytery of Turriff. Patron, the Earl of Kintore. Stipend £159 9s. 7d.; glebe £16. Church built in 1778, and since enlarged, chiefly subsequent to 1829–30; sittings 500. Schoolmaster's salary £30 per annum, with about £26 10s. fees, &c., exclusive of the bequest left to the parochial master of Aberdeen, Banff and Elgin shires, expected, in 1834, to amount to between £20 and £30.

DRUMCLOG. See **AVONDALE**.

DRUMDERFIT, or **DRUMNADEUR**, that is, 'the Ridge of Tears,' a rising ground in the parish of Wester Kilmuir, or Knockbain, in Ross-shire, on which are a great number of cairns, which are said to indicate the spot of an extraordinary massacre of the Isles men, about the year 1400.

DRUMGLOW. See **CLEISH**.

DRUMLANRIG CASTLE, a magnificent seat of the Duke of Buccleuch, in the parish of Durisdeer, Dumfries-shire. It stands on a knoll or rising-ground, on the right bank of the Nith, about 17 miles north-west of Dumfries, and 3½ north-north-west of Thornhill; and, for several miles, forms an arresting feature in a rich and remarkably varied landscape, to the eye of a traveller passing along the highway which traverses the picturesque vale of the Nith. The castle is a hollow square, four stories high, surmounted with turrets at the angles, and presents such an array of windows, that the peasantry of the vale fondly report them to be as numerous as the days of the year. From the inner court, staircases ascend at the angles in semicircular towers. On the architraves of the windows and doors is a profuse adorning of hearts and stars, the arms of the Douglasses. The castle fronts to the north, and has also a noble appearance on the east, combining, on each side, the aspects of strength and beauty,—the lineaments of a fortress and a mansion; and it is every night secured, not only by a thick door of oak, but by a ponderous gate of iron. Though more Gothic than Grecian, and marked with considerable architectural defects, it is a noble and imposing edifice; and suggests ideas of a princely chieftain holding his court among dependents and vassals. This great pile occupied ten years in building, and was finished in 1689, the year after the Revolution. William, first Duke of Queensberry—celebrated in civil history as a statesman, and in the annals of the Covenanters as an abettor of persecution—planned and completed it; and he expended upon it such enormous sums of money, and during the only night of his residing within its walls, was so exasperated by the inaccessibility of medical advice to relieve him from a temporary fit of illness, that he abandoned it in disgust, and afterwards, in the unpolished language of the period, wrote upon the artificers' bills

for erecting it,—“The deil pike out his een that looks herein!” A portrait in the gallery—that of William III.—is, in its wounds and defacement, a memorial of the Highlanders having occupied the castle on their march in 1745. Drumlanrig was the principal residence of the family of Queensberry. But on the death of Charles, the third Duke, in 1777, without male issue, it passed, along with the Queensberry titles, to William, Earl of March; and upon the death of the latter in 1810, it went by entail to the Duke of Buccleuch. During both these periods, and for years afterwards, it was little occupied, greatly neglected, and defaced. But the present noble proprietor has, since his majority in 1827, adopted it as his favourite residence, and has brought the house itself, and the beautiful grounds around it, into a smiling and polished condition. Pennant says: “The beauties of Drumlanrig are not confined to the highest part of the grounds; the walks, for a very considerable way by the sides of the Nith, abound with most picturesque and various scenery. Below the bridge the sides are prettily wooded, but not remarkably lofty; above, the views become wildly magnificent. The river runs through a deep and rocky channel, bounded by vast wooded cliffs, that rise suddenly from its margin; and the prospect down from the summit is of a terrific depth, increased by the rolling of the black waters beneath. Two views are particularly fine: one of quick repeated but extensive meanders amidst broken sharp-pointed rocks, which often divide the river into several channels, interrupted by short and foaming rapids coloured with a moory taint;—the other is of a long strait, narrowed by the sides, precipitous and wooded, approaching each other equidistant, horrible from the blackness and fury of the river, and the fiery red and black colours of the rocks, that have all the appearance of having sustained a change by the rage of another element.” Till a few years ago, there was preserved in the park of Drumlanrig a remnant of the aboriginal wild cattle of Scotland. [See article CUMBERNAULD.] “These animals,” says Mr. Gilpin, who saw the objects he describes, “are milk-white, except their noses, ears, and orbits of their eyes, which are of a dark-brown, approaching to black. They are described by old writers as having manes; but these have none. They resemble the cow in many respects; but their form is more elegant, with a spirited wildness in their looks; and when they run, instead of the clumsy cow-gallop, they bound like deer.” Pennant, who also saw these animals while here in June, 1772, has this memorandum: “In my walks about the park see the white breed of wild cattle, derived from the native race of the country, and still retain the primeval savageness and ferocity of their ancestors; were more shy than any deer; ran away on the appearance of any of the human species, and even set off at full gallop on the least noise; so that I was under the necessity of going very softly under the shelter of trees or bushes to get a near view of them. During summer they keep apart from all other cattle, but in severe weather hunger will compel them to visit the out-houses in search of food. The keepers are obliged to shoot them if any are wanted. If the beast is not killed on the spot, it runs at the person who gave the wound, and who is forced, in order to save himself, to fly for safety to the intervention of some tree. These cattle are of a middle size, have very long legs, and the cows are fine horned. The orbits of the eyes and the tips of the noses are black; but the bulls have lost the manes attributed to them by Boethius.”

DRUMLITHIE, a considerable manufacturing village in the parish of Glenbervie, on the line of

road from Laurencekirk to Stonehaven; distant from the former 7½ miles, and 6 from the latter.

DRUMMELZIER,* a parish in Peebleshire; bounded on the north-west by Stobo; on the north by Manor; on the east by Manor and Lyne; on the south by Tweedsmuir; and on the west by Lanarkshire and Glenholm. It is of a remarkable figure, not unlike the outline of a decapitated human body, in a sitting posture, the neck a little elongated. At one point, from Glenkerierig-hill on the west, to Black Dody hill on the east, it is 5 miles in breadth; but during one-fourth of its length, it is only 2½ miles broad, and during one-half of it, no more than from ¾ to 1¾. Yet, in extreme length, it extends from Catlercleugh on the south-west, to Mounthill on the north-east, 13¼ miles. It stretches from the mountain-ridge or water-line, which divides Peeblesshire from Lanark, away north-eastward into the centre of the county. Kingledoors burn rises in the heights which divide the two counties, and intersects a limb of the parish over a distance of 4½ miles. There the Tweed, having entered the parish from the south, flows directly across, receiving the waters of this burn on its way; and it thence forms the north-western boundary-line over a distance of 9 miles. On the other hand, the eastern or south-eastern boundary-line is formed by a ridge of heights which separate the local waters of Drummelzier from those of Manor. The body of the parish is thus a slope or acclivity of hills looking down upon the Tweed, and terminating in the vale upon its banks. Its indigenous brooks, 7 in number, all rise toward the east, and run down westward or north-westward to pour their waters into the Tweed. But though a hilly district, and forming a part of the southern high-lands, the parish contains much arable land, and is finely variegated with plantations and cultivated fields. The vale along the river is in general narrow; yet, in some places, it expands into beautiful haughs; and, where the rivulets break down from the heights, it opens into fine cleughs or glens. This vale is the chief scene of culture, and the principal seat of the population. The soil in the haughs is rich alluvial loam; but elsewhere is, in general, sharp and very stony. Limestone and slate are found, but are not worked. Drummelzier castle—formerly a seat of the Tweedie family, and a link in a chain of fortresses, now all in ruin, along the banks of the Tweed—overlooks the river from a beautiful site environed with plantation. There are, in the parish, vestiges of a Roman road, and of two old castles,—one of the latter 6 feet thick in the walls, and held together by a cement as hard as stone, yet so old, that no tradition remains of even the period of its destruction. Upon a spot near the junction of the Powsail rivulet with the Tweed, is a tumulus, reported to be the grave of the famous wizard, Merlin. It is said that Merlin predicted the union between the two kingdoms, and the prophetic couplet was thought to have been of some use in conciliating the prejudices of the people. It runs nearly as follows:—

“When Tweed and Powsail meet at Merlin’s grave,
Scotland and England one king shall have.”

Except a road along the Tweed, which, during more than half the distance, traverses the western side of the river, and does not strictly belong to the parish, Drummelzier is quite unprovided with facilities of communication; and throughout its south-western limb—which, though narrow, is long—it has no proper road whatever. The village of Drummelzier is beautifully situated on the Powsail, one-fourth of a

* The name is popularly pronounced, and occasionally written, Drummeller. “The whole word,” says the author of *Caledonia*, “is probably the British *Drym-mel-taur*, signifying ‘the Dwelling on or at the ridge.’”

mile above its confluence with the Tweed, and contains something less than 100 inhabitants. Population of the parish, in 1801, 278; in 1831, 223. Houses 42. Assessed property, in 1815, £4,668.—Drummelzier, formerly a vicarage of the rectory of Stobo, is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, Trotter of Ballendean. Stipend £192 5s. 7d.; glebe £10. Schoolmaster's salary £32, with £11 8s. 1½d. of other emoluments. The present parish consists of the original Drummelzier, and the southern and larger part of the old parish of Dawick. [See DAWICK.] At Kingledors, in the south-eastern part of Drummelzier, formerly was a chapel, dedicated to St. Cuthbert, the early evangelist of Tweedside; and, along with its appurtenances, and the lands of Hopcarshire, it was granted to the monks of Melrose.

DRUMMOND, a village in the parish of Kiltarn, near the river Skiack, on the post-road from Dingwall to Novar inn. It has two well-attended fairs,—one in June, and the other in December. The parish-school is here.

DRUMMOND CASTLE, in the parish of Muthil, 2 miles south of Crieff, was for many generations the residence of the noble family of Perth, and is now a seat of Lord and Lady Gwydyr. Behind the present castle are the ruins of one still more ancient, but of its history few authentic facts remain. Drummond castle, as it now appears, has undergone little or no exterior alteration for nearly a century. It forms two sides of a quadrangle, facing north and west. The front walls are ornamented with creeping woodbine, and a variety of evergreens. To the south of the castle, and in its immediate vicinity, under a steep bank, is an extensive flower-garden, laid out in the Dutch taste. Near a mile to the east is the fish-pond,—a large sheet of water, forming an agreeable feature in the landscape. At the termination of the last struggle for the Stuarts,—in which cause, James, Duke of Perth, acted a conspicuous part,—Government erected on the spot now covered by this lake, a kind of fortified village, which was occupied for some time after by the royal troops, as a post of observation, this being the centre of Strathearn, and the principal pass or key to the North Highlands. Not a vestige now remains of this once formidable military encampment. The family of Drummond was always ranked among the most ancient and illustrious names of the Scottish nation, and was distinguished by a long train of worthy ancestors not less remarkable for the noble alliances they made, and the dignities conferred on them, than for personal merit. Sir Malcolm Drummond flourished in the middle of the 12th century. From him descended Sir John Drummond of Stobhall, who made a great figure in the reigns of James III. and IV., and was concerned in most of the public transactions of the time. He was raised to the peerage by the title of Lord Drummond, January 14, 1487. His grandson James, 4th peer, was created Earl of Perth, March 4, 1605. His great nephew, James, 4th Earl, was successively Lord-justice-general, and Lord-chancellor of Scotland. On the accession of James II. of England, he was in great favour with that monarch, and attempted to follow him abroad after his abdication, but was taken, and suffered four years' imprisonment. On his liberation he followed his master, who created him Duke of Perth, first lord of the bedchamber, knight of the garter, &c. He died at St. Germain's in May, 1716, and was interred in the chapel of the Scottish college at Paris. His eldest son James—by Lady Jane Douglas—attached himself firmly to the House of Stuart. He opposed the Union, and was very active in the insurrection of 1715. His son James,

called Duke of Perth, imbibed all the principles of his family, and joined the standard of the young Pretender. At the battle of Preston he acted as lieutenant-general; “and in spite of a very delicate constitution,” says Douglas, “he underwent the greatest fatigues, and was the first on every occasion of duty, where his head or his hands could be of use; bold as a lion in the field, but ever merciful in the hour of victory.” After the battle of Culloden had extirpated the hopes of the house of Stuart, he embarked for France, but died on the passage, May 13, 1746. Having died before the limited time appointed by parliament for the surrendering, he escaped the attainder, but it fell on his brother and heir John, who was embarked in the same cause, and whose estate and title were forfeited to the Crown.

DRUMOAK, sometimes called **DALMAIK**, a parish partly in Aberdeenshire, partly in Kincardine; in extent about 4 miles long and 2 broad. It is bounded on the north by Echt and Peterculter parishes; on the east and south by Maryculter; on the south by Maryculter and Durris; and on the west by Banchory-Tarnan. The surface is hilly, a great part being only fit for sheep-pasture. The tower of Drum, in this parish, is a very ancient edifice. Population, in 1801, 648; in 1831, 804. Houses, in 1831, in Aberdeenshire, 128; in Kincardineshire, 35. Assessed property, in 1815, £1,405.—This parish, formerly a vicarage, is in the presbytery and synod of Aberdeen. Patron, Irvine of Drum. Stipend £157 14s. 1d.; glebe £21 16s. 8d.—Schoolmaster's salary £30, with £22 fees.

DRUMSTURDY-MUIR, a straggling hamlet in the parish of Monifieth, on the old road from Dundee to Arbroath, Forfarshire. Rising immediately on the south of it is the far-seeing Laws-hill, on the summit of which is a vitrified fort.

DRYBURGH ABBEY, a noble edifice, now in ruins, situated about 4 miles from Melrose, on the north bank of the Tweed, in the most delightful part of the vale of that river, famed as it is for beauty along its whole extent. The abbey, overgrown with ivy, and adorned with flowers, stands amidst the gloom of wood, on a verdant level, above high banks of red earth which confine the course of the river, whose rapid stream here makes a bold sweep around the park and mains-farm of Dryburgh, in its passage onwards. Mr. George Smith, architect, states that the ruins are so overgrown with the luxuriant foliage, that he found great difficulty in taking accurate measurements of them. “Everywhere you behold the usurpation of nature over art. In one roofless apartment a fine spruce and holly are to be seen flourishing in the rubbish; in others, the walls are completely covered with ivy; and, even on the top of some of the arches, trees have sprung up to a considerable growth, and these, clustering with the aspiring pinnacles, add character to the Gothic pile. These aged trees on the summit of the walls are the surest records we have of the antiquity of its destruction.” The structure was originally cruciform, divided in the breadth into three parts by two colonnaded arcades. The cross or transepts and choir have all been short; a part of the north transept which is still standing, called St. Mary's aisle, is a beautiful specimen of early Gothic work. Perhaps the most striking feature in the remains is a fine Norman arch, which was originally the western doorway. Its enrichments are in the style of the 12th century, and little affected by time. The monastery is a complete ruin. Nothing is entire but the chapter-house, St. Modan's chapel, and the adjoining passages. The chapter-house is 47 feet long, 23 broad, and 20 in height. At the east end there are five pointed windows; the western extremity

contains a circular-headed centre-window, with a smaller one on either side. The hall is adorned with a row of intersected arches. Mr. Smith concludes his description with the following remarks:—"From a minute inspection of the ruins we are led to believe that there are portions of the work of a much earlier date. The arch was the distinctive feature of all structures of the middle ages, as the column was of those of classic antiquity; and among these ruins we observed no fewer than four distinct styles of arches,—namely, the massive Roman arch with its square sides; the imposing deep-splayed Saxon; the pillared and intersected Norman; and last, the early English pointed arch. These differ not only in design, but in the quality of the materials and in the execution. The chapter-house and abbot's parlour, with the contiguous domestic dwellings of the monks, we consider of much greater antiquity than the church." [Monastic Annals of Teviotdale, p. 323.]—These structures were built of a hard pinkish-coloured sandstone, and exhibit a remarkable diversity in their levels. Near the ruins still flourishes a fine tree which there is good reason to suppose was planted seven centuries ago. The late Earl of Buchan was devotedly attached to this place. At a short distance from the abbey he constructed an elegant wire suspension-bridge over the Tweed, 260 feet in length, and 4 feet 7 inches between the rails, which was very recently blown down. His lordship also erected on his grounds here an Ionic temple, with a statue of Apollo in the inside, and a bust of the bard of 'The Seasons' surmounting the dome. He also raised a colossal statue of Sir William Wallace, on the summit of a steep and thickly planted hill; which was placed on its pedestal September 22, 1814, the anniversary of the victory at Stirling bridge, in 1297. "It occupies so eminent a situation," says Mr. Chambers, "that Wallace frowning towards England, is visible even from Berwick, a distance of more than 30 miles." The statue is 21½ feet high, and is formed of red sandstone, painted white. It was designed by Mr. John Smith, sculptor, from a supposed authentic portrait, which was purchased in France by the father of the late Sir Philip Anslie of Pilton. The hero is represented in the ancient Scottish dress and armour, with a shield hanging from his left hand, and leaning lightly on his spear with his right. Upon a tablet below there is an appropriate inscription.

Sir Walter Scott, in the 'Minstrelsy of the Scottish Border,' gives an interesting account of the Nun of Dryburgh,—an unfortunate female wanderer, who took up her abode, about eighty years ago, in a vault amongst the ruins of this abbey, which during the day she never quitted. It was supposed from an account she gave of a spirit who used to arrange her habitation, at night, during her absence in search of food or charity at the residences of gentlemen in the neighbourhood, that the vault was haunted; and it is still, on this account, regarded with terror by many among the lower orders. She never could be prevailed upon to relate to her friends the reason why she adopted so singular a course of life; "but it was believed," says Sir Walter, "that it was occasioned by a vow that during the absence of a man to whom she was attached, she would never look upon the sun. Her lover never returned. He fell during the civil war of 1745-6, and she never more beheld the light of day." Allan Cunningham tells us that the late Earl of Buchan waited upon Lady Scott in 1819, when the illustrious author of Waverley was brought nigh to the grave by a grievous illness, and begged her to intercede with her husband to do him the honour of being buried in Dryburgh.

The place,' said the Earl, 'is very beautiful,—just

such a place as the poet loves, and as he has a fine taste that way, he is sure of being gratified with my offer.' Scott, it is reported, good-humouredly promised to give Lord Buchan the refusal, since he seemed so solicitous; but the peer himself had made his tomb in these ruins before the illustrious bard. The last resting-place of Sir Walter Scott, is a small spot of ground in an area formed by four pillars, in one of the ruined isles which belonged to his family. The ground originally belonged to the Halyburtons of Merton,—an ancient and respectable baronial family, of which Sir Walter's paternal grandmother was a member, and of which Sir Walter himself was the lineal representative. On a side-wall is the following inscription:—"Sub hoc tumulo jacet Joannes Halyburtonus, Barro de Mertoun, vir religione et virtute clarus, qui obiit 17 die Augusti, 1640." Below this there is a coat-of-arms. On the back-wall the latter history of the spot is expressed on a small tablet, as follows:—"Hunc locum sepulturæ D. Seneschallus, Buchani comes, Gualtero, Thomæ et Roberto Scott, nepotibus Halyburtoni, concessit, 1791;"—that is to say, the Earl of Buchan granted this place of sepulture in 1791, to Walter, Thomas, and Robert Scott, descendants of the Laird of Halyburton. The persons indicated were the father and uncles of Sir Walter Scott; but, though all are dead, no other member of the family lies there, except his uncle Robert, and his deceased lady. "From the limited dimensions of the place," says Mr. Chambers, "the body of the author of Waverley has been placed in a direction north and south, instead of the usual fashion; and thus, in death at least, he has resembled the Cameronians, of whose character he was supposed to have given such an unfavourable picture in one of his tales." May no unhallowed hand ever violate the sepulchre, wherein—to use the language of lament which he himself penned over a brother-bard—"that mighty genius, which walked amongst men as something superior to ordinary mortality, is laid as soundly to rest as the poor peasant whose ideas never went beyond his daily task."

"He's gone! the glorious spirit's fled!
The Minstrel's strains are hush'd and o'er;
And lowly lies the mighty dead.

* * * * *
Still as the harp o'er Babel's streams,
For ever hangs his tuneful lyre;
And he, with all his glowing dreams,
Quench'd like a meteor's fire!

So sleeps the great, the young, the brave.
Of all beneath the circling sun:
A muffled shroud—a dungeon grave—
To him—the Bard, remain alone!
So, Genius, ends thy blazing reign!
So mute the music of the tongue,
Which pour'd but late the loftiest strain
That ever mortal sung!"

It has been conjectured, that the name Dryburgh takes its derivation from the Celtic *Darach-bruach*,—"the Bank of the grove of oaks." Some vestiges of Pagan worship have been found on the Bass hill,—an eminence in its vicinity,—among which was an instrument used for killing the victims in sacrifice. In the early part of the 6th century a monastery was founded here by St. Modan; but it is supposed that after his death the community was transferred to Melrose. Mr. Morton observes, that it "was probably destroyed by the ferocious Saxon invaders under Ida, the flame-bearer, who landed on the coast of Yorkshire, in 547, and after subduing Northumberland, added this part of Scotland to his dominions by his victory over the Scoto-Britons at Cattrath." Part of the original monastery is supposed to remain in the sub-structure of the existing ruins. The present structure was founded by Hugh de Morville, Lord of Lauderdale, and Constable of Scotland,

about 1150. According to the Chronicle of Melros, Beatrix de Beauchamp, wife of De Morville, obtained a charter of confirmation for the new foundation, from David I.; and the cemetery was consecrated on St. Martin's day, 1150, "that no demons might haunt it;" but the community did not come to reside here until the 13th of December, 1152. The monks were Premonstratensians, from Alnwick. Tradition says, that the English, under Edward II., in their retreat in 1322, provoked by the imprudent triumph of the monks in ringing the church-bells at their departure, returned and burnt the abbey in revenge. King Robert the Bruce contributed liberally towards its repair, but it has been doubted whether it ever was fully restored to its original magnificence. Certain flagrant disorders, which occurred here in the 14th century, drew down the severe censure of Pope Gregory XI. upon the inmates. Many of the abbots of Dryburgh were persons of high rank and consequence. James Stewart, who was abbot in 1545, occasionally exchanged the cowl for the helmet. Having united his retainers with those of some neighbouring nobles, they boldly determined on making a raid on the English border, and crossing the Tweed, burned the village of Horncliffe in Northumberland; but the garrisons of Norham and Berwick attacked and drove them across the border with considerable loss, before they could effect much more damage. In the same year Dryburgh abbey was destined again to be laid in ruins; being plundered and burnt by an English force under the Earl of Hertford. The market-town of Dryburgh had been previously destroyed by the troops of Sir George Bowes. The last head of this house—the lands and revenues of which were annexed to the Crown in 1587—was David Erskine, natural son of Lord Erskine, who is described as "ane exceeding modest, honest, and shamefast man." The abbey and its demesnes were granted by James VI. of Scotland to Henry Erskine, Lord Cardross; second son of John, Earl of Mar, the Lord-treasurer, and Mary, daughter of Esme Stewart, Duke of Lennox,—the direct ancestor of David Stewart Erskine, Earl of Buchan. The estate of Dryburgh-proper lies in the parish of Mertoun, in Berwickshire. A small property called the Holmes, in the parishes of St. Boswell's and Melrose, in Roxburghshire, was added to it by the late earl. The yearly rental of the whole, in 1840, was £800, exclusive of the policy extending to 52 acres.

DRYFE (THE), a river in Annandale, Dumfriesshire. It rises at the base of Loch Fell, on the northern point of the parish of Hutton and Corrie; flows due south down the centre of that parish for nearly 6 miles; then bends suddenly round and flows for about a mile eastward; and again debouching, takes permanently a south-western direction, over a distance of 9 miles, through the lower part of Hutton, the eastern wing of Applegarth, and the north-western wing of Dryfesdale, when it falls into the Annan. The stream has thus a course of about 16 miles. In the early part of its course it flows through a hilly country clothed with verdure and adorned with plantation; but afterwards it traverses a champaign country almost all under a rotation of crops. In fair weather the stream is a mere rivulet, clear and pure in its waters, and stored in its pools with abundance of trout and a few salmon; but in humid weather, it is subject to sudden and impetuous floods, which come furiously down from the uplands, lay waste cultivated fields, sweep away produce and stock, and occasionally plough up, over rich and loamy soil, a new channel for the river. The Dryfe's impetuosity, or its property of 'driving' all before it, is supposed to be alluded to in its name.

DRYFESDALE—popularly pronounced Drys-

dale*—a parish in the district of Annandale, Dumfriesshire, occupying the centre of the large and beautiful valley called the How of Annandale. It is bounded on the north by Applegarth; on the east by Hutton, Tundergarth, and St. Mungo; on the south by Dalton; and on the west by Lochmaben. It has, in some degree, the figure of the outline of a sportsman's powder-horn, the neck lying to the south. It measures in extreme length, from a bend of the Annan, opposite Dormount, on the south, to the point where it is first touched by Corriellaw burn, on the north-east, $7\frac{1}{2}$ miles; and, in extreme breadth, from a bend of the Annan, opposite Halleaths on the west, to the confluence of Corrie water with Milk water on the east, 5 miles. Its area is upwards of 11,000 acres. The north-eastern division is an agglomeration of verdant hills, partly cultivated and partly in pasture. The highest elevation is White Woollen or White Woon, so called from its having formerly fed with its fine pasturage large flocks of white sheep. Though rising 1,500 feet above the level of the sea, and somewhat acclivitous in ascent, it now nearly all luxuriates beneath dresses of grain, and presents to the eye of a lover of scenic beauty connected with agricultural improvement, a picture which will live long in his remembrance; and, in its turn, it commands from its summit a view of other objects so beautiful, so various, so far-spreading before the eye, stretching away in a complete panorama of the picturesque, that the tourist will feel attracted to it as a kind of temple of taste. Standing on this hill, a spectator sees spread at his feet the richly-tinted carpeting of the How of Annandale; he looks across upon the brilliant landscape of Lower Nithsdale, foiled by the looming hills of Galloway; he admires the serried horizon, though limited view, toward the north; he sees along the diversified scenery, now frowning and highland, and now smiling and lowland, of Eskdale and the English border; and he looks away over the sandy waste, or the tumultuous and careering waters of the Solway frith, to the Isle of Man and the Irish sea. Many views are more magnificent and thrilling, but few live more soothingly and fondly in the imagination. The other hills of Dryfesdale, for the most part, are, like the chief one we have mentioned, cultivated and under a rotation of crops. The western and southern parts of the parish are in general flat and in a state of high cultivation. Along the banks of the Dryfe and the Annan, are tracts of rich holmland, the depositions of the streams from time immemorial, consisting of deep loam, easy of culture, and luxuriantly fertile. The other flat grounds are, in general, light and dry, lying on a slaty and ragged rock or gravel, and, when properly cultivated, are abundantly productive. The Annan forms the boundary-line for about $6\frac{1}{2}$ miles on the west and south; the Milk, for about 2 miles on the south-east; and the Corrie, for about $1\frac{1}{2}$ mile on the east;—and they all diversify and enrich the landscape, and possess considerable attractions to the angler. The Dryfe—which was described in the preceding article—here terminates its course, after traversing the parish over a distance of $2\frac{1}{2}$ miles. The depositions which it makes, and the stretch of level land which it occasionally desolates with its floods before entering the Annan, are called Dryfe-sands. This locality is memorable as the scene of a sanguinary contest, on 7th December, 1593, between the Maxwells and the Johnstones. The former, though much superior in numbers, were routed and pursued; and lost, on the field and in the retreat, about 700 men, including

* The name is derived from the river Dryfe, and was anciently applied to the entire district through which that stream flows.

Lord Maxwell, their commander. Many of those who perished or were wounded in the retreat, were cut down in the streets of Lockerby; and hence the phrase, currently used in Annandale to denote a severe wound,—“A Lockerby lick.” On Dryfe-sands, or the holm of Dryfe, about $\frac{1}{2}$ a mile below the old churchyard, are two very aged thorn-trees, called “Maxwell’s Thorns,” with a tumulus at their base, which mark the scene of the slaughterous onset. In 5 localities are vestiges of strong towers; and in 8 places—chiefly eminences—are remains of camps or forts, some square or Roman, and others circular or British. The British camp most in preservation is at Dryfesdale gate, and occupies about 2 acres of ground, and commands an extensive view. The counterpart of this, is a Roman one about $\frac{1}{2}$ a mile to the east, where, about the end of the first century, the army of Julius Agricola, and the forces of Corbredus Galdus, king of the Scots, met in warlike encounter. There are plain traces of the great Roman road which traversed Dryfesdale, and which here branched-off into two great lines. [See DUMFRIES-SHIRE.] The parish is intersected from north to south by the mail-road between Glasgow and London, and is traversed, at short intervals, and in various directions, by minor roads. Though there are several hamlets, Lockerby, a stirring and attractive town, centrally situated, absorbs all the local trade:—see LOCKERBY. Population of the parish, in 1801, 1,893; in 1831, 2,283. Houses 409. Assessed property, in 1815, £8,285.—Dryfesdale is in the presbytery of Lochmaben, and synod of Dumfries. Patron, the Crown. Stipend £165 10s. 9d.; glebe £25. Unappropriated tithes £53 18s. 7d. The parish-church, situated in Lockerby, was built in 1757. Sittings 750. In Lockerby is also a place of worship belonging to the United Secession. Here are 7 schools, 6 of them unendowed. Parish schoolmaster’s salary £34 4s. 4½d., with £37 other emoluments. In Lockerby, are a subscription library, a circulating library, and a public reading-room. The church of Dryfesdale was anciently dedicated to St. Cuthbert, and belonged, as a mensal church, to the occupant of the see of Glasgow. The upper part of the parish—then called Little Hutton, to distinguish it from the conterminous parish of Hutton on the north—was a chapelry, having its own place of worship at an extinct hamlet called Little Hutton. There were also 2 other chapels,—one at Beckettoun, and the other at Quaas. The former belonged to the Knights Templars, and may still be traced in the vestiges of ancient tombs in what formed its burying-ground. Quaas chapel likewise has left local memorials; and has likewise contributed its font to serve as the market-cross of Lockerby. The ancient parochial church of Dryfesdale stood on Kirkhill, on the south-east of the Dryfe. In 1670, both it and part of the cemetery around it, were swept away, and their site converted into a sand-bed, by one of the Dryfe’s impetuous inundations. Next year, a new church was built near the former site, on what was thought a more secure spot; yet even this was, in a few years, so menaced by the encroachments of the river, which tore away piece after piece of the cemetery, that, along with its site, it was finally abandoned. These disasters were regarded as the verification of an old saying of Thomas the Rhymer, which a less astute observer of the furiously devastating power of the Dryfe than he might very safely have uttered:—

“Let spades and shools do what they may,
Dryfe will have Drysdale kirk away.”

The church of 1670, and even greater part of the cemetery, have now wholly disappeared. A story

has long been current in Annandale exhibiting an instance of the washing away of the bodies of the dead,—that a widower, after mourning for a reasonable time the spouse whom he had interred in Dryfesdale, wedded, on a wet and stormy day, a second helpmate, and crossing the bridge at the head of the bridal party, on their way homeward from the marriage-ceremony, saw the coffin of his deceased wife falling from “the scaur” into the torrent, and gliding toward the spot on which he stood. In what remains of the old cemetery, are two conspicuous tombs or enclosed burying-plots,—one of them that of the Johnstones, with their coat-of-arms sculptured over the entrance.

DRYHOPE, a fortalice in the parish of Yarrow, Selkirkshire; 15 miles west by south of Selkirk, near the lower extremity of St. Mary’s lake. The celebrated Mary Scott, “the flower of Yarrow,” was born here. She married Walter Scott, the laird of Harden, a freebooter as renowned for his roving propensities as his wife for her beauty.

DRYMEN, an extensive parish in the western district of Stirlingshire. Its form is nearly triangular. Its greatest length from north to south is about 14 miles, and its greatest breadth about 10. It is bounded on the north by Perthshire, from which it is separated at various points, by the waters of Duchray, Kelty, and Forth; on the south by the parish of Killearn and the shire of Dumbarton; on the west by the parish of Buchanan and by the Catter burn and the Endrick, which separate it from Dumbartonshire; and on the east by the parishes of Kippen, Balfron, and Killearn. The greater portion of this parish is composed of mountain and moor, and in no part is it distinguished for fertility. A large hilly tract in the north-western part of the parish is almost entirely covered with heath, and an immense moss occupies the north-eastern angle. Between these and also along the western part of the parish is a narrow stripe of light, dry, gravelly soil, being almost the only portion fit for the plough. The extensive mosses in this parish, which bear very unequivocal marks of a ligneous origin, seem to prove that this part of Stirlingshire was formerly almost entirely covered with wood. In 1795 an alder tree in this parish measured 19½ feet round the trunk, and an ash tree of immense age in the churchyard of Drymen measured, a few years ago, 15 feet. The greater part of the uncultivated grounds afford pasture to sheep and black cattle. By a return made in 1811 to Dr. Graham of Aberfoyle, the author of the Agricultural Report on Stirlingshire, there were 2,093 black cattle, and 3,700 sheep in the parish of Drymen. Fairs are held at Drymen on the 1st Tuesday of January, O. S.; the 3d Tuesday of February, O. S.; the 3d Wednesday of April, O. S.; the 10th of May, O. S.; the 9th of June, O. S.; the 3d Wednesday of July, O. S.; the 23d of August, O. S.; and the 1st Friday of November, N. S.—Sheriffs small debt circuit courts are held at Drymen on the 2d Tuesdays of January, April, July, and October. The parliamentary registration-court is also held at Drymen once a-year.—Population, in 1801, 1,607; in 1831, 1,690. Houses 283. Assessed property, in 1815, £8,399.—The parish of Drymen is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. Patron, the Crown. The parish-school was attended, in 1833, by 154 children. Salary of the master £31; school-fees £25. There are also two other schools, which were attended at the same period by 58 children. There is a large sepulchral cairn, in the interior of which several stone-coffins have been found, on the farm of Finnich-Tenant in this parish; and near the hill of Gartmore, in the north-eastern part of the parish, is a Roman *castellum* in a fine state of preservation.

It measures 50 paces square within the trenches. The noble family of Drummond derives its name from this parish, having, it is said, obtained a grant of lands here so early as the time of Malcolm Canmore, and made Drymen their principal residence for 200 years before the time of David II., when they removed to Perthshire. A tradition exists that John Napier, the inventor of the logarithms, was born at the farm-house of Drumbeg in this parish. Of the truth of this there is some doubt. Part, however, of his patrimonial inheritance lay here, and the house of Gartness on the Endrick was a favourite residence of this illustrious person, and the scene of many of his profound investigations. This parish, like others in the western part of Stirlingshire, was down to a late period subject to the exaction of black-mail by the Macgregors of Glengyle. Sir Walter Scott mentions that on one occasion Rob Roy Macgregor summoned all the heritors and farmers of this part of the county to meet him at the kirk of Drymen to pay this tribute. Only one gentleman ventured to decline compliance, whose lands the freebooter and his ketterans instantly swept of all they could drive away.

DUART CASTLE, an ancient building, once the castle of the chief of the Macleans, occupying the brink of a high cliff which shoots out from the coast of Mull into the sound opposite Oban. It is $4\frac{1}{2}$ miles from the ferry of Achnacraig, and consists chiefly of a large square tower, with walls of an immense thickness. Two additional buildings of more recent construction—one of which was occupied by a garrison towards the end of last century—connected by a high wall, form with the tower an oblong square of about 120 by 72 feet.

DUBBIESIDE, a village in the parish of Markinch, Fifeshire, at the mouth and on the south bank of the Leven. Its inhabitants are chiefly employed in the manufacture of coarse linen. It is $7\frac{3}{4}$ miles north-east of Dysart.

DUCHRAY (THE), a small river in the west of Stirlingshire. It rises on the northern declivity of Benlomond, and flowing eastward forms for several miles the boundary between the shires of Stirling and Perth. At Blairvach, in the midst of wild and singular scenery, it forms a fine cascade of 30 feet. It falls into the Forth a little below the lake of Menteith. On its banks, near the clachan of Aberfoyle, is Duchray castle, formerly the seat of one of the Graham family. It has been fitted up as a hunting-lodge.

DUDDINGSTON, a parish on the coast of Edinburghshire; bounded on the north by the parish of South Leith; on the south-east by the frith of Forth; on the east by Inveresk; on the south by Libberton; and on the west by St. Cuthbert's and Canongate. It is of very irregular outline; and might have been nearly a rectangle, but for a triangular elongation on its eastern side, and the attachment of a westward stripe to its south-west angle. On the north, from the east base of Arthur's seat to the sea, it is only $1\frac{1}{2}$ mile long; but on the south, from Salisbury-green on the west to Magdalen-bridge on the shore, it is $3\frac{3}{4}$ miles. In its central part, over half its length, it is nearly $1\frac{1}{2}$ mile in breadth; but in the western stripe it is only $\frac{1}{4}$ of a mile, and in the eastern angle diminishes from $1\frac{1}{2}$ mile to a point. Nearly the whole of the parish is dressed in the richest garb of cultivation. A fertile soil, well-enclosed fields, a varied surface, the beautiful demesne of the Marquis of Abercorn, and a delightful intermixture of lawn and tillage, of water-scenery, rows of plantation, and fences of shrubbery, render it an attractive environ of the proud metropolis of Scotland. Pow burn and Braid burn enter

it on the south-west, and, after forming a confluence, diagonally intersect it, and diffuse in their progress many beauties of mimic landscape. The united stream is conducted through the pleasure-grounds of the Marquis of Abercorn in an artificial canal, and afterwards traverses a romantic little dell, and passes on to pay its tiny tribute to the sea. Duddingston loch, spread out at the south-east base of Arthur's seat, and measuring about $1\frac{1}{4}$ mile in circumference, smiles joyously amid the opulent scenery around it, and in winter allures crowds of skaters from the neighbouring city to its glassy bosom. On the north-eastern bank of the lake rises the fine Grecian form of Duddingston-house, surrounded by gardens, plantations, mimic temples, and various adornings indicating united opulence and taste. A little eminence, surmounted by the venerable-looking parish-church, under the south cope of Arthur's seat and overlooking the lake, commands a wide expanse of beautiful and picturesque scenery. Overshadowed by the bold precipices of the neighbouring mountain, and shut out by it from every view of the magnificent and crowded city at its further base, a spectator feels himself sequestered from the busy scenes which he knows to be in his vicinity, or he hears their distant hum dying away on the breeze, and disposing him to enjoy the delights of solitude; and he looks south-east and north over a gorgeous panorama of elegant villas, towering castles, rich valleys, undulating hills, groves, ruins, and a plenteous variety of scenic tints and shading, till his vision is pent up by the Pentlands and Lammermoor, or glides away with the sinking sea into the distant horizon. Many of the scenes and objects within his view—such as Craigmillar castle—crowd his mind with historical recollections; and others—such as the peopled shores and the laden waters of the frith—portray to him the enterprise and refinements of a modern age. Whether in the seclusion and loveliness of its own immediate attractions, or in the exhibition it gives of the wide landscape around it, softened and ruralized by the intervention of the mountain-screen of Arthur's seat hiding Edinburgh from the view, the little eminence of Duddingston is captivating in its attractions, and draws to its soothing retirement many a tasteful or studious citizen of the metropolis to luxuriate in its pleasures. The pedestrian approach to it from the city possesses allurements of its own, to heighten the attractions of the resort; leading by a pleasant path through the king's park, and under the basaltic columns of Samson's ribs, overhanging the tunnel of the Edinburgh and Dalkeith railway. Though the parish, in its present state, is not excelled in the loveliness and exuberance of cultivation by any district in Scotland, and may compete with the finest spots in the rich champaign of England, it was, so late as 150 years ago, an unreclaimed moor, covered with sand, and variegated only by the rankest and most stunted shrubbery and weeds. About the year 1688, the proprietor of the estate of Prestonfield was Lord-provost of Edinburgh; and, better acquainted than his contemporaries with the value and fertilizing powers of city manure, he availed himself of ready and thankful permission, to carpet and enrich the sterile soil of his property with the accumulations of the yards and streets of the metropolis. So successful was his astute policy that, arid and worthless as his lands had been, they speedily became the first which were enclosed in the vicinity of Edinburgh, and are still esteemed the best grass pastures about the city, or perhaps any where else in Scotland. About the year 1751, the Earl of Abercorn, proprietor of the estate of Duddingston, compensated in vigour what had been lost by delay, in imitating the successful movements on the conterminous property;

and having subdivided his estate into commodious farms, and enclosed and beautified it with hedgerows and clumps of plantation, expended £30,000 in rearing the architectural pile, and spreading out the array of water-embellishments and landscape decorations, which preside in its centre. Coal of excellent quality abounds in the parish, and finds a ready market in the metropolis. The strata of limestone and ironstone which run north-eastward through Edinburghshire, traverse the parish, and dip into the sea near its eastern extremity, and are said to look up again from the surface on the opposite coast of Fife. Clay of so pure a kind has been found as to be material for stoneware, and for crucibles capable of sustaining without injury a very high degree of heat. On the coast, in the interstices of rocks and stones, have been found curious and rare vegetable petrifications; some of them resembling the finest Marseilles quilting, and others formed of reeds and shrubs known to be indigenous only in tropical countries. Small pieces of chalcidony and porphyry, and large masses of agate, have been picked up on the beach; but may now, it is presumed, be vainly sought for, after the peering searches of numerous virtuosos of a former generation. Marl of different kinds, of great richness and in much plenty, has been found in Duddingston loch. Indigenous plants of upwards of 400 species, and exhibiting a curious and interesting variety, allure the botanist to gratify his taste, and admire the interminable displays of creative skill and beneficence, round the banks of the loch, and along the roots and skirts of Arthur's seat. The Fishwives' causeway, forming the north-east boundary of the parish, and once a part of the great post-road to London, bears marks of considerable antiquity, and is supposed to be a remnant of those regular roads, converging to Holyrood-house, which Mary, of debated memory, patronized as a means of soothing or of benefiting her turbulent subjects. At the mouth of Duddingston burn, have been found, buried in a deep stratum of clay, and from bark to core as black as ebony, the trunks of large oak trees,—remnants, it is supposed, of the King's forest, in which the inmates of the monastery of the Holy Cross had the privilege of nourishing their hogs. The Figgetwhins, formerly a forest, stretching over a considerable territory—sold in 1762 or 1763 for only £1,500—and now in part the opulent and beautiful tract around Portobello, and in part the site of that extensive and smiling suburb of the metropolis, are said to have been a place of shelter and of rendezvous to Sir William Wallace and his copatriots, when they were preparing to attack Berwick. Monteath, the secretary of Cardinal Richelieu of France, David Malcolm, an essayist, a celebrated linguist, and a member of the Antiquarian society about 1739, and Pollock, professor of divinity in Aberdeen, were all ministers of Duddingston. The parish is cut, through its western wing or stripe, by the Edinburgh and Dalkeith railway, and is intersected from west to east near the shore by the Leith branch. It is traversed also by the great turnpike from Edinburgh to London, by way of Berwick. Population, in 1801, 1,003; in 1831, 3,862. Houses 633. Assessed property, in 1815, 14,194.

Duddingston contains the parliamentary burgh of Portobello, [See PORTOBELLO,] the villages of Joppa and Easter and Wester Duddingston, and the hamlets of Duddingston-mill and Duddingston Salt-pans. Joppa is a suburb of Portobello, with 389 inhabitants in 1831.—Easter Duddingston is situated in the eastern angle of the parish, on a rising ground near the sea, and consists of a few plain cottages inhabited by labourers. Population, in 1831, 171.—Wester Duddingston, situated on the north side of the loch, was

once populous, and contained 30 looms; but now, though neat in appearance, and beautiful in situation, surrounded by gardens and plantations, and so attractive as to draw to its villa-like cottages summer-residents from Edinburgh, is very small, and contained only 225 permanent inhabitants in 1831. At the east end of it a house still stands in which Prince Charles slept on the night before the action at Prestonpans.* Duddingston-mill is a joyous little hamlet, containing the parochial school, and delightfully situated near the centre of the parish, about $\frac{1}{2}$ a mile east from Wester Duddingston. Near it is Cauvin's hospital, an edifice resembling a large elegant villa, built in 1833, and maintained, for the board and liberal education of 20 boys, by a munificent bequest of Louis Cauvin, a Duddingston farmer.—Duddingston Salt-pans consist of some straggling houses on the coast to the eastward of Joppa.

The parish of Duddingston is in the presbytery of Edinburgh, and synod of Lothian and Tweeddale. Patron, the Marquis of Abercorn. Stipend £248 19s. 5d.; glebe £30. Unappropriated teinds £118 4s. 11d. The parish-church is a building of considerable antiquity, and, from the structure of the arches and the peculiar character of the ornaments, has been supposed by some to have been of Saxon erection. A very beautiful semicircular arch divides the choir from the chancel. In the churchyard is an elegant marble obelisk, to the memory of Patrick Haldane, Esq. of Gleneagles. During the reign of William the Lion the monks of Kelso acquired the church and lands of Duddingston; and these being at an inconvenient distance from their abbey, they appointed baron-bailies, and on advantageous terms to tenants let the lands. In 1630, the estate of Prestonfield was disjoined from the parish of St. Cuthbert. In 1834, a district more than a mile in length, and nearly half-a-mile in its greatest breadth, was disjoined from Duddingston, and erected into the *quoad sacra* parish of Portobello. Parochial schoolmaster's salary £34, with about £12 fees. There are 10 non-parochial schools attended by about 300 scholars.

DUFF HOUSE, a seat of the Earl of Fife, in the immediate neighbourhood of Banff, surrounded by a noble park, said to be 14 miles in circumference. It is a large quadrangular edifice, of massive proportions, decorated with Corinthian pillars in front, and a handsome balustrade on the top, terminated at each corner by a square turret. Externally it is sprinkled over with vases and statues; internally—to borrow a new-coined expression from a late lively tourist—it is perfectly Louvrized with pictures,—chiefly portraits. There are the two mistresses of Louis XIV., Madame de Montaspar, and the Duchess de Valliere, with the grand monarch himself; also Lady Castlemain, and Lady Carlisle, Jane Shore, and Nell Gwyn, with some others equally respectable, and forming

* At the east end of Wester Duddingston, and nearly opposite Lord Abercorn's gate, stood a memorable thorn-tree, known as Queen Mary's tree, perhaps one of the oldest thorn-trees in Scotland, and of the greatest dimensions, being about 9 feet in circumference. It formerly stood within the park, but on widening the carriage-road, it was brought outside, and then several fissures appeared in the trunk, through which the elements of air and water were fast consuming the venerable tree. The road-trustees had these fissures filled up with stone and lime, and had it otherwise protected, but the violence of the gale on the 25th of May, 1840, pulled it up by the roots, laying it along a shattered and withered trunk. A well-known and justly reputed artist, who resides in the neighbourhood, has ascertained that the Duddingston thorn existed so far back as the reign of Alexander the Fierce (1107), when it was one of the landmarks of the property on which it grew. It is mentioned in the title-deeds of the Abercorn property, and hence the desire on the part of his lordship's doers to preserve a precise knowledge of the spot on which it stood. The principal part of the wood was removed to a wood-yard in the neighbourhood, for the purpose of being made up into various fancy articles, furniture, rustic chairs, &c.

"a pretty set" in every sense of that equivocal term; also Queen Elizabeth and her beautiful victim Queen Mary, and the youthful and accomplished Lady Jane Grey; the Duchess of Richmond by Vandyke; Mrs. Abington by Sir Joshua Reynolds; the late Duchess of Gordon, "looking like majesty personified;" Sir Francis Knollys by Sir Godfrey Kneller; the Admirable Crichton; the Chevalier St. George when a boy; Colonel Gardiner; and a whole host beside of beauties, warriors, statesmen, nobles, and authors.—This splendid mansion is placed near the middle of an extensive plain, spreading on one side to the edge of the Doveron, which here fills its channel without cutting, and but rarely overflowing, its banks. The wall of the park, upon its north-east side, sweeps along the town of Banff; and the great gate, at the distance of about half-a-mile from the house, opens into the street. From the windows of two sides, the house commands an approach from another quarter, where the river quits the park, at the distance of half-a-mile from the house. This approach opens straight along a magnificent bridge of seven arches, upon the highway to Aberdeen; the road into the town making an easy sweep to the other hand, and passing by the gate which leads from the end of the bridge to the house. The town of Banff, with the shipping in its port, and a wide prospect of the ocean, form the verge of the landscape on the one side; upon the other are the winding river, the broad extended green vale, diversified by a variety of trees and shrubs in serpentine stripes, or grouped together in spreading groves; while the distant acclivities, on either side, are enriched to a great extent by cultivated fields and sheltering plantations. Where the river enters the park on the south side, it is contracted to the breadth of a brook between hanging rocks, over which is thrown a private bridge of one stately and elegantly formed arch, having in one of the abutments a chamber which commands a striking and romantic view to either hand. A large enclosure, stocked with a numerous herd of fallow-deer, is contained in a recess of the park. On that quarter of the park which divides it from the town of Banff, there is a considerable extent of garden, enclosed by a wall, well-covered with fruit-trees, and a long range of hot-houses.*

DUFFUS, a parish in Morayshire; bounded on the north by the Moray frith; on the east by Drainy and Spynie parishes; on the south by Alves parish; and on the west by the Moray frith. It extends 5 miles in length from east to west along the south coast of the frith, and averages 3 in breadth. Its form is nearly that of a parallelogram. Except where

its tameness is varied by plantations, and relieved by the hill of Rose-isle, a small eminence in the middle of the parish, and by an artificial mount on which the ruins of Duffus castle stand, the country is a continued plain, everywhere arable. Along the coast extends a level tract of land, about $\frac{1}{2}$ mile in breadth, which was at one time richly cultivated, but for many years it was covered with sand from the western shore. The sand at length ceased to be blown thither, and the land has been almost all restored to its former condition. The soil in the eastern quarter of the parish is a deep rich clay, capable of producing any sort of crop. It resembles the carse of Gowrie. The western consists of a rich black earth, mixed here and there with sand, but in general so excellent that the crops for quality and increase cannot be surpassed in Scotland. The plain of Duffus, together with the adjoining land, has been called, perhaps more from richness than from situation, 'The Heart of Morayshire.' The mildness and geniality of the climate is well-known; but in so northern a latitude is very surprising. There is little rain; and as there may be said to be no hills, neither are there rivulets or rivers in the parish. The loch of Spynie, which, when full, extended into it for upwards of a mile, has been drained out of the bounds of this parish altogether; and though the benefits anticipated from this expensive work [see DRAIN] have not in general been realized, yet, so far as Duffus is concerned, the project has been successful.—Duffus castle stood on the north-west shore of this lake. A deep moat surrounded it with a parapet-wall and drawbridge; and from the low-lying marshy state of the ground and the vicinity of Loch Spynie, it must have been almost encompassed with water. This castle must have been of great antiquity. The walls are formed of rude workmanship, being composed of rough stones run together with lime, the whole forming a mass 5 feet thick. The ruin, as it now appears, surrounded with its clumps of aged trees, and standing in the midst of a pleasant plain, presents, at every point of view, a picturesque and interesting landscape. In the distance from the castle is the palace of Spynie, now also dilapidated. Formerly the walls of both these places must even have been washed by the waters of the loch; but now, since these have been drained away, corn-fields and green pastures intervene. The old castle is thought to have formed a place of strength for the protection of the palace. One of its earliest possessors, and perhaps its founder, was Freskinus de Moravia, whose family became conspicuous in Moray in the reign of David I. It is not certain when this castle was dilapidated.—The coast of Duffus at the eastern end is rather bold, rocky, and cavernous. There are freestone quarries on the coast; while, inland, there is limestone which is now burnt for manure, &c. At the western end, the land is only elevated about 4 feet above sea-level. At this extremity a small but rather conspicuous promontory runs into the sea, forming the north-western extremity of Brough-head bay. Here stands the thriving sea-port and fishing-village of BROUGH-HEAD: which see.†

* In the age, it is supposed, of Alexander III., a convent of Carmelite friars had obtained possession of the beautiful and fertile vale in which Duff-house is now placed. A grant by Robert Bruce, dated at Scone, August 1st, 1324, confirms this possession of nearly 500 acres, for procuring bread, wine, and wax, for the exercises of divine worship. The same charter bestows a "chapel of the Virgin Mary near the town of Banff," the situation, it is believed, of the former church—where they had also several cells—"with the benefice thereto appertaining, for building a chapel and the other houses of their order." The ruins of this establishment have been entirely removed. In forming the modern arrangement of the ground about Duff-house, a very large urn of stone, on a suitable pedestal, decorates a hillock in the park, and preserves all the bones which were turned up in the cemetery of these monks. The situation also of their chapel is now occupied by the vaulted sepulchre of the family of Fife, on a green mount overhanging the meadow upon the bank of the river. A plain undecorated fabric rises over the vault, which contains the monuments of the ancestors of the family; and considerable ingenuity has been exerted, and proportional cost expended, in providing for its long duration. The roof—into which, on this account, no timber has been admitted—is not lofty, and forms outwardly two sides of a prism. It is framed into an arch of cut stone, so closely jointed by the accurate smoothing of the chisel, as to ward off the pelting of the heaviest storm from another solid circular arch underneath, which is raised over the walls of the dome, and forms the ceiling of this simple though costly sepulchre.

† Notwithstanding the general opinion there given as to the ancient fortifications at Brough-head, it is observed by Mr. Rhind, in his elegant and illustrated 'Sketches of the Past and Present State of Moray,' published in 1839, that "it does not appear at all probable that the Romans ever had any permanent footing in Moray. Severus, it is true, penetrated into some parts of the north; but after the loss of a great part of his men from cold, fatigue, and famine, he was soon compelled to retreat. Agricola sailed round the island on a voyage of discovery; but certainly did not stop at any one place a sufficient time to build a fort, or construct a wall. It was from this voyage that Ptolemy the geographer drew his materials for his rude map of the country. The Floron of Ptolemy appears to correspond to Burch-head, at that time probably nothing more than

Near a place called Kaim, at this end of the parish, stood an obelisk, conjectured to have been that erected near the village of Camus, in commemoration of the victory obtained by Malcolm in Moray, over the Danes, under their memorable leader Camus. At the picturesque village of Duffus there is a square, in the centre of which the church is placed. It is surrounded by four streets regularly paved, the workmanship, it is said, of Oliver Cromwell's soldiers. The villagers were noted for their devotion to the house of Stuart. Port-Cumming and Hope-man, where there is a harbour, are the other principal villages in the parish. Population, in 1801, 1,339—1,623; in 1831, 2,308. Houses 480. Assessed property, in 1815, £5,611.—This parish is in the synod of Moray, and presbytery of Elgin. Patron, Sir Archibald Dunbar, Bart. Stipend £232 8s. 10d.; glebe £18. Unappropriated teinds £245 15s. 11d. In 1823 a portion of the parish, including the three villages,—Brough-head, Cummingstoun, and Hope-man,—was attached to the chapel-of-ease at Brough-head by authority of the presbytery; and in 1833, the country district, called Rose-isle, was also added. The financial affairs of the chapel-congregation are under the control of certain managers and a committee of presbytery. Chapel built in 1832; cost £300.—There is a United Secession congregation at Brough-head. Chapel built in 1821; cost £367 9s. 11½d.—At Kaim there is a small Episcopal chapel. Schoolmaster's salary £36 per annum; fees, &c. £15, besides a portion of the Dick bequest. There are 7 private schools.

DULLISH, a place on the cattle-road from Caithness and Strathnaver, in the parish of Kildonan, Sutherlandshire. A fair is held here on the 14th of August, and another on the 12th of September, both in connexion with the Kyle and the Falkirk markets.

DUIRNISH, or DURINISH, a parish in Invernessshire, in the isle of Skye; about 19 miles long, and 15 broad; containing from 50,000 to 55,000 Scottish acres. The extent of sea-coast is about 80 miles. The ground about the lochs, or arms of the sea—which run far into the country—descends in some places with a quick, and in others with an easy slope towards the shore. The promontories or headlands are usually rocks of immense height, with a great depth of water near them. The moors are, in most places, deep and wet; the soil is partly a light black loam, and partly of a reddish gravelly appearance; and, though mostly thin and stony, it is on the whole fertile and productive. The most remarkable mountains are the two Hallivails. The ruins of several Danish forts are yet traceable in this district. Some indications of coal have been discovered. In the churchyard, according to Boswell, is a pyramid of freestone, about 30 feet high, with a pompous inscription to the memory of Thomas, Lord Lovat, by his son, Lord Simon, who suffered on Tower-hill. Population, in 1801, 3,327; in 1831, 4,765. Houses 790.—This parish is in the presbytery of Skye, and synod of Glenelg. Patron, M'Leod of M'Leod. Stipend £158 6s. 7d.; glebe £22 10s.

a headland. The Varar is the river Beaul; Strathfarar being still the Gaelic name for the valley west of the Aird. Varris may have been Forres,—Tuesis the Spey. Not only from these circumstances, but also from the simple and rude construction of the well itself, the probability is, that the Picts were the founders of the furt and the artificers of the well. Nor on this account is it the less interesting as a relic of ancient art. We have abundant examples of the Roman art in other situations; but very few specimens, indeed, of the ingenuity of the Scandinavians. That the Picts, in times subsequent to the Roman visit to Scotland, held this stronghold of Burgh-head, there can be no doubt. The very name, and the traditions of battles which they fought in the vicinity, indicate this. In cleaning out the well, a number of Spanish coins were found amongst the rubbish, and a slab with a bull rudely carved on it. Perhaps the Buccaneers may have paid the place a visit in more modern times."

Church built in 1823-4; sittings 550. This parish may be considered as divided into three districts:—1st, Glendale, extending westwards from Skinnieden, near the head of Dunvegan loch. Population, in 1831, 1,538. There is a preaching-station here.—2d, Kilmuir, being the district in which the parish-church is situated, including the country between Dunvegan loch and Loch Bay, extending southward. Population, in 1831, 1,489.—3d, Arnizort, extending to the eastward of Kilmuir, and to the boundaries of the parishes of Halen, Snizort, and Bracadale. Population, in 1831, 929. There is a preaching-station here, and an itinerating Gaelic school.—Schoolmaster's salary £30, with £5 fees. There were 5 nonparochial schools in 1834.

DULL, an extensive parish in Perthshire. It is about 20 miles in length from north to south, and 12 miles in breadth. It is bounded on the north by the parish of Blair-Athole; on the south by the parish of Kenmore, an isolated portion of that of Fortingall, and the parishes of Weem, Logierait, and Little Dunkeld; on the east by the parishes of Moulin and Logierait; and on the west by the parishes of Fortingall and Kenmore. The parish of Dull is divided into five districts:—the district of Appin, in which the parish-church stands; the district of Grandtully, a peninsulated portion in the south-east; the district of Amulrie, which is situated south from the rest of the parish, and is completely isolated from it, being bounded on the north by Weem and Logierait, on the west by Logierait, part of Fortingall, Kenmore, and Comrie, on the south by Monzie, and on the east by Little Dunkeld and Weem; the district of Foss in the north-western part of the parish; and the district of Fincastle in the north-eastern: See articles GRANDTULLY, AMULRIE, FOSS, and TENNANDRY. The boundaries, however, of the parish of Dull *quoad sacra* and *quoad civilia* are not the same; the district of Amulrie is annexed *quoad sacra* to the mission of Amulrie; the district of Grandtully is annexed to the mission of Grandtully; the district of Fincastle has now been annexed to the new parish of Tennandry; and the district of Foss to the government church of Foss. A large portion of this parish is wild and mountainous. The soil is very various. "The division of Appin," says the Old Statistical Account, "is flat; part of the soil is thick, but by much the greater part is thin and gravelly. It seems that the river Tay had occasionally altered its bed, and consequently carried away the earth and left much sand and gravel. There is a great deal of hill, but the greater part of the parish is a corn country. In the higher tracts the arable ground is exceedingly good, and yields great crops, although they are seldom fertile, being very late in ripening. In the district of Appin the grain is of an excellent quality; and, in general, the harvest is as early as it is in Mid-Lothian." In 1792 there were 1,500 horses, 5,000 cows, and 24,000 sheep, in this parish. The Tay and the Tummel are the only considerable rivers in the parish, but it is intersected by numerous smaller streams. There are not less than 15 lakes, most of which afford excellent fishing. Population, in 1801, 4,055; in 1831, 4,590. Houses 843. The population is principally scattered over the parish; and only in a few instances collected into small villages. Fincastle and the places adjacent to it have a population of 221. The lands of Clunie and Derculich are inhabited by 302 persons. The village of Aberfeldie and its neighbourhood have a population of 800, and Croftmoraig and Tullyhuil of 70. Assessed property, in 1815, £3,980. The valued rent is £4,898 3s. Scots.—The parish of Dull is in the presbytery of Weem, and synod of Stirling and Perth.

It is said to have been at some former period united to the parish of Pitcairn or Grandtully. Patron the Crown. Stipend £257 18s. 10d. Unappropriated tends £70 18s. The minister, besides a manse and glebe, has also a privilege of casting peats, of feal and divot, and of foggage for 12 souns of cattle on the hill. The church—the period of the erection of which is not known,—was repaired about 18 years ago. Sittings 650.—An Independent congregation has been established for nearly 43 years at Aberfeldie. The chapel and a house for the minister were built in 1817 at an expense of £650. Sittings 500. Stipend £40 from the congregation, and £10 from the general funds of the Congregational Union of Scotland: See ABERFELDIE. Salary of the parish-schoolmaster £34 4s. 4½d., with £14 school-fees and £7 of other emoluments. The instruction given consists of English and Gaelic reading, writing, and arithmetic; with Latin and Greek occasionally. Average attendance 75. There are 10 private schools in the parish, the average attendance at which is 480. Three of the latter schools are supported by charitable societies.

DULNAN (THE), a river on the east side of Inverness-shire, rising in the heights of Badenoch, and joining the Spey below Tullochgorum, nearly opposite Abernethy church.

DULSIE BRIDGE, a romantic bridge spanning a narrow chasm through which the Findhorn rushes, in an arch of 46 feet, with a smaller subsidiary one, at a point of the river 12 miles from Freeburn, and 2 from Furness inn. It is on the line of the old Military road from Fort-George, through Strathspey and Braemar. See ARDCLACH.

DUMBARNIE. See DUNBARNIE.

DUMBARTON, a parish and royal burgh in Dumbartonshire; bounded on the north by the parishes of Bonhill and Kilmaronock in Dumbartonshire, and those of Drymen and Killearn in Stirlingshire; on the south by the parish of West Kilpatrick and the frith of Clyde; on the west by the Leven, which separates it from the parish of Cardross, and by the parish of Bonhill; and on the east by the parish of West Kilpatrick and the shire of Stirling. The southern part of the parish near the Clyde is—with the exception of the singular rock on which the castle stands—nearly a dead level; but as we recede from the coast it becomes quickly more hilly, and towards the northern extremity it is almost entirely composed of hill and moor, with scarcely any inhabitants. It is about 7½ miles in length, and about 3½ in breadth; and its superficial extent, according to a survey made in 1818, is 6,522 Scots, or 8,155 English acres. The soil near the banks of the Clyde is principally a rich black loam of great fertility; but the northern, and by much the larger part of the parish, is almost entirely moorland and incapable of cultivation. Limestone is found at Murroch glen, between 2 and 3 miles to the north-east of the town of Dumbarton; and a red sandstone on the northern slope of Dumbarton moor. There are several printfields and bleachfields on the banks of the Leven, and in the town of DUMBARTON: which see. Glass-making, tanning, and ship-building are carried on to some extent.—The parish of Dumbarton is in the presbytery of Dumbarton, and synod of Glasgow and Ayr. It is in the patronage of the town-council of Dumbarton. Stipend £233 6s. 2d., with 6 stone of salmon. Church built in 1810; sittings 1,265.—There is a United Secession church, built in 1826; sittings 489. Stipend £130.—A handsome Roman Catholic chapel was erected in 1830, at an expense of £1,400; sittings 218. Stipend £90.—There is also a small Baptist congregation in the town.—The parochial school has two teachers, each of whom has a salary

of £40. Number of scholars, in 1834, 198. Population, in 1801, 2,541; in 1831, 3,623.

DUMBARTON,* a royal burgh and the capital of Dumbartonshire, is situated on a low flat piece of ground on the coast of the frith of Clyde, at the mouth of the small river Leven; 15 miles north-west of Glasgow, and 57 west of Edinburgh; in N. lat. 55° 57', and W. long. 4° 35'. The original name of Dumbarton appears to have been Alclud or Alcluyth, that is, 'the Rock upon the Clyde;' and under this appellation it was in the time of the Venerable Bede the capital of the kingdom of Strathclyde. Before this time, however, the site was occupied as a Roman naval station, under the name of Theodosia; and it appears not improbable that the rock was occupied by a Roman fort, and that the wall of Antoninus terminated at this point. Dumbarton was at a much later period the chief town of the Earldom of Lennox. About the beginning of the 13th century, it was resigned by Earl Maldwyn into the hands of Alexander II., who, in 1222, erected it into a free royal burgh with extensive privileges. Additional charters were granted by succeeding monarchs, all of which were confirmed by James VI., in 1609, and ratified by parliament in 1612. This charter grants or confirms to the burgh considerable property in land and extensive fishings in the Leven and Clyde. It gives the town right to a free port, in the same manner as Edinburgh has in Leith; and conveys a right to levy customs and dues on all ships navigating the Clyde between the mouth of the Kelvin water, 3 miles below Glasgow, and the head of Loch Long. The rights and privileges of the burgh were ratified by subsequent acts of parliament, in 1641 and 1661. The right granted by the charter of King James to levy customs and duties in the Clyde appears to have been of the most valuable kind. According to a statement published by a committee of the burgesses of Dumbarton, in 1829, although the space limited excluded Glasgow, it comprehended Greenock, and the ground in the vicinity of Greenock on which the town and harbour of Port-Glasgow were subsequently formed. The valuable privilege thus conferred on Dumbarton by this charter was, that every vessel, whether foreign or belonging to native born subjects, coming within these limits, was bound to go to, pay duties at, and take clearances from Dumbarton; and that no merchants could carry their effects to any other harbour—either then existing or to be afterwards made within these limits—in defraud or evasion of the lucrative right thus vested in the burgh of Dumbarton. Besides, the clause by which all vessels were bound to break bulk and make market with free burgesses, gave rise to a claim of the greatest value to Dumbarton. This was styled the "offers dues," and was levied without opposition from all foreign vessels coming into Clyde. It is described in a contract entered into between Glasgow and Dumbarton, in 1700, "as obliging strangers to make the first offer of the goods and merchandize imported by them into the Clyde, to the burghs of Glasgow and Dumbarton, at such expense and rate as the strangers, offerers, shall not have power or liberty to undersell the same to others." These extensive privileges, which were respectively claimed by Dumbarton and Glasgow, produced perpetual

* The origin of the name is involved in some uncertainty, partly, perhaps, in consequence of the various etymologies which it has assumed. Dumbarton, according to Chalmers, signifies 'the town of the Castle' on the summit; but it so happens that the more common orthography of the name at an early period seems to have been *Dunbruton*, which would signify 'the fort or castle of the Britons.' Both names are correctly descriptive, the one of the physical features, the other of the historical character of the place. In writing *Dumbarton*, we have given way to the prevailing though probably incorrect orthography.

disputes between the two burghs during the 17th century. These were finally terminated in 1700 by a contract, by which the town-council of Dumbarton sold and disposed to the town-council and community of Glasgow, the dues payable to the burgh of Dumbarton by all ships coming into the Clyde, of which the freemen of Dumbarton were not owners; and also their share of the "offers dues." For these rights the town of Glasgow paid to Dumbarton the sum of 4,500 merks, (about £260 sterling,) and the burghs mutually agreed that the vessels belonging to the burgesses, inhabitants of Glasgow and Port-Glasgow, should not pay duties in the harbour of Dumbarton; and, on the other hand, the vessels of Dumbarton burgesses should be exempted from duties in the harbours of Glasgow and Port-Glasgow. This contract was ratified by the convention of burghs and the Scottish parliament, in 1701.* Though the castle of Dumbarton—to which we shall immediately allude—has borne its share in the vicissitudes of the Scottish story, we do not find that the town itself occupies any considerable place in history. It has undoubtedly existed from a very remote period; but its inconsiderable size and importance, and its position being somewhat removed from the castle-rock, have probably saved it in a great measure from those disasters of siege and stratagem and arms, of which its near neighbour has often borne the brunt. It was, however, several times burnt during the sieges which the castle underwent. In the time of James IV. and James V., Dumbarton was made a naval station; and the former monarch made several of his expeditions from this port to Tarbert in Kintyre, to the Western islands, and elsewhere. From Dumbarton also, without doubt, the small Scottish navy sailed—under the wretched conduct of the Earl of Arran—against England, shortly before the battle of Flodden.

The town of Dumbarton is built principally on a sort of peninsula, or promontory, on the east bank of the river Leven, a little above the point where the latter joins the Clyde. The principal street, called Main-street, forms a kind of semicircle, nearly concentric with the course of the river, and situated at a short distance from the water edge. This street is intersected by the Cross-vennel and various other smaller streets. A suburb, called Renton, is situated on the west side of the river, being united with the town by a good stone bridge of five arches, built about the middle of last century. The church and public offices are situated in the outer part of the town, near the suburb of Bridgend, toward the Glasgow road. The principal manufacture in Dumbarton is that of glass, which, however, has considerably fallen off within the last few years, though it is understood to be again reviving. This manufacture commenced about 1776, and the Old Statistical Account mentions that, in 1792, it employed 130 hands, and that the manufacturers paid £3,800 of duties. At a later period the business of the company was greatly extended. Not less than 300 people were employed at it,

* The navigation of the Clyde having since, by various acts of parliament, been put under the management of trustees, the rights thus transferred to Glasgow are now vested in this parliamentary trust. These trustees made an attempt, in 1825, to abrogate the right of exemption from river-dues belonging to Dumbarton—an exemption which had now become of considerable value, owing to the high rates levied by the trustees, and the improvement in the navigation of the river. They were, however, defeated in parliament, and the rights of Dumbarton formally recognised, under a slight modification intended merely to guard against frauds. A similar attempt was again made in 1830, but a committee of appeal threw the bill out, as in breach of a solemn bargain between the parties. The trustees proposed in committee to give a sum of £16,000 to Dumbarton as the price of its exemption, besides saving the rights, for their own lives, of persons then burgesses of Dumbarton. There seems to be no doubt, however, that the exemption is worth a considerably larger sum.

and upwards of 16,000 tons of coal were consumed annually. The New Statistical Account states that, in 1818, the duties paid to government amounted to the enormous sum of £119,000 a-year. The other branches of industry carried on in the town are rope-making, tanning, and ship-building; the last, in particular, is carried on to a very considerable extent. The fishings on the Leven and Clyde produce a revenue of about £385 a-year to the town. The trade of Dumbarton, however, is very inconsiderable. The shipping belonging to the port does not exceed 40 vessels with about 1,212 tons burden; and the harbour-dues have produced, on an average of the last five years, only about £70 per annum. By act 3^d and 4th William IV., the number of the council is fixed at 15, and consists of a provost, 2 bailies, a treasurer, and 11 councillors. The magistrates exercise the usual civil and criminal jurisdiction belonging to royal burghs. The town-clerk acts as their assessor. Two burgh-courts are held weekly. The magistrates take cognizance of certain trifling cases familiarly known in the burgh by the name of "Causeway complaints." There is also a dean-of-guild court, which exercises the usual jurisdiction of such courts, such as lining marches, judging of the sufficiency of buildings, and checking weights and measures. The magistrates and council appoint the town-clerk, collector of town's revenues, collector of assessed taxes, master of public works, gaoler, town-officer, and town-drummer. The magistrates alone appoint the burgh-fiscal. The old corporations were six in number,—the guild y, the hammermen, shoemakers, tailors, coopers, and weavers. There is no distinct police-establishment in the town. It is not watched. The cleansing and lighting of the streets, and supplying water, are under the direction of the magistrates. Before the passing of the Municipal reform act, the abuses arising from the mismanagement of the burgh-funds were very considerable. The debt of the town amounted to £19,108 10s. 1½d. The total property of the burgh was stated, in 1832, at £17,910; but this was suspected to be an over-estimate, as, in 1819, it had been valued at only £10,658. This property consists principally of the town's muir, the walk-mill lands, the broad meadow, the Leven and Clyde fishings, and the harbour. The moor consists of about 4,000 acres, upon which all the burgesses have the free right of pasture. Its possession has been the source of a tedious litigation for about fifty years between the town and some neighbouring proprietors. The lawsuit was only terminated within the last few months in favour of the burgh, and it is supposed that the law-proceedings will cost about the entire price of the land, or £10,000! Dumbarton formerly joined with Glasgow, Renfrew, and Rutherglen in sending a member to parliament. It now joins with Kilmarnock, Port-Glasgow, Renfrew, and Rutherglen. The parliamentary constituency is 170.

The castle of Dumbarton is situated to the south of the town, from which it is separated by a bend of the Leven, at the point of junction between that river and the Clyde. The rock on which the old fortress stands projects considerably into the channel of the Clyde, and is a prominent as well as a picturesque object in the beautiful scenery of that river. It shoots up abruptly from a flat level, and stands completely isolated from any other elevations. Its form is somewhat like that of a mitre, the rock dividing about the middle, and forming two summits, on which the batteries and other parts of the castle are erected. The entrance to the castle is by a gate at the foot of the rock, and fronting the south-east. It is defended by a rampart, immediately within which the guard-house and apartments for the officers are situated.

A flight of stone steps conducts to the point at which the rock is parted, where there is a well, together with barracks and a battery. The other batteries are situated on the two summits of the rock, and afford an extensive and delightful prospect,—of which the vale of the Leven, the immense form of Benlomond, the hills of Arrochar, and the expanse of the Clyde, are the most attractive objects. The geological character of the rock is basaltic; and it is remarkable for possessing, in particular parts, a strong magnetic property. Dumbarton rock—as we have already mentioned—was, in all probability, occupied as a stronghold in the time of the Romans, and was, at all events, chosen for the site of a fortress by the aboriginal inhabitants of Scotland, shortly after those invaders had evacuated the country. It is particularly mentioned by Bede, at the beginning of the 8th century, as one of the strongest fortifications possessed by the Britons. Hoveden refers to it as having been reduced by famine by Egbert, King of Northumberland, in 756, but Chalmers is disposed to doubt the accuracy of this statement. Its importance as a fortress has all along been considered so great that it has—from the time of Bede at least, down to the present hour—been zealously retained by the Crown as one of the royal castles. When Maldwyn obtained the Earldom of Lennox from Alexander II., the castle of Dumbarton, and a portion of the land in its neighbourhood, was specially excepted from the grant. Along with the other royal fortresses of Scotland, it was delivered up to Edward I. during the competition between Bruce and Baliol for the Crown; and was afterwards made over to Baliol in 1292, when the dispute was settled in his favour. In 1296, it again fell into the hands of the English, and Alexander de Ledes was appointed governor of the castle by Edward. From 1305 to 1309, it was held for the same monarch by Sir John Menteith, the betrayer of Wallace. After the fatal battle of Halidon hill, in 1333, Sir Malcolm Fleming of Cumbernauld secured Dumbarton castle for the King. Towards the end of the same century it was held first by Sir Robert Erskine, and afterwards by Sir Robert Danielston. After the death of the latter, in 1399, Walter Danielston, parson of Kincardine O'Neil, forcibly took possession of it, and held it till 1402, when he surrendered it to the Crown. In 1425, James Stewart, son of the Regent Albany, assaulted and burnt the town of Dumbarton, and murdered Sir John Stewart, the King's uncle, who held the castle with 32 men. Dumbarton was besieged in 1481 by the fleet of Edward IV., and was bravely and successfully defended by Andrew Wood of Largs. In 1489, the Earl of Lennox, keeper of the castle, having engaged in an insurrection against the government of James IV., Dumbarton was besieged—though without success—by the Earl of Argyll. Shortly after, however, the king himself appeared before the castle, and compelled the sons of Lennox, who then held it, to surrender, after a siege of six weeks. In 1514, the Earls of Lennox and Glencairn, during a tempestuous night, broke open the lower gate of the castle; and, having thus obtained access, turned out the governor, Lord Erskine. Lennox appears to have retained possession till 1516, when he was compelled to deliver it up to Allan Stewart. Shortly after the battle of Pinkie, Queen Mary took up her residence in the castle of Dumbarton; and, on leaving it, embarked for France, at this place, in 1548. Queen Mary again visited the castle, in 1563, when on a progress into Argyll; and during the troubles which followed on her dethronement, this fortress was held for her by Lord Fleming. This lord appears to have kept

possession of it till May 1571, when it was taken by stratagem, under the conduct of Captain Thomas Crawford, who scaled the rock during the night,* and made prisoners of the garrison, and of several persons of consideration—among the rest Archbishop Hamilton of St. Andrews—who had taken refuge here. The governor, however, succeeded in making his escape in a boat to Argyleshire. During the civil wars of Charles the First's time, the castle changed hands on several occasions, and continued throughout the whole of that period to be regarded as an object of great importance by the contending parties. It is unnecessary to follow out the history of this fortress during later times; suffice it to mention that, about the beginning of the 18th century, the

* “This exploit has been graphically described by Mr. Tytler, [‘History of Scotland,’ Vol. VII. p. 350.] “The capture of Dumbarton castle by the Regent,” says Mr. T. “which occurred at this time, gave a severe shock to the fortunes of the Queen's friends. This exploit, for its extraordinary gallantry and success, deserves notice. The castle, as is well known, is strongly situated on a precipitous rock, which rises abruptly from the Clyde, at the confluence of the little river Leven with this noble estuary. It was commanded by Lord Fleming, who, from the beginning of the war, had kept it for the Queen, and its importance was great, not only from its strength, which made many pronounce it impregnable, but because its situation on the Clyde rendered it at all times accessible to foreign ships, which brought supplies. Captain Crawford of Jordanhill, to whom the attack was intrusted, had been long attached to the house of Lennox. He was the same person whose evidence was so important regarding the death of Darnley, and who afterwards accused Lethington of participation in the murder, since which time he appears to have followed the profession of arms. In the enterprise he was assisted by Cunningham, commonly called the Laird of Drumwhassel, one of the bravest and most skilful officers of his time, and he had been fortunate in securing the assistance of a man named Robertson, who, having once been warden in the castle, knew every step upon the rock familiarly, and for a bribe consented to betray it. With this man Crawford and his company marched from Glasgow after sunset. He had sent before him a few light horse, who prevented intelligence by stopping all passengers, and arrived about midnight at Dumbich [Dumbuck], within a mile of the castle, where he was joined by Drumwhassel and Captain Hume, with a hundred men. Here he explained to the soldiers the hazardous service on which they were to be employed, provided them with ropes and scaling ladders, and advancing with silence and celerity, reached the rock, the summit of which was fortunately involved in a heavy fog, whilst the bottom was clear. But, on the first attempt, all was likely to be lost. The ladders lost their hold while the soldiers were upon them; and had the garrison been on the alert, the noise must inevitably have betrayed them. They listened, however, and all was still; again their ladders were fixed, and their steel hooks this time catching firmly in the crevices, they gained a small jutting-out ledge, where an ash tree had struck its roots, which assisted them, as they fixed their ropes to its branches, and thus speedily towed up both the ladders and the rest of their companions. They were still, however, far from their object. They had reached but the middle of the rock, day was breaking, and when, for the second time, they placed their ladders, an extraordinary impediment occurred. One of the soldiers in ascending was seized with a fit, in which he convulsively grasped the steps so firmly, that no one could either pass him, or unloose his hold. But Crawford's presence of mind suggested a ready expedient; he tied him to the ladder, turned it, and easily ascended with the rest of his men. They were now at the bottom of the wall, where the footing was narrow and precarious, but once more fixing their ladders in the copestone, Alexander Ramsay, Crawford's ensign, with two other soldiers, stole up, and though instantly discovered on the summit by the sentinel who gave the alarm, leapt down and slew him, sustaining the attack of three of the guard till he was joined by Crawford and his soldiers. Their weight and struggles to surmount it, now brought down the old wall and afforded an open breach, through which they rushed in shouting, “A Darnley, a Darnley!” Crawford's watchword, given evidently from affection to his unfortunate master, the late king. The garrison were panic-struck, and did not attempt resistance. Fleming, the governor, from long familiarity with the place, managed to escape down the face of an almost perpendicular cleft or gully in the rock, and passing through a postern which opened upon the Clyde, threw himself into a fishing-boat, and passed over to Argyleshire. In this exploit the assailants did not lose a man, and of the garrison only four soldiers were slain. In the castle were taken prisoners, Hamilton the Bishop of St. Andrews, who was found with his mail shirt and steel cap on; Verac, the French ambassador, Fleming of Boghall, and John Hall, an English gentleman, who had fled to Scotland after Dacre's rebellion. Lady Fleming, the wife of the governor, was also taken, and treated by the Regent with great courtesy, permitted to go free, and to carry off with her her plate and furniture; but Hamilton the private, was instantly brought to trial for the murder of the King, and the late Regent, condemned, hanged, and quartered without delay.”

offices of hereditary keeper and constable of the castle having fallen into the hands of the Marquis of Montrose, the government of Queen Anne insisted on his resigning these offices into the hands of the Crown, which he accordingly did, and the castle has accordingly, ever since, remained a royal fortress, and been occupied by a small garrison.

DUMBARTONSHIRE—or more properly Dumbartonshire—a small county in the west of Scotland; forming what was anciently known as the Lennox. It is bounded on the west by Loch Long and Argyshire; on the north by Perthshire; on the east by Stirlingshire and Lanark; and by the river Clyde on the south. The length of the shire, from Kelvin river on the south-east, to Aldernan rivulet in Arrochar on the north, is about 36 miles; its breadth varies from 2 to 13 miles. Its general outline is that of a crescent; the convex line being determined by the eastern coast of Loch Long, and the northern coast of the frith of Clyde, from the junction of Loch Long, up to within a few miles of Glasgow. The greatest breadth of the shire is between the junction of Loch Long with the frith, or the south-west point of the peninsula of Roseneath, and the centre of the broadest part of Loch Lomond. These boundaries and admeasurements, however, are exclusive of a detached portion of the shire, on the south-east, consisting of the parishes of Cumbernauld and Kirkintilloch, which detached portion is nearly 12 miles long, and from 2 to 4½ broad. The shire contains in whole, according to one admeasurement, 147,300, and, according to another, about 167,040 English acres, of which about a third part is under cultivation. About 20,000 acres are occupied with lakes.—Population, in 1801, 20,710; in 1831, 33,200. Houses, in 1831, 3,785. Population, in 1841, 44,295; being an increase of 33.3 per cent. on that of 1831; and the largest increase, within the period, of any county in Scotland, with the exception of Lanarkshire, which amounted to 34.8 per cent. Houses, in 1841, 7,986.—Assessed property £71,587. Valued rent £35,382 7s. 8d. Scots. Supposed rental, in 1820, £56,000.

For beautiful and varied scenery, this county is scarcely surpassed in Scotland. It is, indeed, mountainous and uneven, but enriched with many fruitful valleys, and watered by numerous streams, among which the LEVEN glides calmly along until it falls into the Clyde at Dumbarton: see that article. The other streams are the Falloch, the water of Luss, the Finlass, and the Fruin, all flowing into Loch Lomond, with numerous smaller rivulets. The Endrick skirts the northern borders of Kilmarnock parish; and the Kelvin runs along the eastern boundary of East Kilpatrick. The three large lochs, LOCH LONG, the GATLOCH, and LOCH LOMOND, are described under their respective heads. The lofty mountain of Benvoirlich [see ARROCHAR] is in this shire. The climate has a considerable share of moisture.* The prevalent winds blow from the

west and south-west,—if we except the months of March, April, and May, at which period of the year the cold east wind is a too frequent visitant. Before its influence the spring—a season in which congeniality would at all times be preferred—often partakes more of the bitterness of winter than even winter itself.

The soil and surface of Dumbartonshire may be classified as follows:—Deep black loam, clay on a subsoil of till; gravel or gravelly loam; green hill-pasture; mountain, moor, and bog. In the parishes of Kirkintilloch and Cumbernauld, till soil predominates. A very large portion of the shire is comprehended in Loch Lomond, and the many islands interspersed on its expansive and varied surface. Throughout the whole of Dumbartonshire, there are very few extensive estates—a circumstance in a great measure favourable to their improvement, as a stimulus is thus given here to proprietors themselves to engage with more spirit in advancing the general interests of agriculture. A great deal has been done of late years, and is still doing, to enhance the value of land. Draining—one of the most important items of modern improvement—has been practised successfully and to much advantage, and attention has also been given to the proper management of fences. For many years the operation of ploughing was performed—according to ancient Highland usage—with four horses abreast; the driver marching in front of his team, with a long stick in his hand, attached to which were the halters of each horse. This method, which required the close attendance of two persons, was superseded in time by the use of three horses; but since the introduction of the Lanarkshire breed of horses, the modern system of ploughing by two horses has been in almost universal use. Lime is the manure in most general use, and large quantities of it are imported from the north of Ireland and the island of Arran, independently of what is manufactured in the county. There is also a considerable mart for common manure supplied from Glasgow, Greenock, and other adjacent towns. Seaweed, gathered on the southern and western coast, is convertible into the same commodity, but this description of manure is here accounted very inferior. Marl can be obtained, though not in great quantities, and it is scarcely ever made use of.

Oats are raised in greater quantities than any other species of grain, and also a considerable quantity of wheat, which has, of late years, been much increased; barley has, however, decreased in proportion. Pease are little sown; but the culture of beans is becoming more general, and in stiff clayey soils they are found to be an excellent preparative for wheat. Turnips, as in Renfrewshire, are not raised to any extent. Potatoes are cultivated in great quantities; their quality is excellent, and in Glasgow and the surrounding towns there is always a ready market for them. In the detached parishes of Kirkintilloch and Cumbernauld, a good deal of flax is grown. Copsewood is at once highly ornamental, and a considerable branch of revenue here; and no small degree of care is taken in its management. The land on which it is produced is unfit either for cultivation or pasture; the gain derivable from the wood, therefore, may be considered, after the deduction of labour, as almost altogether gratuitous; yet from pretty accurate calculation, it was, in 1821, little short of that produced from the whole arable and pasture land of the county. Since the breeding of sheep became more common, it has been found necessary to resort to the practice of muir-burning, so

* The following is a register of rain-gauges kept at four different places in this county in the year 1833. The gauges were all constructed on Mr. Thom of Rothesay's model:—

	Keppoch.	Camis-Esk	Araincoble.	Belretiro.
January....	0.4	0.50	0.80	0.9
February...	6.6	7.	6.67	7.4
March.....	1.6	1.80	1.51	1.2

A rain-gauge, on the same model, at Garnethill, Glasgow, gave 32.00, during the same year, and another at Edgecombe cottage, in Devonshire, 35.27

that the upland division of the shire—which could once boast of little else than heath and moor—is now covered with verdure, and has, on the whole, a widely different, though much more agreeable aspect from what it presented at the close of last century.

The native horses are very inferior, and, with very few exceptions, are scarcely ever used in field-labour. The farmers generally supply themselves at the Lanarkshire markets, with the celebrated breed of that county. Most of the black cattle with which the farms are stocked are brought from the West Highlands; very few are bred in the county. A number of the principal farmers have furnished themselves with milk-cows from Ayrshire, and the concerns of the dairy are daily rising in importance. The sheep fed in the county yield annually from £5,000 to £6,000. The breed is said to have been first introduced from Moffat-dale, and the higher districts of Dumfries-shire and Lanarkshire. Their wool is coarse, but their natural hardness well-qualifies them for enduring exposure. Swine are kept by almost every farmer, mostly for domestic use. On Inchmurrin and Inchlonaig, two islands of Loch Lomond, there are extensive herds of fallow-deer. Red deer—once plenteous in the mountainous districts of the county—have long since been extirpated, and but very few roes remain among the rugged and woody spots on the banks of Loch Lomond and Loch Long. In consequence of the practice of burning the heath, already alluded to, the hum of the bee is seldom heard in this district now; and honey—once produced in considerable quantities—is now scarcely to be obtained in the moory districts.

Dumbartonshire now possesses excellent means of land-communication. Of this, in former times, there was a great deficiency. Previous to the year 1790, the only turnpike road was that from Dumbarton to Glasgow, while the country roads were also few, and of the very worst description. The improvements in roads and bridges which has taken place since the above date has been almost incalculable, and has proved of the utmost advantage to the agriculture and local commerce of the shire. From the number of rivers and small streams, it was found essential to have proper bridges constructed. The largest of those bridges was built, at the expense of Government, across the Leven, at Dumbarton, about 70 years ago, and cost £2,500. It is upwards of 300 feet in length, and consists of 5 arches, the largest of which is 62 feet in span. The Forth and Clyde canal was begun in 1768, and finished in 1790; and it has, as a water-communication, been of the greatest service to the commercial and manufacturing interests of Dumbartonshire. By the improvements of the Clyde, about 600 acres of rich land have been added to this county, in consequence of the space formed between the jetties, to confine the current of the river, having been gradually filled up with mud and silt, the surface of which has become covered with a sward of fine pasture grass, a great portion of which has recently been cultivated. The vicinity of Glasgow has created a considerable extent of manufacturing industry in this county. The banks of the Leven, in particular, are covered with numerous bleachfields, printfields, and cotton-works, giving employment to thousands. Among the various manufactures of the county, the printing of cottons is still the most important. Next to this is cotton-spinning. There are several paper-mills, a large iron-work, two or three chemical works, two or three distilleries, and an extensive glass-work. The salmon-fisheries are at present worth about £800 per annum. The herring-fishery produces about £4,000. In the western division of the county are extensive coal-pits.

The county is ecclesiastically divided into 12 parishes: and contains one royal burgh, four burghs-of-barony, and four villages. The number of parochial schools, in 1834, was 13, attended by 895 scholars; of non-parochial schools, 54, attended by 2,994 scholars. Justice-of-peace courts are held at Drumfoulk and at the Baths inn, both near Helensburgh; at Old and New Kilpatrick; at Dumbarton, Kirkintilloch, and Cumbernauld. Sheriff circuit-courts are held at Kirkintilloch and at Helensburgh; the general small debt court is held at Dumbarton, the county-town. The county sends one representative to parliament. Parliamentary constituency, in 1839, 1,218.

The weights of this county, previous to the equalization act, were: Avoirdupois for English goods and groceries; Dutch for meal; and Tron of 23 ounces avoirdupois, for butter, cheese, butcher-meat, fish, and home flax. The Dumbarton pint is 2·9 cubic inches less than the standard pint. For wheat, pease, and beans, the firloft contained 2562·75 cubic inches, and is 1 firloft, 3 pints, 1 chopin, 3½ cubic inches of the old standard-measure. For oats, barley, and malt, the firloft contained 3,417 cubic inches, which is 1 firloft, 2 pints, 4·668 cubic inches standard-measure, or 6·597 per cent. above the Linlithgow measure. The water-peck of potatoes is nearly 42 lbs. The chalders of lime is 64 bushels; of lime-shells, 32 bushels. The roof of land is 6 yards square. The score of sheep sometimes 21; and the stone of wool sometimes 17 lbs.

DUMFRIES,* a parish in the south of Nithsdale, at the middle of the south-west border of Dumfries-shire. Having the outline of a cone, with its apex toward the north, it is bounded on the north-west by Kirkmahoe; on the north-east by Tinwald; on the east by Torthorwald; on the south by Caerlaverock; and on the west by the river Nith, which divides it from Kirkcudbrightshire and the parish of Holywood. It is 8 miles in extreme length, and about 2½ in average breadth; and contains an area of 15 square miles. About 8 miles north of the burgh, or of the centre of the parish, a range of hills is cloven by the Nith, and they thence diverge and sweep down, in a well-wooded and picturesque amphitheatre, toward the Solway frith, terminating, on the east side, in the heights of Mousewald, and, on the west, in the towering summit of Criffel, and enclosing, in their progress, a beautiful and nearly level plain, of almost a regular oval figure. The centre of this plain, at the place where it is broadest, and where the two lines of hill are from 6 to 8 miles asunder, constitutes the parish of Dumfries. Its surface, for the most part, is a perfect level. But it rises in a brief but beautiful acclivity, from the edge of the Nith a little to the northward of the burgh, undulates along the arena occupied by the streets, and then rises into a low ridge of hills, which intersect the southern division of the parish, stretching away at half-a-mile's distance from the river toward Caerlaverock. On their north-west face, where they look down upon the Nith, these hills are sloping, and wear the gentlest forms of beauty; but on the north-east they break down in abrupt declivities, and have a bold front and commanding outline. In one place, about 1½ mile from the burgh, they present a precipitous front, and rise to a considerable height in two perpendicular rocks, known as the 'Maiden Bower crags,' one of which has near its summit a remarkable cavity, said to have been the scene of Druidical

* The original name was *Dunfres*, and is supposed to have been derived from the Gaelic *Dun* and *phreus*, signifying 'a Mound covered with brushwood,' or 'a Castle among shrubs.' The lightness of the soil, which was unlikely, in the forest period of Scotland, to bear indigenous trees of a size greater than copsewood, seems to indicate that the appellation was appropriate.

rites for the testing of virginity. About 2 miles to the north-east of the burgh, is also a picturesque height, called Clumpton, which, at an early period, was, most probably, a mountain-grove and a haunt of the Druids, and, in a later age, was used as a beacon-post for commanding the considerable expanse of country which it overlooks. A beautiful eminence, called Corbelly hill, though not in the parish, but rising from the opposite bank of the Nith in the suburb of Maxwelltown, bears aloft an observatory, and mingles with the grouping of heights and lawns and groves on the Dumfries side, to form, if not a brilliant, at least an exquisitely fascinating landscape. Along the whole western border, the Nith sweeps gracefully under wooded and richly variegated banks; and along the eastern border the sluggish and almost stagnant Lochar flows listlessly on through the brown wastes of Lochar moss. All the eastern section or stripe of the parish forms part of this remarkable morass [see LOCHAR MOSS]; but is, to a considerable extent, reclaimed, and, in some spots, even smiles in beauty. The north and north-western sections are a reddish earth upon a freestone bottom; and the south-western is a strong clay, and, in the flat lands, a clay upon gravel. Plantations of oak, elm, and other trees, are of frequent occurrence. Around the town, in every direction, are enclosures surrounded with trees, gardens, and nursery-grounds, neat lawns and pleasant mansions, which impress a stranger with ideas of refined and opulent comfort. Several small lakes, particularly the Black and the Sand lochs, enrich the scenery of the parish, and, when paved with ice, are trodden by numerous groupes of curlers. In Lochar moss is Ferguson's well, a mineral spring strongly impregnated with steel; and on the farm of Fountainbleau is a powerful chalybeate spring, which is numerously visited by invalids, and held in much repute for its medicinal properties.—Antiquities within the limits of the burgh will occur to be noticed in the next article; but a few exist in other parts of the parish. A short way south of the town, on a romantic spot called Castledykes, overlooking a beautiful bend of the Nith, stood formerly the fortified residence of the Comyns. Near Castledykes is a field called Kingholm, which either may have received its present name from Bruce, in connexion with his having slaughtered Comyn, or may have originally been called Comyns-holm, contracted gradually into Kingholm. At the opposite end of the town, and upon the banks of the river, is another field still called Nunholm, which lies adjacent to the site of a nunnery formerly established at Lincluden. Toward the south end of the parish is an eminence called Trohoughton, which has been noticed by Pennant as a Roman station. In the eastern part of the parish, an antique, supposed to be a Roman sandal, was, many years ago, found; and in the Nith, nearly opposite to the town-mills, was found, about half a century ago, a small gold coin, thinner than a sixpence, but as broad as a half-crown, bearing round the impression of a Roman head, the inscription 'Augustus.' There are in the parish several small villages, but all of inconsiderable importance. Dr. Wight, professor of divinity in Glasgow, Dr. Ebenezer Gilchrist, and Mr. Andrew Crossbie, advocate, were natives of Dumfries; and the Rev. William Veitch—of whose life Dr. McCrie has given an account—was, for some time after the Revolution, its minister. Population of the parish, including the burgh, in 1801, 7,288; in 1831, 11,606. Houses 1,509. Assessed property, in 1815, £8,086.

Dumfries gives name to a presbytery and a synod, and is within the jurisdiction of both. At the Reformation it was bereft of several chapels which for-

merly belonged to it, and of endowments connected with particular altars, and left in possession of only its principal church, dedicated to St. Michael. In 1658, a second minister was appointed; and in 1727 a second church, called the New church, was built. In 1745, the old church of St. Michael was pulled down, and the existing structure erected. The patron of both this church and the New is the Crown. In 1838, a third church was built, and called St. Mary's. All the places of worship in the parish, both established and dissenting, are situated in the burgh. Sittings in St. Michael's 1,250; in the New church 1,185; in St. Mary's 1,034. Stipend of the minister of St. Michael's £332 1s. 11d., with a glebe of about £25 annual value; of the minister of the New church £231 13s. 4d.—The Episcopal congregation dates at least from January 1762. The present chapel was built in 1817, and cost £2,200. Sittings 300. Stipend, on the average, £250.—The First United Secession congregation was established about 1760. The present church was built in 1829, and cost upwards of £900. Stipend, in 1836, £120; but the charge has since then become collegiate.—The Second United Secession congregation was established in 1807. The church was built in 1809, and cost £1,350. Stipend £164 4s., including an allowance of £20 for a house.—The Roman Catholic congregation is local to one-third of its amount; and, as to the remaining two-thirds, is scattered through the conterminous parish of Maxwelltown, and over the whole of Dumfries-shire and Kirkcudbrightshire. Previous to the erection of their chapel in 1813, they met in a private house in the burgh, and in the domestic chapel of Terregles-house. The chapel cost £2,659 4s. 9d., and has 750 sittings. Stipend of the minister and his assistant variable, and in 1836, £121 1s. 1½d. The minister has also a house, rated at £15.—The Relief congregation was established in 1788. Sittings in the church 812. Stipend from £60 to £120, with a manse valued at £12. In July 1835, the Rev. Andrew Fyfe, who had been 27 years minister, left the Relief body and joined the Establishment, and was followed, in his movement, by about three-fourths of the congregation. A litigation as to the right to the property of the chapel and manse terminated in favour of the adherents to the Relief body.—The chapel of the Wesleyan Methodist congregation was built in 1782, and cost £500. Sittings 300. Stipend £81, with a house valued at £8.—The Independent congregation was established in 1801. Their present chapel was built in 1835, and cost about £700. Sittings 300. Stipend £80.—The Reformed Presbyterian congregation are of more recent establishment than any other of the dissenting congregations, and they have a commodious chapel.—According to a survey made by the elders of the parish, in 1835 there were belonging to the Establishment 5,118, belonging to other denominations 2,042, not known to belong to any religious denomination 3,886. Of the last class—so disproportionately and startlingly numerous—only 1,285 were above 12 years of age, all persons having been included who were too young to attend public worship. There are 3 parochial schools recently erected, and 36 non-parochial, most for the ordinary branches, and some for the higher and most polite departments of education. Probably in no place in Scotland are there greater or more numerous facilities for informing and polishing the minds of the young. Dumfries academy, the chief of the schools, has four masters; the salary of the classical master, the interest of £660 6s. 3d., with fees from each scholar of 7s. 6d. per quarter; and the salary of each of the other masters, the interest of £204 8s. 10d., with fees from each scholar of 5s. per quarter.

DUMFRIES, a royal burgh, the county-town of Dumfries-shire, the seat of a circuit-court, and of a presbytery and a synod, and the metropolis of the south-west quarter of Scotland, is a place of elegance, importance, and great antiquity. It is situated in N. lat. $55^{\circ} 2' 45''$, and W. long. from Greenwich $3^{\circ} 36'$, on a slight undulating elevation on the east bank of the Nith, about 9 miles above the entrance of that river into the Solway frith. It stands 72 miles south from Edinburgh; 74 miles to the east of south from Glasgow; 60 miles south-east from Ayr; 30 miles to the south of west from Langholm; 8 miles south-west from Lochmaben; 33 miles round the eastern extremity of the Solway frith from Carlisle; and 341 miles by way of Manchester from London. Dumfries exults in the elegancies and attractions of a minor capital, in the snugness and pomp of a numerous opulent and aristocratical population, and in the bustle and productiveness of a crowded agricultural market. As a town, it is, as to both situation and structure, one of the most beautiful in Scotland. Built of a dark-coloured freestone, it, in some spots, has the sombre aspect of a town of brick; but many of its edifices being gauzed in a white paint, and others so decorated with the brush as to resemble structures of Portland stone, it presents a tout-ensemble of variegated tints and mingled gaiety and sadness which suggests ideas of the picturesque. Entering the town from the north, a stranger passes along a street of the beautiful and populous suburb of Maxwelltown; then turning round a right angle, he crosses the Nith on a handsome bridge, erected in 1794, whence he commands a view of the burgh and its suburb, stretching partly to the northward but chiefly to the southward, along the sloping banks of the river; he now traverses Buccleuch-street, light and airy in the aspect of its buildings, and the site of the county-buildings and two elegant places of worship; he here passes to the right a street which intersects the lower part of the town in a line parallel to the river, and, at the top of Buccleuch-street, he glances, through an opening on the left, on a cluster of new streets which reminds him of some snug but airy nook in the new town of Edinburgh; he next winds round an irregular but wide opening on the left, and finds himself in a spacious area, whence narrow but romantic-looking streets diverge, the one parallel to Buccleuch-street away to the Nith, and the other in the opposite direction curving round northward to meet the river above a graceful bend which it makes before approaching the bridge; and standing in the centre of the area, with his face to the south, he is overshadowed from behind with the facade and spire of the New church, and looks down the broad far-stretching High-street, sweeping away southward parallel to the Nith. This street is nearly a mile in length, but, like a brook in a romantic glen, it deviates so from the straight line as, while disclosing part of its beauties, to allure a spectator onward to behold more; and it is of very unequal width, averaging probably about 60 feet, but expanding at three points into at least 100. At several places in its progress it sends off branch-streets at right angles toward the Nith; about half-way along it is joined from the south-east, at an angle of 50 or 60 degrees, by English street, the spacious thoroughfare to the south; and all along the east it is winged by lanes and clusters of buildings which, together with the streets lying between it and the Nith, make the average breadth of the town $\frac{1}{4}$ of a mile. All the streets are well-paved, clean, and lighted up at night with gas; some of the smaller ones are remarkably elegant; and the great thoroughfares present an array of large and brilliant shops which may almost bear comparison with those of the proud metropolis. The

Nith adds much both to the beauty and salubrity of the town, approaching it under an acclivity richly covered with wood,—breaking over a caul built diagonally across it for the supplying of a cluster of grain-mills with water,—alternately leaping along in a shallow current, and swelling backward upon the caul by the pressure of the flowing tide,—and both above and below the town, diffusing verdure and beauty over banks which are rich in promenading retreats for the citizens. Dumfries still wants a luxury for a long time desiderated, and the absence of which excited surprise in a stranger,—a supply, by means of pipes, of good spring water.

A little below the bridge which communicates with Buccleuch-street, is the old bridge, built in the 13th century. This was originally a structure of 13 arches, and was esteemed the best bridge in Great Britain next to that of London; but it now consists of only 6 arches, and is mounted by a rapid ascent on the Dumfries side to what was formerly its centre, and affords accommodation only to foot-passengers. On the south side of Buccleuch-street are the county jail and bridewell, the latter originally used as the court-house, and both built in 1807. They are surrounded by a high wall, bridewell in front and the jail in the rear; but are heavy-looking buildings, and inconvenient places of confinement. Directly opposite, on the north side of Buccleuch-street, and communicating with the jail by a vaulted subterranean passage, is the county court-house. This was originally the spacious chapel, or “tabernacle,” erected by the Haldanes during the briefly triumphant march of their missionary operations in Scotland; and, after having for years stood uncoccupied, it was converted into a court-room and other judiciary offices, and architecturally renovated and adorned, so as to combine interior commodiousness with exterior elegance of appearance. In the middle of the High-street, cleaving it, for a brief space, into two narrow thoroughfares, is a cluster of buildings surmounted by the Mid steeple, and including the chambers in which the meetings of the town-council are held. Opposite to it, in the eastern thoroughfare, is the ‘Trades’ hall, erected in 1804, for the meetings of the seven incorporated trades. Overshadowed by the Mid steeple is a sudden expansion of the High-street called Queensberry square, the centre of traffic for the south-west of Scotland, and, in common with all the adjacent thoroughfares and opens, the theatre of dense crowds of actors on the day of the weekly market; and in this square a Doric column of handsome architecture, erected in 1780 by the gentlemen of the county, in memory of Charles, Duke of Queensberry, rears aloft its fine pinnacle, and superintends the busy scenes around. In George-street, the assembly-rooms, of recent erection, display much beauty of architectural design. At the townhead, or on the elevated bank of the Nith, before it sweeps round toward the New bridge, stands, in a spacious area, and commanding a fascinating view, the High school or academy. This institution has a rector and four masters, and has, for a quarter of a century, been celebrated as a place of liberal education. The buildings are elegant, the class-rooms capacious, and the masters well-qualified for their duties. The Crichton Royal institution was originally designed to be an university, but is a large and handsome asylum provided by the bequest of upwards of £100,000 by the late Dr. Crichton of Friars carse. At the south-east extremity of the town is the Dumfries and Galloway Royal infirmary, founded in 1776, and maintained chiefly by legacies, private contributions, parochial allowances, and annual grants from the counties of Dumfries, Kirkcudbright, and Wigton. It is commodiously fitted up in the interior, but is a

large and somewhat gloomy building, suggesting, by its appearance, sympathy for its suffering inmates. This institution is the only one of its class in the south of Scotland, and has been of incalculable benefit to the surrounding district. The poor's hospital, erected in 1733, by the bequest of two relations of the name of Muirhead, supports, as inmates, poor orphans and aged paupers of both sexes, and affords pensions to upwards of forty widows at their own homes; and it is maintained partly by its own funds, and partly by subscriptions and donations. At the west end of the town is the public dispensary. In various localities are the offices of six banks; four of which are recently erected, and beautiful edifices. The town has two large and commodious inns, besides a number of secondary ones proportioned to its bulk and importance. The Commercial inn is an object of curiosity, from its having been, in his retreat from England, in December 1745, the head-quarters of Prince Charles Stuart. The theatre of Dumfries, though small, is of handsome structure and under spirited management.

Of the ecclesiastical edifices by far the most interesting is the old parish-church, situated at the south-east end of the town, and dedicated to St. Michael, the patron saint of Dumfries. The present edifice was built in 1745, and is surmounted by a lofty and handsome spire. The cemetery around it is famous for the vast multitude, and the singular variety of its monuments,—its splendid mausoleums rising like mimic temples over the ashes of the gifted and the wealthy,—its forest of obelisks, columns, and elevated urns, robed in white painting, and appearing in the dim moonlight like an assembly of spectres,—and its crowds of simple head-stones rearing their humble forms over the remains of the worthy but unknown to fame. Exclusive of such as are in a ruinous condition, the monuments, according to a calculation of Mr. M'Diarmid—whose genius has thrown so much lustre on the burgh—could not be reared at a much less expense than £100,000. There are 120 monuments of the first class of architecture; considerably upwards of 700 tomb-stones on pillars, and in good repair; about 220 head-stones or erect slabs; and about 1,000 other monumental structures or stones which are more or less dilapidated. Among the monuments is one erected over the ashes of three witnesses to the truth, who were martyred during the persecutions of the Stewarts. But the structure which, more than any other, attracts the gaze of strangers, is a splendid mausoleum over the mortal remains of the poet Burns. The body of the bard, who spent at Dumfries the latter unhappy years of his life, and who, after his death, gave name to the small street in which he died, was originally interred in the northern corner of the cemetery, and honoured with only a plain monumental stone erected by his widow. But a subscription, sanctioned by a contribution of fifty guineas from George IV., having been raised to express admiration of the poet's genius, his body, or as much of it as could be collected, was, on the 19th of September, 1815, exhumed from its obscure resting-place, and transferred to an arched vault in the present mausoleum. This beautiful edifice,

"The homage of earth's proudest isle,
To that bard-peasant given;"—

was constructed according to a design furnished by Thomas F. Hunt, Esq. of London, at a cost of £1,450; and it contains, in the interior, a fine emblematic marble structure, designed by Peter Turnerelli, which represents the genius of Scotland investing Burns, in his rustic dress and employment, with her poetic mantle. So great is the concourse of visitors to the mausoleum, that the beadle who attends the visitors is supposed to realize £40 or £50

a-year from their donations. The New church—as it is still called—looks down the High-street from its north-west end, and is a fine edifice, surmounted by a spire. It was built partly of materials from the dilapidated old castle of Dumfries, on the site of which it stands; and was first opened for public worship in 1727. The parish-church of St. Mary's, an erection of 1838, looks down English-street, the great thoroughfare to England; and is a conspicuous and arresting object to strangers entering the town from the south. It was built according to a design furnished by John Henderson, Esq. of Edinburgh; and is a beautiful light Gothic structure, with an ornamental spire supported by flying buttresses. The Episcopal chapel, and the Second United Secession meeting-house, are both—especially the former—neat and agreeable edifices, and contribute, with the county-buildings, to present an attractive picture to a traveller entering the town from the north. The Roman Catholic, the Independent, and the Reformed Presbyterian chapels all likewise do credit to the ecclesiastical architecture of the burgh.

Dumfries is rich in its religious, educational, literary, and social institutions. It has Bible and missionary societies, both general and congregational, for aiding the diffusion of Christianity; a Liberian society for assisting the free negroes on the African coast; a Samaritan society for watching over the well-being of the poor; a friendly society for the support of widows; an association for resisting the encroachments of infidelity; 4 endowed, and upwards of 30 unendowed schools; an astronomical association; a horticultural society; a mechanics' institution; an annual exhibition of works of art; four public reading-rooms; a public library, established in 1792; a society library, established at an earlier period; two other public libraries, and three circulating libraries maintained by the trade speculation of booksellers; and three weekly newspapers, the Courier, the Herald, and the Times,—the first long known beyond the usual limits of provincial newspaper circulation, for the high literary character impressed upon it by its editor Mr. M'Diarmid. Dumfries has altogether an intellectual and polished tone, which invests it with an importance far paramount to the bulkiness of its population. In keeping, also, with the aristocratic character of a portion of its inhabitants, it has a character—an evangelical moralist would say, not an enviable one—for gaiety and fashionable dissipation. Besides its successful demand for select and celebrated actors in its theatre, it has a regatta club, a share in the meetings of the royal Caledonian hunt, and annual races in autumn on the crowded racing-ground of Tinwald downs. It was, till very recently, remarkable likewise for its frequent public processions, and its periodical shooting, in the field called Kingholm, for 'the siller gun,'—a bauble presented to the town by James VI., when returning from his visit to Scotland, as an expression of his satisfaction with the loyalty of the burghers.

The navigation of the Nith has at a great expense been materially improved. Embankments have been thrown up, and various devices practised to counteract the devastating effect of the deep and impetuous tide which rushes up from the Solway; so that many vessels, which were formerly obliged to unload at Glencaple or Kelton, can approach close to the burgh. Quays also are provided against whatever emergencies may occur, or for the accommodation of vessels of larger size, at brief intervals along the river. Besides those at the town and at Glencaple and Kelton, there is one, called the new quay, at the bend of the Nith near Castledyke; so that there are altogether 4 quays within a distance of 5 miles. In the year 1811, the harbour stood greatly in need of

repair, and an act of parliament was obtained for the purposes of repairing it, and of improving the navigation of the river Nith. Obstructions had been formed in the channel, and it was necessary for the purposes of trade to cleanse, deepen, and straighten it. By this act commissioners were appointed for these purposes, with ample powers to carry them into execution. Under this act £18,930 9s. 11d. had been expended up to 1834 in attempting to improve the channel of the river, and in repairing the harbour. From the varying currents, the navigation is still very dangerous; but a rock which ran across the bed of the river, visible at low water, and prevented large vessels from passing Glencaple, has recently been cut away. The amount of the debt affecting the harbour in 1834, was as follows:—

	£	s.	d.
On bond, - - - - -	5,000	0	0
Balance due the treasurer, on last settlement of his account, at 28th September, 1833, -	909	7	3
	£5,909	7	3

The debt is yearly decreasing, in consequence of £250 yearly being provided for its liquidation.

The duties leviable from vessels arriving at the port are the following: From coasting vessels 2d. per ton register; from foreign vessels 6d.; from goods $\frac{1}{2}$ d.; from coal 6d.; from lime 6d. And from outward-bound vessels: coasting vessels 2d.; goods $\frac{1}{2}$ d. These dues are moderate, and the revenue arising from them during the five years from 1828 to 1832 averaged £1,083 5s. per annum. A part of the expenditure incurred has arisen from improvements upon the light-house at Southernness, and upon the landing-places at the mouth of the river. From 12 to 14 foreign vessels belong to the Nith, and trade chiefly with America. But the port is regarded as extending from the creek of Annan, or the head of the Solway frith to Glenluce bay on the coast of Galloway; and, in 1835, it claimed 192 registered vessels, 11,798 tonnage; and in 1836 yielded £4,218 of revenue to the custom-house. The number of vessels belonging properly to Dumfries is about 80. A steam-vessel also plies weekly between it and Whitehaven, holding communication thence with Liverpool, and conveys a large quantity of goods and live stock, especially sheep, to the English market. The principal imports are timber, slate, iron, coal, wine, hemp, and tallow; and the principal exports wheat, barley, oats, potatoes, wool, freestone, and live stock. Dumfries, however, figures more as a mart than as a port. Its markets have long been famous for the transfer of stock from Scottish to English dealers, and for their bulky, unfuctuating importance. On every Saturday is a market of little value; and on every Wednesday is a great market, more resembling an annual fair than a matter of hebdomadal occurrence. On the sands, an open space along the side of the river, the cattle-dealers dispose weekly of an immense number of cattle and pigs; and, from the end of December till the beginning of May, they there dispose of many thousand carcasses of pork, usually selling upwards of 700 in one day, and sometimes, in a few hours pocketing £4,000 or £5,000. There are also great annual fairs at Whitsunday and Martinmas for black cattle, and, in October and February, for horses. But the chief market is an annual fair in September, when about 6,000 head of cattle are exposed for sale. During the droving season, too, a vast number of transactions are effected privately throughout the surrounding country; no fewer than 20,000 head of cattle, which had not been exposed in market, having been known, in a period of ten days, to pass the toll on the thoroughfare to England. So many pass through Dumfries, that the custom levied at the bridge has frequently amounted to £700

a-year. At each of the horse fairs about 500 horses are disposed of; and at that in February an immense number of hare-skins are sold, probably not fewer than 30,000 or 35,000. Manufactures are considerable in hats, which employ 200 workmen; in hosiery, principally of lamb's wool, which engage nearly 300 stocking-frames; and in shoes and clogs, or wooden-soled shoes, which employ upwards of 300 individuals. There are also several breweries, several tanneries, and an extensive basket-making establishment.

The municipal government of Dumfries is vested in a provost, 3 bailies, a dean-of-guild, a treasurer, and 19 merchant-councillors, constituted according to the Reform act; and the town is divided into four wards, who elect the council and the commissioners of police. The report of the convention of royal burghs in 1709 stated the sett of Dumfries, or the constitution of its council, to be what it still is under the act of municipal reform. The 7 incorporated trades of the town are hammermen, squaremen, weavers, tailors, shoemakers, skimmers, and butchers; and these formerly wielded a paramount influence in the council. Dumfries unites with Annan, Lochmaben, Sanquhar, and Kirkcudbright in sending a member to parliament. Parliamentary constituency, in 1839, 592; municipal, 485. A large part of the heritable property formerly belonging to the town has been sold during the present century. The debts with which the town was burdened, as well as the extensive improvements which have been carried into effect during that period, are assigned as the cause of these sales. All of these alienations are stated to have been made by "public roup for full value," and no undue preference appears to have been shown to existing councillors. The property, thus disposed of, amounted to £15,305 ls. 7d. Corporation revenue, in 1838-9, £1,596 6s. 11d. The present property of the town consists principally of mills and granaries, which, in the year ending 15th October, 1833, yielded a rental of £357 19s. 8d. sterling. The burgh is also possessed of some shops and houses in the suburbs, with small portions of land attached to them, which yielded a rental last year of £179 10s.; and it has feu-duties, which yield annually £114 4s. 5d. This was stated to comprehend the whole of the real property of the burgh, with the exception of a sum of £1,125 9s. 9d. of arrears, which have accumulated since 1815, and a great part of which is represented as desperate.

Ordinary Revenue.

The revenue of the burgh for the year ending 15th October, 1833, stood as under:

	£	s.	d.
1. Feu-duties, - - - - -	144	4	5
2. Rents of Lands, - - - - -	179	10	0
3. Rents of mills and granaries, - - - - -	357	19	8
4. Customs, - - - - -	589	17	10
5. Tolls, - - - - -	81	1	6
6. Impost on ale, - - - - -	66	15	0
7. Rents of church seats, - - - - -	236	18	8
8. Burgess composition, - - - - -	24	4	0
	£1,650	11	1

Casual Revenue.

Miscellaneous articles, - - - - -	0	16	0
	£1,651	7	1

The expenditure of the burgh for the year, from 1832 to 1833, stood thus:

Ordinary Expenditure.

	£	s.	d.
1. Interest on debts, - - - - -	276	8	0
2. Repairs on public buildings, &c., - - - - -	310	3	10
3. Public burdens, - - - - -	69	1	3
4. Entertainments, - - - - -	45	7	6
5. Salaries, - - - - -	440	13	5
6. Miscellaneous articles, - - - - -	50	14	1

Casual Expenditure.

1. Miscellaneous articles (subscription and advances on occasion of cholera, and ailment of prisoners), - - - - -	386	16	8
---	-----	----	---

2. Law expenses (partly to account of old balances),	- 164 6 3
	£1,743 11 0
During this year the magistrates paid off debts to the extent of	- 800 0 0
And contracted debts to the extent of	- 525 14 1
Difference,	- 274 5 11

The burgh, from time immemorial, has possessed a right to levy tolls and customs for cattle and various descriptions of commodities passing across the river Nith. At what time this right was first constituted is uncertain; but the burgh is in possession of documents showing that this tax was levied in 1425. In 1681 this right was confirmed by an act of the Scottish parliament; and it was then declared that the burgh should possess, in all time coming, a right to levy customs from "Portractford exclusive, downwards to the mouth of the water of Nith," for the purpose of upholding the bridge of Dumfries. The amount of the dues leviable is not defined under the act, but they were fixed by a minute of council in 1772. The burgh has also the right to levy sundry small customs within burgh, and these, together with the bridge-custom, in the year ending 15th October, 1833, yielded £589 17s. 10d. The amount of police assessment for 1832 was £815 6s. 9d., and the annual revenue was further increased by a sum of £212 7s. 2d., arising from the sale of manure, and police fines. This sum is amply sufficient to defray all the ordinary charges. The parliamentary boundaries of Dumfries, under the reform act, include Maxwelltown and its suburbs on the west side of the Nith. Being the metropolis of an important county, it has a large number of resident lawyers; and, in addition to its quarter-sessions, it has twice-a-year the circuit justiciary court for the southern districts of Scotland, and the sheriff and small debt courts.

Its ancient arms was a chevron and three fleurs de lis; but that used for many years past is a figure of St. Michael, winged, trampling on a serpent, and bearing a pastoral staff. The motto is "Alorburn," a word which, during many centuries of warfare when the burgh was constantly exposed to danger, was used as a war-cry to assemble the townsmen. The side toward the English border being that whence danger usually approached, a place of rendezvous was appointed to the east, an area intersected by a rill called the Lowerburn or Lorburn; and when the townsmen were summoned to the gathering, the cry was raised, "All at the Lowerburn,"—a phrase which was rapidly elided into the word "Alorburn." A street in the vicinity of the original course of Lowerburn, bears the name of Lorburn-street. The populous suburb of Maxwelltown, formerly called Bridgend, agglomerates with Dumfries, and properly forms part of the town; but it is under separate jurisdiction, both civil and ecclesiastical, and will be noticed in a separate article. See MAXWELLTOWN. In consequence of a considerable part of it being colonized with Irish, and in other respects out of keeping with the flaunting character of the aristocratic burgh, it is treated with some contempt by the Dumfriessians, and, though contributing some fine features to the scenic grouping of their town, figures in their conversation chiefly as an object of sport. Including this suburb, the population of Dumfries amounted, in 1831, to 16,271.

Dumfries appears to have originally grown up around a strong castle or border-fortress, which was of great importance during the 12th century, and—especially in the times of Wallace and Bruce—was often a subject of contention between the Scotch and English. So early as the reign of William I., who died in 1214, it was of such importance as to be the

seat of the judges of Galloway; and it appears to have received its charter either immediately after the accession of that monarch, or during the preceding reign, that of David I. From several remains of antiquity, it even appears to have been a place of some consequence before the end of the 8th century. So great and almost paramount a public work as the old bridge could have been thought of only in connection with a town and thoroughfare quite as important to Scotland, in the middle ages, as modern Dumfries is to the country at present; and this erection was constructed before the middle of the 13th century, by the Lady Devorgilla, third daughter of Allen, Earl of Galloway, and mother of King John Baliol. The same lady founded at Dumfries a monastery of Grey Friars. This edifice stood on a mound at the margin of the Nith, and, though long since untraceable, continues to give name to Friars Vennel, one of the considerable streets of the town. In 1305, Robert Bruce had, in the chapel of this monastery, an angry altercation with the Red Comyn, a relation of its foundress. Hesitating about asserting his title to the crown, and irritated by opposition from Comyn, he poniarded the latter before the altar, and, rushing out to his friends who waited at the gate, hurriedly expressed a doubt that he had slain him. "You doubt!" cried one of his friends; "I mak siccar;" and he immediately ran to the wounded rival of his master, and despatched him. Bruce, by this event, was committed to open warfare; and, unfurling his standard against the opponents of his claims, he led them on to Bannockburn, and there trod over their bodies to the throne. After the assassination of Comyn, the frequenters of the Grey Friars' chapel deserted it, and began to resort to the chapel of St. Michael, which stood on the site of the present St. Michael's church. Edward I. of England, in the course of his inroads into Scotland, occasionally halted at Dumfries; and here he ignominiously put to death the brave patriot and brother-in-law of Robert Bruce, Christopher Seton. The scene of Seton's execution was a mound or slight eminence to the east of the town, at the entrance of the town, then and previously the gallows-hill or common place of public execution, but now known as Kirsty's (Christopher's) mount. Christian Bruce, the widow of Seton, erected on the spot a chapel to his memory; and her brother, King Robert, granted, in 1324, a hundred shillings yearly out of the barony of Caerlaverock, for the support of a chaplain who should offer masses for the soul of the deceased. All vestiges of the building, which was called St. Christopher's chapel, have disappeared.

Dumfries castle was seized and garrisoned by Edward I., after he had dethroned John Baliol; but was retaken by Bruce after he had slain Comyn; and before 1312, it was once more seized by the English, and was again, in that year, retaken by Bruce. In 1307 Edward II. marched upon Dumfries, and received the homage of several Scottish nobles. In 1396 the burgh obtained some important immunities from Robert III.; in 1485 it received from James II. a charter, confirming its privileges and possessions; and in 1469 it obtained from the Crown all the houses, gardens, revenues, and other possessions, which had been the property of the Grey Friars.* During the

* Infefment was recently given on a royal charter in favour of the magistrates of Dumfries, confirmatory of all their former rights, privileges, and corporate immunities, the records of many of which had been lost or destroyed in 1715 and 1745, and other troublesome times. This new grant also confers on the town a right of guildry, of which it was not formerly possessed. James VI. had granted to the corporation a signature to that effect, about the year 1621; yet it did not appear that infefment had ever passed upon it. This document was only lately, and by accident, brought to light.

troubles which so long harassed and devastated the borders, Dumfries was frequently, in spite of the brave resistance of its citizens, plundered and burned. In 1536, one such disaster was signally retaliated by Lord Maxwell, who made an incursion into England, and reduced Penrith to ashes; and about the same period, either that nobleman, or some member of his family, built a strong castle for the defence of the town. In 1565, this castle was surrendered to Queen Mary, when, at the head of a portion of her troops, she visited the town to reduce and castigate some of her disaffected nobility. In April, 1570, Lord Scroop, acting under the Earl of Essex, made a devastating inroad upon Dumfries-shire, and, in spite of a brave resistance on the part of the townsmen of the burgh, who marched under the leading of Lord Maxwell to oppose him, he took and plundered the recently erected castle, and set fire to the town. The citizens, harassed by frequent and heavy calamity from invasion and rapine, felt aroused to attempt the rearing of some strong rampart for their protection. In 1583, they erected a strong building called the New Work, which served the double purpose of a fortress, and of a retreat for the people, and a repository for their goods when they were beaten back by invaders. No vestiges, however, either of this erection, or of the old castle, or of the castle built by the Maxwell family, can now be traced. About the time, too, when the New Work was erected, or possibly at an earlier period, a rude fortification or extended rampart, called the *Warder's Dike*, was thrown up on the south-east side of the town, between the Nith and Lochar moss.

Dumfries was visited in 1617 by James VI., when he was on his return to England; and it then received from him 'the siller gun,' to be shot for every seventh year by the incorporated trades. During the reign of Charles I. it shared largely in the disasters which overspread the country; and it shared still more largely in those of the dark reign of Charles II. On the 20th of November, 1706, 200 Cameronians entered the burgh, published a manifesto against the impending union of the two kingdoms, and burnt the articles of union at the cross. The Covenanters were indignant that the articles of union made no recognition of their solemn league and covenant, and that they, on the other hand, recognised the constitution of the church of England, which they had sworn to overthrow and exterminate; but notwithstanding the intemperance and tumultuousness of their well-meant proceedings, they happily did not succeed in precipitating the town into any serious disaster. During the insurrection of 1715, when Viscount Kenmore encamped on the heights of Tinwald, and menaced the burgh with his army, the war-cry of 'Loreburn' arose for the last time in the streets of Dumfries; and so loud was its sound, and startling its reverberations, that the Viscount, without attempting to execute his menaces, broke up his camp, and marched away to Annan. During the insurrection of 1745, a part of the citizens cut off at Lockerby a detachment of the Highlanders' baggage, and, in consequence, drew upon their town a severer treatment from the Pretender than was inflicted on any other burgh of the size. Prince Charles, on his return from England, let loose his mountaineers to live at free quarters in Dumfries; and he levied the excise of the town, and demanded of the citizens a contribution of 1,000 pairs of shoes, and £2,000 sterling. An alarm having reached him that the Duke of Cumberland had expelled his partizans from Carlisle, and was marching rapidly on Dumfries, he hastily broke away northward, accepting for the present £1,100 of his required exaction, and carrying with him Provost Crosby, and Mr.

Riddell of Glenriddell, as hostages for the payment of the remainder. The town suffered considerably from the plunderings of his troops; and is supposed to have sustained, by his visit, damage to the amount of £4,000 sterling. The king—to whom, in opposition to the Stuarts, the town was steadfastly attached—afterwards granted, from the forfeited estate of Lord Elcho, the sum of £2,800, to compensate in part for the losses of the citizens, and express his approbation of their loyalty. Since 1746, the burgh has plenteously participated in the blessings of peace and increasing enlightenment, and though moving more slowly than some other towns in the race of aggrandizement, has been excelled by none in the gracefulness of its progress, and the steadiness and substantial character of its improvement.

Dumfries gives the title of Earl in the Scottish peerage, to the ancient family of Crichton of Sanquhar. In 1633, William, 7th Lord Crichton, was created Earl of Dumfries, enjoying, at the same time, the titles of Viscount of Ayr, Lord Crichton of Sanquhar and Cumnock, and other honorary distinctions. In 1696 the earldom, owing to a want of male heirs, passed to a female branch of the Crichton family, who married a member of the family of Dalrymple, and son of the 1st Earl of Stair. William Dalrymple, her eldest son, and 4th Earl of Dumfries, afterwards succeeded to the Stair peerage. On his death the earldoms were again separated,—that of Dumfries passing to his nephew, Patrick Macdowall of Feugh. This last Earl's heir or inheritrix was a daughter, who married John Stuart, eldest son of the Marquis of Bute. By a royal licence the Bute family, the present proprietors of the earldom, have assumed the name of Crichton.

DUMFRIES-SHIRE, a large, important, and beautiful county in the south of Scotland, deriving its name from the town just described. It is bounded on the north by the counties of Lanark, Peebles, Selkirk, and Roxburgh; on the east by Cumberland; on the south by the Solway frith; on the south-west by Kirkcudbrightshire; on the west by Kirkcudbrightshire and Ayrshire; and on the north-west by Ayrshire. In latitude it extends from 55° 2', to 55° 31'; and in longitude from 2° 39', to 3° 53', west from London. Its figure is irregularly ellipsoidal: the greater diameter from the mountain of Corson-cone on the border of Ayrshire, to Liddel mount on the border of Roxburghshire, in a direction nearly south-east by east, measures about 50 miles; and the lesser diameter, from Loch Craig on the confines of Peebleshire, to the Solway frith at Caerlaverock-castle, in a direction west of south, measures about 32 miles. Its ellipsoidal form, besides undulating in every part of the circumference, is indented to the depth of 10 miles by the southern point of Lanarkshire, to the depth of 5 miles by Ettrick Head in Selkirkshire, and to the depth of 3 miles by the point of Kirkcudbrightshire, which forms the parish of Terregles. Its circumference, drawing the line across the waters at the mouth of the estuaries of Nith and Annan, is about 174 miles, extending round a mountain-line of 120 miles, a champaign line on the east of 18, a line of sea-shore from the Sark to the Nith of 21, and a champaign line along the Nith and the Cluden on the south-west of 15. The surface of the county contains an area of 1,006 square miles, or 644,385 English acres. These are the measurements of Dr. Singer, in his *General View of the Agriculture of Dumfries-shire*, derived, at a large cost to the landholders, from the labours of a ten years' survey. Other measurements, however, assign to the county 1,228 square miles, or 785,920 acres, and 1,800 square miles, or 1,820,000 acres. Dr. Singer's measurements are probably within the truth,

yet seem to have been made with caution. For several miles on the south-west, the county is divided from Kirkcudbrightshire by Cairn water. From the point where that stream ceases to touch it, all the way round its western, northern, north-eastern, and eastern border, it is—with the deduction of Liddesdale, or the parish of Castletown, which, though sloping toward the south, is included in Roxburghshire—marked off by the highest elevations of the mountain-range which breaks away westward from Cumberland and traverses the south of Scotland. Falling in now with Liddel water, the boundary-line follows that stream till its confluence with the Esk; it thence, for about a mile, follows the united rivers, and then, for upwards of 3 miles, breaks due westward through an open country, till it strikes the Sark; and, following that stream to the sea, it afterwards runs along the margin of the Solway frith and the estuary of the Nith. The county is thus, with some unimportant exceptions, shut in by natural geographical limits.

All the northern part of Dumfries-shire is very mountainous, not only the summits of the water-dividing line which bounds it, but the elevations of the spurs which that range sends down toward its lowlands, rising, in many instances, to a great height above the level of the sea. Along the boundary from west to east are Black Larg, 2,890 feet above sea-level; Lowther, 3,130; Queensberry, 2,140; Hartfell, 3,300, the highest mountain in the south of Scotland; Whitecoomb, nearly of equal altitude; Ettrick Pen, 2,220; Wisp-hill, 1,836; and Tinnishill, 1,846. Radiating from the boundary mountain range are spurs, which, in some instances, run far down the county, decreasing, in their progress, into hills, but which, in most instances, are short, and allow the multitudinous head-waters, or mountain-rivulets of the border, to find confluences with one or other of three rivers which traverse the lowlands of the county. Of the interior mountains, the most remarkable are Cairnkinna and Glenquhargen in Penpont, the former 2,080, and the latter 1,000 feet above sea-level; Langholm-hill, between the Esk and the Tarras, 1,204; and Brunswark-hill, in the parish of Hoddam, 740. [See separate articles in the present work on most of these mountains.] Almost all the mountains, whether on the boundary or in the interior, have an inconsiderable basis, a rapid acclivity, and summits, in some instances, round-backed or flattened; in others, conical; and, in a few, tabular or flat. The peaked and towering summits, or summits of rugged and craggy outline, so common in the Highland counties, are here unknown. Yet the Dumfries alps are scarcely less grand or picturesque, and at intervals but a degree less savage than those of Argyle or Perth; and they abound in sylvan ravines, and fairy nooks, and retreats of scenic beauty to which the Highland alps are strangers. The central or midland part of the county is exquisitely diversified in scenery, and exhibits an attractive blending of hill and valley,—the elevations possessing every variety of character, and often rising to considerable altitude, and the lower grounds consisting of slope, undulation, moorland, dell, and holm; so that a tourist traversing the district, no matter in what direction, is continually stimulated by novelty of view, and rapidly surveys the most heterogeneous classes of attraction in landscape. Down to the southern line of the midland district, the county, after ceasing near the boundary to be sectioned off into fragments by mountain-spurs, is divided into three great valleys or basins, traversed by the rivers Nith, Annan, and Esk. But that part of the county which lies south of a line drawn from Whinnyrig by

Ecclefechan, Craighaws, Solway bank, and Broomholm to Moorburnhead, is comparatively low and flat, being only occasionally marked by low hills, either round-backed or obtusely conical. At this line, the basins of the Annan and the Esk cease to be valleys, and are spread out or flattened into plains. The valley of the Nith, too, for 10 miles before it touches the Solway, is in all respects a plain, with the exception of a short range of low hills in the parish of Dumfries, a few unimportant isolated eminences, and an amphitheatre of beautiful but not high hills, one side of which divides the plain from the basin of the Annan, while the other trends away into Galloway. A section of this plain of the Nith is the dead level of Lochar moss. Dumfries-shire, sloping down from the alpine heights of its cincturing boundary, and subsiding eventually into a plain, is Lombardy in miniature,—differing from its beautiful Italian type, chiefly in having a larger proportion of upland compared to its champaign country.

From the configuration of the county, no streams might be expected to flow into it from adjacent districts, and none to flow out except to the sea. The original waters of the Nith, however, as well as one or two of the unimportant and remote tributaries of that river, pass into the county through gorges or openings on the west. All other waters, which any where traverse it, well up within its own limits, and expend all their resources in enriching its own soil. The Nith, from the very point of entering it, and the Annan and the Esk, from a short distance south of their source, begin to draw toward them nearly all the other streams, so as to form the county into three great valleys or basins. All these three rivers pursue a course to the eastward of south, the Nith on the west, the Annan in the middle, and the Esk on the east; and, with the exception of some small curvings, they flow parallel to one another, at an average distance of about 12 miles, imposing upon their own and their tributaries' basins the names respectively of Nithsdale, Annandale, and Eskdale. The streams which flow into them, though very numerous, are, for the most part, of short course, of small body of water, and remarkable only for the beauty or picturesqueness of the ravines or dells through which they pass. The chief of those which enter the Nith are, from the west, the Kello, the Euchar, the Scaur, the Cavern, and the Cluden; and, from the east, the Crawick, the Minnick, the Enterkin, the Carron, the Cample, and the Duncow. The chief which enter the Annan are, from the west, the Evan, and the Ae; and, from the east, the Moffat, the Wamphray, the Dryfe, and the Milk. The chief which enter the Esk are, on the west, the Black Esk; and, on the east, the Stennis, the Ewis, the Tarras, and the Liddel. In addition to these streams—which are all described in separate articles in our work—and multitudinous smaller ones, but independent of the three great rivers of the county, four rivulets, each 10 miles or more in length, flow southward, and fall into the Solway,—the Lochar and the Pow in the space between the Nith and the Annan, and the Kirtle and the Sark in the space between the Annan and the Esk. Several of the upland and tributary streams, like the parent rivers to whose embrace they run, form, for a brief way, considerable basins of their own, and impose upon them their names. Ancient documents, and even the rustic natives of the present day, talk frequently of Moffatdale, Dryfesdale, Ewisdale, and 'the lads of Ae.'—Dumfries-shire possesses very few lakes, and these of but small extent. The most remarkable are those in the vicinity of Lochmaben, nine in number, the largest fully 3 miles in circumference. Loch Skene, too, at the source of Moffat water, is notable in con-

nection with its furnishing the stream which forms the magnificent cataract called the 'Grey Mare's Tail.' Salmon, herlings, parr or samlet, and sea-trout, are found in the larger rivers; and pike, perch, trout, and eels, in the smaller. Fish in great abundance, and, in one instance, of a strictly peculiar species, are found also in the lakes. In the Nith and the Annan, fishing for salmon, grilse, and whiting or herling, commences on the 10th of March, and closes on the 25th of September; but as to the period both of commencing and of closing, is generally considered to be a month too early. The fisheries of all the rivers are greatly injured by the killing of salmon in the spawning season, and by the use of stake-nets in the Solway.—Springs of the purest water exist in great numbers in the gravel beds and fissured rocks of the mountain district of Dumfries-shire. Of mineral waters in the county, the chalybeate are most frequent, and are always discovered by the oxide of iron which they deposit round their bed. The most celebrated are a chalybeate near Annan; another at the Brow, in the parish of Ruthwell; a sulphur-spring at Closeburn-house; a chalybeate in a ravine of Hartfell mountain; and particularly the two springs, one sulphureous, and the other chalybeate, near the village of Moffat.

Most of Dumfries-shire basks, with a southern exposure, under the genial rays of the meridian sun. The high mountain-range which, over so considerable a distance, environs it, softens the acerbity of blasts from the north-west, north, and north-east. Its southern or perfectly lowland division, is warmed by the vicinity of the Solway, and hardly ever, in any spot or in any intensity of frost, retains snow for a week. Most of the rain which falls in the county is accompanied with mild winds from the south or west, and differs widely from the chilling distillations which annoy the eastern coasts of the kingdom. Snow, though capping the alpine summits on the boundary, does not remain very long on even the mountain faces of Dumfries-shire. Moisture, however, is somewhat abundant, coming more freely from the Atlantic than, on the eastern coast, it does from the German ocean. Rains prevail most towards the beginning of August and the end of September, and are then well-known under the names of the Lammas and the equinoctial floods; and they also, not infrequently, fall long and heavily during the months of winter. The prevailing winds blow, in summer and autumn, from the west and the south; and, in spring and winter, from the east and the north. The heat often rises, in summer, above 70° Fahrenheit, and has been known to raise the thermometer to 92° in the shade; but in the average of the year, it is believed to be about 45°. The climate, as regards salubrity, is in general thought good.

Hares, in many districts, are very abundant. Rabbits also are found; but they are few in number, and have not any regular warren. Foxes have here retreats, whence they occasionally sally to plunder the poultry-yard; and they afford considerable employment to hounds, and sport to huntsmen. The red deer and the capercaille, which formerly were met with in Dumfries-shire, are now extinct. Two or three forest-deer were recently discovered at Rae-hills, and have been protected and propagated; but they are believed to have strayed from the hills of Lanarkshire. At a former period, indeed, the forest-deer, though for a time extinct, was very abundant; and it is frequently found inhumed in the morasses. Pheasants, grouse, black game, partridges, and other game birds, and also the woodcock, the curlew, the plover, the snipe, and the lapwing, are very plentiful.

A brown or reddish coloured sandstone, dipping

generally toward the Solway, and supposed to be a continuation of the red marl formation of Cumberland, stretches athwart the southern part of Dumfries-shire; and proceeding northward, merges in a reddish coloured limestone, succeeded first by blue limestone and coarse white sandstone, and next by mandlestone rock and primitive formations containing metallic ores. Near Dumfries and Lochmaben the sandstone is red; near Langholm and Sanquhar, it is grey; and at Cove, near Kirtle water, it is of light colour and solid texture, affording a fine material for pillars. The sandstone, where it crops out, is frequently incohesive, and is called tillband; but by being followed in its dip, it is usually found sufficiently compact to be used for ridge-stones. In each of the three great divisions of the county, limestone is worked in large quantities for sale. In Annandale the quarries are most numerous, but are each greatly inferior to the quarry of Closeburn in Nithsdale. At Kelhead the lime rock, which is of the first quality, is from 12 to 24 feet thick, and is said to yield 95 parts out of 100 of carbonate of lime. Ironstone has been found in spheroidal masses, associated with limestone, and exists also in detached masses in wet bogs; but it has not hitherto been worked. Marble has been worked at Springkell, Kelhead, and other places, and employed for some useful and ornamental purposes. Veins of slate are found in Evandale and the parish of Moffat; but, in the former case, are too schistous, and in the latter too inconveniently situated to be of practical value. Coal, though supposed, in continuation of the coal-field of Cumberland, to stretch at a great depth under the red strata of the shores and valleys of Nithsdale and Annandale, and though seemingly, in some parts, forced up near the surface, and often laboriously searched for by boring, is found in a workable state only in the parishes of Sanquhar and Canobie, at the extremities of the county. The coal of Sanquhar is probably connected with the coal-field of Ayrshire; that of Cannobie affords a supply of about 25,000 tons per annum; yet Dumfries-shire is, for the most part, obliged to supply itself with coal from Cumberland, of to find a succedaneum for it in the produce of Lochar moss and other bogs. Extensive lead-mines, the most productive in Britain, are worked at Wanlockhead on the north-east boundary of the parish of Sanquhar. The galena or ore yields from 74 to 80 per cent.; is contained in veins of from a few inches to 15 feet thick; and, during a period of 50 years, yielded 47,420 tons. Silver is extracted from this ore in the proportion of from 6 to 12 ounce. in the ton. Lead ore has been found also, but not worked, in the parishes of Penpont, Johnstone, St. Mungo, and Langholm. Gold occurs in the mountains around Wanlockhead, either in veins of quartz, or in the sand washed down by the rivulets. In the reign of James V. 300 men are said to have been employed there during several summers, and to have collected gold to the value of £100,000 sterling; and either they or subsequent searchers have left monuments of their diligence, in the artificial mounds of sand which overlook the gold-bearing streams. The largest piece of gold ever found at Wanlockhead, is in the British museum, and weighs 4 or 5 ounces. Very recently two pieces were picked up which weighed respectively 60 and 90 grains. An antimony mine, the only one in Great Britain, was discovered in 1760 at Glendinning, in the parish of Westkirk; and, from 1793 till 1798, produced 100 tons of the regulus of antimony, worth £8,400 sterling. The ore is a sulphuret, and yields about 50 per cent., and forms a vein seldom exceeding 20 inches in thickness, and combining blende, calcareous spar, and quartz. Copper-ore is said to have been found, but

not in considerable quantity, in the toadstone in the parish of Middlebie. Manganese occurs in small quantities in nests or heaps. Gypsum is found in thin veins. Loose blocks of sienite are found all over the low part of the county. Greenstone, grey wacke, and greywacke slate, compose the rocks of many of the hills. Floetz-trap is found, generally in the shape of mountain-caps, on the summits of the mountains. Basaltic or whinstone rocks occur in various localities, and exhibit some fine specimens in the mountains near Moffat.

The soil, in the lower parts of Dumfries-shire, is in general light, and underlaid with rock, gravel, or sand. In some places, where it has a subsoil retentive of water, it is cold, and occasions rankness of vegetation. In Nithsdale and Annandale it is for the most part dry, but in Eskdale it is in general wet. A gravelly or sandy soil prevails on the ridges or knolls of the valleys and even of the bogs. Muir soil abounds in the mountain-districts, and wherever there is white-stone land; but when its subsoil is dry, it is capable of gradual transmutation into loam. A loamy soil, rich in vegetable mould, covers considerable tracts in the lower southern district, and is interspersed with other soils on the gentle slopes of the midland district. Alluvial soils—called in other parts of Scotland haugh-land, but here called holm-land—abound along the margins of the streams; and in general are shallow and poor in the upland dells, and deep and rich in the lowlands. Clay, as a soil, seldom occurs, except as mixed with other substances; but, as a subsoil, is extensively found, either white, blue, or red, under the green sward of ridges, and beneath soft bogs. Peat-moss exists, in great fields, both on the hills and in the vales; and, wherever drainage can be practised, is such as may be converted into soil. Sleaf, or the saline and muddy deposition of the waters of the Solway, spreads extensively out from the estuary of the Loch, and is not only productive in itself, but affords an effective top-dressing for the adjacent peat-moss.

Estates are held either of the Crown, or of a subject superior, who may or may not have property in the county; and, in either case, they may be laid under entail for an unlimited period, and in favour of heirs yet unborn. Kindly tenures, or possessions of land as the king's kindly tenants, subject to the annual payment of a small fixed sum to an officer of royal appointment, exist in the vicinity of the castle of Lochmaben, and present an anomaly any resemblance to which in Scotland is found only in Orkney. Feu-holding, which involves perpetuity of right and full power of alienation, but is subject to an annual payment quite or nearly equal to the fair rent of the soil, is confined chiefly to the burghs. Burgage-holding extends over considerable tracts of land around Dumfries, Annan, Lochmaben, and Sanquhar. Long leases of small portions or plots of land—provincially but inaccurately called feus—are everywhere common; and, being granted with a view to building, embody in a degree the idea of property. Farms of arable land are generally let on leases of 15, 19, or 21 years; and those of sheep-pasture, on leases of 9 or 13. A stipulation is made, in most instances, that not more than one-third of the arable land shall, at one period, be under white crops; and, in other instances, that the four-field or six-field course of husbandry shall be practised. But leases are of various forms, and not very rigidly observed in their conditions. Pasture-farms are usually entered at Whitsunday, and arable-farms in autumn after the removal of the crop. Rents are paid, one-half at Whitsunday, and the other at Martinmas. Sheep-farms vary in size from 300 to 3,000 acres,

and pay, on the average, about 4s. per acre of rent. Arable farms vary from 50 to 600 acres, a large proportion of them being from 100 to 150; and they pay from £1 to £5 per acre,—the average for good land being about £3 10s. Some farms—though only an inconsiderable proportion, and chiefly in the midland district—are both pastoral and arable, and are regarded as particularly convenient and remunerating.

The agricultural capacities of Dumfries-shire were long under-estimated and neglected, and did not begin to be fairly developed till the year 1760. Charles, Duke of Queensberry, who died in 1778, greatly improved his property in Nithsdale and Annandale,—the largest property in the county. The Earl of Hopetoun laid the basis of extensive prosperity in the pastoral uplands of Annandale; and by abolishing thirlage to his mills, and giving advantageous leases to the farmers, spread a new and rich carpeting over the lowlands of his property. The Duke of Buccleuch, grandfather to the present duke, succeeded, by skill and liberality, and by bearing the chief expense of the great road leading from England along the Esk, in diffusing agricultural energy over his extensive possessions in Eskdale. Sir John Heron Maxwell and Mr. Pulteney Malcolm introduced new and effective methods of husbandry into considerable districts on the southern plain. J. J. Hope Johnstone of Annandale, Esq., drew excited and profitable attention to improvements in the breed of cattle, and set a high example to landlords in a liberal treatment of his tenants. Menteth of Closeburn, however, on an estate of 10 miles by 8, achieved improvements which have provoked the emulation and aroused the energies of the whole county. By drainage, by the free but judicious use of lime, by irrigation, and by a wise and handsome treatment of servants, he has converted mimic wildernesses into gardens, and raised the value of some land from 5 shillings to £4 10s., and £5.

Crops are cultivated of various kinds, and in various orders of rotation. In the uplands, and recently reclaimed grounds, wheat is not an object of attention. Farmers, in the best districts, differ considerably in their modes of culture; some skilfully endeavouring to suit a permanent course of cropping and of management to the peculiarities of the soil; and others labouring, by ingenious or experimental changes in the genera of the crops, and in the order of their rotation, to extract from the soil, its maximum of productiveness, without, at the same time, doing damage to its energies. A rotation of frequent occurrence is, first, oats,—next, potatoes or turnips, the latter fed off by sheep,—next, wheat or barley, sown with grass-seeds,—next, hay,—and finally, for three years, pasture. Both for home-consumption and for exportation, oats and potatoes are more plentifully cultivated than any other crop. The culture both of potatoes and of turnips—particularly the latter—has of late years very greatly increased, and is found to be a valuable improvement. Potatoes are in much request for the fattening of pigs and cattle. On ground of difficult access, and generally on upland farms, bone-dust is advantageously used in enriching the soil; and in fact this manure has throughout entire districts come into general use, and is an object of considerable mercantile or productive speculation. Implements of husbandry, and all the appliances of the farm-yard, are the same as those in other agricultural counties. The Dumfries-shire farmers, however, have very generally thrown away the sickle, in the reaping of their crops, and adopted in its stead a small scythe. Most of the farm-houses, including all of recent erection, are built of stone and lime, roofed over with slate, and

are commodious and well-arranged. Plantations and pleasure-grounds abound in the lower parts of the county, and are everywhere remarkable for their beauty and opulence.

The mountainous division of Dumfries-shire is employed in pasturage; and is stocked, partly with black cattle, but principally with sheep. The cattle of Eskdale are, in general, larger than any others in the county. All farmers, however, who purchase cattle for breeding, endeavour to introduce the beautiful and much-valued form of the true Galloway cattle. Their prevailing colour is black, and their weight from 32 to 55 stone. The mountain-flocks of sheep consist either of Cheviots, or of black faces with short wool. But most of the sheep are of mixed breed,—the Cheviots having been crossed with the Leicester sheep, the South Downs, and the Negretto and Paular breeds of Spain.—A peculiarity in the store-farming of Dumfries-shire, is its rearing an enormous number of pigs. In the year 1770 not more than £500 value was received in the produce of pork; but so far back as 1812 it had risen to about £50,000 a-year; and since then, it has very greatly increased. The pork is excellently cured, and sent off in bacon to most of the leading markets of England.

Dumfries-shire, though conducting an extensive export trade in oxen, sheep, pigs, corn, wool, and skins, is not strictly a commercial, much less a manufacturing county. Its sea-ports are the scenes of a sea-ward traffic exceedingly small in proportion to its intrinsic importance and productive capacities: See articles ANNAN and DUMFRIES. Woollen and linen manufactures, though frequently tried in the county, have but recently been naturalized, and are still very limitedly successful. At Sanquhar, and the vicinity, ginghams, Thibets, and tartans are woven. At Dumfries and at Annan, coarse ginghams are largely manufactured, chiefly for the Carlisle market. Wages have greatly declined for the last two or three years. The average amount of a weaver's work, per week, will not exceed one cut, or 60 yards of coarse gingham, for which he only receives 6s. 6d., with 1s. extra, if approved, making 7s. 6d. But out of this he has to pay 2d. per shilling for winding, and at least 1s. for loom-rent, wear and tear, fire and light, &c., leaving not above 5s. 3d. clear, on 6 days' work of 11 hours per day. Females employed in hand-sewing muslin collars, and seaming stockings, earn about 2s. per week; and in winding, from 1s. 6d. to 2s. About 35 years ago, weavers in this county might have made 35s. per week; though they in fact—such were their habits of dissipation—seldom made above 10s. Such energies as in other localities would be directed to manufacturing and mercantile enterprise, are here almost all employed in subordination to the direct and accessory pursuits of agriculture; but great improvements, from a concurrence of agencies, and a co-operation of favourable influences, have taken place, since the commencement of the present century, upon the condition and habits of the population. Smiling cottages, neater and cleaner than anywhere else in Scotland,—moorlands, richly cultivated to the base, and even up the acclivities, of mountains,—a soil, arrayed in the gayest dress, and laden with luxuriance,—roads, churches, school-houses, fences, rural clothing and popular manners, convenient, beautiful or refined in character,—all attest the high though tranquil prosperity which Dumfries-shire has attained.

The county is intersected in every direction with excellent roads. The two Carlisle and Glasgow turnpikes traverse it from Sarkbridge respectively through Annan, Dumfries, Thornhill, and Sanquhar, —and through Ecclefechan, Lockerby, Dinwoodie-

Green, and Beatoch; the Dumfries and Edinburgh turnpike, northward by way of Moffat; the Carlisle and Edinburgh turnpike, along the vales of the Esk and the Ewes; and the Dumfries and Ayr turnpike, north-westward through Dunscore and Glencairn. Cross-roads wend along every valley, or stretch outward on the straight line, from village to village; and, in general, they have been much improved, and are kept in good repair. Safe and easy communications have been opened also through several parts of the alpine districts.—Two distinct lines of railway from the great line along the west of England have been projected, and either doubtless, if executed, would add incalculably to the facilities of communication, and the relative value of produce in this county.*

Besides the fairs and cattle-markets of the town of Dumfries, [see DUMFRIES,] there are fairs for lambs, at Langholm, 26th July; and at Lockerby, 16th August and 16th October, excepting when the date falls on Saturday, Sunday, or Monday, and then on the Tuesday following;—for sheep, at Langholm, 18th September;—for tups, sheep, lambs, and wool, at Sanquhar, 17th July, if Friday, and if not, on Friday following;—for tups, at Moffat, in the latter end of June; at Annan, in May and October; at Moffat, in March and October; and at Lockerby, in April.

* Of these two projected lines, that called the Nithsdale line commences at the Carlisle terminus of the Newcastle and Carlisle railway. After crossing the Eden, it takes a northerly direction towards the Esk, which it crosses below the iron bridge; it then bends round to the westward, keeping parallel to the Solway frith, and passes Annan water a little to the south of the present bridge; thence, it approaches Comlangen castle, and, skirting the north side of Lochar moss, reaches Dumfries. In this distance the gradients are of a very easy character. From Dumfries the line keeps the valley of the Nith up to New-Cumnock. Shortly after leaving Dumfries it crosses the river, which it recrosses at Aldgirth bridge; it then skirts the north side of the village of Thornhill, and keeps along the east side of the Nith to half-way between that place and Sanquhar, where the ravine widens, and it will become necessary to cross the river in two or three places. From Sanquhar to Kirkcconnel the line still keeps on the east side of the Nith; but, a little beyond the latter town, it may be again requisite twice to cross the river. The line is on the east side of the stream up to New-Cumnock, where it leaves the valley of the Nith. Between Old and New-Cumnock it keeps parallel to the turnpike-road, and here crosses the summit of the pass through this part of the country. At the village of Auchinleck, a little beyond Old-Cumnock, the line crosses the turnpike-road, which it recrosses near Berrour, and it then keeps on the east side till it intersects Cessnock water. The line passes the Irvine water a little below Hurlford bridge; it afterwards carried over the turnpike-road; and enters the northern suburb of Kilmarnock, crossing, by a viaduct, Kilmarnock water. It here curves to the west to join the intended Kilmarnock branch of the Glasgow and Ayr railway. Hence the line passes by Dalry, Beith, Lochwinnoch, Johnstone and Paisley to Glasgow. To the distance of 92 miles 18 chains, are to be added 10 miles 18 chains of the Kilmarnock branch, not yet begun, and 22 miles 53 chains of the Ayrshire railway; making the total distance from Carlisle to Glasgow 125 miles 9 chains, and to Edinburgh 171 miles 9 chains; whereas by the Clydesdale line the latter distance is only 97 miles 44 chains, and the former only 100 miles 74 chains. This latter line enters Dumfries-shire near the pass of the Clyde's Nap, where a cutting of 2 miles 56 chains in length, and 50 feet in depth, will be required. From hence the line keeps on the south side of the turnpike-road and on the right bank of Elvan water, which runs into the Annan to the southward of Beatoch bridge. At Middle-Gill a viaduct will be required of 30 chains in length and 110 feet in extreme height. The line passes within about a mile of Moffat, and to the west side of Beatoch bridge inn, crossing the Dumfries and Edinburgh road near Kirkpatrick manse; it continues nearly in the same direct course and approaches the Annan, which, as well as the turnpike-road from Glasgow to Carlisle, it crosses near Johnstone bridge. From this point the line towards Lochmaben and Annan, as projected by Mr. Locke, commences, but a shorter line preferred by the parliamentary commissioners, takes a course towards Lockerby, crossing the turnpike-road twice, and the Dryfe water. From Lockerby the line proceeds to Greta by Ecclefechan, thence crossing the turnpike-road, and the Milk, the Mein, and the Kirtle. It then proceeds by the west side of Greta, and just after crossing the Sark joins the Lochmaben and Annan route, and passing Moss-bank, crosses the river Esk by a bridge of 17 feet in height and 132 yards in length. From hence the line proceeds direct towards the eastern side of Caldew church, where it takes a short curve to the eastward, and joins the Carlisle and Newcastle railway, crossing in its course the river Eden by a bridge 38 feet high and 100 yards in length.

A line of Roman road, proceeding northward, anciently entered Dumfries-shire across the Liddel, and wended along the east side of the Esk to Castle O'er and Raeburn-foot in Eskdale-muir. Another and more important line entered the county across the Sark at Borrowslacks, advanced to the westward of Brunswark-hill, crossed the river Milk at the drove ford, between Scroggs and the bridge, proceeded by Lockerby and Torwood-muir, across the Dryfe a little way above its confluence with the Annan, and here divided into two branches, the one stretching northward through Annandale, and the other westward into Nithsdale. Of these two branches, the former, or the main line, wended along the east side of the Annan, passed Dinwoodie green and Girth-head, crossed the Wamphray water, and northward at Burnfoot, crossed the Annan to the Roman intrenchments at Tassie's holm; it then crossed the Evan, advanced by the farm of Dyke, ascended the ridge of Loch-house, and passed on to the top of Errickstane-brae, advancing to Newton in Lanarkshire. The second or westward line of the main road, proceeded, from the point of its divergence in Dryfesdale across the Annan, by Amisfield house, Duncow, and Dalswinton, advanced up the east side of the Nith by Thornhill, crossed Carron water, turned then away northward, entered and traversed the defile called the Wellpath, in the mountains above Durrisdeer, and there passed into the basin or vale of the Powtrail in Lanarkshire, afterwards to rejoin at Crawford castle, the line which had traversed Annandale. Some inferior side-branches struck off from these central lines. One diverged from the westward branch, through Kirkmichael, to what is now the glebe of that parish, and where there seems to have been a Roman station; and another turned off to the west from the Nithsdale road, crossed the Nith, and passed through Tynron by Scaur water. The most remarkable stations connected with the roads, are those of Brunswark, Castle O'er, and Raeburnfoot, together with Agricola's camp on Torwood-moor near Lockerby. In many places are Roman encampments, circular and square fortifications, cairns or burians, vestiges of towers, and moats or artificial mounts, which are supposed to have been the seats of popular judicial assemblies. The most remarkable towers are at Amisfield, Lag, Achincass, Robgill, and Lochwood; and the largest and most beautiful moat is at Rockhall, near Lochmaben. Remains or vestiges of druidical temples exist in the parishes of Gretna, Esdalemuir, Holywood, Wamphray, and Moffat. A remarkable antiquity, supposed to be of Anglo-Saxon origin, is the cross of Markland, found in the churchyard of Ruthwell. The principal ancient castles, are those of Caerlaverock, Tortherwald, Closeburn, Morton, and Sanquhar, in Nithsdale; Achincass, Hoddam, Comlongan, and Lochwood, in Annandale; and Wauchope and Langholm, in Eskdale. In various places, are vestiges of ancient monasteries. Throughout the country, vast quantities of ancient coins and medals and pieces of armour have been found.

Dumfries-shire originally comprehended, in addition to its own ample territory, the stewardry of Kirkcudbright; and, in the reign of William I., was placed under a sheriff. But, during a considerable period, its sheriffs had only a nominal authority beyond the limits of Nithsdale. From the reign of David I. till that of Robert Bruce, both Annandale and Eskdale were under independent baronial jurisdiction,—the latter on the part of various proprietors, and the former on the part of Robert Bruce's ancestors. The county consisted then strictly of the sheriffship of Nithsdale, the stewardry of Annandale and the regality of Eskdale; and was parti-

tioned off very nearly, according to the water-lines of the three principal rivers by which it is traversed. Bruce, on receiving the Scottish crown, made great alterations in the civil polity of his kingdom, and paved the way for hereditary sheriffships and local jurisdictions. By an act passed 20th of George II., Dumfries-shire assumed the status and the jurisdiction which it has since maintained.—This county sends one member to parliament: constituency, in 1839, 1,927. Its four royal burghs, Dumfries, Annan, Lochmaben, and Sanquhar, also unite with Kirkcudbright to send a member. The county contains six burghs-of-barony, Moffat, Lockerby, Langholm, Ecclefechan, Thornhill, and Minnyhive; the villages of Springfield or Gretna green, Glencaple, Tortherwald, Tinwald, Penpont, and Kirkconnel; and a swarm of hamlets. The county and burgh prison is in the town of Dumfries. It was built about 30 years ago, and contains 52 ill-arranged apartments for criminals, and 2 for civil prisoners. It is in contemplation [1842] to erect a new prison.—Population, in 1801, 54,597; in 1831, 73,770. Houses, in 1831, 12,365. Population, in 1841, 72,825; being a decrease of 1.3 per cent. within ten years. Houses, in 1841, 14,375. Assessed property, in 1815, £295,621. The valued rental, in 1808, was £219,037 10s. 8d.; or nearly sixteen-fold that of the land-rent in 1656.

Till the epoch of the Reformation, Dumfries-shire formed part of the extensive diocese of Glasgow, and was divided into the two deaneries of Nithsdale and Annandale. The synod of Dumfries not only embraces the whole county, but extends its jurisdiction considerably into coterminous districts; and consists of five presbyteries, Dumfries, Lochmaben, Annan, Penpont, and Langholm. The presbytery of Annan has 8 parishes, and that of Penpont 9, all within the county; the presbytery of Langholm, 6, one of which is in Roxburghshire; the presbytery of Lochmaben, 13, small parts of two of which are in Lanarkshire; and the presbytery of Dumfries, 17, ten of which are in Kirkcudbrightshire. The total number of parishes in Dumfries-shire is thus 42.—The number of parochial schools, in 1834, was 65, under 69 teachers; of schools not parochial 129, under 143 teachers. The total number of scholars 11,437.—The total number of convicted criminal offenders, in 1841, was 63: of these, 22 were for assaults, and 28 for simple thefts.

Dumfries-shire, in common with a large part of Galloway, was, at the period of the Roman invasion, A. D. 80, inhabited by the tribe called the Selgovæ. The Romans included it in what they termed the province of Valentia. After they withdrew, it remained for a season, in a state of independence; but subsequently was overrun by Ida and the Angles; and, during two centuries, formed a part of the new kingdom which they founded. Vast multitudes of immigrants poured into it, in the meantime, from among the Cruithne of Ireland and the Scoto-Irish of Kintyre, and raised up with the natives the mongrel breed of Piets. This hardy, though heterogeneous race, burst the yoke of foreign domination, and restored the district to a condition of rude independence. Edgar, after his accession, in 1097, abolished the system of local governments, and established the Anglo-Norman dynasty, dividing Scotland into lordships. At his death, Dumfries-shire, in common with Cambria, in which it had become included, passed, by his bequest, to his youngest brother, David. Having become the adopted home of many opulent Anglo-Norman barons, whom David invited hither as settlers, Cambria was now partitioned into extensive baronies, and enjoyed the luxury of an apparently fair administration of justice. Nithsdale was possessed by a powerful chief, called Donegal, of Celtic ancestry, whose descendants assumed the name of

Edgar; Eskdale was subdivided among Asenals, Sonlises, Rosseddalls, and others, who figured briefly and obscurely in their country's annals; and Annandale was possessed by Robert de Bruce, a chief of skill and valour, whose descendants afterwards wore the Scottish crown. The Bruces had many lands and castles in the county; but during the 12th and 13th centuries, resided chiefly in the castle of Lochmaben. Lesser proprietors in Annandale held of the Bruces as retainers, such as the Kirkpatrick of Kirkpatrick, the Johnstons of Johnston, the Carlyles of Tortherwald, and the Carnocs of Trailflat and Drumgrey. But, independently of any of the great barons, the ancestors of the present house of Maxwell held the castle and lands of Caerlaverock; and, in the same way, Sir John Comyn held lands which, including the estate of Duncow, stretched round Dumfries to the south-east till they touched the Nith at Castledykes. In 1264, Alexander III. advanced to Dumfries with a large army, and thence despatched John Comyn and Alexander Stewart to the isle of Man to subjugate it to Scotland. In the wars of Bruce and Baliol, Dumfries-shire was placed between two fires; or, to use a different figure, it nursed at its breasts both of the competitors for royalty; and from the nature of its position, bearing aloft the Bruce in its right arm and the Comyn in its left, it was peculiarly exposed to suffering. Located as the baronial possessions of Bruce were in Annandale, and those of Baliol in Nithsdale, Dumfries-shire was necessarily the scene, if not of the most decisive, at least of the earliest and the most harassing struggles of the belligerents. Bruce, after the victory of Bannockburn had put him into undisputed possession of the kingdom, gave the Comyns' manor of Duncow to Robert Boyd, and their manor of Dalswinton to Walter Stewart; he bestowed on Sir Thomas Randolph, his own lordship of Annandale and castle of Lochmaben, and created him Earl of Moray; and he conferred on Sir James Douglas, in addition to the gift of all Douglasdale, the greater part of Eskdale and other extensive possessions in Dumfries-shire. In the troubles and warfare which occurred under David II., between the Bruicians and the Baliols, this county was again the chief seat of strife and disaster. Nor did it suffer less in degree, while it suffered longer in duration under the proceedings of the rebellious Douglasses, who, after being introduced to it by Robert Bruce, grew, by various ramifications of descent and acquisition, to be its most potent barons. On the attainder of this family in 1455, their authority and possessions reverted to the Crown, and were in part bestowed on the Earl of March. In 1484, the county was invaded by the exiled Earl of Douglas and the Duke of Albany; and thence, during a century and a half, it appears never to have enjoyed a few years of continuous repose. So late as 1607, the private forces of Lord Maxwell and the Earl of Morton were led out to battle on its soil, and were with difficulty prevented from tracking it with blood. During, in fact, the entire period from its assuming an organized form till the union of the Scottish and the English crowns, Dumfries-shire, from being situated on the border, was peculiarly exposed to hostile incursions and predatory warfare. Some of its children distinguished themselves by deeds of patriotic bravery; and others, for many generations, subsisted entirely on spoil and pillage. Under James VI., the county sat down in quietude, and began to wear a dress of social comeliness; but again, during the reign of the Charleses, was agitated with broils and insurrections. In the rebellions of 1715 and 1745—especially in the latter—it was the scene of numerous disasters,—disquiet and

consternation spreading here, more perhaps than in any other district of Scotland, among the middle and lower classes of the population. Of the aristocrats, a large proportion were imbued with the spirit, and a considerable number shared the ruin, of Jacobitism. The Maxwells, in particular, were utterly destroyed by the attainder of the Earl of Nithsdale in 1715; and, at the eras of both rebellions, several other families of note became, as to their possessions and influences, extinct. In more recent times, the Douglasses of Queensberry, and the Johnstons of Annandale, have merged into other families. At present, the noble house of Buccleuch is by far the ascendant family of the county, and possesses property, ecclesiastical patronage, and other appurtenances of rank and social grandeur, almost too great to be employed, except in very judicious hands, benignly for the well-being of the community.

The principal seats in the county are, Drumlanrig castle, Duke of Buccleuch and Queensberry; Kenmount, Marquis of Queensberry; Comlongan castle, Earl of Mansfield; Rachill's, Hope Johnstone of Annandale; Springkell, Sir Patrick Maxwell; Jardinehall, Sir William Jardine; Maxwelltown, Admiral Sir Robert Lawrie, Bart.; Amisfield, Charteris, Esq.; Closeburn hall, C. G. S. Menteath, Esq.; Craigdarroch, R. Cutlar Ferguson, Esq., M. P.; Westerhall, Johnston, Bart.; Drumcraeff, Rogerson, Esq.; Hoddam castle, General Sharpe; Dalswinton, M'Alpine Leny, Esq., formerly the seat of the celebrated Mr. Miller; Murraythwaite, Murray; Barjarg tower, Hunter; Blackwood-house, Copland of Collieston; Langholm lodge, a hunting-seat of the Duke of Buccleuch; Broomholm, Maxwell; Terregles-house, Maxwell of Nithsdale; Mossknow, Graham.

DUMGLOW. See CLEISH.

DUN,* a parish in the north-east of Forfarshire; bounded on the north by Strickathrow and Logieport; on the east by the parish of Montrose, and Montrose basin; on the south by the river South Esk, which divides it from Marytown and Farnell; and on the west by Brechin. It is of nearly a square figure, with points running off at two of its angles; and measures in extreme length and breadth about 4 miles, and in superficial area about 12 square miles. Along the banks of the South Esk and the shore of Montrose basin the surface is low, flat, protected by embankments, and of a clayey fertile loam. A little northward, and up to the centre of the parish, the surface gently and gradually rises, carpeted with a fine productive soil of blackish mould. From the centre to the northern boundary the surface ceases to rise, and, excepting a considerable tract which is covered with plantation, is, in general, wet and miry. Two brooks of local origin flow eastward respectively to the Esk and the basin. A third is collected into an artificial lake on the west, called Dun's dish, covering about 40 acres, and used to drive a mill. The bed of Montrose basin along the base of the parish, has a black, slimy, and very dreary appearance at low water; and is then frequented by considerable numbers of athletic females, from the neighbouring fishing-village of Ferryden, searching for bait. Over the South Esk is a finely ornamented bridge of 3 arches, built in 1787. The river abounds with salmon, sea-trout, a fish called the finneck, which appears only during August and September, and several other trouts of passage. Dun, at the Reformation, was the property of a gentleman of the name of Erskine, who figures in a manner most patriotic and religious in the history of the period. The parish is traversed, at its greatest breadth, by the highway

* The name is Gaelic, and signifies a hill, or rising ground.

between Montrose and Brechin, and is abundantly intersected by minor roads. Population, in 1801, 680; in 1831, 514. Houses 114. Assessed property, in 1815, £5,735.—Dun is in the presbytery of Brechin, and synod of Angus and Mearns. Patroness, the Marchioness of Ailsa. Stipend £159 3s. 2d.; glebe £15. A new church has recently been built. Schoolmaster's salary £34 4s. 4½d., with £19 19s. of other emoluments. There is an unendowed school.

DUNAVERTY CASTLE, a stronghold—of which scarcely a vestige now remains—on the summit of a rock considered to be the point in Kintyre nearest to the Irish coast. In 1647 this castle sustained a severe siege by General Leslie with a body of 3,000 men. The garrison consisted of about 300 Irish and Highlanders, under the command of a brother of Sir Alexander McDonald. They were “put to the sword every mother’s son, except one young man,” says Sir James Turner.

DUNBAR,* a parish in Haddingtonshire, at the mouth of the frith of Forth, along which its coast extends, in a very sinuous line, upwards of 10 miles; but in a direct line somewhat less than 8 miles. Its average breadth is 2 miles. It is bounded by the frith of Forth on the north; by Innerwick parish, from which it is separated by Dryburn water, on the east and south; by Innerwick, Spott, and Stenton parishes on the south; and by Prestonkirk and Whitekirk parishes on the west. A detached portion of the portion—called Dunbar outer common—consisting of about 7 square miles, is separated from the parish by the intervention of the parishes of Spott and Stenton, being bounded by these parishes on the north; by Spott and Innerwick on the east; by two detached portions of Spott and Stenton parishes on the south; and by Whittingham parish on the south and west. This detached portion is quite a moorland district, lying upon the Lammermoors, and having its waters flowing to the south-east and drained by the Berwickshire Whitadder. Of the main part of the parish, amounting to 87½ plough-gates, or nearly 7,200 acres, all arable, the general appearance is gently undulating and pleasing. The western part of the coast, including Tynningham and Belhaven bays, presents a fine clean sandy beach; on approaching Dunbar, from the west, the coast becomes bold and rocky; to the eastward of Dunbar it presents a series of low rocky ledges, generally of red sandstone formation, and dipping gently to the south-east. As we advance towards the east, however, these rocks assume a more vertical slope, and here and there shoot up in sharp peaks. The red sandstone is succeeded by a grayish sandstone, further to the east. Limestone rocks prevail in the eastern district of the parish. The rocks in the immediate neighbourhood of the port of Dunbar are of a reddish-coloured trap-tufa, and exhibit in many places a very regular columnar structure. The highest ground is Brunthill, which forms the extreme south-east point of this part of the parish, and rises to an altitude of about 700 feet above sea-level. A little to the north of it, on the march with Spott parish, is Doon hill or Down hill, which is about 120 feet lower. The only

streams in this parish are the water of Beil and the water of Spott—two rivulets more remarkable for the beautiful scenery through which they glide, than for their volume of water or length of course. The soil is partly a rich loam, partly clay, and partly a light mould well-adapted for the production of grain and green crops of every description. Both the old and the new Statistical reporters on this parish claim for it the high pre-eminence of being the most fertile tract of the most fertile district of Scotland. When the Old Statistical Report was written [1792] the rental of the parish was £8,000; lands near the town yielding a rent of from £4 to £5 5s. per acre; and several considerable farms, from 30s. to 42s. In 1823 the rental was £23,405; the highest rent being £6 per imperial acre; and the average rent £3 10s. per Scots acre. The valued rent is £16,953. Assessed property, in 1815, £24,570. Houses, in 1831, 698. Population, in 1801, 3,951; in 1831, 4,735. In 1821 it was 5,272, an increase to be accounted for chiefly from the establishment, in 1815, of a large cotton manufactory at Belhaven, with which above 500 people were connected, but which stopped working in 1823.—The principal villages in the parish are **BELHAVEN** and **WEST BARNs**, both which are situated on the great post-road from Edinburgh to Berwick, which runs through the whole length of this parish: See these articles. **East Barns**, now little more than a farm-village, is celebrated in the annals of necromancy as having been the residence of a very famous witch, Isabel Young, who was convicted and burnt in 1629. The ancient villages of Belton, Hetherwick, and Pinkerton, with their respective chapels, have long since disappeared. The principal seats are Belton, Lochend, and Broxmouth. There is good fishing of white-fish, lobsters, and herrings off the coast.—This parish is the seat of a presbytery, in the synod of Lothian and Tweeddale. Patron, the Duke of Roxburghe. A Secession church was established here in 1766; church built in 1814; sittings 700.—In 1820, an Antiburgher Secession congregation, which had been established at East Barns in 1763, transferred their place of meeting to Dunbar.—A Wesleyan Methodist chapel was built here so early as 1764.—The principal schools in the parish are the two burgh-schools,—the grammar and the mathematical school. The master of the first has a salary of £42; of the second, £36. There are 2 parochial schools; the salary of the 1st master being £34 4s. 4½d.; of the other, the interest of a mortification of £150, and half-a-chalder. Besides these there are 2 private schools within the burgh, and a Mechanics’ institution.

The royal burgh and seaport of **DUNBAR**, in the above parish, is situated at the mouth of the frith of Forth, on the great post-road from Edinburgh to Berwick; 28 miles from Edinburgh, 11 from Haddington, and 30 from Berwick. It chiefly consists of one spacious street called the High-street, of which Dunbar-house, the residence of the Earl of Lauderdale, forms the northern termination. Parallel to this street, and between it and the shore, run two smaller streets; while the harbour projects a little into the bay, on the south-east; and the bold rocks which are crowned by the ruins of its far-famed castle rise directly north of Dunbar-house, and within 300 yards of it. The houses are mostly modern. The most ancient part of the town is in the vicinity of the harbour and the castle. The town-house is an old edifice. In 1822 handsome assembly-rooms were built by subscription. There are a few neat villas in the neighbourhood. The church, a very handsome edifice—to be afterwards noticed—is on the south-east outskirts of the town.

* The parish of Dunbar, says Chalmers in his ‘Caledonia,’ [vol. ii. p. 538 and 406,] took its Celtic name from the town; and the town obtained its designation from the fortlet on the rock, which at this place projects into the sea. *Dun-bar*, in the British, and the Gaelic, signifies ‘the Fort on the height,’ or ‘Strength upon the summit;’ but ought not to be rendered—as Lord Hailes has done—into the English ‘top-cliff.’ Buchanan and Boece inform us that Kenneth I. having defeated the Picts in a pitched battle at Scoon, conferred the fortress here upon one of his most valiant soldiers, whose name was Bar; and hence the name Dunbar, or ‘the castle of Bar.’ In 961 we find the men of Lothian, under two leaders of the name of Dunbar and Græme, doing battle against the Danish invaders at Cullen.

The harbour is small, and incapable of receiving ships of above 300 tons burthen. "In the earlier periods of the history of Scotland, the collection of the customs or duties upon merchandise due to the Crown was generally intrusted to the royal burghs, who enjoyed the exclusive privilege of foreign trade. Through the distance of Haddington from the English border, the collection of the king's customs seems to have been neglected in the Merse during the reign of David II., and an opportunity afforded to the English when in possession of Berwick and Roxburgh, to purchase and carry off from that district wool, hides, and other merchandise, without paying custom. To remedy the evil, that monarch, by a charter dated the 40th year of his reign (1369), granted to the Earl of March the right of having a free burgh at Dunbar, and free burgesses dwelling in the same, who should have the privilege of buying and selling skins, wool, hides, and other merchandise, together with a free port at Belhaven, and all the liberties and advantages which belonged to a free burgh and harbour. The burgesses of Dunbar were also appointed collectors of the king's customs within the bounds of the burgh and harbour; and the boundary of the burgh was declared to be the same as the earldom of March. It was further declared by this charter that the burgesses of Haddington should have the privilege of trading within the burgh of Dunbar; but that they should pay the customs due upon the articles of their trade there to the collector of Dunbar; and that the burgesses of Dunbar should have the privilege of trading within the bounds of the burgh of Haddington, but should pay the custom due upon the trade there to the collector of Haddington. We have not ascertained when Dunbar was first erected into a royal burgh. In the year 1469 a commissioner from Dunbar first appears in the rolls of parliament; but the liability of the burgh to general taxations, in consequence of its admission to the privileges of trade under the charter above referred to, had probably entitled them to be represented in parliament at a much earlier period. By a charter of confirmation and *de novo damus*, granted to the town by James VI., dated 23d October, 1618, it is declared 'That the ancient old bounds of the said burgh have been, now are, and in all time coming shall be the hail earldom of March and lordship of Dunbar; as also the bounds of the baronies of Coldingham, Mordingtown, Buncle, Langtown, Innerwick, and Stenton; together with all and sundry tolls, customs, impositions, anchorages, or other duties, casualties, liberties, rents, commodities, privileges, and just pertinents whatsoever due, used, and wont, as well by sea as by land, and in the peaceable possession of which they have been for these sundry years bypast, and at present are.' No part of these lands, however, appear to be conveyed to the burgh, and the boundary here described must be that of their exclusive privilege to trade." [Parliamentary Report on Municipal Corporations.]—In 1577, Dunbar was the rendezvous of the Dutch as well as of the Scottish fishery. Tucker, in his Report, of November, 1656, says: "The towne of Dunbarre, or village rather, is a fisher towne, famous for the herring-fishing, who are caught thereabout, and brought thither, and afterwards made, cured, and barrelled up either for merchandise, or sold and vended to the country-people, who come thither farre and neare at that season, which is frome about the middle of August to the latter end of September, and buy great quantities of fish, which they carry away, and either spend them presently, or else salt and lay up for the winter provision of their families. The trade here is little except salt, which is brought hither and laid up, and after sold for the fishing; the people of these parts,

which are not fishermen, employing themselves in tillage and in affairs of husbandry." In 1661 Ray observes in his 'Itinerary': "There is a great confluence of people at Dunbar to the herring-fishery; and they told us, sometimes to the number of 20,000 persons."* About the period of Tucker's visit, the port of Dunbar was greatly damaged by a violent storm, and during the Protectorate, £300 were granted towards defraying the expense of erecting a new pier towards the east. In 1774 the harbour was enlarged and improved; and in 1785, a new pier was built, and various improvements executed upon the harbour. In 1710, a custom-house was established here, which has jurisdiction from Berwick bounds to Gulane point. In 1752, a whale-fishery company was established at Dunbar, which, not succeeding, was dissolved in 1804. In 1792, there were 16 vessels belonging to the port, of a total burthen of 1,505 tons, and 2 Greenland ships of 675 tons. In 1830, there were 6 vessels belonging to Dunbar engaged in the wood and grain trade with the Baltic, and 39 in the coasting-trade. The registered vessels belonging to this port, in 1839, was 30, of 1,495 tons burden in whole. Ship-building, the manufacture of sail-cloth and cordage, and the curing of herrings both by salt and smoke, afford employment to a considerable number of hands. There are also a soap-work, an iron-foundry, a steam-engine manufactory, and several breweries and distilleries, in the neighbourhood. A weekly corn-market is held here on Tuesday; and fairs, chiefly for hiring single farm and domestic servants, immediately after the terms of Whitsunday and Martinmas. The stoppage of the East Lothian bank in 1822, proved a heavy discouragement to trade in this quarter; but the engagements of the company have been all honourably liquidated. The first printing-press in the county of East Lothian was set up at Dunbar by Mr. G. Miller, in 1795; and we believe that the Dunbar press has the high merit of having been the first in Scotland, from which issued a cheap periodical miscellany, in which the instruction and entertainment of the lower classes was professedly the principal object aimed at.†

* "The herring-fishery in the Forth commences annually about the beginning of August, and continues nearly two months. About the beginning of the present century the herrings were taken in such plenty, that they were sold at a half-penny per dozen; and as there was a greater quantity caught than could be immediately cured, the refuse was absolutely driven to manure the fields. In 1819, there were employed at Dunbar alone, about 280 boats, and in them nearly 2,000 men. The following year the fishery, though not so well-attended, employed upwards of 200 boats, which brought daily from 30 to 60 crans each,—price from 4s. to 5s. per cran. It is computed that nearly 35,000 barrels of herrings were cured here in a season. The manner in which this fishery was carried on, is similar to the plan of the old Dutch fishery, which renders it extremely beneficial to the country. The boats belong partly to fishermen, who employ the rest of the year in catching white fish, and partly to landmen, who build and equip them in the way of adventurers. An adventure of this kind is called a *drave*, and is thus managed:—Two or three fishermen associate with five or six landmen,—for there are commonly eight or nine men to a boat. Each fisherman has at least two nets of his own; one is appointed as skipper, who lays in provisions and other necessities, and receives the money for what is sold. When the season terminates, the accounts are made up, and after discharging the expenses, what remains is divided into eight or nine shares, or as they call them, *deals*. The proprietor of the boat draws one deal, every fisherman half-a-deal, every two nets half-a-deal, every landman, who is capable of working two nets, half-a-deal. Thus all parties are interested in profit and loss. In ancient times a certain quantity of herrings were taken for the king's kitchen, which was afterwards commuted into a tax of 10s. upon every sizeable boat. There was also a duty paid to the high-admiral's deputy, who presided over the fishery. This has fallen into desuetude; but the town exacts the 1.15th fish as vicarage teind. The fishers still appoint one of their number, whom they style admiral, to arrange the order of sailing, &c., and two chancellors, to whom all disputes are referred."—*Miller's History of Dunbar*, 1830, 12mo.

† Mr. Robert Chambers, in his 'Gazetteer of Scotland,' published in 1830, notices the Dunbar cheap miscellany in these terms: "One of them was a periodical styled 'The Cheap Magazine,' which, though conducted on an unambitious plan, was certainly an undertaking in some respects in advance of the

The municipal council of Dunbar consists of 20 members, including a provost, 3 bailies, and a treasurer. Prior to the 3^o and 4^o William IV., the magistrates and old council, out of a leet of 8 made by themselves, chose 4 new councillors; the old and new council chose the 5 magistrates out of leets made by themselves; and then the old and new magistrates put off such 4 of the old councillors as they thought proper. There was no provision for any change in the council, except the 4 annually put off; so a majority of the council continued without election, and there was no restriction upon re-election. The jurisdiction of the magistrates extends over the whole royalty, which is ill defined. There is no dean-of-guild in Dunbar. The magistrates discharge the duties incumbent on that officer in other burghs. The magistrates and council have the appointment of the town-clerk, chamberlain, superintendent of police, procurator-fiscal, burgh-schoolmasters, clerk to the corn-market, and burgh-officers. They have no other patronage. There is no guildry, and there are no incorporated crafts possessing exclusive privileges. The number of municipal electors, in 1839, was 130. The property of the burgh consists of the town's common, upon which the burgesses have a right of pasturage, and from which no revenue is derived; of lands, mills, and houses, fishing, sea-ware, teinds of fish, church-seat rents, and stone-quarries. The value put upon this property, including £5,000 on the common, is £14,500. The debt due by the town was £8,376 4s. 4d. at Michaelmas, 1832, and it remains about that amount still. The whole revenue of the town, of every kind, including arrears recovered, received during the year ending at Michaelmas, 1832, was £1,293 14s. 6d.; but it appears that this sum included the assessment for the poor and the king's cess, neither of which form any part of the revenue of the burgh; these together amount to £119 19s. 4½d., leaving the revenue of the burgh £1,173 15s. 1½d. The income of the burgh for the year 1788, as appears from returns made to parliament, was £668 17s. The total expenditure for the year 1831-2 was £1,385 2s. 6½d.; but this includes £132 3s. 7d. paid for poor-rates and land-tax, a very small part of which can have been paid on account of the common property. This sum may therefore be deducted from the total of £1,385 2s. 6½d., which will leave the expenditure of the year about £1,253. The revenue, in 1838-9, was £1,282 11s. 7d. The burgh of Dunbar joins with those of Haddington, North Berwick, Lauder, and Jedburgh, in returning a member to parliament. The boundaries of the parliamentary borough include the village of Belhaven. The population, within the parliamentary boundaries, in 1841, was 2,987; inhabited houses 719. Parliamentary electors, in 1839, 131; in 1841, 149.

The church of Dunbar is noticed in the 'Taxatio' of Lothian in 1176, wherein, with the chapel of Whittingham, it is assessed in 180 merks. It was not a collegiate charge originally, but was converted into a collegiate form in 1342, by Patrick, 10th Earl of Dunbar, for a dean, an arch-priest, and 18 canons. For their support were assigned, together with the revenues of the church at Dunbar, those of the chapels of Whittingham, Spot, Stenton, Penshiel, and Hetherwick; and in addition to these, were annexed

the chapels of Linton in East Lothian, and Dunse and Chirnside in Berwickshire: the founder reserving to himself and his heirs the patronage of the whole. In 1492, the chapels of Dunbar, Pinkerton, Spot, Belton, Pitcox, Linton, Dunse, and Chirnside, were appointed as prebends to the collegiate church. Soon after this arrangement, the chapels of Spot, Stenton, and Hetherwick, were converted into parish-churches, yet still remained dependant as prebends of the college. On the forfeiture of the earldom of March in 1434-5, the patronage of the church fell to the Crown. During the reign of James III. it was enjoyed with the earldom of Dunbar, by the Duke of Albany. It again reverted to the king, on the forfeiture of his traitorous brother, in 1483, and now belongs to the Duke of Roxburghe, as principal heritor of the parish. The church of Dunbar ceased to be collegiate at the Reformation in 1560. This venerable fabric was built in the form of a cross, measuring 123 feet in length, while it was only from 20 to 25 feet broad. The transept or cross aisle measured 83 feet. The west end of the church, beyond the transept, was probably the ancient chapel of Dunbar. The entry lay through a Saxon arch,—

"On ponderous columns, short and low,
Built ere the art was known,
By pointed aisle and shafted stalk,
The arcades of an alley'd walk,
To emulate in stone;"

while the east end of the church, including the south aisle of the transept, was a species of the Norman or Gothic style. In 1779, the old church underwent a thorough repair. It was ceiled in the roof, new floored, part of the long body cut-off by a partition, and regularly seated. The foundation-stone of a new church, occupying the site of the old one, was laid on the 17th April, 1819. The work was contracted for at £4,990; but it cost about £1,000 more before the burial-vaults and other additions were completed. One-fifth of the expense was paid by the town of Dunbar, and the rest by the heritors. It is a handsome building in the Gothic style, built with a red stone brought from a quarry near Bowerhouses, and is capable of containing 1,800 hearers. From the steeple, which is about 90 feet high, five counties may be distinguished. The first object which arrests the stranger's attention on entering Dunbar church, is a superb monument immediately behind the pulpit, erected to the memory of George Home, Earl of Dunbar, 3d son of Alexander Home of Manderston. This nobleman was in great favour with James VI., and successively held the offices of high-treasurer of Scotland, and chancellor of the exchequer in England; and, while in the latter capacity, he was created a peer of his native land. It was on him that 'the British Solomon' chiefly depended for the restoration of prelacy in Scotland; and at the parliament held at Perth in 1606, he had the skill to carry through the act for the restoration of the estate of bishops. His death took place suddenly at Whitehall, on the 29th January, 1611, when he was about to solemnize his daughter's marriage with Lord Walden in a magnificent manner. A writer in the 'Biographia Scotiana, or Scots Worthies,' imputes this circumstance to the judgment of heaven, while Sir John Scott, in his political epitome of slander, ascribes it to some poisoned sugar tablets which were given him by Secretary Cecil for expelling the cold. "His body," says Crawford, "being embalmed, and put into a coffin of lead, was sent down to Scotland, and with great solemnity interred in the collegiate church of Dunbar, where his executors erected a very noble and magnificent monument of various coloured marble, with a statue as large as life." The monument is 12 feet broad at the

age. It appeared in the year 1814: afforded a considerable mass of plain paper and print, once a-month, at fourpence; and was filled with matter calculated in general to instruct (as well as amuse) the two great classes who mostly require instruction,—the young and the poor. Such a work, as it was rather like a design of the present time than of that when it appeared, might surely be tried again, with better hopes of success than at first. The work at present existing, which approaches nearest to it in character, is the 'Gaelic Messenger' of Dr. Macleod." Mr. Chambers, it seems not unfair to conclude from the evidence thus before us, was indebted to Mr. Miller's miscellany for the idea of his own very excellent and useful weekly sheet.

base, and 26 feet in height. Above the pedestal, Lord Dunbar is represented, kneeling on a cushion, in the attitude of prayer, with a Bible open before him. He is clad in armour, which is seen under his knight's robes, and on his left arm is the badge of the order of the garter. Two knights in armour stand on each side as supporters. Above the knights in armour are two female figures,—the one representing Justice, and the other Wisdom. Betwixt these figures, and immediately above the cupola, Fame sounds her trumpet; while, on the opposite side, Peace, with her olive wand, sheds a laurel wreath on his lordship. Immediately beneath the monument is the vault, wherein the body is deposited in a leaden coffin.

The great object of attraction to tourists in this neighbourhood is the magnificent ruin of Dunbar castle, of which the following description is abridged from Mr. Miller's carefully compiled 'History':—It is founded upon a reef of trap rocks, which project into the sea, and, in many places, rise like bastions thrown up by nature to guard these stern remains of feudal grandeur against the power of the waves, which yet force their way through rugged caverns and fissures in the stone, and, with a thundering noise, wash its dark foundations. These rocks are in some places composed of red basaltic greenstone, and in others of tufa; and in some places masses of indurated sandstone appear entangled in the trap rock. [See Cunningham's 'Geology of the Lothians,' page 97.] The body of the buildings measures about 165 feet from east to west; and, in some places, 207 feet from north to south. The south battery—which Grose supposes to have been the citadel or keep—is situated on a detached perpendicular rock, accessible only on one side, 72 feet high, and is connected to the main part of the castle by a passage of masonry measuring 69 feet. The interior of the citadel measures 54 feet by 60, within the walls. Its shape is octagonal. Five of the gun-ports remain, which are called 'the arrow-holes.' They measure 4 feet at the mouth, and only 16 inches at the other end. The buildings are arched, and extend 8 feet from the outer walls, and look into an open court, whence they derive their light. About the middle of the fortress part of a wall remains, through which there is a gateway surmounted with armorial bearings. This gate seems to have led to the principal apartments. In the centre are the arms of George, 11th Earl of Dunbar, who succeeded his father in 1369; and who, besides the earldom of Dunbar and March, inherited the lordship of Annandale and the isle of Man from his heroic mother. The towers had communication with the sea, and dip low in many places. North-east from the front of the castle is a large natural cavern of black stone, supposed to have formed part of the dungeon,* which, Pennant observes, "the assistance of a little art had rendered a secure but infernal prison." But as it has a communication with a rocky inlet from the sea on the west, it is more likely that it is the dark postern through which Sir Alexander Ramsay and his brave followers entered with a supply of provisions to the

besieged in 1338. It was a place also well suited for securing the boats belonging to the garrison. The castle is built with a red stone similar to what is found in the quarries of the neighbourhood. Part of the foundation of a fort, which was begun in 1559, for the purpose of accommodating a French garrison, may be traced, extending 136 feet in front of the castle. This building was, however, interrupted in its progress, and demolished by act of parliament. In the north-west part of the ruins is an apartment about 12 feet square, and nearly inaccessible, which tradition denominates the apartment of Queen Mary.

The time of the erection of Dunbar castle cannot be precisely ascertained, but it was evidently built at a very early period of the Christian era. Cospatrick, the father of the noble family of Dunbar, was the son of Maldred, the son of Crinan by Algha, daughter and heiress of Uthred, prince of Northumberland. After the conquest of England by William the Norman in 1066, Cospatrick and Merleswain, with other nobles of the north of England, fled to Scotland, carrying with them Edgar Atheling, the heir of the Saxon line, and his mother Algha, with his sisters Margaret and Christina. Malcolm Canmore, who married the Princess Margaret [see article DUNFERMLINE], bestowed on Cospatrick the manor of Dunbar, and many fair lands in the Merse and Lothian. Cospatrick having signalized himself in an expedition against a formidable banditti which infested the south-east borders of Scotland, was created Earl of the Merse, or March; and the lands of Cockburnspath were bestowed on him by the singular tenure of clearing East Lothian and the Merse of robbers.—Cospatrick, 2d son to the foregoing, succeeded his father in his Scottish property, and died in 1147, leaving four sons.—Cospatrick, 3d Earl of Dunbar, had two sons,—Waldeve, his successor, and Patrick, who inherited the manor of Greenlaw, and was ancestor of the Earls of Home.—Waldeve, 4th Earl of Dunbar, succeeded his father in 1166, and died in 1182.—To him succeeded Patrick, 5th Earl of Dunbar, on whom William I., in 1184, bestowed Ada, one of his natural daughters, in marriage. About the end of the 12th century, he held the offices of justiciary of Lothian and keeper of Berwick. In 1214, to retaliate the inroads made by Alexander into England, Henry III. invaded Scotland with a powerful army, and took the town and castle of Berwick. His next attempt was on the fortress of Dunbar; but finding it impregnable, he laid waste the country to the walls of Haddington, and returned homewards. In 1218, Earl Patrick founded a monastery of Red Friars in Dunbar. In 1231, when this munificent nobleman was stricken in years, with a view to part with the world in good fellowship, he invited his children, relations, and neighbours, to spend the festivities of Christmas at his castle of Dunbar. On the expiry of four days, he sent for his relation the abbot of Melrose; and, having bade his guests and the world a last adieu, received extreme unction agreeably to the forms of the Romish church, after which he assumed the monastic habit. This venerable person died in 1232, and was buried in the convent church of Eccles, which his grandfather had founded.—Patrick, 6th Earl of Dunbar, succeeded his father at the age of 46. In 1242, at a royal tournament held at Haddington, the young Earl of Athol overthrew Walter, the chief of the family of the Bissets. To revenge this affront, the lodgings of the Earl were set on fire the same night, and Athol, with several of his friends, was either slain or burnt to death. The king endeavoured in vain to bring the perpetrators of this atrocious assault to trial, but the combination of the Cummys and other

* Gavin Douglas, Bishop of Dunkeld, probably conceived his description of the allegorical poem of King Hart's Castle, when a prisoner in this dreary place in 1515:—

"So strong this king him thocht his castel stude,
With many toure and turrat crounit he;
About the wall there ran ane water voud,
Blak, stinkand, sour, and salt as is the sey.
That on the wallis wiskit, gre by gre,
Rolding to ryis the castell to confound:
Bot that within maid sa grit melodie,
That for their reird that nicht not heir the sound."

Note by Mr. Miller.

Mr. J. Mason has lately published a very exact plan of Dunbar castle and the rocks in the bay.

nobles against the Bissets was so strong that the latter were obliged to abandon their country. On this occasion, the Earl of Dunbar—whom Lord Hailes calls the most powerful baron of the southern districts—put himself at the head of the nobles who demanded retribution. The Earl of Dunbar held the first rank among the 24 barons who guaranteed the treaty of peace with England in 1244. He died in 1248, at the siege of Damietta in Egypt.—Patrick, 7th Earl of Dunbar, during the turbulent minority of Alexander III., was one of the chiefs of the English faction. Thomas Lermont of Ersildoun, commonly called the Rhymer, visited Dunbar in 1285, and foretold to the Earl the sudden death of Alexander III., who was killed by a fall from his horse on the sands of Kinghorn. We are circumstantially informed by Bower—who was born at Haddington 100 years after—that, on the night preceding the king's death, Thomas, having arrived at the castle of Dunbar, was interrogated by the Earl, in the jocular manner he was wont to assume with the prophet, if to-morrow should produce any remarkable event; to which the bard replied, in the mystical language of prophecy: "Alas for to-morrow, a day of calamity and misery! Before the 12th hour, shall be heard a blast so vehement that it shall exceed those of every former period,—a blast which shall strike the nations with amazement,—shall humble what is proud, and what is fierce shall level with the ground! The sorest wind and tempest that ever was heard of in Scotland!" After this prediction, which was left to be fulfilled either by accident or the weather, Thomas retired. Next day, the Earl and his companions having continued in watch till the ninth hour, without discovering any unusual appearance in the elements, began to doubt the present powers of the soothsayer, to whom "the sunset of life had given mystical lore," and having ordered him into their presence, upbraided him as an impostor, and hastened to enjoy their wonted repast. But his lordship had scarcely placed himself at table, and the shadow of the dial fallen on the hour of noon, when an express, covered with foam, appeared at the castle-gate, demanding an audience. On being interrogated, he exclaimed: "I do indeed bring news, but of a lamentable kind, to be deplored by the whole realm of Scotland! Alas, our renowned king has ended his fair life at Kinghorn!" "This," cried the prophet, gathering himself up in the spirit of conscious veracity, "this is the scathful wind and dreadful tempest which shall blow such a calamity and trouble to the whole state of the whole realm of Scotland!"

Patrick, 8th Earl of Dunbar and March—surnamed Black Beard—succeeded to the honours and possessions of his father in 1289. He appeared at the parliament at Brigham in 1289, where he is called Comes de Marchia, being the first of the Earls of Dunbar designated by that title. When, in 1296, Edward, with a powerful army, entered Scotland, the Earl of Dunbar, with the Bruces and their adherents, took part against their country; but Dunbar's heroic Countess got possession of the castle of Dunbar, and delivered it to the leaders of the Scottish army. Edward despatched the Earl of Warrene with 12,000 men to lay siege to Dunbar, which was defended by the flower of the Scottish nobility. The Scots, sensible of the importance of this fortress, which, if taken, laid their country open to the enemy, hastened with their main army of 40,000 men, under the command of the Earls of Buchan, Lennox, and Mar, to its relief. Warrene, undaunted by the superior numbers of the Scots, left part of his army to blockade the castle, while he advanced to meet them. The English had to de-

scend into a valley—probably Oswaldean, a glen near Spot—before they could reach the Scots; and as they descended, the Scots observing or imagining they saw some confusion in their ranks, set up a loud shout of exultation, and causing their horns to be sounded, rushed down from their well-chosen position. But when Warrene emerged from the glen, and advanced undismayed against their formidable front, the undisciplined troops, after a very brief resistance, fled before him, and were pursued with great slaughter as far as Selkirk forest. Next day, Edward, with the main body of the English army, reached Dunbar, and compelled the garrison to surrender. When the heroic Wallace first undertook to deliver his country from her abject bondage, the Earl of Dunbar refused to attend a meeting of the estates at St. Johnston:

"Lightly he leuch, in scorn as it had been,
And said he had sic message seldom seen,
That Wallace now as governor sall ryng,
Here is gret faute of a gude prince or king
That king of Kyll I can nocht understand,
Of him I held never a fur of land;
That Bachiller Trowis, for fortune schawis her quhell,
Tharwith to lest, it sall nocht lang be weil:
Bot to you lords, and ye will understand,
I make you wyss, I aw to mak na baud,
Als fre, I am in this region to ryng
Lord of mine awne, as ever was prince or king;
In Ingland als gret part of land I haif,
Ma rent thair of thair will no man me craif,
What will you mair, I warn you I am free,
For your summons ye geit na mair of me."

Henry's Wallace, Book VII.

The patriot-hero, with 200 men, went in pursuit of the haughty baron. Wallace was joined by Robert Lauder at Musselburgh, and afterwards by Crystal of Seton. They were met at Linton by Squire Lyle, who informed them that the Earl had made his gathering at Cockburnspath, and was on his march to Dunbar. Lauder upon this would have pressed forward; but Wallace is represented by the old 'Makhar,' already quoted, as calmly replying to the remonstrances of his comrade,

"We may at laysar ride,
With yone power he thinkis bargane to bide:
And of a thing ye sall weill understand
A hardier lord is nocht into Scotland;
Micht he be made trew stedfast till a king,
Be wit and force he can do meikill thing;
Bot wilfully he likis to tyne himself."

Wallace encountered Patrick in a field near Innerwick, where the latter had assembled 900 of his vassals, and with half that number compelled the Earl, after a terrible conflict, to retreat to Cockburnspath, while he fell back on Dunbar; but finding the castle without provisions, and the garrison wede away with their lord, he gave it in charge to Crystal of Seton. In the meantime the Earl of Dunbar had gone to Northumberland to solicit the aid of the bishop of Durham; but his ostensible reason, says 'The Minstrel,' was "to bring the Bruce free till his land." Vessels were immediately sent from the Northumbrian Tyne to blockade Dunbar, and cut off supplies, while the Earl, with 20,000 men, hastened to retake his fortress. In the interim the champion of Scotland had repaired to the west in quest of succour, and returning by Yester, was joined by Hay and a chosen body of cavalry. With 5,000 men he marched to the support of Seton, while the Bishop of Durham, who had remained at Norham with Bruce, came to the assistance of Dunbar, and riding through Lammermoor, threw himself into an ambush near Spott-moor. By this unexpected movement, Wallace was completely hemmed in, when Seton fortunately came to his relief. The two armies closed in mortal strife. The Scots pushed on so furiously against the Southrons, that they were just about to fly, but Patrick was

"Sa cruell of intent,
That all his host tuk of him hardiment;
Throuh his awne hand he put mony to pain,"

The desperate valour of the Wallaces, the Ramsays, and the Grams, was of little avail against the superior force of the English; so that when the ambuscade of Bishop Beck appeared, they were on the point of retiring. Dunbar singled out Wallace amidst the throng, and

"Hereat the plait with his scharp groundyn claiff
Through all the stuff, and woundit him sun deill."

The hero returning the blow with sevenfold vengeance, clove down Maitland, who had thrown himself betwixt the two adversaries. Wallace's horse was killed beneath him, and he was now on foot dealing destruction to his enemies, when

"Erle Patrick than, that had gret craft in war,
With spears ordand guid Wallace down to bear;"

but 500 resolute warriors rescued their champion, and the war-worn armies were glad to retire. The same night Wallace traversed Lammermoor in quest of the retreating host, while Bishop Beck, Earl Patrick, and Bruce, fled to Norham. On his return, the champion, still mindful of the odium attached to his name by the Earl of Dunbar,—

"Passit, with mony awfull men,
On Patrick's land, and waitit wonder fast,
Tak out guidis, and places down the east;
His steeds, sevin, that Mete Hamys was all'd,
Wallace gert break the burly biggins bauld,
Baith in the Merse, and als in Lothiane,
Except Dunbar, standand he leavit nane."

In 1309 this wavering Earl died, leaving by his wife, Marjory Cumyn, daughter of Alexander, Earl of Buchan, one son. Edward, after seeing his army annihilated at Bannockburn, fled with a body of horse towards Berwick; but Sir James Douglas, with 80 chosen horsemen, so pressed on the royal fugitive, that he was glad to shelter himself in the castle of Dunbar. Here he was received by Patrick, 9th Earl, 'full gently,' after which, by means of a fishing-boat, he coasted along the shore till he reached the towers of Bambrough. "This was honourable," observes a distinguished writer, "because Patrick must have had in his thoughts at that time the making his peace with his native monarch, and could not be ignorant how easily and advantageously he might have done so, by detaining in custody the person of the King of England." After this, the Earl of Dunbar made peace with his cousin, Robert I., and was present at Ayr on the 26th April, 1315, when the succession to the Crown of Scotland was settled on Bruce. After the defeat at Halidon-hill, however, and before Edward left Berwick, he received the fealty of the Earl of Dunbar with several others of the nobility; and the castle of Dunbar, which had been dismantled and razed to the ground on the approach of the English, was now rebuilt at the Earl's own expense, for the purpose of maintaining an English garrison. The Earl attended the parliament held at Edinburgh in February, 1334, when Baliol ceded Berwick, Dunbar, Roxburgh, and Edinburgh, and all the south-east counties of Scotland, to be annexed for ever to the English domains; but thereafter retired into the Highlands to join the friends of Bruce. In January, 1337, William Montague, Earl of Salisbury, together with the Earl of Arundel, to whom the King had left the chief command of the forces in Scotland, attempted to take the castle of Dunbar with a large army. At this important crisis the Earl was in the North; so that the defence of his stronghold devolved upon his Countess, a lady who, from the darkness of her complexion, was commonly called Black Agnes. She was daughter to the celebrated Thomas Randolph, Earl of Moray. During the siege, Agnes performed all the duties of a bold and vigilant commander. When the battering engines of the English hurled stones or leaden balls against the battlements, she, in scorn, ordered one of her

maids to wipe off with a clean white handkerchief the marks of the stroke; and when the Earl of Salisbury, with vast labour, brought his sow close to the walls, the Countess exclaimed:

"Beware, Montagow,
For farrow shall thy sow!"

Whereupon a large fragment of the rock was hurled from the battlements, and crushed the sow to pieces, with all the poor little pigs—as Major calls them—who were lurking under it. We shall here present our readers with Winton's rhyming account of this memorable siege:—

*Of the assiege of Dunbare,
Where the Countess was wise and ware.*

Schyre William Montague, that sua
Had tane the sieg, in hy gret ma
A mekil and richt stalwart engine,
And up snerly gert dress it; syne
They warpit at the wall great stanes
Baith hard and heavy for the nans,
But that nane merrying to them made,
And alsua when they mystyne had,
With a towel, a damiselle
Arrayed jollily and well,
Wipit the wall, that they might see
To gere them mair annoyed be;
There at the sieg well lang they lay,
But there little vantage got they;
For when they bykkyne wald, or assail,
They tint the maist of their travaile.
And as they bykeryd there a day,
Of a great shot I shall you say,
For that they had of it ferly,
It here to you rehearse will I.
William of Spens percit a Blasowne,
And thro' three faulds of Awbychowne,
And the Actowne through the third ply
And the arrow in the bodie,
While of that dynt there dead he lay;
And then the Montagu gau say;
"This is ane of my Lady's pinnis,
For amouris thus, thy heart rianis."
While that the sieg was there on this wise
Men sayis there fell sair juperdyis.
For Lawrence of Prestoun, that then
Haldin ane of the wichtest men,
That was in all Scotland that tide,
A rout of Inglis men saw ride,
That seemed gude men and worthy,
And were arrayed richt richly;
He, with als few folk, as they were,
On them assembled he there;
But at the assembling, he was there
Intil the mouth stricken with a spear,
While it up in the harnys ran;
Till a dike he withdrew him than,
And died; for nae mair live he might.
His men his death perceived noucht;
And with their faes faucht stontly,
While they them vanquish'd utterly.
Thus was this guid man brought till end,
That was richt greatly to commend.
Of gret wirschipe and gret bownte
His saul be aye in saltie.
Sir William als of Galstoun
Of Keith, that was of gude renown,
Met Richard Talbot by the way
And set him to sa hard assay,
That to a kirk he gert him gae,
And close there defence to ma;
But he assailed there sa fast,
That him be-hov'd treat at the last,
And twa thousand pound to pay,
And left hostage and went his way.
The Montagu was yet iyang,
Sieging Dunbare with stalwart hand;
And twa gallies of Genoa had he,
For till assiege it by the sea.
And as he thus assieging lay,
He was set intil hard assay;
For he had purchased him covyn
Of ane of them, that were therein,
That he should leave open the yete,
And certain term till him then set
To come; but they therein haily
Were warnit of it privily.
He came, and the yete open fand,
And wald have gane in foot steppand;
But John of Cowpland, that was then
But a right poor simple man,
Shut him off back, and in is gane,
The portullis came down on ane;
And spared Montagu, thereout
They cryed with a sturdy shout,
"A Montagu for ever mair!"
Then with the folk that he had there,

He turned to his Herbery,
And let him japyt fullyy.

Syne Alexsander, the Ramsay,
That trowed and thought, that they
That were assiged in Dunbar,
At great distress or mischief were;
That in an evening frae the Bass,
With a few folk, that with him was,
Toward Dunbar, intil a boat,
He held all privily his gate;
And by the gallies all slyly
He gat with his company;
The lady, and all, that were there,
Of his coming well comfort were,
He issued in the morning in hy,
And with the warhis sturdily,
Made ane apart and stout melle,
And but tynsel entered he.

While Montagu was there lyand,
The King Edward of England
Purchased him help and alyawns,
For he wald amowe were in France;
And for the Montagu he sends;
For he cowth nae thing till end
For owtyin him, for that time he
Was maist of his counsel privie
When he had heard the king's bidding
He removed, but mair dwelling,
When he, I trow, had lying there
A quarter of a year and mair.

Of this assigee in their hethyng
The English oysid to make karping
"I vow to God, she makes gret stere
The Scottish wenche ploddere,
Come I aire, come I late,
I fand Annot at the yate."

WYNTOWNIS CRONYKILL, Book viii. cap. 33.

Amongst the nobles who fell in the field of Durham, in 1346, was Thomas, Earl of Moray, brother to the heroic Countess of Dunbar. As he had no male issue, Agnes became sole possessor of his vast estates; and her husband assumed the additional title of Earl of Moray. Besides the earldom of Moray, the Earl of Dunbar and his Countess obtained the isle of Man, the lordship of Annandale, the baronies of Morton and Tibbers in Nithsdale, of Morthingtoun and Longformacus, and the manor of Dunse in Berwickshire; with Mochrum in Galloway, Cumnock in Ayrshire, and Blantyre in Clydesdale.—George, the 1st of that name, and 10th Earl of Dunbar and March, succeeded his father in 1369. From the vast possessions he inherited, he became one of the most powerful nobles of Southern Scotland, and the rival of the Douglasses. His daughter, Elisabeth, was betrothed to David, son and heir to Robert III., and on the faith of the prince, who had given a bond to perform the espousals, the earl had advanced a considerable portion of his daughter's matrimonial settlement; but Archibald, Earl of Douglas—surnamed the Grim—jealous of the advantages which this marriage promised to bestow on a family whose pre-eminence in the state already rivalled his own, protested against the alliance, and by his intrigues at court, through the influence of the Duke of Albany, had the contract between the Duke of Rothesay and Lady Elizabeth Dunbar cancelled, and his own daughter substituted in her place. Stung by this gross insult, Earl George retired into England, where Henry IV. granted him a pension of £400 during the continuance of the war with Scotland, on condition that he provided 12 men-at-arms, and 20 archers with horses, to serve against Robert. In 1398, in conjunction with Hotspur, and Lord Talbot, March entered Scotland and fearfully devastated the lands, which he could no longer call his own, as far as Hailes castle on the Tyne. After the battle of Halidon in 1402, Henry addressed congratulatory letters to the Earl of Dunbar, the Percies, and others. At last, through the mediation of Walter Halyburton of Dirlton, a reconciliation with the Douglasses was effected in 1408; Douglas consenting to Dunbar's restoration, on condition that he obtained the castle of Lochmaben, and the lordship of Annandale, in lieu of the castle of Dunbar and earldom of March,

which he then possessed. A contagious fever closed the life of George, Earl of Dunbar, at the advanced age of 82. By Christian, daughter of Sir William Seton of Seton, he had six sons and two daughters.

George, 11th Earl of Dunbar and March, succeeded his father, at the mature age of 50. In 1435, the Earl, and his son Patrick, visited England. The motive of this visit to the English court is not known; but the slumbering jealousies of James I.—who had already struck a blow at the power of the barons—were easily awakened; and he formed the bold plan of seizing the estates and fortresses of a family which for ages had been the most powerful and opulent on the Scottish borders. The Earl of Dunbar was arrested and imprisoned in the castle of Edinburgh, while the Earl of Angus, Chancellor Crichton, and Adam Hepburn of Hailes, were despatched with letters to the keeper of the castle of Dunbar, who immediately surrendered it to the King's authority, and Hepburn was left constable of this important fortress. In a parliament assembled at Perth, on the 10th January, 1434-5, George was accused of holding his earldom and estates, which had been forfeited by his father's tergiversation. "In vain did he plead," says Robert Douglas, "that his father had been pardoned and restored by Albany;" it was answered, "that a forfeiture incurred for treason could not be pardoned by a regent;" and the parliament, in compliance with this reasoning, having heard Sir George Dunbar, on his part, adjudged, "that, in consequence of the attainder of George de Dunbar, formerly Earl of March and Lord of Dunbar, every right both of property and possession in all and each of those estates in the earldom of March and lordship of Dunbar, and all other lands which he held of our said lord the King, with all and each of their appurtenances, did and does exclusively belong and appertain to our lord the King." Thus the earldom and estates of Dunbar were vested in the Crown. The lordship of Dunbar was bestowed by James II. on his 2d son, Alexander, Duke of Albany, then in his infancy. "Against this measure," says Mr. Tytler, "which in a moment reduced one of the most powerful subjects in the realm to the condition of a landless dependent upon the charity of the Crown, it does not appear that the Earl, or his friends, dared to offer any remonstrance or resistance. They probably knew it would be ineffectual, and might bring upon them still more fatal consequences; and James proceeded to complete his plan for the security of the kingdom, by taking possession of the forfeited estate, and delivering the keeping of the castle of Dunbar, which he had seized in the preceding year, to Sir Walter Halliburton of Dirlton. He then, to soften in some degree the severity of his conduct, conferred upon March the title of Earl of Buchan, and assigned to him, out of the revenues of that northern principality, an annual pension of four hundred marks. That noble person, however, full of resentment for the cruelty with which he had been treated, disdained to assume a title which he regarded as only a mark of his degradation, and almost immediately after the judgment bade adieu to his country, and, in company with his eldest son, retired to England. Although this extraordinary proceeding appears not to have occasioned any open symptoms of dissatisfaction at the moment, it is impossible to conceive that it should not have roused the jealousy and alarmed the minds of the great body of the feudal nobility. It cannot perhaps be pronounced strictly unjust, yet there was a harshness, it may almost be said, a tyranny, in the manner in which such princely estates were torn from the family, after they had been possessed for twenty-six years, without challenge or remonstrance."

In 1494, the castle of Dunbar was in the hands of the English. On the marriage of Margaret of England with the King of Scotland in 1502, the earldom of Dunbar and lordship of Cockburnspath, with their dependencies, were assigned as the jointure of the young Queen; but the castle of Dunbar is expressly mentioned as being reserved by the King to himself. In 1515, Dunbar was garrisoned with French soldiers. In December 1527, when James V. laid siege to the neighbouring castle of Tantallon, then the stronghold of Douglas, he "gart send to the castle of Dunbar," says Lindsay of Pitscottie, "to Captain Morrice, to borrow some artillery, and laid great pledges for the same; because the castle was then in the Duke of Albany's hand, and the artillery thereof his own." The English, in the inroad under the Earl of Hertford, in 1544, after their return from the siege of Leith, and after burning Haddington, encamped the second night—26th May—near Dunbar. "The same day," says Patten, "we burnt a fine town of the Earl Bothwell's, called Haddington, with a great nunnery and a house of friars. The next night after, we encamped besides Dunbar; and there the Scots gave a small alarm to our camp. But our watches were in such readiness that they had no vantage there, but were fain to recoil without doing of any harm. That night they looked for us to have burnt the town of Dunbar, which we deferred till the morning at the dislodging of our camp, which we executed by V. C. of our hakbutters, being backed with V. C. horsemen. And by reason we took them in the morning, who having watched all night for our coming, and perceiving our army to dislodge and depart, thought themselves safe of us, were newly gone to their beds; and in their first sleeps closed in with fire, men, women, and children, were suffocated and burnt. That morning being very misty and foggy, we had perfect knowledge by our espials, that the Scots had assembled a great power at a strait called the Pease." [Expedition under the Erle of Hertford.]—In 1547, the Duke of Somerset invaded Scotland with an army of 14,000 men: and, having crossed the pass of Pease, with "puffing and payne," as Patten says, demolished the castles of Dunglass, Inverwick, and Thornton. "This done, about noon, we marched on, passing soon after within the gunshot of Dunbar, a town standing longwise upon the sea-side, whereto is a castle—which the Scots count very strong—that sent us divers shots as we passed, but all in vain: their horsemen shewed themselves in their fields beside us, towards whom Bartevel with his viii. [c.] men, all hakbutters on horseback—whom he had right well appointed—and John de Rybaud, with divers others, did make; but no hurt on either side, saving that a man of Bartevel's slew one of them with his piece, the skirmish was soon ended. We went a iii. mile farther, and having travelled that day a x. mile, we camped nigh Tentallon, and had at night a blind alarm. Here had we first advertisement certain, that the Scots were assembled in camp at the place where we found them. Marching this morning a ii. mile, we came to a fair river called Lyn, (Tyne,) running all straight eastward toward the sea; over this river is there a stone bridge that they name Linton bridge, of a town thereby on our right hand, and eastward as we went, that stands upon the same river. Our horsemen and carriages passed through the water—for it was not very deep—our footmen over the bridge. The passage was very strait for an army, and therefore the longer in setting over. Beyond this bridge about a mile westward—for so methought as then we turned—upon the same river on the southside, stands a proper house, and of some strength, belike, they call it Hayles castle, and per-

taineth to the Earl of Bothwell, but kept as then by the governor's appointment, who held the Earl in prison."—After the defeat at Pinkie in 1548, Dunbar was burnt by the German mercenaries under the Earl of Shrewsbury, on his return to England from the attack on Haddington.

On the assassination of Rizzio, Mary left Edinburgh, at midnight, in company with Darnley, and proceeded to the palace of Seton, whence she pursued her journey to the safer retreat of the castle of Dunbar. Having thus seduced the king to abandon his party, the queen's next step was to avenge the murder of her favourite. A proclamation was accordingly issued from Dunbar, on the 16th March, 1565, calling on the inhabitants of the sheriffdom of Edinburgh in the constabulary of Haddington, Linlithgow, Stirling, Lanark, Roxburgh, Selkirk, Peebles, Berwick, Lauder, &c. to meet her at Haddington, on Sunday the 17th current, with eight days provisions. Sir James Melville, one of the gentlemen of her chamber at Haddington, says that she complained bitterly of Darnley's conduct in the late assassination; and from that day forward never met him with a smile. "On the 19th of April, in parliament, the queen taking regard and consideration of the great and manifold good service done and performed, not only to her Highness's honour, weill, and estimation, but also to the commonweill of her realm and lieges thereof, by James, Earl Bothwell; and that, through his great service foresaid, he not only frequently put his person in peril and danger of his life, but also super-expended himself, alienated and mortgaged his livings, lands, and heritage, in exorbitant sums, whereof he is not hastily able to recover the same, and that he, his friends and kinsmen, for the most part, dwell next adjacent to her Highness's castle of Dunbar, and that he is most habile to have the captaincy and keeping thereof, and that it is necessarily required that the same should be well entertained, maintained, and furnished, which cannot be done without some yearly rent, and profit given to him for that effect, and also for reward of his said service: Therefore, her Majesty infetted him and his heirs-male in the office of the captaincy keeping of the castle of Dunbar, and also in the crown lands of Easter and Wester Barns, the lands of Newtonleaves, Waldane, Rig, and Fluris, Myreside, with the links and coning-yairs, (warrens,) &c. the mill, called Brand's-smyth, West Barnes mill, with their lands, and £10 of annual rent from the lands of Lochend, with all the lands, privileges, and fees belonging to the government of the castle, lying in the constabulary of Haddington, and sheriffdom of Edinburgh, holding of her Highness and her successors." On the 21st April, Mary went to Stirling, to visit her son; and, on her return on the 24th, Bothwell, with an armed party of 800 men, met her at Cramond bridge, and taking her horse by the bridle, he conveyed her "full gently" to the castle of Dunbar. The Earl of Huntly, Secretary Maitland, and Sir James Melville, were taken captives with the queen, while the rest of her servants were allowed to depart. Sir James Melville informs us, that next day, when in Dunbar, he obtained permission to go home. "There," continues he, "the Earl of Bothwell boasted he would marry the queen who would or who would not; yea, whether she would herself or not." Captain Blackater, who had taken him, alleged, that it was with the queen's own consent. Crawford justly observes: "The friendly love was so highly contrasted betwixt this great princess and her enormous subject, that there was no end thereof, so that she suffered patiently to be led where the lover list, and neither made obstacle, impediment, clamour, or resistance, as in such acci-

dent used to be, which she might have done by her princely authority." "They had scarcely remained ten days in the castle of Dunbar," says Buchanan, "with no great distance between the queen's chamber and Bothwell's, when they thought it expedient to return to the castle of Edinburgh."

The nuptials of Mary and Bothwell, which were celebrated on the 15th of May, 1567, excited the indignation both of the nation and of foreign courts, and a confederacy of nobles met at Stirling, levied troops, and prepared to march against the murderer of their king. The regicide fled with Mary to Borthwick castle, and when Lord Home environed the castle, effected his escape, while the queen, disguised as a page, followed him to Dunbar. [See article BORTHWICK.] In a few days after the queen's arrival at Dunbar, 4,000 men had flocked to her standard. Confiding in her numbers, Mary left Dunbar with Bothwell on the 14th June, with 200 hakbutters, the flower of her forces, and some field-pieces from the castle; and lodged the first night at Seton. This news having reached the associated lords, they left Edinburgh early next morning, (Sunday,) and met the queen's forces at Carberry-hill, near Musselburgh. Here Bothwell a second time threw the gauntlet down to his accusers; but after the challenge had been for the second time accepted, he refused to fight. The confederates "conquered, ere a sword was drawn;" and the poor queen surrendered herself to the laird of Grange, whilst the guilty Bothwell retraced his steps to Dunbar. On the 26th June, the lords of council ordained "letters to be directed in the queen's name, to heralds, &c. to pass and charge the keeper of the castle of Dunbar, to surrender the same to the executor of the said letters in six hours; because the Earl of Bothwell was reset and received within the said castle. Bothwell, afraid that he might be environed in Dunbar, fled by sea to Orkney. On the 21st September, 1567, four companies of soldiers, under Captains Cunyngnam, Murry, Melvil, and Haliburton, were sent to take Dunbar, which surrendered to the regent on the 1st of October. On the meeting of parliament, December 1567, the castle of Dunbar, which had been so often the asylum of the unfortunate and the guilty, was ordered to be destroyed. In act 35. parl. 1. James VI. we find the following item: "Forsamekle as thair hes bene of befor divers large and sumpteous expensis maid be our soverane lordis predecessouris and himself, in keiping, fortifying, and reparatioun of the castell of Dunbar and forth of Inchekeith, quhilkis ar baith unprofitabill to the realme, and not abill to defend the enemeis thairof, in cais the samin were assaultit: and now seeing that the said castell and forth ar baith becumin sa ruinous, that the samin sall allutterlie decay, except thair be sic expensis maid thairupon as is unhabill to be peromit without greit inconveniencis; and alsua havand consideration of ane act of parliament maid in unquibule our soverane lordis grandschiris tyme, King James the Feird, of maist worthie memorie, ordinand the said castell of Dunbar to be demolischit and cassin downe, as in the act maid thairupon at mair lenth is contentit, quhilk act as zit is not abrogat. Therefore our soverane lord, with avise and consent of my lord regent, and the estatis of this present parliament, hes ordainit, and ordainis, That the castell of Dunbar and forth of Inchekeith be demolischit and cassin down utterlie to the ground, and distroyit in sic wyse that na foundment thairof be occasioun to big thairupon in tyme cumming." In 1581, among several grants excepted by James VI. from the general revocation of his deeds of gift made through importunity, mention is made of the "forthe of Dunbar granted to

William Boncle, burgess of Dunbar." This, probably, referred to the site of the fortress, and perhaps some ground adjacent.

In 1650, Cromwell, at the head of 16,000 men, entered Scotland; and, after some marching and countermarching, engaged the Scotch army under General Leslie, in the neighbourhood of Dunbar. Leslie's position on Doon-hill was admirable, and his force was nearly double that of his opponent; but rashly quitting his position, and descending into the plain, they exposed themselves to a fatal charge from Cromwell's van-brigade, which threw them into confusion, and decided the fortune of the day in a brief space. There is extant a letter from Cromwell himself to Lenthal, the speaker, giving a very fair though enthusiastic account of this memorable engagement. He says: "We having tryed what we could to engage the enemy 3 or 4 miles west of Edinburgh; that proving ineffectual, and our victual failing, we marched towards our ships for a recruit of our wants. The enemy did not at all trouble us in our rear, but marched the direct way towards Edinburgh, and partly in the night and morning, slips through his whole army, and quarters himself in a posture easie to enterpose between us and our victual; but the Lord made him lose the opportunity; and the morning proving exceeding wet and dark, we recovered, by that time it was light, into a ground where they could not hinder us from our victual; which was a high act of the Lord's providence to us. We being come into the said ground, the enemy marched into the ground we were last upon; having no mind either to strive or to interpose between us and our victual, or to fight; being indeed upon this lock, hoping that the sickness of your army would render their work more easie by the gaining of time; whereupon we marched to Musclevurgh to victual and to ship away our sick men, where we sent aboard near 500 sick and wounded soldiers: and upon serious consideration, finding our weakness so to increase, and the enemy lying upon his advantages, at a general council it was thought fit to march to Dunbar, and there to fortifie the town, which, we thought, if any thing, would provoke them to engage; as also, the having a garrison there, would furnish us with accommodation for our sick men; would be a place for a good magazin, (which we exceedingly wanted), being put to depend upon the uncertainty of weather for landing provisions, which many times cannot be done, though the being of the whole army lay upon it; all the coasts from Leith to Berwick not having one good harbour; as also to lie more conveniently to receive our recruits of horse and foot from Berwick. Having these considerations, upon Saturday, the 30th of August, we marched from Musclevurgh to Haddington, where, by that time, we had got the van-brigade of our horse, and our foot and train, into their quarters; the enemy was marched with that exceeding expedition, that they fell upon the rear-forlorn of our horse, and put it in some disorder; and indeed had like to have engaged our rear-brigade of horse with their whole army, had not the Lord, by his providence, put a cloud over the moon, thereby giving us opportunity to draw off those horse to the rest of the army, which accordingly was done without any loss, save of three or four of our afore-mentioned forlorn, wherein the enemy—as we believe—received more loss. The army being put into a reasonable secure posture, towards midnight the enemy attempted our quarters on the west end of Haddington, but—through the goodness of God—we repulsed them. The next morning we drew into an open field, on the south side of Haddington; we not

judging it safe for us to draw to the enemy upon his own ground, he being prepossessed thereof, but rather drew back to give him way to come to us, if he had so thought fit; and having waited about the space of four or five hours, to see if he would come to us, and not finding any inclination of the enemy so to do, we resolved to go, according to our first intendment, to Dunbar. By that time we had marched three or four miles, we saw some bodies of of the enemies horse draw out of their quarters; and by that time our carriages were gotten near Dunbar, their whole army was upon their march after us; and, indeed, our drawing back in this manner, with the addition of three new regiments added to them, did much lighten their confidence, if not presumption and arrogance. The enemy that night, we perceived, gathered towards the hills, laboring to make a perfect interposition between us and Berwick; and having, in this posture, a great advantage, through his better knowledge of the country, which he effected, by sending a considerable party to the strait pass at Copperspath, [Cockburnspath] where ten men to hinder, are better than forty to make their way: and truly this was an exigent to us; where-with the enemy reproached us with that condition the parliament's army was in, when it made its hard conditions with the king in Cornwall. By some reports that have come to us, they had disposed of us, and of their business, in sufficient revenge and wrath towards our persons, and had swallowed up the poor interest of England, believing that their army and their king would have marched to London without any interruption; it being told us, we know not how truly, by a prisoner we took the night before the fight, that their king was very suddenly to come amongst them with those English they allowed to be about him; but in what they were thus lifted up, the Lord was above them. The enemy lying in the posture before-mentioned, having those advantages, we lay very near him, being sensible of our disadvantage, having some weakness of flesh, but yet consolation and support from the Lord himself, to our weak faith, wherein, I believe, not a few amongst us shared, that, because of their numbers, because of their advantages, because of their confidence, because of our weakness, because of our strait, we were in the mount, and in the mount the Lord would be seen, and that he would finde out a way of deliverance and salvation for us; and indeed we had our consolations and our hopes. Upon Monday evening, the enemy, whose numbers were very great, as we heard, about 6,000 horse, and 16,000 foot, at least, ours drawn down, as to sound men, to about 7,500 foot, and 3,500 horse; the enemy drew down to their right wing about two-thirds of their left wing of horse, to the right wing shogging also their foot and train much to the right, causing their right wing of horse to edge down towards the sea. We could not well imagine, but that the enemy intended to attempt upon us, or to place themselves into a more exact position of interposition. Major-general and myself coming to the Earl of Roxburgh's house, [Broxmouth] and observing this posture, I told him, I thought it did give us an opportunity and advantage to attempt upon the enemy; to which he immediately replied, that he had thought to have said the same thing to me: so that it pleased the Lord to set this apprehension upon both of our hearts at the same instant. We called for Colonel Monk, and shewed him the thing; and coming to our quarter at night, and demonstrating our apprehensions to some of the colonels, they also cheerfully concurred; we resolved, therefore, to put our business into this posture, that six regiments of horse, and three regiments and a half of foot should march in the van;

and that the major-general, the lieutenant-general of the horse, and the commissary-general, and Colonel Monk, to command the brigade of foot, should lead on the business; and that Colonel Pride's brigade, Colonel Overton's brigade, and the remaining two regiments of horse, should bring up the cannon and rere; the time of falling on to be by break of day; but, through some delays, it proved not to be so till six o'clock in the morning: The enemies word was 'The Covenant;' which it had been for divers days; ours, 'The Lord of Hosts.' The major-general, lieutenant-general Fleetwood, and commissary-general Whaley, and Colonel Twisletons, gave the onset; the enemy being in very good posture to receive them, having the advantage of their cannon and foot against our horse. Before our foot could come up, the enemy made a gallant resistance, and there was a very hot dispute at swords point between our horse and theirs. Our first foot, after they had discharged their duty, being over-powered with the enemy, received some repulse, which they soon recovered; but my own regiment, under the command of lieutenant-colonel Goff, and my major White, did come seasonably in; and at the push of pike, did repel the stoutest regiment the enemy had there, meerly with the courage the Lord was pleased to give; which proved a great amazement to the residue of their foot. This being the first action between the foot, the horse in the meantime, did, with a great deal of courage and spirit, beat back all opposition, charging through the bodies of the enemies horse and their foot, who were, after the first repulse, given, made, by the Lord of Hosts, as stubble to their swords. Indeed, I believe, I may speak it without partiality, both your chief commanders, and others, in their several places, and soldiers also, were acted with as much courage as ever hath been seen in any action since this war. I know they look on to be named; and therefore I forbear particulars. The best of the enemies horse and foot being broken through and through in less than an hour's dispute, their whole army being put into confusion, it became a total rout; our men having the chase and execution of them near eight miles. We believe, that upon the place and near about it, were about three thousand slain. Prisoners taken of their officers, you have this enclosed list; of private soldiers, near 10,000. The whole baggage and train taken; wherein was good store of match, powder, and bullet; all their artillery, great and small, thirty guns. We are confident they have left behind them not less than fifteen thousand arms. I have already brought into me near two hundred colours, which I herewith send you. What officers of quality of theirs are killed, we yet cannot learn; but yet surely divers are, and many men of quality are mortally wounded, as Colonel Lumsdel, the Lord Liberton, and others: and that, which is no small addition, I do not believe we have lost 20 men; not one commissioned officer slain that I hear of, save one coronet, and Major Rooksby, since dead of his wounds; and not many mortally wounded. Coloney Whaley only cut in the hand-wrist, and his horse twice shot and killed under him, but he well, recovered another horse, and went on in the chase. Thus you have the prospect of one of the most signal mercies God hath done for England and his people this war." The subsequent history of Dunbar presents nothing very memorable. It partook of the alarm and confusion consequent on the approach of the Highland army in 1745. In 1779, Paul Jones's squadron hovered a brief space in front of the town; and, in 1781, Captain Fall, another maritime adventurer, threatened a descent, but sheered off on perceiving preparations making for giving him a warm reception.

DUNBARNIE, a parish in the south-east of Perthshire, about 4 miles in length, and 3 in breadth. It is bounded on the north by the Earn, which separates it from Forteviot, and by the parishes of Perth and Rhynd; on the south by the parishes of Dron and Abernethy; on the west by the parish of Forgandenny; and on the east by the parishes of Rhynd and Abernethy. It is intersected by the gently flowing Earn, and its scenery is of very uncommon beauty. The "softly swelling" Ochil hills approach its southern border, and appear almost to enclose it; the west is occupied by gentle rising grounds adorned with plantations, avenues, and hedgerows; on the north is the beautiful Hill of Moncrieff, the view from which, Pennant called "the glory of Scotland," and the description of which in 'The Fair Maid of Perth,' cannot fail to be in the recollection of most of our readers. The soil of the parish consists principally of clay, till, and loam, and has been cultivated with great success. Several mineral springs occur in this district, of which those of **PRITCHLEY** are much celebrated: see that article. The principal village in the parish is the **BRIDGE-OF-EARN** [which see], in the immediate vicinity of which the church and manse are situated. Population, in 1801, 1,066; in 1831, 1,162. Houses 190. Assessed property £8,182.—The parish of Dunbarrie is in the presbytery of Perth, and synod of Stirling and Perth. Patron, Sir Thomas Moncrieffe, Bart. Stipend £178 17s. 7d.; glebe £29 8s. The church and manse were originally in the western extremity of the parish, but were removed to their present situation in 1689. There was also, anciently, a chapel at Moncrieff, and a church at Kirkpottie, both appendages of the church at Dunbarrie. The former of these still continues to be the burying-place of the family of Moncrieffe, the latter has been long in ruins.—Schoolmaster's salary £34 4s. 4½d., with an average of from £20 to £25 school-fees, with about £8 of other emoluments. Average number of pupils, 76. There is also a private school, the average attendance at which is 78.

DUNBEATH, an ancient parish now comprehended in the parish of Latheron, Caithness. The village is 7½ miles north of Berriedale, on the banks of the river Dunbeath, which here discharges itself into the German ocean. It is an excellent fishing-station. The "bluff old castle" of Dunbeath, on a narrow neck of land, impending on one side over the sea, and on the other over a deep chasm into which the tide flows, was taken and garrisoned by the Marquis of Montrose, in 1650. See **LATHERON**.

DUNBLANE, a parish in the south of Perthshire, comprehending the principal part of Strathallan. It is bounded on the north by the parishes of Muthill and Blackford, being separated partly from the former, and entirely from the latter, by the river Allan; on the south by the parishes of Leacroft and Logie, from the latter of which it is separated partly by the Allan, and partly by a small burn which rises in Blairdevon-hill and falls into the Allan a little below the house of Kippenross; on the east by the parish of Blackford; and on the west by Kilmadock and Leacroft. Its figure is nearly triangular, and it is about 9 miles in length and 6 in breadth. The most interesting physical feature of the parish is the Water-of-Allan, which, below the town of Dunblane, flows through a deep and finely wooded glen, and is in many places overhung by considerable precipices. Its channel is rocky, and the stream rapid and turbulent but beautifully clear. The walk along the eastern bank, from the Bridge-of-Allan to Dunblane, is delightfully sequestered, winding, with alternate ascent and descent, through a thickly-wooded dell, full of sweet glimpses. That part of the parish which lies on the eastern bank

of the Allan forms the western terminating declivity of the Ochil range. The surface of the parish towards the north-west rises to a considerable height, forming the commencement of a dark heathy ridge which runs in a north-westerly direction, and makes a conspicuous object in the scenery of this part of the country. Its general aspect to the north of the town of Dunblane is bleak and dreary; and towards the east and north-west, it is composed of heaths, moors, and swamps. The hills afford good pasture to sheep and black cattle. The soil, where at all capable of cultivation, is light and sandy. Good crops, however, are grown, especially to the south of the town of Dunblane. There are three large wool mills in this parish, upon the Allan; one at Kimback, about 3 miles above Dunblane; another, on the open haugh-ground, a little above the bridge of Dunblane; and the other below the town, on the western bank of the Allan, and nearly opposite the house of Kippenross. The value of assessed property, in 1815, was £14,423. Population, in 1801, 2,619; in 1831, 3,228. Houses 504.—Dunblane is the seat of a presbytery. It is in the synod of Perth and Stirling. Patron, the Crown. Stipend £289 1s. 9d. Unappropriated teinds £44 13s. 6d.—There are two United Secession congregations in the town of Dunblane. One of these occupies a very handsome chapel, in the vicinity of the Cathedral, built in 1835. Another United Secession congregation has existed for about 70 years at Greenloaning, a hamlet, and stage on the Perth road, in this parish. The church at this place has 200 sittings. Minister's stipend £60, with a manse, erected in 1826 at an expense of £200, and a piece of ground worth about £2 6s. per annum.—The parochial schoolmaster has a salary of £34 3s., with £10 10s. additional from an endowment. The school-fees produce about £45; other emoluments, £4 11s. 9d. The average number of scholars is about 100. There are 9 other schools in the parish, total average attendance 230.

DUNBLANE, the chief town in the above parish, having formerly been the seat of a bishopric, sometimes lays claim to the designation of city. Its external appearance, however, is very far indeed from supporting its right to any such title. Richard Franck, who travelled in Scotland about 1658, calls it "dirty Dumblane," and adds, "Let us pass by it, and not cumber our discourse with so inconceivable a corporation." Dunblane has in all probability considerably improved in appearance since it was visited by the old English tourist, but we are constrained to confess that its aspect still in some degree proves the justice of his alliterative reproach. The principal street is narrow and inconvenient; many of the houses are old and mean; and the use of thatch as a covering is more frequent than in any other town of the size which we remember. Its situation, however, is pleasing, a great part of it being built on the sloping banks of the Allan, and close by the side of the river; while the venerable Cathedral, with its high square tower, and its long line of arched windows, relieves at least, if not redeems, the paltriness and poverty which surround it. The town is built principally on the left or eastern bank of the river, though a few straggling houses occupy the opposite side, and in one quarter arrange themselves into the form of a village-street, on the sides of the high road from Bridge-of-Allan, which, sweeping down between them, crosses the Allan and enters the town by an old narrow bridge of a single arch, built about the beginning of the 15th century by Finlay Dermock, Bishop of Dunblane. The principal street—the direction of which is nearly parallel to the stream—ascends from the bridge up towards the Cathedral, which is almost screened

from the view, however, by some old buildings at the entrance to the grave-yard. The Cathedral is said—though apparently with little evidence—to have been founded by David I., in 1142. It is certain, however, that it was restored or rather rebuilt by Clemens, Bishop of Dunblane, about 1240. The greater part of it has been unroofed, and is otherwise in a ruinous state; the choir, however, is still used as the parish-church, and is tolerably entire. The eastern window, and a few of the entrances, have been partially renewed, and this part of the building is kept in a good state of repair. Some of the choristers' seats, and those of the bishop and dean, all of them of oak quaintly carved, still remain; and two ancient sarcophagi, and the monument of a warrior and his lady, are preserved in this part of the building. There are also here three blue marble grave-stones which cover the bones of Lady Margaret Drummond, mistress of James IV., and her sisters Euphemia and Sybilla, who were poisoned at Drummond-castle in 1502. In the nave, most of the prebendal stalls are entire; and the entrance and the fine west window have suffered little injury, but the roof has fallen in, and the building is otherwise much decayed. In 1840 workmen were employed in securing it against further dilapidation. New mortar has been carefully applied to all the interstices, and cramp-irons have been introduced where necessary. The length of the Cathedral is 216 feet, its breadth 56, and the height of the wall to the battlements 50 feet. The tower is placed alongside the building. Its height to the top of the little wooden spire, is 128 feet. The Bishop's Palace stood to the south of the Cathedral, on the edge of the declivity toward the river, and a few vestiges of its lower apartments and retaining wall may yet be traced.

Dunblane is a burgh-of-barony. It is situated within the barony of Cromlix, the superior of which, Lord Kinnoul, formerly named a bailie who had a court-house within the town. The court-house is now occupied by the sheriff-substitute of this district of Perthshire, who resides and holds his court at Dunblane. Both the sheriff-court and the commissary-court are held here every Wednesday during session. A new gaol was built in 1842, on the site of an old mansion known as Strathallan-house or castle. The town has no charter nor constitution of any kind, nor any property or common good. A market is held on Thursdays; and fairs, principally for cattle, on the 1st Wednesday of March, O. S.; Tuesday after the 26th of May, the 10th of August, O. S.; and the 1st Tuesday of November, O. S. The Commercial bank of Scotland, and the Glasgow Union bank, have branches here. The town was lighted with gas in 1841. Dunblane contains about 1,800 inhabitants.—At Cromlix, the property of the Earl of Kinnoul, 1½ mile north of Dunblane, and 7 from Stirling, are two mineral springs which came into notice about 34 years ago, and of which the following is an analysis by Dr. Murray. In a pint of the water of

	North Spring.	South Spring.
Muriate of soda, . . .	24 grains.	22.5
Muriate of lime, . . .	18.	16.
Sulphate of lime, . . .	3.5	2.3
Carbonate of lime, . . .	0.5	0.5
Oxide of iron, . . .	0.17	0.15
	46.17	41.25

These springs are still visited, but their popularity has waned before that of the Airthrie wells at the Bridge-of-Allan, which are at once more powerful, and much more pleasantly situated.

Dunblane is supposed to have been originally a cell of the Culdees. The period of its erection into

a see has not been ascertained, but the first Bishop is said to have been appointed by David I. The see comprehended portions of Perth and Stirling shires. Maurice, who was appointed Bishop by Robert Bruce in 1319, had, while abbot of Inchaffray, distinguished himself on the field of Bannockburn. At a later period the see was held by a man eminent in a far other field, Robert Leighton, afterwards Archbishop of Glasgow. This gentle and heavenly-minded man of genius was Bishop of Dunblane from 1662 to 1670, when he was raised to the dignity of Archbishop. He was long remembered in Dunblane by the name of "the Good bishop;" and a retired, shady path near the river, which he used to frequent, is to this day fondly pointed out as "the Bishop's walk." His library, which he bequeathed for the use of the clergy of this diocese, is still preserved in a small building erected for the purpose in the main street, near the Cathedral. A marble stone with the Bishop's arms, and the inscription 'Bibliotheca Leightoniana,' tastefully carved upon it, is inserted in the wall on the outside. The library consisted originally of about 1,400 volumes, but has since received considerable additions.—The only historical event of importance with which Dunblane is connected is the battle of Sheriff-muir, or, as it is sometimes called, of Dunblane, in 1715. Sheriff-muir lies a little to the north-east of the town. It is a boggy, uncultivated tract, on the lower part of the declivity of the Ochils, and is entirely in the parish of Dunblane. This battle was fought on the same day on which the Pretender's forces surrendered at Preston in England. The commander of the king's troops was the Duke of Argyle; those of the Pretender were led by the Earl of Mar. The latter had just taken up his quarters at Perth when he was informed that the Duke had returned from Lothian to Stirling; and having been joined by the northern clans under the Earl of Seaforth, and those of the west under General Gordon, he conceived himself in a condition to force the passage of the Forth, and to form a junction with the Pretender's friends in the south, and thus advance along with them in one body into England. He commenced his march on the 11th of November, and proceeded on that day as far as Auchterarder, where he reviewed his troops, and allowed them to rest over the night. Argyle having been informed of these movements of the enemy, immediately determined to give battle. He accordingly passed the Forth at Stirling on the 12th, and encamped in the immediate neighbourhood of Dunblane: his left being posted close by the village, and his right toward Sheriff-muir. The Earl of Mar having arrived towards the evening of the same day within 2 miles of the royal camp, remained all night under arms and in order of battle. His troops amounted to about 9,000, while the royal army did not exceed 3,500. In the morning, the Duke drew up his forces on the rising ground of Sheriff-muir. He himself commanded the right, and General Whetham the left. Glengary and Clanronald, who commanded the centre and right wing of the rebel army, commenced the battle with a furious attack on General Whetham. The Highlanders charged sword in hand, and came up with such impetuosity that the left wing of the King's troops immediately gave way, and a complete rout and prodigious slaughter took place. General Whetham fled at full gallop to Stirling, and there declared that the royal army was totally defeated. While this was going on on the left, the Duke of Argyle, at the head of a party of dragoons, attacked the other flank of the enemy, whom he drove back as far as to the Allan, about 2 miles behind them. In that space, however, they had at-

tempted to rally no less than ten times, so that he was compelled to press them hard in order to prevent them from recovering their ranks. Brigadier Wightman, with 3 battalions of infantry, was in the act of advancing to support him, when the right wing of the rebel army suddenly returning from the pursuit of Whetham, hastily formed in the rear of the king's troops, and prepared to renew the attack with about 5,000 men. Argyle and Wightman then faced about and drew up behind some enclosures. Neither party, however, seemed disposed to renew the engagement, and after remaining in this position till the evening, Argyle quietly retired to Dunblane, and the Earl of Mar to the village of Ardoch. Next day the Duke, after removing the wounded from the field, and carrying off some pieces of artillery which had been left by the enemy, retreated to Stirling. The number of slain is supposed to have amounted to about 500 on each side. Both armies laid claim to the victory.—The following verse from the well-known ballad on the fight at Sheriff-muir, though sufficiently rough, appears to be truly descriptive:

"There's some say that we ran,
And some say that they wan,
And some say that nane wan at a', man;
But ae thing I'm sure,
That at Sheriff-muir
A battle there was that I saw, man
And we ran and they ran, and they ran and we ran,
And we ran and they ran awa, man!"

DUNBOG, a small and entirely agricultural parish in Fifeshire; bounded on the north by the Tay; on the east by the parishes of Flisk, a detached portion of Abdie, and Crieh; on the south by Monemal; and on the west by Abdie. Superficial area about 1,900 acres, of which about 300 are waste land. The whole is divided at present into five farms. Assessed property, in 1815, £2,957; present real rental about £3,000. The principal mansion in the parish is Dunbog, a seat of the Earl of Zetland. To the south-east of it is Collairnie, which for five centuries was the seat of a family of the name of Barclay.—This parish is in the presbytery of Cupar and synod of Fife. Patron, the Crown. Stipend £204 4s. 8d.; glebe £8 15s. Unappropriated tithes £160 5s. 1d. Church built in 1803; sittings 200.—Salary of parochial schoolmaster £34.

DUNCANSBY, or **DUNCANS-BAY**, a promontory in the shire of Caithness, and parish of CANISBAY [which see] in N. lat. 58° 38'; and W. long. 3° 2'. This beautiful promontory is of a circular shape, and about 2 miles in circumference. The Head is covered with green sward to the very brink of the surrounding rock, with an intermixture of short heath. Towards the sea—which encompasses two-thirds of the Head—it is one continued precipice; and, during the season of incubation, is frequented by innumerable flocks of sea-fowls. Near the top of the rock, and on that side which faces the Orkneys, is a vast cavern called by the neighbouring inhabitants, the Glupe. On the highest part of the Head are the remains of an ancient watch-tower. The prospect from hence is the most noble and extensive that can be imagined.

DUNCOW, a small village 5 miles north of Dumfries, in the parish of Kirkmahoe, Dumfries-shire. It stands on Duncow-burn, a rivulet which rises in the south of Closeburn, traverses Kirkmahoe from north to south, dividing it into two nearly equal parts, and, a little below Kirkmahoe village, falls into the Nith. The course of this stream is about 7 miles. At the village of Duncow is a round hill or doon, whence it derives its name, and which formerly gave name to the barony of the Comyns, the opponents of Robert Bruce. In this village James V. left his attendants before he paid his angry visit to Sir John

Charteris of Amisfield. Till recently a large stone marked the site of the cottage in which the king slept.

DUNDALAV, a rude fortress on the summit of a hill in the farm of Dalchully in Badenoch, Inverness-shire. The hill is conical, and has an elevation of about 600 feet above the contiguous ground. The ascent is uncommonly steep and rocky, precluding all access except on the south side, where a narrow path seems to have been cleared for a road. The top is a beautiful horizontal plot of ground, commanding a very extensive prospect of the valley in all directions. Around this green there has been built a very strong wall of flat stones or flags, without mortar of any kind, whose thickness is 18 feet, and circumference 1,500; the height 8 feet perpendicular where it is most entire. Upon the north-east side there has been a turret, or citadel, constructed with the same materials, whose wall is also circular, and contains a reservoir for holding water. The wall of the citadel seems to have been extremely massy, from the quantity of stones that have fallen from it, which is much greater than from any other part of the building. The labour of collecting and carrying up-hill such an immense heap of stones as these buildings required, must have been great beyond conception, when we reflect, that very likely it was performed by mere bodily strength, without the aid of any mechanical powers. On both sides of this hill there are two other rocky eminences, but much inferior in size and altitude, which might, however, have been the cause of the name given to the principal one, *Dun-da-lav*, that is, 'the Two-handed hill.' At the distance of a few miles down the valley of Badenoch, there is another fortress, similar to this one, at Dalchully, but not so entire, which probably communicated with Craig-ellachie, still farther down. See **DUN-DORNADIL**.

DUNDAS. See **DALMENY**.

DUNDEE,* a parish in the south of Forfarshire, having the main body lying along the Tay, and a detached portion to the north-east. The principal part is bounded on the north by Liff, Mains, and Murroes; on the east by Monifieth; on the south by the frith of Tay; and on the west by Liff. It is of an elongated form, stretching from east to west, broadest at the east end, and narrowest at the middle; and it measures diagonally, from Ninewells on the south-west to Saltside on the north-east, 6½ miles, and has an average breadth of 1½ to 1¾. The detached part is bounded on the west by Tealing, and on all other sides by Murroes, and has nearly the figure of a square, 1½ mile deep. The whole parish is supposed to contain 3,700 Scotch acres. The surface rises with an easy ascent from the Tay; behind the burgh it swells somewhat suddenly up, and forms the conspicuous hill called Dundee Law, whose summit is 525 feet above the level of the Tay; and toward the west it again swells considerably and forms the lesser

* The name, in former times, was generally spelt *Donda* or *Dondie*; and in Queen Mary's charter *Dondie*; in law-Latin it is *Deidonum*; and it has been affirmed by various Highlanders, that they consider it as signifying, what this Latin imports, 'the gift,' or otherwise, 'the hill of God.' These circumstances give probability to the tradition, that it obtained the name, about the middle of the 12th century, from David Earl of Huntingdon, who landing here, after a dreadful storm in his return from the holy wars, designed by it to express his gratitude for his deliverance; and, in consequence of a vow, built the present parish-church. Had the signification been the hill of Tay, as *Tuodonum*, according to Buchanan, it would in Gaelic have been pronounced *Duntow*. The ancient name was *Alec*, in Boece's Latin, *Alectum*, and by this it is distinguished in the Highlands. The signification of *Alec* is said to be, 'pleasant' or 'beautiful.' The language spoken by the inhabitants, has, from time immemorial, been the broad Scotch; that is, English or Saxon with a peculiar provincial accent. The names of places in the parish are partly in this language, and partly Gaelic. Of the former kind are Blackness, Coltside, Clepington, and Chaypots. Balgay, Dudhope, Drumgeith, Duntroon, Baldovie, and various others are examples of the latter.

elevation of Balgay-hill. The appearance of the whole slope toward the Tay, as seen from the river or the opposite shore, is beautiful. Balgay-hill, in addition to its own fine form, possesses the attraction of a sylvan dress; and Dundee-law is cultivated up its whole ascent, till it shoots into a round, green, and unusually pleasing summit. Most of the parish is in a state of good cultivation, and is sufficiently planted to be adorned without being incumbered. The soil, to the west of the town, is thin and dry; in the north-west of the parish, and behind Dundee-law, is poor, upon a bottom of till; and, in the eastern division, in general, good, being partly alluvial and partly mixed with clay. A part of the eastern division is intersected by the Dichty and the Frithy, which form a confluence just before leaving it. The united streams form the southern boundary of the parish for about 600 yards. Tod's-burn and Wallace-burn will be afterwards noticed. The Tay, along the parish, varies in width from 1 mile to $2\frac{1}{2}$; and is marred by a shifting sand-bank, upwards of a mile in length, parallel with the channel of the river. On the lands of Balgay are large rocks of porphyry; and the greater part of the parish is incumbent on rocks of igneous origin. The detached portion of the parish abounds with excellent freestone; at one quarry it is extensively wrought, and pavement and slate are also raised in small quantity. The town is chiefly supplied with building-stone from Lochee, Kingoodie, and by railway from the parishes of Strathmartine and Auchterhouse. The supply of pavement, often exported, and of slate, now little used, is chiefly from the immediate neighbourhood of the Sidlaw ridge. Of late years the true sandstone of the carboniferous group has been brought from Fifeshire, and used in some of the principal buildings. In the sulphureous atmosphere of Dundee it soon acquires a bloated and unseemly appearance, and it is presumed that its future use is proscribed in any work of consequence. —Along the coast stretches the great northern railroad from Edinburgh to Aberdeen by way of Perth; and, at remarkably brief intervals, roads intersect one another, both westward and northward. A railway, recently completed, leaves Dundee on the north, passes through a side of the law, in a tunnel 340 yards in length, and stretches away toward Newtyle, opening a communication between Strathmore and the navigation of the Tay. On the summit of Dundee-law are vestiges of a fortification, traditionally ascribed to Edward I. According to tradition, a Pictish force having encamped on Tothel-brow in the parish of Strathmartine, the Scottish army, under Alpine, occupied the law, rushed to battle on the intervening plain, and having been defeated, suffered the mortification of seeing their king captured and beheaded. This event occurred in 834. Assessed property, in 1815, £27,288. Of this, £22,878 was within the burgh.—Dundee gives name to a presbytery, and is in the synod of Angus and Mearns. By act of Assembly the parish has been constituted, *quoad sacra*, into 8 separate parishes. These shall be described in the article on the burgh.

DUNDEE, a royal burgh, an extensive sea-port, the fifth town of Scotland in point of population, and the first in the rapidity of recent increase in prosperity, is pleasantly situated on the north side of the estuary of the Tay, about 10 miles above Bud-donness at the embouchure of the river. It stands in $56^{\circ} 27' 33''$ north latitude, and $3^{\circ} 2' 55''$ longitude west from the meridian of Greenwich, and is distant 22 miles east from Perth, 14 south from Forfar, 17 south-west from Arbroath, and 42 miles, by way of Cupar, from Edinburgh. It occupies chiefly a stripe of ground along the base of an acclivity, and seems pent up by Dundee-law and Balgay-hill as if they

were a pursuing foe urging it into the sea; but though it has at both ends crept along the Tay and sought to escape the pressure from behind, it has also begun to tread, in spacious streets, upon the lower acclivities in its rear.—The population, within the royalty, in 1841, was 59,135; inhabited houses 13,204. Within the parliamentary boundaries, the population was 63,825; houses 14,078.

Till recently the royalty was confined within narrow limits. From the south side of Balgay-hill a rill called Tod's-burn flows eastward, and, having been joined by another on the west side of the law, pursues a south-east course, till, after intersecting the modern town nearly in the middle, it falls into the Tay. These two streams are, perhaps, the most valuable in Scotland in proportion to their volume of water. They supply the greater part of the steam-engines in the town; and from their upper sources water is carted to town, and sold at the rate of 6 gallons a penny. Little of the united stream now appears above ground. Another rill, called Wallace-burn, rises on the north of the law, runs first eastward and next southward, and then falls into the Tay $\frac{1}{4}$ of a mile east of the mouth of the former. Between these rills, on low flat ground along the shore, stood ancient Dundee; consisting of only two principal streets,—the Seagate next the Tay, and the Cowgate on a somewhat parallel line to the north. West from the mouth of the first stream, rocks of from 50 to 90 feet above the level of the Tay swell up from the low grounds; and these, before being assailed by the levelling operations of modern improvement, were of considerably greater elevation, and must have formed a fine feature of the burghal landscape. On these rocks, at the point where they were highest, stood for centuries the ancient castle of Dundee. This important stronghold probably resembled, in its architectural features, the fortified edifices of the 11th century; but has long since disappeared.

The modern town of Dundee has bounded far beyond the limits of the ancient burgh. In one great line of street—somewhat sinuous, but over most of the distance not much off the straight line—it stretches from west to east, near and along the shore, under the names of Perth-road, Nethergate, High-street, Seagate, and the Crofts, nearly $1\frac{1}{2}$ mile. In another great line, first north-west, next north, and again north-west, it stretches from the shore, through Castle-street, Murray-gate, Wellgate, and Bonnet-hill, upwards of $\frac{3}{4}$ of a mile; and even there straggles onward through the incipient appearances of farther extension. A third line of street,—commencing on the east at the same point as Perth-road, but diverging from it till it is nearly $\frac{1}{4}$ of a mile distant, and called over this space Hawkhill; then, under the name of Overgate, converging toward it, till both merge into the High-street; then at the latter street diverging northward through that part of the second line which consists of Murray-gate, and at the end of that street, debouching away eastward, under the name of the Cowgate, nearly parallel to Seagate,—extends about $1\frac{1}{2}$ mile. But while thus covering an extensive area, Dundee possesses little regularity of plan. Excepting the numerous new, but in general short streets, on the north, and most of the brief communications between the two great lines along the low ground, not even the trivial grace of straightness of street-line is displayed. Most of the old streets, too, are of irregular and varying width; and many of the alleys, are inconveniently and orientally narrow. Yet the town makes up by a dash of the picturesque, by its displays of opulence, and by the romance of its crowded quays, full apparently of plots which issue in the startling but delightful de-

nouement, what it wants in the neat forms and elegant attractions of simple beauty. Its exterior, also, and its general grouping, and its richness of situation in the core of a brilliant landscape, eminently render it, as seen from the Fife side of the Tay, or from Broughty ferry-road, the justly lauded "Bonny Dundee" of song, and *Ail-lee*, "the pleasant" or "the beautiful" of Highland predilection. In a military point of view it is accessible on all sides, and is entirely commanded by the neighbouring heights, so as to be quite indefensible; but as regards commerce, comfort, and beauty, it is enriched by its singularly advantageous position on the Tay, and sheltered and adorned by the eminences among which it is cradled.

The most bustling and important part of the town is the High-street, called also the market-place, and the Cross. This is an oblong square, or rectangle, 360 feet long, and 100 feet broad, wearing much of that opulent and commercially great and dignified appearance which characterises the Tron-gate or Argyle-street of Glasgow, or even the less crowded parts of the great thoroughfares of London. The houses are of freestone, four stories high, rich and gaudy in their shops, and generally regular and modern in their structure, though in two or three instances, surmounted on the front by the gable-end construction. On the south side, projecting several feet from the line of the other buildings, stands the Town hall. This is a fine Roman structure, erected in 1734; but, being built of a mouldering, dark-coloured stone, it has a dingy and somewhat defaced appearance. Beneath, it lies open in piazzas, and above, it towers up in a spire of about 140 feet in height. At each end of the High-street, is a building which closes up the wide and stirring area of the rectangle, but allows, on both sides, sufficient space for thoroughfares into the adjoining streets. That which occupies the east end, is the Trades' hall, dividing the commencement of the Seagate from that of Murray-gate. It is a neat though plain building, adorned in the front with Ionic pillars, and surmounted by an elegant cupola. The Seagate, one of the streets of the ancient town, and formerly the abode of the Guthries, the Afflecks, the Brightons, the Burnsides, and other principal families, is a long, sinuous, and very narrow street, extending away to Wallace burn. The line of street is then continued to the eastward, through the Crofts and Carolina port, till it merges in the road to Broughty ferry. South of the Seagate are the Gas works, and the East and the Tay foundries. Murray-gate, opening on the northern end of the trades' hall, is narrow and inconvenient at its entrance, but soon expands in width, and assumes a pleasing appearance of well-built and somewhat regular lines of houses. In this street are banking-houses and several other public offices, and also the quarters of the carriers to the east and the north. At Wellgate-port, the eastern termination of Murray-gate, the street forks into two,—the Cowgate, which runs eastward, and the Wellgate, which runs northward, forming a straight line with Bonnet hill. The Cowgate, more remarkable for business than any of the other thoroughfares, and virtually the exchange of the town, has some handsome buildings, most of which are devoted to commerce, and is adorned at its east end with a venerable archway, originally one of the town gates, where the reformer Wishart preached during the prevalence of the plague in 1544, the archway or gate serving to keep the infected and the uninfected in separate crowds. From the Cowgate, Queen's-street, St. Roque's-lane, and the Sugar-house wynd, lead off to the Seagate. King-street subdivides and contracts the

Cowgate, and breaks off at an acute angle from its north side, running north-eastward to Wallace burn, and there merges in the great north road, by way of Arbroath and Montrose, to Aberdeen. In King-street stands the royal infirmary, built in 1798, on an elevated situation sloping to the south, well-detached from other buildings, and having a promenade for convalescents. The Wellgate rises gently from the Murray-gate, and, on market-days, is a scene of bustling and tumultuous business. At the head of the Wellgate is the Lady well, whence the street has its name, and which draws ample supplies of excellent water from various springs on the high grounds. From this point Buckle-maker wynd—formerly the seat of a craft whence it derived its name, but which is now extinct—goes off at right angles and extends to Wallace burn. An extensive rising ground lying northward of this wynd, and called Forebank, is adorned with numerous elegant villas and gardens. On a line with Wellgate, and mounting up the ascent, Bonnet hill rejoices in the additional names of the Rottenrow and the Hill-town of Dundee, and stretches away over the acclivity on to the lands of Clepington; but it has a motley and grotesque appearance, and, though the seat of very extensive manufactures, consists generally of ill-built houses, confusedly interspersed with cloth factories. Maxwelltown, a suburb of recent origin, occupies the grounds which lie between Hill-town and the villa of Hillbank, to the northward of Forebank. Opposite to Buckle-maker wynd, Dudhope wynd, which forms the northern boundary of the Chapelshade, breaks off to the west, and runs along nearly half-a-mile, terminating at the barracks.

From the High-street, to which we now return, Castle-street goes off at right angles with the commencement of the Seagate, and leads down to the harbour. This street contains several fine buildings; and is the site of the theatre and an Episcopalian chapel, the lower part of the latter edifice containing the office of the Dundee bank. At the south-east corner of Castle-street stands the exchange coffee-room,—a commodious and beautiful building, having a spacious opening to the west, and erected by a body of subscribers at an expense of £9,000. Its western front, on the basement story, has Doric pillars, boldly relieved by deep recesses of the doors and windows; and, on the second story, is in a style of the Ionic order, more ornate than what usually occurs. The reading-room is 73 feet by 38, and is 30 feet in height. From the south-west corner of the High-street, and parallel with Castle-street, Crichton-street leads down to the green-market, and on to Earl Grey's dock. Opposite to the town-hall, and in a direction the reverse of Castle and Crichton streets, a splendid street has recently been built, combining uniformity with elegance, and rivaling, in the beauty of its buildings, some of the admired parts of the Scottish metropolis. The splendour of Reform-street—the name imposed on this public-spirited and tasteful addition to the thoroughfares of the burgh—is greatly enhanced by the magnificent appearance of the new public seminaries, which close it up on the north, and look down along its area. This edifice is in the Doric style of architecture, and has its portico or central part copied from the exquisite model of the Parthenon of Athens. A double-columned gateway, closed in by an iron-palisaded wall which encircles a beautiful shrubbery, leads to the principal entrance. The building contains a room 42 feet by 40 for classes studying the higher departments of science, another of the same dimensions fitted up as a museum, one 37 feet by 30 for the junior classes, a

well as a large provision of other apartments; and it was erected at an expense of about £10,000.

At the west end of the High-street, closing up the area, is an ancient building, long called the Luckenbooths, on the corner of which is still a turret indicative of its former character. This venerable pile was the adopted residence of General Monk, when he entered Dundee and consigned it to the pillage of his soldiery; and it was the birthplace of the celebrated Anne Scott, daughter of the Earl of Buccleuch, and afterwards Duchess of Monmouth, whose parents had sought a refuge in the town from the effects of Cromwell's usurpation; and it was also, in 1715, the adopted home of the Pretender, during the period of his stay in Dundee. The lower part of the building was originally divided into arched sections; but is now modernized. An edifice connected with the Luckenbooths, and originally called the tolbooth, is also very ancient, and had before it, in old times, the Tron in which the public weights were kept. In its vicinity is an alley still called Old Tolbooth lane. Within St. Margaret's close, at the High-street, were formerly a royal residence and a mint. The palace, after ceasing to be a home or a possession of royalty, was inhabited by the Earls of Angus, by the Scrymgeours of Dudhope, and afterwards by John Graname of Claverhouse, Viscount Dundee. Robert III. was the first sovereign who struck coin in the mint. An alley leading from the High-street is still called Mint-close.

Passing out of the High-street, on the north side of the Luckenbooths, the Overgate runs away westward for upwards of $\frac{1}{4}$ of a mile to the West-port, and there forks into lines of street called Hawkhill and Scouringburn, which pass on to the limits of the town. The Overgate was originally called Argylegate, from the connexion it had with the family of Argyle; and, opposite the Windmill, it still has a house to which tradition points as that family's quondam property. As the street proceeds, it sends off several branch-streets to the north which run up toward the base of the Law. This district, though containing many good houses, exhibits utter recklessness of architectural taste or uniformity, and is the site of the larger portion of the great manufactories. But Tay-street, the principal communication with the lower part of the town, is elegant and possesses a beautiful square. The streets, or rather alleys, parallel with it, breaking off on the south side of Overgate and Hawkhill—Tally-street, Thorster-row, School-wynd, Long-wynd, and Small's-wynd—are narrow and cheerless communications. From the west end of Overgate, but chiefly from Scouringburn or Witch-know, Lindsay-street, leading to the new jail and bridewell, Barrack-street and other openings break off northward, and present fine lines of new and pleasingly constructed buildings. The barracks occupy a commanding eminence at the foot of the Law, and enclose the remains of Dudhope castle, formerly the residence of the constables of Dundee; and, for advantageous and healthful situation, they excel all other buildings of their class in the north of Scotland.

Returning again to the High-street, we find a wide opening from its western end, on the south side of the Luckenbooths. Most of this opening is closed up, at the distance of a few yards, by an Episcopalian chapel, of very neat appearance, which has its lower story fitted up and occupied as shops. On the south side of this chapel, leading out from the High-street, and forming the main line of communication with Perth and Glasgow, opens the Nethergate, which stretches away, through the direct continuation of Perth-road, into the carse of Gowrie, and, through a forking continuation sea-ward, into the delightful

promenade of Magdalene-yard. The Nethergate is a well-built and somewhat spacious street of nearly $\frac{1}{2}$ a mile in length; and leaves behind the bustle and confusion of the business parts of the town, and puts on appearances of architectural neatness and modern improvement. As it advances westward, it becomes the site of the elegant or the flaunting homes of the elite of the town; and, along with its branch-streets, has quite as aristocratic an air as comports with its propinquity to manufacture and commercial stir. The houses, instead of forming continuous lines, now stand apart, environed with lawn and flower-plots; and eventually they announce their inmates to be parties who know quite as well to luxuriate in the results which affluence produces, as to ply the arts by which it is obtained. To render the Nethergate somewhat straight, and achieve a considerable degree of order and neatness in the collocation of modern buildings, many edifices of antique character and historical interest, shared a common demolition with the gaunt and ungainly houses which at one time jostled one another along the line. Among others, a short way after the debouch of the street from the cross, stood Whitehall, the residence, at various periods, of the kings of Scotland, the scene of frequent conventions of estates and burghs, and the meeting-place of several general assemblies of the Church of Scotland. A memorial of the building still exists in the name of an alley, called Whitehall close, which leads down to the shore; in a sculpture of the royal arms of Charles I. over the entrance to this alley, with the inscription in decayed letters, "God save the King, C. R. 1660;" and in the insertion of some sculptured stones which belonged to it in several of the buildings which stand on or near its site. All that remains of it is a portion of the west wall. On the lintel of a door, leading to three low vaults, which communicate with one another, and are hemmed in by an outer wall of great strength, is inscribed, "Tendit acerrima virtus." Opposite this lintel is a niche with several ornamental figures; two of which, though much decayed, appear to have been statues. Whitehall was the home of Charles immediately before his ill-fated expedition to Worcester; and it seems to have been strictly a court-residence, surrounded by numerous houses belonging to the nobility. A little to the westward of Whitehall close stood one of the most ancient and spacious mansions in Dundee, the town-residence of the powerful Earls of Crawford, said to have been built in the 13th century, and, along with its grounds, stretching downward from the Nethergate quite to the river. Sixty or seventy years ago, vestiges of the mansion were still in existence, having the word "Lindsay" embossed in a sort of battlement. The lords of Crawford resided here in feudal splendour; and, in the beginning of the 15th century, Archibald, sixth Earl of Angus and Lord of Liddesdale, commonly called Bell-the-Cat, visited the mansion, and was married within its walls, amid a pomp and magnificence of ceremony which were remarkable even in those days of excessive pageantry, to Maud Lindsay, daughter of the contemporaneous Earl of Crawford.

Passing off from the Nethergate, near the site of the mansion of the Crawfords, Union-street leads down to the shore. This is a spacious and beautiful thoroughfare, traced along the sites of many unseemly and frail houses which formerly disfigured and menaced the locality. From its west side branches Yeaman shore, having in its southern line of buildings a plain and indifferently situated public edifice, the Sailors' hall. Merging from Union-street on the south we find ourselves near the western point of the quays and docks of Dundee. Hence to the Trades'

lane, Dock-street, consisting of new and elegant erections, runs parallel to the Tay, and forms a fine background to its series of docks, with their marine forest of masts. Going off from an open area at the foot of Castle-street is Exchange-street, running nearly parallel with Dock-street; and crossing the further end of this at right angles, and coming down to Dock-street, from the Seagate near the High-street, is Commercial-street. Both of these are new thoroughfares, and in keeping with the neatness and taste of the modern improvement-spirit of the town. In Green-market square, foot of Crichton-street, is the old custom-house, one of the most antiquated buildings in Dundee. The lower part was formerly arched, and seems also to have been surrounded with a kind of piazza, now converted into shops and cellars. At the top it originally terminated in fine circular turrets; in each story it has circular turreted rooms, as well as other apartments bearing vestiges of ancient comfort and magnificence; and altogether it appears to have been one of those baronial residences which, in feudal times, abounded in the town, and which either have bequeathed their names to streets or left some scanty physical memorials to stimulate the curiosity of the antiquarian. The old Fish-market beside this edifice is now abandoned; a clean area, well-supplied with water, and placed under suitable regulations, having been provided between the end of Castle-street and the Green-market. At the extreme west of the harbour, and nearly opposite Union-street, is Craig-pier, exclusively used by the large steam-vessels which ply at brief intervals on the ferry to the Fife coast, and constitute nearly a complete succedaneum for a bridge across the estuary. From this pier on the west, to the ship-building-yards opposite Trades' lane on the east, stretch the proud and opulent series of docks which are at once the boast of Dundee, the chief means of its wealth, and the best evidence of its enterprise and taste. Previous to 1815—when commissioners were appointed by act of parliament to extend and improve the harbour—the only accommodations for shipping were a small pier and a few ill-constructed erections which could not be reached by vessels of any considerable draught of water. But between 1815 and 1830, a wet-dock, with a graving-dock attached to it, was constructed,—the tide-harbour deepened and extended,—seawalls and additional quays built,—and various other improvements made, at the munificent cost of £162,800. The wet-dock, then constructed, and called William the Fourth's, covers an area of nearly 8 acres, and has its adjoining graving-dock in corresponding proportion. Since 1830 a large part of the tide-harbour has been converted into another wet-dock, called Earl Grey's dock. Still further improvements, on a magnificent scale, have been made or are in progress; and include an extent of space eastward equal to nearly double the area of the docks and harbours which have been noticed. All of these improvements are considerably within the range of high-water mark, leaving an important space of ground skirting along the town to be occupied as the site of buildings, and the area of a continuation of Dock-street; and part of the improvements are also within low-water mark, leaving, even there, between the new wet-docks and the sea, a space to be occupied by warehouses and building-yards. Two additional wet-docks, a tide-harbour with a very deep water draught and greatly improved accommodation for shipping, are the principal elements. The great outer sea-wall is extended considerably to the eastward, and does great credit to Mr. Leslie the engineer, for the skill and science he has displayed. When the improvements are completed, they will render the

harbour of Dundee one of the finest, safest, and most convenient in Britain. One valuable advantage is that, like the harbours of Liverpool and of Greenock, it is situated almost all within the line of low-water mark, and offers commodious ingress in very reduced states of the tide. The estuary of the Tay, where it washes the town, is about 2 miles broad, and is pent up by banks which, in general, have a sufficiently rapid declination to leave little of the beach bare at low water. Most vessels, especially steam-boats, can, in consequence, enter the harbour at even the unfavourable epochs of the tide. Various sand-banks, indeed, at the mouth of the estuary, opposite the town, offer obstructions to the navigation; but they are now, by the appliances of lighthouses, beacons, and accurate charts, rendered nearly harmless, and fail to impede the rapidly increasing progress of the commerce of the river. Mr. Leslie has erected on the quay of Earl Grey's dock a stupendous crane, by which eight men easily lift a weight of 30 tons. The height of the sheave above the level of the quay is 40 feet; the total weight of the castings, bars, chain, and brasses, 59 tons.

Several public buildings and places of interest require more detailed mention than could be made of them in a general sketch of the town; and others—including all the ecclesiastical edifices—remain yet to be noticed. The Trades' hall was built by the nine incorporated trades, and was originally fitted up with separate apartments for their respective use. Besides being a considerable ornament to the High-street, it occasioned the removal of shambles formerly on its site, which were a great public nuisance. The ground-floor is fitted up in commodious and elegant shops; and the second floor contains an elegant hall, 50 feet long, 30 broad, and 25 high, which, previous to the erection of the theatre, was occasionally used for histrionic exhibitions, and is now occupied by the Eastern bank of Scotland. The Town-hall was built on the site of St. Clement's church, from a design of the celebrated William Adam. The ground-floor, behind the piazzas, is fitted up in apartments for business,—the west end being a long-established apothecary's shop, and the east end affording accommodation for the town-chamberlain and the treasurer of police. The west end of the second floor contains a very handsome hall, profusely embellished, in which the town-council hold their sederunts; and the east end contains a hall equally spacious, though less ornate, in which the guildry incorporation and the sheriff and justices hold their courts. On the same floor are four rooms with strongly arched roofs, for the use of the town clerks and the conservation of the public records; and though threatening, from their peculiar structure, to wear a heavy appearance, are airy, well-lighted, and cheerful. The third floor—in ludicrous inconsistency with the importance and public-spirit of the town, and in painful incongruousness with the suitable lodgment or the effective moral reclamation of the miserable inmates—continued, in 1836, to be the jail, ill-aired, wretchedly planned, and utterly too limited. The apartments are five, three of which, in the front, are lighted by small oval windows, and were appropriated to debtors; while the two in the rear were strong rooms for male felons. Of the attic rooms, part was occupied by the turnkey, and part by female prisoners, debtors, and felons, without classification. Even the tower of the spire surmounting the town-hall was partly fitted up and used as a prison. New public buildings, however creditable to the character of the burgh, adapted to the multiplied exigencies of its social condition, and consisting of jail, bridewell, and police-office, have recently been completed, at the south-west corner of

the town's gardens, from a design of Mr. Angus, and at a cost of £26,000. The first jail in Dundee stood in the Seagate; and near its site is still pointed out a spot where a woman, named Grizel Jeffrey, was ignominiously burned to death under an imputation of witchcraft.—The lunatic asylum was opened for patients in 1820, and is a well-arranged edifice, and well-conducted institution; situated about $\frac{1}{2}$ a mile north of the town, upon an inclined plane considerably higher than the vale of the burgh, commanding a fine view of the Tay and the country along its shores, and encircled with spacious airing-grounds and delightful garden-walks.—The theatre—it may be remarked, as an instance additional to several which have occurred, of an economical disposition of public buildings, peculiarly characteristic of Dundee—has its ground-floor fitted up and occupied as shops.—The Watt institution is an elegant Grecian structure, consisting of a front building and an attached back-building of two floors, and commodiously distributed in the interior, into a library 29 feet by 21, on the ground-floor, a laboratory, 21 feet by 14 $\frac{1}{2}$, and an apparatus-room 21 feet by 14; on the second-floor, into a lecture-hall 50 feet by 35; and in the back-building, into a museum, lighted below by 10 windows, and above by 2 cupolas.—At the head of a lane, between Castle-street and the old fish-market, is the hall of the Caledonian lodge of free-masons.—At the part of the Nethergate, opposite the foot of Tay-street, stand the dilapidated remains of the hospital. The date of its foundation is unknown. On the 15th of April, 1567, Queen Mary granted to the magistrates, council, and community of Dundee, for behoof of the ministry and hospital, all lands, &c. which had belonged to any chaplainries, altars, or prebendaries, within the liberty of the town, with the lands which belonged to the Dominican and Franciscan friars, and the Grey sisters, which were incorporated into one estate, to be called the foundation of the ministry and hospital of Dundee. This charter was confirmed by James VI., in 1601. The property of the hospital, though under charge, nominally, of an hospital master, is, in fact, under the administration of the magistrates of Dundee. The house has been allowed to fall down, and the funds belonging to it are now applied to the aid of poor burgesses.—The Howff, or burying-ground of the town and parish, is situated in Bar-rack-street, formerly called Burial-wynd. It has been greatly improved in appearance of late. But a new cemetery has been laid out on ground sloping gently to the south, in the lower Chapelshade gardens, and is so decorated in incipient imitation of the celebrated Pere la Chaise of Paris as to have become a favourite promenade of the burghers.—The new bleaching-green, lying north of the new cemetery, is an oblong of nearly 4 acres in area, surrounded with wall and hedge, and tastefully intersected with decorated paths.

The most prominent object in Dundee—that which most visibly connects it with antiquity, and bulks most largely among its public edifices, and constitutes the most distinctive feature in its burghal landscape—is the agglomeration of buildings called the churches and the tower. Whether looking up from the area before the Trades' hall, or peering through any vista or opening among the sinuous streets, the tower looms largely in the view, and looks like the impersonation of fleeting Time casting a dark shadow upon the bustling scenes of the hour; and, look upon Dundee from what point or visible distance we may, whether from the east or from the west or from the south, the tower lifts its gaunt length high above the undulating surface of a sea of roofs, and suggests thoughts of many generations

who have fluttered away their ephemeral life, and passed to their long home, beneath its shadow. The churches are situated west of the Luckenbooths, between the Overgate and the Nethergate. A chapel, it is supposed, originally occupied that part of their site on which now stands the East church, and was founded by Prince David, Earl of Huntingdon. Around this as a nucleus, other portions of the structure were raised to complete the form of a cathedral; and the whole must, for a considerable period, have been a church in the fields, the town having its boundary at the west end of the High-street. The edifice, in its present form, is irregularly cruciform, and is divided into 4 sections, called the West or Steeple church, the South or New church, the North or Cross church, and the East or Old church. The choir is 95 feet long, 54 high, and 29 broad; and has 2 aisles, each 14 $\frac{1}{2}$ feet broad. The cross part has no aisles; and is 174 feet long, and 44 broad. The roofs of the four sections were originally of one height, and presented an uniform appearance of architectural beauty. But the West or Steeple church having been destroyed by the English before the national union, a new one was erected in 1789, of such niggard and inharmonious proportions, as utterly to mar the symmetry of the interesting pile. In fact, so many additions and vast alterations have, in the course of ages, been made, that, with the exception of the tower, probably no part whatever of the strictly original structure remains. The tower stands at the extreme west of the churches, and is most advantageously seen, with its elegant gable windows, from an alley leading out opposite to it from the Nethergate. Its height is 156 feet. At the corners, it is adorned with lofty abutments, terminating in carved pinnacles; half-way up, it has a bartizan or gallery; and, at the top, which is flat, and apparently unfinished, it is battlemented with a stone rail, and surmounted by a cape-house resembling a cottage with a double slanting roof. The cape-house, in the estimation of competent judges, is much more modern than the tower, and probably was erected as a watch-post to accommodate a warder in the age of forays and predatory incursions; it could never, at all events, except by the most grotesque of blunderers, have been constructed with a view to architectural decoration; for it sits, in vile deformity, as a disfiguring excrescence upon the fine, care-worn brow of architectural beauty which it surmounts. The tower, so far from having had destined for it so tiny and unseemly a termination, appears, from the abrupt flat formation of its second bartizan, to have had designated for its summit, either a tapering spire, or more probably an imperial crown, similar to what adorns the towers of St. Giles' of Edinburgh, and the Cross or the tolbooth of Glasgow.*

All the other ancient ecclesiastical edifices of Dundee—which were numerous, well-endowed, and quite in keeping with the spirit of ostentatious display and prodigal expenditure which characterized the bastard and superstitious spirit of the dark ages—have disappeared. The oldest, St. Paul's, was situated between Murraygate and Seagate. St. Clements occupied the site of the present Town-hall. A mile-and-a-half west of the town, a burying-ground, still in use, marks the site of the

* Since the first edition of this Work issued from the press a few weeks ago, Dundee has been nearly despoiled of her venerable groupe of ecclesiastical edifices by a fire which broke out in the pile of buildings above described early on the morning of Sunday the 3d of January, 1841, and by which the South and Cross churches have been entirely gutted, and the Old church, with its fine Gothic arches, nearly reduced to a ruin. The total damage sustained cannot be under £15,000, and it is at present questionable whether any attempt should be made to repair the old structures.

church of Logie;—a mensal or table-furnishing church of the Bishop of Brechin. On a rocky rising ground, north of the High-street, stood the chapel of St. Salvator, probably an appendage of the royal palace situated in the adjoining close of St. Margaret, or Maut close. Outside of the Cowgate-port, between the Den-bridge and the east end of the Seagate, stood the chapel of St. Roque; commemorated in the name of a lane, which runs from King-street to the Seagate, and is called St. Roque's lane, or vulgarly, Semirookie. On a rock, a little eastward from Carolina-point, stood the chapel of Kilaraig, meaning, in the language of the Culdees, the church upon the rock, but afterwards called by the Roman Catholics, the church of the Holy Rood. This chapel is commemorated in the name of Rood-yard, still applied to the locality. At the foot of Hilltown, stood the chapel of Our Lady, commemorated in the name of the adjoining Lady well. On a rock at the western part of the harbour, originally called Nicholas rock, and afterwards Chapel-craig, stood the chapel of St. Nicholas. On the east side of Couttie's wynd, still stands a vestige of the basement part of the wall of the chapel of St. Mary. A large cluster of houses called Pleasance, near the western approach to the barracks, probably indicates the site of a forgotten chapel dedicated to Our Lady of Placentia. There appear to have been 4 or 5 other chapels; and there were also, in the churches, particularly in the cathedral one which still survives, various well-endowed altars, dedicated to particular saints, and served by separate officials. There were likewise 5 convents;—a Franciscan friary on the Howff; a Dominican friary to the west of the Franciscan, and separated from it by the Friar's Vennel, afterwards called the Burial-wynd, and now called Barrack-street; a monastery of Red or Trinity friars, on or near the site of the hospital, possibly the hospital itself, at the foot of South Tay-street; a convent of the Nuns of St. Clare, still in existence at the head of the Methodist close, Overgate, and containing now a large hall which is occasionally used by the incorporation of hammermen, by the preacher, by the scientific lecturer, by the itinerant salesman, and even by the histrionic actor; and a cloister of Magdalenes at the west end of the town, commemorated in the name of the large irregular field or promenade, called Magdalene-yard.

In modern ecclesiastical edifices, as to both number and architectural beauty, Dundee will bear comparison, if Edinburgh and Glasgow be excepted, with any town in Scotland. St. Andrew's church, built in 1772, occupies a slightly rising ground on the north side of the Cowgate; and is much and justly admired for its uniform and simple elegance. An exquisitely formed spire rises, from its west end, to the height of 139 feet, and contains a set of fine music-bells. Adjacent to it stands the Glassite chapel, a neat octagonal edifice, built, in 1732, for Mr. Glass, the founder of his sect. An Independent chapel, on the west side of Constitution-street, directly west from the public seminaries, has its east or principal front of Gothic architecture, with two buttresses on each side, the transverse ribs springing from ornamental corbels, and crossed by smaller ribs running longitudinally on the ceiling. The new chapel of the second United Secession congregation, situated in the same street, and opened on the last day of May, 1840, is both a spacious and a very splendid edifice. The Episcopalian chapels, already incidentally noticed, are finely ornamental of the localities in which they stand. The Roman Catholic chapel in Nethergate is a beautiful Gothic structure; and forms a fine feature of the rich agglomeration of

architecture seen eastward from the High-street. St. David's church, in North Tay-street, though a plain edifice, is spacious, and of pleasing exterior. Two United Secession chapels, respectively in School-wynd and Tay-square; the Gaelic church, in South Tay-street; the parish-churches of St. Peter, and Chapelshade; an Independent chapel in Princes-street; an Independent Methodist chapel, in Lindsay-street; an Original Burgher chapel, now called Willison church, the minister and congregation having joined the Establishment; a United Christian chapel, and other places of worship belonging to various denominations, are elegant or comfortable erections.

Dundee is rich in charitable, literary, and public institutions. Besides the royal infirmary, the royal lunatic asylum, and the ancient hospital fund, it has a medical and surgical dispensary and vaccine institution,—a royal orphan institution,—an indigent sick society,—a clothing society,—a medical institution for the lame,—an eye institution,—18 endowments for various philanthropic purposes,—the charitable funds of the guildry, the nine trades, the seamen fraternity, and numerous voluntary associations,—funds for the poor, raised partly from collections at church doors, and partly by assessments on the inhabitants in the burgh;—a seaman's friend society,—a florist's and horticultural society,—the Watt institution,—a mechanics' institution,—a phrenological society,—a Highland society,—numerous public libraries,—and religious and school societies, general and congregational, for promoting almost every variety of enlightening and Christianizing effort at home and abroad.—The banks in Dundee are,—the Dundee banking company, established in 1763, and located in Castle-street,—the Dundee Union bank, established in 1809, and located in Murraygate,—the Eastern bank of Scotland, established in 1838, and located in Seagate,—the National Security savings bank, established in 1838, and located in Reform-street; and branch offices of the bank of Scotland, in High-street,—of the royal bank of Scotland, in Seagate,—of the British Linen company, in Murraygate,—and of the National bank of Scotland, in Cowgate.—Dundee has 3 newspapers:—the Advertiser, the Courier, and the Chronicle.* Oftener than once, periodicals of a literary character have been commenced; but uniformly, after a brief and hopeless career, they have been discontinued.

Dundee is remarkable for failure, perseverance, and eventual success in attempts at manufacture. Coarse woollens, under the name of 'plaiding,' dyed in Holland, and exported throughout Europe,—bonnets, so extensively manufactured as to employ a large proportion of the population,—coloured sewing thread, made by seven different companies, maintaining 66 twisting-mills, and employing 1,340 spinners,—the tanning of leather, in at least 9 tan-yards, and to the annual value of £14,200,—glass in two factories, one for window and the other for bottle-glass,—the spinning of cotton undertaken, and, for a time, spiritedly conducted by 7 different companies;—these, and the making of buckles and other minor manufactures, all flourished for a season, and, in the end, went utterly to ruin; bequeathing, in some in-

* In October 1840, the 'Dundee Chronicle,' which had, for some time, been under the management of trustees, was exposed for sale in the office of Messrs. Shiell and Small. The Non-intrusionists had given out that they intended to purchase the copyright, but on the day of sale they did not make their appearance; and the only bidder was Mr. Peter Brown, for the Chartists. The paper and printing materials in the printing-office were put up at £700, and, after a spirited competition, were knocked down to Mr. Brown at £380. The Non-intrusionists have since started a journal for the advocacy of their views in Dundee, under the name of 'The Warder.'

stances, their names to streets, and in others the vestiges of their factory walls to the inspection of the commercial antiquary, as memorials of the instability of trade. The making of soap, the brewing of ale, and the manufacture of cordage, are ancient, but the first is extinct, and the second in a declining state, while the third is in an increasingly prosperous condition. Linen of various kinds is at present the most extensive and prosperous manufacture, and gives an impulse to all other departments of trade. Brown linen, since the period, considerably remote, when the manufacture was introduced, has always been the largest article; and while of various sorts, consists largely of Osnaburghs, for clothing to the West Indian negroes. Bleached linen, in imitation of the sheeting and duck of Russia, and made from yarn which is bleached by a skilful chemical process before being woven, is also a large article. Another fabric is sailcloth, exported in considerable quantity to America and the East Indies. Another is bagging for packing cotton, made indifferently of hemp or of flax, and sent to the West Indies and America. Coarse linens for household purposes, though formerly manufactured, are now nearly superseded by the cheaper linens of Ireland. All these goods, till a recent date, were manufactured by the hand, and employed vast numbers of persons in the towns and villages of Forfarshire. Machinery, however, has been introduced to a vast extent, and has not only increased to a prodigious extent the quantity of the manufacture, but so considerably improved its quality, and lessened the cost of its production, as to enable it successfully to hold its way in the face of the menacing competition of Germany and Russia. In the town and its immediate vicinity, there were, in 1832, 36 flax spinning-mills, employing a steam-power equal to that of 600 horses, and annually consuming 15,600 tons of flax, and producing 7,488,000 spindles of yarn. The mills are in general large buildings, from 4 to 6 stories high, having on each flat a vast number of spindles or carding machines, and attended by about 3,000 individuals, considerably the larger proportion of whom are children and youths. According to the census of 1831, the number of linen manufacturers was 363; and the number of persons employed in the linen manufacture, 6,828.* So greatly has this manufacture increased, that while Dundee imported, in 1745, only 74 tons of flax, it imported, in 1791, 2,444 tons of flax, and 299 of hemp; and in 1833, 15,010 tons of flax, and 3,082 of hemp; and exported proportionally of manufactured fabrics. Causes of its prosperity are found in the advantageous position of the port, with reference to the Baltic, whence the raw material is obtained,—in its being the grand emporium of Forfarshire, the Carse of Gowrie, and the northern parts of Fifeshire, which all depend upon it for the supply of their material and the sale of their productions,—and in a bounty granted by Government on all home-linen exported, and the impost of

a heavy duty on all foreign linen imported. But flourishing as the linen manufacture of Dundee has been, dark clouds have passed over it, and let down drenching rains upon not a few houses connected with it during four years preceding October, 1840; and at that date continued still to have such a lowering aspect, as to occasion doubt whether a return of sunshine were near.

An interesting view of the commercial condition of the town will be afforded by an extract from 'An Account of the Trade of the Port of Dundee, during the three years ended 31st May, 1838. By John Sturrock, Esq., Banker and Convener of the Finance Committee of the Harbour Trustees, Dundee:—' "The commercial crisis, which commenced in October, 1836, and which extended over Great Britain, Ireland, and the continents of Europe and America, was severely felt in Dundee. Its injurious effects were aggravated by the circumstance, that during the year from 1st June, 1836, to 31st May, 1837, an excessive importation of flax and flax codilla, the raw materials from which the greater part of our exports is manufactured, took place. The flax imported in that year was 22,461 tons, while the average of the four preceding years ended 31st May, 1836, was 15,726 tons, showing an excess of 6,735 tons. In the same manner, the importation of flax codilla being 8,279 tons, exceeded by 3,405 tons the average of the four preceding years, which was 4,874 tons. The consequence was—a great part being held by persons who were dependent upon credit—that the prices fell in a double ratio: first, from the check given to credit,—and, secondly, from the importations being greater than the trade of the place required. Hence D. C. flax—of which a greater quantity is consumed than any other—which in June, 1836, was worth £42 15s., had fallen to £33 in July, 1837; and flax codilla fell, during the same period, from £21 15s., to £17 per ton. Therefore, although the average quantity of flax imported during the three years ended 31st May, 1838, only exceeds the average of the four years ended 31st May, 1836, by 1,845 tons; the former being 17,571, the latter 15,726; and the average of the flax codilla, for the same period, only exceeds by 944 tons, the average for the three years being 5,818, and of the four years, 4,874 tons; yet we see the injurious results arising from the excessive importations from the 1st June, 1836, to 31st May, 1837, amounting to 30,740 tons; the price of the whole being affected according as the excess bears a greater or less ratio to the actual quantities required for consumption.

"On an inspection of the exports, the most gratifying conclusions are to be drawn from the returns of the sheetings, dowlas, sacking, and sailcloth exported. The quantities of the three first-mentioned articles have regularly increased; and though the last year of the latter article falls short of the first year by 4,492 pieces, yet it exceeds the year 1836 by 21,199 pieces. The most important and valuable article of our trade are sheetings. Their value, during the three years, amounts to a third of the whole exports; and, as half of the quantity is said to be used in home consumption, the trade is of the best and surest kind, and the most likely to continue to increase. The next is dowlas, of which 3-4ths are reported to be exported; then follows sailcloth, half of which is exported; and thereafter sacking, of which 2-3ds are supposed to be used for home consumption. The article of Osnaburghs forms a considerable part of our exports, but seems liable to great fluctuations, as the average number of pieces exported during the last three years is only 81,967; while that of the three years ended 31st May, 1835, was 120,784. This probably arises from 9-10ths of

* "The number of weavers in Dundee," says the Report of the Assistant Hand-Loom Weavers' Commissioner, dated 27th March, 1839, "is from 4,000 to 5,000, all engaged on linen fabrics. This was ascertained about the year 1834, from the number of signatures attached to a petition in favour of payment by the yard. The number that signed this petition was 4,673, about 700 of whom resided in Lochee. The account which the witnesses gave," respecting the amount of wages, "rather varied; but they agreed that the average was about 8s. per week, clear of deductions, which might amount to about 1s. 1½d. per week to those working in factories, and 1s. 3½d. to those working in their own premises. The difference of wages made at different fabrics was from 1s. to 2s. per week. (Mr. Easson stated, that, taking the average of 10 men's work (100 pieces) for eight weeks in May and June, 1837, and deducting the charge for winding the weft, the average to each per week was 8s. 1½d. For February and March, 1835 (202 pieces), the average was 9s. 3½d. This he considered a fair average of the earnings of the factory weavers."

the article being exported, and, from the difficulties which the exporters experience, from imperfect information, in regulating the supply to the demand. Whether the great change which has taken place in our colonies by the complete emancipation of the negroes, whose clothing was generally made of this article, will influence this manufacture, can only be ascertained by time. Conjecturing that free labour will not only improve the state of the proprietors but of the labourer, we may anticipate an increase.

Years ended.	Cotton Bagging exported.	Aggregate of each 3 Years.	Yearly average of the 3 Years.
May 31, 1827	Pieces. 44,777	168,611	56,203
.. 1828	63,865		
.. 1829	59,060

.. 1831	65,592		
.. 1832	49,036		
.. 1833	27,179	137,858	45,952
.. 1834	30,521		
.. 1835	80,158		
.. 1836	159,494	262,359	87,453
.. 1837	79,649		
.. 1838	23,216		
Total,	746,839	746,839	62,236

"The value of cotton-bagging, of which 19-20ths are reckoned to be exported, exceeds that of several of the articles enumerated; but the remarkable circumstances attending the exportation of this commodity during the last 12 years, require to be particularly considered. On reference to the return of cotton-bagging, it will be found that the number of pieces exported in the 12 years from 1st June, 1826, to 31st May, 1838, is 746,839, making an annual average of 62,236. The average of the three years ended the 31st May, 1829, is 56,203; of the three years ended the 31st May, 1832, is 59,337; of the three years ended the 31st May, 1835, is 45,952; and of the three years ended the 31st May, 1838, is 87,453. During the first six years of this period, the difference of the annual number of pieces exported was not very great, and the profits of the trade were fair. During the next three years the exportation, as a whole, was moderate, particularly in the two first years, when great profits were realized. This led to an excessive and foolish exportation in the year ended 31st May, 1836, when no less than 159,494 pieces were sent from this port, exceeding the exportation of the whole three years, ended 31st May, 1835, by no less than 21,636 pieces. The crop of American cotton this year, one of the greatest they have ever had, is estimated at 1,700,000 bales, which, allowing a piece of bagging to pack 11 bales, will consume 154,500 pieces. As the Americans themselves furnish one-half of this quantity, the exportation of 1836 was equal to two years' consumption. Hence, although a part of that year's exportation may have been sold at a profit, its ultimate effects, followed by the commercial crisis which took place in the same year, were to depress the prices, and to render the speculations ruinous. The same results which followed the excessive importation of flax have therefore taken place, and before the trade will furnish profits, it will be necessary that more attention be paid to proportion the supply to the demand.

"On taking a general view of the trade during the three years ended 31st May, 1838, it appears that the value of the articles imported, and principally used in our manufactures, amounts to £3,284,585, and that the value of the articles exported in the same period is £4,108,970. This leaves a surplus of £824,385, being a little more than 25 per cent. on the imported value. But as, taking one manufacture with another, the expense of the labour added

to the value of the raw material may be 30 per cent., it follows, that during these three years, the loss sustained by the community, on the whole trade, has been nearly 5 per cent. If each particular year be examined, we find that the value of the imports, in the year ended 31st May, 1836, is £1,253,296. The value of the exports is £1,651,439, being a surplus of about 32 per cent., to meet the 30 per cent. paid for labour, added to the prime cost of the raw material. In the year ended 31st May, 1837, the cost of the imports amounts to £1,248,776, whilst the exports are only valued at £1,284,862, showing a surplus of nearly 3 per cent. to meet 30 per cent., the cost of the labour of converting the raw material into manufactured articles. In the year ended 31st May, 1838, the value of the imports amounts to £782,513, while the amount of the exports reaches £1,172,669, showing an increase of nearly 50 per cent. to meet the additional cost of labour of about 30 per cent., added to the value of the raw materials of which the manufactured articles are composed. This would leave a profit of 20 per cent."

During the year ending April, 1840, the export of manufactured goods was as under:—

Other manufactures than those already mentioned, are the making of 'Dundee kid gloves,' famed over the whole country, chiefly on account of the superior manner in which they are sewed, and made of a fine leather principally imported from England;—sugar-refining, conducted in one sugar-house,—the making of candles and snuff,—the working of iron,—the constructing of machinery,—and the making of hand-cards, and cards for cotton, wool, silk, and tow.

In 1731, the entire shipping belonging to Dundee, Perth, Broughty-ferry, Ferry-Port-on-Craig, and St. Andrews, amounted to 70 vessels, 2,300 tonnage. In 1792, the number of vessels belonging to Dundee alone was 116; tonnage, 8,550. In 1815, a grand impulse began to be given to commerce by the vast improvements which were commenced upon the harbour. In the years 1824, 1829, 1833, 1836, and 1840, the vessels and tonnage were as follows:—

In 1824, 165 vessels,	17,945 tonnage.
In 1829, 225 vessels,	27,150 tonnage.
In 1833, 284 vessels,	35,473 tonnage.
In 1836, 302 vessels,	39,531 tonnage.
In 1840, 324 vessels,	51,135 tonnage.

Several of the larger vessels belonging to companies are employed in whale-fishing. The amount of produce brought home by these vessels in 1833, was 2,020 tons of oil, and 100 tons of whalebone; jointly about £54,000 in value. The vessels next in size trade to the Baltic, the West Indies, North and South America, and other foreign markets, for the manufactures of the town. Many vessels are employed by various shipping companies, in maintaining regular and frequent communication with London, Hull, Newcastle, Leith, Aberdeen, and Glasgow. Numerous small vessels also are employed in the coasting trade, carrying lime and coals, and other bulky cargoes. But the most brilliant and stirring movements in the port are those of steam navigation. With the coast of Fife a communication is maintained hourly during a large portion of the day. The ves-

sel employed on this ferry is of peculiar construction, substantially and handsomely built, and performs the trip across in 20 minutes, allowing 10 minutes at each side for disembarkation and embarkation. The length on the deck is 92 feet, and the breadth about 34. One end, for 32 feet, is 2 feet lower than the rest of the deck, and railed in for carriages and cattle, and has its side-doors fitted with a drawbridge, by which an easy egress is afforded to the quay. The vessel consists of 2 hulls, with a canal between, and is worked by 2 engines of 15 horse power each, placed in the 2 hulls, and driving a paddle adjusted in the intervening canal. So smoothly do they work, as to occasion scarcely any noise or tremour. Two helms, one placed at each end of the vessel, are worked by a wheel and pinion, and when jointly employed, turn the vessel round in very short compass. The machinery is so constructed that either end may be the stern; allowing the vessel to land and start again without losing the time and labour of turning. During a breeze, or across the swell, the motion is much more gentle than that of ordinary steam-boats. The vessel, while peculiar to Dundee, is altogether, though no specimen of beauty or neatness in naval architecture, a fine contrivance for utility, and the very beau-ideal of a ferry-boat. About 100,000 persons are annually conveyed across the estuary by it, besides carriages, horses, and vast numbers of cattle. Steam-boat communication, in a style combining speed with elegance, is maintained daily with Newburgh and Perth, and in summer this communication is extended to Broughty-ferry, and Ferry-Port-on-Craig. An excellent steam navigation is maintained between Dundee and Leith. A powerful steam-vessel, the ill-fated 'Forfarshire,' plied to Hull, till she sank in the fearful catastrophe, which will long live in the recollection of thousands, associated with commendation of the philanthropic heroism of Grace Darling. Three splendid steam-ships, the latest built at an estimated cost of £23,000, maintain communication with London. The first and second, appropriately called 'the Dundee' and 'the Perth,' began to ply in 1834. They are of nearly the same size, measuring 152 feet along the keel, 164 feet along the keel and fore-rake, 28 feet 4 inches between the paddles, and 18 feet from the deck to the floor of the hold. The actual and comparative prosperity of the port, from the commencement of the improvements on the harbour in 1815, till May, 1828, will be shown by the following table of the nett amount of harbour-revenue derived from the shore-dues:—

From July, 1815, to July, 1816,	£4.096
From July, 1816, to July, 1817,	5,558
From July, 1817, to May, 1818,	5,021
From May, 1818, to May, 1819,	5,605
From May, 1819, to May, 1820,	5,605
From May, 1820, to May, 1821,	5,910
From May, 1821, to May, 1822,	5,940
From May, 1822, to May, 1823,	6,683
From May, 1823, to May, 1824,	7,881
From May, 1824, to May, 1825,	7,975
From May, 1825, to May, 1826,	8,055
From May, 1826, to May, 1827,	7,462
From May, 1827, to May, 1828,	9,236

Dundee, long active and somewhat noted for ship-building, appears to be starting a successful career of constructing iron ships. Great progress has recently been made there in this novel but promising species of naval architecture. Mr. Borrie of the Tay foundry, in particular, has lately entered into a contract for constructing iron steam-vessels of about 1,500 tons. One which—early in 1840—he undertook to build, was to be 330 feet in length when fully rigged, 300 feet along the keel, and propelled by 2 engines, each of 250 horse power. As no piece of ground sufficiently capacious for his purpose could be ob-

tained at Dundee, Mr. Borrie leased ground to be fitted up as a building-yard at Broughty-ferry. Mr. Thomas Adamson also has taken premises for a similar purpose.

Two railways leading from Dundee have been constructed respectively to Newtyle, and to Arbroath and Forfar.—The Newtyle railway opens a communication with Strathmore, and was projected under an apprehension that the commerce of that far-extending and populous and fertile valley, as well as that of Perth, might be diverted to Arbroath. This railroad is 11 miles in length, and cost upwards of £100,000. Starting from the north side of Dundee, it ascends an inclined plane over a distance of 800 yards, rising 1 yard in 10; it then passes through a shoulder of Dundee-law, in a tunnel of 340 yards in length; and it afterwards passes along two other inclined planes before reaching Newtyle. This railway has literally perforated the obstruction which the heights behind the town placed in the way of communication with Strathmore, and has already prodigiously increased the traffic between that district and the town. The number of passengers by this line during the year ending April 30, 1840, was 71,004; amount of goods carried 43,192 tons; revenue £8,260. There are branch-lines to Cupar-Angus and Glamis.—The Forfar and Arbroath railway was opened, along the whole line, only on the 2d of April, 1840; but was opened over part of the line 17 months earlier. The distance from Dundee harbour to Arbroath is 16½ miles, and is nearly level throughout; from Arbroath to Forfar 15½ miles, with a rise of 220 feet. This line will probably continue to be the most advantageous line of communication between Dundee and Forfar, though it is twice the length of the turnpike road between these towns. This is owing to the difficulty of crossing the Sidlaw-hills, which intersect the direct line nearly at right angles, the undulations of the intermediate country being also in a great measure parallel to their direction. The summit-level of the Dundee and Newtyle railway is 500 feet above the level of the sea, though it crosses the Sidlaw ridge at the lowest point to be found for 10 miles eastward; whereas the summit-level of the Arbroath and Forfar railway is 280 feet lower, and this height is attained without expense and delay of stationary engines. The revenue of the 2d year amounted to £12,874, and a dividend of 5 per cent. was declared. The discontinuance of all Sunday traffic on this railway was determined by a vote of 277 to 273 shareholders, on June 3d, 1841.

Dundee is excellently accommodated with flesh and fish markets. Its fuel consists of coal, brought chiefly from England. The town, in its streets, in its shops, in its public buildings, and in some of its private houses, is cheerfully lighted up with gas. Altogether, Dundee is behind no town of Scotland in the race of social and civic improvement; and, for a considerable series of years, it has outstripped most in the careerings of commercial enterprise. "In population," says the writer in the New Statistical Account of Scotland, under date December 1833,— "In population, manufactures, and trade, in the luxury and comfort which prevail, Dundee has perhaps advanced faster than any similar town in the kingdom. There are men alive in it who remember when its population was only one-fifth of what it is now,—when its harbour was a crooked wall, often enclosing but a few fishing or smuggling craft,—when its spinning-mills were unknown and unthought of, and its trade hardly worthy of the name. And curious would it be could we anticipate the future, and tell what will be its state when another generation shall have passed away, and other hands shall

perhaps be called to prepare a record of its progress or decline." We were much amused with the following account of Dundee, written in 1678, and now present it to our readers as a curiosity in its way. It is taken from a Description of the County of Angus, originally written in Latin, by Robert Edward, minister of Murroes, and published in the year 1678, along with a pretty large map of the county, executed by the same hand. A copy of this "Description" was found among some loose papers in the House of Panmure about 60 years ago, and being the only copy that could be traced, a translation was made from it and published in 1793, inscribed to the Honourable William Ramsay Maule, now Lord Panmure. After stating that there are five royal burghs in Angus, and specifying four of them, viz., Forfar, Brechin, Montrose, and Arbroath, the following description is given of Dundee, as the fifth:—"But at Dundee, the harbour, by great labour and expense, has been rendered a very safe and agreeable station for vessels; and from this circumstance the town has become the chief emporium, not only of Angus, but of Perthshire. The citizens here (whose houses resemble palaces) are so eminent in regard to their skill and industry, that they have got more rivals than equals in the kingdom. The town is divided into four principal streets, which we may suppose to represent a human body, stretched on its back, with its arms towards the west, and its thighs and legs towards the east. The steeple represents the head, with an enormous neck, rising upwards of eighteen stories into the clouds, and surrounded with two battlements or galleries, one in the middle, and another at the top, like a crown adorning the head, whose loud-sounding tongue daily calls the people to worship. The right hand is stretched forth to the poor, for there is a large and well-furnished hospital on that side; but the left hand, because nearer the heart, is more elevated towards heaven than the right, indicating a devout mind panting after celestial enjoyments. In the inmost recesses of the breast stand the sacred temples of God. So remarkable were the people of this place for their adherence to true religion, that, at the Reformation, it was honoured with the appellation of a second Geneva. On the left breast is a Christian burying-place, richly and piously ornamented, that the pious dead may be long held in veneration and esteem. In the belly is the market-place, at the middle of which is the cross, like the navel in the body. Below the loins stand the shambles, which, as they are in a proper place, so are they very neat and convenient, having a hidden stream of fresh water, which, after wandering through the pleasant meadows on the left, runs under them; and having thus, as it were, scoured the veins and intestines of the town, is afterwards discharged into the river. Here the thighs and legs are separated. The sea approaching the right invites to the trade and commerce of foreign countries; and the left limb, separated for the right a full step, points to home trade in the northern parts of the county." Such is the account given of Dundee in 1678; and if the writer of the above were now to view the human body which he so minutely describes, we doubt not that, owing to the huge corpulency and great stature it has attained in the course of eightscore years, he would be much puzzled to trace out the features of the child in the full-grown man.

By act of 3^d and 4th William IV. the town-council of Dundee is fixed at 20, exclusive of the dean-of-guild, who has a seat *ex officio*. All the councillors retire in a cycle of 3 years, 6 the first year, and 7 the second and the third; and, the burgh being divided into 3 districts, 2 are returned each year by each district, and 3 the second and the third year by

the first district. The magistrates are a provost and four bailies,—the provost being chief magistrate. They exercise jurisdiction over the whole ancient and extended royalty, including all the suburbs and urban population. They try questions of debt to any amount; and all criminal cases within burgh. There is a sheriff-substitute in Dundee, whose jurisdiction is cumulative with that of the magistrates within the royalty, and at the same time extends over a portion of the county of Forfar, forming the parishes of Dundee. The magistrates have the appointment of the town-clerks, procurator-fiscal, chamberlain, collector of cess, jailer, and other city-officers. The town-clerk and procurator-fiscal are appointed *ad vitam aut culpam*; the other officers hold their appointments during the pleasure of the council. There are five churches of the Establishment within the burgh of Dundee, of which the magistrates and council are patrons. The guild-burgesses—about 750 in number—enjoy the exclusive privilege of carrying on trade within the burgh; and are possessed of funds, secured upon heritable bonds, amounting at Michaelmas, 1832, to about £2,000. There are nine incorporated trades and three united trades of Dundee, all enjoying the exclusive privilege of exercising their crafts within the burgh, and possessing funds which are employed chiefly in giving assistance to decayed members and widows. The police of Dundee is now regulated by statute passed in 1837 [7th Will. IV. c. 109], by which the town is divided into eleven wards, and the provost, four bailies, dean-of-guild, the sheriff of the county, and his substitute for the Dundee district, together with two general commissioners for each ward, are appointed general commissioners for the purposes of the act. There are also two resident commissioners chosen for each ward; both the general and resident commissioners are chosen by the persons occupying houses or other premises within their respective wards, valued at £2 and upwards of yearly rent. The general commissioners for each ward are head constables.—The public property of the town consists of lands, houses, churches, and salmon-fishings; and in 1833, was estimated at £123,447 10s. 10d. The revenue of the burgh in 1692, was £279 4s. 6d. In 1788, it was £2,820 8s. 8½d. The present ordinary revenue, arising from lands, houses, fishings, &c., feu-duties, ground annuals, vicarage-duties, malture-malt, interest of money from petty customs, burgesses' entries, duty of 2d. Scots on the pint of ale, rent of shops, rent of kirk-roads, and duty on coals paid to kirk-fund, and church seat-rents, is £7,011 11s. 3½d. There was also a casual revenue, in 1833, of £528 4s. 11d., making the total revenue of the year £7,539 16s. 2½d.* The revenue, in 1838-9, was £7,936 7s. 7d.

* At a meeting of the Town-council held at the close of 1837, Mr. Moyes produced and read an abstract of the income and expenditure of the town from 26th September, 1831, to 6th November, 1837. He then read the following resolutions, and moved their adoption.

"1. That from an abstract of the revenue and expenditure of the burgh from 26th September, 1831, to 30th September, 1840, made up by the Town-chamberlain, it appears, that, during the six years ending 6th November, 1837, the expenditure of the burgh exceeded the income to the extent of £12,840 0s. 6d., or £2,150 0s. 1d. per annum.

"2. That, notwithstanding this great and continued deficiency in the revenue, the Town-council, in the year 1834, engaged in attempts to introduce water into the town by means of compulsory assessment, contrary to the wishes of a large number of their constituents, as well as of the owners of property in Dundee; and during that and the three following years debts were incurred, or are alleged to have been incurred, relative to the matter of the water, to the extent of £15,031 2s. 11½d.

"3. That it thus appears, that from September, 1831, to November, 1837, the expenditure of the burgh exceeded the income to the extent of £27,871 3s. 5½d.

"4. That by the act 3 George IV., cap. 91, § 11, it is enacted, 'that it shall not be lawful for the magistrates or the Town-council of any burgh to contract any debt, grant any obligation,

Dundee formerly united with Perth, Cupar-Fife, St. Andrews, and Forfar, in sending one member to parliament; but under the reform act it returns a member for itself and suburbs. In 1839, the parliamentary constituency was 2,740; the municipal 2,693. Pop. of burgh and parish, in 1801, 26,084; in 1831, 45,355; in 1841, 63,825. Houses, in 1841, 14,078.

Previous to the act of assembly in 1834, the whole burgh of Dundee, with a considerable landward territory, formed only one parish. This, for convenience, was divided into several districts, over each of which a minister and his elders presided. Since then the original parish has been divided *quoad sacra* into 12 separate parishes.

1st, ST. MARY'S, comprehends the rural district of the original parish, together with a portion of the suburbs of the town. Population, in 1837, 5,395; of whom 3,384 belonged to the Establishment. Two places of worship, the Old church, with 1,094 sittings, and the South, with 1,354, both supposed to have been built in the 10th or 11th century, and of late thoroughly repaired, were used, previous to the

make any agreement, or enter into any engagement, which shall have the effect of binding them or their successors in office, unless an act of council shall have been previously made in that behalf.' And as a doubt has recently been started whether the predecessors in office of this council did, by act or acts of council, authorize the various accounts as to the water bills (payment of which is now sought from the council) to be incurred, so as to render it incumbent on this or any succeeding council to discharge them, the council now recommends to their successors in office to make inquiry how far the provisions of the foresaid act in relation to the several water accounts were complied with, and thereafter to proceed as they shall be advised.

"5. That, from the abstract of the income and expenditure before referred to, it appears that the expenditure of the burgh during the period from 7th November, 1837, to 30th September, 1840, exceeded the income by £7,187 13s. 1d. or £2,395 17s. 5d. per annum.

"6. That the additional interest chargeable against the burgh, in consequence of the extra expenditure during the six years ending 7th November, 1837, exceeds £1,000 per annum.

"7. That, besides this yearly interest, the foresaid sum of £7,187 includes £999 4s. 3d. paid to the managers of the burgh, and other accounts, amounting to £1,144 11s. 10d.—all which sums were incurred previous to November, 1837; and deducting them and the said interest (in all £5,143 16s. 1d.) from the total extra expenditure for the three years since November, 1837, the actual extra expenditure beyond the income from that time to 30th September last, amounts to £2,043 16s. 11d., or £681 5s. 7d. per annum.

"8. That, under all these circumstances, it is the opinion of this council that the resolution of the Committee on the Funds of the Town, dated 13th October current, and approved of by the council, should be strictly adhered to for the future."

Mr. Easson then seconded the resolutions, which were adopted—the dean-of-guild dissenting. Very little discussion took place on these resolutions; but Mr. Moyes read the following abstract of the chamberlain's report:—

Income and Expenditure of the Town, from 26th September, 1831, to 6th November, 1837,—abridged by Mr. Moyes.			
	Yearly Expenditure and Income.		Deficiency.
Ordinary expenditure for the above period,	£18,760	£8,126	
Ordinary income for the same period,	45,015	7,507	
	£3,717		£619
Extraordinary expenditure,	£10,344	£1,724	
Extraordinary income,	1,221	203	1,520
	£9,122		£62,140
From November 6th, 1837, to September 30th, 1840.			
Ordinary expenditure,	£25,684	£8,561	
Ordinary income,	23,917	7,972	
	£1,767		£589
Extraordinary expenditure,	£5,455	£1,818	
Extraordinary income,	35	11	£1,806
	£5,420		£2,355
Deficiency on ordinary expenditure from 1831 to 1837,	£3,717		
Do. Extraordinary do. do. 9,122		£12,540	
Do. on Ordinary do. from 1837 to 1840, 1,767			
Do. Extraordinary do. do. 5,420		£7,187	£20,027
Paid on account of Water Bills, Claimed as due for Water Bills,	£11,976		
	3,054		
			15,031
			£35,059

late fire, in common by the congregation of St. Mary's, and by those of the second and the third parishes. Stipend £286 10s. 7d.; glebe £25. Unappropriated teinds £48 13s. 11d.

2d, ST. PAUL'S. This is wholly a town-parish, about $\frac{1}{2}$ a-mile square. Population, in 1837, 3,969 of whom 2,335 belonged to the Establishment. Stipend of the minister £274 17s. 2d.; of the assistant and successor, who is also parochial missionary, £95.—The fourth United Secession congregation was established in February 1837. The church is rented for £44 a-year, and has 420 sittings.—The Original Seceder congregation was established in 1818. The church was purchased from a Relief congregation for £650, and repaired at an expense of £100. Sittings 900. Stipend £120.—The Baptist congregation of the Meadows was established in 1810. The chapel is the upper flat of an edifice, built in 1835, at a cost of £1,400. Sittings 300. No stipend.—The Society of Friends' congregation was organized about 1833, and meets in a dwelling-house. No stipend.—The Pædobaptist Berean congregation was established about 1778, and assembles in a school-room rented at £5. Sittings 125. No stipend.—The Baptist Berean congregation, formerly one with the preceding, meets in the Wrights' hall, Nethergate, rented at £5. Sittings 125. No stipend.—The congregation in Ranken's close has no particular denomination, was established in 1832, and meets in a large flat rented at £9. Sittings 80. No stipend.

3d, GREYFRIARS. This parish includes about one-eighth of the town and suburbs. Population, in 1837, 4,991; of whom 3,398 belonged to the Establishment. Stipend £275 1s. 8d.—The Established church Gaelic chapel had not, in 1837, any parish attached to it; but was designed for the whole Gaelic population, estimated at from 600 to 700. Sittings 391. Stipend about £110.—The first United Secession congregation was established in 1745. The church, situated in School-wynd, was built in 1825, and cost upwards of £2,000. Sittings 1,010. Stipend £200, with an allowance of £20 for sacramental expenses.—The second United Secession congregation was established in 1747. The church used in 1837 was built in 1764, and had 750 sittings. But a new and very commodious church was opened in Constitution-street in 1840. Stipend of senior minister £120, with a house; of junior minister £120.—The Original Burgher congregation is supposed to have been established about the year 1745. The church, situated in Barrack-street, was built in 1814, and subsequently enlarged, at an entire expense of £1,769 16s. 4d. Sittings 756. Stipend £175.—The Congregational church assembling in Constitution-street was established in 1800. The chapel was built in 1833, and cost £3,000. Sittings 1,250. Stipend £300.—The Old Scotch Independent congregation was established in 1771, and meets in the upper flat of an edifice, built in 1826, and fitted up as a chapel. Sittings 160. No stipend.—The New Jerusalem congregation was established in 1817, and assembles in a hall rented at £4. Sittings 250. No stipend.—The Wesleyan Methodist congregation was established in 1764. The chapel was purchased in 1788 for £300. Sittings 522. Stipend £120.—The United Methodist congregation was established in 1835. The chapel, situated in Lindsay-street, was built in 1838, and cost about £2,000. Sittings 1,035. Stipend £104.—The United Christian congregation was established in 1830, and, in 1837, assembled in the Scotch Episcopal chapel, rented at £7, and containing 600 sittings. But a new and commodious chapel has since been built at a cost of about £1,800. Sittings 1,150

Stipend £100.—The congregation of the Holy Apostolic Catholic church was established in 1836, and assemblies in a hall rented at £35. Stipend variable.—The Unitarian congregation was established in 1834. Sittings 300. Salary £74.

4th, ST. JOHN'S. The greatest length of this parish is about half-a-mile. Population, in 1837, upwards of 5,000. The parish-church, usually called the Cross church, has been used as a place of worship during the last 100 years, and was altered and enlarged in 1830. Sittings 1,037. Stipend £275.—The third United Secession congregation was established in 1832. The church was built in 1834, and cost £2,300. Sittings 1,014. Stipend £200.—The Relief congregation was established in 1820. The chapel, built in 1792, was purchased in 1833 for £1,000. Sittings 870. Stipend £100.—The Roman Catholic congregation was established about 1790. The chapel was built in 1836, and cost about £6,000. Sittings 1,182.

5th, ST. CLEMENT'S. This is wholly a town-parish; $\frac{3}{4}$ of a mile in extreme length, and $\frac{1}{4}$ of a mile in extreme breadth. Population, in 1837, 6,446; of whom 3,917 belonged to the Establishment. The parish-church, usually called the Steeple-church, was rebuilt about 1782. Sittings 1,463. Stipend £300.—The Episcopalian congregation of St. Paul's was established at a remote period. The church was built in 1812, and cost £3,686 14s. Sittings 504. Stipend £200.—The Baptist congregation, north side of Seagate, was organized in 1769. The chapel was built in 1789, and cost £420. Sittings 300. Stipend £20.—The Baptist congregation, south side of Seagate, was established about 1790. The chapel cost upwards of £500. Sittings 250. No stipend.—The Reformed Presbyterian congregation was organized in 1831. This parish is partly landward but chiefly town. It measures in extreme length, 1 mile; in extreme breadth, $\frac{3}{4}$ of a mile. Population, in 1837, including that of Hillton parish [see below], 8,723; of whom 4,360 belonged to the Establishment. The church was built in 1774, and cost £3,000. Sittings 1,486. Stipend of the incumbent £70; of the assistant and successor £100.—The Primitive Methodist congregation was established in 1835; and meets in a building fitted up as a chapel, rented at £15. Sittings 170. Stipend £44.—The Glassite chapel was built in 1732.

7th, ST. DAVID'S. This parish is chiefly town, but includes a small landward district, and also comprises a small part of the *quoad civilia* parish of Liff. Its greatest length is about 2 miles; greatest breadth about $\frac{3}{4}$ of a mile. Population, in 1837, including that of Dudhope [see below], 8,384. The parish-church was built in 1800 by the Haldanites; and, in 1822, was bought and fitted up by the town-council at an expense of £2,221 6s. Sittings 1,608. Stipend £275.

8th, CHAPELSHADE. This parish is partly landward and partly town: greatest length, $1\frac{1}{2}$ mile; greatest breadth 1 mile. Population, in 1837, 7,320; of whom 3,538 belonged to the Establishment. The church was built as a Relief chapel in 1789, and was united to the Establishment as a chapel-of-ease in 1791. In 1830 it was enlarged to the extent of 500 additional sittings, at a cost of £880. Sittings 1,280. Stipend £150.

9th, ST. PETER'S. This is a suburban parish, extending about a mile into the country. It measures, in extreme length, $1\frac{1}{2}$ mile; in extreme breadth, about $\frac{1}{4}$ of a mile; and in area, about 240 acres. Population, in 1837, estimated at 4,000. Stipend £220, with £12 for communion expenses.

10th, HILLTON. This is a newly erected *quoad sacra* parish, having been cut off from St. Andrews parish in 1838. It includes nearly all the suburban and all the landward part of that parish. The population is about 4,000. The stipend averages £170. There are a private school, and an infant school, in this parish, and a commodious parish-school is about to be erected beside the church.

11th, DUDHOPE. This *quoad sacra* parish is chiefly composed of the western portion of the former parish of St. David's. Its population is about 2,200. The church is elegant and commodious, and contains about 1,050 sittings. Stipend £150.

12th, WALLACETOWN. This *quoad sacra* parish embraces a suburban district of about half-a-mile in length, and a quarter-of-a-mile in breadth, containing a population of about 3,000. Its church cost £2,700, and seats 1,075. Stipend £150. There are a school attached to the church, and an efficient infant-school, and school-of-industry, in this parish.

The parliamentary documents on the state of education in Dundee, follow the ecclesiastical division which existed in 1834, and exhibit the town and original parish, not in 12 districts, but in 7.—1st, Cowgate district. There were 9 schools, all non-parochial, and attended by an average of 435 scholars, being fewer than 1 in 19 of the population.—2d, Chapelshade district. There were 7 schools, all non-parochial, attended by 503.—3d, St. Clement's parish. There were 5 schools, all non-parochial, attended by 645.—4th, Greyfriars' parish. There were 5 schools, all non-parochial.—5th, Hawkhill district. There were 10 schools, all non-parochial, attended by 900.—6th, St. Mary's parish. There were 5 schools, all non-parochial, but free, attended by 1,065 scholars.—7th, St. Paul's parish. There were 13 schools, all non-parochial. Seven were endowed. One of these is an academy, one a grammar-school, and one a sessional school, attended by 500 children.

Among many celebrated natives and citizens of Dundee, may be mentioned, Alexander Scrymgeour, one of the heroic companions of Wallace, and the first of Dundee's hereditary constables;—Sir John Scrymgeour, one of the former's descendants, who became Viscount of Dudhope, and adhering to Charles I, fell in the battle of Marston-muir;—Hector Boethius, the Scottish historian, in 1470, the Principal of King's college, Aberdeen, and one of the revivers of elegant literature;—Robert Pittlock, now called Patullo, who, as first Captain of the Scottish guard, in the service of France, acquired distinguished military honours under Charles VII.;—James Halliburton, one of the earliest and ablest of the Scottish reformers, through whose influence Dundee became the first town of Scotland in which the reformed religion was openly professed;—George Mackenzie, Lord-advocate of Scotland, author of the 'Institutes of the Scots Law,' and founder of the Advocates' library of Edinburgh;—John Mar, the constructor, in the 17th century, of a curious chart of the North sea and the frith of Tay, which cannot, even at the present day, be excelled in correct illustration;—George Yeaman of Murie, the representative of the town in the last Scottish or Union parliament, and one of the ablest and most patriotic legislators of his country;—Dr. John Willison, the well-known and cherished author of 'The Afflicted Man's Companion';—Robert Fergusson the poet, and Robert Stewart, a friend of his, and an eminently literary man;—James Weir and James Ivory, teachers in the Dundee seminary, and profound mathematicians;—Admiral Duncan, the hero of Camperdown, and of many other naval fights;—Dr. Robert Small, the author of a luminous view of the astronomical discoveries

of Kepler, and of many valuable papers in the Transactions of the Royal Society of Edinburgh.—To these might be added Alexander Wedderburn, 1st Earl of Rosslyn; and Charles Middleton, 1st Lord Barham. Dundee has even claimed Sir William Wallace as a native.

Dundee was formerly fortified with walls, begun by the English, and completed, in 1547, by the French. The existence and even the position of its gates are commemorated in the names of its streets, Nethergate, Overgate, Seagate, and Murraygate,—the first formerly called Fluckergate, and the second Argylegate. The town was at an early period a royal burgh. In the 12th century David, prince of Scotland, Earl of Huntingdon, the hero of Sir Walter Scott's graphic and exciting story of the Talisman, landed at Dundee on his return from the crusades; and, in fulfilment of some vows which he had made in the spirit of the period, he built a gorgeous church, and surmounted it with the magnificent tower which still forms the most striking feature in a scenic picture of the burgh. Dundee was twice taken by Edward I., pillaged of its records, robbed of its property, defaced in its churches, and even burned to the ground; and, though burned a third time during the inroad made to Scotland, in 1385, by the Duke of Lancaster, it speedily towered to an eminence of prosperity greater than it had ever attained previous to its disasters. At the period of the Reformation it was the first town in Scotland which publicly renounced popery; and it became so noted for the energetic and uncompromising spirit of its protestantism as to acquire the title of the "Second Geneva." General Monk encountered a stubborn, prolonged, and sanguinary resistance beneath the walls of Dundee; and when, at length, he took the town by assault, he repaid the bravery of its burghers and of numerous strangers who had fled to it for refuge, by abandoning it to pillage. So great was the spoil, that each soldier in Monk's army received for his share nearly £60 sterling,—a sum, in the comparative value of money at the period, truly wonderful. Once more, however, the town speedily emerged, in a degree, though not fully, from its calamities; and thenceforth ceased to be the theatre of any such events as ensanguine the pages of its previous annals.

Dundee has at two periods given noble titles. Sir John Scrymgeour, of the family who were long constables of the town and standard-bearers to the King of Scotland, was created Viscount Dundee, in 1641; and his second successor, the third Viscount, was created Earl of Dundee in 1661. On the latter's death, without immediate heirs, the Scrymgeours of Birkhill, now Wedderburn of Wedderburn, were defrauded of their inheritance. In 1686 the estates—after having been for a time in the possession of Maitland of Hatton—were bestowed by James VII. on Captain John Graham of Claverhouse. This man, of infamous memory in the history of the persecution of Scotland's Worthies, was, in 1688, created Viscount Dundee. On his death, a few months afterwards, at the battle of Killiecrankie, the estates were finally conferred by King William on the family of Douglas.

DUNDEE AND ARBROATH RAILWAY.—An act for incorporating this company received the royal assent on the 6th May, 1836, (6th William IV., cap. 32,) and passed through both houses of parliament with little or no opposition. The company broke ground in August, 1836; and the whole line was completed in less than three years. This line was constructed for the purpose of uniting the towns of Dundee and Arbroath, between which there is a considerable trade carried on. It commences

at Trades'-lane, Dundee, and takes an easterly direction, running parallel with Dock-street on the north, and the proposed New Wet Docks on the south; it then continues through an arm of the Tay for about a mile, when it enters a very deep rock-cutting on the Craigie estate. Proceeding still eastward, it crosses at two different points the road between Dundee and Broughty-ferry. Broughty-ferry is distant from Dundee by railway, $3\frac{1}{2}$ miles, and the depot at this favourite bathing-village is very handsome and commodious. Here the company's workshops for repairing their engines, carriages, &c., are situated, and they are very commodious. On leaving Broughty-ferry it takes its course along Broughty-ferry links, and proceeds through barren sands, of little or no value, until it reaches the thriving village of Carnoustie, between Broughty-ferry and Carnoustie. There is a small station at Monifieth, but at this place there is little business done. From Carnoustie to Arbroath, a distance of $6\frac{1}{2}$ miles, there is little to interest the traveller. On approaching Arbroath the line takes a very sharp curve of $\frac{1}{4}$ mile radius. Were this curve in the centre of the line, or where the trains went at high velocities, it might be considered dangerous; but as it is placed close upon the Arbroath depot, it is rather an advantage in bringing up the speed of the trains than otherwise. At Arbroath the station is most commodious, and the accommodation for passengers excellent. There is a branch from this station to the harbour of Arbroath, where it joins the Arbroath and Forfar railway. Close upon the depot stands the Bell-rock signal-tower, from whence a communication is kept up with the men stationed upon the Bell-rock light-house. This line, from the favourable gradients, easily obtained, (the ruling one being 1 in 1,200,) and the little value of the land through which it goes, has been constructed at a much less cost than any other railway in Great Britain, viz., £6,460 per mile: and this too with a double line of rails. The rails are 56 lbs. to the yard, and the bearings are three yards apart; it is principally laid upon stone-blocks, and the gauge, or width of rails, is 5 feet 6 inches. This is rather an uncommon gauge, and it is much to be regretted that it has not been more generally adopted, as it admits of more room for the complex machinery of the locomotive engine, and gives greater steadiness to the carriages when in motion. The length of the line from Dundee to Arbroath is $16\frac{1}{2}$ miles; and it passes through the parishes of Monifieth, Barry, Panbride, St. Vigeans, and Arbirlot. There are a number of beautifully executed bridges both under and over this line; and the bulwark, or sea-wall, which runs from Dundee to the deep cutting at Craigie, is a work of great magnitude, showing, in an eminent degree, the skill and ingenuity of the company's engineer, Mr. Miller, of Grainger and Miller, Edinburgh, under whose direction the whole line was planned and executed. It was first partially opened for passengers, from Craigie to Arbroath, on the 6th October, 1838; to the Rood yards of Dundee, on the 3d June, 1839; and the whole line, from Trades'-lane, Dundee, to Arbroath, was opened on the 1st April, 1840. The capital of the company is £100,000, in 4,000 shares of £25 each, with power to borrow an additional sum of £40,000 in security of the works. But this has been found barely sufficient to complete the line, and furnish a sufficient supply of "plant" or stock of working materials; and an act has been obtained lately, authorizing the creation of additional stock to the amount of £50,000. The fares between Dundee and Arbroath, are—First class, 2s. 6d.; Second do., 2s.; Third do., 1s. 6d.; and the distance is performed in 55 minutes.

DUNDELCHACK (Loch), a lake in the parish of Daviot, Inverness-shire. It is about 6 miles long, and $1\frac{1}{2}$ broad. It never freezes in winter, but very readily in spring, by one night's frost, in calm weather. It pours its waters, by a small stream, into the Nairn, forming in its course several beautiful lochlets.

DUNDONALD,* a parish in the north-west of Kyle, on the coast of Ayrshire. It is bounded on the north by Irvine water, which separates it from Irvine, Dreghorn, and Kilmaurs; on the east by Riccarton and Craigie; on the south-east by Symington and Monkton; and on the south-west and west by the frith of Clyde. From a bend in Irvine water, before that stream enters Irvine harbour, the parish extends southward along the coast $7\frac{1}{2}$ miles; in its greatest breadth it extends between 6 and 7 miles; and it contains an area of about 17 square miles. It is divided from south to north into two nearly equal parts, by the low range called the Claven hills, and afterwards by Shewalton moss. The upper or eastern section is a rolling surface of gentle eminences, adorned with clumps and belts of plantation; and consists, in general, of a fertile, loamy clay. The lower or western section is nearly a dead flat; immediately on the coast, except around Troon, and in some other spots, it is sandy and barren; and from half-a-mile inland, it has an excellent soil, and is in a state of fine cultivation. The promontory of Troon, protruding $1\frac{1}{4}$ mile into the sea, and not $\frac{1}{4}$ mile of average breadth, forms a fine feature in the landscape of the Ayrshire coast, as seen from the eminences south-eastward of Ayr. The Claven hills range south-eastward about 3 miles, and south-westward about $1\frac{1}{2}$ mile, and are all either under culture, in pasturage, or covered with plantation. They are so low as not to bear comparison with the other hills of the county, yet have long been distinguished by particular names. One of the largest is called Warley hill,—probably a corruption of 'warlike;' and bears on its summits the vestiges of two encampments. The Norwegians who landed near Ayr, and were afterwards defeated at Largs, it is thought, fortified this hill; and they here were not only on a post of great security from the hostile warlike appliances of their period, but enjoyed a delightful and extensive view over the rich amphitheatre of Cunningham and Kyle, and the picturesque attractions of the frith of Clyde. On a rising ground, near the village of Dundonald, stands the ruin of Dundonald castle, described below. Westward of the castle is a very beautiful sylvan bank, nearly a mile in length, and, in most places, upwards of 100 feet in height. In a grand curvature of this bank, and on a gentle eminence, stands the house of Auchans, for a long period the residence of the Wallaces of Dundonald; afterwards, about 1640, the property of Sir William Cochrane of Loudon, who was created Earl of Dundonald; and subsequently the possession of the Earls of Eglinton. At the Auchans are the remains of a small orchard, which was once in high reputation. The pear, well-known in Scotland by the name of Auchans, derived that name from this place. The tree came originally from France, was planted in this orchard, grew to a great height, and was, not long ago, blown down by a storm. It appears that the Wallaces had preceded the noble family of Dundonald in the possession of this property, as well as that of Auchans: for Douglas mentions John Wallace of Dundonald and Auchans, as having married a daughter of David Stuart of Castlemilk, some time posterior to the year 1570. Both father and son, of the same name, are mentioned as proprietors of Dundon-

* The name means 'Donald's hill,' or 'fort,' and must have been derived from an eminence within its limits surmounted by a stronghold.

ald, A. D. 1572. Plantations, especially around Auchans, are large. Shewalton moss, nearly 4 miles in circumference, affords an inexhaustible supply of peat. Coal abounds, and is worked in large quantities for exportation. The parish is traversed south-westward by the railway from Kilmarnock to Troon, and southward along the coast by the great railway between Glasgow and Ayr; it is intersected, in various directions, by 7 or 8 lines of road, and it has harbours at Troon, Halfway or Irvine. Its villages are Troon [See Troon], Dundonald, Fairlie, Shewalton, Loans, and Halfway. The last is a suburb of Irvine. In 1836, Troon had a population of 1,088; Fairlie and Shewalton, of 505, chiefly colliers; Dundonald and Loans, of 505, consisting principally of handloom weavers and handicraftsmen; and Halfway, 2,571, consisting chiefly of seamen, ship-carpenters, and persons employed about the harbour. Population of the parish, in 1801, 1,240; in 1831, 5,579.* Houses 685. Assessed property, in 1815, £14,385.—Dundonald is in the presbytery of Ayr, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend £256 2s. 11d.; glebe £8. Unappropriated tithes £647 1s. 5d.—The parish-church was built in 1803, and repaired in 1835; sittings 611. In 1836 an additional church was erected at Troon, having 900 sittings; and another was about to be erected at Halfway, with from 800 to 1,000 sittings. Both were intended to be made parish-churches, *quoad sacra*.—The United Secession built at Troon a chapel in 1822 or 1823, with 289 sittings; and though they for a time abandoned it, they have recently had their people there recongregated.—In 1836, according to the report of the religious instruction commission, there were in the parish persons belonging to the Established church, 3,960; belonging to other denominations, 1,878; not known to belong to any denomination, 29: total, 5,867. Parish schoolmaster's salary £29 18s. 9d., with about £50 of other emoluments. There are 10 schools not parochial,—3 of them exclusively for females.—The parish of Dundonald anciently comprehended, on the east, the chapelry of Riccarton, which was erected into a separate parish long before the Reformation; and, on the south, the chapelry of Crossby, now included in the united parishes of Monkton and Prestwick. The church, along with its two chapels, belonged to the monks of Paisley, and was served by a vicar.

Dundonald castle has never made any conspicuous appearance in our national history; but it claims attention as having been the residence of some of our princes of the house of Stuart. It is situated on the coast of the frith of Clyde, in the above parish. This castle gives name to the earldom in the family of Cochrane; but the rising ground on which the castle stands, with 5 roods of land adjoining, is all the property in this parish which now pertains to that family. No authentic record can be produced as to the time when the castle was built, or when it was spoiled of its roof, and rendered desolate. A large pile still remains. The walls are very thick, and built of whinstone, which abounds in the vicinity. The corners are of a freestone superior in quality to any now found in the parish. The Stuart arms are engrossed in different parts of the building, and the whole has much the form of those castles which were raised in many places of Britain during the 12th and 13th centuries. "The manor and par-

* The vast difference between the population in 1801 and 1831, is not all increase. For since 1821, the villages of Troon, Halfway, and Sherratton, were detached from the parish of Irvine, and annexed to that of Dundonald. In 1831, these alone contained 2,516 of the population; and in the census of 1801, they of course do not appear, or appear only in the parish of Irvine.

ish of Dundonald belonged to Walter, the son of Alan, the first Stewart, who held the whole of the northern half of Kyle, in the beginning of the reign of William the Lion; and it might have been granted to him by David I., or his successor Malcolm IV. Perhaps the castle of Dundonald was built by the first Walter, who had no appropriate house or castle when he settled in Scotland. It seems to have been the only castle which the Stewarts had in their extensive barony of Kyle Stewart; but several of their vassals had small castles in that district." [*'Caledonia,'* vol. iii. p. 508.]—Some writers have asserted—although perhaps rather on doubtful authority—that Walter, the first of this name, and son of Fleance, received from Malcolm Canmore the baronies of Strathgrief, or Renfrew, and Kyle, in lieu of his pretensions to Lochaber. We do not know that the name of this place occurs before the mention that is made of it in the designation of Walter, the third of this Christian name, who is designed 'of Dundonald.' He was made Justiciary of Scotland by Alexander II., in 1230. It was his son Alexander who behaved so gallantly in the battle of Largs, against the Norwegians. "The castle of Dundonald," says Chalmers, "became the retreat of Robert II., after his retirement from government, upon the death of James, Earl of Douglas, at Otterburn, in 1388." He must, however, before this date, have occasionally made this the place of his residence: for Sir John Kennedy, of Dunure, having endowed a chapel adjoining to the burial-place of the parish-church of Maybole, this grant is confirmed by Robert II. at Dumdounald, 4th December, 1371.* Robert II., after he ascended the throne, lived much in Dundonald castle, wherein he died in 1390. This event is particularly commemorated by the good prior of St. Serf's Inch in Lochlevin:

The second Robert of Scotland Kyng,
As God purvaid, maid endyng
At Dumdounald in his cuntre.
Of a short seknes thare deyed he.

WYNTOUN, B. ix. c. 10, v. 3.

In the same fortress, his mild, but unfortunate, son and successor, Robert III. occasionally resided.† We need scarcely remind the reader, that this prince had been baptized by the name of John; but that this being deemed an unlucky name—as exemplified in the history of King John of England, of John Baliol, and of John, king of France—it was, at his accession, judged expedient that he should assume that of Robert. Hence, in the language of the vulgar, he was commonly known by the sobriquet of John Fernyeir, equivalent to "John of the last year," or "he who was formerly called John." His first title of honour seems to have been Lord of Kyle; afterwards he was Earl of Carrick; as we learn from Wyntoun:—

Syne eftyrwartis all a while
Wyth a gret folk the Lord of Kyle,
That syne was Erie of Karryke,
And alsa Prynce of our kynryk,

* Wood's Doug. Peerage, i. 325. Reg. Mag. Six. p. 83, No. 282. The orthography appears more correct in Robertson's Index, p. 93, No. 282, where it is *Dundounald*.

† This, it would seem, may be fairly assumed from the supplies provided for the royal family here. As Irvine was the nearest sea-port to Dundonald, and only a few miles distant from it, there is extant a Comptum of 1396,—in which it is stated, that there was paid to the burgesses of Irvine, in different instalments, for the use of the house of "our Lord the King," for goods in vessels and other utensils, ordered by the King's letters under his own seal, £13 3s. 4d.; and to the officers of the king's house, for their services for that year, £23 18s. 8d. [Rotul. Compt. ii. 345.] There is another, of the baillies of Irwyn, A. D. 1398, for money paid for the proper use of "our Lord the King." From the same source, we learn that herrings had formed no inconsiderable part of the provision made for the royal family. For a charge is stated "for the purchase of six thousand nayse of herrings for the use of the King," A. D. 1402. This Comptum, however, apparently refers to Perth.

Made in Annandirale a rade.
And sa lang tyme thare-in he bade,
Q'hill all the folk of that cuntre
Consentyt Scottis men to be.

CRONYKIL, B. viii. c. 42, v. 197.

It would appear, that the title above referred to was not, like that of Earl of Carrick, connected with the dignity of heir apparent, but had been given to him, as a younger son, from the patrimonial inheritance of the Stewarts. This good prince terminated his unhappy reign, April 4th, 1406. According to Pinkerton, this event took place at the castle of Rothsay in Bute. This corresponds with the account given by the continuator of Fordun, and by Skene in his 'Table of all the Kings of Scotland.' But Ruddiman, David Macpherson, and others, give the preference to Wyntoun's testimony, who says that he died at Dundonald:—

A thousand and foure hundyr yere
To tha the sext all reknyt clere,—
Robert the third, our Lord the Kyng,
Maid at Dundonald his endyng.

CRONYKIL, B. ix. c. 26, v. 1.

Not far from this royal seat, the remains of an ancient ecclesiastical foundation are still to be seen, popularly denominated, 'Our Lady Kirk of Kyle;' but the time of its erection is quite unknown. This chapel was called Capella de la Grace, as appears from a charter of James IV., A. D. 1490. From its vicinity to Dundonald, it seems to have, at least, occasionally received some special tokens of royal favour. For the same prince, we are told, never passed through that part of the country without making an offering at 'Our Lady's Kirk of Kyle.' It appears that belonging to this establishment, there was a very useful minister of the church of Rome, who was commonly known as "Our Lady of Kyle's Pardoner," and who seems, like others of the same order, to have perambulated the country for the purpose of vending her acts of grace.‡

DUN-DORNADIL, or DORNADILLA'S TOWER, or DUNHARDEIL, an ancient hill-fort on the east side of Loch Ness, in the parish of Durness. It stands upon a high hill, of a circular, or rather conical shape, the summit of which is only accessible, on the south-east, by a narrow ridge which connects the mount with a hilly chain that runs up to Stratherrie. On every other quarter the ascent is almost perpendicular; and a rapid river winds round the circumference of the base. The summit is surrounded by a very strong wall of dry stones, which was once of great height and thickness. The enclosed area is an oblong square of 25 yards long, and 15 yards broad; it is level and clear of stones, and has on it the remains of a well. Upon a shoulder of this hill, about 50 feet below the summit, there is a druidical temple, consisting of a circle of large stones firmly fixed in the ground, with a double row of stones extending from one side as an avenue or entry to the circle. There is another fortress of this kind, which commands an extensive view of the lower parts of Breadalbane. On the summit of Dun-Evan in Nairnshire, there is also a similar fortress, consisting of two ramparts, which surround a level space of the same oblong form with that of Craig-Phadric, though not quite so large. Within the area of Dun-Evan, there are the traces of a well, and the remains of a large mass of building which once furnished shelter to the defenders of the fort. A similar fort exists in Glenelg, and a stone rampart surrounds the top of

‡ James IV. being at Edinburgh, December 8th, 1511, gave a gratuity of three shillings to "Our Lady of Kyle's Pardoner." Various instances of his liberality have a prior date, July 6th, 1497, he gave an offering of 14s. in "Our Lady's Kirk of Kyle," in September of the same year, when he was at "Our Lady Kirk of Kyle," he, by his treasurer, paid £5 for five trentales of masses to be there said for him.—*'Caledonia,'* iii. 497, 498.

the hill, and in the area there is the vestige of a circular building for the use of the ancient inhabitants. From the situation of these hill-forts, as they are called, their relative positions to one another, and the accommodations attached to them, it has been inferred with great plausibility that they were rather constructed for the purpose of protecting the tribes from the attacks of one another, than with the design of defending themselves from an invading enemy. As a corroboration of this view it is observed, that these fortresses are placed upon eminences in those parts of the country which in the early ages must have been the most habitable and furnished the greatest quantity of subsistence. They frequently appear in groups of three, four, or more, in the vicinity of each other; and they are so disposed, upon the tops of heights, that sometimes a considerable number may be seen at the same time: one of them being always much larger and stronger than the others, placed in the most commanding situation, and no doubt intended as the post of the chief.

DUNDRENNAN, the ancient name of the parish of Berwick, Kirkcudbrightshire, and now associated chiefly with the ruins of a celebrated abbey in that parish, situated in a long narrow valley on the west bank of the Abbey burn, about $1\frac{1}{2}$ mile from the Solway, between the Urr and the Dee. The ruins, though now miserably dilapidated, evince it to have been a beautiful and extensive pile. The church was in the form of a cross, surmounted by a spire 200 feet high. The body was 120 feet long, and divided into 3 aisles by clustered columns spanned with arches,—the side-aisles each 15 feet broad, and the middle aisle 25. The transept measured, from north to south, 120 feet, and from east to west 46 feet. On the south side of the church were the cloisters, enclosing a square area of 94 feet, with a grass plot in the centre. East and west but chiefly south of these, were the lodgings and different offices of the monastery, occupying a space of nearly 300 square feet. This abbey was founded, in 1142, by Fergus, Lord of Galloway. Its first monks were brought from the Cistercian abbey of Rievall, in Yorkshire; and its first abbot was Sylvanus, who died in 1189. A subsequent abbot sat in the great parliament, at Brigham, in 1290, for settling the succession of the Crown. Walter—either the same abbot or his successor—swore fealty to Edward I. in 1296; and received, in return, a precept to the sheriffs of Berwick and of Cumberland for the restriction of the property of his house. Robert I. and David II. granted to the monks considerable territorial possessions. In the beginning of the 15th century, Thomas, the abbot, sat in the celebrated general councils of Constance and Basil. Edward Maxwell, of the noble family of that name, was abbot in the time of Mary; and afforded her an asylum here upon her flight from the disastrous battle of Langside. Dundrennan was one of those whose functionaries were appointed by the King, independently of the Pope. In 1587, all its property devolved to the Crown by the act of annexation. In 1605, it was made over to Gavin Hamilton, who had been consecrated bishop of Galloway. A considerable part of the useful Chronicle of Melrose was compiled by a monk of Dundrennan,—most probably by Abbot Thomas. “Dundrennan abbey,” says Mr. McDiarmid, “like most religious houses built by the Catholics in the olden time, is beautifully situated in a valley of the same name; whether the surrounding limited district gave to or received from the monastery its present appellation, is a point we pause not to discuss—but most probably the former. The site of the edifice is merely sloping, and hardly deserves the name of an emi-

nence; but a brawling burn passes hard by;—hills of various forms appear at a little distance;—of grown timber there is no great breadth, but the braes which form the fore-ground, are in many places engagingly covered with copse; the Solway, a well-known arm of the sea, comes rippling to the land, at less than 2 miles to the south; and there are eminences plentifully scattered around that command delightful marine views over a long line of frith, including Skiddaw and his congeners, the Isle of Man, and, looming far a-head, the singularly peaked mountains of Morn in Ireland. When the monastery was inhabited, all these and other objects must have been distinctly visible from the turret and tower; and, as regards vast amplitude of scenery, resting on the placid, running into the picturesque, and intermingling the sublime, there could be few retreats of the same order more highly favoured than Dundrennan abbey. The name of Queen Mary lends a charm to Dundrennan which bids fair to defy disassociation so long as one stone of the building remains upon another. After the disastrous battle of Langside, her course seems to have lain by the romantic Glenkens; and, in wending her way through its wildest recesses, she drew rein for a brief space at Queenshill,—a property situated near the head of the vale of Tarf, the name of which was changed in honour of the above memorable event. At Tongland she is said to have crossed the Dee,—not of course, by the splendid bridge erected by Telford, but a frail wooden erection, which her attendants destroyed as one means of retarding the movements of the enemy. While this work proceeded, the beleaguered Queen sought temporary shelter and refreshment in the cottage of a widow, who cheerfully gave of her little all, and was rewarded, scanty as ways and means may have been, to the extent of her ambition as proprietrix of a humble domicile and adjoining field. Still it is not easy to map the exact route of the persecuted and beautiful Mary during her flight to the coast. That she paused and breakfasted at the castle of Lord Herries, in the parish of Kirkcudbright, is considered certain; and equally so that she visited the hospitable mansion of Lord Nithsdale—Terregles—where specimens of her needle-work, and the bed in which she slept are still shown; and it is natural to suppose that both hurried visits must have been paid after her crossing the Dee at Tongland. It was evening when the Queen reached Dundrennan; and the impression has long been erroneously cherished that her last sad sojourn on the shores of a country which she never revisited except in dreams, was passed under the roof of this abbey. The monks, no doubt, bore her true fealty, but they perhaps drained the vengeance of her pursuers in the shape of fine or confiscation; and, from whatever motive, a lodging was provided in a private house, which, at the period alluded to, was occupied by the ancestors of the late Mrs. Anderson of Stroquhan. The monks, however, attended her to the water's edge,—assisted in seating her in an open boat,—and after waving many an affectionate adieu, slowly bent their steps homeward, pausing at intervals to mark how the frail bark progressed towards its destination. The elements, according to tradition, were auspicious, and the Solway on the day of expatriation, presented none of the terrors of a Highland loch—

‘The blackening wave is edged with white,
Tempt not the gloomy Firth to-day.’

Port-Mary is simply a creek surrounded by high rocks, which received its name from the circumstances recorded, as did Maryport on the opposite side, the point of debarkation.

DUNDROICH, or 'the Druids' hill,' a mountain on the boundary line between Peebles-shire and Edinburghshire, but chiefly within the limits of the parish of Eddlestone in the former county. It rises 2,100 feet above the level of the sea, and commands a view, on one side, of Lanarkshire; on another, of Annandale; on a third, of Teviotdale; and on a fourth, of the three Lothians and Fifeshire.

DUNDURN, a solitary little chapel in the parish of Comrie, at which service is occasionally performed for the benefit of those parishioners residing in that extremity of the parish which extends towards Lochearnhead.

DUNEARN. See **BURNISLAND**.

DUNFERMLINE,* a parish, the largest in Fife. Its extreme length from north to south is about 8 miles; its breadth towards the south end about $4\frac{1}{2}$ miles, but towards the north only 3 miles. It is bounded on the south partly by the frith of Forth, and partly by Inverkeithing; on the east by Inverkeithing, Aberdour, and Beath; on the north by the parish of Cleish; and on the west by Saline, Carnock, and Torry-burn parishes. The greater portion of the parish has a southern aspect, the ground rising gradually from the sea towards the north. South of the town of Dunfermline, it is well-cultivated and enclosed; and the number of gentlemen's seats, with their wooded grounds, gives much beauty to the scenery. Towards the north, the soil is not so good; and although much has been done in the way of improvement, the general appearance of that part of the parish is not so interesting as it is to the south. The Lyne is the only brook deserving attention in the parish. Its source is near the eastern extremity of it. Having received various accessions, it becomes considerable below the town, frequently overflows its banks, and lays the rich fields of Pittencreeff, Loggie, Cavig, and Pitliver under water. After running towards the western extremity of the parish, it unites with another small brook, and takes a southern direction towards the frith of Forth. There are several lakes of considerable depth and extent, in which perch, pike, and eel are found. Besides the town of Dunfermline, there are 7 villages in the parish, viz.:—**LIMEKILNS**, **CHARLESTON**, **CROSSFORD**, **PATHEMOOR**, **MASTERTOWN**, **CROSSGATES**, and **HALBEATH**: see these articles.—In the immediate neighbourhood of the town, towards the south-west, is Pittencreeff, the property and residence of James Hunt, Esq. "The moment you leave the street," says Mercer, "you enter a private gate, and are on the verge of a deep glen filled with fine old trees, that wave their foliage over the ruins of the ancient palace. A little farther on is the peninsular mount, on which Malcolm Ceanmore resided in his stronghold,—the original germ of Dunfermline. Round the base of the mount winds a rivulet, over which is a bridge leading to the mansion-house, situate on the farther bank, in a spacious park well-wooded, adorned with shrubberies, and having a splendid prospect to the south. The ground, too, is classical; for amidst this scenery, three centuries ago, when it was even more romantic than it is at present, must often have wandered the poet Henryson, holding sweet dalliance with the muses. There can be no doubt that here was the

very 'wod' he so beautifully describes in the introduction to one of his fables:—

In myddis of June, that jolly sweet sessoun,
Quhen that fair Phiebus, with his beanis brycht,
Had dreyt up the dew fra daill and doun,
And all the land maid with his lenyis lycht;
In a mornng betwene mid-day and nycht,
I raisis and put all sluith and sleep on syde;
Ontill a wod I went alone, but gyd.

Suait was the smell of flouris quhyt and reid
The noyis of birdis rycht delitious;
The bewis brod blumyt abone my heid;
The grund growand with grassis gratious.
Of all pleisans that place was plenteous,
With suait odours and birdis armonie;
The mornyng mild my mirth was mair forthy.

The roseis reid arrayit rone and ryss,
The primrose and the purple viola:
To heir it was a poynt of paradys,
Sic myrth the mayvys and the merle couth ma:
The blossoms blyth brak up on bank and bra;
The smell of herbis, and of foulis the cry,
Contenting quha suld have the victory.

In the 13th century this property belonged to William de Oberwell, who, in 1291, granted a right to the monastery of working coal for their own use in his lands. In 1632 Thomas, 3d Lord Bruce of Kinloss, afterwards Earl of Elgin, had a charter of the barony of Pittencreeff; and Sibbald informs us that in his time it was the property of a Mr. Forbes. About the middle of the last century it belonged to George Chalmers, Esq. It was afterwards purchased by the father of the present proprietor.—The mansion-house and finely-wooded grounds of Pitferrane, the seat of Sir John Halket, baronet, have been held by this family since the end of the 14th century, having been acquired from the Scotts of Balwearie, the previous proprietors, about 1399. From a remote period this family had the right of exporting coals from their lands to foreign countries free of duty. In 1707 the privilege was purchased by government for £40,000 sterling.—Near the sea-coast is Broomhall, the elegant mansion of the Earl of Elgin and Kincardine, situated on an elevated lawn overlooking the village of Limekilns.—East of Broomhall is Pitreavie, in the 17th century the property of a family of the name of Wardlaw. Sir Henry Wardlaw of Pitreavie founded an hospital at Mastertown. His lady, Elizabeth Halket, of the family of Pitferrane, is now admitted to have been the authoress of the fine ballad of Hardyknute, which so long puzzled the antiquaries of the day, and to which Pinkerton wrote a second part, which gave rise also to much controversy. She is buried in a vault on the outside of the church of Dunfermline. The Scottish troops were defeated here by a detachment of Cromwell's forces under Colonel Overton, on the 20th of July, 1651, when 3,000 fell, and 1,200 were taken prisoners.

The coal-works in this parish are very extensive; and an able account has been given of them by the Rev. Peter Chalmers, in the 'Quarterly Journal of Agriculture,' from which we have condensed the following abstract:—The largest colliery is the Elgin colliery, belonging to the Earl of Elgin. The whole area of the coal-field belonging to him, wrought and unwrought, may be stated at from 2,600 to 2,700 acres. About 800 or 900 of these, which are the most southern, are nearly exhausted. A large portion of this extensive coal-field Lord Elgin holds on a lease of 999 years, from the Pitferrane family. Almost all the coal partakes more or less of the caking quality and soft texture of the Newcastle coal.—A new pit has lately been opened near the West Baldrige farm-house, named the Wallsend pit, which is the deepest coal-shaft in Scotland, and probably one of the most valuable. It is in depth 105 fathoms, 1 foot. There are 19 beds of coal, containing alto-

* The name of this parish is derived from the Celtic *Dun-fear-llyn*, signifying 'the Fortified hill by the Crooked stream.' The hill-fort here referred to, from which the parish has taken its name, was most probably that, a minute fragment of the ruins of which still appears on a small peninsular mount in Pittencreeff glen, and which is called Malcolm Ceanmore's tower. The arms of the town are a tower, supported by two lions, with the motto *Esto rupes inaccessa*.—'Be thou an inaccessible rock,' alluding to the rocky height on which the tower was built.

Engraved by W. Smith

Interior of Dunfermline Abbey.

gether 49 feet, 8 inches of coal, which can be worked in 13 separate divisions, by this pit.—Immediately to the east of the Elgin is the Wellwood colliery. It is situated about a mile north of Dunfermline. The coal from this work is extensively used in the town of Dunfermline and neighbourhood, and a large quantity of it is also exported, principally to France. The steam-boats plying between Paris and Rouen are almost entirely supplied with it. The quantity of coals raised at this work, in 1839, was about 48,000 tons. The number of persons employed at the work is 252.—To the east of this colliery are the Townhill and Appin collieries.—The next large and old colliery, still farther to the east, and 2½ miles from the town of Dunfermline, is that of Hall-beath. The output at this work, in 1837, was 18,437 tons, a great proportion of which was exported. The coals exported are shipped at Inverkeithing, whither they are carried by a railroad.—A little way to the east a small colliery has been lately begun at Nether-beath, called the Cuttle-hill colliery. About 2,000 tons have been sold annually since the coal-work began; but they are expected to increase.—Limestone is found and wrought for sale on the lands of Broomhall, Roscobie, Lathalmond, and Dunduff. Those at CHARLESTON on Broomland lands, are the most extensive: see that article. There are several whinstone and freestone quarries in the parish. Iron-stone pervades the whole coal-field of the Earl of Elgin, in thin bands and balls, and was once wrought to the extent of 4,000 to 5,000 tons per annum. Copper pyrites, in small quantities, is found imbedded in the clay iron-stone, with carbonate of lime, at the Elgin colliery.

Among the most eminent Scotsmen of the 15th century was 'Maister Robert Henryrson, scholmaister of Dunfermling.' He was a poet of considerable fancy, and successfully attempted various styles of composition. His longest poem,—'The Testament of the Fair Cresseide,'—"contains," says Dr. Irving, "many strokes of poetical description, which a writer of more than ordinary genius could only have produced." He wrote a number of fables in verse, which convey useful lessons, but are rather prolix. Of these, probably the best is 'The Borrowstoun Mous, and the Landwart Mous.' His pastoral 'Robin and Makyne' displays a love of nature and great sweetness of versification; and his 'Abbey Walk' is full of serious reflections. The learned civilian, Edward Henryrson, LL.D., seems to have been the grandson of the poet. George Durie, abbot of Dunfermline, was made an extraordinary lord of session in July, 1541, and keeper of the privy-seal in 1554. He died in 1561. Robert Pitcairn, abbot of Dunfermline, was secretary-of-state in 1570, which office he held during the regencies of Lennox, Mar, and Morton, and afterwards under James VI. Two of the family of Seaton, Earls of Dunfermline, were extraordinary lords-of-session; and three of the abbots of Dunfermline held the office of lord-high-chancellor of Scotland. In 1839, the Right Hon. Mr. Abercrombie, late speaker of the house of commons, was called to the house of peers, by the title of Baron Dunfermline of Dunfermline.

Malcolm III., surnamed *Cean-mhor*, or 'Great-head,' resided chiefly, after his accession to the Crown, at the tower which still bears his name, in the glen of Pittencreeff, in the immediate neighbourhood of the modern town of Dunfermline, and here he married Margaret, a Saxon princess, who had, with her brother Edgar, the heir of the English throne, fled to Scotland for refuge from the Norman conqueror. Margaret was the daughter of Edward, son of Edmund Ironside, king of England. Upon William the Conqueror ascending the English throne, Edgar, son

of Edward, with his mother Agatha, and two sisters, Margaret and Christian, retired into Scotland. Some authors say, that being on a voyage to Hungary, they were accidentally driven thither by a storm. The place in the frith where the ship anchored is a small bay, about a mile north-west of North Queensferry, near the present toll-bar. This bay is called St. Margaret's Hope.* On the side of the present road, near Pitreavie, about 2 miles from Dunfermline, is a large stone called St. Margaret's stone. Here she is said to have rested, leaning on this stone. North and South Queensferry derive their name from St. Margaret. "The site of Malcolm's tower," says Mercer, in his excellent 'History of Dunfermline,' "was strikingly adapted for a stronghold, and could not fail of attracting a rude engineer of the 11th century. Fordun says, it was a place extremely strong by natural situation, and fortified by steep rocks; in the middle of which there was a pleasant level, likewise defended by rock and water, so that it might be imagined that the following words were descriptive of this place:—*Non homini facilis, viz adeunda feris*. 'It is difficult to men, scarcely accessible by wild beasts.' The *venusta planities*,—or 'pleasant level' on which the tower was built,—forms the summit of a very steep eminence that rises abruptly out of the glen, and causes the rivulet to wind round its base, forming a peninsula. The whole substructure of the glen on both sides is formed of freestone, which projects in many places from the surface; and these rugged declivities must have been clothed with thick impervious woods, rendering the summit extremely difficult of access on three sides."

At the request of his pious queen, and of her confessor, Turgot, Malcolm founded and endowed a monastery for 13 Culdees in the vicinity of his own residence, which, with its chapel, was dedicated to the Holy Trinity. The date of Malcolm's foundation must have been between 1070, when he was married, and 1086, when he and his queen made extensive grants to the church of the Holy Trinity. Besides the donations from Malcolm to the church, his sons Ethelred and Edgar, both bestowed lands upon it. Alexander I. granted various lands to it, and is said to have finished the church; and his queen, Sibilla, also conferred lands upon it. He died at Stirling, but was interred at Dunfermline. David I., who ascended the throne in 1124, in accordance with his policy in other parts of the kingdom, not only added greatly to the wealth of the monastery, but introduced into it a colony of the Benedictines, or Black monks, from Canterbury in England; and for the purpose of making the change of rules under which they were brought more agreeable to the Culdees, he raised it to the dignity of an abbey, having a mitred abbot for its head, and a prior and sub-prior under him. From the style of the architecture, Mr. Leighton is inclined to think that it was during the reign of David I. that the church—the nave of which still remains—was erected.† Gotfrid or Gaufrid, who had been prior of Canterbury, was the first abbot. He died in 1154, and was succeeded by his nephew, Gaufrid. From a statement made to the Pope in 1231, it appears that the number of monks had then been increased to 50. About the period of the death of Alexander III., it had become one of the most extensive and magnificent monastic estab-

* On a staircase in the house of Pennycook, in Mid-Lothian, there is a painting which represents the landing of Margaret at the Hope,—the procession from thence to Dunfermline,—and the king and queen, the day after their marriage, entertaining a number of mendicants. The procession is said to have been on foot.

† In the library of the faculty of Advocates, in Edinburgh, there is preserved a copy of St. Jerome's Latin Bible, in manuscript, beautifully illuminated. This Bible—according to an annexed note—is said to have been used in the church of Dunfermline in the reign of David I.

lishments in Scotland. Mathew of Westminster says, that at this time "its boundaries were so ample,—containing within its precincts three carrucates* of land, and having so many princely buildings,—that three potent sovereigns, with their retinues, might have been accommodated with lodgings here, at the same time, without incommoding one another." When Edward of England invaded Scotland in 1303, he resided in the abbey of Dunfermline from the 6th of November that year till the 10th of February, 1304. At leaving it, Edward caused his army to set it on fire. "On account," says Matthew of Paris, "of its magnitude, the nobles of the kingdom were accustomed to assemble here to devise plots against Edward; and, during war, they issued thence, and proceeded to plunder and destroy the inhabitants of England. The royal army, therefore,—perceiving that they had converted the temple of the Lord into a den of thieves, and that it gave great offence to the English nation,—utterly destroyed it, by leveling all its splendid edifices to the ground; sparing from the flames the church only, and a few lodgings for monks." As soon as the kingdom was settled under Bruce, this monastery was begun to be rebuilt, but probably never regained its former grandeur. According to Lindsay of Pitcottie, the abbey and its church were finally destroyed on the 28th of March, 1560. The last abbot was George Durie, of the family of Durie of that ilk, who held the office from 1530 till the destruction of the monastery. He died in 1572. The abbey was richly endowed, and derived part of its extensive revenue from places at a considerable distance. Kirkcaldy, Kinghorn, Burntisland, Musselburgh, and Inveresk belonged to this abbey. According to a rental given up at the Reformation by Allan Coutts, in name of George Durie, the abbot, the yearly revenue was as follows:—Money £2,513 10s. 8d. Scots; wheat 28 c. 11 b. 1 f.; bear, 102 c. 15 b. 1 f. 3 p.; meal, 15 c.; oats, 61 c. 6 b. 2 f.; horse-corn, 29 c. 1 b. 1 f. 2½ p.; butter, 34 st.; lime, 19 c. 15 b.; salt, 11 c. 8 b.—According to another rental by the same person:—Money, £2,404 4s.; wheat, 27 c. 4 b. 3 f.; bear, 83 c. 11 b. 2 f. 2 p.; oats, 158 c. 5 b. 2 f., whereof 84 c. white oats; lime, 20 c.; salt, 11 c. 8 b.; capons, 374; poultry, 746.† In 1560, Robert Pitcairn

* A carrucate of land was as much as could be tilled with a plough in a year.

† Some of the grants to the abbey—as appears from its chartulary, of which Mr. Dalzel has given an analysis in his 'Monastic Antiquities'—were of a singular nature, and may not be unworthy of particular notice. David I. grants to the abbey, "omnem decimam de auro quod mihi eveniet de Fif et Forthrik," the tenth part of all the gold he should derive from Fif and Forthrik. The latter term, Lord Hailes says, is compounded of *Forth* and *rick*, i. e. 'the kingdom or territory at the Forth'; and he supposes that it means that district on the northern bank of the Forth, from the neighbourhood of Stirling to where the river is lost in the salt water. In Hay's 'Scotia Sacra,' the monastery of Dunfermline is said to be in Forthrik moor; and on the north side of the parish there is a moor which still retains the name of Forthrik moor. By a charter of confirmation, the same monarch grants to the abbey the seventh—after the title—of all the seals caught at Kinghorn.—Bastards, it would appear, were in general excluded from monasteries: Pope Innocent, at the request of the abbot of Dunfermline, grants him permission to admit one bastard into the number of his monks with this exception, "dummodo non sit de adulterio, vel incestuoso coitu procreatus."—Malcolm IV. grants to the abbot and monks the heads—the tongues excepted—of certain fishes supposed to be a small kind of whales then occasionally caught in some particular district of the Forth near the abbey-church. The words of the grant are, "Pro salute animæ predecessoris mei Davidis Regis, capita piscium qui dicuntur *crepsci* præter linguam, qui in meo Dominio ex illa parte Scottwater applicuerint, in qua parte illorum ecclesia sit est." Malcolm IV. gave them a grant of the half of the blubber—"dimidium sagminis" of the *crepsci* which should be taken between the Tay and Forth, for the use of the church—"ad luminaria coram altariis premonstratis ecclesie."—Several indulgences granted by different pontiffs are recorded in the chartulary. As oil of olives could not be procured within the diocese of St. Andrews, Pope Nicholas, by bull in 1459, grants a free indulgence to the monks of this abbey to make use of butter—at abhis lactiniis—during Lent, and on all other days when animal food was for-

bidden.—They possessed a monopoly of the ferry between Queensferry and Inverkeithing, on condition that those belonging to the court, as also strangers and messengers, should have a free passage. They had likewise the customs of vessels entering the harbour of Inveresk, or Musselburgh, which was under their jurisdiction.

Although the ruins of the ancient abbey which still remain, are sufficient to afford a glimpse of what must have been its former grandeur, yet they are but a trifling portion of the extensive conventual buildings which must have existed here, even subsequent to the demolition. The western portion, or nave of the abbey-church—which was originally a cross church—is still in tolerably good preservation; and is a fine specimen of the architecture of the age in which it was erected. It is generally said to be in the Saxon style of architecture; but Mr. Leighton is inclined to think that the style is Norman. The principal entrance to the abbey-church is from the west, where there is a very finely enriched doorway in the Norman style, and above this a handsome pointed window, divided by mullions and transoms. In the north side there is another entrance from what is now the churchyard, by a porch of later erection, which is in the pointed style. The roof of the nave is supported by a double row of splendid Norman pillars, from which spring round arches to support the upper wall, and at the west end by a clustered column on each side; a clustered pilaster from which springs a pointed arch, also supporting the upper wall. These columns likewise separate the body of the nave from the north and south aisles. The outside of the building is ornamented by two heavy towers at the west end, one of which is surmounted by a spire, and the sides by heavy buttresses characteristic of the style of the building. Immediately to the south of the abbey-church are the ruins of the frateri, or refectory, which formed the dining-hall of the monastery. Its south wall, from the windows of which there is a magnificent view, and the west gable, in which there is one of the finest pointed windows in Scotland, alone remain. The only other portion of the monastic buildings existing is the gateway of the monastery—row

hidden.—They possessed a monopoly of the ferry betwixt Queensferry and Inverkeithing, on condition that those belonging to the court, as also strangers and messengers, should have a free passage. They had likewise the customs of vessels entering the harbour of Inveresk, or Musselburgh, which was under their jurisdiction.

called the Pends—which exhibits a fine specimen of the pointed style of architecture. Mr. Swan has given views of the Norman porch, and of the Interior and Exterior of the old Abbey-church in his elegant work entitled 'Fife Illustrated' [Glasgow: 1839-40. 3 vols. 4to.]. The abbey-church was long the place of sepulture of our Scottish kings. Here Malcolm Canmore and his queen St. Margaret were interred, also their eldest son, Edward, who was killed in Jedwood forest, Edmond their second son, and another named Ethelrade, who was Earl of Fife, King Edgar, Alexander I. with Sibilla his queen, David I. with his two wives, Malcolm IV., and Alexander III., with his queen Margaret and his son Alexander, were also here entombed. The great Bruce, too, the saviour of his country, was here laid at rest from his many toils, with his queen Elizabeth, and his daughter Christina, the widow of Sir Andrew Murray. The remains of these distinguished individuals were all interred in the choir, which forms the site of the present church. In digging for the foundation of the new parish-church in February, 1818, the tomb of Robert Bruce was discovered, and his skeleton found wrapt in lead.* On a subsequent day, the tomb was again opened in presence of the Barons of Exchequer, several literary gentlemen from Edinburgh, the magistrates of the town, and the neighbouring gentry. A cast of the skull having been taken, the stone-coffin in which the remains lay was filled with melted pitch; it was then built over with mason-work, and the pulpit of the new church now marks the spot where all that remains on earth of the patriotic warrior is deposited. Many of our great nobles were also buried in this church; among whom may be mentioned, the great Macduff; Constantine, Earl of Fife; William Ramsay, Earl of Fife; the Earl and Countess of Athol, in the reign of William the Lion; Randolph, Earl of Moray, the compatriot of Bruce; and Robert, Duke of Albany, governor of Scotland. Many churchmen also of great power and influence were interred here. After the accession of Alexander, our Scottish kings frequently resided on the south side of the Forth, but they occasionally also resided at Dunfermline. When they gave up their residence in the old tower is not known, but at an early period a palace or castle appears to have been erected adjoining the monastery, and on the site of the present ruins of the palace. James IV., after his accession to the Crown, was more here than any of his immediate predecessors; and he appears to have either entirely rebuilt or greatly enlarged the palace, and added to its height, as in 1812 a stone was found in the roof of one of the windows bearing the date of 1500. James V. and his daughter Queen Mary also resided here; and James VI., previous to his departure for England, appears often to have had his residence in the palace, where Charles I. is said to have been born. In July, 1633, this unfortunate monarch visited Dunfermline, where he held a court, and created Sir Robert Kerr of Ancrum, ancestor of the Marquis of Lothian, Earl of Ancrum, and dubbed five gentle-

* According to Fordun, Robert Bruce was buried in the middle of the choir. Barbour thus describes the inhumation of this illustrious restorer of the Scottish monarchy:

They haiff had him to Dunferlyue,
And him solemnly yirded syne,
In a fair tomb into the quire;
Bishops and prelates that were there
Assozied him, when the service
Was done, as they best could devise;
And syne, upon the other day,
Sory and wo they went their way.
And he debowelled was cleanly,
And also bairned syne full richly;
And the worthy Lord of Douglas,
His heart, as it forsoken was,
Received has in great dewtie,
With fair and great solemnitie.

men knights. In August, 1650, Charles II. remained several days in the palace, and here that monarch subscribed the national league and covenant, which was the last occasion of the palace receiving a royal visit. From this time it appears to have been entirely neglected, and in 1708 the roof fell in. It is now a complete ruin; all that remains being the south wall, and a sunk vaulted apartment traditionally called the King's kitchen. The length of the palace seems to have been 150 feet by 33 in breadth. The remaining walls were several years ago repaired, and put into a state in which they may still last for ages, by James Hunt, Esq., the proprietor of the estate of Pittencrieff on which they are situated.

The town of DUNFERMLINE owes its origin to the neighbourhood of the palace and the monastery, and for a long period was only a burgh-of-regality holding of the abbot and monks. In 1588 it was erected into a royal burgh by James VI., who conferred upon it about 900 acres of muirland, situated to the north and east of the town. At this time it could be little more than a village, as in 1600 it is said to have contained only about 1,000 inhabitants. At the commencement even of the 18th century it was almost without trade; but in 1718 a small factory for the weaving of table-linen was established, since which time the increase of its manufactures and of its wealth has been gradual and progressive. It is now remarkable for this branch of the linen-trade, which has proved a source of much wealth to the town and many of its inhabitants. In 1740 the society of weavers was instituted, and manufactures were increasing; but in 1745 it was found difficult to raise £80, the cess laid upon the town by Prince Charles. About 1749 the British Linen company—then just established—began to employ a number of looms in the town for weaving table-linen; but the weavers wrought chiefly at ticks and checks during the winter, and only in the summer at table-linen. About 1763 the table-linen of Dunfermline first found its way to the London market. From this period the manufactures and wealth of the town began more rapidly to increase; improvements have been made on the mechanism of the looms, great skill and taste displayed in the devices introduced into the cloth, and a variety of other goods have been brought into the market through the enterprise of the manufacturers. The spinning of linen yarn has been extensively carried on since 1806, when it was first introduced. Table-linen is still the chief manufacture; but table-covers, either wholly of cotton, or of worsted on cotton, and a few counterpanes, are also made. The annual value of this description of goods manufactured has been estimated at £374,000 sterling.† The number of looms em-

† "In the infancy of the trade, it was the custom to weave diaper only during the summer, the winter being employed in weaving ticks and checks. This practice continued till about the year 1749, when the manufacture of ticks and checks was in a great measure relinquished. Since the above period the diaper trade has been gradually increasing; in 1788 there were about 900, and last year (1792) no less than 1,200 looms employed in the trade; of this number, above 800 belonged to the parish. The value of goods annually manufactured has for some time past been from £50,000 to £60,000 sterling, and the trade was on the increase. Astonishing improvements have been made within less than half-a-century in the art of weaving, and in the manufacture of table-linen. By the introduction of machinery labour has been greatly abridged. Formerly, in weaving diaper, two, and sometimes three persons, were requisite for one web; now, by means of the fly-shuttle, and what is called a frame for raising the figure, a single weaver can work a web 2½ yards broad without the least assistance. Many of the tradesmen in this place discover considerable genius in drawing figures for the diaper, and several of them have obtained premiums for their draughts. Table cloths can be furnished of any desired breadth, length, and fineness; and noblemen and gentlemen may have their coats-of-arms and mottoes wrought into any table-linen they may choose to commission. In the chest of the incorporation there is preserved a very curious

ployed by the manufacturers of Dunfermline in 1836, was 3,519; of which 2,273 were employed in weaving table-linen, 462 in table-covers and counterpanes, 13 in woollen goods, and of 771 it was not ascertained how they were employed. In 1838 there were 3,000 looms in the town and suburbs employed in this manufacture, and 741 in Kinross, Strathmiglo, Leslie, Falkland, &c.; making, in all, 3,741. The total number of persons in Dunfermline employed in this trade, in 1838, was 6,438; viz., weavers, 3,000; winders, 1,100; children of weavers, 1,900; warpers and warehousemen, 150; yarn-boilers, men and women, 30; yarn-bleachers, ditto, 40; cloth-bleachers, ditto, 150; lapping and dressing cloth, 30; cutting patterns, men and boys, 20; pattern drawers, 8; dyers, 10. About one-third in value of the goods are exported to America and other places abroad. There are five mills for spinning linen-yarn in the parish; but one of these has not been working for the last twelve months. The yarns spun are of various qualities from tow and flax, and are used in the manufacture of table-linen, diapers, tickings, sheetings, towelings, and plain linens. A portion is also used in the manufacture of plain and coloured threads. There are also here an iron and brass foundry, candle and soap works, a tan-work, rope-work, tobacco manufactories, and brick-works.

Dunfermline stands on an eminence of considerable extent, stretching from east to west, about 270 feet above the level of the sea, from which it is 3 miles distant, and having a pretty steep and uniform declivity to the south. It is about 16 miles north-west from Edinburgh; 6 from North Queensferry; 13 from Kirkcaldy; and 30 from Cupar. The prospect towards the south, south-east, and south-west is extensive and varied; stretching over the frith of Forth to the opposite coast, with all its rich and varied scenery. The greater part of the town is situated on a rising ground, having a pretty bold declivity towards the south; the ground, however, soon flattens, so that what is called the Nethertown stands on a plain. It commands an excellent view of Edinburgh, the castle, Arthur's seat, and the elevated grounds in the vicinity of the metropolis; in clear weather different spires of the city can be distinguished by the naked eye. Immediately in view are the opposite and fertile banks of the Forth, comprehending a part of Mid and West Lothians, Binnlyaw, the pleasure-grounds northward of Hopetoun, and the borough of Queensferry. The frith is a most pleasant object, and in its course from near the North ferry up towards Culross,—sometimes concealed by an elevated shore, but here and there breaking forth in varied openings,—greatly enlivens and diversifies the beauty of the scene. From the church-steeple there are seen parts of fourteen different counties. The most distant and remarkable places are Soutra-hill in the shire of Berwick, Tinto in Lanark, Benlomond in Dumbarton, Benledi in Perth, the Lammermoors in Haddington, the Campsie and Logie hills in Stirling, and the Pentland hills in Mid-Lothian; Hopetoun-house, the castle of Blackness, Borrowstounness, the borough of Culross, and the beautiful windings of the Forth from Leith near to Stirling castle. In approaching the town from any direction it has a fine appearance, and, with its splendid church and spires, forms a most imposing object in the landscape. In the business parts of the town the streets, though generally rather narrow, are well-built, and care has been taken to improve them. The greatest improve-

ment, however, was that made by the late George Chalmers, Esq. of Pittencreeff, on the approach from the west. He threw a bridge 297 feet in length across the glen in which the Tower burn flows, with a mound raised about it 50 feet in height, solely at his own expense. This bridge forms now one of the best streets in the town, having good shops and well-built houses upon it. The houses along the principal thoroughfares are generally well-built, and have the appearance of respectability and comfort; and within late years the town has been greatly enlarged by a handsome suburb on the west, and by additions to the cross streets. Many neat villas and houses, surrounded by gardens and pleasure-grounds, occupy the outskirts of the town, and are inhabited by persons connected with the burgh. From the industry and enterprise of the inhabitants, and the advantage of a large supply of excellent coal in the immediate neighbourhood, it seems probable that the population and manufactures will continue to increase, and the town to extend itself in proportion. The population appears to consist almost entirely of persons actively engaged in business. The principal public buildings are the abbey-church already noticed; the town-hall, and the jail—which is an old building near the cross, very inadequate for the purposes required; the guild-hall, an elegant building with a fine spire, partly fitted up as an inn; the academy, and several churches and chapels.

The town is governed by a provost, 2 bailies, a guild-magistrate, a treasurer, 17 other councillors, and a town-clerk. The provost and magistrates have the jurisdiction within the royalty as extended by the police act in 1811. They hold regular courts, the town-clerk acting as their assessor. There is a guildry, the dean of which has the power of judging in all questions of boundary of property, &c. This incorporation possesses property to the annual value of £350 per annum. There are eight incorporated trades,—wrights, tailors, smiths, weavers, shoemakers, bakers, masons, and fleshers. In 1811 a police act was obtained, which not only regulates the police of the town, but contains powers for paving, lighting, and cleaning the streets, for removing nuisances and obstructions therefrom, for opening new and widening the present streets, and likewise for increasing the supply of water for the burgh. The provisions of this act were at the same time extended over the suburbs of the town, with the exception of that of Pittencreeff. The town was in consequence divided into wards, by each of which commissioners are appointed for carrying the provisions of the act into effect, and by whom the superintendent of police and other necessary officers are appointed. The necessary funds are raised by an assessment on the inhabitants. This act has produced great improvements in the town.—The present property of Dunfermline consists of the farms of Highholm, Muircockhall, Lilliehill, Cairncubie, and part of the town's muir, with the coal under these lands, which for some years has been worked on account of the burgh. These lands comprehend 700 Scots acres or thereby, 180 of which are planted. The burgh likewise possesses 3 or 4 acres of land, known by the name of Halliblade acres. The house-property of the burgh consists of the workmen's houses at the town-colliery, the flesh-market, slaughter-house, and washing-house, the town-house, high school, and charity-school in Priory-lane. The burgh is likewise possessed of a number of seats in the parish-church. The whole value of the burgh-property, taking in the land rental at 30 years' purchase, in consideration of the value of the minerals, and the value put on the wood and houses by a professional man, is stated to be £19,501 5s. 10½d. The town-

specimen of the weaving art: it is a man's shirt wrought in the loom about 100 years ago, by a weaver of this place of the name of Ingles. The shirt is without seam, and was finished by the ingenious artizan without the least assistance from the needle; the only necessary part he could not accomplish was a button for the neck.—*Old Statistical Account.*

house, high school, and Priory-lane school, are estimated at £2,150 more. The only alienation of the burgh's real property of any consequence, within the last 40 years, was part of the lands lying immediately south of those still belonging to the burgh, which were sold to Mr. Downie of Appin, in 1829, for the price of £14,105. The annual revenue of the burgh was estimated in 1834 at about £870, composed of

Land, coal rents, and wood, about . . .	£	s.	d.
Rents of houses, &c.	7	0	0
Fen-dues	35	0	0
Custom and market dues, about	1	10	0
Burgess entries, about	100	0	0
	2	0	0
	£363 10 0		

The estimated gross annual expenditure of the town was reported at the same date as follows:

Yearly salaries, about	£	s.	d.
Interest of debt, about	65	0	0
Aliment to prisoners, about	600	0	0
Stipend and school salaries	15	0	0
Fen-dues	38	0	0
Repairs on property, gaol, &c.	3	12	0
	10	0	0
	£731 12 0		

In this view the ordinary income should exceed the necessary expenditure by £136 18s. The actual revenue for the year 1832, was £1,241 18s. 8d.; the expenditure, £1,309. The present revenue is about £1,000 per annum. The debt of the burgh in 1694 was 5,573 merks, equal to £309 11s. 2d. sterling. From the records of the burgh it appears that it was so poor in 1701, as to apply for pecuniary aid to the convention; and in the year 1745 it was obliged to borrow the small fine imposed upon it by Prince Charles.

In 1788, the debt had increased to	£3,000
— 1798, it had increased to	5,000
— 1808, it amounted to	10,450

The debt, as returned to parliament under the order of July, 1832, was,

	£	s.	d.
October, 1827	20,795	0	8½
— 1828	20,339	16	2
— 1829	15,085	13	1
— 1830	15,040	19	10
— 1831	14,658	9	4

The burgh has no patronage, but in the appointment of the clerk, chamberlain, fiscal and town's officers. There are 8 fairs or public markets during the year, viz., on the 3d Tuesdays of January, March, April, June, July, September, October, and November; and two weekly markets,—one on Tuesday for the sale of grain by sample, which is well-attended by the neighbouring agriculturists; and one on Friday for butter, cheese, eggs, &c. Since October, 1829, the town and suburbs have been lighted with gas.—The annual value of real property within the burgh, in 1815, was £10,900 sterling; in 1843, £17,532.

The great distance of the western district of the county from the county-town, led to the appointment of a separate sheriff-substitute for that district, who holds courts weekly during time of session, and at fixed intervals during vacation. A court for the recovery of small debts is held by the sheriff twice every month during session, and once a-month during vacation. A justice-of-peace court is also held once a-month. A new and commodious prison is now erecting at the north-west corner of the town-green. It embraces two acres of ground. Its cost of erection will be about £2,100. Dunfermline, in conjunction with the burghs of Inverkeithing, Culross, South Queensferry, and Stirling, sends a member to parliament. Registered voters in 1839-40, 550; in 1842-3, 526; of whom 377 were proprietors, and 127 £10 householders. There are branches of five banks in the town, viz., of the bank of Scotland, the British Linen company, the Commercial bank of Scot-

land, the Edinburgh and Glasgow bank, and the National bank. There is also a National security savings' bank, originally established in 1815, the funds of which as on December 12, 1843, amounted to £18,915, held by about 1,050 depositors.

In addition to the railroads betwixt Charleston harbour and the Elgin and Wellwood collieries, and that from Inverkeithing to the Halbeath and Townhill collieries, a railway is projected from Stirling to Dunfermline. This line will probably start from the terminus of the Scottish Central railway at Stirling. It will pass Alloa on the north side, and then proceed, by the north side of Clackmannan, and by Kennet, Brucefield, and Oakley, to the north side of Dunfermline, where it will terminate near the new jail, by a junction with the Queensferry and Perth line. It is intended that a branch-line shall leave the main line, at a point about 3 miles distant from Stirling, and proceed up the vale of Devon to Kinross, passing through Alva, Tillicoultry, Dollar, and Fossaway.

Although there is no parochial school in the parish, education is well-provided for. The total number of schools in the *quoad civilia* parish, exclusive of North Queensferry, in 1844, was 32; the total number of teachers, 37; of scholars, exclusive of those attending evening schools, 2,622, or about 1 in 7½ of the population. The burgh school is under the management of the magistrates and kirk-session. The school-house is elegant and commodious, with a dwelling-house for the teacher. Besides his fees, the master has a salary from the town, and the interest of a mortification left by Queen Anne, amounting to £22 12s. 6d. The commercial academy, under the direction of the guildry, is a handsome building, with dwellings for the teachers, two in number. The late Adam Rolland, Esq. of Gask, left £1,000 sterling for the purpose of establishing a charity-school. The teacher is bound to educate gratis 50 scholars presented by the managers, and is allowed to take an additional number of pupils, from whom moderate fees are charged. His salary is £32. The Lancasterian system of education has been adopted in this institution, which is erected in Priory-lane, and is attended by about 180 children.—The Dunfermline town-library was instituted in 1789, and contains nearly 3,000 volumes; the tradesmen's and mechanics' library contains 2,000 volumes. The abbey-church library is well-selected; and there are besides several congregational and circulating libraries. There is a public reading-room in the guild-hall, which is well-supplied with journals. Dunfermline has a flourishing mechanics' institute, a phrenological society, two horticultural societies, and an agricultural society.

This parish is in the presbytery of Dunfermline and synod of Fife. From the time of the Reformation the nave of the old abbey-church, having been repaired, served as the parish-church of Dunfermline, while the choir remained a complete ruin. The necessity of additional church-accommodation having been long felt, the new church was begun in 1818, and opened for divine service in 1821. It immediately adjoins the old church on the east, and is in itself an elegant building, in the pointed style, with handsome perpendicular windows, and sittings for 2,051 persons. It is surmounted by a fine tower, 100 feet high, terminated by a balustrade, on which the name of Robert Bruce, king of Scots, has been introduced in letters of open hewn-work, four feet in height. The church is collegiate. Patron of both charges, the Crown. Stipend of the 1st charge £282 4s. 2d., with a glebe of the value of £34; of the 2d, £282 4s. 2d., without a manse or glebe. Unappropriated Crown tields £641 5s. 9d.;

of private teinds £211 3s. 8d. It is an original parish; but many lands originally belonging to it have been united to the parishes of Beath and Carnock. It comprehends the *quoad sacra* parish of St. Andrews, erected in 1835. Church built in 1821; sittings 2,051.—There is a United Secession congregation at LIMEKILNS: which see.—Another United Secession congregation was formed in this parish in 1788. Their church, in Chalmers-street, was built in 1789; cost £700; sittings 430. Stipend £128.—A 3d congregation in connection with the Secession exists at CROSSGATES: which see.—An Original Burgher congregation was established in 1799. Church built in 1801; sittings 600. Stipend £122.—A 4th United Secession congregation was established in Maygate, in 1832. Church bought in 1833 for £440; sittings 410. Stipend £120.—A Roman Catholic congregation was established in 1823.—A congregation calling itself the Holy Catholic Apostolic congregation appeared in 1834.—St. Andrew's parish is formed of a portion of the town, which contains above 3,000 inhabitants. The church was built in 1833; sittings 797. Stipend £120, with manse and garden.—In this parish is St. Margaret's United Secession congregation, established in 1826. Church built in 1828; sittings 979. Stipend £175.—Queen Anne-street United Secession church was built in 1800; sittings 1,642. Stipend £200, with manse and garden.—A Relief congregation was established in 1752. Church built in 1776; sittings 520. Stipend £150, with manse and garden.—A Baptist congregation was established about 1805. Church built in 1836; sittings 310.—There is also a recently formed Independent church.—According to a census of the *quoad sacra* parish of Dunfermline made in 1836, of a population of 14,253, there were in connexion with the Establishment 5,385, and belonging to other denominations 8,408; and in the *quoad sacra* parish of St. Andrews, out of a population of 3,033, 1,621 were in connexion with the Establishment, and 1,368 with other denominations.—There were no fewer than 30 private schools in this parish in 1834, attended by about 2,400 children. Of these 3 were infant-schools.—Queen Anne-street United Secession church was originally built for the celebrated Ralph Erskine, who, while one of the parish-ministers of Dunfermline, was expelled from his charge for declining the authority of the supreme ecclesiastical court, and became one of the fathers of the Secession church.*

* The parishioners of KILROSS had given a call to a Mr. Francis Craig, but another person—Mr. Stark—had received the presentation. As this latter gentleman had scarcely a single vote, the presbytery of Dunfermline refused to ordain him. The commission of the general assembly, thereupon, appointed a sub-committee to proceed to KILROSS and effect a settlement. Against this unconstitutional proceeding complaints and petitions were presented both by the parishioners and by the presbytery; but these were rejected, and the presbytery were enjoined to enrol and acknowledge Mr. Stark as one of their number. Mr. Ralph Erskine and others tendered a protest against this decision, but the clerk was prohibited from entering it on the records of the assembly. The matter did not rest here, for a complaint being made at next meeting of assembly, in 1733, that the presbytery had refused to enrol Mr. Stark, the recusant brethren were forthwith summoned to the bar of the court, and sharply rebuked for their disobedience; and a committee was appointed to meet with such of the brethren of the Dunfermline presbytery as were in town, and to get Mr. Stark judicially enrolled. The presbytery were moreover, commanded to encourage and strengthen the hands of Mr. Stark in the work of the ministry, and they were forbidden to offer or receive any protest against his sitting and acting as a member of their court. "Upon the principles of strict Presbyterian government," says Mr. McKerrow, the historian of the Secession church, "the members of the Dunfermline presbytery cannot, in this instance, be vindicated from the charge of contumacy, in refusing compliance with the decision of the supreme court; either they ought formally to have declined its authority, as some of them afterwards did, when they joined the Secession, or while they continued to profess subjection, they ought to have obeyed. At the same time, the conduct of the assembly and of their commission was arbitrary in a high degree, and pecuniarily calculated to excite opposition." Ebenezer Erskine had early joined the Seceding party, or rather had been the principal

The pulpit which this excellent and eloquent man filled in the old kirk of Dunfermline was made into two small side-tables, which are now in the hall of Abbotsford, the side-walls of which are lined, to the height of 7 feet, with a beautifully carved panneling of dark oak from the same edifice.—There are several

pal organ in declaring a secession from the church, and in the formation of the Associate presbytery: See article STIRLING. His brother of Dunfermline, however, did not give in his open adherence to the Associate presbytery until February, 1737. On this occasion, Mr. Ralph Erskine stated that though he withdrew, for the present, from the National church, and joined his brethren of the Secession, yet he did not by this intend withdrawing from ministerial communion with those pious ministers of the Establishment, who were "groaning under, or wrestling against, the defections of the times." "Neither," said he, "do I hereby intend to preclude myself from the liberty of returning and joining with the judicatories of this church, upon their returning to their duty; and, so far as my joining with the foresaid, or any other ministers, in their lifting up the said testimony, and promoting the end and design thereof, and the said return can consist together; seeing if the judicatories, who at present either unjustly refuse, or unduly delay to receive that testimony, were acting a contrary part, and putting hand to reformation, the same reasons that induce to this withdrawing, would necessarily induce to a returning, which I cordially wish I may quickly see good reason for." It was not in fact until the meeting of the general assembly in 1740, that Mr. Ralph Erskine was formally deposed.—In the interim a curious contest was carried on between Mr. Erskine and his colleague Mr. Wardlaw, of which Mr. Mercer has given some account from a manuscript journal kept at the time by an eyewitness apparently, of which the following are extracts:—

"Dunfermline, October 28th, 1739. The session resumed the consideration of their former resolutions of suspending their connection with the present judicatories of the established church. The plurality of the members present declared they were for continuing in an interdependent situation, without holding a connection with the established church; and agreed that this overture should be read before the session upon Sabbath the 11th of November, to be approved or disapproved of by them.

"After this a pulpit-war commenced 'twixt Mr. Erskine and Mr. Wardlaw, which continued till Mr. Erskine was put out of the kirk. What Mr. Erskine spoke in the forenoon, with respect to the defections and back-lidings of the Established church, and the lawfulness and necessity of the brethren to separate from them, Mr. Wardlaw contradicted in the afternoon, saying, that the Associate presbytery were unnatural children, and ought to have pined by their mother; and that it was at best a setting up altar against altar. Much was said on both sides, and many scriptures cited.

"May 11th, 1740. This day Mr. Erskine's turn was to preach in the tent, forenoon; and knowing he was to meet with opposition in assaying to preach in the old kirk in the afternoon, gave suitable exhortations to the congregation how to behave, whatever should fall out, it being the Lord's day; and also, that he was to be with his brother Ebenezer, at the sacrament in Stirling, next Lord's day; Mr. White, probationer, to preach for him, here, that day. That the congregation should wait in the church-yard till they saw if he got entrance, if not to return to the other place of worship. Accordingly, this afternoon Mr. Hardy, minister in Culross, being appointed to take possession of Mr. Erskine's pulpit, whose diet it was the sabbath, the Established party came a little after the second bell, and closed the porch-door, as the ministers always entered the east door. Mr. Erskine's congregation were mostly without, in the church-yard, the east door was guarded by David Black of Hill, Bailie Chalmers, Bailie John Walker, and others, to keep out Mr. Erskine; but when he came through the church-yard with Mr. Brison, many following, as they came near the east kirk door, Mr. Brison cried out, 'Make way for your minister.' Upon this, some rushed in, others that were within soon turned back the gentlemen door-keepers, neither could they get the door shut, so that when Mr. Erskine came forward none of his opposers had power or courage to make the least resistance against him; his presence struck a terror in them. The way to the pulpit was lined on every side, so that Mr. Erskine had a full and free entry to it. During all this time Mr. Hardy was in the session-house, trembling; for he would not mount the pulpit till he saw if Mr. Erskine was kept out of the kirk; and when the small scuffle was at the kirk-door, he called to lock the session-house door; and when the kirk was composed, and the psalms singing, he went forth, with his gentlemen door-keepers, to Bailie John Walker's house, but was in such confusion and disorder, that when they called for a dram, he could not ask a blessing on it (as was said).

"May 18th. This day Mr. Erskine assisting at a sacrament in Stirling, and Mr. White being to preach the forenoon in the kirk; but Mr. Geddes, the other minister in Culross, and Mr. George Eddie took early possession of the pulpit; and when Mr. White came to the kirk, the pulpit was filled, and he refused entrance; so he, and our congregation, returned to our own place of worship.

"This week Mr. Hugh Forbes came to Dunfermline, and visited Mr. Erskine; and, speaking of our affairs, desired Mr. Erskine to make no more attempts to force himself into the established kirk of Dunfermline, as he wished him well, and that if he did, the consequences might not be comfortable, as it bordered upon rebellion; so we never afterward attempted it."

mortifications for the benefit of the poor in the town and parish. 1. St. Leonard's hospital, which is very ancient, and the founder of which is not known. The hospital-buildings were situated at the suburb called the Spittal, but are long since removed. The rent of 64 acres of land were mortified for the maintenance of 8 widows, each of whom was entitled to 8 bolls meal, 4 bolls malt, 8 lippies fine wheat, 8 lippies of groats, and 2 shillings of silver annually, and an apartment in the hospital. The Marquis of Tweeddale exercises the patronage.—2. In 1675, Sir Henry Wardlaw of Pitreavie founded an hospital at the village of Mastertown, called the Pitreavie hospital, for the benefit of 4 widows, with which he burdened a portion of the lands of Mastertown. Each widow is to receive 6 bolls meal, or 3 bolls groats, and 3 bolls of bear, at the patron's option, annually, and an apartment in the hospital.—3. At the death of the last Episcopal clergyman of the parish in 1710, 600 merks Scots (£33 6s. 8d. sterling) was found in the poor's box, which was mortified for the use of the poor. The town pays the interest yearly,—one-half to the poor of the burgh, and the other half to the poor of the landward part of the parish.—4. John Reid, a shopkeeper in the burgh, mortified some land for the use of poor persons who had at one time been in good worldly circumstances, under the management of certain trustees. The revenues belonging to this mortification have been greatly increased from the feuing of the land; and in 1827, the yearly rental was £140 sterling. The guildry and the different incorporations also give weekly or monthly allowances from their funds to decayed members, and widows of members of their several bodies.

DUNGLASS CASTLE, a stronghold in East Lothian, which stood on the west side of the romantic little rivulet which separates Oldhamstocks parish in East Lothian from Berwickshire, on the spot where the elegant modern seat of Sir James Hall, Bart., is now situated. It was originally one of the many strongholds of the Earls of Home. After the attainder of Lord Home in 1516, it appears occasionally to have been held by the Douglasses; for, according to Patten, it was held by George Douglas in 1548. Patten relates, that while Somerset's army was passing the Pease, "my lord's grace, willing to lose no time, and that the enemies as well by deed as by brute should know he was come, sent an herald to summon a castle of George Douglas, called Dunglas, that stood at the end of the same valley nearer the sea, and a mile from the place of our passage. The captain thereof, Matthew Hume, a brother's son of the Lord Hume's, upon this summons, required to speak with my lord's grace. It was granted, and he came. To whom, quoth his grace, since it cannot be but that ye must be witting both of our coming into these parts, and of our proclamation sent hither before, and proclaimed also since, and ye have not yet come to us, but keep this holde thus, we have cause to take you as our mere enemy. And, therefore, be ye at this choice—for we will take none advantage of your being here now—whether ye and your company will render your holde and stande, body and goods, at the order of our will, or else to be set in it again as ye were, and we will assay to win it as we can. The captain, being about this riddle brought in great doubt what answer well to make, and whether best to do, at last stricken with the fear of cruelty that by stubbornness he should well deserve, and moved again with the hope of mercy that by submission he might hap to have, was content to render all at his grace's pleasure, and thereupon, commanded to fetch his company, returned to the castle. In the time of tarrying

for fetching his guard, we saw our ships, with good gale and order, fair sailing into their firth, which is a great arm of the sea, and runneth westward into their country above iiii. score mile. Upon this standeth Leith, Blackness, Stirling, and Saint Jho's road, and all the best towns else in the south part of Scotland. This captain came and brought with him his band to my lord's grace, which was of xxi. sober soldiers, all so apparelled and appointed, that, so God help me—I will say it for no praise—I never saw such a bunch of beggars come out of one house together in my life! The captain and vi. of the worshipful of the company were stayed and commanded to the keeping of the provost-marshal, more to take Munday's handsell, then for hope of advantage; the residue were licensed to go their gate with this lesson, that if they were ever known to practise or do ought against the army, while it was in the country, and thereupon taken, they should be sure to be hanged. After this surrender, my Lord John Gray, being captain of a number—as for his approved worthiness right well he might—was appointed to seize and take possession of the manor, with all and singular the appurtenances, in and to the same belonging, with whom, as it hapt, it was my chance to go thither. The spoil was not rich sure; but of white bread, oaten cakes, and Scottish ale, whereof was indifferent good store, and soon bestowed among my lord's soldiers accordingly. As for swords, bucklers, pikes, pots, pans, yarn, linen, hemp, and heaps of such baggage beside, were scant stoof for, and very liberally let alone; but yet sure it would have rued any good housewife's heart, to have beholden the great unmerciful murder that our men made of the brood-geese and good laying-bens that were slain there that day, which the wives of the town had pend up in holes in the stables and cellars of the castle, ere we came. In this meantime, my lord's grace appointed the house should be overthrown; whereupon the captain of the pioneers, with a iiiiC. of his labourers, were sent down to it, whom he straight set a-digging about the foundation. In the town of Dunglas—the which we left unspoiled and unburned—we understood of the wives, (for their husbands were not at home;) that it was George Douglas's devise and cost to cast these cross trenches at the Peaths, and stood him in iiii. Scottish L., which is as much sterling as iiii. good English crowns of V.s. a piece; a mete reward for such a work." Next day, Patten continues, "Our pioneers were early at their work again about the castle, whose walls were so thick, and foundation so deep, and there too set upon so craggy a plot, that it was not any easy matter soon to underdig them; our army dislodged and march on." After the destruction of Dunglass thus recorded, it was rebuilt, and probably much enlarged; for, in 1603, it was sufficient to lodge James VI. and his whole retinue when on his journey to London; and, on his return, in 1617, he was welcomed by the 'Muses Dunglasides'. In 1640, the Earl of Haddington, and several of the neighbouring gentlemen who had joined the Covenanters, took possession of Dunglass castle, for the purpose of watching the garrison of Berwick. His lordship, having received a letter from General Leslie, was standing in the court-yard reading it to the company, when the powder-magazine blew up, and one of the side-walls in its fall overwhelmed his lordship and his auditors, who all perished in the ruins. Scotstarvet states, that a report prevailed that the deed was effected by a faithless page, who, in revenge of some real or imaginary insult, thrust a hot iron into a barrel of gunpowder, and perished with the rest. This incident is sometimes erroneously connected with the subject of the next article,

though the two castles are separated from one another by the whole breadth of the island.

DUNGLASS, an ancient fortress and hamlet, in the shire of Dumbarton, and parish of Old Kilpatrick; $2\frac{1}{2}$ miles south-east by east of Dumbarton. The great Roman wall, commonly called Graham's Dyke, extending between the Forth and the Clyde, terminated here. The castle, which is picturesquely situated on a small promontory jutting into the Clyde, was once a Roman station. On a part of the rock, a simple obelisk monument has recently been erected to the memory of Henry Bell, the well-known father of steam-navigation. It was formerly the property of the Colquhouns of Luss, who held the whole tract of country from thence to Dumbarton.

DUNGYLE, an ancient fortress, on a lofty crag in the south-west of Bute. The stones which composed it lie in scattered heaps chiefly on one side of the hill. The curiosity of this object consists in the vitrification of a great part of these stones,—a process by which, it is supposed, they were cemented together; for no trace of lime, mortar, or any other cement, is found attached to them. "It is conjectured," says Dr. Lettice, in his *Letters on a Tour in 1792*, "that strata of wood and stone, in form of a wall, being first alternately placed upon each other, sods of earth were raised on either side to support them, and that then, the wood being set on fire, the upper strata of stone soon subsided on those immediately below them, and their vitrified sides meeting whilst red-hot, became firmly attached to each other. It is not improbable, that sand and the fern-plant—both at hand—might be mingled with the wood, or perhaps laid under it, to assist the vitrification. As the first strata would sink considerably in this process, successive additions were piled upon them, till the walls were raised to the height required. This strong place was called, in the Gaelic language, *Dungyle*, or *Dun-a-goil*; interpreted, 'the Fort of the Strangers;' and is supposed to have been constructed by the Danes or Norwegians. Mr. Thorburn—probably understanding the name to mean, 'a Fort against the strangers'—is of opinion that it was built by the inhabitants to defend themselves against the attacks of the former. As the northern people, just mentioned, certainly made many successful inroads into the island, and at some intervals considered themselves as its principal proprietors by right of conquest, there appears more difficulty in deciding the origin of this fortress than I will undertake to remove. A much smaller fort, of the same curious construction, stood at the north side of the island. The situation of Dungyle to a picturesque eye would, perhaps, be less amusing, on account of the remarkable ruins of the fortress, than on that of the different prospects seen from its eminence. Toward the south-east rise the bleak rocks of Mountblain, with the hamlet of Garatie, just below its rudest crags,—a few trees wildly scattered round it. A little to the left appears one of the Cumbræes, and its lighthouse with admirable effect. To the south-west, dashed by the waves of the Clyde, pouring into the Irish sea, the lofty mountains of Arran, pinnaled with many a black, mis-shapen crag aspiring to the clouds, with waterfalls glittering betwixt them, present altogether a thousand circumstances of the truest sublimity; whilst, on the right, as the eye moves along the north-western shore of Bute, it catches the lovely isle of Inchmarnock, and the long sweeping peninsula of Kintyre. We descended from Dungyle, and winding northward round its base, surveyed certain columnar stacks of dark rocks, which compose this mountainous elevation, now formidably projecting over our heads. Beneath these rocks we entered the long windings of a cave, worn

black by the eternal dripping of springs down its sides. For want of light we did not choose to penetrate beyond 40 or 50 feet: our companion informed us that its depth was not known. In barbarous times it is supposed to have been frequently a place of concealment to some enemy of the inhabitants; as it is at present to those of his majesty's revenue, the smugglers. Its rugged bottom was strewn over with fish-bones, whose eatable parts had been devoured by the otter, or the savage biped just mentioned. Notwithstanding this den-like appearance of things, a botanist would have been delighted with the variety of aquatic foliage which fringed its entrance."

DUNIAN, a hill on the boundary between Bedrule and Jedburgh parishes, Roxburghshire. Its summit at one place, excepting a cap or nobule of very inconsiderable elevation, is a round-backed and prolonged ridge, stretching chiefly along the boundary of the parishes, and partly into the interior of Jedburgh. At its highest point it has an elevation of 1,031 feet above the level of the sea; and very nearly at this point it is traversed by the high road between Jedburgh and Hawick. But the hill slopes on both sides in a very gentle acclivity, and bestrides the whole space between the Jed and the Teviot,—a geographical distance of nearly 3 miles, thus allowing the highway to climb it with comparative facility. On its eastern base, rising somewhat rapidly from the Jed, stands the chief part of the town of Jedburgh. See BEDRULE.

DUNINO,* or DENINO, a parish in the south-east of Fifeshire, on the road between St. Andrews and Anstruther. The kirk is 4 miles south of the former, and 5 miles north of the latter. It is bounded on the north by the parishes of Cameron and St. Andrews; on the east by St. Andrews and Kingsbarns; on the south by Kingsbarns, Crail, and Carnbee; and on the west by Carnbee and Cameron. It is doubtful whether the lands of Kingsmuir, extending to 844 acres, belong to this parish or to Crail. The district is beautifully interspersed with small streams, the principal of which is Pitmilly burn, which flows from west to east through the parish. Coal seems, from the vast number of old pits in various places of the parish, to have, at one time, been a very plentiful article here. Freestone is also found in abundance; but, though of an easy access, and of a good quality, it is seldom called for beyond the limits of the parish. Ironstone exists here. Of 3,275 acres, being the superficial extent of this parish, 270 are under plantations. The

* Pronounced *Dununie*. Some persons, little less fanciful, perhaps, than intelligent, says the reporter to Sir John Sinclair, think that Denino derives its origin from the Gaelic *Dun-yn-nach*, whose first constituent signifies 'a hill,' and the two last 'young women.' They infer, therefore, that Denino and 'the Hill of Virgins' are equivalent terms. Unfortunately there is not the least circumstance, either in tradition or record, tending to establish the authenticity of this derivation. In the local situation of Denino we seem to have a sufficient account of the origin of the name. The simple consideration of its standing in the immediate vicinity of a large and deep den, where, in right opposition to it, two huge rocks seem to threaten an embrace over the perennial stream below, appears to have naturally suggested the name, Denino, or, in other words, 'the Village on the Den.' Thus far the writer in the *Old Statistical Account*. [Vol. xi. pp. 352, 353.] But his successor in the office of parochial statistic gives a different turn to the whole matter. He says there is not and never was any village in the parish, nor any deep and large den! That the first syllable in the name of the parish was originally *Dun*, and that *Den* is a modern corruption; that there is a traditional account of a nunnery having once existed here on the summit of the highest ground in the parish—Dunino law; and that charters exist in which the parish is distinctly termed *Dunnenauacht*, and *Dyn-nenoch*. Mr. Leighton, again, asserts that this conjecture of a nunnery having existed here is totally without foundation, as there is no record of any such religious establishment; and argues that the name points not to the station of a religious sisterhood, but the *dun* or fortified hill-camp of a body of warriors. So much for conflicting etymologies!

real rental, in 1793, was £1,157; in 1836, £3,122. The assessed property was returned, in 1815, at £2,634. Population, in 1801, 326; in 1831, including the island of May, which also is claimed by Crail parish, 383. Houses 74. There are three ruined fortalices in this parish: viz., the castle of Draffun, Stravethy castle, and Pittairthy castle. This parish is in the presbytery of St. Andrews, and synod of Fife. Patron, the united college of St. Andrews. Stipend £198 16s.; glebe £28. Unappropriated teinds £33 15s. 10d. Church built in 1826; sittings 224.—Parish-schoolmaster's salary £34 4s. 4½d., with £16 fees, and other emoluments.

DUNIPACE, a parish in Stirlingshire, which has been conjoined with that of Larbert since about 1620. It is bounded on the north by the parish of St. Ninians; on the south by the Carron, which divides it from Denny and Falkirk parishes; on the west by the Carron, which again separates it from Denny, and by the parish of St. Ninians; and on the east by the parish of Larbert. It derives its name from two remarkable mounds in the eastern part of the parish. "The whole structure of these mounds," says Mr. Nimmo, in his 'History of Stirlingshire,' "is of earth; but they are not both of the same form and dimensions. The more easterly one is perfectly round, resembling an oven, and about 50 feet in height. That it is an artificial work does not admit of the least doubt; but the same thing cannot be affirmed with equal certainty of the other, though it has generally been supposed to be so too. It bears no resemblance to the eastern one either in shape or size. At the foundation it is nearly of a triangular form; but the superstructure is quite irregular; nor does the height of it bear any proportion to the extent of the base. Buchanan calls the western mount the smaller, but his memory had quite failed him, for there are at least four times the quantity of earth in it than in the other. Neither can we discern any appearance of the river's having ever come so near as to wash away any part of it," as that historian affirms; though it is not improbable that considerable encroachments have been made upon it, which have greatly altered its original shape, as it affords an excellent kind of gravel for different uses. The mounds are now planted with firs, which, together with the parish-church of Dunipace, standing in the middle between them and the river running hard by, gives this valley a romantic appearance. The common account given of these mounds is, that they were erected as monuments of a peace concluded in that place betwixt the Romans and the Caledonians, and that their name partakes of the language of both people; *Dun*, signifying 'hill,' in the ancient language of the country, and *Pax* 'peace,' in the language of Rome; the compound word *Duni-pace*, according to this etymology, signifies 'hills of peace.' If the concurring testimony of historians and antiquaries did not unite in giving this original to these mounds, we should be tempted to conjecture that they are sepulchral monuments. Human bones and urns had been discovered in earthen fabrics of a similar construction in many parts of the island; and the little mounds or barrows which are scattered in great numbers around Stonehenge, in Salisbury plain, are generally supposed to have been sepulchres of the ancient Britons." This conjecture of the intelligent historian of Stirlingshire, with regard to the origin of the hills of Dunipace, is supported by his editor Mr. Stirling, who rejects the absurd, mongrel etymology

of Buchanan, and states it as more probable that the word Dunipace is entirely Celtic in its origin. *Duin-na-Bais* in Gaelic, would signify, he mentions, 'hills or tumuli of death.' "Dunipace," continues Mr. Nimmo, "is taken notice of in history as a place where important national causes have been decided, and that more than once, by great monarchs in person. The Roman Emperor Severus, accompanied by his sons Caracalla and Geta, is supposed to have here concluded a peace with the Caledonians. We find Edward the 1st of England, at Dunipace, upon the 14th October, 1301, when he signed a warrant to his plenipotentiaries, who were at that time in France, authorizing them to consent to a truce with the Scots, as a necessary preliminary towards a peace with their ally, the French king, between whom and Edward an obstinate war had long raged. At the chapel of this place, too, Robert Bruce and William Wallace are said to have had a second conference, the morning after the battle of Falkirk, which effectually opened the eyes of the former, to a just view of his own true interest, and that of his country. Until the bridge of Larbert was erected in the last century, the ordinary place of crossing the Carron seems to have been at Dunipace. No where else does the river offer a passage naturally so commodious and easy, the banks being generally steep and rugged. The numerous armies which frequently crossed this shire, appear to have taken their route that way, at least since the demolition of a Roman bridge which stood half-a-mile to the eastward." [Nimmo's 'History of Stirlingshire,' p. 68—73.]—A portion of the ancient Caledonian forest, known by the name of Torwood, still remains in this parish. An old oak tree of immense size, used to be pointed out here as having afforded a hiding-place to Sir William Wallace after his defeat in the north. Adjoining to this there is a square field, enclosed by a ditch, where Donald Cargill pronounced sentence of excommunication against Charles II., the Duke of Lauderdale, Sir George Mackenzie, the King's advocate, and others. The population of Dunipace, in 1801, was 948; in 1831, 1,278. Assessed property, in 1815, £5,634. For ecclesiastical statistics, see LARBERT.

DUNKELD AND DOWALLY, a conjoint parish in the north-eastern part of Perthshire. It consists of the town of Dunkeld, and the landward parish of Dowally, both of which were disjoined from the parish of Caputh in 1500. It is bounded on the north by the parish of Logierait; on the south by the parish of Caputh and the river Tay, which divides it from the parish of Little Dunkeld; on the east by the parishes of Cluny and Caputh; and on the west by the Tay, which separates it from Little Dunkeld. A portion of the parish of Dowally, called Dalcapon, is detached from it, and is situated several miles farther north. This portion is bounded on the south and west by the parish of Logierait; on the north by the parish of Moulin; and on the east by the parish of Kirkmichael. The greatest length of the parish is 7 miles; its greatest breadth 3 miles. Its superficial extent is about 14 square miles. The parish stretches along the banks of the Tay, which waters its western boundary, and from that river it rises into steep and barren mountains, of which it is principally composed. It is estimated that its surface consists of about 1,200 acres of arable land, 1,000 of meadows in pasture, 260 of oak wood, and 9,000 of heath, and hill pasture. The valued rent of Dowally is £1,390 2s. 2d. Scots. Assessed property, in 1815, £14,976. The population of the parish amounted, in 1801, to 1,857; in 1831, to 2,037; of whom 566 were in the parish of Dowally, and 1,471 in the town of Dunkeld. Of the whole

* The writer of the Old Statistical Account seems to contradict this statement. He distinctly states that the course which the river had taken when it made the encroachment referred to by Buchanan, is still visible.

population 1,965 are connected with the Establishment, and 72 belong to other denominations. From a more recent survey, the population of the parish of Dowally has increased since 1831 to 596. No new survey has been made of Dunkeld. Dunkeld is the seat of a presbytery, and is in the synod of Perth and Stirling. Patron, and sole heritor, the Duke of Athole. The cathedral, which has been fitted up as the parish-church, was built in 1317. It was refitted and repaired in 1820, at an expense of about £5,400, defrayed solely by the late Duke of Athole, with the exception of £990 granted by the Exchequer. Sittings 655. Stipend £161 7s. 7½d., with £63 per annum in lieu of manse and glebe. Gaelic is commonly spoken in the parish of Dowally, and the inhabitants generally understand English very imperfectly. The marches of Dowally in fact are said to constitute a distinct line of demarcation between the two parts of the united parishes in respect to the English and Gaelic languages: see article DOWALLY.—There is also an Independent congregation in Dunkeld. It was established in 1800. Church built in 1800, at an expense of £500. Sittings 310. Stipend £60, and a house worth about £10 annually.—A Glassite congregation has likewise been established for about 90 years. The congregation assembles in the upper flat of a house, rented at £10 per annum, and fitted up at the expense of the congregation. Sittings about 100. There is no minister. The members are only 10 in number, and the average attendance is about 30.—The salary of the parish schoolmaster is £34 4s. 4½d., with £14 of school-fees. Average number of scholars, about 50. There are four other schools in the parish, attended, on an average, by 194 children.

The town of Old Dunkeld is delightfully situated on the north bank of the Tay, close on the river side, and with a finely-wooded hill immediately behind it. It consists of one principal street, extending in a line parallel with the river, and intersected by several smaller streets or lanes. It is a place of great antiquity. In Pictish times it is said to have been the seat of royalty, and it is certain that a cell of Cul-dees was established here at a very early period. It was afterwards, by David I., in 1130, made the seat of a bishopric, and ranked as the first in Scotland. It is still regarded as the capital of the northern part of Perthshire. Its size, however, is very inconsiderable, the population, in 1831, having been only 1,471. A limited trade of consumption with the surrounding country is carried on, but it is not a trading place in a comprehensive sense, nor has it any manufactures. The cathedral stands apart from the town, and is surrounded by fine old trees. Though now much dilapidated, it is still a fine building. The tower, the two side-aisles, and the nave alone remain. The ruins of the principal aisle in particular are singularly grand. At the west end are the remains of a fine large Gothic window which has originally been beautifully ornamented, but is now sadly injured. The tower, which was founded in 1469, and finished in 1501, is placed at the west end of the north aisle, and is a structure of great elegance. The Tay is crossed at Dunkeld by a magnificent bridge, of which the middle arch is 90 feet wide; the two next 84 feet each; and the two next 74 feet each; with 2 land-arches, each 20 feet wide. Total water-way 446 feet. This bridge was built in 1807-9, at an expense of £14,054, of which £7,000 were contributed by the Duke of Athole.—Dunkeld is a burgh-of-barony under the Duke of Athole. It received from Queen Anne, in 1704, a charter conferring on it the dignity of a royal burgh, with 3 bailies, a dean-of-guild, a treasurer, and 10 common-council-men; also fully empowering it

“to have freemen, merchants, guild-brothers, municipal courts, or dean-of-guild, with the council and other members, liberties, and emoluments thereto belonging, as also burgh-brothers of the fraternity, or guildry, and to be appointed and created with such liberties and privileges as belongs to them, or are usual within any other burgh-royal within the kingdom; with full power and liberty to use, traffic, and merchandize, as well within the said kingdom as without it, in foreign countries, and of exporting and importing all lawful effects and commodities whatsoever.” This charter, however, does not appear to have been accepted by the burgh, or carried into effect, as the town continued merely a burgh-of-barony. The jurisdiction of the burgh is that of an ordinary baron-bailie, who is appointed during the pleasure of the superior. He holds no regular court, but trifling disputes are settled by him at his own house: matters of a more serious character being referred to a justice-of-peace court, which meets at Dunkeld once a month. Courts under the new small debt act are held every 2d Monday of February, May, August, and November. Fairs, principally for cattle, are held on the 14th February, 5th April, 20th June, and 2d Tuesday of November. Here are branches of the Commercial bank of Scotland, and of the Perth banking company.

The scenery in the neighbourhood of Dunkeld, particularly in the grounds of the Duke of Athole, is extremely beautiful. The poet, Gray, who visited the town in 1766, thus describes the approach to and situation of the place: “The road came to the brow of a deep descent; and between two woods of oak we saw, far below us, the Tay come sweeping along at the bottom of a precipice at least 150 feet deep, clear as glass, full to the brim, and very rapid in its course. It seemed to issue out of woods thick and tall that rose on either hand, and were overhung by broken rocky crags of vast height. Above them, to the west, the tops of higher mountains appeared, on which the evening clouds reposed. Down by the side of the river, under the thickest shades, is seated the town of Dunkeld. In the midst of it stands a ruined cathedral; the tower and shell of the building still entire. A little beyond it a large house of the Duke of Athole, with its offices and gardens, extends a mile beyond the town: and as his grounds are intersected by the streets and roads, he has flung arches of communication across them, that add much to the scenery of the place.” Mr. Gilpin says: “This favoured spot—for it is indeed a beautiful scene—consists of a large circular valley, the diameter of which is in some parts a mile; in others two or three. Its surface is various; and some of the rising grounds within the valley itself would even be esteemed lofty, if it were not for the grand screen of mountains, which circles the whole. At the base of those, towards the south, runs the Tay, in this place broad, deep, and silent. The whole valley is interspersed with wood, both on the banks of the river and in its internal parts; and would have been a still more beautiful scene, if art had done as much as nature. Much indeed it has done, but nothing well. Cascades, and slopes, and other puerilities deform a scene which is in itself calculated to receive all the grandeur of landscape. The walks show some contrivance; and might, with a few alterations, be made beautiful. Indeed the whole is capable of receiving any improvement; and may by this time have received it. I speak of it only as it was a dozen years ago. The remains of the abbey, shrouded in wood, stand on the edge of the lawn; but rather too near the house. The solitude, which naturally belongs to ruins, and the embellishments which are necessary about a habitable mansion, in-

terfere rather too much." [Observations in 1772, Vol. I. pp. 113, 114.]—In the subsequent article will be found some additional remarks on the beautiful scenery of this locality.

DUNKELD (*Lincol.*), a parish in Perthshire, which adjoins that described in the last article. It consists of the united parishes of Little Dunkeld and Laganallachy; and is bounded on the north by the parish of Dull, and by the Tay, which there divides it from the parish of Logierait; on the west by the parishes of Dull and Teem; on the south by the parishes of Dull, Monzie, Auchteraven, and Kilsclaven; and on the east by the river Tay, which divides it from Logierait, Dunkeld, and Canth. Its greatest length is 16 miles, its greatest breadth between 5 and 6 miles, and it contains about 31,000 acres. The parish consists of three distinct and populous districts, which are all separated from each other by high hills: viz. the Bishopric, which extends from the Bran along the west bank of the Tay to the northern boundary of the parish; Strathbran, the valley of the Bran, along the southern confines of the parish; and Murthly, a long narrow strip of land stretching from the town of Little Dunkeld along the banks of the Tay to the south-east. The southern and eastern parts of Murthly present an undulating surface. The soil is a kind of black loam, mixed with sand, and tolerably fertile. There is a considerable tract of heath in the neighbourhood of Murthly, a portion of which is now covered with fine woods. The western part of the district below Invar is a deep, narrow vale through which the Tay flows. It is adorned with oak-woods, and the bottom forms a stripe of good arable land. On the south side of this valley is situated the celebrated hill of Birnam. The district called the Bishopric is about 10 miles in length from Invar to Grantully. It derives its name from the greater part of it having formerly been the property of the see of Dunkeld. It forms the western side of a beautiful valley through which the Tay flows in a wide smooth stream. The bottom of this valley is level and fertile; and it is bounded on the west by a long range of high mountains, which present an irregular but bold and abrupt face to the valley. The numerous projections of the range are perpetually changing the point of view, and opening up new prospects to the traveller as he moves along. This district is populous; it contains a number of gentlemen's seats, and is everywhere throughout the greater part of its surface with oak-woods. The soil is sandy, with a mixture of loam. Beyond the district of the Bishopric, to the western extremity of the parish, there is a wild tract of immense extent composed of hills, moors, and fells, through which considerable streamlets find their way into the river Bran. It does not appear to be distinguished by any general name, and is scarcely occupied by any human habitations. The district of Strathbran extends about 9 miles from west to east, or from Invar to Annulrie. The soil in this district is clay and loam, and it is more moist than either of the others. The surface rises in a gentle slope from both sides of the Bran, and is bounded on the south and north by hills. The soil is fertile, and the greater part of the population of the parish are concentrated here. Beyond the valley towards the south there is a long tract of hills occupying nearly 4,000 acres, and covered principally with heath, though in some places affording good pastures. Below Murthly in this parish, there is an inexhaustible body of freestone, of a fine grain, and great hardness. It is of a light, vivid ash colour, and was used for building the cathedral of Dunkeld. The hill of Birnam furnishes slates of a deep blue colour, bordering on violet; and lead-ore has also been found

in this elevation. Iron probably exists to some extent in the parish, as there are fountains strongly impregnated with this metal near Dalguise in the Bishopric, and also at Murthly. "In Strathbran," says the Old Statistical Account, "near the king's highway, there is to be met with a remarkable kind of clay. When wet it feels perfectly smooth and unctuous; when dry it acquires a remarkable degree of induration; and when pounded, the powder affects the touch like the finest wheat flour." "This argillaceous substance," it is added, "may be fit for some of the finest works of the potter." A great part of the wealth of this parish consists in the natural woods, which are mostly of oak. The planting of wood has also been carried to an immense extent by several of the proprietors of the parish, particularly by the Duke of Athole. Those beautiful plantations on the banks of the Bran, and on the heights around Little Dunkeld and Invar, have long been the delight and admiration of travellers. The most remarkable points in these grounds are the Rumbling bridge and Ossian's hall. The latter of these is a neat edifice situated in a romantic promontory which overlooks a broad, broken cascade. The stranger is conducted into a small apartment lighted from the top, and desired to look at a picture of Ossian painted on the wall. While he is examining it, it suddenly disappears as if by magic; and he finds himself at the entrance of an oblong apartment, the walls and roof of which are covered with mirrors, wherein the cascade opposite the window is reflected, tumbling as it were in all directions;—a fantastic and ill-assorted combination of the solemnities of nature, with childish toys. There is much sound, sober sense, as well as high poetry, in the "Effusion" of Wordsworth, on this cascade and its hall, which we make no apology for quoting:—

"What He—who, mid the kindred throng
Of heroes that inspired his song,
Doth yet frequent the hill of storms,
The stars dim-twinkling through their forms!
What! Ossian here—a painted thrall,
Aute fixture in a tattered wall,
To serve an unsuspected screen,
For show that must not yet be seen;
And, when the moment comes, to part
And vanish by mysterious art;
To lead, harp, and bow, split asunder,
To ingress to a world of wonder;
To say saloons with waters dancing
From the sight wherever glancing;
One loud cascade in front, and lo!
A thousand like it, white as snow,
Stream on the walls, and torrent-foam
Active round the hollow dome,
Illusive cataracts! of their terrors
Not stripped nor voiceless in the mirrors,
The cataract the pageant from the flood
Thundering adown a rocky wood,
What pains to dazzle and confound!
What strife of colour, shape, and sound
In this quaint medley, that might seem
Dropped out of a sick man's dream!
Strike scene, fantastic and uneasy
As a madman's dream!
What! disenchanted from the mood
That loves on silent thoughts to brood!"

O Nature! in thy changeful visions,
Through all thy most abrupt transitions,
Smooth, graceful, tender, or sublime—
Ever verse to pantomime.
These neither do they know nor us
Thy servants, who can trifle this;
Else verily the sober powers
Of rock that frowns, and stream that roars,
Exalted by congenial ways,
Of spirits, and the undying lay,
And names that shoulder not away,
Had wakened some redeeming thought
More worthy of this favoured spot;
Recalled some feeling, to set free
The Bard from such indignity!"

The Old Statistical reporter mentions that a peculiar species of serpent abounds near Ossian's hall at Little Dunkeld. "It grows," he says, "to the

length of twenty inches; is of a yellowish colour, and speckled all over with brown spots, which give it the appearance of a beautiful marble. Its bite is not thought poisonous. This reptile is never seen in elevated situations, but always in grounds of a warm exposure. The black snake worm, from eight to ten inches in length, a noxious animal, is sometimes met with, but very seldom, in the same tract of ground." The same writer mentions a remarkable variety of the lizard tribe, which is found in the moors at the eastern extremity of the parish. "It is," says he, "about nine inches long; the body or trunk is of an unusual length in proportion to the tail, which does not taper gradually from the hind feet as in other lizards, but becomes suddenly small like that of a mouse. The back is full of small protuberances, and guarded with a skin almost as hard as a sea-shell. The eyes are large, clear, and circular, like those of an ordinary trout; the jaws more than an inch in length, and the teeth so strong as to be heard making a ringing noise upon the iron point of a pole, at the distance of more than 10 feet. When irritated it expresses its rage by the reddening and glistening of its eyes." [Old Statistical Account, vol. vi. p. 361.]—Near the bottom of the south-east side of the celebrated Birnam hill, which is in this parish, [see article BIRNAM] there is a round mound which bears some traces of a rude fortification. It has been known from time immemorial by the names of Court hill and Duncan's hill; and tradition reports that it was occasionally occupied by the unfortunate King Duncan. A number of small cairns are in the immediate neighbourhood. A little higher up the same hill are the ruins of an oblong building, called in Gaelic *Forhaillon*, with circular turrets at the corners. Birnam, as is well known, was anciently a forest, and part of the domain of the Scottish kings.—The following interesting tradition is given by the author of the Old Statistical Account of Little Dunkeld, with regard to a small field called the Yoke-haugh, which lies about 2 miles above Little Dunkeld. "A man who may be called the Cincinnatus of Scotland happened, along with his two sons, to be ploughing in this field on the day of the battle of Luncarty. Hearing the fate of the battle, and seeing the Scottish army retreating, he was instantly fired with heroic indignation, and, together with his sons, seized each of them the yoke of an oxen-plough, persuaded their countrymen to rally, and marching at their head, met the Danes on the banks of the Tay, near Caputh, where, having renewed the combat, the aged hero exhibited prodigies of valour, and the Danes were completely defeated. In consequence of this he was dignified by his sovereign with peculiar honours, obtained the name of Hay, and the implement with which he fought for his arms." "The yoke," adds the Reporter, "is still the arms of the noble family of Kin-noul, who are thought to be descended from this saviour of his country."—Besides the remains of antiquity which we have already mentioned, there are a number of Druidical circles, British forts, and immense cairns. A stone-bridge over the Bran, a little above Trochrie, is said, in Sir John Sinclair's Statistical Account, to be the oldest in Perthshire. The castle of Trochrie on the banks of the Bran, and about 3 miles above Little Dunkeld, was a seat of the unfortunate John, Earl of Gowrie. It is now a complete ruin.—The valued rent of this parish is £4,805 16s. 4d. Scots. The value of assessed property, in 1815, was £5,595. Population, in 1801, 2,977; in 1831, 2,867. Houses 578. Except in the town of Little Dunkeld, the inhabitants are dispersed over the parish in hamlets or small villages.—The parish of Little Dunkeld is in the

presbytery of Dunkeld, and synod of Perth and Stirling. Patron, the Crown. There are two churches in the parish;—one at Little Dunkeld, which was built in 1798, with 820 sittings; the other at Laganallachy, which is situated in the district of Strath-bran, about 3 miles from Little Dunkeld. It can contain about 500 people. Stipend £157 10s. 8d.; glebes at Little Dunkeld and Laganallachy worth about £28 a-year. The minister has also a right of cutting peats for fuel.—There are two parish-schools. The salary of one is £20 18s. 11½d., and £10 of school-fees;—that of the other £10, and £15 of school-fees. Total average attendance about 100. There are 5 other schools in the parish, the average number of scholars attending which is about 250.—The town of Little Dunkeld is situated close on the banks of the Tay, in the south-eastern part of the parish, and may not improperly be regarded as a suburb of old Dunkeld, being, in fact, united with it by a bridge over the river.—The small village of Invar, on the Bran near Dunkeld, was the birth-place of Neil Gow. An old oak in the Athole grounds, near this place, is still pointed out as his favourite tree, under which he used to sit for hours composing his beautiful airs.

The following description of the scenery of Dunkeld, by the celebrated traveller, Dr. E. D. Clarke, will probably be new to some of our readers. We quote it, not the less willingly that it contains an ingenious defence of what appears to us the silly artificialities of Ossian's hall, on approaching Dunkeld from the north:—"Nothing," says the Doctor, "occurs particularly remarkable until just before you arrive at the toll-gate, before descending into the beautiful vale of the Tay, and from that moment a scene opens before you, which perhaps has not its parallel in Europe. I know not in all Scotland, nor in any part of Great Britain, a scene more striking than Dunkeld, as you descend to cross the ferry. From the toll-gate towards the river you have the great forest of Birnam above you on the left, and down far to the right a long hollow valley, watered by the rapid meandering Tay, attracts the attention. Dunkeld, shut in by high mountains, rises with its ruined cathedral, its church and houses above the water. To enrich this noble scene, the finest trees are seen flourishing with the greatest redundancy. How weak and groundless are the expressions of Johnson respecting Scotland and its timber, when one beholds this luxuriant valley proudly decorated with majestic oaks, sycamore, limes, beech, maple, birch, and all the glories of the forest! I measured a single oak close to the ferry, and found it to be 17 feet in the girth; and near it stood a sycamore of much greater magnitude. The grounds belonging to the Duke of Athole, I do not hesitate to pronounce, are almost without a rival. There are some scenes about them which bear a resemblance to the finest parts of Mount Edgecumbe in Cornwall. The walks alone form an extent of 16 or 17 miles,* and these are kept in the finest order, not fantastically cut according to any absurd rule which may violate the grandeur of nature, but winding among the most solemn groves and majestic trees which the earth produces. I cannot pretend to detail their beauties. The pencil alone can, and even that would but inadequately describe them. The greatest curiosity of Dunkeld—at least that which is generally esteemed such—is a cascade formed by a fall of the Bran, about ½ mile from the ferry of Invar. The manner in which this is presented to the spectator has been much reprobated by several of our modern tourists,

* This is probably under-stated. Dr. Macculloch mentions that the extent of the walks is 50 miles, and that of the rivers 20 miles.

who, anxious to show their taste for the beauties of nature, hastily condemn the smallest interference of art. For my own part, I entirely differ with them respecting the cataract of the Bran at Ossian's hall. I consider it as one of the most ingenious and pleasing ornaments to rural scenery I ever beheld. A hermitage or summer-house is placed 40 feet above the bottom of the fall, and constructed in such a manner that the spectator, in approaching the cascade, is entirely ignorant of his vicinity to it, being concealed by the walls of this edifice. Upon entering the building you are struck with a painting of Ossian, playing upon his harp, and singing the songs of other times;—the picture, as you contemplate it, suddenly disappears with a loud noise, and the whole cataract foams at once before you, reflected in several mirrors, and roaring with the noise of thunder. It is hardly possible to conceive a spectacle more striking. If it be objected that machinery contrivance of this sort wears too much the appearance of scenic representation, I should reply, that as scenic representation I admire it, and as the finest specimen of that species of exhibition, which doubtlessly, without the aid of such a deception, would have been destitute of half the effect it is now calculated to produce. A little below this edifice a simple but pleasing arch is thrown across the chasm of the rocks through which the river flows with vast rapidity. About a mile higher up the Bran is the Rumbling bridge, thrown across a chasm of granite about 15 feet wide. The bed of the river for several hundred feet above the arch is copiously charged with massive fragments of rock, over which the river foams and roars like the waters of Ivy bridge in Devonshire. Approaching the bridge, it precipitates itself with great fury through the chasm, casting a thick cloud of spray or vapour high above the bridge, and agitating by its fury even the prodigious masses which form the surrounding rocks. Few objects will more amply repay the traveller for the trouble of visiting them than the woody precipices, the long winding shady groves, the ruins and cataracts of Dunkeld." See article THE BRAN.

DUNLICHTY. See DAVIO, Inverness-shire.

DUNLOP,* a parish in the north of the district of Cunningham, Ayrshire. It is bounded on the north by Renfrewshire; on the south-east and south by Stewarton; and on the north-west by Beith. It is of an oblong figure, stretching from north-east to south-west, generally about 2 miles broad, but tapering and narrow toward the extremities. Its greatest length is about 7 miles; and it contains about 10½ square miles. A doubt exists—but with a probability on the negative side—whether or not a small part of it on the north belongs *quoad civilia* to the parish of Neilston in Renfrewshire. The surface, for the most part, is agreeably undulating, nowhere rising into a greater elevation above the beds of the local streams than 150 feet; yet the whole is more than 300 feet above the level of the sea, and, from many of its knolls or little hills, carries the eye minutely and graphically over the richly cultivated country between it and the sea, and away over the map of romance spread out over the wide waters of the frith of Clyde. All the way south-westward it gradually slopes; in some places, it is a beautifully irregular agglomeration of knolls; and often, when it swells up, on one side, in a gentle rising ground, it breaks suddenly down, on the other, in a precipitous rock or grassy-bank overhanging a rivulet. In its central parts, however, it has a somewhat naked

appearance from paucity of plantation. The parish is separated from Beith by Lugton water, and from Stewarton by Corsehill-burn, and is bisected into nearly equal parts by the Glazert,—all the streams flowing south-westward; and it derives from them a little beauty, and only a trifling advantage. The soil, in some places, is a fine loam; in a few spots, is moss; but in general is of a clayey, retentive nature, and very productive. Limestone abounds; coal is of very inferior quality, and is not worked. Dunlop house, beautifully situated on the brook which forms the south-eastern boundary, is a splendid mansion. Dunlop has long been celebrated for its cheese; and though now successfully competed with by most parishes in Ayrshire, and some in Renfrewshire, in the production of that article, is even yet unsurpassed. Barbara Gilmour—a woman whose wits were sharpened, and whose range of observation was varied, by exile to Ireland, during the troubles in Scotland between the Restoration and the Revolution—settled down in Dunlop as a farmer's wife; and having specially turned her attention to the produce of the dairy, successfully attempted to manufacture from unskimmed milk a species of cheese then unknown in Scotland, and altogether different from the horny, insipid produce of skimmed milk still in use among the peasantry of Peebles and other secluded districts. Her manufacture was speedily imitated by her neighbours; and, in a short time, came into such general demand, under the name of Dunlop cheese, that, whether the produce of her own hands, or that of her neighbours, or that of persons in adjoining parishes, it found far and near a ready market. Even Mr. Cobbett himself has pronounced it "equal in quality to any cheese from Cheshire, Gloucestershire, or Wiltshire." About 25,000 stones are now produced annually in the parish; and large quantities from other parishes in the south and west pass through it as an entrepot both convenient for its situation, and advantageous for its celebrity. Dunlop is traversed for 5 miles by the road between Kilmarnock and Paisley; it is otherwise well-provided with roads; and it may now enjoy facility of communication from its being near the range of the Glasgow and Ayr railway.—The village of Dunlop is situated near the centre of the parish; 3 miles north of Stewarton; 5 south of Beith; and 9 north-east of Irvine. It consists of a single street, and has upwards of 200 inhabitants.—Population of the parish, in 1801, 808; in 1831, 1,040. Houses 210. Assessed property, in 1815, £6,762.—Dunlop is in the presbytery of Irvine, and synod of Glasgow and Ayr. Patron, the Earl of Eglinton. Stipend £215 1s. 6d.; glebe £20. Unappropriated tithes £296 0s. 11d. The parish-church was built in 1835. Sittings 750. The church was formerly a vicarage of the monks of Kilwinning. Schoolmaster's salary £25 13s. 3d., with from £18 to £21 other emoluments. There are 3 schools non-parochial.

DUNMAGLAS, a district in the shire of Nairn, though locally in the shire of Inverness, and old parish of Dunlichty; 19 miles north-east by east of Fort-Augustus. Here is the seat of the ancient family of MacGillivray, chief of the clan of that name. This district anciently belonged to the Thanes of Calder, one of whom procured an Act in 1405, incorporating all his lands in the shires of Inverness and Forres, into the shire of Nairn; and, accordingly, Dunmaglas forms still a part of that county, though under the jurisdiction of the sheriff of Inverness. Dunmaglas is situated among and comprehends the whole of the sources of the river Farigag, in Stratherrick, above Abershea. The whole is in the form of an oblique parallelogram, of

* At the village of Dunlop is a small hill, anciently fortified, round which is a heud or winding of the local stream. This hill, in the Scots-Irish language, is *Dun-tub*, 'the Hill at the heud.' Hence the origin of the name Dunlop.

which the longer diagonal runs north and south about 7 miles; the extent being about 16 square miles.

DUNMORE, or ELPHINSTONE, a village in the shire of Stirling, and parish of Airth; 8 miles south-east of Stirling. This village is situated upon the Forth, and is within the jurisdiction of the port of Alloa. The castle of Dunmore is the ancient seat of the family of Murray, from whence they derive their title of Earl. The 1st Earl of Dunmore was Lord Charles Murray, 2d son of John, Marquis of Athole, and of Lady Amelia Stanley, by whom the sovereignty of the isle of Man, and the barony of Strange, came into the Athole family. His lordship was the 6th in descent from Mary, queen-dowager of France, the beautiful daughter of Henry VII., through the Earls of Derby, and the Cliffords, Earls of Cumberland. See AIRTH.

DUNMORE. See MONZIE.

DUNMYAT, a beautiful conical eminence in the parish of Logie, and vicinity of Stirling, commanding a splendid panoramic view of the carse of Stirling.

DUNNET, a parish in the county of Caithness, bounded by the Pentland frith on the north; by Canisbay on the east; Bower on the south; and Orlrick on the west. It extends about 10 miles in length; and is on an average $2\frac{1}{2}$ in breadth. It is the most northerly parish in Great Britain; the extremity of Dunnet-head being found by the latest observations, to be farther north than Duncansby-head, or John-o'-Groats. Except Dunnet-head, [see next article,] there is scarcely an eminence in the parish. The soil is in general light, with little clay or deep loam; and by far the greater part is incapable of cultivation. The coast is in most places bold and rocky. On the east of Dunnet-bay there is a beautiful level sand, stretching for 2 miles along the shore, over which the sea ebbs and flows above a quarter of a mile. The sand above high-water-mark is loose; and by being exposed to driving, frequently hurts the neighbouring lands. Adjoining to it, there is a tract of barren sand nearly 2 miles in diameter, which is said to have been arable ground, or rich pasture, some time about the end of the 17th century. The ruins of cottages are now appearing in different parts of it; but they seem to be of a much older date. That part of the parish to the east of Dunnet-head, along the frith, has a low rocky shore.* Though Dunnet-bay runs far into

the land, it affords no shelter for any vessels upon the north side of it, which is contiguous to Dunnet-head, as it is exposed to the west. But on the Pentland frith, to the east of the Head, there are several very secure havens for boats or small craft. The haven of Brough, close by the Head, is well-sheltered from every wind but the north-west. The harbour of Ham, or Holm, scarcely a mile to the east of Brough, might also be rendered safe for small vessels at little expense. It has, however, the inconvenience of a bar of sand and gravel across the entrance of it, upon which there is not sufficient depth of water for vessels in any great burden, but with spring-tides. Scarfskerry is a narrow creek between two rocks, and affords a convenient landing for boats with easy weather, but is not capable of being much improved. Dunnet-bay affords excellent flounders and haddocks; and is sometimes frequented by shoals of herrings, in July and August. Besides these, great quantities of cuddins, as they are called here, or small saiths, are caught in the summer-season. The frith abounds with excellent cod and ling, which are found principally in deep water, in the tide-way, and taken with a line of 50 or 60 fathoms, to which a single hook is fixed, and a lead sinker. The village or hamlet of Dunnet, situated to the east of Dunnet-head, and to the north-east of the bay, has a beautiful exposure and declivity to the south. There are several caves in the rocks here, and the vestiges of some old chapels are still to be seen.—Two inner cells of Picts' houses exist at Ham. The entrances are about 8 feet asunder, and seem to have led from two outer circular apartments, of about 17 or 18 feet diameter, which appear to have had a communication from the one to the other. The entrance to the largest cell is near 30 inches wide; but as it is much filled up with earth, it is not known what the height of it may have originally been. The cell is about 9 feet long, and 6 feet wide about the middle; but becomes narrower towards the farther extremity, which is circular. The roof is about 5 feet from the earth in the floor. The walls are constructed of large rough stones, apparently without any kind of cement. Every course in the walls projects a little over that immediately below it, till they approach within about 3 feet of one another. That space is covered by a course of strong stone lintels. The smaller cell is finished in the same manner. And the whole is covered with earth, which forms a beautiful green mount, about 8 or 9 feet above the level of the adjacent field.—There is a grave-stone in the churchyard, the inscription on which is as follows:—"Here lies Margaret Wallace, daughter of William Wallace, who was murdered by Alexander Calder, son of Alexander Calder in Dunnet, because he could not have her in marriage. August the 29th, in the year of God 1635." There is a tradition, that the murder was committed on a Sunday morning; and that the murderer, by fleeing to Orkney, escaped punishment.—Freestone of excellent quality is quarried at Dunnet-head; but, in this remote region, it is of little value.—Population, in 1801, 1,366; in 1831, 1,906. Houses 387. Assessed property, £10.—This parish is in the synod of Sutherland and Caithness, and presbytery of Caithness. Patron, Sir James Colquhoun, Baronet. Stipend £191 4s. 6d.; glebe £12. Unappropriated tithes £870 12s. 9d.—Schoolmaster's salary £34 4s. 4½d., with £10 fees. There are 4 non-parochial schools.

DUNNET-HEAD, an extensive promontory, running into the Pentland frith, on the north-western point of the parish of Dunnet, in N. lat. 58°

* "The current in the Pentland frith off this coast is exceedingly strong during spring-tides, so that no vessel can stem it. The flood-tide runs, from west to east, at the rate of 10 miles an hour, with new and full moon. It is then high water at Scarfskerry—whence the ferry-boat crosses from Dunnet for Orkney—at 9 o'clock. As the water begins to fall upon the shore, the current immediately turns to the west; but the strength of the flood is so great in the middle of the frith, that it continues to run east till about twelve. These contiguous currents, running with amazing velocity in opposite directions, have a strange appearance from the land, in a day favourable for observing them. With a gentle breeze of westerly wind, about 8 o'clock in the morning, the whole frith seems as smooth as a sheet of glass, from Dunnet-head to Hoy-head, in Orkney. About 9 the sea begins to be in a rage, for about 100 yards to appearance, off the Head, while all without that continues smooth as before. This appearance gradually advances towards the frith, and along the shore to the east: though the effects of it are not much felt upon the shore, till it reach Scarfskerry-head, which is about 3 miles distant from Dunnet-head, as the land between these two points forms a considerable bay. By 2 o'clock the whole frith seems to be in a rage. About 3 in the afternoon, it is low water on the shore, when all the former phenomena are reversed; the smooth water beginning to appear on the land, and advancing gradually till it reaches the middle of the frith. From the strength of the tides, and the surprising velocity of these contiguous currents in opposite directions, the Pentland frith is a very dangerous navigation to strangers, especially if they approach near the land. But the natives along the coast are so well-acquainted with the direction of the tides, that they can take advantage of every one of the e currents, to carry them safe to one harbour or another. Hence very few accidents happen but from want of skill or knowledge of the tides. The safest way for strangers is either to take a pilot on board, or to keep at a considerable distance from the land. The frith is said to be about 12 miles broad, opposite

to Dunnet, though no exact measurement has probably been taken."—*Old Statistical Account* :—See also on the subject of these tides, article CANISBAY.

40', and W. long. 3° 22'. It consists of several hills interspersed with valleys, in which is a considerable extent of pasture for small cattle and sheep. Through its whole extent, Dunnet-head presents a front of broken rocks to the sea, the height of which varies from 100 to 400 feet. It is joined to the land by a narrow isthmus, about 1½ mile broad. A light-house was erected on this headland in 1831. It shows a fixed light, visible at the distance of 23 miles in clear weather, and elevated 340 feet above high water. A great variety of fowls frequent the rocks; one called the layer, or puffin, is found in no other place of the British isles, except Hoyhead in Orkney, and the cliffs of Dover.

DUNNICHEN,* a parish near the centre of Forfarshire, bounded on the north by Roscobie and Kirkden; on the east by Kirkden; on the south-east and south by Carmylie; and on the west by Inverarity and Forfar. It is of extremely irregular outline; having a main body of nearly the form of a parallelogram, and sending off arms which embrace and almost bisect the parish of Kirkden. Part of it, too, is quite detached. It is about 4 miles in length, and contains 4,024½ Scotch acres. The surface in general consists of gently sloping ridges, and is considerably high, but does not shoot up into any very great elevations. The hill of Dunnichen, whose summit forms the northern boundary line, and which stretches about 3 miles in a south-easterly direction, is the highest ground; and at its loftiest point rises 520 feet above the level of a stream on a neighbouring plain, and 720 above the level of the sea. On the summit and sides of this hill—which, with trivial exceptions, is all cultivated or planted—the soil is a friable sandy loam; and in most other parts of the parish it is either of the same character as here, or a friable clay with a retentive subsoil. A brook, called Vinny or Finny, runs from west to east along the base of the hill of Dunnichen, receiving some rills in its course, and passes into Kirkden, there to disgorge itself into the Lunan. The parish is ill-provided with roads. The villages, in addition to Lethem, a place of considerable rural importance, [See **LETHEM**], are Dunnichen, where there is an annual fair, on the third Wednesday of March, O. S.; Dummitormont or Drummietermon, and Coton of Lownie, both inhabited chiefly by small farmers, most of whom are weavers; and two hamlets, the one at Bouriefad and the other at Craichy. Dunnichen house is a fine mansion, beautifully embosomed in plantation. Population of the parish, in 1801, 1,043; in 1831, 1,513. Houses 331. Assessed property, in 1815, £3,505.—Dunnichen is in the presbytery of Forfar, and synod of Angus and Mearns. Patron, the Crown. Stipend £158 2s. 3d.; glebe £11. The parish-church was built in 1802, and repaired in 1817. Sittings 456. An Independent chapel, situated in Lethem, was built in 1802. Sittings 360. A chapel of the United Secession, also situated in Lethem, was recently erected.—There are 3 schools, 2 of them non-parochial. One of the latter is in Lethem, and the other at Dumburrow bridge. Parochial schoolmaster's salary £34 4s. 4d., with school-fee, and also £5 of other emoluments.

DUNNING, a parish in the south of Perthshire, at the northern extremity of the Ochill chain, where it terminates in Strathearn. It is bounded on the north by Methven, from which it is separated by the Earn; on the east by Forteviot and Forgandenny; on the south by Kinross-shire; and on the west by Auchterarder. It is intersected by several small streams, tributaries of the Dunning water, which

flow northwards into the Earn. The village of Dunning, near the centre of the parish, 5 miles east-north-east of Auchterarder, was burnt by the rebels in 1716. It is now a neat little town, under the government of a baron-bailie, and having fairs on the 2d Tuesday in May, O. S., the 20th of June, and the 24th of October. The parish-church is situated here, and there are also a United Secession church, and a Relief church. The only manufacture here is that of coarse linen.—Duncruib, the property and residence of the ancient and noble family of Rollo, in this parish, was a grant to the family of Rollo, by David Earl of Strathearn, with the consent of King Robert his father, the charter bearing date the 13th of February, 1380; in 1512, it was erected into a free barony; and, in 1651, Sir Andrew Rollo, Knt., was raised to the dignity of Baron Rollo of Duncruib, by Charles II.—The House of Keltie, the property of the Drummonds of Keltie, is an ancient edifice. Population, in 1801, 1,504; in 1831, 2,045. Houses 297. Assessed property £6,593.—This parish, formerly a chapelry, is in the presbytery of Auchterarder, and synod of Perth and Stirling. Patron, the Earl of Kinnoul. Stipend £238 19s. 2d.; glebe £20. Unappropriated teinds £13 18s. 6d.—Schoolmaster's salary £34 4s. 4½d., with £18 fees. There are 2 private schools.

DUNNOTTAR, a parish in the county of Kincardine, bounded on the north by Fetteresso parish, from which it is divided by the rivulet Carron; on the east by the German ocean; on the south by Kinneff; and on the west by Glenbervie parishes. Its form is triangular, extending about 4 miles in length on each side, by 2½ in breadth, at the base along the coast; and comprehending 8,156 superficial acres. It is situated at the beginning of the great how or hollow of the Mearns, which extends through the county of Forfar, under the name of Strathmore. The surface is uneven, with frequent but inconsiderable risings, which do not deserve the name of hills. Towards the coast the soil is a kind of clay loam; but as it recedes it degenerates into a wet gravelly moor. The sea-coast, especially that part of it called Fowlsheugh, upwards of a mile in length, is very bold, and formed of alternate strata of freestone and plumb-pudding-stone, the latter containing nodules of quartz and limestone. There are many deep caves in the rocks, which are much frequented by gulls, coots, and other sea-fowls. At the north-eastern corner, where the rivulet Carron runs into the sea, is situated the town of Stonehaven, the capital of the county, having a fine natural harbour: See **STONEHAVEN**. The harbour is surrounded with excellent quarries of freestone of a most durable quality, and extremely valuable for building. The turnpike-road from Montrose to Aberdeen passes through the town of Stonehaven; and another road runs directly from that town to Perth, through the valley of Strathmore. The fishing-village of Cratoun is situated on the south-eastern boundary of the parish. Fishing is very successfully carried on along the coast. Population of the parish, in 1801, 1,973-1886; in 1831, 1852. Houses 326. Assessed property, in 1815, £5,137.—This parish is in the presbytery of Fordoun, and synod of Angus and Mearns. Patron, the Crown. Minister's stipend £232 19s. 10d.; glebe £8. The church is situated near the Carron, not far from Stonehaven. It was rebuilt in 1782.—Schoolmaster's salary £34 4s. 4½d., with about £54 4s. 6d. of school-fees, &c. There are two private schools in the parish. A school was to be erected in 1836, at which 30 of the poorest children in the town or burgh of Stonehaven are to receive gratuitous education.

DUNNOTTAR CASTLE, in the above parish, stands

*The name is supposed to consist of the Gaelic *dun*, 'a hill,' and the word *Nechtin*, the name of a Pictish chief who is traditionally reported to have resided in the parish.

on the coast about a mile-and-a-half to the south of Stonehaven, on a stupendous perpendicular rock, 160 feet above sea-level. Its flat summit is several acres in extent. The whole mass somewhat resembles, in form, the rock on which Edinburgh castle is built, projects into the sea, and is almost separated from the land by a very deep chasm, which served as a kind of natural fosse or ditch; the adjacent rock having been scarped and rendered inaccessible by art. The castle ruins consist of a series of stately towers and other buildings occupying an extensive area, and rather resembling a ruinous town than a dismantled fortress. From its situation and its extent this celebrated castle forms one of the most majestic ruins in Scotland; and, before the era of artillery, must have been impregnable. The only approach to it is by a steep path winding round the body of the rock. The entrance is through a gate, in a wall about 40 feet high; whence, by a long passage, partly arched over, and through another gate pierced with four ailettes or loop-holes, the area of the castle is reached. This passage was also formerly strengthened by two iron portcullises. The area is surrounded by an embattled wall, and occupied by buildings of very different ages, which, though dismantled, are, in general, tolerably entire, wanting only roofs and floors. "The battlements, with their narrow embrasures," says the author of 'A Summer Ramble,' "the strong towers and airy turrets full of loop-holes for the archer and the musketeer,—the hall for the banquet, and the cell for the captive,—are all alike entire and distinct. Even the iron rings and bolts that held the culprits, for security or torture, still remain to attest the different order of things which once prevailed in this country. Many a sigh has been sent from the profound bosom of this vast rock,—many a despairing glance has wandered hence over the boundless wave,—and many a weary heart has there sunk rejoicing into eternal sleep." The most ancient edifice, except the chapel, is a square tower said to have been built about the latter end of the 14th century. A large range of lodging-rooms and offices, with a long gallery of 120 feet, seems to be of a very modern date,—not older than the latter end of the 16th century. There are ruins of various other buildings and conveniences necessary or proper for a garrison, such as barracks, a basin or cistern of water 20 feet in diameter, a bowling-green, and a forge said to have been used for casting iron bullets. The building now called the chapel was at one time the parish-church; for, notwithstanding its difficulty of access, the church, and even the burial-place of the parish, were originally situated on the top of this rock. During the contention between Bruce and Baliol, its natural strength induced Sir William Keith, the great marischal of Scotland, to build a castle on it as a place of safety for himself and his friends during these troublesome times; but, in order to avoid offence, he first built a church for the parish in a more convenient place; notwithstanding which, the bishop of St. Andrews excommunicated him for violating sacred ground. Sir William, on this, applied to Pope Benedict XIII., setting forth the exigency of the case, and the necessity of such a fortress, with the circumstance of his having built another church; on which his holiness issued his bull, dated 18th July, 1394, directing the bishop to take off the excommunication, and to allow Sir William to enjoy the castle at all times, on the payment of a certain recompense to the church; after which it continued in the Keith family till the forfeiture of the late Earl in 1715. About the year 1296 this castle was taken by Sir William Wallace, who, according to his historian, burnt 4,000 Englishmen in it. Blind Harry gives the following very lively account of this achievement:—

The Englishmen, that durst them not abide
Before the host full fear'dly forth they flee
To Dunnotar, a swake within the sea.
No further they might win out of the land.
They 'ssembled there while they were four thousand,
Ran to the kirk, wend'd girth to have tane,
The lave remained upon the rock of stane.
The bishop there began to tresty ma;
Their lives to get, out of the land to ga;
But they were rude, and durst not well
Wallace in fire gart set all hastily,
Burnt up the kirk and all that was therein.
Attour the rock the lave ran with great din;
Some hung on crags, right dolefully to dee,
Some lap, some fell, some fluttered in the sea,
No Southern in life was left in that hold,
And them within they burnt to powder cold.
When this was done, fell feil on their knees down,
At the bishop asked absolution.
When Wallace leugh, said, I forgive you all;
Are ye war-men, repent ye for so small?
They ruid not us into the town of Air,
Our true barons when they hang'd there!

In 1336 the castle of Dunnottar was refortified by Edward III. in his progress through Scotland; but, as soon as he had quitted the kingdom, it was retaken by Sir Andrew Murray, the Regent of Scotland. No further event of any historical interest or importance in respect to this castle occurred for many centuries afterwards, during which it was the chief seat of the Marischal family. But, in the time of the great civil war, it was besieged by the Marquis of Montrose; the Earl Marischal of that day being a staunch Covenanter. The earl had immured himself in his castle, together with a great many of his partizans, including 16 covenanting clergymen who had here sought refuge from Montrose. The earl would have come to terms with Montrose; but he was dissuaded by his ministerial party, and the royalist at once subjected his property to military execution. Stonehaven and Cowie, which belonged to the vassals of the Earl Marischal, were burnt; the woods of Fetteresso shared their fate, and the whole of the lands in the vicinity were ravaged. The earl is said to have deeply regretted his rejection of Montrose's proposals, when he beheld the smoke ascending from his property; "but the famous Andrew Cant, who was among the number of his ghostly company, edified his resolution at once to its original pitch of firmness, by assuring him that that reek would be a sweet-smelling incense in the nostrils of the Lord, rising, as it did, from property which had been sacrificed to the holy cause of the covenant." During the Commonwealth, Dunnottar castle was selected as the strongest place in the kingdom for the preservation of the regalia from the English army which then overran the country. Being deposited in this castle by order of the privy-council, Earl Marischal obtained from the public a garrison, with an order for suitable ammunition and provisions, Cromwell's troops, under command of Lambert, besieged the castle, which was put under command of George Ogilvy of Barras, in this parish, as lieutenant-governor; the earl himself having joined the king's forces in England. Ogilvy did not surrender till the siege had been converted into a blockade, when he was reduced by famine and a consequent mutiny in the garrison. He had previously, however, removed the regalia by a stratagem on account of which he was long imprisoned in England. Mrs. Granger, wife of the minister of Kinneff, had requested permission of Major-general Morgan, who then commanded the besieging army, to visit Mrs. Ogilvy, the lady of the lieutenant-governor. Having obtained permission, Mrs. Granger, who was a resolute woman, packed up the crown among some clothes, and carried it out of the castle in her lap; her servant maid, at the same time, carrying the sword and sceptre on her back, in a bag of flax. The English general very politely assisted the lady

to mount her horse. The regalia were kept sometimes in the church of Kinneff, concealed under the pulpit, and at other times in a double-bottomed bed at the manse, till the Restoration, in 1660, when they were delivered to Mr. George Ogilvy, who presented them to Charles II. For this good service, with his long imprisonment and loss of property, Ogilvy received no farther mark of royal favour or reward than the title of Baronet and a new coat-of-arms. Sir John Keith, brother to the Earl Marischal, was created Earl of Kintore; but honest Mr. Granger and his wife had neither honour nor reward. The family of Barras have still in their custody a receipt granted by the Earl Marischal on the delivery of the regalia.* Dunnottar was used, in the year 1685, as a state prison for confining the Covenanters, males and females, who, to the number of 167, had been seized at different times in the west of Scotland, during the persecution under Charles II. In the warmest season of the year they were all barbarously thrust into a vault, still called 'the Whig's vault,' where a number of them died, and a grave-stone in the church-

* Sir Walter Scott, in a letter addressed to Mr. Croker, says: "The castle of Dunnottar, though very strong, and faithfully defended, was at length under the necessity of surrendering; being the last strong place in Britain on which the royal flag floated in these calamitous times. Ogilvie and his lady were threatened with the utmost extremities by the republican general, Morgan, unless they should produce the regalia. The governor stuck to it that he knew nothing of them; as in fact they had been carried away without his knowledge. The lady maintained she had given them to John Keith, second son of the Earl-Marischal, by whom, she said, they had been carried to France. They suffered a long imprisonment and much ill-usage. On the Restoration, the old Countess Marischal, founding upon the story Mrs. Ogilvie had told to screen her husband, obtained for her own son, John Keith, the earldom of Kintore, and the post of Knight-marshal, with £400 a-year, as if he had been in truth the preserver of the regalia. It soon proved that this reward had been too lustily given; for Ogilvie of Barra produced the regalia, the honest clergyman refusing to deliver them to any one but those from whom he received them. Ogilvie was made a Knight-baronet, however, and got a new charter of the lands acknowledging this good service. Thus it happened, oddly enough, that Keith, who was abroad during the transaction, and had nothing to do with it, got the earldom, pension, &c.; Ogilvie only inferior honours; and the poor clergyman nothing whatever, or, as we say, the bare's foot to lick. As for Ogilvie's lady, she died before the Restoration, her health being destroyed by the hardships she endured from the Cromwellian satellites. She was a Douglas, with all the high spirit of that proud family. On her death-bed, and not till then, she told her husband where the honours were concealed, charging him to suffer death rather than betray them." [Life of Sir W. Scott, vol. iv. pp. 117, 118.]—These regalia, as is well known, are now deposited in the crown-room in Edinburgh castle. The interest attaching to them, however, depends not on their splendour, but on the many momentous historical events with which they are associated. The principal object is the Crown, which has overshadowed the brows of so many monarchs, from the heroic restorer of Scottish independence, to the boyish James; for there seems good reason for believing that the lower and massy portion, consisting of the purest metal, was the identical golden circlet worn by Robert Bruce. Lateral ornaments were added by succeeding monarchs; and at last it assumed its present elegant shape, and was closed in at the top, to distinguish this royal badge from the coronets then generally adopted by the nobles. When one of these aspired to regal power, he was said to be about to "close his coronet." The imperial crown of Scotland is of pure gold, enriched with diamonds, pearls, and curious enamellings. It differs from the crown of England: the latter being alternately adorned with only crosses three; fleurs de lis; whereas the Scotch crown has only crosses three; such as we see on our old coins and the assen's plates; it is 9 inches in diameter, and, from the union circle to the top of the cross palee, (the only one upon the crown,) on the summit of the golden celestial globe, 6½ inches. The stem of the sceptre is in the form of a hexagon, 2 feet in length. Under the figure of the Virgin Mary, is the letter J; under that of St. James, the letter R; and beneath St. Andrew, the figure 5. Ten thistles encircle the stem. The whole length of the sceptre is 34 inches. Pope Julius 2d presented the sword to James IV. It is 5 feet long. On the blade are indented with gold, Julius II. P.; and, on the scabbard, in golden characters, Julius II. PON. MAX. N. His Holiness had for his armorial figures, an oak-tree pectinate, a hill, and a star. The two latter cannot be found on the sword; probably they were on the two enamelled plates which are now lost from off the pommel. That he had such armorial figures is certain, from the verses made by Voltoline, a famous Italian poet, said to have been found in a monastery:

Quercus, Mons, Stella, formant tua stemmata, Principes
Hisque tribus trinum stat diadema tuum.
Tuta raris Petri, mediis non fecit undis,
Mons tegit a ventis, stellæque monstrat iter.

yard of Dunnottar records their place of burial. The castle was dismantled soon after the rebellion of 1715, on the attainder of James Earl Marischal.

DUNOLLY, a castle built on a great rock on the shore, about 2 miles from Dunstaffnage in Mid-Lorn. "Nothing," says Sir Walter Scott, "can be more wildly beautiful than the situation of Dunolly. The ruins are situated upon a bold and precipitous promontory, overhanging Loch-Etive, and distant about a mile from the village and port of Oban. The principal part which remains is the donjon, or keep; but fragments of other buildings, overgrown with ivy, attest that it had been once a place of importance, as large apparently as Artornish or Dunstaffnage. These fragments enclose a court-yard, of which the keep probably formed one side: the entrance being by a steep ascent from the neck of the isthmus, formerly cut across by a moat, and defended doubtless by outworks and a drawbridge. Beneath the castle stands the present mansion of the family, having on the one hand Loch-Etive, with its islands and mountains; on the other, two romantic eminences tufted with copsewood. There are other accompaniments suited to the scene; in particular, a huge upright pillar, or detached fragment of that sort of rock called plum-pudding stone, upon the shore, about a quarter of a mile from the castle. It is called *Clach-na-cau*, or the Dog's pillar, because Fingal is said to have used it as a stake to which he bound his celebrated dog Bran. Others say, that when the Lord of the Isles came on a visit to the Lord of Lorn, the dogs brought for his sport were kept beside this pillar. Upon the whole, a more delightful and romantic spot can scarce be conceived; and it receives a moral interest from the considerations attached to the residence of a family once powerful enough to confront and defeat Bruce, and now sunk into the shade of private life." ['Lord of the Isles,' Note.] It is now possessed by M'Dougal of that ilk, the representative of the ancient family of this name. Such is the traditionary reminiscence of the dignity of Dunstaffnage, that, according to the inhabitants of the district, Dunolly was little more than one of the office-houses connected with the palace. For, misled by similarity of sound, if not partly by the love of the marvellous, as in Gaelic *ollamh*—pronounced *ollah*—signifies 'a physician,' it is received as an historical fact that the medical practitioner who was attached to the royal family had this castle allotted to him as his residence, the name being rendered 'the Fort of the physician.' While, however, the absurdity of the idea appears, not only from the distance, which must have rendered it quite ineligible as a residence for one whose services would be often required at a moment's warning, but from the total improbability that a place of such consequence would be assigned to any officer of the court; it seems to be directly opposed to historical proof of a far more authentic character than the greatest part of that which our meagre records furnish in regard to so remote a period. *Ola* was a very common name among the Danes and Norwegians. It appeared in different forms; as in that of *Aulaiv*, *Aulaf*, *Olaive*, *Olo*, and in Latin of *Olaus*. Of this name there was a Scandinavian king of Dublin, A. D. 853, and another, A. D. 959. Somerled, Thane of Argyle, and Lord of the Isles, who flourished about the middle of the 12th century, married a daughter of Olaus, King of Man, from whom our genealogists deduce two dynasties, distinguished, in the stormy history of the middle ages,—the Lords of the Isles, and the Lords of Lorn. As the Norse princes—whether coming immediately from Norway, from the Orkneys, from Ireland, or from Man—made frequent descents on the western coasts and islands of Scotland, it seems al

most certain that the name *Dunolly* signifies 'the Fortified hill of Olave.' That it was a place of very considerable consequence in that quarter, and had received this name, even before the close of the 7th century, is undeniable, from the notice taken of it in that invaluable relic of antiquity, the 'Annals of Ulster.' Here it is mentioned, "A. D. 685. Com-bussit Tula aman (*sic*) *Duin Olla*." It is afterwards said,—"700. The destruction of *Dunaila* by Selvach."—"713. *Dun Olla* construitur apud Selvaon."—"733. Talorgan filius Drostani comprehensus alligator juxta *arcem Olla*."—"852. Aulay, King of Lochlin," *i. e.* of Scandinavia, "came into Ireland, and all the foreigners of Ireland submitted to him." In the oldest map we have of Lorn—that of Timothy Pont—*Dunolly* is denominated *Dun oldyf*. Pinkerton entertains the same idea as to the origin of the name. In reference to one of the passages quoted from the Annals of Ulster, in which the place is called *Dunolla*, he says: "This is surely the noted Castle in Lorn." ['Enquiry,' ii. 122.] That excellent northern scholar Johnstone gives the same explanation:—" *Dun Oly, i. e.* Olave's tower. The place might receive this name, from having been the residence of *Olave*, the youngest son of Somerled, thane of Argyll." ['Haco's Expedition against Scotland,' Note 77.]—There was lately discovered at *Dunolly*, an interesting subject for antiquarian examination. Some workmen employed in removing the soil from a spot immediately under the rock upon which the ruins of the castle stand, and occupied for at least a century past as garden ground, came, at the depth of about five feet, to a bed of ashes covering a considerable surface. A layer of loose stones, about four feet deep, succeeded, and upon being removed, showed the top of a wall of solid mason-work, running parallel with and closely attached to the castle rock. Curiosity led to the removal of a part of the wall, and the trouble was recompensed by discovering the entrance to a spacious cavern, the whole interior of which was ornamented with the most beautiful stalactites. But—what will excite a deeper feeling—the excavators found that they had broken in upon the slumbers of the dead; for, placed regularly round the bottom of the cave, lay many mouldering remnants of mortality. In the centre of this charnel-house was a large flag-stone covering an opening not unlike a modern grave; but nothing was found in it to disclose the purpose for which it had been reserved. Among the ashes were the bones of various animals, pieces of iron, remains of broadswords, a few defaced coins, and other vestiges of the hand of man. There is no existing tradition of the cave, or the use to which it had been dedicated.—Thomas Brydson, in his 'Pictures of the Past,' has the following pleasing verses on *Dunolly* castle:—

The breezes of this vernal day
Come whispering through thine empty hall,
And stir, instead of tapestry,
The weed upon the wall;

And bring from out the murmur'ing sea,
And bring from out the vocal wood,
The sound of nature's joy to thee,
Mocking thy solitude.

Yet proudly, 'mid the tide of years,
Thou lift'st on high thine airy form—
Scene of primeval hopes and fears—
Slow yielding to the storm!

From thy gray portal oft at morn,
The ladies and the squires would go,
While swell'd the hunter's bugle-horn
In the green glen below;

And minstrel-harp, at starry night,
'Voke the high strain of battle-hore,
When with a wild and stern delight
The warrior stoop'd to hear.

All fled for ever! leaving nought
Save lonely walls in ruin green,
Which dimly lead my wand'ring thought
To moments that have been.

DUNOON* AND **KILMUN**, a parish in Argyllshire, in the district of Cowal, on the west side of the frith of Clyde. It is about 24 miles in length, and on an average 3 in breadth, but in some places 9 miles in breadth. The general appearance of the country is flat and agreeable, having a few eminences covered with natural wood in the back part of the parish. The soil is sandy and fertile; the coast is also sandy, and presents no safe creek or harbour for vessels of any burden. "It is probable," we are told in the Old Statistical Account, "that the mount on which the castle of Dunoon is situated, was once surrounded by the sea; and the minister's glebe has a bank of sandy clay in it which seems to have been formed by the sea." But this seat of royal greatness is now so demolished that there is scarcely a vestige of it remaining. This has been chiefly in consequence of the dilapidations to which it has been subjected, the stones having been abstracted for building the adjoining cottages. It appears to have consisted of three towers,—one looking up the frith, another in an opposite direction, and a third guarding the approach from the land. The first of these is the only one of which there are any distinct traces. It has been of a circular form. On the side parallel with the frith, may be seen the remains of a small entrance, which it is supposed must have served as a sally-port and a place of escape in cases of emergency. It is believed that there are still a number of vaulted apartments, pretty entire, under the ruins. The site of the castle includes about an acre of ground: being

* The orthography of this term has assumed a variety of forms. It is erroneously given by Gough under that of *Dunoon*; and still more so in Timothy Pont's map, where it appears as *Dunouy*. In this map, the river 'Clyd' is represented as terminating opposite to Dunoon, and 'Dubhrithan Fyrth' as commencing immediately below. The industrious Macpherson has pointed out *Dunhun* or *Dunhovyn* as the capital castle of the lordship of Cowal. The latter orthography corresponds with Wyntoun's, which is *Dunhovyn* and *Dunhovyn*; nearly agreeing in sound with *Downhove*, that of Fordun. Bree has *Downhome*. Irvine explains *Noviodunum* as denoting 'Dunoon castle, in Cowal, be-east Towart point.' He follows the absurd mode adopted by Buchanan, who has often completely disguised the local names of our country, by giving them a Latin form totally removed from that which properly belongs to them or is indicative of their origin. According to this form, the term has been supposed to be derived from the Gaelic *dun*, 'a castle,' and *nuadh*, 'new.' For Buchanan gives it as 'Noviodunum, vel Dunum Novum, in Covelis.' In the Old Statistical Account it is stated, that the castle of Dunoon was formerly a nunnery; and that the name comes from the Gaelic word *Dun-noogh*, which signifies 'the House of the virgins.' Were this the origin, it should certainly have the plural form, *Dun-nan-oighean*. The denomination given by Pont, if not a typographical error, might seem to have originated from this term in the singular. By some, a preference has been given to the etymon adopted by Buchanan, on the supposition that Dunoon being the nearest fort on the frith of Duabarton, and in all probability erected in a later age, was thence called New Fort. But it must be evident that this idea is exceedingly vague. There is no reason to suppose that Dunoon existed for many centuries after the fame of Duabarton had been far spread; or that the former ever attained such eminence as to bring it in any respect into comparison, not to say competition, with the latter. Such also was the distance between them, besides the intervention of different arms of the sea, that the one could not well be subsidiary to the other. Nor would the designation, New Fort, be a sufficient mark of distinction, while there was at least Dunglass in the immediate vicinity of Duabarton, and Rothesay in that of Dunoon. As our most ancient writers exhibit this name in an aspirated form, perhaps there is ground for viewing its origin as northern. Dunoon may, like *Dunolly*, have received its designation from some Scandinavian chief. *Hogni* was a common name among the colonists of Iceland; who, it is well known, emigrated from Norway in the 9th century. Although the form of *Dunhovyn* might suggest the idea of affinity to Iceland *hoeft*, 'portus'; it happens unfortunately for such an etymon that there is no creek, or shelter of any consequence, or safety, even for boats, at or near this village. As *Owen* was a name in Scotland borne by Welsh, by Picts, and by Scots, although sometimes appearing as *Hoan*, *Eogan*, *Eoghan*, &c., this fort may have been denominated *q. Dun-Owen*, or *Dun-Eogan*.

much broader at the base, where it fronts the frith, than behind. The received belief of the vicinity is, that there was a nunnery, at a little distance from the castle, where stands the present church. In support of this hypothesis, it has been urged, that on clearing away the ruins of the old chapel—part of which composed the church—when the workmen began to pull down the gable, they discovered a beautiful Gothic window which had previously been so built up and plastered as to be indiscernible. But this proves nothing as to the existence of a nunnery; as it may reasonably be supposed that the chapel, appropriated to the worship of the court, would be finished in the best style of the age. There is no vestige, in our monastic history, of any nunnery in this district. Near the castle stood the *Tom-a-mhoid*, or 'the Hill of the court of justice,' the same which is elsewhere called 'the Mote-hill.' Here also was the Gallow-hill, the name of which sufficiently indicates its appropriation. A ploughed field is still denominated the *cuspars*, or the butts, marking the scene of the ancient archery. The privilege of a ferry was granted to the heritable keepers of this castle, on condition of their supplying the garrison with certain provisions.

The castle of Dunoon, it has been said, is of great, but undefined, antiquity. It originally belonged to the hereditary high-stewards of Scotland, to whom Malcolm gave a grant of Bute and Cowal, in the 11th century. According to our historians, indeed, Walter, the son of Fleance, having adhered to the interests of Malcolm Canmore, not only received from him the baronies of Renfrew and Kyle, but was made Lord of Bute and Cowal, then at the king's disposal, in consequence of an insurrection of the islanders in quelling which he acted as his Majesty's lieutenant and commander-in-chief. In reward for his services, he was also made *Dapifer Regis*. His son Alan was by King Edgar constituted *Senescallus Scotiæ*, or Great-steward of Scotland, whence originated the family name. Dunoon had remained in the possession of the Stewarts till the reign of David II., who, in consequence of the insurrection of Edward Baliol, A. D. 1333, had deserted the throne. Baliol having overrun the country, among other fortresses took Dunoon. His despicable surrender of the kingdom to Edward III. so disgusted the nobles, that some of them rose in defence of their liberties; and Robert the Steward, who had lain concealed in Bute, resolved to stand forth in the public cause. He escaped to Cowal, and aided by Colin Campbell of Lochow, one of the ancestors of the family of Argyle, made himself master of the castle of Dunoon, A. D. 1334. In reward of his faithful service, Campbell was made hereditary governor, and had the grant of certain lands for the support of his dignity. Robert, the first king of the Stewart family, succeeding David II., the castle would henceforth be viewed in the more honourable light of a palace. In the year 1544, the Earl of Lennox, anxious to obtain the regency, and having received the support of Henry VIII., appeared in the frith of Clyde with 18 vessels and 800 soldiers. Having made himself master of Rothesay, he proceeded to Dunoon. Here he met with powerful opposition from Archibald Earl of Argyle; but the latter was obliged to retreat with loss, being unable to resist the force of Lennox's artillery. The whole estate was consolidated by entail in the person of Archibald the 1st Duke, A. D. 1706. Mary, it has been asserted, in the month of August 1568,* paid a

visit at Dunoon to her favourite sister the Countess of Argyle. While here, she is said to have employed herself in the diversion of deer-hunting, and to have availed herself of the opportunity to grant charters to her vassals. The person referred to must have been Lady Jean Stuart, natural daughter of King James V., who was the first wife of Archibald, Earl of Argyle. How long Dunoon continued to be the residence of the Argyle family is uncertain. Pennant says:—"Inverary was inhabited about the latter end of the 14th century by Colin, surnamed *Tongollach*, or 'the Wonderful,' on account of his marvellous exploits; and, I may add, his odd whims; among which, and not the least, may be reckoned the burning of his house at Inverary on receiving a visit from the O'Neilles of Ireland, that he might have pretence to entertain his illustrious guests in his magnificent field-equipage. The great tower—which was standing till very lately—was built by the black Sir Colin, for his nephew, the 1st Earl of Argyle, at that time a minor. I do not discover any date to ascertain the time of its foundation, any further than that it was prior to the year 1480, the time of Sir Colin's death. In December 1644, amidst the snows of this severe climate, the enterprising Montrose poured down his troops on Inverary, through ways its chieftain thought impervious." It would appear, therefore, that Dunoon was only the occasional residence of the Argyle family; as they were the hereditary keepers of this palace.

The village of Dunoon originated from the residence of this noble family at the castle or palace. In consequence of this, many of their vassals had houses built in its vicinity, which they occupied when they attended the court of their chief. Here also the bishops of Argyle resided, at least occasionally, after the restoration of episcopacy, in the reign of Charles II. Near the church, the ruins of the bishop's house—where one of the fire-places was still visible—were till lately pointed out. In former times the island of Lismore was the seat of those bishops, whence they were called *Episcopi Lismorenses*. In the 18th century the village of Dunoon was very considerable, and a place of resort on account of a ferry which was the principal inlet to the district; but a new road being opened by Loch Lomond, round the head of Loch Long, contributed to its decay, and it sunk into insignificance until its recent creation as a watering-place, by the citizens of Glasgow, many of whom have built handsome residences here. The old village has, in fact, nearly disappeared, and the whole shore, from a point considerably to the south of Dunoon, and round to near the Lazaretto at the mouth of the Holy Loch, is thickly planted with cottage and marine villas. A good timber quay has also been erected for the accommodation of the numerous steamers which touch here. Population, in 1801, 1,750; in 1831, 2,416. Assessed property, in 1815, £7,661. Houses, in 1831, 467. A survey made under the direction of the parish-minister, in 1837, gave 2,842 of population, of whom 2,464 were in connexion with the Establishment. The population of Kilmun as distinct from Dunoon, was 833 in 1837. The Dissenters are chiefly in connexion with the United Secession church.—Dunoon is the seat of a presbytery, and is in the synod of Argyle. It is said to be one of the most ancient parishes in Scotland. The parish of Kilmun was united to it both *quoad sacra* and *quoad civilia*, by the courts of teinds at a date not known. Patron, the Duke of Argyle, Stipend £275 2s. 1d.; glebe £36 17s. Church of Dunoon built in 1816; enlarged in 1834; sittings 793. The parish-minister officiates at Dunoon and Kilmun alternately, from the middle of April to the middle of October; and during the rest of the year.

* The account given of this visit is obviously misdated. It could not have taken place A. D. 1568. It must refer to 1563. In a progress through the west of Scotland, Mary having, on the 26th July, left Inverary, where she had remained three days, turned to Strone, where she slept, and went to Dunoon, on the 27th, and there passed the following day.

two sabbaths at Dunoon and one at Kilmun.—There is a neat United Secession chapel at Dunoon; built in 1828; sittings 280. Stipend £120.—See KILMUN. A chapel has been recently erected within the district of Toward, and a missionary officiates here and in Kilfinan every alternate sabbath.—There are 3 parochial schools in this parish, and 6 private schools, attended altogether by about 300 children. The salary of one of the parochial schoolmasters is £30 per annum, with £28 fees; of another £25 14s., with £18 fees; and of the 3d £21, with £8 8s. fees.

DUNPENDER, more commonly called Traprain law, an isolated conical hill in the parish of Prestonkirk, in East Lothian. It forms a conspicuous object from numerous points in the county, especially to travellers approaching Haddington from the east or west.

DUNPHAIL, an ancient tower formerly belonging to the Cummings, in the parish of Edenkeillie, in Elginshire. It occupies the summit of a high isolated rock, which appears to have been at one time surrounded by the Divie, which here runs through the extensive estate of Dunphail, the property of Mr. Cumming Bruce, the representative of the Cummings of Dunphail, who has erected a splendid modern mansion, in the Venetian style, in the immediate vicinity of the tower.

DUNREGGAN, a small village in the parish of Glencairn, Dumfries-shire, 16½ miles north-west of Dumfries. It is situated on Dalwhat water, on the opposite bank from Minnyhive, and communicates with that village by a stone bridge. It has of late been increased in its population by an influx of strangers, and improved in its buildings and general appearance. Along with Minnyhive and a hamlet called Kirkland, it has a population of about 1,000.

DUNROBIN CASTLE, the ancient seat of the Earls of Sutherland, in the parish of Golspie, in Sutherlandshire. It is still occasionally occupied by the Duke of Sutherland, and is considered to be the oldest inhabited residence in Britain. "Never felt," says Mrs. Sinclair, "a sensation so like being in a balloon as when gazing from the drawing-room window of Dunrobin castle, perched like an eagle's aerie on the summit of a lofty rock, and looking down on the waving tops of the trees, the ocean furrowed with streaks of foam, and the far-distant prospect of Tarbetness, with its beacon-light

"Streaming comfort o'er the troubled deep."

A long line of points and pinnacles terminates at Trouphead, and if you can look on the whole view without an ecstasy of admiration, shut your eyes on Nature for ever after, as you are unworthy to behold her. The park, though not highly dressed or ornamented, has the beauty of great extent, and is abundantly wooded to the edge of the wide and intensely blue ocean. Every tree so exposed to the wild northern blast must have a precarious existence, and those planted nearest the ocean generally perish on a forlorn hope; but no species can brave the sea-breeze half so hardly as the Huntingdon willow, which has outgrown all its cotemporaries at least twelve feet in height, and is covered with abundant foliage, though all shaped like flags, with a bare pole next the sea, and the long branches fluttering and streaming towards the land." ['Northern Circuit,' pp. 13, 14.] —There are several curious portraits here; also some old furniture, arms, and other ancient memorials.

DUNROD. See KIRKCUDBRIGHT.

DUNROSSNESS, a parish in Shetland, to which the parishes of Sandwick and Cunningsburgh are united *quoad civilia*. It forms the southern extremity of the mainland; and is a peninsula washed on three sides by the sea. The chief creeks are Quen-

dal Voe, West Voe, Grutness, and Aith's Voe. Sumburgh-head, a bold high rock, composed of indurated sandstone, in N. lat. 59° 51', and W. long. 1° 16', is the southern promontory. There is a lighthouse upon it, showing a fixed light, elevated 300 feet above high water, and seen at the distance of 24 miles in clear weather. Fair isle is the only island attached to this district; but on the west side of Dunrossness there is an island, or rather a peninsula, connected to the main by a sandy beach, which is sometimes flowed over by the water, called St. Ninian's isle, on which stood a church, the site of which can still be traced. It is said that the captain of a Dutch vessel, being nearly lost in a storm at sea, vowed, that if he was preserved from the dangers that threatened him, he would build a church on the first land at which he should arrive. This island was the spot to which he first came, and here he built a church, which he consecrated to St. Ninian. There are the remains of another church on a projecting headland called Ireland-head, not far from this. There are several small lakes which abound with fish. Population, in 1801, 3,201; in 1831, 4,405. Assessed property, in 1815, £596. Houses, in 1831, 755.—This parish is in the presbytery of Lerwick, and synod of Shetland. Patron, the Earl of Zetland. Stipend £208 6s. 8d.; glebe £8. Unappropriated tithes £53 18s. 4d. Church built in 1790; sittings 858. There is a church on FAIR ISLE: see that article. A small Baptist church, and a Methodist church, are within the district of Dunrossness. In 1833 the districts of Sandwick and Cunningsburgh were erected into a *quoad sacra* parish by the General Assembly. See SANDWICK. The extent of the *quoad sacra* parish of Dunrossness is about 9 miles by 4, with a population, in 1831, of 2,354.

DUNSCORE,* a parish on the western border of the district of Nithsdale, Dumfries-shire. It is bounded on the north by Glencairn and Keir; on the east by Kirkmahoe and Holywood; on the south by Holywood and Kirkcudbrightshire; and on the west by Kirkcudbrightshire. It has a figure resembling the outline of the extended wings of a butterfly; oblong, but compressed almost to bisection in the middle. It stretches from west to east, and measures, in extreme length, from Blackmark to an angle a little south of Isle tower, 11½ miles. In breadth it is exceedingly various; measuring in the middle, at the confluence of the Cairn and the Gleneslin, less than ¼ of a mile; and from the southern base of Colliston hill on the south, to an angle due north on the opposite boundary, 3¾ miles. Its area contains between 23 and 24 square miles. The surface in the upper or western district is rocky and mountainous, but slopes down toward a central glen; in the lower or eastern district it consists chiefly of three diverging vales, with their intermediate hills; but toward or along the eastern boundary it becomes somewhat open, and is beautified by the meanderings of the Nith and the luxuriance of its holms. The glen of the west is traversed by Gleneslin water, and is 4 miles in length, and toward the boundary becomes rocky and barren. The hills which enclose it are heathy, and fit only for pasture; and one of them, called Bogrie hill, rises 1,200 feet above the level of the sea. The Cairn intersects the parish at its narrowest part; but previous and subsequent to the intersection it forms the western boundary line for about 3 miles. It is here a more rapid stream than the Nith, which it soon afterwards joins; and after rain or thaw, it sometimes comes down

* The name is Scots-Irish, and signifies 'the Strength or Fortlet on the projecting bank.' But the locality originally designated by it is not pointed out even by tradition, and cannot now be traced.

with an impetuosity which very suddenly swells the brook into a torrent. Dalgona bridge, erected over it above where it intersects the parish, is 80 feet in span. The Nith, touching the eastern district for about 2 miles, sparkles along in its usual brilliance, and is gay and joyous in the adorning of its banks. The loch and water of Urr form the western boundary line, but are shut in by rugged, heathy uplands. The soil along the Nith and the Cairn is rich alluvial loam; in the higher districts it is, in general, a light, stony loam, upon a till bottom; and, in considerable tracts, it is a spongy or a heathy moss. The parish is intersected, near the eastern boundary, by the turnpike from Dumfries to Glasgow; along the vale of the Cairn by the road from Dumfries to Minnyhive; and from east to west, through its whole length, by a road leading into Galloway.—The old tower of Lag, situated at Haliday hill, and now a ruin, is said to have been built in the reign of James III., and was protected by an outer wall and a ditch. It is square and narrow, but massive and towering. Its last inhabitant was Sir Robert Grierson, of infamous memory, for the sanguinary part he acted in the persecution of the Covenanters. In the upper part of the vale of Gleneslin, overlooking a gorge or narrow pass, are the two square towers of Bogrie and Sundaywell. The latter belonged, in the times of the persecution, to a man whose memory is odorous in tradition, John Kirk, who opened his stronghold as a refuge to the persecuted, and afforded frequent shelter and assistance to Blackadder and other ejected ministers. From the deep mountain seclusions in its vicinity, often did the appealing psalmody of 'a conventicle' arise, and echo away along the glens.—Friar's Carse, in the vale of the Nith, was anciently a monastic establishment, dependent on Melrose abbey. Though only some detached antiques sculptured stones remain as vestiges of the edifice, the name is commemorated both in a small lake and in the surrounding estate. On the property is the small farm of Ellisland, celebrated as the residence of the poet Burns during the palmiest days of his career; and painted for a place in the gallery of fame, by the limnings of his poetic pencil.—Dr. Crichton, a proprietor of Friar's Carse subsequent to James Riddell, Esq., the contemporary of Burns, bequeathed to Dumfries £100,000, with which a county lunatic asylum has been erected. The celebrated John Welsh, son-in-law to John Knox, was a native of Dunscore.—The village or hamlet of Cotlack is in the eastern district, about half-a-mile from the Cairn. Population of the parish, in 1801, 1,174; in 1831, 1,488. Houses 260. Assessed property, in 1815, £23,926.—Dunscore is in the presbytery and synod of Dumfries. Patron, the Crown. Stipend £170 18s. 8d.; glebe £42 10s.—The parish-church was built in 1823; sittings 850. There is in the parish a Relief meeting-house. The church of Dunscore belonged very early to the monks of Holywood; and, for a time, it stood on litigated ground between them and the monks of Melrose. Before the Reformation, this parish had several places of worship. One of these, situated on Gleneslin water, can still be traced in the vestiges of its walls, and is commemorated in the name of a farm called the Chapel. The old parish-church stood considerably to the eastward of the present one; and its cemetery—containing the remains of Grierson of Lag, and of several families of note—is still in use. There are in the parish 4 schools, 3 of which are parochial. The salaries of the parochial schoolmasters amount to £51 6s. 6½d., divided into three nearly equal proportions. The fees amount respectively to £20, £15, and £10. Other emoluments are respectively £9, £6, and £3.

DUNSE,* a parish at the northern limit of the district of Merse in Berwickshire. It is bounded on the north by Abbey St. Bathans, and a detached part of Longformacus; on the north-east by Buncle and Edrom; on the south by Edrom; on the south-west by Langton; and on the west by Longformacus. It is irregular in outline; but may, in a general view, be regarded as oblong. In extreme length it measures 6 miles; in average breadth 3½ miles; and in superficial area, about 21 square miles. The northern division, comprising about one-third of the area, is clothed in a heathy dress, variegated with stripes of pastoral green and autumnal yellow; and running up the acclivity of the Lammermoor hills, sends aloft near the boundary, the conspicuous cone of COCKBURNLAW [which see] 912 feet above the level of the ocean. The southern and larger division undulates along the valley of the Merse, with, in general, a delightfully rolling surface, a rich and fertile soil, and an ample adorning of culture and grove. Dunse-law, north of the town of Dunse, stands on a base of between 2 and 3 miles in circumference, and rises in a gradual ascent on all sides, till it terminates in a plain of nearly 30 acres, 630 feet above the level of the sea. Its table-summit was the site of the original town or village, and is still tracked by the vestiges of the intrenched camp of the army of Covenanters, under General Leslie, who here sat down to watch the warlike movements of Charles for enforcing prelacy. Whitadder water comes down upon the parish at its north-eastern angle, and forms its boundary-line over a distance of 2½ miles, offering to the luxurious banquets of a delicious fish, called the whiting, from 16 inches to 2 feet long, and of high-coloured red flesh similar to that of the salmon. A brook called Langton burn flows down from the west, and forms the whole of the southern boundary-line, falling into the Blackadder at the point of leaving the parish. An artificial lake, in the vicinity of Dunse castle, abounds with perch and eels, and forms a smiling feature in the landscape. A moss skirts the south side of the town, stretching from east to west, and, except by one pathway, was in ancient times impassable. Another moss—celebrated for the murder of the Chevalier de la Beaute by Home of Wedderburn, and called, from the name of the victim whose blood it drank, Batties bog—stretches along the confines of the parish of Edrom. Dunse castle, a little north-west of the town, is a magnificent Gothic edifice, agglomerated with a surviving tower of an earlier and ancient structure, believed to have been built by Randolph, Earl of Moray. Wedderburn castle, at the south-east limit of the parish, and Manderston, 1½ mile north of the former, are elegant mansions, surrounded by tastefully ornamented demesnes. Dunse was formerly haunted and scourged by pestilence, and, so late as 90 years ago, was depopulated by ague and putrid fever; but, in consequence of rapid improvements in draining and cultivating the soil, it eventually attained a healthy climate. Four lines of road diverge from the town nearly in the direction of the cardinal points; and lead the way through the parish respectively toward Edinburgh, Berwick, Coldstream, and Lauder.—Dunse is rich in the fame of distinguished natives; and boasts names of no less éclat among scholars and divines than those of John Duns Scotus, 'the angelic doctor,'—Thomas Boston, the well-known author of 'The Fourfold State,'—Dr. Thomas M'Crie, the biographer of Knox and Melville,—and Dr. Abraham Robertson, Savilian professor of astronomy at Oxford.

* The name was anciently written Duns, and is simply the Celtic *Dun*, which means 'a hill,' and was applied to the beautiful eminence called Dunse-law.

Population of the parish, including the town, in 1801, 3,157; in 1831, 3,469. Houses 530. Assessed property, in 1815, £16,196.

Dunse gives name to a presbytery, and is in the synod of Merse and Teviotdale. Patron, Hay of Drummelzier. Stipend £291 13s. 5d.; glebe £25. Unappropriated teinds £477 2s. 11d. The parish church was built in 1790. Sittings 837.—A new church in connexion with the Establishment, called Boston church, was opened in 1839.—There are in the town two meeting-houses of the United Secession, and one of the Relief. The first United Secession congregation was established about the year 1738, and built their meeting-house, with 580 sittings, in 1740. Stipend £120; with a house, offices, garden, and small glebe, of the yearly value of £25.—The second United Secession congregation was established about the year 1768. Their meeting-house was built about the year 1821, at the cost of nearly £2,000. Sittings 1,008. Stipend £160; with a house, garden, and stable, of the annual value of £30.—The Relief congregation was established about the year 1750. Sittings in their meeting-house, 800. Stipend £120.—Dunse has a parochial school, conducted by 2 teachers, and attended by a maximum of 137 scholars; and 11 non-parochial schools, conducted by 12 teachers, and attended by a maximum of 707 scholars. Of the non-parochial schools, one is a girls' boarding-school, 2 more are girls' schools, and 1 is a boys' school. Salary of the parochial schoolmaster, subject to an allowance for an assistant, £34 4s. 4½d., with £70 school-fees, £20 other emoluments, and a house.

DUNSE, a burgh-of-barony, and the most important town in Berwickshire, stands on a fine plain at the southern base of Dunse-law, 7½ miles from Greenlaw, 11 from Ayton, 15½ from Berwick-upon-Tweed, 10½ from Coldstream, and 44 by way of Haddington from Edinburgh. Situated in the centre of the county, and unrivalled in extent, attractions, and marketing importance, it is the virtual, though not the civil, capital of Berwickshire. It is neat and modern in its edifices, spacious and tidy in its streets, and pleasing, though not brilliant, in its general burghal appearance. In the market-place—which is a fine open area or square—stands the town-house, a beautiful Gothic structure of modern erection, surmounted by a very elegant and tasteful spire. An array of good houses, large shops, and commodious churches and seminaries, imparts to the town a cheerful aspect. As the scene of most of the legal business of the county, a large body of provincial lawyers figure among its population. Most of the inhabitants are shopkeepers, handicraftsmen, and dependents on the marketing, from an extensive range of agricultural country. Though there is some weaving conducted in the town and neighbourhood, yet it does not sensibly impress on the town a manufacturing character. A weekly market on Wednesday, 3 annual fairs for cattle, and quarterly markets for sheep, draw down upon it the stir and the traffic by which it mainly subsists. The fair held at Dunse on the 1st Thursday of June is an important one for fat cattle, which are mostly purchased by English dealers. There is usually a small show of sheep also at this fair. Dunse August fair has declined of late years. It is also a hiring-market, and is held on the 26th of the month, or the Tuesday after when that date falls on a Saturday, Sunday, or Monday. The November fair is held on the 17th of the month. It has also declined. The 1st of the sheep-markets is held on the 4th Wednesday of March, and is chiefly for the sale of ewes in lamb; the 2d, on the 3d Wednesday of May, is for hogs and wethers; the 3d, on the 2d Wednesday of July,

is principally for lambs, and is also a great wool-market. The 4th sheep-market is held on the 4th Wednesday of September, and is principally for draft ewes. A subscription library, 2 circulating libraries, a news-room, 2 booksellers' shops, and a printing-office, seem to indicate the presence of a literary taste; and 2 friendly societies and a savings' bank intimate laudable concern for the interests of the poor. The town is the seat of a justice-of-peace court, on the first Monday of every month; and it has branch-offices of the British Linen company's bank, and the Bank of Scotland.

Dunse is of considerable antiquity, and appears to have been at one time a free burgh-of-barony, whose burgesses had power to choose a magistracy, and create corporations. In 1670, Sir James Cockburn of Cockburn, who had purchased the estate of Dunse from Hume of Ayton, obtained from Charles II. a charter, erecting it under him into a burgh-of-barony; and since that date, he and his successors in his claims have nominated a bailie to its government, without consulting the feuars and inhabitants. The baronial right of superiority was subsequently acquired, and continues to be possessed by Hay of Drummelzier. The south part of the town stands on the barony of Crumstane, belonging to the same superior. Yet the inhabitants of Dunse are a private association, who manage the police and the common good, and are called 'the feuars of Dunse,' in the same way that the inhabitants of royal burghs are called burgesses. The common good or property of the feuars consists of the town-house, which draws rent from the county of Berwick, and parties occasionally using its hall, and which is fitted up in the lower floor in shops; 10 acres of land on a neighbouring muir, which contain a whinstone quarry; and the proceeds of the manure of the town, and the weighing-machine or steel-yard. The annual revenue derived from these sources is £123 15s.; and the annual expenditure for the year 1833, was £140 5s. 11d. Six corporations or crafts formerly existed, and claimed exclusive privileges; but during the last 27 years they have practically ceased. During 120 years after the cession of Berwick-upon-Tweed to England, Dunse shared with Lauder the privilege of being the county-town; and not even in favour of Greenlaw, was it wholly deprived of that privilege till the year 1696. There were within the burgh, in 1833, 148 householders, whose rents were £10 and upwards, and 84, whose rents amounted to £5, but were under £10.

DUNSINNAN, or DUNSINANE, one of the Sidlaw hills, in the parish of Collace, and county of Perth, 8 miles north-east of that town. It rises in a conical form, with a flat and verdant summit, to the height of 1,114 feet above sea-level, and 800 feet from its base, and commands a fine view of Strathmore and Blairgowrie. At one place is to be traced a winding road cut into the rock; on the other sides it is steep and of difficult access. It has been a military station, defended by a strong rampart and fosses which went quite round the upper part of the hill. The area within the rampart is of an oval form, 210 feet long, 130 broad, and a little lower than the ruins of the rampart itself, the height of which, as appears from the immense mass remaining, must have been great. This stronghold, which is 15 miles distant from Birnam, is attributed to the usurper Macbeth; and the traditions in the neighbourhood concerning the predictions of the witches, and the defeat and death of the Thane, are so similar to Shakspeare's history of Macbeth, that it is probable the great dramatist had visited the spot himself when in Scotland.—Dunsinnan house, delightfully situated amid extensive plantations

with a southern exposure, is a fine mansion, and has been recently enlarged and improved. William Nairne, Esq., a younger son of the Dunsinnan family, toward the close of last century, and during nine years of the present, adorned the situations of senator of the College of Justice, and member of the High court of Justiciary, bearing the title of Lord Dunsinnan.

DUNSKERRY, a small island of Sutherland, 4 miles north of the promontory of Farouthead.

DUNSTAFFNAGE,* an ancient castle in Mid Lorn, Argyshire, remarkable for being one of the first seats of the Scottish princes. It is situated on a promontory, almost insulated in that beautiful arm of the sea called Loch-Etive; and if romantic and magnificent scenery, and the pleasing interchange of mountain and valley,—wood and water,—sea and land,—island and continent,—conjoined with all those recollections, borrowed from the earliest ages of our history, which are most gratifying to national feeling,—be viewed as inducements in selecting the site of a royal residence, it might well be questioned whether Scotland could present one more desirable than the vicinity of Dunstaffnage. On the west, Dunstaffnage fronts that beautiful and fertile island, fitly denominated Lismore, or Leasmore,—the Great garden,—beyond which towers the bleak and rocky Mull. The prospect terminates, towards the north, with the lofty mountains of Morvern; while the view is enriched with a cluster of small islands scattered in various directions. Behind it lies that fortress, celebrated in our ancient chronicles under the name of BERIGONIUM, and also the ruined priory of ARDCHATTAN: See these articles. "The builder of this castle," says Grose, "and time of its construction are unknown. It is certainly of great antiquity, and was once the seat of the Pictish and Scottish princes. Here, for a long time, was preserved the famous stone, the Palladium of Scotland, brought, as the legend has it, from Spain. It was afterwards removed by Kenneth II. to Scone, and is now in Westminster abbey, brought thither by King Edward I. On it was the following inscription:

Ni fallat fatum, Scoti quocunque locatum
Invenient lapidem, regnare teneant ibidem."

Our venerable Wyntoun has thus rendered this ancient national prophecy:

* The form of this name has been considerably varied by different writers. By Boece, and his ancient translator, Bellenden, it is written *Dounstafage*, or *Dounstaphage*; by Fordun, or rather his continuator Bower, *Dunstaffinch*. In Beau's map it is *Dunstaffage*. There has not been less variety in regard to the etymon given of this name. Camden, having said that *Dunstaffage* was "anciently a royal residence," explains the term as signifying 'Stephen's mount.' This idea appears to have been borrowed from our Boece,—the father of so many fables in the history of Scotland. Speaking of a king whom he calls *Evenus*, he says: "*Artem haud procul a Berigonio loco natura invictissimo ædificavit, Evonium dixit, a suo nomine, nunc Dounstafage vulgo, id est castrum Stephani, appellatum.*" [Hist. Fol. 26 a.] For it is to be observed, that, according to our writers, this palace had both a vulgar and a royal designation. Bellenden has thus rendered the passage: "Kynge Erwin byggit ane castell, nocht far fra Berigon, callit than [then] Erwin, efter his name, now callit Dounstafage." It is observable, that Bellenden leaves out the explanation of the vulgar name, which had been given by Boece, as apparently not satisfied that it was well-founded. He had, indeed, good reason for hesitation; as there is no evidence that it is any thing more than a monkish dream, like the origin assigned to the name of the town of Montrose,—*Mons rosarum*,—"the Mount of roses,"—the least appropriate designation that fancy could possibly devise for a dry, barren isthmus of sand, apparently forced up by the action of the waves,—a mount on which a rose never grew but by the diligence of horticulture. As Stephen is a name scarcely known in Gaelic nomenclature, *Dunstaffage* has been rendered, by those who seem best acquainted with the language, *Dun agus* (pronounced *is*) *tuinish*, as signifying 'the Fortified hill with two islands,' descriptive of the local situation, the place having been denominated from two islands which lie north from the castle. With this account Bower's orthography of *Dunstaffinch* most closely agrees.

But gyf Werdys falyhand be,
Quhare-eyr that stane yhe segyt se,
Thare sall the Scottis be regnand
And lordys haleoure all that land.

CRONKIL, B. iii. c. 9.

Boece has given the same legendary prediction. According to Wyntoun, Fergus, the son of Ere, brought this "stone of power" with him from Ireland into Scotland; but, before it reached Dunstaffnage, it had visited Icolmkill in its way. He, indeed, altogether omits the mention of this palace in the history of its peregrinations, which might almost vie with those of the cottage of "our Lady of Loretto." For, according to his account, Fergus

Brought this stane wyth-in Scotland
Fyrst quhen he come and wane that land,
And fyrst it set in Ikkolmkil,
And Skene thare-efir it wes brought tyle
And thare it wes syne mony day,
Qhyll Edward gert have it away, &c.

Leslie asserts that it was brought from Argyre to Scone by Kenneth Macalpine.† "This castle," Pennant has observed, "is fabled to have been founded by Edwin, a Pictish monarch, cotemporary with Julius Cæsar, naming it after himself, *Evonium*." Grose has said, "According to vulgar tradition, this castle was founded by Edwin, a Pictish monarch." It is probable that the name has assumed this form by an error of the press. But this good-humoured writer has undoubtedly fallen into an error, when he speaks of this as "a vulgar tradition:" for, as far as we can learn, there is not a vestige of the name *Evonium* among the natives. It seems to have no other authority than that of Boece, who acknowledges that the intention of the monarch, in designating the fortress which he erected from his own name, was in fact frustrated by the predominance of the vulgar designation. Although the so-called *Evonium* lies on the bay of Oban, even fancy can afford no aid from any supposed similarity; for the term Oban is explained 'the White bay;' whence the name of the modern town of Oban, at the distance of 3 miles from the palace. The castle is of a square form, 87 feet within walls, having round towers at three of the angles. The average height of the walls is 66 feet; 9 in thickness. The external measurement of the walls amounts to 270 feet. The circumference of the rock, on which it stands, is 300. It has its entrance from the sea by a staircase; but it is supposed that, in former ages, this was by means of a drawbridge. Only part of the building is habitable, the rest of it being in ruins. The masonry is considered as very ancient. At the distance of about 400 feet from the castle are the remains of a chapel formerly appropriated to the religious services of its inmates. This, in length, is

† "Unless the Destinies fail," or "be defective."

‡ "In the Wardrobe Account of Edward, for March, 1299, there is the following entry of a payment to 'Walter the painter, for a step to the foot of the New Chair, in which the Stone of Scotland was placed, near the altar, before the shrine of St. Edward, in Westminster abbey, and to the carpenters and painters painting the said step; and the gold and colours to paint it with; and making a case to cover the said chair, £1 19s. 7d.' [Remarks on the Wardrobe Account, p. xli.] Walsingham says, that the use Edward put it to, was to serve as a chair for the celebrating priests at Westminster. In the treaty of peace between Robert Bruce and Edward III, there is a particular stipulation for the restoration of this Stone. The Londoners, however, had taken a fancy to it, and excited a commotion to prevent its removal; and Robert had no difficulty to persuade his people to waive the performance of the agreement. Indeed, so deep-rooted has been the belief of the Scots in the augury attached to it, that many looked upon the accession of James to the British throne as the fulfilment of the prediction. Even in the present day, when there is so much anxiety evinced for the recovery of objects held in national estimation, we do not hear of any application being made to his majesty for the restoration of the *Lia-faile*. There is no doubt but many of those who witnessed the original aggression, would console themselves with the reflection, that the lang-shanked Southerne had caught a Tartar."—*Curriak's Life of Wallace*.

78 feet; in height, 14; and in breadth, 26. It is said, that some of the ancient regalia were preserved here till the 18th century, when, in consequence of the infirmity of the keeper, they were embezzled by the servants, who could not withstand the temptation excited by the silver that adorned them. We are informed, however, that they left a battle-axe, 9 feet in length, of beautiful workmanship, and embossed with silver. Pennant has given a drawing of a small ivory figure found here, which he thinks "was certainly cut in memory of" the celebrated "chair, and appears to have been an inauguration sculpture. A crowned monarch is represented sitting in it with a book," rather a scroll, "in one hand, as if going to take the coronation-oath." Speaking of the ruined chapel, he says, that it had once been an elegant building, and has at one end an enclosure, used as a family cemetery. As, according to all the slender remains of our national history, the fatal chair of royalty was transferred to Scone, after the union of the Scots and Picts under the son of Alpin, it might naturally enough be supposed that Dunstaffnage lost much of its former importance. Being no longer—as it had been under the Dalriadic kings—the regal seat, nor, from the far greater extent of dominion, in a situation adapted for this pre-eminence, its name scarcely appears in our annals for some centuries. Indeed, it seems highly probable, that very soon after it had been deserted by its royal possessors, it had become a stronghold of the Norwegians. About the year 843, Kenneth Macalpine transferred the seat of government from Dunstaffnage to the palace of Forteviot, in Perthshire. By this time the Norwegians had begun to make inroads on the western coast of Scotland, and had taken possession of a considerable part of Ireland; and we may trace them in the immediate vicinity of this regal fortress. See DUNOLLY. We lose sight of Dunstaffnage for several centuries, till it again rises up to view during the eventful reign of Robert Bruce. It was then possessed by Alexander of Argyle, father of John, whom Archdeacon Barbour calls the Lord of Lorne, and who, he says, dwelt in the vicinity of the head or source of Tay.

The lord of Lorne wonnyt thar by,
That was capitale enymy
To the king, for his emys sak,
Jhon Cumyn; and thought for to tak
Wengeance apoun cruell maner.

THE BRUCE, B. ii. 396.

John, called the Red Cumyn, whom Bruce had slain at Dumfries under the imputation of treachery, was *eme*, that is, uncle, to John of Lorn; Alexander of Argyle, the father of the latter, having married Cumyn's daughter. Sir Walter Scott, having remarked, that according to Lord Hailes, she was his aunt, adds that "the genealogy is distinctly given by Wintoun.

The thryd douehtyr of Red Cwmyne,
Alysawndyr of Argyle syne
Tuk, and weddyt til hys wyf;
And on hyr he gat in-tyl hys lyf
Jhon of Lorne, the quhilk gat
Ewyn of Lorne eftyr that."

CRONYKIL, B. viii. c. vi. v. 206.

This Alexander adhered to the interests of Baliol. At the time here referred to, Bruce was defeated in the battle of Dalree, near Tyndrum; but afterwards, A. 1308, having defeated the army of John of Lorn, he besieged his father in his fortress of Dunstaffnage.

The king, that stoute wes, stark, and bauld,
Till Dunstaffnych rycht sturdely
A sege set; and besyly
Assaylit the castell it to get—
Schyr Alexander off Arghile, that saw
The king distroy wp, cleue and law,
His land, send treyteris to the king;
And come his man bot mar duelling.
And he resawyt him till his peess.

THE BRUCE, B. vii. 410.

Bower, in his continuation of Fordun's *Chronicon*, says that Alexander rendered the castle to Bruce; but that, refusing to do homage to him, he received from the king a safe-conduct for himself and all who wished to retire with him, and fled into England, where he died. This account is more credible than the other; as the father certainly died in England, and John his son fled by sea, continuing, as we learn from Barbour, in his rebellion. It is in relation to this interesting period of our history that Sir Walter Scott has introduced the following notice of this palace, in that beautiful poem the scene of which is laid in this enchanting district of our country:

"Daughter," she said, "these seas behold,
Round twice an hundred islands roll'd,
From Hirt, that hears their northern roar,
To the green Ilay's fertile shore.
Or mainland turn, where many a tower
Owens thy bold brother's feudal power,
Each on its own dark cape reclined,
And listening to its own wild wind,
From where Mingary, sternly placed,
O'erawes the woodland and the waste,
To where Dunstaffnage hears the raging
Of Connal with his rocks engaging."

LORD OF THE ISLES, Cant. i. st. 8.

The lands of Dunolly still belong to the Macdougals, who claim as their ancestor this Alexander of Argyle. Their claim, indeed, seems indisputable. "The islands," Pennant has remarked, "remained governed by powerful chieftains, the descendants of Somerled, Thane of Heregaidel, or Argyle, who, marrying the daughter of Olave, King of Man, left a divided dominion to his sons Dugal and Reginald; from the first were descended the Macdougals of Lorn: from the last the powerful clan of the Macdonalds. The lordship of Argyle, with Mull, and the islands north of it, fell to the share of the first; Ilay, Cantyre, and the southern isles, were the portion of the last." Nisbet gives the following account of this family; although he has strangely disguised the name of the place. "There was," he says, "a great and old family of this name in Argyleshire, called M'Oul, M'Dowall, or M'Dugall, Lords of Lorn, whose title and lands went, by an heiress, to Stewart, Lord of Lorn, and are now in the family of Argyle; Colin Campbell, the 1st earl of Argyle, having married Isabel, heiress of Stewart of Lorn.—The heir-male of this family is John M'Dougall of Dunolich, whose castle of Dunolich was the mansion-house of the said family." The late proprietor informed Dr. Jamieson, that they had lost by far the greater part of their lands in consequence of their adherence to the interest of Baliol; and that on this ground Dunstaffnage had passed from them to the family of Argyle, who claimed this as their share of the spoil. In conformity with this account, it has been said; "When the wars between the Bruce and Baliol factions again broke out in the reign of David II., the lords of Lorn were again found on the losing side, owing to their hereditary enmity to the house of Bruce. Accordingly, upon the issue of that contest, they were deprived by David II. and his successor of by far the greater part of their extensive territories, which were conferred upon Stewart, called the Knight of Lorn. The house of Macdougall continued to survive the loss of power, and affords a very rare, if not an unique, instance of a family of such unlimited power, and so distinguished during the middle ages, surviving the decay of their grandeur, and flourishing in a private station." [*Lord of the Isles*, Note.]—A charter of Robert I. is still extant, granting to Arthur Campbell, fourth son of the brave Sir Colin Campbell of Lochow, "the constabulary of Dunstaffnage, and the manes thereof, whilk Alexander Argyle had in his hands." David II. confirms a charter granted by his father to William de Vetere Pont (Weapont).

dated at Dunstaffynch in the 4th year of his reign. "I find," says Pennant, "about the year 1455, this to have been a residence of the Lords of the Isles; for here James, last earl of Douglas, after his defeat in Angus, fled to Donald, the Regulus of the time, and prevailed on him to take arms, and carry on a plundering war against his monarch James the Second." He refers to Hume of Godscroft as his authority; but all that Godscroft says is: "The Earle himself by flight got him to Dunstaffage, where finding Donald Earle of Rosse, and Lord of the Isles, he incited him to make war against the king in his favours, and after he had engaged him therein, he withdrew himself again into England." This, however, does not amount to a proof that Dunstaffage was then occupied as a palace by these usurping *reguli*. Buchanan merely says, that Earl James met with Donald, the tyrant of the Isles, and Earl of Ross, at Dunstaffage;—"ad Stephanodunum *convenit*." From this phraseology we can only infer that this was the appointed place of meeting; and it was most probably selected as the most convenient place for both; the Earl of Douglas, having no maritime accommodation, coming to that point which Donald could easily reach by sea. We cannot, indeed, suppose that this had become "a residence of the Lords of the Isles," without assuming it as a fact, that that branch of the noble family of Argyle, to which this fortress had been appropriated by Robert I., had been expelled from it.

DUNSYRE, a parish in the upper ward of Lanarkshire, bounded by Dolphinton and Walston on the south-east and south; Linton on the east and north; West Calder on the north; and Carnwath on the west. It is a high lying parish, the most of it being more than 700 feet above the sea level, and contains a steep and precipitous hill about 1,250 in height, from which the parish is understood to have received its name. It extends to nearly 5 miles in length, and the same in breadth, and contains 11,071 imperial acres. The climate is rather damp and ungenial, and rheumatism prevails amongst the inhabitants to a greater extent than is usual elsewhere. Springs are abundant in the parish, and it is watered to a considerable extent by the streamlet of Medwin, which takes its rise in its north-east corner, near the foot of the hill, called Craigangus, and which affords excellent trout fishing. The soil of the parish is generally of a sandy nature, or a mixture of sand and clay, but from its altitude it is not blessed with great fertility. A large section of it is laid out in sheep pasture. It has been supposed that coal existed in the confines; but though search has been made, the presence of this valuable mineral has not yet been ascertained, and the inhabitants are required to bring their supplies from a distance of 12 miles. Peat, however, is extensively cut from the extensive mosses in the parish. There is little wood, and little ornament, possibly from the non-residence of the proprietors, and some portions of the district have an exceedingly wild and dreary appearance. The village of Dunsyre does not contain a population amounting to more than 50 souls, who are principally tradesmen, necessary to and supported by the agriculturist. The nearest market-towns are Carnwath and Biggar,—the former 6, and the latter 8 miles distant from the village. The route by which the army of Agricola reached the Roman camp at Cleghorn can be traced through the parish, and several cairns occur along the line, in some of which urns have been found. Dunsyre comprised a portion of the lands which were exchanged by the ambitious Earl of Bothwell with the Earl of Angus, for the lands and castle of Hermitage in Liddesdale. It was sold, however, by James, Marquis of Douglas, to Sir

George Lockhart, the President of the Court of Session, in the hands of whose successors almost the entire parish still remains. In the troubled times of the persecution, Dunsyre often afforded a retreat to the Covenanters, and the last sermon preached by the amiable Donald Cargill was upon Dunsyre common in 1669. He was seized shortly thereafter by Irvine of Bonshaw, taken to Edinburgh, hanged in the Grass-market, and his head struck off and fixed upon the port of the Netherbow. William Veitch, one of the most celebrated of the preachers of the Covenant, was at one time tenant of Westhills in the parish, from which he was compelled to flee, after the battle of Pentlands, in 1667. Assessed property, in 1815, £2,006. Population, in 1801, 290; in 1831, 335. Houses, in 1831, 57.—This parish is in the presbytery of Biggar, and synod of Lothian and Tweeddale. Patron, the Crown. Stipend £156 15s. 9d.; glebe £28. Hamilton of Wishaw says—"The tinds of this parish were anciently a part of the patrimonie of the abbacie of Kelsoe; but in respect its but a small parish, they are wholly possessed by the incumbent."—Salary of parochial schoolmaster £25 3s. 4d, with £5 school-fees.

DUNTOCHER, a *quoad sacra* parish, divided from Old Kilpatrick in Dumbartonshire, in 1836, by authority of the General Assembly. Population, in 1836, 3,336, whereof 1,604 belonged to the Establishment, and 1,717 to other denominations, chiefly that of the United Secession. Church built in 1836, at a cost of £1,600; sittings 776. Stipend of minister £114.—An original Burgher congregation was established at Fairley about 58 years ago. Stipend £89, with house, garden, and glebe. Sittings in the church 500.—A United Secession congregation was established at Duntocher about 18 years ago. Church built in 1824, at an expense of £1,000; sittings 592. Stipend £150. See OLD KILPATRICK.

DUNTROON CASTLE, a fine old edifice at the entrance of the Crinan canal, to the south of Craignish. Its structure is very imposing, overhanging the sea, and backed by knolls, rocks, and wood. It is now the property of Mr. Malcolm. In former times it belonged to a branch of the Campbells. Colonel Stewart of Garth, in his most interesting work on the Highland regiments, states that it was an ancient compact, and has been "a uniform practice in the families of the Campbells of Melfort, Dunstaffnage, and Duntroon, that when the head of either family died, the chief mourners should be the two other lairds, one of whom supported the head to the grave, while the other walked before the corse. The first progenitors of these families were three sons of the family of Argyle, who took this method of preserving the friendship and securing the support of their posterity to one another."*

DUNVEGAN, a bay and headland in the parish of Kilmuir, on the west coast of the isle of Skye. Near it is a small village of the same name, with a post-office. The house of Dunvegan, the principal seat of Macleod, the chief of the ancient and powerful clan of that name, is partly old and partly mo-

* A similar custom is noticed by the author of "Roginold Dalton," as occurring in the sister kingdom. It is ascribed to the two English families of Dalton and Ward, whose founders were brothers in arms during the wars of John of Gaunt in Spain. "It was," he remarks, "by such ties as these, that, in many instances, the noble benevolence of the old English gentry among themselves was sustained and nourished. It was the influence of such remembrances that often tempered the asperities of political conflict, and softened and refined the character even of civil war itself. Thus, for example, the heads of these very races had happened to embrace different sides in the time of Charles the First. They fought against each other at Edgehill; and yet when Sir Marmaduke Dalton was slain before Newark castle, Colonel Ward asked, and obtained, permission to accompany the corse to Lancashire, and, stern republican though he was, rendered the last honour to the young Cavalier."

dern. It forms two sides of a small square; on the third side is the skeleton of a castle of unknown antiquity, supposed to have been a Norwegian fortress when the Danes were masters of these islands. "It is so nearly entire," says Dr. Johnson—who was entertained here by Lady Macleod with 'all the arts of Southern elegance'—"that it might have easily been made habitable, were there not an ominous tradition in the family that the owner shall not long outlive the reparation. The grandfather of the present laird, in defiance of the prediction, began the work, but desisted in a little time, and applied his money to worse uses. Here we saw some traces of former manners, and heard some standing traditions. In the house is kept an ox's horn, hollowed so as to hold perhaps two quarts, which the heir of Macleod was expected to swallow at one draught, as a test of his manhood, before he was permitted to bear arms, or could claim a seat among the men. It is held, that the return of the laird to Dunvegan, after any considerable absence, produces a plentiful capture of herrings; and that, if any woman crosses the water to the opposite island, the herrings will desert the coast. Boetius tells the same of some other place. This tradition is not uniform. Some hold, that no woman may pass, and others, that none may pass but a Macleod."

DUNWAR. See **EAGLESHAM.**

DUNYCOICH. See **INVERARY.**

DUPLIN, or DUPLIN, a parish in Perthshire, united in 1618 to that of **ABERDARGIE**: see **ABERDARGIE**. This was the scene of an engagement between Edward Baliol and the Earl of Marr, on the 12th, or as some say the 18th, of August, 1332. Baliol having landed near Kinghorn, and routed the troops under the Earl of Fife who opposed his landing, marched northward, and encamped on the Millar's acre at Forteviot. The Earl of Marr heard at Perth,

That all thare fays cummyn ware
To Fortewyot, and thaim thare
Had lwygd in a lytl plas,
The Mylnars Ake it callid was;
And men sayis, bath hors and man
In that akre war lwygd than.

WYNTOUN, B. viii. c. 26, v. 67.

The Earl of Marr was encamped, with a numerous army, on a rising ground on the opposite side of the river Earn, near to Duplin. The contemptible appearance of Baliol's forces, confined within such narrow bounds, proved a snare to the royal army, who laughed at the idea of danger from a mere handful of enemies. Total carelessness was the natural consequence; and ere day dawned, the English had crossed the river, and attacking an army that had abandoned itself to intemperance, easily put it to a complete route. Some monuments of antiquity appear in the neighbourhood; but whether they have been erected as memorials of this disastrous battle, or claim an earlier era, is uncertain. There is a stone cross, quite entire, a good way up the acclivity, on the opposite bank of the Earn, almost straight north from the ford by which Baliol's army passed the river; and another on the south of Forteviot, upon a rising ground, called Dronachy, lying broken over at the pedestal, on which are many emblematical figures. About half-a-mile north from the first of these, a large tumulus or cairn was opened, and in it were found some coffins formed of rough flat stones, containing many fragments of bones. About 50 years ago a stone was found near the site of the palace, having two lambs carved on it. This is now in the possession of Lord Ruthven.

DURINISH. See **DUIRNISH.**

DURISDEER,* a parish in the north of Nithsdale,

* The name is written, in ancient documents, Dorisdere and Dorisdair; and seems derived from the situation of an ancient

Dumfries-shire. It is bounded on the north-west by **Sanquhar**; on the north-east and east by **Lanark-shire**; on the south-east by **Morton**; and on the south and west by **Penpont**. It approaches the form of a parallelogram, but with many sinuosities in the outline; and stretches from south-west to north-east. It measures diagonally, from the angle formed by the confluence of the Carron and the Nith on the south, to an angle on Lowther-hill on the north, $8\frac{1}{2}$ miles; in length, from the Mar burn opposite **Drumlanrig** castle to the north-east boundary at the source of the Carron, $7\frac{1}{4}$ miles; and in extreme breadth, from **Slunkford** on the Nith to an angle $1\frac{1}{2}$ mile south-east of the parish-church, $5\frac{1}{2}$ miles. Its area is about $28\frac{3}{4}$ square miles. Its eastern section is part of the high mountain range which walls in **Dumfries-shire**. In the north it is bleak, inhospitable, and Highland in its dress. Hills and mountains press so tumultuously upon the glens, that a tourist, in following a winding path, is puzzled to conceive how an opening among the acclivities heights which seem to forbid his progress can exist. The central, southern, and south-eastern sections are comparatively low in surface, and beautiful in exquisite diversity. Here the Nith diagonally intersects the parish, over a distance, including sinuosities, of 8 or 9 miles; and, all the way along, it luxuriates in a richness of scenery unsurpassed by the opulence of any merely picturesque landscape. From the narrow pass of shelving and almost precipitous banks, clad with brushwood and plantation, and foiled by rock and scaur, to the broad expanse or plain, cultivated like a garden, and walled round with a mountain-barrier, the basin of the river exhibits nearly every variety of scenery, and astonishes the tourist by the suddenness and the charming character of its transitions. Near the southern boundary, where the vale is widest, stands the gorgeous ducal pile of **Drumlanrig**, [see **DRUMLANRIG CASTLE**,] surrounded with the fairy-land of its demesne. From north to south other parts of the parish, even its least cheerful and most rugged, are variegated, and occasionally tinged with beauty, by the courses of Carron water, and Kirk, Enterkin, and Mar burns. The soil in the low grounds is in general deep, loamy, and fertile. The hills contain the same minerals as the neighbouring mines of **Wanlockhead**. North of the church, in the **Wallpath**, are vestiges of a Roman camp. Along the **Wallpath**, the great Roman road through **Nithsdale**, [see **DUMFRIES-SHIRE**,] passed on its way to join in **Lanark-shire** the road through **Annandale**. The parish is traversed along the vale of the Nith, by the turnpike from **Dumfries** to **Glasgow**, and along the vale of the Carron by that to **Edinburgh**: the two roads forking off from a hitherto common line immediately after entering the parish at Carron-bridge. The village of **Durisdere**, situated on the upland part of the parish, is a small sequestered hamlet. Population of the parish, in 1801, 1,148; in 1831, 1,488. Houses 248. Assessed property, in 1815, £10,386.—**Durisdere** is in the presbytery of **Penpont**, and synod of **Dumfries**. Patron, the Duke of Buccleuch. Stipend £220 16s. 8d.; glebe £25. The church was built in 1720. Sittings 350. **Durisdere** was originally a rectory, belonging to the see of **Glasgow**, and served by a vicar; and, in the 14th century, was constituted a prebend of **Glasgow**. There were anciently two chapels; vestiges of which are still apparent. One was situated on the Carron, and still gives the name Chapel to the farm on which it stood. In the present par-

castle at the entrance of a remarkable mountain-pass, called the **Wallpath**, between **Nithsdale** and **Clydesdale**. *Durisdere* in British, and *Dorus* in Irish mean 'a passage'; and *dair*, in both languages, signifies 'oakwood'—and here appears to allude to the tuftings of oak with which the **Wallpath** most probably was adorned.

ish-church is a grand mausoleum of the Drumlanrig Douglasses. An aisle, surmounting the sepulchral vault, has a marble monument of multiform sculpture, and imposing appearance, but in a style offensive to modern taste, commemorative of James, second Duke of Queensberry, and his Duchess. On the sculptured wall, the ducal pair are represented as lying on a couch, dressed in state. The Duchess is stretched in the attitude of death, her hands folded over her breast. The Duke appears behind her, half raised on his elbow, wearing an enormous wig, and contemplating the countenance of his lady. The tout-ensemble of the sculpture, however, is anything but lugubrious; and, but for the affecting suggestion of the mutability and vanity of all human grandeur, presents such an array of the trappings and grotesque adornings of antique courtly apparel, as would be irresistibly ludicrous. There are in Durrisdeer 5 schools, 2 of them parochial. The salaries of the parish schoolmasters amount to £51 6s. 6½d., with £23 9s. other emoluments.—Durrisdeer, according to one version of the old ballad, was the scene of Johnnie o' Breadislee's 'woeful hunting'

— Johnnie buskt up his gude bend bow,
His arrows are by ane;
And he has gane to Durrisdeer
To hunt the dun deer down.

The 'silly auld carle' tells the seven Foresters of Hislington what he has seen 'atween the water and the brae,' and a conflict, in which Johnnie slays all the seven, but is mortally wounded himself, issues:

Now Johnnie's gude bend bow is broke,
And his gude graie dogs are slain;
And his body lies dead in Durris deer,
And his hunting it is done.

See article BRAD.

DURNES,* a parish in the county of Sutherland, forming the north-western point of Scotland. It comprehends the cultivated lands on the eastern side of Loch Eriboll, commonly called Westmoine; with the tract denominated Strathmore, and intersected by the river Hope; Durness Proper, or the peninsular tract stretching between Loch Eriboll and Durness bay and kyle; and the Parf district, which comprehends that portion of the parish lying between the Atlantic and the kyle of Durness, and extending south to the Ashir district of Edderachylis. Its length from east to west is about 25 miles; its average breadth nearly 12 miles; and its superficial area, including the numerous lochs or arms of the sea which deeply indent its coasts, 300 square miles. On the east its boundaries are coterminous with the parish of Tongue, on the south, with those of Edderachylis. The scenery of this parish is mostly wild and mountainous. It is nearly destitute of wood, and considerable tracts are occupied by bleak mosses. Towards the shore, however, where the peninsula of Durness terminates in Farout-head, there is a series of beautiful fields, and rich green pasture. On the

sides of the hills, too, upon spots where shealings have been occasionally erected to shelter the shepherds in summer and harvest when feeding their flocks at a distance from their ordinary dwellings, the sward is richly variegated with clover, daisies, and other valuable grasses and wild flowers. Along the shore a tract of flat land extends, in some places, to the very verge of the ocean; in others there is a considerable extent of bare sands; at the head-lands piles of rocks tower to a vast height. The shores themselves are almost everywhere rocky and destitute of vegetation. The tides rush in with great rapidity and violence upon this coast, especially at Cape Wrath, where their violence is increased by means of a shoal, running out north by east from the extremity of the cape for 5 or 6 miles, and covered by a depth of water measuring from 16 to 24 fathoms: see article CAPE WRATH. About a mile from the coast is the Staigs, a rock the top of which is always above water, but which is nevertheless formidable to ships approaching the cape by night; but a still more dangerous rock, the top of which can be seen only in neap-tides, is said to lie 9 miles due north from the cape. Loch Eriboll forms a spacious harbour, in which even the smallest sloop enjoys perfect safety. It penetrates the country in a south-west direction, nearly 11 miles from the Whiten-head, which lies on the left hand of the entrance, and whose white and elevated rocks mariners distinguish at a distance, even in the night. On the west, or right hand of the entrance, is Rispond, a small dry harbour used by the tacksmen of the fishings and the kelp shores: see article ERIBOLL. To the west of Farout-head is Durness bay, a large shallow bay of rough sea, too open to afford shelter for vessels. Its upper extremity is prolonged into a narrow kyle running inland in a south-west direction up Strathdinard. Between Durness bay and Cape Wrath the cliffs are very magnificent.—In the cave of Smo, about 2 miles east of the parish-church, sounds are distinctly repeated by a remarkable echo. This cave is, indeed, in many respects an object worthy of notice. It is, in some places, 100 feet wide, and from 20 to 60 feet in height.† A short way within its mouth there is a perforation in the arch, through which a stream of water descends, and is received into a subterranean lake extending to a length not ascertained. Tradition says, that the only person who ever had courage to attempt to explore it, was one Donald, Master of Reay, but that the extinction of the lights, by foul air, obliged him to return before he could advance to the extremity of the lake or the boundary of the cave. Macculloch notices a cave near the Whiten-head which, he says, "exceeds in beauty, splendour, and sublimity of effect, all the caves of Scotland except perhaps that of Papa Stour."—The principal mountains in this alpine territory are Benhope in Strathmore: see article BENHOPE; Ben-Spionnadh, which has an elevation of 2,566 feet; Cranstachie in Durness Proper; and Fairbheinn and Bendearg in the Parf district. The principal lake is LOCH HOPE: which see. This tract of country, though extremely interesting to the geologist, is not known to afford any uncommon minerals. There are numerous small lochs. Loch-Borley in Durness Proper, affords, in great abundance, a species of char called 'Red Bellies,' and, in Gaelic, *Tarragan*. They are caught only in October, when they repair to the shallow water to deposit their spawn. From Loch Dinard flows a stream of the same name, which, after a north-east course of about 10 miles flows into the kyle of Durness. The Hope, flow-

† Figured in Dalziel's 'Coast Views.'

‡ Some accounts of this cave substitute yards for feet in these admeasurements.

* "Various etymologies are assigned for the name of this parish. Among others, it is said that *Dur* is a contraction of *Durrin*, [or *Dorrain*.] or *Doggin*, which signifies, in Gaelic, 'a Storm'; so that *Durness* would seem to mean 'the Ness or Promontory of storms,'—an appellation to which the neighbouring coast is not unentitled. But whatever may be the meaning of the name, it is well-known, from tradition, that the application of it to this parish took place, not from the nature of the ground, but in consequence of the Bishop of Caithness disposing of it to Morrison—*Ày MacHormaid*, as they call him—a Lewis man, and a native of a place called *Diurness* there, on occasion of his being married to his natural daughter, or—as such were usually termed in those days—his sister. This *Ày Morrison* gave it its present name, to commemorate the place of his own nativity. Whatever its former name might have been, it surely has been a shoal, or summer-dwelling of old, belonging to the bishopric of Caithness." [Old Statistical Account.]—In the New Statistical Account, it is suggested that the name of this district may be derived from *Durin*, the principal township in the parish, and *Innis*, 'a green patch or grazing,'—thus signifying an oasis in a desert.

ing through Strathmore, is a fine stream. See article **LOCH HOPE**.—The whole of this extensive parish, with the exception of about 1,000 acres, has been converted into sheep-walks. The wages of day-labourers, at the close of last century, were commonly from 6d. to 7½d. a-day, they now receive 1s. 6d. per day. The usual half-yearly wages of men-servants were from 26s. to £1 16s.; and of women-servants, from 10s. to 15s., in 1798; the former now receive £6 per annum, with a considerable supply of meal and potatoes; the latter receive £3 per annum with board. The whole rent of the lands, kelp-shores, and fishings, was about £450, in 1796; in the New Statistical Account of 1834, the average raw produce is estimated at £8,000. The assessed property, in 1815, was £1,706. Population, in 1801, 1,208; in 1831, 1,153. Houses, in 1831, 197. Three-fourths of the population are scattered along the northern coast, between the kyle of Durness and the mouth of Loch Eriboll. Of the remaining fourth, the greater part reside in small hamlets along both shores of Loch Eriboll.—The parish of Durness is in the presbytery of Tongue, and synod of Sutherland and Caithness. Patron, the Crown.—This, with the adjoining parishes of Tongue and Edderachylis, comprehending a tract of country 35 miles in length and from 15 to 25 in breadth, were formerly united in one parish under the common name of Durness. But, as one clergyman was not equal to the task of instructing the inhabitants of so extensive a district, George, Lord Reay, in 1721, applied to the General Assembly for aid towards the religious instruction of the inhabitants of this country. The Assembly agreed that a collection for this purpose should be made through all Scotland, and a contribution of £1,500 sterling was thus obtained. The original parish of Durness was, in consequence, divided into the three parishes of Durness, Tongue, and Edderachylis, in 1724; and stipends were assigned for the ministers of these parishes, in certain proportions, out of the teinds of Lord Reay's estate, and the interest of the money contributed. Stipend £158 6s. 8d.; glebe £20. The old parish-church was built in 1619, and enlarged in 1692. It was stated to the parliamentary commissioners, in 1836, that it was on the eve of being rebuilt.—There is a mission-station at Camisendun or Cambusindoun, which is 11 miles distant from the parish-church.—Schoolmaster's salary £25 15s.—The celebrated Gaelic bard, Robert Donn, or Mackay, was a native of this parish.

DUROR, a *quoad sacra* parish disjoined from Appin in 1827. It extends along Loch Linnhe and Loch Leven, and is from 28 to 30 miles in length, by from 5 to 6 in breadth. In 1836 the population was estimated at 1,600, of whom about one-half belonged to the Establishment. Church built by the parliamentary commissioners in 1826, and repaired in 1834; sittings 323. Stipend £120, with manse and glebe. There are an Episcopalian, and a Roman Catholic congregation, in this parish. See **LISMORE** and **APPIN**.

DURRIS, a parish in Kincardineshire; bounded on the north by the river Dee, which divides it from Drumoak in Aberdeenshire; on the east by Maryculter and Feteresso parishes; on the south by the parish of Glenbervie; and on the west by the parishes of Strachan and Banchory-Ternan. It extends about 8 miles in length, and 5½ in breadth, containing 16,000 acres. Houses 211. Assessed property, in 1815, £2,290. Population, in 1801, 605; in 1831, 1,035. The ground of this parish rises from the south bank of the Dee, till, in its southern extremity, it terminates in a ridge of the Grampian mountains. There are thus extensive haughs or tracts of

level land near the river, while, southwards, the mountains rise to an elevation of upwards of 1,000 feet above the level of the sea. Cairn-monearn is the highest of these, being elevated about 1,200 feet above sea-level. Mindernal, Mount Gower, and Craigbeg, are nearly of the same height. On the top of Mount Gower is a mineral spring, similar to one of the Harrogate waters. Several rivulets intersect the parish, of which the Sheeoch burn is the chief. It rises in the south-western extremity beyond Shillofad, and runs south-eastwards, often with a great body of water, and with headlong rapidity, for about 12 miles, till it falls into the Dee at Durris church. There are several large plantations of larch and Scots fir,—both of which were introduced here by Lord Peterborough. A great part of the parish has been enclosed, and many improvements in agriculture have been effected. There is extensive pasture-land, some of which, however, might be rendered arable. Gross annual produce valued at about £14,000. Farm-produce is sold at Stonehaven and Aberdeen, as there is neither market-town nor village in this parish. Three annual fairs for cattle are held however. On a hill named Castle hill there is the appearance of an ancient fortification having a regular fosse and glacis. There is an ancient mansion connected by a colonnade with Durris house, the principal modern building in the parish.—Durris is in the presbytery and synod of Aberdeen. Patron, Mactier of Durris. Stipend £158 6s. 7d.; glebe £15. Schoolmaster's salary £29, with £23 10s. fees, and other emoluments. Besides the parochial school, attended by 33 pupils, there was, in 1834, a sessional school attended by 36 pupils. Master's salary £12, with about £21 of fees.

DUTHIL and **ROTHIEMURCHUS**, two parishes, now *quoad civilia* united, the former situated in Morayshire, and the latter in Inverness-shire. The united parish is bounded on the north-west by Moy and Dalrossie; on the east by Inverallan and Abernethy; on the south by the Cairngorm mountain; and on the west by Alvie. The river Spey runs between the two parishes, and the river Dulan intersects Duthil for upwards of 13 miles, and falls into the Spey. The parish of Rothiemurchus lies betwixt the Cairngorm mountain and the Spey, a short way further up the river than the most part of Duthil. Together, they extend in length about 20 miles, and nearly 17 in breadth. Assessed property, in 1815, £60. Houses 389. Population, in 1801, 1,578; in 1831, 1,895; and exclusive of Rothiemurchus, 1,309. Their general appearance is hilly, with fir, birch, and alder, on the skirts of the hills. Higher up the ground becomes rocky, and covered with heath, but in many parts affording good pasture. The soil on the banks of the Spey and the Dulan is fertile, but liable to be overflowed. The rest of the soil in this district is gravelly and thin. There are two small lakes in Rothiemurchus; one of them, Lochaneilan, has an island and a ruinous castle noted for a remarkable echo. The wastes in this parish abound with game of all kinds. Numerous sheep and black cattle are reared. The military road from Dalnacardoch to Inverness passes through the parish. On this road is the stage-inn of Aviemore, near the head of Strathspey, which commands a fine view of the great fir woods of Rothiemurchus, supposed to cover from 14 to 16 square miles. Opposite to the inn is **CAIRNGORM**—which see—and about a mile to the north is the beautiful and bold projecting rock of Craigellachie, the 'rock of alarm.' "From its swelling base, and rifted precipices, the birch trees wave in graceful cluster; their bright and lively green forming a strong contrast in the fore round, to the sombre melancholy hue of the

pine forests, which, in the distance, stretch up the sides of the Cairngorm."—[Guide to the Highlands.] Craigellachie is the hill of rendezvous to the Grants. 'Stand fast, Craigellachie!' is the slogan or war-cry of that clan,—the occupants of this strath,—the name of whom prevails here to the exclusion of almost every other, as, perhaps, may be recollected from Sir Alexander Boswell's lively verses:—

"Come the Grants of Tullochgorum,
Wi' their pipers gaun before 'em,
Proud the mothers are that bore 'em.
Feedle-fa-fum!"

"Next the Grants of Rothiemurchus,
Every man his sword and durk has,
Every man as proud's a Turk is.
Feedle-deedle-dum!"

This truly Highland district altogether is exceedingly interesting and romantic. The name of Duthil signifies 'the glen of heroes,' and also 'the excellent valley,' because the Kirktown commands the prospect of a valley upwards of 1,000 acres in extent. Three miles to the east of Duthil manse stands the picturesque ruin of the old tower of Muckerath, a seat of the Grants of Rothiemurchus, and which was erected in 1598 by Patrick Grant, a son of John, surnamed 'The Simple.' The church of Duthil is one of the few Roman Catholic edifices which escaped the relentless destructive energies of the Reformers.—This district is in the presbytery of Abernethy, and synod of Moray; but Rothiemurchus is now a *quoad sacra* parish, with a government church. Stipend of Duthil parish £229 17s.; with a glebe valued at £5 3s. 4d. Unappropriated tithes £122 6s. Patron, the Earl of Seafield. Church built in 1827; sittings 700. Being the property of the sole heritor of the parish, the sittings are free to all the parishioners. Schoolmaster's salary £25 13s. 2d., with fees, &c. averaging £7 10s. There are 3 private schools in this parish. Stipend of Rothiemurchus *quoad sacra* parish £120, with glebe valued at £5. Patron, the Crown. Schoolmaster's salary, with fees, &c., about £30. There are three private schools in the parish of Duthil. See ROTHIE-MURCHUS.

DYCE, a parish in Aberdeenshire, lying along the side of the river Don, which separates it from Fintyre on the north. It is bounded by Newhills on the east; Skene on the south; and Kinellar on the west. Its greatest length is 6 miles, and greatest breadth 3 miles. A ridge of hills called Tyrebeggar runs directly through the parish from north to south. The soil near the Don is deep and rich, producing fine crops. Agriculture is here in an advanced state; nearly 3,000 acres are under cultivation. In the hilly ground of Tyrebeggar, however, upwards of 1,000 acres are covered with heath or other underwood. There are several plantations of larch and Scots fir in the parish. Extent of the parish 4,667 acres. Houses 104. Assessed property, in 1815, £1,315. Population, in 1801, 347; in 1831, 620; in 1839, 416. The cause of the decrease in population is stated by the minister to have arisen partly from some proprietors having dispossessed their cottagers, and thrown their possessions into larger farms,—and partly to the stoppage of quarries, in which sometimes nearly 100 men were employed. These quarries are of granite. They have been worked since the middle of last century; and dressed stones, for paving the streets and for building, have been sent hence in great quantities to London. On the top of one of the hills there is a Druidical temple, consisting of 10 rough stones planted in a circular form. There are also several cairns on the hills. There is no town or village in the parish. It is intersected by the Aberdeen and Inverury canal.—This parish is in the presbytery and synod of Aber-

deen. Patron, Gordon Skene of Dyce. Stipend £150 11s. 2d.; glebe £7 10s. The church is situated on a rocky promontory, formed by a winding of the Don, and commands a fine view of the river's course through the valley for 20 miles. Schoolmaster's salary £26 per annum, with £14 fees.

DYE (THE), a rivulet in the parish of Strichen, Aberdeenshire, tributary to the Dee.

DYE (THE), a small stream in Berwickshire, which, descending from the Lammermoor range, flows past the village of Longformacus, and falls into the Whitadder.

DYKE AND MOY, two parishes in the county of Elgin, except part of Moy, which is in the shire of Nairn. They were united in 1618. The united parish is of an irregular, four-cornered figure, running up the Moray frith, 6 miles along the shore, and stretching from the coast, southwards, nearly the same length. It is bounded on the north by the Moray frith; on the east by the river Findhorn, and the loch at its mouth; (but the boundaries being very irregular, a few farms are situated on the east side of the Findhorn;) on the south by the parishes of Ardclach and Edenkille; and on the west by Auldearn parish. A great proportion of this district is fertile in soil, and highly cultivated. There are some fine arable fields of black and brown loam, and the surface is agreeably diversified with gentle slopes and flats, and ornamented with gardens and plantations, villas and mansions. Along the coast, however, is that extensive sandy desert called the Culbin or Mavistone sand-hills, which stretches through the parishes of Auldearn, Dyke, and Kinloss, on both sides, and round the mouth of the river Findhorn. Boethius represents these as produced by the same inundation of the sea which swept away the princely estate of Earl Godwin in Kent in 1100, leaving the celebrated or rather infamous Godwin sands in its room. Since the original devastation, the sea appears to have been encroaching considerably on this coast, or at least the evil has been extended by the blowing of the sand-hills. These were originally piled up in three great hills below Mavistone, in Auldearn parish; and from this great reservoir the sand has been drifted towards the north-east in such enormous quantities, that the barony of Culbin—one of the most valuable estates in Moray, distinguished, indeed, as 'the granary of Moray'—was literally and entirely buried under it about a century and a half ago. The lands were covered to the depth of several feet, between the years 1670 and 1695, and the estate so much destroyed, that the proprietor petitioned parliament to be exempted from paying the ordinary public dues. The estate still remains completely covered up, the only traces of its former existence being the occasional appearance of the ruins of houses, and portions of the soil still retaining seeds having the power of vegetating, which are occasionally dug up.* The removal of the sand to Culbin is said to have been accelerated by the country people pulling up bent from the grounds in the parishes of Dyke and Auldearn, and the practice was prohibited, in consequence, by act of parliament. The entrance of the Findhorn into the sea has been removed from the

* In the churchyard of Dyke is an old tomb-stone belonging to the family thus curiously disinherited; and, from an inscription, it appears that the provident couple who first slept under it had it prepared during their lifetime. On the upper part of the stone are the initials, V. K. B. L.; below, two armorial coats, and the date, 1613: after which runs the following legend:—

VALTIR KINNAIRD, ELIZABETH INNES,

The builders of this bed of stane,
Are laird and ladie of Cowhine;
Quhilk tua and theirs, quhane braithie is gane.
Fleis God, wi' sleip this bed vithin.

westward, nearly 2 miles to its present situation, and on the spot where stood the ancient town and harbour of Findhorn, nothing now appears but sand and bent grass, scarcely affording meagre pasturage to a few sheep. Besides indications of an ancient forest visible in the bay between Findhorn and Burgh-head, there are other traces of considerable changes on the whole sea-coast in this vicinity.—The heath of Hardmoor, which adjoins the now sterile district of Culbin, is celebrated as the place in which Macbeth was met by the weird sisters, while he journeyed with Banquo from the western islands, to meet King Duncan at the castle of Forres. It is a bleak and barren enough heath, and its 'blasted' aspect well befits the imaginary scene of such a supernatural meeting. No one can pass this spot without having his mind full of the horrors of the tragedy. The imagination of thousands has been rivetted on this locality, and the poet, out of a few meagre and uncertain traditions, has invested what was, perhaps, after all, but a common and vulgar assassination, with the intense interest of a great moral catastrophe.—Immense and thriving plantations of oak, pine, larch, elm, beach, &c., which cover the whole country side, and amount, it is said, to about 15,000,000 of trees, have, of late years, grown up with the ancient pine forest in the vicinity of the noble castle of Darnaway in this parish: see DARNAWAY.—There are three villages in this parish;—Dyke, Broom of Moy, and Kintesk. Population of the united parish, in 1801, 1,492; in 1831, 1,451. Houses 306. Assessed property, in 1815, £9,178. There are one or two small lakes in the parish. The Findhorn, which flows into Findhorn loch, to the north of Moy-house, is the principal river, and is of considerable value for its salmon-fishings.—The united parish of Dyke and Moy is in the synod of Moray, and presbytery of Forres. Patrons, the Crown, and Grant of Moy. Stipend £244 11s. 8d., with glebe valued at £16 13s. 4d. Schoolmaster's salary £34 4s. 4½d. per annum, with £20 4s. 7d. fees, &c. There are two private schools in the parish. A society's school is situate at Connicavel, on the borders of the parish, at which children, belonging to this place, are also educated.

DYSART,* a parish in Fifeshire, on the frith of Forth, to the east of Kirkcaldy. Its form is that of an irregular parallelogram, nearly 4 miles in length from north to south, and varying from 1¼ to 2¼ miles in breadth from east to west. It is bounded on the south by the frith; on the east by the parishes of Wemyss and Markinch; on the north by Kinglassie; and on the west by Kinglassie, Auchterderran, and Kirkcaldy. The sea-coast—which extends between 2 and 3 miles—is bold and rocky, and the surface of the parish afterwards continues to ascend for about a mile towards the north. The parish contains 3,054 Scots acres, the whole of which are arable, with the exception of about 400 acres which are under wood. The rent of land varies from £6 6s. per acre to £1 5s.; the average rent may be about £2 5s. per acre. The annual value of real property for the landward part of the parish, in 1815, £4,578; for the burgh of Dysart, £4,180; total £8,758. The valued rent of the parish is £5,321 6s. 8d. Scots.—Coals have from a very early period been wrought in this parish; and there are still mines at work on the estate of the Earl of Rosslyn. The coals in the neighbourhood of Dysart have been repeatedly on fire. They were remarkably so in 1662, owing, it is supposed, to the spontaneous combus-

tion of a quantity of pyrites. George Agricola, the great metallurgist, who died in 1555, takes notice of this phenomenon as occurring here. Buchanan, from this circumstance, fixed on the neighbourhood of Dysart for the scene of exorcism in his 'Franciscanus,' and gives an admirable descriptive view of it under the horror of an eruption:

*Campus erat late incultus, non floribus horti
Arrident, non messe agri, non frondibus arbor:
Vix sterilis siccis vestitur arena myricis;
Et pecorum rara in solis vestigia terris:
Vicini Deserta vocant. Ibi saxea subter-
Antra tegunt nigras vulcania semina cautes;
Sulphureis passim concepta incendia ventis,
Fumiferan volvant nebulam, piceoque vapore
Semper anhelat humus: cæcisque inclusa cavernis
Flamma forens, dum lactando penetrare sub auras
Conatur, totis passim spiracula campis
Fudit, et ingenti tellurem pandit hiatus:
Teter odor tristisque habitus faciesque locorum.*

There are beds of ironstone lying below the coal, which are also worked where they come near the surface. The ironstone is usually shipped for Carron works; a ton is said to yield 12 cwt. of iron. There are also limestone and freestone quarries. The principal manufacture in the parish at present is that of checks and ticks, which was introduced about the commencement of the last century. In 1836 the number of looms employed was about 2,088; the quantity of cloth annually made was supposed to be about 31,006,720 yards; and the value about £150,236. There are a mill to the east of Dysart, for spinning flax, which employs from 80 to 100 persons, a pottery for making stoneware, a rope-work, and a patent slip-dock for repairing vessels.—Besides the burgh of Dysart, there are several populous villages in the parish. PATH-HEAD is at the south-western extremity of the parish: which see. Immediately adjoining, and to the north-east of Pathhead, is Sinclairtown, built on the property of the Earl of Rosslyn. It is more modern than Pathhead, and contains a population of 1,240. Still farther to the north-east are Easter and Wester Gallatown, with a population of 1,053. There are also two smaller hamlets, viz., Borland, containing 184 inhabitants; and Hackley-moor, containing 434.—The population of this parish, in 1755, was 2,367; in 1801, it was 5,385; and in 1831, 7,104. The number of families, in 1831, was 1,712; of which, 106 were chiefly employed in agriculture, and 1,222 in trade, manufactures, and handicraft.—This parish is in the presbytery of Kirkcaldy, and synod of Fife. The church of Dysart was erected in 1802; it is a plain building capable of containing 1,600 persons. It is a collegiate charge, a second minister having been established in 1620. The Patron of both charges is the Earl of Rosslyn. The stipend of the 1st minister is £265 10s. 5d.; glebe £21. He is also entitled to a fish-teind which is of little value and never exacted; 16 chalders of salt, worth about £3 10s. per annum; a supply of coals, worth about £9 per annum; and 15s. 10d. yearly from some old buildings feued to the patron. The stipend of the 2d minister is £207 11s. 3d., with coals; but he has neither manse nor glebe. The unappropriated teinds of the parish amount to £714 4s. 7d. In Pathhead a chapel was erected some years ago in connection with the church of Scotland, in which the clergymen of the parish alternately preach and dispense the ordinances of religion.—To accommodate those of the population residing in the northern extremity of the parish, a chapel has been erected at Thornton in the neighbouring parish of Markinch, 13 miles from Dysart; and portions of this parish, of Markinch, and of Kinglassie, have been erected into a *quoad sacra* parish.—There are a chapel connected with the Relief Synod at Dysart, built in 1772; sittings 750;

* The name of this parish is obviously Celtic, *Dys-artd*, signifying 'the Height of God'; it is therefore probable that, at an early period, a place of worship existed here, from which the name originated.

and one belonging to the Associate Synod of Original Seceders; built in 1763; sittings 795. The stipend of the minister of the former is £100, with manse and garden; of the latter, £126.—There are 14 schools in the parish, two of which are taught by females. The parochial, or rather burgh-school, is situated in the town of Dysart, and is well-attended. The teacher is paid partly from the town-funds, and partly from money mortified for the purpose, the sum of £43 per annum, besides his school-fees. There are 3 other unendowed schools in the town. At Pathhead there is a school endowed by the late Mr. Philp of Edenshead, for the education of 100 children, who, as at Kirkcaldy, receive a yearly allowance for clothing; and there are also in this village 3 other unendowed schools; there are 2 schools at Sinclairtown, 3 at Gallatown, and 1 at Borland, all unendowed.

The town of DYSART is a royal burgh, and joins with Kirkcaldy, Kinghorn, and Burntisland in sending a member to parliament. Parliamentary constituency, in 1839, 130. It was originally a burgh-of-barony holding of the St. Clairs of Rosslyn, and subsequently of the Lords Sinclair. About the beginning of the 16th century, it was erected into a royal burgh, but the early charters have been lost. A few years ago, the burgh was disfranchised, in consequence of some informality at the election of the magistrates; and its affairs have since been under the superintendence of three managers appointed by the court of session. The revenue, in 1838-9, was £908. The burgh consists of three narrow streets, having a kind of square in the centre. The central or high street presents a number of antique substantial houses, having dates and inscriptions on their fronts. Many of them had piazzas on the ground-floor, where the merchants exposed their goods for sale; but these are now mostly built up. In the centre of the town is the town-house, which contains a council-hall, the prison, the weigh-house, and the guard-house. It is a plain building, ornamented with a tower and spire. Fortunately the prison requires to be but seldom used. The harbour of Dysart, though not deficient in size for the trade, was formerly very unsafe; the swell, when there was a gale from the east, being so great that vessels were driven from their moorings and nearly wrecked within it. A few years ago, however, an adjoining quarry was converted into a wet dock, which has 18 feet of water, and is sufficient to contain 17 or 18 vessels of different burden, exclusive of the old or outer harbour. The population of the burgh, in 1831, was 1801. So far back as 1450, salt was manufactured and shipped at Dysart, not only to other places in Scotland, but to Holland and the Continent; fish was also exported, as also great quantities of coal; and malting and brewing were carried on to a great extent at an early period. In fact it is admitted that Dysart enjoyed a large share of the trade which the different burghs on the south side of the Forth anciently possessed. But the same circumstances which destroyed the trade of the other burghs, had a destructive effect upon that of this town; its trade decayed, and its shipping rapidly disappeared. A few brigs, and a few sloops, are all that now belong to the harbour, and foreign vessels seldom visit it, except a few from Holland or the Baltic.—About a mile north of the town there is

still standing a large memorial stone, which tradition says marks the spot where a battle was fought with the Danes; and about half-a-mile farther north, is a farm called Carberry where the Romans are said to have had a station. The remains of the camp are said to have been formerly visible, but no traces of it are now to be seen; the tradition is strengthened, however, by the name of the place. Near the middle of the harbour is a high rock called the Fort, which is said to have been fortified by Oliver Cromwell, but no part of the works now remains.—Although not mentioned in Spottiswoode's list of religious houses, there is said to have been a priory of black friars in Dysart, the chapel of which was dedicated to St. Dennis. Part of the old wall of this chapel, which still retains its name, yet remains, but it has for a long period been converted into a smithy. Near the chapel of St. Dennis is the old church of Dysart, which bears the marks of having been a handsome piece of architecture in its time. On one of the windows is the date 1570; but the steeple and the porch bear marks of greater antiquity.—West of Dysart are the lands of Ravenscraig belonging to the Earl of Rosslyn. Here, on a lofty rock which overhangs the sea-shore, are the ruins of Ravenscraig castle, sometimes also called Ravensheugh castle. The castle and lands of Ravensheugh appeared to have belonged to the Crown at a very early period; but they were granted by James III., in 1470, to William 3d Earl of Orkney, the ancestor of the present proprietor, in return for his resignation of that earldom to the Crown. It afterwards became the residence of the descendants of the 3d son, the Lords Sinclair, from whom it has descended with the other estates to the present proprietor. It was still inhabited at the time Sibbald wrote, but it has now for many years been in ruins.—Adjoining Ravenscraig are the lands of Dunnikeir the property of Sir John Oswald, on part of which the village of Pathhead is built. This property anciently belonged to the family of Lundin of Balgonie; and afterwards, according to Sibbald, to a Mr. John Watson, who built the old house in Pathhead, and mortified several acres of land near Burntisland for maintaining poor widows. About the end of the 17th century, Dunnikeir became the property of the ancestor of the present proprietor.—In the northern portion of the parish is Strathore, the property of John Fergus, Esq., which in part anciently belonged to the Hepburns of Waughton; and at the north-east extremity Skeddoway, long the property of a family of the name of Alexander, now of the Earl of Rosslyn.—Dysart house, the residence of the Earl of Rosslyn, is situated above the sea-shore to the west of the burgh. It is a plain but neat and commodious mansion, and commands an extensive and very beautiful view of the frith, and of the scenery to the east. The gardens are very beautiful.—The barony of Dysart appears to have belonged, so early as the 13th century, to the Sinclairs of Rosslyn. Dysart gives the title of Earl to the ancient family of Tollemache. Of this family—whose extraction is English—there was, in the 25th of Edward I., one Hugh de Tollemache, who held of the Crown the manor of Bentley, in the county of Suffolk; and, in the 29th year of that monarch's reign, had summons to attend the expedition into Scotland. Dysart formerly gave the title of Earl to the family of Murray.

E

EACHAIG (THE), a small river in Argyshire, in the district of Cowal, which has its rise in Loch Eck, and runs into the Holy Loch. It affords good trout and par fishing.

EAGERNESS, a promontory on the east coast of Wigtonshire, protruding southward, and shutting in Garlieston bay. It is about a mile long, and $\frac{3}{4}$ of a mile in average breadth, and terminates in a rocky, but not very high bank.

EAGLESHAM,* a parish which forms the south-eastern portion of the county of Renfrew. It extends about 6 miles from east to west, and about 7 from north to south; and is bounded on the north-west by Mearns, in the same county; on the south-west by Fenwick, and on the south by Loudoun, both in Ayrshire; and on the east by Carmunnock and East Kilbride, both in Lanarkshire. The soil is various. The higher and western districts consist partly of dry heath, and partly of deep moss, with a number of green hills, and much natural meadow-ground. The moors are among the best in Scotland for game. The arable land in the lower part of the parish is very productive. The whole parish enjoys free air and excellent water, and is remarkably healthy. The river White Cart takes its rise out of the moors of Eaglesham and East Kilbride, and in its course northwards divides the counties of Lanark and Renfrew. The water of Earn, a tributary of the Cart, flows on the north-west of this parish, which is also watered by several rivulets, and contains two small lakes, Binnend and Lochgoin, the latter giving name to a farmstead where dwelt John Howie, author of the 'Lives of Scottish Worthies.' Balagich and Dunwan, each about 1,000 feet above the level of the sea, are the highest hills in the parish, and, indeed, with two exceptions—Mistylaw and Hill of Staik—the highest in the county. At Balagich there have been observed several pieces of barytes. There are also found large masses of wacke or osmond stone, which stands the strongest heat without renting, and is, therefore, used in building ovens and other furnaces.—The estate of Eaglesham formed part of the extensive grant made by David I. to Walter, the founder of the House of Stewart, before the middle of the 12th century. By Walter it was transferred to Robert de Montgomery, who was one of those knights that accompanied him when he migrated from England to Scotland. This estate, which was the first, and, for two centuries, the chief possession of the Scottish family of Montgomery, has remained their property, undiminished, for the long period of seven hundred years. For their succession to the Eglinton estates and their elevation to the peerage, see article EGLINTON.—Between the Cart and a rivulet called Mains water, part of the ruins of the castle of Polnoon, or Ponoon, may still be traced. It was built by Sir John Montgomery of Eaglesham, with the money received for the ransom of Henry Percy, the celebrated Hotspur, whom he took prisoner with his own hand at the battle of Otter-

burn, in 1388. It is said that the ransom being called *poind money*, the name Polnoon was thence derived; but this seems strained and far-fetched. Polnoon lodge, which stands on the north-east of the village of Eaglesham, is a small mansion of modern construction, belonging to the Earl of Eglinton.—In the year 1769 the old village was demolished, and a new one begun to be built on a plan which was formed two years before by Alexander, the 10th earl, a nobleman of fine taste, who, however, did not live to see it completed. It chiefly consists of two rows of houses, generally of two stories, facing each other at the distance of 100 yards at the upper, and 250 at the lower end, the nature of the ground not admitting of a more regular line of street. The houses have each a kitchen-garden at the back. Midway between the rows there runs a streamlet to which, from each side, there is a gentle descent, partly formed into washing greens, and partly embellished with trees. Upon the whole, the appearance of this village is eminently beautiful. The tenements in the village are held of the family of Eglinton, on leases for 999 years, at a moderate ground rent. There is no other village in the parish. Cotton-spinning has been carried on here since the end of the last century.—Robert Pollok, the lamented author of 'The Course of Time,' was a native of this parish. He was born at North Muirhouse, where his father was a farmer, in 1798; was licensed to preach in connexion with the United Associate Synod in 1827; and died of consumption in the autumn of the same year. In his sketches of inanimate nature he returns again and again to the scenery of his beloved home:

"'Mong hills, and streams,
And melancholy deserts, where the sun
Saw, as he passed, a shepherd only here
And there watching his little flock; or heard
The ploughman talking to his steers."

To the trees which overshadowed the paternal mansion, his verse thus pays homage:—

"Much of my native scenery appears,
And presses forward to be in my song;
But must not now: for much behind awaits
Of higher note. Four trees I pass not by,
Which o'er our house their evening shadow threw:—
Three ash, and one of elm. Tall trees they were,
And old, and had been old a century
Before my day. None living could say aught
About their youth; but they were goodly trees:
And oft I wondered, as I sat and thought
Beneath their summer shade, or in the night
Of winter heard the spirits of the wind
Growling among their boughs,—how they had grown
So high in such a rough tempestuous place:
And when a hapless branch, torn by the blast,
Fell down, I mourned as if a friend had fallen."

Population, in 1801, 1,176; in 1831, 2,372. Houses, in 1831, 242. Assessed property, in 1815, £10,117. The parish contains 15,450 English acres, and, excepting 550 acres, wholly belongs to the noble family of Eglinton.—Eaglesham is in the presbytery of Glasgow. Stipend £278 14s. 6d.; glebe £25; unappropriated tithes £856 2s. 5d. Patron, the Earl of Eglinton. A diminutive church, which existed before the Reformation, continued to serve as the parochial place of worship till 1790, when Archibald, the 11th Earl of Eglinton, much to his honour, erected and fitted up a handsome church of an octagonal form, with a steeple.—There are meeting-houses of the United Associate Synod, and a Reformed Pres-

* In the Old Statistical Account we are gravely told that this place received its name from *eagles* having "often perched on the *ho'm* or low ground where afterwards the village was built;" but there is no reason to believe that it ever was frequented by these birds. A church having existed here from a remote period, a more probable derivation is from *eaglais*, (Gaelic), 'a church,' and the Saxon term for a hamlet. Thus, *Eaglais-ham* signifies the 'church hamlet,' or, according to a Scottish phrase still in use, the kirk-town.

byterian church here.—Salary of parochial schoolmaster £30, with about £7 of other emoluments.

EAGLESHAY, or **EGILSHAY**, one of the Orkneys, about 2½ miles long, and 1 mile broad. The coast is in general sandy. On the north side of the island is a large tract of sand covered with bent, and sheltering great numbers of rabbits. This island is celebrated for having been the place where the pious St. Magnus was murdered. It was formerly a vicarage, united to the ancient vicarage of Rousay. At the west end of the island is a small Gothic church, which was dedicated to St. Magnus. It has a pyramidal steeple at the west end; and at the east end is a vaulted choir which joins to the body of the church. The church is said to have been erected on the very spot where the infamous deed was perpetrated by his ambitious relation. The population, in 1801, was 197; in 1831, 228. Houses 41. This island is entirely composed of sandstone and sandstone flag, and in some places the strata are very much elevated. It lies to the east of Rousay, from which it is separated by Howa sound, not exceeding a mile in breadth.

EAGLESHAY, one of the Shetland isles; constituting part of the parish of North-Maven. It is situated in Islesburgh cove, on the east of St. Magnus bay, and is an excellent island for grazing. It abounds with rabbits.

EALAN-NA-BHRIU. See **EDDERACHYLIS**.

EALAN*-NA-COOMB, or **EALAN-NA-NAOIMPE**,—that is, 'the Island of Saints,'—a small island off the coast of Sutherland, and in the parish of Tongue. Here were formerly a chapel and burial-place, the remains of which are still visible. On the south side of this island the sea, after passing for several yards through a narrow channel, spouts up into the air, sometimes to the height of 30 feet, through a large circular hole in the rock; and a few seconds afterwards there is a discharge of water from the east side of the island, with a loud noise resembling the explosion of cannon. This happens only when it is half-flood, and a gale at north-west.

EALAN-GHEIRRIG, a small rock situated on the mouth of Loch Riddan, in the parish of Inverchoalin, Argyleshire, memorable in the annals of the 17th century. In 1685, when the Duke of Monmouth attempted an invasion of England, the unfortunate Archibald, Earl of Argyle, was induced to favour the invasion. He brought with him three frigates, and a considerable quantity of arms and ammunition. With these he landed at Dunstaffnage, and, having collected an army of 3,000 men, proceeded through the narrow kyles of Bute, to Ealan-gheirrig, which he fortified very strongly, and there deposited his spare arms and ammunition. Soon after, upon the appearance of some ships of war, the garrison surrendered.

EALAN-NA-ROAN,—that is 'the Island of Seals,'—an island on the north coast of Sutherlandshire, annexed to the parish of Tongue. It is about 2 miles in circumference, and is inhabited by four or five families. It is entirely composed of coarse pudding-stone, on the surface of which is a shallow soil almost entirely produced by art. About the year 1783, the centre of this island sunk considerably, leaving a pool of water where there was arable land before.

EALAN-USNICH, a small island of Argyleshire, in Loch-Etive.

EARLSFERRY, a town in the parish of Kilconquhar, on the frith of Forth, Fifeshire; 6 miles east of Largo; 2 south of Colinsburgh; and ½ a-mile west

of Ely. The tradition is that this town was originally constituted a burgh by Malcolm III., between 1057 and 1093, at the request of Macduff, the Maormor of Fife, who, in his flight from the vengeance of Macbeth, was concealed in a cave at Kincaig point, which still bears his name, and was afterwards ferried across the frith to Dunbar by the fishermen of the place. From this circumstance it was called Earlsferry; and it likewise obtained the privilege that the persons of all who should cross the frith from thence should be for a time inviolable, no boat being allowed to leave the shore in pursuit, till those who had already sailed were half-way over. There does not seem any reason to doubt the fact of Macduff having been concealed in the cave at Kincaig, nor that he was assisted in making his escape to the opposite coast by the inhabitants of the village in its neighbourhood. But the erection of it into a royal burgh must have been at a subsequent period, and was probably done at the request of one of the descendants of the great Macduff. The Celtic people of Scotland erected no royal burghs; and we have no evidence of any earlier than the reign of David I. or Malcolm IV. The title of Earl, too, was equally unknown to the Celts; so that the name of Earlsferry must have been bestowed at a subsequent period, though in commemoration of the escape of Macduff. Earlsferry, however, is a burgh of great antiquity, but its earliest charter, the date of which is unknown, was destroyed by fire in Edinburgh. A new charter was in consequence granted by James IV., in which it is narrated that the burgh of Earlsferry was "of old past memory of men, erected into a free burgh," &c. By this charter all its ancient privileges and immunities were renewed and confirmed. A considerable trade is said at one time to have been carried on here, and two annual fairs and two weekly markets to have been held. This has long been at an end, and the fairs and markets have long been discontinued. The magistrates of Earlsferry have the same powers with other magistrates of royal burghs; but it does not appear that at any time Earlsferry had exercised its privilege of sending a commissioner to the Scottish parliament. The town-house stands in the middle of the town. It is an old building, surmounted by a spire, in which there is a clock and bell. It contains the town-hall, and a very wretched cell which forms the prison for criminals; fortunately, however, it is little if at all used. Debtors, when there are any, are confined in the town-hall, and sleep in a small room adjoining, but it is several years since there occurred a case of imprisonment for debt. The population is about 600.

EARLSTON, a parish in the south-western part of the district of Lauderdale, Berwickshire. It is bounded on the north by Legerwood and Gordon; on the east by Hume and Nenthorn; on the south by Roxburghshire and Merton; and on the west by Leader water, which divides it from Roxburghshire. Its form is somewhat oblong, stretching from east to west, but with deep indentations on both sides in the middle. From Hardie's-mill-place on the east, to the top of a projection near Kedsle on the west, it measures 6 miles; but in breadth it varies from 3¼ miles at the western limit, and 2 miles near the eastern limit, to a mile at the middle. A hill in the centre of the western division rises nearly 1,000 feet above the level of the sea, and was probably the site of a Roman encampment. In the eastern division, and near the northern and southern limits of the western, are other hills less elevated, which differ just sufficiently from the features of lowland scenery to give the district a pastoral aspect. Other parts of the parish, especially those along the

* *Ealan*, or *Eilan*, signifying 'Island,' is of frequent occurrence in Gaelic topography.

banks of the Leader, and those of the south-eastern division, are comparatively flat. The Leader comes down upon the north-western angle from the north, cuts off a small projecting wing, forms the boundary-line for a distance of $3\frac{1}{2}$ miles, strikes the Tweed at a point where that noble and joyous river offers to become the southern boundary, and drives it off south-eastward along the margin of the continuous parish of Merton. During the whole course of its connexion with Earlston, the Leader is a stream of no common beauty, meandering among the hills and groves of Carolside, sweeping past the western base of the classic COWDENKNOWES [which see] and merrily careering between the richly-wooded slopes of Drygrange and Kirklands, till it pays its tribute to the gorgeously robbed queen-river of the south. One of the head-waters of the Eden rises about a mile east of the Leader's bed on the northern limits of the parish, and, joined in its progress by other rills which unite with it to form the main stream, it forms the boundary-line, first over most of the north and next over all the east, during a course of about 8 miles. While skirting along the north it is an uninteresting rill, cold in its appearance, and naked in its scenery, but after it sweeps round to flow along the east, it is overlooked on the side of Earlston by a phalanx of plantation $1\frac{1}{2}$ mile deep, and partakes, in a degree suited to its bulk as an infant-river, the lively character of the Leader. Two other rills rise in the interior, and flow respectively toward the Leader and the Eden, contributing their tiny frolics to the gladness of the general scene.

In olde dayes of the king Artour,
All was this land full filled of fairie;
The elf-queene with her jolly compaignie,
Danced ful oft in many a grene mede.
Chaucer.

The soil, in some of the arable parts, is clay; in some, is a light dry loam; and in several is strong, rich, and very fertile. The chief mansions are the splendid edifice of Mellerstain on the east, and the houses of Cowdenknowes and Carolside on the Leader. The parish is intersected, in its eastern division, by the road from Edinburgh to Kelso by way of Lauder, and has several other roads diverging from the village of Earlston. Population, in 1801, 1,478; in 1831, 1,710. Houses 310. Assessed property, in 1815, £7,034.

The village of Earlston stands on the banks of the Leader, north-east of Cowdenknowes, 7 miles south of Lauder. It consists principally of one long street, at right angles with the river, and stretching away to the east, and presents to the eye two rows of one-story houses, interrupted occasionally by buildings of larger bulk and greater pretension, used as inns or shops. The inhabitants, about 900 in number, are chiefly weavers and agricultural labourers. The fabrics woven are blankets, plaidings, and very stout gingham, and are superintended by manufacturers on the spot. The woollen looms are recently established. One web per week, measuring from 60 to 70 ells, is, on the average, woven by each weaver, and is paid at 12 shillings nett. The cotton weavers, though they work 14 hours a-day, while the woollen weavers work only 11, do not earn per week more wages than 6 shillings nett. A manufactory not long established in the village, and belonging to the Misses Whale, gives employment, in various departments of cotton-weaving, to numbers of persons who would otherwise be destitute, and has made a promising attempt to naturalize in the deep seclusion of this district the production of shawls and merinos. Earlston has two annual fairs for horses and cattle, and is the seat of a justice-of-peace court on the first Tuesday of every month.

Here are the parish-church, a Relief meeting-house, an Original Seceder meeting-house, an endowed academy of high provincial character, a subscription library, a friendly society, and a savings' bank.—Earlston is not a little famous as the birth-place of Thomas the Rhymer, the earliest poet of Scotland, who flourished in the village or its vicinity as a tenant in fee of the opulent barons of the soil, during the latter half of the 13th century. He is often and justly called Thomas of Ersildun, or Ercildoune; the corrupted name Earlston having been substituted in consequence, as is believed, of a popular though doubtful tradition that the village was for a time the residence of the Earls of March.* In his native place, as well as throughout Scotland, Thomas is celebrated among the lower orders solely on account of his reputed character of a prophet, and in connexion with the rhyming distichs—often of doubtful meaning, and apparently of multitudinous origin—which float on the tide of tradition, and along the currents of ancient and legendary literature. From some combination of causes easily intelligible by those who have peered behind the curtain of the confessional, and studied the expediences and diplomacies of the cloister, Thomas appears to have been made, with the help of a little astuteness in observing character and perspicacity in calculating moral chances, an expert tool of priestcraft—either on his private adventure, or more probably in combination with the monks of Coldingham, who had power over him as the owners of Ercildoune church, and dived deep into the politics of the court—for swaying the wills and influencing the conduct of wealthy and potent individuals in an age of the nobility's intense enslavement, and subjection to enormous pecuniary mulctings, by the pressure of superstition. Obtaining credit with the great and the influential for being a true prophet,—a credit which could be facily manufactured out of a few clever verified conjectures, and a few predictions either spoken after the event, and promulgated as spoken before it, or framed in combination with concerted means to effect their fulfilment,—he, as a matter of course, was rapidly viewed as a superhumanly gifted being by the multitude, and became associated, in the fancy of an ignorant people, with ideas and legends of whatever methods and invisible communications would be supposed to aid him in looking fully and brightly down the vista of futurity. The faith which remote pastoral districts, and even many of the lower classes in sections of the country freely plied with the influences of enlightenment, still repose in the genuineness of his pretended prophetic character—especially as that character stands wholly connected with matters of very trivial importance, and superlatively contrasted to the moral grandeur, and unutterable magnificence, and altogether surpassing worth of the details of true prophecy, as given in written revelation—is just one humiliating evidence among several, that the pestilential fogs and vapours of the Middle ages have not yet been dispersed by the thorough reclaiming of the moral marshes of the land.† The ruins of Thomas the

* The name Ercildoune seems to have been derived from the Cambro-British *Arceildun*, 'the Prospect hill,' and may have been adopted to describe the hill south of the village, whence a somewhat extensive and very fine view is obtained of the vales of the Leader and the Tweed.

† Sir W. Scott, in his introduction to the ballad of 'Thomas the Rhymer,' says: 'It cannot be doubted, that Thomas of Ercildoune was a remarkable and important person in his own time, since, very shortly after his death, we find him celebrated as a prophet and as a poet. Whether he himself made any pretensions to the first of these characters, or whether it was gratuitously conferred upon him by the credulity of posterity, it seems difficult to decide. If we may believe Mackenzie, Learmont only verified the prophecies delivered by Eliza, an inspired nun of a convent at Haddington. But of this there seems not to be the most distant proof. On the contrary, all

Rhymer's residence stand at the west end of the village, on a low ground intervening between it and the Leader. A stone, the modern substitute of one more ancient, in the wall of the parish-church, bears the inscription :

"Auld Rhymer's race,
Lies in this place."

Earlston or Erclidoun was occasionally the residence of King David I. The manor was held in the 12th century by the family of Lindsay, and afterwards passed into the possession of the Earls of Dunbar.—In addition to the village of Earlston, the parish contains 3 hamlets, Redpath, Fans, and Mellerstain. Redpath has about 120 inhabitants. Fans, situated near the centre of the northern division, has about 150. Mellerstain, situated in the east, and enriched with an endowed school, has upwards of 200.

Earlston is in the presbytery of Lauder, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £217 14s. 6d.; glebe £37. Unappropriated teinds £217 14s. 6d. The parish-church was built in 1736. Sittings about 450. The church of Erclidoun was given, at the middle of the 12th century, to the monks of Kelso; and was transferred by them, about the year 1171, to the monks of Coldingham, in exchange for the church of Gordon; and it remained with the latter, and was served by a vicar till the Reformation.—The parish-school is attended by a maximum of 176 scholars, and a minimum of 104. Schoolmaster's salary £28, with £32 school-fees, and the interest of £550. Of 4 non-parochial schools, one is a boarding-school.

EARLSTOWN, a village in the parish of Till-coultry, Clackmannanshire.

EARN* (Loch), a beautiful sheet of water in the south-western part of Perthshire, east of Loch

Voel, and north-east of Loch Lubnaig; 13½ miles from Callander, and about 30 miles west of Perth. In length it is 7 miles; its circumference is about 19 miles, and its depth is said to be 100 fathoms.†

There is a road along each side of the lake from the village of Lochearnhead to St. Fillans; so that the visiter may adopt either way in traversing its banks his fancy may prompt; or if he wish to enjoy a full view of all the beauties which surround it, he may make the circuit of the whole with much ease. There are few Scottish lakes more worthy of a visit than Loch Earn. Its shore throughout, and for at least half-a-mile inland, is clothed with thriving copse and brushwood,—creating continual changes of the scenery, and a succession of the most picturesque and romantic views. Beyond these woods, on every side, hills and mountains arise, piercing the clouds with their lofty summits, and adding grandeur and sublimity to the scene. Looking from either end of the lake the view is peculiarly magnificent: the whole valley can be seen at once,—with its enormous vista of mountains enclosing all around,—the transparent lake which forms its glassy centre,—and the beautiful fringing of wood with which the base of the mountains and the shores of the lake are adorned. Dr. Macculloch says: "Limited as are the dimensions of Loch Earn, it is exceeded in beauty by few of our lakes, as far as it is possible for many beauties to exist in so small a space. I will not say that it presents a great number of distinct landscapes adapted for the pencil,—but such as it does possess are remarkable for their consistency of character, and for a combination of sweetness and simplicity, with a grandeur of manner scarcely to be expected within such narrow bounds. Its style is that of a lake of far greater dimensions: the hills which bound it being lofty and bold and rugged, with a variety of character not found in many of even far greater magnitude and extent. It is a miniature and a model of scenery that might well occupy ten times the space. Yet the eye does not feel this. There is nothing trifling or small in the details; nothing to diminish its grandeur of style, to tell us that we are contemplating a reduced copy. On the contrary, there is a perpetual contest between our impressions and our reasonings: we know that a few short miles comprehend the whole, and yet we feel as if it was a landscape of many miles, a lake to be ranked among those of the first order and dimensions. While its mountains thus rise in majestic simplicity to the sky, terminating in those bold, and various, and rocky outlines which belong to so much of this geological line, from Dunkeld and Killiecrankie, even to Loch Catteran, the surfaces of the declivities are equally various and bold,—enriched with precipices and masses of protruding rock, with deep hollows and ravines, and with the courses of innumerable torrents which pour from above, and, as they descend, become skirted with trees till they lose themselves in the waters of the lake. Wild woods also ascend along their surface, in all that irregularity of distribution so peculiar to these rocky mountains,—less solid and continuous than at Loch Lomond,—less scattered and less romantic than at Loch Catteran; but from these very causes, aiding to confer on Loch

ancient authors, who quote the Rhymer's prophecies, uniformly suppose them to have been emitted by himself. Thus, in Wintown's 'Chronicle'—

'Of this fycht quillum spak Thomas
Of Erysdoun, that sayd in derne,
There suld meit stalwartly, starke and sterne,
He sayd it in his prophcy;
But how he wist it was ferly.'

Book viii. chap. 32.

There could have been no *ferly* (marvel) in Wintown's eyes at least, how Thomas came by his knowledge of future events, had he ever heard of the inspired nun of Haddington, which, it cannot be doubted, would have been a solution of the mystery, much to the taste of the prior of Lochleven. Whatever doubts, however, the learned might have, as to the source of the Rhymer's prophetic skill, the vulgar had no hesitation to ascribe the whole to the intercourse between the bard and the queen of Faery. The popular tale bears, that Thomas was carried off, at an early age, to the fairy land, where he acquired all the knowledge which made him afterwards so famous. After 7 years' residence, he was permitted to return to the earth, to enlighten and astonish his countrymen by his prophetic powers; still, however, remaining bound to return to his royal mistress, when she should intimate her pleasure. Accordingly, while Thomas was making merry with his friends in the tower of Erclidoun, a person came running in, and told, with marks of fear and astonishment, that a hart and hind had left the neighbouring forest, and were, comely and slowly, parading the street of the village. The prophet instantly arose, left his habitation, and followed the wonderful animals to the forest, whence he was never seen to return. According to the popular belief, he still 'dresses his weird' in Fairy land, and is one day expected to revisit earth. In the meanwhile, his memory is held in the most profound respect. The Eildon tree, from beneath the shade of which he delivered his prophecies, now no longer exists; but the spot is marked by a large stone, called Eildon tree stone. A neighbouring rivulet takes the name of the Bogle burn (Goblin brook) from the Rhymer's supernatural visitants. The veneration paid to his dwelling-place even attach'd itself in some degree to a person, who, within the memory of man, chose to set up his residence in the ruins of Learmont's tower. The name of this man was Murray, a kind of herbalist; who, by dint of some knowledge in simples, the possession of a musical clock, an electrical machine, and a stuffed alligator, added to a supposed communication with Thomas the Rhymer, lived for many years in very good credit as a wizard.—'Border Minstrelsy,' vol. iv. pp. 113—115.

* The name appears to be derived from its situation to the west of the country of Strathearn; *Eryn* or *Herin* in Gaelic signifying 'West.' "Which name (Loch Earn) it has," says Christopher Irvine, [Historia Scotiæ Nomenclatura Latino

Vernacula, 1697,] "because it lieth to the west of Loch Tea: and [because] when the west wind bloweth hard on the lake it raiseth the river (Earn), and maketh it swell and overflow its banks." We may, with perfect consistency, adopt honest Christopher's conclusion, while we hesitate to admit the grounds on which he appears to have arrived at it.

† This great depth may account for the fact that it was never known to freeze, however intense the frost. Much has been written as to this quality in the waters of Loch Ness, and it has been attributed to many causes: in that of Loch Ness to an impregnation of sulphur. It has been proved, however, that this is not the case; and that the real cause of Loch Ness, as well as many other lochs, not freezing, is their great depth.

Earn a character entirely its own. If the shores of the lake are not deeply marked by bays and promontories, still they are sufficiently varied; nor is there one point where the hills reach the water in that meagre and insipid manner which is the fault of so many of our lakes, and which is the case throughout the far greater part, even of Loch Catteran. Loch Earn has no blank. Such as its beauty is, it is always consistent and complete. Its shores, too, are almost everywhere accessible, and almost everywhere so wooded as to produce those foregrounds which the spectator so much desires; while, from the same cause, they present much of that species of shore scenery which is independent of the mountain boundary. Elegant ash-trees springing from the very water, and drooping their branches over it, green and cultivated banks, rocky points divided by gravelly beaches, which are washed by the bright curling waves of the lake, the brawling stream descending along its rocky and wooded channel, and the cascade tumbling along the precipice, which rises from the deep and still water below,—these and the richly cultivated and green margin, with the houses and traces of art that ornament its banks, produce in themselves pictures of great variety, marked by a character of rural sweetness and repose, not commonly found among scenery of this class. Thus also the style of Loch Earn varies, as we assume different points of elevation for our views, and perhaps in a greater degree than any of the Highland lakes,—assuredly more than in any one of similar dimensions. At the lower levels, and perhaps most of all at the western extremity where the banks are lowest, and at the eastern, where the beautifully wooded island forms a leading object in the picture, every landscape is marked by tranquillity and gentleness of character,—a character adapted to glassy waters and summer suns, to the verdure of spring and the repose of evening. High up on the hills, the grandeur of the bold Alpine landscape succeeds to the tranquillity of the rural one; and amid the wild mountain forms, and the rude magnificence of aspiring rocks and precipices, enhanced and embellished by the gleaming lights of a troubled sky and the passage of clouds, we almost forget the placid and cultivated scenes we have just quitted, and imagine ourselves transported to some remote spot of the distant Highlands.” [Macculloch’s ‘Highlands and Western Isles of Scotland,’ vol. i. pp. 124—126.] Benvoirlich is the loftiest of those mountains which lend their grandeur to the scenery of Loch Earn: see ARROQUHAR. Upon the margin of the lake, and near the base of the mountain, is situated the house of Ardvoirlich, the residence of William Stewart, Esq., the proprietor of the Ben, and the present representative of an ancient family of the Stewarts to whom this property has long belonged. The grounds are well-wooded, the situation pleasant, and the walks lead to a variety of picturesque scenes and waterfalls in adjoining ravines. Near the middle of the lawn, between the house and the road, grows a thorn-tree, 150 years of age, which is interesting both from its shape, its size, and its age. The branches spread out thick and wide on every side, and nearly horizontal; so that forty men might easily dine beneath its shade. Nearly opposite to Ardvoirlich is a lime-quarry, which has been a great source of fertility and wealth to the valley of Strathearn. The stones are conveyed by water to the east end of the lake, whence they are carted away by the purchasers sometimes to a distance of 20 miles. This valuable quarry is on the property of Lord Breadalbane.—Nearly 2 miles from the house of Ardvoirlich, and at the south-west end of the lake, is the ancient castellated mansion of Edinample, the

property of Lord Breadalbane; near which are the remains of an old chapel. This place is beautifully wooded, and is situated in a narrow glen through which the Ample finds its way to the lake. The stream is here suddenly precipitated in two spouts over a projecting cliff of rocks, into a profound abyss where they unite, and rush again over a second precipice, forming a beautiful cascade near the castle.—About 1½ mile up the northern side of the lake from St. Fillans, the traveller comes to the opening of Glentarkin, in which the great stone of Glentarkin stands,—a singular natural curiosity worthy of a visit. There is no road up this glen, and it is very difficult of access; but a traveller in the Highlands must not pay attention to these circumstances, if he would see all that is curious in such a rugged country. Nearly 3 miles up the glen, in the centre of a green sloping declivity between two rocky mountains, stands this singular stone. The remarkable thing about it is the beautifully balanced position in which it stands, and in which it has stood certainly since the remote period when it was detached from one of the rocky hills in its neighbourhood, and fell to its present situation. At the base where it rests on the ground, it measures 70 feet in circumference, but at about ten feet from the ground it spreads out equally on all sides, and its circumference is here 110 feet. Under its projecting sides, 60 or 100 men might find shelter. The solid contents of this enormous block above ground, exceeds 25,000 feet.—At the east end of the lake stands the little village of St. Fillans, beautiful alike from its situation, and from the neatness and regularity with which it is built: see ST. FILLANS.—In the middle of the lower part of the lake opposite the village is the only island which the lake contains. It is called Neish island. In early times it is said to have been inhabited by a family of the name of Neish, from whom it derives its appellation. This family and their adherents had long been at deadly feud with the M’Nabs, whose residence was at the head of Loch Tay. Many battles were fought between them with various success; but at length one was fought in Glenboulta-achan, about 2 miles north of Loch Earn foot, in which the M’Nabs were victorious, and the unfortunate Neishes cut off almost to a man. A small remnant of them, however, still lived in the island of Loch Earn, the head of which was an old man, a relation of the original chief of the family. He subsisted chiefly by plundering the people in the neighbourhood. On one occasion—it is said to have been in the reign of James V.—the chief of the M’Nabs, who resided at Kennil house, near the head of Loch Tay, had sent his servant to Crieff for provisions for a Christmas merry-making. The servant was waylaid on his return at Loch Earn foot, and robbed of all his purchases; he went home therefore empty handed, and told his tale to the laird. M’Nab had twelve sons, all men of great strength, but one in particular exceedingly athletic, who was ironically termed, *Join mion Mac’ an Appa*, or ‘smooth John M’Nab.’ In the evening these young men were gloomily meditating some signal revenge on their old enemies, when their father entered and said,—*Bhe’n oidich an oidich, n’am bu ghilleam na gillean*,—‘the night is the night, if the lads were but lads!’ This hint was taken as it was meant, for each man instantly started to his feet, and belted on his dirk, his claymore, and his pistols. Led by their brother John, they set out, taking a fishing-boat on their shoulders from Loch Tay, carrying it over the mountains and glens till they reached Loch Earn, where they launched it, and passed over to the island. All was silent in the habitation of Neish; secure in their insular situation, and having the boats

at the island, all had gone to sleep without fear of surprise. Smooth John dashed open with his foot the door of Neish's house; and the party rushing in, they attacked their old enemies, putting every one of them to the sword, and cutting off their heads, with the exception of one man and a boy who concealed themselves under a bed. Carrying off the heads of their enemies and any plunder they could secure, the youths presented themselves to their father; and Smooth John, holding up the head of the chieftain of the Neishes, said to his father, *Na biodh fiongh, oirbh!* 'Be in fear for nothing!' while the piper struck up the pibroch of victory. The old laird, after pleasing himself by contemplating the bloody heads, declared, 'That the night was the night, and the lads were the lads!'

EARN (THE), a river in Perthshire, which rises about 4 miles above the village of Comrie, in the loch of the same name, and flowing eastward in a course full of beautiful curves, falls into the Tay near the village of Caerpow, in the parish of Abernethy. It forms the boundary of all the parishes which are situated on its banks, with the exception of those of Comrie, Forteviot, and Dunbarnie, all which have portions on both sides of the river. On its northern margin, besides those portions of the parishes which we have just named, are Crieff, Trinity-Gask, Gask, Aberdalgie, and Rhynd; on the south are a part of Comrie, Strowan, Muthill, Blackford, Auchterarder, Dunning, a part of Forteviot, Forgandenny, a part of Dunbarnie, and Abernethy. All these form the valley of STRATHEARN [which see], one of the richest and most beautiful tracts of country in Scotland. The course of the Earn is considerably more than 30 miles in length. Its principal tributary waters are the Ruchill and Lednoch, which join it at Comrie, and the Moy which falls into it in the parish of Forteviot. It is navigable for about 3 miles above its mouth, or as far as to the Bridge-of-Earn, for vessels of from 30 to 50 tons burden. Salmon, trout, pike, and perch, are found in its waters. The salmon-fishings are, however, of no great value. The sources of the Earn being surrounded by numerous high mountains, which readily attract great masses of cloud, its waters are often suddenly swelled to such a degree that very considerable devastation is occasioned by the floods, particularly in the lower part of Strathearn.

EARN (BRIDGE OF), a village, situated on the southern bank of the Earn, in the parish of Dunbarnie, Perthshire, at the point where the high road from Edinburgh to Perth crosses the Earn. It is so called from a bridge over the Earn, which appears to have existed here from the most remote antiquity. The village itself is completely modern,—having existed for little more than 50 years. It owes its origin and increase to the vicinity of the mineral well of Piteathly. The houses are principally new, and most of them are let out as lodgings to visitors in the summer season. The parish-church of Dunbarnie is situated a little to the west of the town. The ancient bridge has now almost entirely disappeared; and the river is crossed by an admirable new erection of three arches. Bridge-of-Earn is about 4 miles south-east of Perth.

EARN-WATER. See EAGLESHAM.

EARSAY, or JORSA (LAKE), a considerable mountain tarn, in the parish of Kilmore, in the island of Arran. It contains trout and salmon, and discharges its waters by a stream of the same name.

EASDALE, or EISDALE, a small island of the Hebrides, annexed to the parish of Killbrandon, Argyshire. It is nearly circular; about $1\frac{1}{2}$ mile in diameter; and is celebrated for its slate-quarries. The slate occupies the whole island, and is traversed

at many places with basaltic veins, and thin layers of quartzite and calcareous stones. It has been quarried here upwards of 150 years, and of late has been wrought to a great extent. The number of workmen employed in 1795 was about 300; and the number of slates sold in that year was 5,000,000, at 25s. per 1,000. They now fetch in Glasgow £3 per 1,000 of the largest size, and 45s. for the smaller size. The constant demand for the Easdale slate has caused the surface to be cut very low, except at the south end; and as the greater part is now on a level with the sea, it is now wrought at a considerably greater expense, machinery being necessary to pump out the water. It is supposed that slate of the same quality would be found in the neighbouring islands of Luinag and Seil.

EASSIE. See ESSIE.

EAST-WATER. See NORTH ESK.

EASTWOOD, or POLLOCK,* a parish on the east side of Renfrewshire; surrounded by the parishes of Cathcart, Mearns, Neilston, Paisley, and Govan. Its greatest length from north to south is about 4 miles, and its greatest breadth from east to west is about 3 miles; but the form of this parish is so irregular, that its dimensions in different quarters greatly vary. On the north side it approaches within 3 miles of the city of Glasgow. The soil is in some parts light, in others heavy,—but excepting a tract on the south side, which is tilly and barren, it is in general fertile. The surface has a beautiful and picturesque appearance, being diversified with little hills rejoicing on every side, with valleys, natural woods, plantations, and winding streams. The whole parish—except what is built upon, or occupied with wood—consists of arable land. The river White Cart traverses it from east to west. There are two smaller streams,—Auldhouse-burn and Brock-burn. The minerals wrought are sandstone, limestone, ironstone, and coal. The chief branches of trade are cotton-spinning, weaving, bleaching, and calico-printing. Pollockshaws, a burgh-of-barony, and Thornliebank, a large village, are in this parish: see POLLOCKSHAWS and THORNIEBANK.—The greater part of the parish of Eastwood belongs to the family of Maxwell of Nether-Pollock, which has been seated here since the end of the 13th century. In 1682 a baronetcy was conferred on John Maxwell of Nether-Pollock, afterwards Lord-justice-clerk. Mr. Ramsay, in a work already quoted, says, 'The house of Nether-Pollock, a large and handsome structure of four stories, is situate on the right bank of the White Cart, amidst highly embellished pleasure-grounds and beautiful plantations. The building was completed in 1753 by the grandfather of the present proprietor, a few weeks before his death. The castle—which had been previously occupied by the family—was demolished about the same time: it stood on the site of the offices attached to the present mansion. Upon an eminence about 300 yards to the eastward of the house, there stood a still older castle,—the remains of the drawbridge and fosse belonging to which were in existence in Crawford's time (1710). A remnant of the woods, which in ancient times covered the ground in this quarter, was some years ago found imbedded in the river at Nether-Pollock. This was the trunk of a large oak, which, having been with difficulty dislodged,

* The parish of Eastwood was anciently called Pollock, which may be derived from the Gaelic, *pollag*, 'a little pool.' About the years 1163-5, the church of Pollock, with its pertinents, was granted by Peter of Pollock to the recently founded monastery of Paisley; and to it the church continued to belong till the Reformation. In the 14th century the church and parish came to be called by the name of Eastwood, which is obviously derived from an extensive wood which formerly existed here, and which was only recently wholly extirpated.

was found to measure 20 feet in circumference. It was set up in the pleasure-ground, where it may still be seen scooped out in such a manner as to form a summer-house. On the bank of the river at this place there stands a graceful group of wych-elms, of which an etching and an account were given in Mr. Strutt's '*Sylva Britannica*,' published in 1826,—a splendid work, the portion of which that relates to Scotland was dedicated to Mr. Maxwell, younger of Pollock. The principal tree in this group is of extraordinary health and vigour. It was lately measured for Mr. Loudon's work on Trees, and was found to be 90 feet high, the diameter of the trunk being nearly 4 feet at 5 feet from the ground."—The lands of Darnley in this parish belonged for ages to a branch of the house of Stewart. Sir John Stewart of Darnley was ennobled in the 15th century,—first as Lord Darnley, and afterwards as Earl of Lennox. From this place, then, the family derived its second title, which makes so conspicuous a figure in Scottish history, as having been held by the unfortunate husband of Queen Mary. The name also occurred in the war-cry of the family, which was 'Avant, Darnlé!' In 1571, when Dumbarton castle was surprised and taken by the friends of the murdered prince, under the command of Crawford of Jordanhill, their watch-word was, 'A Darnley, a Darnley!' which, as Mr. Tytler the historian remarks, had been given by Crawford, "evidently from affection for his unfortunate master, the late king." In the beginning of the 18th century, the Duke of Lennox and Richmond sold his estates in Scotland, including Darnley, to the Duke of Montrose. About the year 1757, Darnley was purchased by Sir John Maxwell of Nether-Pollock, in which family it has since continued. It is singular that two ministers of this parish,—namely, Matthew Crawford, who died in 1700, and Robert Wodrow, who died in 1734, have written Histories of the Church of Scotland. Wodrow's is universally known;—Crawford's remains in manuscript. Besides his worth as a minister, Wodrow was a man of extraordinary industry; and to him we are indebted, in addition to his great work, for much valuable information bearing on Scottish history and biography. He was among the first who attended to natural history in this country. George Crawford, in his '*History of Renfrewshire*,' says,—"South of Nether-Pollock, stand the house and lands of Auldhouse, situate upon a rivulet of the same denomination, where there are found a great many fossil shells, collected by the Rev. Mr. Robert Wodrow, minister of the gospel at Eastwood, (my very worthy friend,) a gentleman well seen in the curious natural products of the country."—As having been connected with this parish, we may also mention Stevenson MacGill, D. D., professor of divinity in the university of Glasgow, who died in 1840. He was clerical incumbent here from 1791 to 1797.—Population of the parish, including Pollockshaws and Thornliebank, in 1801, 3,375; in 1831, 6,854. Houses, in 1831, 571. Assessed property, in 1815, £10,076.—This parish is in the presbytery of Paisley, and synod of Glasgow and Ayr. Patron, Sir John Maxwell, Bart. The parish-church was built in 1781; sittings 750. In the front wall of the manse, which was rebuilt about the same time, there is a stone with this inscription: 'Ecclesiam Dei construendam me Thomas Jackeus curavit, 1577.' Apparently this stone had originally belonged to the church. Stipend £267 18s. 4d.; glebe £13 0s. 4d. Unappropriated teinds £78 18s. 5d.—A church of the Associate synod was established at Pollockshaws in 1800; sittings 638; minister's stipend £120, with a manse. The Secession has also a preaching station at Thornliebank. The

Original Seceders also have a church at Pollockshaws, built in 1764; sittings 770; stipend £125, with a manse and garden.—There are about 700 Catholics in the parish, who, when they attend public worship, go to Glasgow.—Schoolmaster's salary £34, with £36 school-fees, and £10 of other emoluments.

EBUDÆ. See HEBRIDES.

ECCLES,* a parish in the district of Merse, on the southern verge of Berwickshire. It is bounded on the north by Fogo; on the east by Swinton and Coldstream; on the south by the Tweed, which divides it from England and Roxburghshire; on the south-west by Roxburghshire and Hume; and on the west by Hume and Greenlaw. It has a somewhat pentagonal form, but with a ragged, and, in three places, an indented outline. From an angle above East Printonian on the north, to a bend in the Tweed opposite Loughton house on the south, it measures very nearly 6 miles; and from the extremity of a lochlet on the eastern boundary to an angle beyond Kennetsideheads on the west, it measures 5½ miles; yet in superficial area it does not contain more than 17½ square miles. The surface, excepting some unimportant ridges which are just sufficient to relieve the scene from monotony, is a continued plain; and, over both rising-ground and level, is all so richly cultivated, fenced, and sheltered with wood, that scarcely an acre is waste or unattractive. The prevailing soil is clay mixed with sand, very fertile, and periodically laden with luxuriant crops. Towards the south the soil inclines to gravel; and, on several farms, it is a very rich loam. Agricultural improvement was early introduced to the parish and vigorously prosecuted; and, aided by the best natural and local appliances, has earned an abundant compensation. No parish in Scotland, probably, is more distinguished for exuberant crops of wheat, barley, oats, and other produce. So far back as half-a-century ago the farmers had become opulent, and almost luxurious, living in a style very different from that of their fathers. The Tweed, over a distance of 3 miles, rolls along the boundary; and, though not wearing here any of its dresses of romance and magnificence, it has not ceased to be pleasing and beautiful. The Leet for 2 miles forms the boundary-line on the east, and is joined in its progress by a brook of 8 miles course, which comes down upon Eccles from the west, forms for a while its boundary with Greenlaw, and then runs across its whole breadth from west to east. The climate, owing to the lowness and flatness of the situation, is not the most salubrious; and lays the population open to epidemics and diseases of debility. At Deadriggs, about a mile north-west of the village of Eccles, is a sandstone cross or monument, 14 feet high, with some curious sculpturings, and apparently of high antiquity, but of unascertained origin or object. Near Leet water is Leetholm peel, the ruin of an ancient stronghold of the border-reavers. Kames, in this parish, was the birth-place of the distinguished judge and philosopher, Henry Home, and gave him the judicial title, by which he is better known, of Lord Kames. Eccles is traversed along the banks of the Tweed by the great road between Carlisle and Berwick by way of Coldstream; is intersected north-eastward near through its middle by the north road from Kelso to Berwick; and, besides

* This name is evidence of a remote affinity which has not till a very recent date been allowed to subsist, but which more than one living writer has shown to be somewhat extensive, between the Celtic languages and those of the Greek and Latin stock. 'Eccles' would, at first sight, be viewed by most persons as certainly derived from the Greek *Ecclesia*, a church; while, with far more likelihood, it was really derived from the British *Eglys*, or the Gaelic *Euglis*, both of which also mean 'church.'

being supplied with various cross-roads, is traversed also from east to west by a line which cuts it into two nearly equal parts. There are in the parish 3 villages,—Eccles and Leetholm on the north road between Kelso and Berwick, and Birgham on the road along the Tweed, but the first is inconsiderable, and the second and third, which contain respectively about 350 and 300 inhabitants, are noticed in separate articles: see **LEETHOLM** and **BIRGHAM**. Population, in 1801, 1,682; in 1831, 1,885. Houses 392. Assessed property, in 1815, £19,557.—Eccles is in the presbytery of Dunse, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £245 19s. 10d.; glebe 20 acres, with a manse. Unappropriated teinds £819 8s. 4d. Schoolmaster's salary £34, with £18 school-fees. There are 2 non-parochial schools in the parish, one at Leetholm and the other at Birgham. The parish-church, situated at the village of Eccles, has a neat spire and pleasing appearance. Sittings 1,000. At the village of Leetholm is a place of worship belonging to the Relief. The church of Eccles was dedicated originally to St. Cuthbert, and afterwards to St. Andrew; and it was annexed, in 1156, by the Earl of Dunbar, to a convent which he founded in the parish, of Cistercian nuns. There were anciently 3 chapels,—one at Birgham, one at Leetholm, and one at the hamlet of Mersington; and they also were annexed to the convent, and, along with the parish-church, continued to be connected with it till the Reformation. The nunnery stood in the neighbourhood of the mansion of Eccles, and appears to have occupied an area of six acres. The only remains of it are part of a wall and 2 vaulted cells. The convent, like other religious houses on the border, did homage to Edward III., after his capture of Berwick. In 1523 it gave a few hours lodging to the Duke of Albany, when retreating from Wark castle. In 1545 it was destroyed in the course of the devastating excursion of the Earl of Hertford; and in 1569 it was formally, as to its property, erected by Queen Mary into a temporal lordship for George Hume, who became Earl of Dunbar.

ECCLESCRAIG. See **ST. CYRUS**.

ECLESFECHAN, a prosperous village in the parish of Hoddam, Annandale, Dumfries-shire. It stands 16 miles east of Dumfries, on the great mail-road from London to Glasgow. A general monthly market is held here; and also a weekly market, during winter, for the sale of pork. The chief support of the village is the manufacture of gingham. There are carriers once a fortnight to Edinburgh, and periodically or occasionally to Dumfries, Carlisle, Annan, and other towns. Here are a meeting-house of the United Secession, 3 schools, a public reading-room, and 4 inns.

ECCLESIAMAGIRDLE. See **DRON**.

ECLESIMACHAN,* a parish consisting of two detached and nearly equal parts, both in Linlithgowshire, the one near the centre of the county, and the other somewhat to the north-east. The south-western part is bounded on the north by Linlithgow; on the east by Uphall; on the south by Uphall and Livingston; and on the south-west and west by Bathgate. It is of an oblong figure; and in its greatest length measures $2\frac{3}{4}$ miles, and in its greatest breadth $1\frac{1}{2}$. The north-eastern part lying at the nearest point a mile apart from the other, is bounded on the north by Abercorn and the Auld-cathie portion of Dalmenie; on the east by Kirkliston; on the south by Uphall; and on the west by Linlithgow. It is of irregular outline, and measures about $1\frac{1}{2}$ mile in length, and, over half that length,

$1\frac{1}{2}$ in breadth, but over the other half only $\frac{3}{4}$. Except the south-western section of the south-western part, where the low hills of Bathgate begin to rise, the whole parish is a flat corn country, producing in abundance all sorts of grain raised in West Lothian. Coal seems to stretch athwart all its extent. Excellent freestone also abounds. Near the manse is a mineral spring, called the Bullion-well, having the same properties as the mineral springs of Moffat. The north-eastern division is intersected a small way by the mail-road from Edinburgh to Falkirk; and all parts of the parish are advantageously situated as to means of communication. Population, in 1801, 303; in 1831, 299. Houses 53. Assessed property, in 1815, £3,051.—Ecclesmachan, formerly a rectory, is in the presbytery of Linlithgow, and synod of Lothian and Tweeddale. Patron, the Earl of Hopeton. Stipend £256 11s. 8d; glebe £15. Unappropriated teinds £140 11s. 1d. Schoolmaster's salary £34 4s. 4½d., with £21 5s. 3d. school-fees.

ECHT, a parish in the Kincardine O'Neil district of Aberdeenshire, bounded on the north by the parishes of Cluny and Skene; on the east by Skene and Peterculter; on the south by Drumoak parish and part of Kincardineshire; and on the west by the parish of Midmar. Its form is nearly square, measuring $4\frac{1}{2}$ miles from east to west and from north to south, and containing about 11,000 acres. Houses 199. Assessed property, in 1815, £2,170. Population, in 1801, 972-932; in 1831, 1,030. Though this is a hilly district, few of the hills are of great height, and many of them are under tillage to the very summit. The soil is partly clay and partly light sand, and in general it is highly improved. The loch of Skene is in the north-eastern boundary of the parish, which is encircled on the north, east, and south with burns which unite and fall into the Dee opposite Maryculter church. The How of Echt is a valley in the centre of the parish, where the air is very mild and salubrious. Housedale is an elegant seat surrounded with extensive and thriving plantations. On the top of the Barmekin, one of the highest hills, is an ancient circular fortification concerning which tradition is silent. Here are also several cairns and druidical edifices.—This parish is in the synod of Aberdeen, and presbytery of Kincardine O'Neil. Patron, the Earl of Fife. Stipend £182 16s. 8d.; glebe £10.—Schoolmaster's salary £29, with £22 15s. 10½d. fees and other emoluments. There are 2 private schools in the parish.

ECK (LOCH), a fresh water lake in Argyleshire, about 6 miles in length, and scarcely half-a-mile broad, yet from 60 to 70 fathoms in depth. It lies in the centre of Cowal, where that peninsula is narrowed by the approach of the upper parts of Loch-Long and Loch-Fyne to each other. The principal supply of water it receives is from the CCR: which see. From its southern or lower extremity flows the Eachnag, which, after a short course of about 2 miles, falls into the Holy-Loch, near Kilmun. To the scenery around Loch-Eck the epithet of beautiful may, with much propriety, be applied. The mountains are not so lofty as in some other districts of the country; but they are all finely formed, and present a graceful and varied outline. Many of them are green to the top, and slope gently down towards the lake, while others are more precipitous and rocky; but throughout the whole their aspect is singularly pleasant and interesting. There are no extensive woods near this lake; but its shores, particularly on the east side, are delightfully fringed with trees and copse. The road from Ardintuany to Strachur is carried for some miles along this side of the lake, and presents to the traveller a most agreeable succession of landscapes. The scenery of

* The name is derived from the circumstance that the church was anciently dedicated to St. Machan.

Loch-Eck, however, is now mostly seen from the water, as a small iron steam-boat has plied upon it for some years. The sail is pleasant throughout; and many strangers prefer this route—which is also much shorter than that by the Kyles of Bute—in going to Inverary.*—Near the head of Loch-Eck is a little round hill called *Tom-a-Chorachasich*, or ‘the hill of Chorachasich.’ The tradition with regard to this mount is, that a prince of Norway, or Denmark, having been defeated by the natives, was pursued, overtaken, and killed at this place, where his grave is pointed out. He is said, of course, to have been of gigantic stature, and is still called in Gaelic, *An Corrachasach mhor, mac Rìgh Lochlan*, ‘the great Corrachasach, son to the King of Denmark.’ Another tradition says that a battle was fought with the Norwegians, in a field near the head of Glen-Finnart, and within a short distance of Loch-Eck, where the Norwegians were defeated with great slaughter. The field is still called ‘the Field of Shells,’ from the number of drinking-shells belonging to the slaughtered Norwegians said to have been found on it after the battle. This tradition, in all probability, alludes to an incursion made up Glen-Finnart by some Norwegians, from that part of Haco’s fleet which sailed up Loch-Long at the time he invaded Scotland in 1262; an invasion that terminated with the battle of Largs.

ECKFORD,† a parish in the vale of the Teviot, Roxburghshire. It is of nearly triangular form, having its angles to the north, south and west; and is bounded on the east by Sprouston, Linton, Morebattle, and Hownam; on the south-west by Jedburgh and Crailing; and on the north-west by Roxburgh and Kelso. From its southern to its northern angle it measures $6\frac{1}{4}$ miles, and from its western angle to Hatt $4\frac{1}{2}$. A small part of it lies on the west of the Teviot; the main body is intersected westward, and divided into nearly equal parts, by the Kail; and a rill, which rises in Sprouston parish, forms, till flowing into the Kail, its eastern boundary-line. The parish has throughout an undulating surface, and rises gradually toward the south. Its heights are, in general, only knolls; but, in the instances of Woodenhill in the south, and Cavertonhill in the centre, are noticeable eminences. Cavertonhill commands a far and minute view of the picturesque vale of the Teviot, and the interesting vale of the Teviot with the fine, though sombre, background of the Border range of mountains. Within the parish itself the Kail ploughs its impetuous way between bold, romantic, and well-wooded banks. Plantation is so abundant as to afford the district ample shelter, and add abundantly to its decoration. The soil, on the low grounds in the west, is a light loam, and on the higher grounds toward the south is clayey; but, in different parts of the parish, and even on the same farm, is various, though, in general, richly productive. The parish, situated as it is within a few miles of the Border, was laid waste, in former times, by many feuds and forays; and it had several towers or strongholds, particularly those of Eckford, Ormiston, Woodenhill, the Moss, and Cessford. The last, even from the appearance of its ruins, may be con-

jectured to have been a place of considerable importance; and, in a letter to Henry VIII., it was represented by the Earl of Surrey, after he had vainly attempted to carry it by storm, and had obtained possession of it by capitulation, as being the strongest fastness in Scotland except Fast castle and Dunbar castle. Cessford castle was the original patrimonial property of the dukes of Roxburgh. Here, according to Wodrow, Henry Hall of Haughhead and other Covenanters were incarcerated in 1666: see CESSFORD. On the farm of Hospital-land a tumulus was opened, and there were found two earthen pots containing fragments and dust of human bones. The parish is traversed a short way, from north to south, by the great road from Berwick to Carlisle; and, in the same or other directions, by 7 subsidiary or cross-roads. There are two stone bridges over the Kail, and a beautiful suspension-bridge, 16 feet broad and 180 long, over the Teviot. There are three villages—Eckford, on the right bank of the Teviot, on the principal intersecting road; Cessford, in the south-east of the parish; and Caverton, in the north-east. Population of the parish, in 1801, 973; in 1831, 1,148. Houses 221. Assessed property, in 1815, £8,648.—Eckford is in the parish of Jedburgh, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £219 14s. 7d., with 42 lbs. of cheese as vicarage teinds; glebe £12 5s. Unappropriated teinds £1,254 0s. 10d. The parish-church was built in 1662. Sittings about 300. Eckford was formerly a vicarage of the monks of Jedburgh. Anciently, at Caverton, stood a chapel, the cemetery of which still exists. In 1554, the parish-church of the period was burnt by the English.—There are 4 schools, 2 of which are parochial, and 1 a boarding-school. The salaries of the parish-schoolmasters amount to £51 6s. 6½d., with £36 school-fees.

EDAY, one of the Orkney isles, between Westray and Stronsay, from the latter of which it is separated by a sound 3 miles across at the ferry. It is about 6½ miles long, and 2½ broad. It consists chiefly of hills of a moderate height, affording excellent pasture. Near the middle it is indented by the sea on both sides, so as to leave only a narrow isthmus connecting the two ends. It possesses two good harbours or roadsteads, each sheltered by a small islet, where vessels of any burden may ride in safety. To the north-east, and at a short distance, lies a large holm named the Calf, which is distinguished for its fine turf and sheep-pasture; and between this and the island of Eday is an arm of the sea that opens both to the north and south, forming the noble harbour of Calf sound. Another harbour, but not of equal excellence, lies towards the west, called Fiers-Ness. In both of these ships may find very safe anchorage, especially in Calf sound.—Eday belonged in the 17th century to Lord Kinclaven, who built a house here, and erected salt-pans which were worked with equal spirit and success during the lifetime of their patron. This nobleman—who was brother of Patrick Stewart, Earl of Orkney—had been by Charles I. created Earl of Carrick, which name he conferred on a village near the harbour of Calf sound, and which was through his influence erected into a burgh-of-barony; but, as he died without lawful issue, the title became extinct, the house crumbled down, and the village sunk into obscurity. In 1725 the pirate Gow, trusting to the defenceless state of the country, entered this harbour; but one of the proprietors, then residing in the house of Carrick, supported by his equally intrepid neighbours, seized the pirate, his crew, and his ship, and thus promptly freed the world of one who had been for a long time a pest to society.—The Read-head, which forms one of the sides of the

* A steam-boat carries the tourist from Glasgow or Greenock to Kilmun; from thence, by an excellent road, they walk, or take a coach provided for the purpose, to Loch-Eck, where the steam-boat on that lake is waiting for them; from the head of the lake, where they leave the second steam-boat, a coach conveys them to the village of Strachur, on the banks of Loch-Fyne, where a third steam-boat is ready to carry them across that loch to Inverary. In this route the visitor is not more delighted with the variety of scenery he passes, than pleased with the continued change of conveyance.

† The name is derived from a passage of the river Teviot, called the Oakford. The *æc*, ‘querous,’ is still pronounced *aik* or *ec*, in the names of many places where the oak formerly flourished.

harbour, contains an excellent freestone quarry, which, it has been supposed, notwithstanding the distance, furnished stones for the cathedral of St. Magnus in Kirkwall.—Here is a Standing stone, of about 16 feet in height, called the Great stone of Seter, similar to those which are observed in the other islands: there are also the remains of several Picts' houses; and a number of tumuli.—The district of Eday comprehends the isle of Faray, with about 62 families, the holm of Faray, Little Green Holm, Muckle Green Holm, Red Holm, Rusk Holm, and the Calf of Eday. Population, in 1801, 718; in 1831, 961.—This island is in the parish of STONSAV and EDAY: see that article. The church was built in 1815; sittings 300. It is now supplied by a missionary on the Royal bounty. Previous to the appointment of the missionary, in 1834, the parish-minister preached three successive Sundays in Stronsay, and the fourth in Eday. Salary of missionary £50, with a manse.—In 1831 a United Secession chapel was erected here; sittings 308.

EDDERACHYLIS,* or EDDRACHILLIS, a parish in the county of Sutherland, extending 16 miles in length, and about 10 in breadth. It is bounded on the west by the Minch; on the north by Durness; on the east by Durness, Tongue, Fair, and Lairg; and on the south by Assynt. It is intersected—as noticed in the note below—by several kyles, or arms of the sea, which afford good harbours for small vessels: see articles LAXFORD and INCHARD. The face of the country is very mountainous and rocky, and the more inland part—which constituted part of Lord Reay's deer forest—presents a vast group of rugged mountains, their summits enveloped in clouds, and divided from one another by deep and narrow glens, whose declivities are so rugged and steep as to be dangerous to travellers unfurnished with guides. There are a number of lakes in the parish, of which Loch Moir and Loch Stack are the chief; and a few small rivers. Several islands, on the coast, afford pasture to considerable numbers of sheep, but that of Handa only is inhabited: see HANDA. Population, in 1801, 1,253; in 1831, 1,965. Houses 276. Assessed property, in 1815, £1,489. Rental, in 1796, £230.—This parish is in the presbytery of Tongue, and synod of Sutherland and Caithness. Patron, the Crown. Stipend £158 6s. 8d.; glebe £20. Sittings in church 275.—The church of KINLOCH-BERVIE [which see] is distant about 6 miles from Edderachylis church.—Schoolmaster's salary

£34 5s. There is a private Gaelic school; and a catechist for the parish.

“Who the earliest inhabitants of Edderachylis have been,” says the writer of the Old Statistical Account of this parish, “is not now easily discoverable. After the most diligent inquiry among the oldest and most intelligent people, all that can be learned is, that two or three centuries ago this place was but thinly inhabited; and, that the inhabitants held their possessions by no legal tenure, paid no rent, and acknowledged no landlord or superior. The first who are said to have held it in property were M'Leods, a branch of the Lewis family, or Siol Torquil; but prior to their establishment as proprietors, tradition reports that in the time of the Norwegian kingdom of the Western isles, these islanders made frequent descents upon the coast, and sometimes not without bloodshed, while they attempted plundering the few inhabitants of their cattle, and carrying them off in their boats. The last of the M'Leod family, who died the acknowledged proprietor of Edderachylis, and seems not to have been of the family of Assynt, was called Mache a Leister; probably on account of the first or principal man of the tribe being remarkable for skill in making arrows, for *Mache a Leister*, is, literally, ‘the Son of the arrowmaker.’ He having no children by his wife, brought over from Assynt a nephew of his wife called James, the son of Roderick, to live in family with him, and succeed him in possession of the estate at his death; which accordingly happened. But he, being of a turbulent and factious disposition, had quarrels with several of his neighbours, particularly the Morisons of Durness and Ashir, some of whom he put to death. The laird of Farr also, Sir Hugh M'Kay, having occasion to remit a sum of money to Edinburgh, the bearer of it next day returned to him, after being robbed only one day's journey from his house, by a party of armed men having their faces disguised with black paint, whom every one supposed to have been sent upon that enterprise by James M'Leod of Edderachylis. As the Morisons of themselves were not able to bring James to task for the injuries done themselves, they contrived a plan for it, by bringing the M'Kays to their assistance. The principal man of the name of Morison at that time in Ashir, had in his house and family, a bastard son of the laird of Farr's, Donald M'Kay: him he proposed both to the M'Kays and to his own friends, to be laird of Edderachylis, if by their joint efforts James M'Leod was made away with. All agreeing to this proposal, the plan for effecting it was to engage a cousin of James M'Leod's, one Donald M'Leod, to take away his life. This business he was reckoned the likeliest and fittest to perform, being a notorious ruffian, and, in order to hinder James's friends from prosecuting revenge afterwards when the deed should be perpetrated by one of themselves. The reward promised Donald induced him readily to undertake it, which was, that he should have the half of Edderachylis for himself, and his offspring; and that the mother of this Donald M'Kay, the bastard, should become his wife. Hereupon, a party of the Morisons from Ashir, headed by Donald M'Kay the bastard, and Donald M'Leod—who among other qualifications, was incomparably skilled in handling the long bow—marched in a dark morning for Edderachylis, though not directly towards Scoury where James M'Leod lived, but to some other place nearer them, where James's best friends, and ablest supporters dwelt, in order to despatch them first; which having done, and three or four men, whom they surprised in their beds in their several dwellings, cruelly slain, they proceeded to Scoury; where, after slaying two or three more of the M'Leods, they

* The name of this parish signifies, ‘Between two Kyles or Arms of the Sea;’ because of its lying between Caolis-Cuin, or Kyle-Score, which divides it on the south from Assynt, and Caolis-Luissard, which separates Edderachylis Proper, on the north, from the district of Ashir. Caolis-Cuin signifies ‘The Narrow kyle;’ and is so called because of a narrow part about the middle of it, near Island Rannoch, where there is a ferry which is not above 60 yards broad, though it widens greatly above, and branches out into two considerable kyles. It is also broad below this place, and encloses a green island, called Stirk's island, near which is good anchoring ground for shipping. This kyle runs up into the country 5 or 6 miles. Caolis-Luissard, —or, as it is commonly pronounced, Laxford,—is a name compounded of the two Celtic words, *Lua* and *Ard*, epithets given to it, and to the river which runs into the head of it from Loch Stack, from the rapid and high course of that stream. But, though these two kyles comprehend the country called Edderachylis Proper, the parish extends a great way farther north, and includes also the davoch or district of Ashir, which is a territory of itself, and was erected into a *quoad sacra* parish called Kinloch-Bervie, in 1820. This district also is intersected by a considerable kyle called Caolis-Inchard, which separates that very rugged piece of ground called *Kerru Garbh* or ‘the Rugged quarter,’ from the northern parts of Ashir, which are the best portions of it. Inchard is a contraction of the two Celtic words, *Innis* and *Aird*, signifying ‘the High Meadow,’ because of the high and rich pasture-grounds lying on each side of the kyle, and of the river which runs into the head of it, and which both go by the same name. As for the word *Ashir*—which the natives term in English *Alshire*, and sometimes more improperly *Oldshire*—its proper form is *Tir-Fas*. It was of old the *Fair-Hir*, or ‘Waste pasture-ground,’ belonging to the inhabitants of Durness.

found James, upon getting some notice of their approach, had taken shelter in a small house he had sometime before built in the middle of a lake in Scoury. But with arrows having fire bound to them, this house being thatched with straw or reeds was soon made to blaze, when he was obliged to come out; whereupon Donald, his cousin-german, killed him dead with a musket-bullet. And as James had a son of his along with him in this island, Donald did for him also; for after he had swam to the farther side of the lake, and endeavoured to run for his life, he slew him with an arrow from his long bow. James M'Leod, or M'Rory, being in this manner slain, Donald thought himself sure of possessing at least half of Edderachylis, according to agreement, but here he found himself mistaken. The Morisons now told him, he must be content with some other reward, for that Donald M'Kay must have all Edderachylis: whereupon Donald in a rage declared that would not do; and immediately betaking himself to his friends in Assint, in a short time returned with a body of men to take possession. But the Morisons, aware of his motions, prepared to meet and fight him upon his first entering the country. Both parties were ready for an engagement in a place called Maly, when Sir Hugh M'Kay of Far presented himself to them, upon the top of a hill hard by, with 300 men, and finding how matters stood, immediately called both before him to a conference in order to an accommodation, which none of them durst refuse. At this interview Sir Hugh proposed to Donald M'Leod, that he should resign his pretensions to Edderachylis in favour of his son Donald; and that he himself, in consideration of his doing so, would grant him other land near himself, called the davoch of Hope, as also Donald M'Kay's mother to be his wife; which proposal he at once agreeing to, the whole difference ended and peace and harmony took place. This promise Sir Hugh actually fulfilled, giving Donald the davoch of Hope, where he lived to an extreme old age, with a family of six or seven sons, continuing the same ruffian to the last. He was buried in the kirk of Durness, where, upon the south wall on the inside of the building, there is a monument of his with the initials of his name, and his arms cut out in the stone, and the year 1619. What became of the sons cannot be discovered, but the lands of Hope are in the possession of the Reay family, as a part of their estate. In this manner came Edderachylis into the hands of the M'Kays, or that branch of them who call themselves the family of Scoury. But of them there were only three proprietors before it became a part of the estate of Reay; the first of these was Donald already mentioned; the second his son Hugh; and the third his son Hugh, who was the famous Gen. M'Kay, commander-in-chief of the forces in Scotland under William III. He was born at Scoury, in this parish, and as George Lord Reay married his daughter, he gave him Edderachylis as her tocher. Next as to Ashir or Fashir, the northern part of this parish, which—as before observed—was the waste or uninhabited parts of Durness; it, as well as Durness, as far back as our information goes, was churchlands; belonging of old to the bishopric of Caithness; and they were disposed of by one of the Popish bishops of that see to a Lewis man, one Ay Morison, son of Norman, who coming by sea for a cargo of meal to Thurso, near the Episcopal seat, happened to fall in love with a sister of the bishop's, and married her, and as her tocher received all Durness and Ashir,—a good and extensive Highland estate. What was the name of this country, prior to this event, cannot now be ascertained by any traditional account; but Morison at this time gave it

its present name of Durness, from the place of his nativity, so that it cannot be considered as local or descriptive; but upon being established in his newly acquired estate, he brought over with him from Lewis a colony of no less than sixty families, mostly of his own name, to whom he gave lands upon his own property. Hence it is that the name of Morison is so prevalent in these parts; for though the property be fallen into other hands, the stock of the inhabitants remains. Some generations after this, it happened that the descendant lineal of this Ay Morison died childless, and left a widow, a Sutherland woman, daughter of one Donald Bain Matheson, then proprietor of Sheenness. This woman, finding herself ill-used by her late husband's relations, eloped in the night, carried with her the rights by which the Morisons held Durness, went to Dun-robin, the Earl of Sutherland's seat, and delivered these papers into his hands. Possessed of these rights only, the Earl considered himself as entitled to claim Durness for himself, and consequently had great bickering with the Morisons to bring them to pay rent to him; but they continuing obstinate and refractory, and being encouraged in an underhand manner by the laird of Far and his agents, the Earl at length became tired of contending with them, and agreed with the laird of Far, ancestor of Lord Reay, to give Durness to him for a feu-duty of 60 marks in the year; and in this manner came the Reay family to be possessed of this estate, but the feu-duty, though still continued, is now reduced to a trifle."

EDDERTOWN, or **EDERDOWN**, a parish in the eastern district of the county of Ross; about 10 miles in length, and 7 in breadth; washed on the north by the frith of Tain. The soil is in general rich and good, but the high hills in the vicinity render the climate cold and the harvests late. There are no natural woods, but several hundred acres have been planted with fir. There are the remains of several ancient encampments in this district. A number of rude stones and cairns in the plain of Carriblair,* are said to point out the spot where a prince of Denmark and his followers lie interred. Population, in 1801, 899; in 1831, 1,023. Assessed property, in 1815, £113. Houses, in 1831, 216.—This parish is in the presbytery of Tain, and synod of Ross. Patron, MacKenzie of Cromarty. Stipend £203 14s. 6d.—Schoolmaster's salary £27 16s.

EDDLESTONE—spelt variously, Eddleston, Eddlestoun, Edleston, and Edlestown—a parish in the north of Peebles-shire; bounded on the north and north-east by Edinburghshire; on the east and south-east by Innerleithen and Peebles; on the south-west by Lyne; and on the west by Newlands. It is of an oblong form, stretching from north to south; but has a considerable projection on the south-west. Its extreme measurement from the confluence of Harehope burn and Meldon burn on the south, to Fernyhole on the north, is 10 miles; and from the confluence of two brooks at the base of Courhope hill on the west, to Burnhead on the east, is 5½ miles. Eddlestone water intersects it from north to south, and divides it into nearly equal parts. This stream rises in the extreme north of the parish, pursues a course due south, receives on its way 8 or 10 tributary rills from the adjacent heights; and after leaving the parish flows direct toward the core of Peebles, and there, at the burgh, the capital of the county, falls into the Tweed. At Cowey's linn, this stream has a fall of 35 feet.

* "Ossian mentions the battle of Carros in one of the attached pieces annexed to Fingal, and where he himself commanded, and worsted the Danes. Perhaps this may have been the scene of action, Carriblair, in Gaelic, signifying 'the Battle of Carros.'"—*Old Statistical Account.*

Its entire course, which is remarkably straight, does not exceed between 11 and 12 miles. In the eastern division of the parish, about a mile from the boundary, is Loch Eddlestone, nearly of a circular form, 2 miles in circumference, and abounding in pike, eels, and perch. Issuing from this lake is the South Esk, which pursues a course directly the reverse of that of Eddlestone water, flowing 3 miles due northward through the parish, and leaving it within about a mile of the Eddlestone's primary sources. The entire surface of the parish may be described as an agglomeration of smooth hills, verdant to their summits, tame in their general appearance, but at intervals surprising the tourist by sudden disclosures of picturesque varieties, and romantic cleughs and dells. Along the eastern boundary, the summits are towering and Alpine, one of them rising to the height of 2,100 feet above the level of the sea: see DUNDOICH. The vales or basins of the streams are in general little other than gigantic furrows in the wide field of hills. On the Cringletie property at the south of the parish, and especially on the demesne and lands of Portmore, at its centre, are considerable plantations. The climate is dry and salubrious. The parish is traversed from south to north, along the banks of the Eddlestone, by the united turnpikes from Peebles and Annandale to Edinburgh; and is otherwise well-provided with means of communication. The village or hamlet of Eddlestone stands on the principal road, toward the south of the parish, 4 miles from Peebles, and 17 from Edinburgh. An annual fair is held here on the 25th of September. Population of the parish, in 1801, 677; in 1831, 836. Houses 144. Assessed property, in 1815, £5,645.—Eddlestone is in the presbytery of Peebles, and synod of Lothian and Tweeddale. Patron, Lord Elibank. Stipend £249 5s. 11d.; glebe £20. Unappropriated tithes £98 16s. 8d. The parish-church was built in 1829. Sittings 420. Schoolmaster's salary £34 4s. 4½d., with about £52 other emoluments.

EDEN (THE), a river in Fifeshire, which takes its rise on the borders of Perthshire, in the parish of Arrgask, about 4 miles west of Strathmiglo, and, taking a course due east, falls into the German ocean at the Guard-bridge, in the bay of St. Andrews, nearly 18 miles from its source. It receives many tributary streams from the Lomond hills, and passes by the county-town of Cupar. It has a very level course from Cupar to the sea, and might be made navigable to this point at no great expense: see Note to article CUPAR-FIFE.

EDEN (THE), a small river in the district of Merse. It rises in the parish of Gordon, near Heckspeth, and flows first eastward, and then southward, dividing the parish of Earlston from the parishes of Hume and Nenthorn. It then suddenly debouches to the east, and flows through the parish of Nenthorn, and over a neck of Roxburghshire, intersecting in its course the parish of Ednam, and falls into the Tweed 3½ miles below Kelso. Its whole course is about 17 or 18 miles. The lower part of its course is very beautiful, being through rich and finely-wooded pastoral scenery.

EDENDON (THE), a rivulet which, rising in the western part of the forest of Athol, among the heights immediately adjoining Inverness-shire, after a course of a few miles to the south, falls into the Garry, a little above the inn of Dalnacardoch.

EDENHAM. See EDNAM.

EDENKEILLIE, or EDINKILLIE, a parish in the centre of Morayshire, bounded on the north by Forres; on the east by Rafford and Dollar; on the south by Knockando; and on the west by Ardcloch. Its greatest length is about 13 miles, and its greatest breadth about 4. It contains about 65 square miles. Houses 285. The only place in the parish which can be called a village is Connicavel, consisting of 26 dwelling-houses. Assessed property, in 1815, £699. Population, in 1801, 1,223-1,215; in 1831, 1,300. The population is chiefly composed of agricultural labourers, handicrafts-men, &c. This parish lies on the right bank of the Findhorn, and is watered by the Divie, and other streams tributary to the Findhorn, on which there is a considerable salmon fishing. It is a pastoral and hilly district, but not mountainous; the highest hill, the Knock of Moray, being of small elevation. On the banks of the Findhorn and the Divie there are some of the most romantic rural scenes which wood, water, rocks, and variety of ground can produce. The natural woods of the plantations are very extensive. The ancient forest of Darnaway covers about 900 acres here, with natural wood of almost every kind indigenous to Scotland. Farther up the river—the banks of which are in general covered with trees—is the wood of Dundaff, of considerable extent. These forests belong to the Earl of Moray. There is also a good deal of natural wood on the other estates in the parish. But the plantations are still more extensive than the natural woods.* In 1829, some of the woods and plantations, with the low grounds, suffered severely from the floods.—Southwards, up the Dorbach, one of the branches of the Findhorn, is Lochindorb, in the middle of which is an island, with the ruins of Lochindorb castle, formerly a place of great strength. It was blockaded by Sir Andrew Moray, the regent, during King David Bruce's captivity. Edward III. honoured it in the following year by raising the siege. It was afterwards used as a state-prison.—The Downe hill of Relugas is a conical hill, round a considerable part of which runs the rapid Divie in a deep rocky channel. On the summit are the remains of a strong fortress of antiquity far beyond the period of authentic history. Higher up the river Divie, stands the castle of DUNPHAIL, [which see] upon a rock of singular appearance, surrounded by a deep gully or narrow glen, formed, probably, by the river, which seems to have run, at a remote period, in this channel. Trees have been planted on the summit of the two latter hills or rocks. The very singular bridge of Rannich here, is of great antiquity: tradition derives its name from the illustrious Randolph, Earl of Moray and regent of Scotland.—This parish is in the synod of Moray and presbytery of Forres. Patron, the Earl of Moray. Stipend £174 8s. 2d.; glebe £10. Church built in 1741; and last altered in 1813; sittings 500.—Schoolmaster's salary £27 16s., with £10 fees, and other emoluments. There are several private schools in the parish.

EDERDOUN. See EDDERTOUN.

EDGERSTON. See JEDBURGH.

EDINAMPLE. See LOCH EARN.

* The vacancies of Darnaway forest were first planted in 1767; and it is stated in the Old Statistical Account, that, from that year to 1791, not less than 10,501,000 trees, principally Scotch firs, including also oak, ash, elm, sycamore, &c., were planted by the late Earl of Moray, for the most part, in this parish.

EDINBURGH,

The metropolis of Scotland, is romantically situated on a congeries of hills, in the north of Mid-Lothian, within 2 miles of the frith of Forth. Its observatory stands in $55^{\circ} 57' 20''$, North latitude; and in $3^{\circ} 10' 30''$, West longitude from Greenwich. The city is 392 miles distant from London; 57 from Berwick-upon-Tweed; 17 from Haddington; 47 from Coldstream; 42 from Kelso; 36 from Melrose; 48 from Jedburgh; 22 from Peebles; $92\frac{1}{2}$ from Carlisle; 50 from Hawick; $153\frac{1}{2}$ from Portpatrick; 71 from Dumfries; $42\frac{1}{2}$ from Glasgow, by way of Bathgate; 31 from Lanark; $35\frac{1}{2}$ from Stirling; 44 from Perth; 243 from Inverness; 121 from Aberdeen; and 42 from Dundee.—Population, in 1831, 136,054; in 1841, 138,194. The population of the parliamentary burgh, in 1841, was 140,241. The number of inhabited houses within the city and suburbs, in 1841, was 22,860; and within the parliamentary boundaries, 23,175.

General Description.

The hills and swelling grounds which partly form the site of the city, and partly overshadow it, lie within a circumference of about 6 miles; and at their northern termination, about 2 miles from the frith, rise from a base, which slopes gently away, over a gradient of from 50 to 100 feet, to the sea. These hills seem to have been thrown up from a smooth surface by some sudden and stupendous operation which cannot easily be conceived; and must have formed, in their natural state, a grouping of scenery strikingly peculiar, and remarkably picturesque. The highest and most easterly is ARTHUR'S SEAT, [which see,] rising 822 feet above the level of the sea, having a slope to the east, which goes rollingly down over a base of nearly a mile, and presenting to the west a precipitous, nearly perpendicular, and very varied face of rugged rock. The outline of this hill, as seen from the west, or a little to the south of west, undulates so strangely as to bear a close resemblance to the sculptured figure of a lion couchant: the summit of the hill, or head of the gigantic sculpture, rising on the south, and the shaggy mane and reclining body stretching toward the north. From the deep dell at the western base of Arthur's Seat, the ground rises regularly over a base of about 700 yards, till it attains a height of 550 feet above the level of the sea; and then in a semicircle, sweeping round from the south to the north, breaks perpendicularly down, in a picturesque face of naked, rugged greenstone rock; and, after an esplanade several feet in width—on which a promenade of most commanding and gorgeous prospect is carried round—descends in an inclined plane of sandy or earthy surface so rapid as to be traversable only by an adventurous and firm-footed tourist: see SALISBURY CRAGS. These two hills, except in the romantic path or narrow dell which lies between them, and which is as sequestered, and as congenial to the musings of solitude or genius, as the haunt of a poet in a far-away spot of Highland seclusion, possess no surface which could ever, without prodigious labour, be made the site of any suburban extension of the city. Two hundred yards north-west of the northern end of the Salisbury semicircle, rises the Calton-hill, lifting a rounded eminence, 344 feet above the level of the sea, presenting an abrupt and bending face to the north-west, and descending in other directions by rapid though not untraversable declivities: see CALTON-HILL. This hill—as will afterwards be seen—bears aloft one or two of Edinburgh's proudest public structures, and has been compelled

by art to afford place for some rows of her private though palace-looking buildings; yet it is principally remarkable, like the loftier and more untameable hills to the south-east, for the magnificence of the panoramic landscape which a spectator sees from its summit, and for the contributions of boldness and romance which it makes to the grouped scenery of the city. From the hollow along the western base of Salisbury-crag, the ground rises westward by a rapid gradient thickly crowded with streets, till, at the distance of 500 yards, it attains an elevation of about 150 or 180 feet, forming a broad-backed ridge of about 1,400 yards from east to west, which falls first gently and next acclivously down on its northern side; and which, on its southern side, slopes insensibly away, till, at the distance of a mile, it is lost in the plain and soft undulations of the country. Nearly all this extensive rising ground is covered with buildings, and forms the site of the new or modern district of the Old Town. Parallel to it, on the north side, lies a hill—which has been aptly compared to a long wedge lying flat on the ground—which gradually ascends westward from the hollow between Salisbury-crag and Calton-hill, till, at the distance of 1,800 yards, it towers up in the agglomerated rocks of Edinburgh-castle, 445 feet above the level of the sea, and presents to the west a perpendicular, romantic, and far-seen face of naked basaltic rock. The gorge or deep dell along the south side of this ridge, lying between it and the one formerly described, is ploughed by an ancient line of street, once the abode of the elite of the city, but now the putrid haunt of the poor and the squalid, and bearing nearly the same relation to Edinburgh which the district of St. Giles does to the metropolis of the south. The ridge or wedge-like slope itself is the site of the original city,—a street stretching along its centre, sending off numerous lanes and alleys down the brief descents on its southern and northern sides, and resembling a reptile or scorpion monster, having the Castle for its head, the lanes for its lateral members, and Holyrood-house and St. Abbey Cuthberts for its tail. Along the northern base of the ridge, extends a deep hollow—formerly covered with water, but now drained and variously disposed of by art—about 200 yards in average breadth. From this hollow, another eminence, or very gentle and broad-backed ridge, greatly less marked in its features than any other of the eminences, ascends softly northward over a distance of 250 yards; and then gracefully, and in an easy gradient, slopes away into the plain which intervenes between it and the sea. This eminence is of soft and nearly imperceptible declivity at its western end; but on the east it breaks suddenly down, and leaves a gorge between its own base and that of Calton-hill. Along this beautiful flat ridge stands the original New Town; and on its northern, slow descent, as well as on the plains beyond it, both northward and westward, stands the second New Town, or most magnificent and boasted portion of the metropolis of Scotland.

Most travellers who have visited both cities have remarked a resemblance, as to site and general appearance, between Edinburgh and Athens. Stuart, the author of 'The Antiquities of Athens,' was the first who vividly depicted it; and he has been followed by Dr. Clarke, Mr. H. W. Williams, and so many other literary painters well-qualified to form a correct judgment, that the names 'Modern Athens,' and 'the Athens of the North,' have been assigned

to Edinburgh by general consent. Mr. Williams says: "The distant view of Athens from the Ægean sea is extremely like that of Edinburgh from the frith of Forth; though certainly the latter is considerably superior." "There are," he adds, "several points of view on the elevated grounds near Edinburgh, from which the resemblance" between the two cities "is complete. From Tor-Phin, in particular, one of the low heads of the Pentlands, immediately above the village of Colinton, the landscape is exactly that of the vicinity of Athens, as viewed from the bottom of Mount Anchesmus. Close upon the right, Brilessus is represented by the mound of Braid; before us, in the abrupt and dark mass of the castle, rises the Acropolis; the hill Lycabetus, joined to that of the Areopagus, appears in the Calton; in the frith of Forth we behold the Ægean sea; in Inch-Keith, Ægina; and the hills of the Peloponnesus are precisely those of the opposite coast of Fife. Nor is the resemblance less striking in the general characteristics of the scene; for, although we cannot exclaim, 'these are the groves of the Academy, and that the Sacred Way!' yet, as on the Attic shore, we certainly here behold—

A country rich and gay,
Broke into hills with balmy odours crowned,
And ————— joyous vales,
Mountains and streams, —————
And clustering towns, and monuments of fame,
And scenes of glorious deeds, in little bounds!"

It is, indeed, most remarkable and astonishing, that two cities, placed at such a distance from each other, and so different in every political and artificial circumstance, should naturally be so alike. Were the National monument to be erected upon the site of the present barracks in the Castle, an important additional feature of resemblance would be conferred upon the landscape; that being the corresponding position of the Parthenon in the Acropolis." But when he peers into the interior of the two cities, that distinguished artist paints the brilliant metropolis of Scotland in tints far richer than he dares bestow upon the ancient capital of Greece. He says: "The epithets Northern Athens and Modern Athens have been so frequently applied to Edinburgh, that the mind unconsciously yields to the illusion awakened by these terms, and imagines that the resemblance between these cities must extend from the natural localities and the public buildings, to the streets and private edifices. The very reverse of this is the case; for, setting aside her public structures, Athens, even in her best days, could not have coped with the capital of Scotland. The truth is, that the comforts of the Athenians were constantly sacrificed to the public benefit; and the ruins which still remain to attest the unrivalled magnificence of the temples of Athens, afford no criterion by which we may judge of the character of her private dwellings. Athens, as it now exists, independent of its ruins, and deprived of the charm of association, is contemptible,—its houses are mean, and its streets scarcely deserve the name. Still, however, 'when distance lends enchantment to the view,' even the mud-walls of Athens assume features of importance, and the modern city appears almost worthy of the Acropolis which ornaments it. It is when seen under this advantage that the likeness of Edinburgh to Athens is most strikingly apparent."

Edinburgh presents, from almost every point whence it can be viewed, such scenic and architectural groupings as are unrivalled in any existing city in the world. It possesses attractions peculiarly its own, and fixes the gaze and challenges the admiration of a spectator by displays of general excellence, unaided by the sumptuousness of any one object, and undegraded by deteriorations from its

prevailing style of magnificence. A tourist coming within view of the city sees no aerial dome rising from a sea of houses, as in Rome or London; and no forest of turrets shooting up from a huge cathedral, as in Milan or York; but he looks on a singularly varied and uniformly rich display of imposing architecture,—sheltered in the vale,—climbing up the acclivity,—stretching away on the plain,—or surmounting the precipice, and crowning the romantic hill. Even the picturesque confusion of the ancient part of the city combines with the symmetrical proportions of the streets and squares of the modern part, to render the rich architectural carpeting of the congeries of hills peculiarly attractive. Nowhere is the eye offended with the vicinity of meanness to elegance, or with a dingy and common-place field of houses spread around a magnificent edifice, or attached to an elegant and airy street; but neatness, beauty, novelty of grouping, picturesqueness, grandeur, and nearly all the principles which thrill the beholder with mingled wonder and pleasure, seem everywhere to struggle for ascendancy, and, like a harmony of sounds, combine their powers to produce an unique and superb effect. Among many admired views of the city, one from St. Anthony's chapel, another from Calton-hill, and a third from the new buildings on the lands of Coates, excite particular attention. From St. Anthony's chapel a spectator sees at his feet the tufted and verdant memorials of the royal park, and the quadrangular and turreted palace of Holyrood, with the venerable ruins of the royal chapel abutting from one of its angles; he looks over it along the deep hollow on the east of the Old town, with its thickly-figured carpeting of houses, till his view is arrested by the North bridge, with its palace-looking summit of buildings above, stretching off toward the east, and with its lofty arches below, occasioning an air of mystery to hang over the scenery beyond, of which they allow only a narrow view; and he looks up on his right to the double ascent of Calton-hill, overhung on its first precipitous acclivity by the dark monument of the philosopher Hume, and the bold and castellated forms of the county-jail and bridewell,—decorated, on the esplanade at the middle of its ascent, with the fine Grecian structure of the Royal High school, and the beautiful sweep of buildings called Regent-terrace,—and crowned on its rounded acclivitous summit with the towering pillar erected to the memory of Nelson, and the naked, antique-looking colonnade of the National monument; and he surveys, a little to his left, the whole of the elaborated surface of the ancient city, struggling crowdedly upward from the point of the wedge-like hill, stratum above stratum, or ridge above ridge, sending aloft in its progress the picturesque towers of the Canongate and Tron churches, and the high, broad tower of St. Giles, with its architectural crown, and terminating in the bold precipitous eminence and ragged but romantic outline of Edinburgh castle. —The view from the lands of Coates, though eminently beautiful, affords less scope for description. The principal features in this picture are the princely piles of the newest part of the New town on the foreground,—the tower and turrets of the very handsome episcopal chapel of St. John's in the distance,—and the rounded, frowning, but sublime face of the Castle, as it stoops precipitously to the west. From Calton-hill the prospect is so gorgeous, so grand, so replete with every thing in either city or sea or country landscape which can thrill and animate with delight, that he is a daring artist who attempts to depict with either quill or pencil the multitudinous splendours of the scene. We must simply say, in general, that a spectator walking around the higher part of the hill, along a path cut out for his accom-

modation, commands in succession a full survey of most parts of both the Old town and the New, and, in addition, looks away north, east, south, and west, over scenery which, even if no queen-city, crowned and jewelled and opulently arrayed, presided in its centre, would compete, in the power and variety of its charms, with nine landscapes in every ten which poetry has immortalized in song. The noble estuary of the Forth, reflecting from its mirror-surface the image of many a smiling town and village and mansion which sit joyously on its banks, and bearing along on its bosom yawl and ship and steam-vessel, till it glides past the huge rock or high islet of the Bass, and the dark conical hill of North Berwick law, and becomes lost in the horizon,—the undulating and verdant country beyond it, receding in distant loveliness till it is obscured in the shadowy splendour of the Ochil hills and the Grampians,—the fertile fields and varied park and woodland scenery which flaunt gaily along the southern shore of the frith,—and, close at hand, the solitary grandeur of Arthur's Seat, and the wild beauty of Salisbury-crag, with their precipitous descents, their pastoral slopes, and their sequestered hollows,—these are some features, faintly coloured and rudely sketched, of a landscape which combines in a magnificent expanse, the richest elements of the beautiful and the sublime, and which are seen over a foreground of portions of Edinburgh, opulent beyond parallel in the attractions of city-scenery.

Edinburgh, in proportion to its population, covers a larger area than almost any other town of Britain. From the north end of Scotland-street on the north, to Crosscauseway on the south, it measures geographically 2,400 yards; and from Manor-place on the west, to Montgomery-street on the east, 2,600 yards; and these points may indicate the lines of a rectangle, the area of which, with some unimportant exceptions, is all covered with town. But on various parts of this rectangle, especially on the north, on the north-west, and on the south, the city has wings of considerable extent, which, if included in its measurement, would make its extreme length from north to south about 4,000 yards; and its extreme breadth from east to west upwards of 3,000. Considerable space, however, in the very core of the city, is either wholly or principally unoccupied with building. The area of Prince's-street gardens and the Castle rock alone extends 900 yards from east to west, and between 200 and 270 from north to south; and, excepting the barracks in the Castle, and the Royal institution on the Mound, has not a single edifice. The Queen-street gardens also are an open area, and extend 850 yards by 130. But we must attempt—yet without, at present, noticing public buildings or glancing at minute features—to give a general topographical view of the arrangements of the city.

The Old Town.

At Abbey St. Cuthbert's, or a small area in front of Holyrood house, situated in the middle of the hollow between Salisbury-crag and Calton-hill, is the eastern termination and lowest part of the old or original town. Leaving this area at its north-west angle, the Canongate moves away westward, over a distance of 650 yards,—climbing on its middle or highest part the wedge-like ridge or central hill on which the chief part of the city stands,—and sending down over the northern face of the hill, New-street, Leith-wynd, and numerous closes, and over the southern face, St. John-street, Mary's-wynd, and various alleys. Continuous with the Canongate, the High-street climbs the upper part of the hill,—sending down Niddry-street and some lanes to the south,—undergoing an intersection at right angles by a great

line of street which runs south and north through the whole extent of the Old town, and ploughing its way, under the names of Lawn-market and Castle-street, up to an esplanade or open and elevated area before the gate of the castle, at a distance of 900 yards from the commencement of the Canongate. In its progress it sends off Bank-street, and numerous lanes to the north; and Niddry-street, Blair-street, George IV.'s bridge, and the West Bow to the south; and it opens on its southern side, round both ends of St. Giles' cathedral, into Parliament-square. This street, after merging from the lower or Canongate part, till it bends and narrows into the brief termination of Castle-street or Castle-hill, is very spacious; and, over its entire length, it consists of very high houses, interspersed with various public edifices, and wears an antique and remarkably imposing appearance. From the great height of its buildings, the varied yet harmonious forms of their projected gables and battlements, and the long sweep which they make, interrupted by few transverse cuts, and marked at intervals by massive, ornamental architecture of an age long gone by, this street possesses a simple and majestic unity of antique aspect, which is probably unparalleled in any city of Britain. Near its western end, 170 yards before it opens into the esplanade of the Castle, a spacious street-way goes off from its south side, suddenly debouches, and runs on parallel to it at an aerial elevation; and passing along the edge of the Castle rock, spans the yawning hollow below, in an airy and magnificent erection called King's bridge, and sends off Castle terrace, nearly parallel to the western face of the Castle, to open a communication with the south-west angle of the New town, while it bends round its main road south-westward and passes into Bread-street, 800 yards from its commencement near the top of High-street. This remarkable road-way is called the New West approach. It passes over a seeming impracticability of ground, and possesses a peculiarity of position, from the dark cliffs of the Castle overhanging it on one side, and an extent of town stretching away in the plain beneath it on the other, which give it an appearance of romance peculiarly its own. Bread-street, which it transversely enters, is one of a large cluster of streets forming an irregular but fine south-west suburb of the Old town. The principal streets of the suburb are Lothian-road, running north and south, parallel with the western face of the Castle, and forming, with its north end, a right angle with the west end of Prince's-street,—Fountain-bridge, running south-west and north-east, and forming the great thoroughfare to Biggar and Lanark,—and Gilmore-place, running parallel to Fountain-bridge, 300 yards to the south. These three streets are all spacious, and wholly or partially lined with beautiful new buildings; and they are clustered in various directions and by various tendrils of communication with Bread-street, St. Andrew's-place, Castle-barns, Gardner's crescent, Semple-street, Earl Grey-street, Ponton-street, Home-street, Leven-street, Tollcross, High Riggs, Portland-place, Laurieston-street, and other localities which, though singly or severally unimportant, are aggregately an interesting suburb. At the southern termination of Lothian-road, where it forms an angle with Fountain-bridge, is Port-Hopetown, the terminating basin and yard of the Union canal.

We now return to Abbey St. Cuthbert's, or the area before Holyrood house. Leaving this at its south-west angle, a narrow street called the South back of Canongate, runs westward, parallel to Canongate, and, in its progress, looks up St. John-street on its north side, and sends off, on its south side, along the base of Salisbury-crag, the celebrated path

of Dumbie-dykes. The South back of the Canon-gate is 750 yards in length; and it pursues its way along the southern base of the central hill of Edinburgh, and, for some little distance, lies along the gorge between it and the southern hill. Just before it terminates on the west, it looks up on the south into the opening to St. John's hill; and at its termination, is met at right angles by the end of Pleasance, coming in upon it by a long sweep from the south. Cowgate, a continuation of the Back of the Canon-gate, wends along the deepest part of the gorge; and, in its progress, looks up Mary's-wynd, Niddry-street, and Blair-street, coming down upon it with a rapid descent from the north, and various lanes, and the Horse-wynd descending upon it from the south; and, though high in its lines of antique houses, it passes quite underneath the over-spanning central arch of South bridge, and the spacious stride of George IV.'s Bridge. Cowgate is narrow, and not quite straight; and, along with the lanes which run up from it, is the most densely peopled and the poorest district of the metropolis,—altogether squalid in its appearance, and seeming to cower along the deep gorge of its locality in order to escape observation. Seen from George IV.'s Bridge, or the open part of the South bridge, it looks like a dark narrow river of architecture moving sluggishly along a dell, and teeming with animated being, and has, in consequence, an appearance quite in keeping with the romantic character of the Old town, but were it raised out of its ravine hiding-place, and stretched out a long plain or ridgy eminence, it would be an utter blot and defilement on the whole picture of the metropolis. Its length, from the angle of Pleasance, to an angle of Candlemaker's-row which comes down upon it from the south-east at its western end, is about 800 yards. Continuous with Cowgate, but suddenly expanding into three times its width, is the Grass-market. This is a spacious rectangle 230 yards in length, communicating at its south-east angle, through Candlemaker's-row, with the southern part of the Old town, and, at its north-east angle, up the acclivitous and winding and narrow alley of West Bow, with the High-street; and sending off, on its south-side, an alley of communication with Heriot's hospital,—the thoroughfare to that princely edifice usually traversed by its inmates. The Grass-market is darkly overhung on the north by the precipitous side of the esplanade of the Castle, friezed by the New West approach; but, on its south side, it is subtended by a gently inclined plane, the southern hill of the Old town beginning, at the end of Cowgate, to slope toward the west. The west end of the rectangle is closed up by the Corn-market, with openings, however, at both sides; and the east end of the rectangle is deeply associated with the holiest and most affecting reminiscences of Scottish history, as the scene of the last sufferings and the fervid testimony of the dying supplications of many a devout martyr during the sanguinary persecutions of the Stewarts,—of Cargill and Renwick, and multitudes more, “of whom the world was not worthy.” The Grass-market is now the chief rendezvous of carriers and farmers, and persons of various classes connected with the country market; and has, for an ancient street, a remarkably airy and imposing appearance. Leaving it on the south side of the Corn-market, Westport continues the line of street westward over a distance of 330 yards,—narrowed into a width similar to that of Cowgate,—sending off toward the south, the Vennel and Lady Lawson's-wynd,—and meeting at its termination Bread-street, Fountain-bridge, High Riggs, and Laurieston, all stretching in different directions to form the suburb which has been already described. The point or

small area in which these streets and Westport meet, bears a certain degree of resemblance to the Seven Dials of London; but, for the most part, looks down rows of architecture greatly superior in aspect.

Let us now adopt as a starting-point for rapid topographical tours over the remaining parts of the Old town, the south end of Clerk-street, at Newington church. This point is 800 yards due west from the base of Salisbury crags, and 1,200 yards south of the Tron church, or nearest part of High-street. Stretching half-a-mile away south from the point we have selected, is the elegant, and opulent suburb of Newington. Its principal feature is Minto-street, the great thoroughfare to the towns of Roxburghshire, to Peebles, and to places intermediate. This street consists of detached two-story houses, sitting back from the road-way, and surrounded by flower-plots and iron railings; and it has on its western, but especially on its eastern side, well-feathered and beautiful wings of building, disposed in the form of short streets, single rows, or spacious openings. The entire suburb is a little town of no common beauty,—a picture in every part, of cheerful ease and refined taste; and almost quite free from shop or city appliance to indicate participation in the common cares of the every-day world.

At Newington church, Montague-street breaks off from Clerk-street, and runs eastward, or toward Salisbury-crag, 180 yards. The street in which it terminates, and which it meets at right angles, is St. Leonard's-street, and commences a line of communication from the east wing of Newington on the south, to the south back of Canon-gate on the north. Running away northward, St. Leonard's-street sends down to the east a street called St. Leonard's hill, in which is the terminus of the Edinburgh and Dalkeith railway; and, at a distance of 320 yards, opens into a little area, whence emerge the Pleasance right onward, a small street to the east, and Crosscauseway to the west. The Pleasance, a continuation of St. Leonard's-street, is spacious, but of irregular width, somewhat winding, and lined with antiquated architecture; and extends 600 yards till it meets at right angles the South Back of the Canon-gate. In its progress, it sends off to the east Carnegie-street, Brown-street, Salisbury-street, Arthur-street, and St. John's hill, all descending over an average distance of 180 or 190 yards, down a rapidly inclined plane to the King's park, or narrow vale at the base of Salisbury-crag, and consisting of plain but neat and uniform houses, built of hevn but unpolished stone. From the west side of Pleasance, go off Richmond-street, Adam-street, and Drummond-street; all about 220 yards in length, and intersected by two lines of street running parallel with Pleasance. This district, including a continuation southward to Crosscauseway, and consisting of a wing the whole length of Pleasance, is of considerably modern aspect, and exhibits a transition-state between the antique and the modish parts of the city.

Returning again to Newington church, we find Clerk-street a continuation of Minto-street, or the great thoroughfare to the middle districts of the south of Scotland. Clerk-street is spacious and well-built; and, after sending off two modern and uniform streets, Montague and Rankeillour, to St. Leonard's-street, and opening on the west into a small area called Drummond-square, terminates at its intersection by Crosscauseway, 380 yards north of Newington church. Nicolson-street continues the line of Clerk-street, over a distance of 440 yards, till it is met at right angles by Drummond-street from the east, and South College-street from the west. In its progress, it looks down Richmond-street, sends off Hill-place, leading into Hill-square, opens into the

small area of Surgeons' hall on the east, sends off some unimportant communications, and expands into the neatly-built area of Nicolson square on the west. South bridge continues the line of Nicolson-street 390 yards, sweeping past the extensive and sumptuous front of the College on the west,—sending off, on the same side, North College-street, and opposite to it, on the east side, Infirmary-street,—passing over the summit of Cowgate,—and, just before meeting the High-street, opening into the area of Hunter square, on the north-east part of which stands isolatedly the Tron church, forming the angle of South Bridge-street and High-street. North Bridge-street now continues the northerly line, over a distance of 370 yards, till it is finally pent up by the majestic front of the Register office, in the line of Prince's-street. North Bridge-street, over one-third of its length, consists simply of the lofty road-way of North bridge; and over another third, at its northern end, is built only on one side,—yet presents in its single row of edifices, owing to their height and elegance and singular position, one of the most prominent objects in the city. The entire line of street, commencing in Clerk, or rather Minto-street, and terminating in Prince's-street, is wide, regular, well-edified, and of imposing aspect; and from about the middle of Nicolson-street northward, is lined with commodious and elegant shops, vying with one another in brilliancy of display, and surpassed only by a few lines of shops in the New town, and such localities as the Regent-street of London, or the Grafton-street of Dublin.

Returning once more to our late starting-point, we go round the west or rear of Newington church, and speedily find ourselves at the south end of Buccleuch-street, 100 yards west of Clerk-street. Buccleuch-street runs parallel with the latter, till it falls in with Crosscauseway, and has a plain appearance. Branching off from it on the west, and extending 270 yards is Buccleuch-place,—a spacious and retired street, of uniform architecture, but possessing a chilled and forsaken aspect. Fifty or sixty yards north of Buccleuch-place, and communicating with the latter by two openings, expands the fine rectangle of George-square, 220 yards by 150; once the boast of Edinburgh, but now jilted and forgotten for the fascinating squares and octagons and crescents of the New town. Behind it, on the west and south, spreads the fine expanse or public promenade of the Meadows or Hope-park, formerly covered with water, and known as the South Loch. Returning to the north end of Buccleuch-street, we find Chapel-street continuing it, but with a bend to the west of north, and extending only about 120 yards. At the end of that distance, Chapel-street runs up against an acute angle of building which separates it into two continuous lines. The more easterly of these is Potterrow, which goes in a direction a little to the west of north, and is afterwards continued by West College-street and Horse-wynd, till the latter plunges down into the gorge of Cowgate. The second continuous line from Chapel-street is Bristo-street; which runs north-westward, sending off various communications to Potterrow, and is afterwards continued by Candlemaker-row to the head of Grass-market, and by George IV.'s bridge, leading off Candlemaker-row, over the summit of Cowgate, to the Lawn-market or High-street. All the district from Buccleuch-street onward, which we have hitherto noticed, is strictly akin in character to that on the west wing of Pleasance, and consists of unornamented masonry, free alike from the antique forms which surprise a visitor in High-street and Canon-gate, and the regularity and elegance which delight him in the strictly modern parts of the city.

From Bristo-street, about 260 yards north-west of the north end of Chapel-street, Lothian-street goes off in a north-east direction over a distance of 170 yards, till it touches Potterrow; and it is thence continued by the line of South College-street eastward into South Bridge-street. Both these streets are comparatively modern and uniform, and contain some elegant shops. From the west side of Bristo-street, opposite the exit of Lothian-street, Teviot-row leads away due west, past the City Poor-house and Heriot's hospital on the north, and Watson's hospital on the south, to the beautiful suburb of Laurieston. This suburb consists of an elegant short street, Archibald-place, stretching south into the Meadows, and symmetrical rows of building, Wharton-place and Laurieston-place, stretching westward in continuation of Teviot-row, and leading on, at a few yards' distance, to the suburb formerly described as lying on the south-west corner of the city. Behind Laurieston, or on its south, expands the Meadows or Hope-park, adorned at this part with the fine form of the Merchant Maiden hospital.

We have now to notice only one small section more of the Old town; and, in order to trace distinctly its locality, must return to the foot of the Canon-gate, within a few yards of our first starting-point, at the area before Holyrood house. Just after leaving that area, we find, off the foot of the Canon-gate, an opening to the north; which offers a winding path in front, up the acclivity to London-road, and at the same time branches off right and left into Abbey-hill and the North back of the Canon-gate. Abbey-hill—of no importance in itself—opens an easy communication, at the distance of 360 yards, with London-road, and thence with the portion of the New town which sweeps round the base, or mounts aloft on the terraces, of Calton-hill. The North back of the Canon-gate runs due west, leaving the foot of the Canon-gate at a very acute angle, and receding from it till, at its termination in Calton, after a progress of 800 yards, it is distant from it, or rather from the continuous line of High-street, 230 yards. The triangle thus formed on two sides, is completed by Leith-wynd, which comes down from the head of Canon-gate, in a direction west of north, to the west end of the North back of Canon-gate. All this triangle, including the streets which form it on the north and west, is the abode of squalidness and poverty, and is thickly intersected with densely-peopled lanes and closes, which seem pressing together to conceal the misery at their base beneath the romantic and rugged outline of the summits of their lofty houses. Leith-wynd is considerably rapid in descent, and, before closing in to form the triangle, sweeps past Trinity-hospital, College-church, and Lady Glenorchy's chapel, all situated in the hollow which is spanned by the lofty North bridge, and lying within range of the shadow of its battlements. The North back of Canon-gate lies along the gorge or narrow hollow between the base of Calton-hill, and the central hill of the site of Edinburgh; at every part of its progress it is frowned upon by precipitous declivities which Calton-hill sends down in near contact with its buildings; and, at its west end, in particular, it is overhung by perpendicular rocks which bear aloft on their summits the county-jail and bridewell. Communicating with this street, but debouching round to the north, and nearly on a line with Leith-wynd, Calton-street leads off along the gorge between the western base of Calton-hill and the abrupt eastern termination of the rising ground on which stands the original part of the New town, and conducting beneath the lofty and beautiful arch of Regent-bridge, ascends, at a distance of 300 yards

from the foot of Leith-wynd, to a junction with Leith-street, and thence to a communication with all the eastern parts of modern Edinburgh.

Beneath the North bridge, and immediately to the west of its base, extend the spacious market-place and the shambles,—the former accessible, from the New town, by handsome paths winding down off Prince's-street, and from the Old town by rapidly descending alleys leading off from High-street and by commodious flights of steps leading off from North Bridge-street. The vale, anciently the North Loch, westward from the shambles and market-places, and intervening between the old town and the new, expands over a space of 315 yards by 200, laid out in garden-grounds, and about to be further adorned by the magnificent Gothic monument to Scott; it as then intersected by the hugely colossal earthen wall of the Mound; and it thence stretches away westward, again laid out in garden-ground, and sweeping past the northern face of the Castle, till it becomes the site of St. Cuthbert's church, and the Episcopal chapel of St. John's, and is lost beneath the new streets of the south-west wing or suburb of the New town. Over half of its extent, or from the North bridge to the esplanade of the Castle, this lovely vale is overhung along the south by the lofty gables and abutments of the towering edifices which terminate the northern alleys from the High-street; and, in grouping with them, as well as with the dark and craggy and vast outline of the overshadowing Castle, it presents an aspect of romance, and of mingled beauty and sublimity, which probably was never rivalled by any other city-view in the world.

The New Town.

The New town of Edinburgh may be regarded as consisting of four sections,—the original New town,—the second New town,—the New town of the lands of Coates,—and the New town around and on Calton-hill. A briefer nomenclature, and one sufficiently accurate, would be the southern, the northern, the western, and the eastern New town. All are distinctive in their respective features, and, viewed in the aggregate, are rather caricatured than pictured by the phrase which royalty is said to have applied to them in compliment, "a city of palaces." Were all the palaces of Britain aggregated on one arena, and arranged in palace order, all with their clusters of attendant buildings, and each with its colonnades, or towers, or turrets, or abutments and gables of Grecian, or Gothic, or Mixed, or Elizabethan architecture, they would present an architectural landscape motley as the trappings of a stage-clown, compared with the dress of simple elegance and unique grandeur and rich but chaste adorning which arrays the New town of Edinburgh.

The southern or original New town, stretches along the summit of the most northerly of the three longitudinal and parallel hills which form the site of Edinburgh; and extends, in length, from nearly the line of the North bridge on the east, to a line considerably west of the west face of the Castle. Its form is a regular parallelogram, the sides of which measure 3,900 feet and the ends 1,090. Its principal longitudinal streets are three, Prince's-street on the south, George-street in the middle, and Queen-street on the north. But between Prince's-street and George-street, and again between George-street and Queen-street, run, over the whole length, meaner and narrower streets, called respectively Rose-street and Thistle-street, which have been judiciously interposed for the accommodation of a middle class in society. Prince's-street—as far east, at least, as it strictly belongs to the original New town, or to a

point 160 yards west of the northern termination of North bridge—consists of only one row of houses, having the form of terrace, and facing the northern, front or towering and picturesque heights of the Old town. Originally the houses were all of one figure and elevation,—three stories high, with a sunk area in front, enclosed by an iron-railing; and they differed only in acquiring a finer polish of stone, and a freer accession of ornament, as the street proceeded toward the west. But during a considerable series of years preceding 1840, the street's uniformity of aspect, over the whole eastern half of its length, had entirely disappeared. Most of the edifices—all constructed as elegant and commodious dwelling-houses—are now, by a variety of devices, transmuted, enlarged, or architecturally adorned, into hotels, club-rooms, public offices, warehouses, and shops; and, with the occasional interspersed of a dwelling-house and the continuation westward of the street in nearly its original condition, they present an appearance, not so much of simple and dignified contrast to the grotesque and antique outline of the opposite Old town, as of distant and inexpert imitation of its romantic irregularities.—George-street, previous to the brilliant erections of the northern and western New town, was said to have no rival in the world; and even yet, in combined length, spaciousness, uniformity of architecture, and magnificence of vista and termination, it may be pronounced unparalleled. It is 115 feet broad, and, like its sister-streets, as straight as an arrow; but it materially suffers, in its power of pleasing, by the projection of one public edifice a little beyond the line of its buildings, and by the recession, nearly opposite, of another within that line. At its ends are superb and spacious squares—the western, called Charlotte-square, and the eastern, St. Andrew's-square; both sumptuous in the architecture of their sides, and ruralized and lovely in the garden-plots and shrubbery of their area. Rising from the centre of St. Andrew's-square, is a lofty, fluted column surmounted by a monumental statue of Lord Melville; and sitting up from the back of Charlotte-square, is the huge form of St. George's church, bearing aloft a magnificent cupola and cross; and these, on the ends of George-street, decorate and shut up the view.—Queen-street maintains its original form, and is a fac-simile of what Prince's-street would still have been, had it not been touched by the modelling hand of innovation. But the grouping of Queen-street with surrounding objects, and the aspects thrown upon it by its peculiar locality, are entirely different and even contrasted. This terrace is not, like Prince's-street, overlooked at a brief distance by the dark and strange forms of a loftily situated city of antiquity; but it looks down, over its whole length, on a tastefully dressed area of lawn and flowers and shrubs; and, across this it is confronted by an array or terrace of edifices more sumptuous and modern than its own; and it thence looks over all the assembled beauties of the second New town, away to the joyous Forth and the dim but beautiful landscape in the distance. —Crossing the parallelogram of the original New town, from Prince's-street to Queen-street, cutting George-street at right angles, are 7 streets, St. Andrew's-street, on the extreme east, and afterwards St. David's, Hanover, Frederick, Castle, Charlotte, and Hope streets, the last forming the extreme west. These streets rise, from each end, by a gentle ascent to George-street; and are not inferior in spaciousness of width and in elegance of architecture, to the principal longitudinal streets which they intersect. But while those toward the west maintain, like Queen-street, their original aspect; those toward the east have, like Prince's-street, though not to

the same extent, been modified and altered, in order to become suitable seats of business.

The second or northern New town considerably resembles, in its general outline and arrangement of streets, the original New town, but has some graceful peculiarities, and greatly excels in the splendour of its architecture. Separated from the other by the area of Queen-street gardens, it, too, has the form of a parallelogram, disposed in two lateral terraces, a central spacious street, and two intervening minor streets,—intersected by cross streets, and terminated by spacious areas. But the parallelogram is shorter and broader than that of the northern New Town; the terraces assume, in their eastern part, the form of crescents; and the terminating area on the west is circular: The northern terrace, in its straight part, is Heriot-row, and, in its crescent part, is Abercromby-place. The central street is Great King-street, shut up on the east end by the Custom-house, at the back of the square called Drummond-place, which forms the eastern area, and opening on the east end into the circular and gorgeously edified area, called the Royal circus. The smaller longitudinal streets are Northumberland-street along the northern section, and Cumberland-street along the southern. The southern terrace, in its straight part, is Fetter-row; and in its curved part, which forms a deep arc of a circle, is the Royal crescent. The intersecting streets are Dublin-street, continued by Scotland-street, on the extreme east,—Nelson-street, continued by Duncan-street,—Dundas-street, continued by Pitt-street,—Howe-street, continued by St. Vincent-street,—and, in the extreme west, India-street. The northern New town, consisting of the terraces, streets, and areas, which have been named, must simply be described *in cumulo*, but with special reference to the Circus, the two Terraces, and Great King-street, as unparalleled, except in a portion of the western New town, for the symmetry and taste of its arrangements, and the superabundance and impressment of its architecture.

Extending out like a fan from the north-west corner of the northern New town, is the beautiful suburb of Stockbridge, having its main communication with Edinburgh through the Royal circus. This cluster of variously arranged, and uniformly elegant, rows of buildings, lies on both sides of a beautiful bend of the water of Leith: the straight line of the river being here from south to north, and the bend from that line being toward the east. The buildings on the east side are, for the most part, arranged in short, continuous streets, called Saxe-Coburg-place, Claremont-street, Clarence-street, Brunswick-street, and India-place—nearly in the form of the half of an octagon, each side of the semi-octagonal figure facing the river in the progress of its bend. The buildings on the west side of the stream are chiefly arranged into five radii of a circle, or stretch between these in brief intersecting streets. The principal radii are Dean-terrace along the river,—a street which expands into St. Bernard's crescent; and Dean-street, and Raeburn-street. The western and eastern sections are connected by a bridge, from which the suburb has its name, and which sends off, on the west, an intersecting street, to communicate through the Royal circus with Edinburgh.

Stretching away east from the northerly part of Stockbridge, is another suburb of the northern New town, separated from it by an open area 530 yards in length, and 170 yards in average breadth, called Canonmills meadow, on the north-east corner of which is a lochlet. In this suburb, at the west, are the Institution for the deaf and dumb, and the Edinburgh academy. The principal lines of buildings are Claremont-place, connecting it with Stockbridge, and

Henderson-row, continuous with the former, and Brandon-street running north and south on a line with Pitt-street and Dundas-street. From the north end of Brandon-street, Huntly-street breaks off eastward, and communicates with a mean, plebeian, and confusedly arranged cluster of buildings called CANON-MILLS: which see.

The western New town commences 140 yards west of the south-west corner of the northern New Town, or of the west end of Heriot-row, in a spacious octagon, called Moray-place, closed round with edifices which are nowhere rivalled, in the aggregate beauties and embellishments and sumptuousness of their architecture, by any aggregation of private houses of similar extent. From one side of this octagon opens Darnaway-street, communicating with Heriot-row. Off Darnaway-street, at right angles, goes Wemyss-place, to fall at right angles upon Queen-street. From another side of the octagon opens Forbes-street, running parallel with Wemyss-place, and forming a continuous line with Charlotte-street. From still another side of the octagon goes south-westward, over a distance of 320 yards, what forms distinctly the continuation of the western New town,—Stuart-street. This is a magnificent thoroughfare, worthy to connect the opulent displays of Moray-place, with displays scarcely if at all less rich, which we shall find at its other extremity. Stuart-street expands at its middle and over half its length, into a double crescent, called Ainslie-place: the two arcs of a circle being exactly opposite, and presenting exquisitely symmetrical fronts. The south-west end of Stuart-street passes into the middle of a very deep and spacious crescent, or more properly a semicircle, called Randolph's crescent, which require only to have an opposite counterpart of itself, in order to be a complete counterbalance to Moray-place. On a line with the chord of Randolph's crescent, Queensferry-street runs 230 yards south-east, to fall there at an obtuse angle upon the north end of Prince's-street; and, on the same line, Lynedoch-place runs north-west toward Dean bridge, which spans and overlooks the deep and beautiful ravine of Leith water, and forms the great thoroughfare with Perth and other places in the north by way of Queensferry. From the middle of the chord of Randolph's crescent, to the intersection of Queensferry-street with the head of Prince's-street, is the side of a square of streets, which lies in the form of a lozenge, with its angles to the four cardinal points, and measures about 400 yards on each side. The streets running north-east and south-west are Melville-street, the most spacious,—William-street, continued by Alva-street,—and Coates' crescent, continued by Maitland-street; and the streets which intersect these, are Melville-place, continued by Queensferry-street, Stafford-street, Walker-street, and Manor-street. This part of the western New town, though beautiful to a degree which would challenge prime admiration anywhere but in Edinburgh, is markedly inferior to the part first noticed. Its south-west side, however, creates a thrill of surprise and delight in the breast of many a tourist, from its being the grand thoroughfare to Glasgow and other places in the west, and the first of the numerous architectural displays of Edinburgh which meets many a stranger's observation. This side we noticed as formed of Coates' crescent and Maitland-street; but Coates' crescent, like Ainslie-place, is double, one of the arcs being called Atholl crescent. The area in each is tastefully adorned with shrubbery; and, in one, has a row of stately trees, which yields, like the line of edifice to the curve of the arc. Immediately behind Maitland-street, and running parallel with it, is Rutland-street, which leads

into the small area of Rutland square. South-westward of the crescents, and on a line with their chord, are Atholl-place, and, in continuation of it, West Maitland-street; and going off from these at acute angles eastward, are the parallel streets, Torphichen-street and Morrison-street, which connect the western New town with the suburb of the Old town south-west of the Castle.

The eastern New town, owing partly to the nature of the ground on which much of it stands, but chiefly to the various dates and conflicting plans of its erection, will not be so easy of description as the other sections. Along its entire western limit it is strictly compact with the northern and the southern New towns, being divided from the former simply by the roadway of Scotland-street and Dublin-street, and from the latter by the roadway of St. Andrew's-street. In its extreme north it is very narrow, and commences at the east end of Canonmills meadow. There, on the line of the suburb of Canonmills, stands Bellevue-crescent, with its face to the north-east. This crescent occupies a gently rising ground, has the fine facade and spire of St. Mary's church in its centre, and is neat and uniform in its architecture; and possesses altogether an imposing appearance. Clarendon-street runs away north-east, opposite to St. Mary's church, and expands into the neat though not showy figure of Clarendon-crescent. From the south-east end of Bellevue-crescent, Broughton-street—a spacious and pleasingly edified thoroughfare, but irregular in its plan and sufficiently plain in some of its buildings—runs in a direction to the east of south, till it falls, at an obtuse angle, on Catherine-street, or the line of Leith-walk. Broughton-street is the grand thoroughfare to Fife, Dundee, and other places in the north, by way of the New-haven ferry. From its west side go off London-street, on a line with Great King-street,—Barony-street, on a line with Northumberland-street,—Albany-street, on a line with Abercromby-place,—and York-place, on a line with Queen-street,—thus forming a junction or compact union with the northern and southern New towns. London-street is in a style of superb elegance akin to the street with which it communicates; Albany-street is neat and uniform; and York-place is a spacious and pleasing thoroughfare, not a little adorned by the beautiful turrets and architectural carvings of St. Paul's episcopal chapel. From the east side of Broughton-street go off Broughton-place, opposite to the exit of Barony-street,—Forth-street, opposite to the exit of Albany-street,—and Picardy-place, opposite to the exit of York-place. Between York-place and the line of Prince's-street, lanes, and little streets, and an area called a square, are huddled together in a style of grotesque confusion, which—apart from superiority in architecture—has no parallel in even the most sinuous nook of the Old town. What adds to the effect produced—the feeling of surprise at the utter contrast exhibited to the spaciousness and regularity of the street arrangements in the other sections of the New town—is that most of this cluster occupies the rounded and declivitous brow of the northern longitudinal hill of Edinburgh. From the middle of York-place, a narrow street called Elder-street, enters the section we are describing, and after a progress of 170 yards up the face of an acclivity, terminates with a bend at the small area of St. James's-square, on the summit of the hill-brow; and from this area two narrow streets descend on rapidly inclined planes,—one to fall at right angles in the south-eastern termination of Broughton-street, and the other to fall at right angles on the head of Leith-street, a few yards east of the north end of the North Bridge. As St. James's-square, and the lanes and little streets sloping down

from it were built, not upon a public plan but upon a private one of the proprietor of the site, they consist of loftier and less ornate houses than other parts of the New town; and, owing to their position, they present to a spectator, at a little distance, the appearance of successive ridges of building, towering aloft one above another, like the seats of a theatre. Though much more akin in character to the Old town than the New, they possess the property of impressing a stranger who approaches Edinburgh from Leith with ideas of the aspiring architecture and wonderful aspect of the city.—At the south end of St. Andrew's-street we are again on Prince's-street, a continuation of which thence to the North bridge, properly belongs to the eastern New town. Prince's-street is here built on both sides; and has thoroughly—more so, indeed, than any other part of Edinburgh—an aspect of business. Here are as many spacious shops, and bustling coach-offices, and noisy inns, and multifarious appliances of stir and traffic, as can well be crowded into the limited space. So great is the bustle in the constant arrival or starting of stage-coaches, in the rush of carriages and cabs and omnibuses, and in the broad current of pedestrians pouring over this central point of intercommunication of streets, that one is forcibly reminded here, at least—if nowhere else in Edinburgh—of the Trongate and Argyle-street of Glasgow,—and faintly even of Cheapside, or Ludgatehill, or Fleet-street of London.—At the north-east angle of the North bridge stands the Theatre; past the sides of which are paths, partly by flights of steps, down to the district of the Old town in the adjoining hollow. Opening out by a curve from the area before the Theatre is Leith-street, which goes away north-eastward, descending a slope, and is continued in the same direction by Catherine-street, till the latter forms an obtuse angle with Broughton-street. Leith-street presents a medium appearance of architecture between the Old town and the New,—more akin, however, to the former than the latter; and it has, on its north side, what is called a terrace, a story of building abutted or projecting from the line of the upper stories, and having a pathway along its summit. At the foot of Leith-street, where it has descended to the hollow, and where it receives the communication from beneath Regent-bridge with Leith-wynd and North back of Canongate, a narrow street or lane, called Calton-hill, goes off and climbs the steep side of the eminence whence it has its name, till, at an acute angle, it merges in the path or flight of steps by which ascent is made to the site of Nelson's monument. Catherine-street is similar in appearance to Leith-street; the houses high, and plain in architecture. At the foot of this street, the thoroughfare which it and Leith-street had formed from Prince's-street, becomes considerably widened and very spacious, shoots off in a direction a little more to the east, and henceforth, till it passes into Leith, at a distance of nearly 2 miles, is as straight, and, in some respects, not less or even more picturesque than Prince's-street. From the foot of Catherine-street, as well as farther on, this thoroughfare is properly Leith-walk; but, for a considerable space, it has subordinate names, each of which, very absurdly, applies to a portion of only one side. On the north side it is called successively Union-place, Antigua-street, and Haddington-place; on the south side it is called Greenside-street, Greenside-place, Baxter's-place, and Elm-row; and then, losing much of its town character, and becoming a debatable ground between the metropolis and its port, is quietly allowed to pass under its proper name of Leith-walk. Over all the so-called streets and places which we have mentioned it is of pleasing

though not superb appearance, and is romantically overhung by the rapid northern slope of Calton-hill, covered with verdure, terraced with promenades, and surmounted by its gorgeous architectural structures, Elm-row is an elegant line of uniform buildings; and opposite to it is the deep recess or open area of Gayfield square, not displeasing in its aspect. From the south-west end of Elm-row a beautiful and spacious line of street, called Leopold-place, opens eastward, expands for a while into the fine form of Hillside-crescent, and stretches away eastward along the north base of Calton-hill, forming one of two grand thoroughfares to London and the east coast of England, by way of Haddington and Berwick-upon-Tweed. From the north-east end of Elm-row goes off Montgomery-street, parallel with Leopold-place, to which it sends the cross-communications of Windsor-street and Brunswick-street. Nearly opposite the exit of Montgomery-street, Annandale goes off to the north-west, and bends round into the beautiful figure of Hope-crescent, facing Leith walk.

Returning to the area, at the end of North bridge, or in front of the theatre, we find a magnificent continuation of Prince's-street, far surpassing it in the opulent architecture of its edifices, leading off in a straight line with it, and along a complete though artificially-formed level, to a point about a third or a half-way up the ascent of Calton-hill. This is called Waterloo-place. For about 50 feet it is lined by ornamental pillars and arches of the Corinthian order, the ledges of Regent-bridge, which carries it across the gorge at the base of Calton-hill; and, in general, it consists of superbly-finished houses of four stories, which, toward Prince's-street, have a pediment and pillars above the lower story. On the north side of Waterloo-place, is a large tenement, built at an expense of £30,000, and long used as a hotel; and on its south side are the Stamp-office and the General Post-office; and though these edifices are in the best style of Grecian architecture, they no more than symbolize with the other structures of the street. At nearly 300 yards distance from Prince's-street, Waterloo-place runs against a shoulder or projection on the side of Calton-hill, and debouches to the south-east. At the point of contact with the bulky obstacle, it sends up, from its north side, an airy flight of steps, by which the level of the far-seeing promenades of Calton-hill, and the esplanade of the paths which lead up to its summit, are attained. While Waterloo-place, or rather the spacious road-way, called London-road, in continuation of it, is making its debouch, it is winged on its south side by the gaol and bridewell,—of very picturesque appearance, and romantically seated on a cliff, which overhangs part of the Old town. London-road again and a third time debouches, running along the side of Calton-hill, and forming an esplanade or shelf in its declivity; and after passing the Royal High school on the north, and a cluster of monuments or small ornamented cemetery on the south, slopes gently away to the north-east, becomes lined with elegant buildings, under the name of Norton-place, forms a junction about 230 yards from the eastern base of Calton-hill, with the great thoroughfare to London, leading off in Leopold-place from Leith-walk, and thence stretches away round the northern base of Arthur's Seat, to Pierhill barracks and Portobello. Just after passing the Royal High school, London-road sends off at an acute angle on its northern side, a communication round the eastern face of Calton-hill, with the upper parts of Leith-walk. This, like the road itself, is an esplanade or shelf on the face of the hill, and is lined on the higher side with a row of superb and uniform houses,

which command much of the brilliant prospect seen from the more elevated promenades, and which, under the names of Regent-terrace, Calton-place, and Royal-terrace, sweep round the hill, over a distance of about 1,000 yards, describing the figure of the orbit of a comet when approaching and leaving its perihelion. At its west end, Royal-terrace sends down a communication with Leopold-place; and at the point of their junction another terrace, called Greenside-row, of neat appearance, but much inferior to the others, goes off at right angles, to run parallel with Leith-walk, and eventually send down a communication bendingly to Catherine-street.

The topographical description which we have now completed of the street arrangements of Edinburgh, though succinct, and probably in itself somewhat confusing, will be very distinctly understood, even by a total stranger to the city, by means of the map or topographical plan inserted in the present work; and it will prevent an idle waste of words in necessarily vague attempts to convey ideas of the general groupings of Edinburgh, and will also save time, and aid distinctness of conception in indicating the position of remarkable objects. Let us next, then, attempt a rapid exhibition of public buildings, civil, charitable, educational, ecclesiastical, and defunct. To promote uniqueness of view, we shall, as much as possible, classify edifices, arranging churches, educational structures, charity-houses, bridges, and extinct buildings respectively into sections; and we begin with a somewhat miscellaneous but very large class, including whatever buildings may, in either a large or a limited and private sense, be termed political and civil.

Civil Edifices.

The abbey and palace of Holyrood will be described in a separate article: see HOLYROOD.—A short way up the Canongate is Queensberry-house, a large plain building, erected by William, 1st Duke of Queensberry. It was inhabited by him, by the 2d and the 3d Dukes, and by the Duchess of the 3d, daughter of Lord Clarendon, and cousin of Queen Mary and Queen Anne. It is now the property of Government.—Nearly opposite to it, within a gate at the head of a close or alley, is Whitefoord-house—a large modern mansion, built by Sir John Whitefoord, and afterwards inhabited by Dugald Stewart. About half-way up the Canongate, on the north side, is the Canongate-tolbooth,—a dark, plain, antique building, surmounted by a small spire, and now used as a prison for debtors. Fixed to the wall, at the south-east corner, is the Canongate cross.—Farther up, on the south side of the street, is the conspicuous mansion of Moray-house, the property of the Earls of Moray, built, most probably, after the union of the Crowns. In front is a massive stone-balcony, communicating with one of the apartments and overlooking the street; and in the rear is a terrace-garden, in which grows a thorn-tree said to have been planted by Queen Mary.—A little below Moray-house is an antique building, said to have been a town-residence of the Dukes of Gordon.

On the north side of High-street is the Royal exchange, commenced in 1753, and finished in 1761 at an expense of £31,457. It is a large and elegant square, with a court in the centre. The south side, or that fronting the street, consists of a light colonnade, about 25 feet high, with a platform on the top adorned with pilasters and vases. All the arches under the colonnade, except the central one, are built up and constructed into shops. From the end of the colonnade, two wings extend northward 131 feet till they touch the inner front, or 182 feet till they reach the rear of the entire edifice. The

W. H. P. 1875

north side of the square extends 111 feet over wall, and is 51 feet broad. Pillars and arches, supporting a platform, run along its front, and form a piazza. In the centre, four Corinthian pillars, whose bases rest upon the platform, support a pediment on which are engraved the armorial-bearings of the city. The building contains the magistrates' court-room, the apartments of the town-council, and various offices connected with the city, and is ascended to its upper floors by a hanging stair, the well of which is 20 feet square, and 60 feet deep. The court in the centre, including the piazza, is 96 feet south and north, and 86 feet east and west. The building is, in its south front, 60 feet high; but it stands on the slope of the hill, and in its rear is 100 feet high.

Nearly opposite to the Royal exchange is Parliament-square, entered by openings at both ends of St. Giles' cathedral, and having that ancient edifice as its northern side. The square is a small area, built entirely round on three sides by public edifices, consisting of the Exchequer, Sir William Forbes and Co.'s bank, the Justiciary court, the Court of session, the Parliament house, and the Libraries of the faculty of advocates, and the writers to the signet. The public buildings of the three sides are large, and very elegant, supported by piazzas. Those on the east and south-east occupy the site of old and lofty houses which were destroyed by a great fire, of three days' continuance, in 1824. The court-room of the Court of exchequer, contained in one of them, is on the second story, lighted partly from the roof, and of very moderate dimensions.

The Parliament house, built on the south and west in the form of the letter L, was begun in 1631, and completed in 1640, at an expense of £11,000. But its present front—consisting of an arcade below, and open galleries above, with pillars supporting a continuous cornice—was erected in 1808. The building is 133 feet long; and, at its narrowest part, 60 feet broad, at the widest part, 98 feet; and it occupies so singular a site, that, though 60 feet high in the rear, it is only 40 feet high along both its northern and its eastern front. The large hall, formerly occupied by the parliament of Scotland, and now known as the outer house of the court of session, is entered by a plain door-way and dark lobby at the angle of the building, or north-west angle of the square. This hall is one of the noblest apartments in the United Kingdom; and extends 122 feet in length, and 49 in breadth. It has a beautiful oaken floor and roof,—the latter arched, supported by abutments, and constructed in the same style of open wood-work as the roof of Westminster hall, with gilded knobs. The hall, besides 4 windows on its west side, has, on its south end, a large and beautiful window of stained glass, on which is depicted a female figure of Justice, with her sword and balance, amid radiated clouds. In various parts of the hall, and of the rooms connected with it, are fine specimens of statuary,—one, by Roubiliac, of Lord-president Forbes, in his judicial robes,—another by Chantrey, of the first Lord Melville,—and one, also by Chantrey, of Lord-president Blair. The hall was formerly adorned by full-length portraits of some of the sovereigns of Britain; and, on occasion of George IV.'s visit to Edinburgh, was the scene of the banquet given to him by the Corporation. In the days of the Scottish parliament, there stood, at the south end, beneath the great window, a high throne for the sovereign; along the sides were seats for the bishops and nobility; before these, were forms for the representatives of counties and burghs; in the middle, was a long table for the use of the Lord-clerk-register and his assistants, and having spread out, on its upper end, "the honours," or regalia; at the foot of the table, was the

bar of the house; behind a wooden partition, farther north, is a pulpit, whence sermons were preached to parliament; and at the north end was a small gallery for the accommodation of strangers. All these appliances of the quondam parliament, however, were long since swept away, leaving the hall nearly a quite unoccupied area, and a magnificent promenade. During sessions, it is a daily resort of most gentlemen of the legal professions, and a frequent resort of many persons of all classes; and exhibits a scene of such bustle and apparent confusion as is bewildering to a stranger. On the east side of the hall, north and south of the entrance, are recesses, with benches and a small projecting and enclosed area, for the courts of the lords ordinary. Beneath the great window are curtained entrances to two neat small rooms, for the same courts, in the disposal of a particular class of cases. Leading off from the hall, on its east and west sides, are the court-rooms of the first and the second division of the court of session. These were fitted up respectively in 1808 and 1818, and are of such inadequate dimensions as frequently to be found annoyingly inconvenient.

Projecting westward from Parliament house towards George IV.'s bridge, and presenting a front toward the spacious thoroughfare along that bridge across the Cowgate, is the Advocates' library. The apartments are chiefly two noble and very elegant rooms, on different floors. The upper room has a carved and gilded roof; and is adorned with a bust of Baron Hume of the exchequer, and with original portraits of Archbishop Spottiswood, Lord-high-chancellor of Scotland, Lord-president Forbes, Lord-president Lockhart, and several other judges of the supreme court. But a large portion of the books is deposited in rooms beneath Parliament house, situated at its south end, and accessible by flights of steps from a door at the north-west angle of the square. The library was founded, in 1682, by Sir George MacKenzie, dean of faculty; and, by several large accessions and a constant accumulation, has become the largest and most valuable in Scotland. The number of printed volumes is 150,000; and of manuscripts, 1,700. The volumes, in the department of Scottish poetry alone, are nearly 400; and are extremely rare and curious. Among the manuscripts, are those of Wodrow the historian, and many of considerable value in the civil and ecclesiastical history of Scotland. The library is one of five which receive from Stationer's hall a copy of every new work published in Great Britain or Ireland; and it excels most, and is equalled by few, of the public institutions of the country, in the liberality of the principles on which it is conducted. Any person who is even slightly known is allowed to read and write in the apartments; and even a stranger is admitted, without any introduction, to survey the literary stores, and examine numerous articles of *virtu*. Members are allowed to possess or carry away, 25 volumes at one time, and to lend any or all of that number to friends. The funds are derived chiefly from fees paid by each advocate on his becoming a member of the faculty; and they admit of about £1,000 a-year being disbursed in the purchase of rare or useful works. The library is under the charge of five curators, a librarian, and three assistants. The office of principal librarian has been filled by men of distinguished literary character,—Thomas Ruddiman, David Hume, Adam Ferguson, and David Irving, LL.D.

The Signet library adjoins Parliament house on the north, and stretches westward, presenting architectural fronts to Parliament-square and Lawn-market. It is of Grecian architecture, and possesses two spacious and handsome apartments on different stories,

The upper room—acquired a few years ago from the faculty of advocates—is probably the most elegant apartment of its size in Scotland, and of very beautiful proportions. It has on each side a range of 12 Corinthian pillars, and in the centre a dome or cupola. On the dome are painted the nine muses, and groups of historians, philosophers, and poets. The roof also is exquisitely ornamented; and galleries are carried along the two sides of the hall. The room is 132 feet long and 39 broad; and is accessible by a grand staircase, adorned, in its progress and round the walls of its landing-place, with some splendid portraits and busts. This splendid apartment was used as a sort of drawing-room by George IV., on the day of the banquet in Parliament-house. The library contains about 60,000 volumes. It is peculiarly rich in British and Irish history; and is under the charge of a body of curators, and conducted on principles of liberality akin to those which distinguish the management of the Advocates' library. The funds are drawn solely from the contributions of the writers to the Queen's signet.

The County-hall stands at the western termination, or north-west angle of the signet library, and presents fronts to George IV.'s bridge, to Lawnmarket, and to St. Giles' church, or the western ingress to Parliament-square. The last of these is the principal; and possesses no common beauty. An elegant portico, consisting of four fluted columns, with finely carved capitals, overshadows a flight of steps leading up to the main entrance, which is modelled after the Choragic monument of Thrasylus. The whole edifice, as to its general plan and its style of ornament, is an imitation of the temple of Erechtheus at Athens. This handsome structure was designed by Archibald Elliott, Esq., and erected in 1817. The court-room has a gallery at the south end, and is neatly fitted up: and measures $43\frac{1}{2}$ feet in length, 29 in width, and 26 in height. The room in which the county-meetings are held is in the north end of the edifice, and very elegant,—measuring 50 feet in length, $26\frac{1}{2}$ in width, and 26 in height. There are apartments also for the sheriff's court, and for various functionaries employed in the business of the county.

On the north side of High-street, westward of the Royal exchange, down a steep and filthy alley called Blyth's-close, are the reputed palace and oratory of Mary of Guise, queen of James V. The tenement pointed out as her residence is now, as well as the oratory, partitioned off into small apartments, and converted into the abode of squalidness and penury; and, even in the days when the now nauseous Cowgate was the seat of the elite of Edinburgh, must have been a strange dwelling for the mother of the beautiful Mary, and an emigrant from the gay and gorgeous royal palaces of France. Over the door is the inscription, "*Laus et Honor Deo*," with the cipher of the queen.—At the top of the High-street is the old city-reservoir; remarkable for its supply of excellent water for the city being brought from the Pentland hills.

On the summit or precipitous extremity of the central hill of Edinburgh stands the Castle, covering an area of about six English acres. The rock which it surmounts is precipitous on the northern, western, and southern sides; in some places is almost perpendicular; and, at its highest part, rises nearly 300 feet above the vale below, and 383 feet above the level of the sea. On its western side it sends off a glacis or esplanade, 350 feet by 300, called the Castle-hill, which communicates with the upper end of Castle-street or High-street, commands all the rich landscape round Edinburgh, except toward the west, and is used both as a parade-ground for the military

and promenade for the citizens. On the western verge of the esplanade is advanced the outer palliaded barrier of the fort. Behind this are a dry ditch and a drawbridge, flanked by low batteries. Within these the road wends past a guard-house, and passes under an arched gateway, secured by strong gates, and bearing aloft an edifice which is used as a state-prison. On the right, after passing the gateway, is the Argyle battery, mounted with 10 guns of 12 and 18 pounders, which are pointed toward the New town, and from which, in general, the salutes are fired. The road thence leads past the arsenal, which is capable of containing 30,000 stands of arms, and exhibits a display of trophies and military stores curiously arranged, and highly attractive to a stranger who has looked little on the muniments of war,—the houses of the governor and other functionaries, which are of plain appearance,—and a huge pile of buildings, called the New barracks, built in 1796, three stories in front but four in the rear, resting there upon piazzas, and so grossly disfiguring the outline of the Castle as to appear, even at a considerable distance, like a large factory sitting on the brink of a precipice. The road sweeps past these buildings in a curve, and during its progress is climbing an ascent; and it now, through a second strong gateway, enters the inner and higher vallum of the fort. Within are the ancient erections of the Castle, and nearly all its most interesting objects. On the south side is a lofty pile of buildings with a court in the centre. The south-east portion of this pile was partly built in 1565 by Queen Mary as a palace, and contains, on the ground-floor, a small apartment—now part of the canteen or tavern of the Castle, and quite accessible to any visitor—in which she was delivered of James VI. In the same buildings is the crown-room, in which the regalia of Scotland are exposed three hours a-day to the view of visitors who have been furnished at the Royal exchange with gratuitous tickets of admission. The regalia were lodged here on the 26th of March, 1707, immediately after the act of Union, and were long supposed to have been secretly conveyed to London; but, on the 5th of February, 1818, were discovered by commissioners appointed by the prince-regent, carefully and even elaborately secured in a large oaken chest. They consist of the crown, the sceptre, the sword of state, and the lord-treasurer's rod of office; and are placed on a table, surrounded from ceiling to floor with a barred cage, and made visible by "the dim religious light" of four lamps. In the crown room are also a ruby ring, set round with diamonds, worn by Charles I.,—at his Scottish coronation,—the golden collar of the order of the Garter, sent by Elizabeth to James VI.,—and the badge of the order of the Thistle, set with diamonds, and bequeathed by Cardinal York to George IV.*—On the east side of the Castle, immediately north of the square court, is the half-moon battery, mounted with 14 guns, overlooking the Old town, and entirely commanding the access along Castle-street and the Castle-hill. On this battery are a flag-staff, behind which George IV. surveyed the city; and a very deep draw-well, the water of which falls when the guns are fired. Farther to the north, and overlooking the Argyle battery, is the bomb-battery, the highest point of the rock, whence a magnificent view is obtained of the gorgeous and far-spreading panorama hung out on all sides toward the distant horizon. On the bomb-battery was placed in March, 1829, the celebrated piece of ordnance called Mons Meg, of 20 inches in the bore,—composed of long pieces of beat iron which are held together by a close series of iron hoops,—employed in 1497 by James IV., at the

* See Note to article DUNSTAFFAGE.

siege of Norham castle on the English border,—rent, in 1682, when firing a salute to James, duke of York,—and bearing on both sides of its elegant frame an inscription which supposes it to have been forged in 1486 at Mons. Behind the bomb-battery stands a small chapel of recent erection on the site of a very old one which it supplanted.—The Castle, except on the eastern side, is exceedingly ill-adapted for the purposes of a fort, and presents an outline either of high houses or walls or points of rock having little capacity for gunnery; the fortifications corresponding with none of the rules of art, but accommodating their form and their uses to the irregular sweep of the rock on which they stand. The garrison has a non-resident governor, a deputy-governor, a fort-major, a store-keeper, a master-gunner, and two chaplains, the one presbyterian, and the other episcopalian. The historical events of the Castle are so intimately blended with those of the town, that they must be woven into one tissue with them in the concluding section of this article.*

* There is one historical event, of too romantic a nature not to be deeply interesting, yet too full of incident to be afterwards interwoven with our necessarily condensed narrative, which we may here introduce. In 1296, during the contest for the Crown between Bruce and Baliol, it was besieged and taken by the English. It still remained in their possession in 1313, at which time it was strongly garrisoned and commanded by Piers Leland, a Lombard. This governor having fallen under the suspicion of the garrison, was thrown into a dungeon, and another appointed to the command, in whose fidelity they had complete confidence. It has frequently been remarked that in capturing fortresses, those attacks are generally most successful which are made upon points where the attempt appears the most desperate. Such was the case in the example now to be narrated. Randolph, Earl of Moray, was one day surveying the gigantic rock, and probably contemplating the possibility of a successful assault upon the fortress, when "he was accosted by one of his men-at-arms with the question, 'Do you think it impracticable, my lord?' Randolph turned his eyes upon the questioner, a man a little past the prime of life, but of a firm, well-knit figure, and bearing in his bright eye, and bold and open brow, indications of an intrepidity which had already made him remarkable in the Scottish army. 'Do you mean the rock, Francis?'† said the earl; 'perhaps not, if we could borrow the wings of our gallant hawks.' 'There are wings,' replied Francis, with a thoughtful smile, 'as strong, as buoyant, and as daring. My father was keeper of yonder fortress.' 'What of that? you speak in riddles.' 'I was then young, reckless, high-hearted; I was mewed up in that convent-like castle; my mistress was in the plain below—' 'Well, what then?' 'Sleath, my lord! can you not imagine that I speak of the wings of love? Every night I descended that steep at the witching hour, and every morning before the dawn I crept back to my barracks. I constructed a light twelve-foot ladder, by means of which I was able to pass the places that are perpendicular; and so well, at length, did I become acquainted with the route, that in the darkest and stormiest night, I found my way as easily as when the moonlight enabled me to see my lover in the distance, waiting for me at her cottage door.' 'You are a daring, desperate, noble fellow, Francis! However, your motive is now gone; your mistress—' 'She is dead: say no more; but another has taken her place.' 'Ay, ay, it is the soldier's way. Woman will die, or even grow old; and what are we to do? Come, who is your mistress now?' 'My Country. What I have done for love, I can do again for honour; and what I can accomplish, you, noble Randolph, and many of our comrades, can do for better. Give me thirty picked men, and a twelve-foot ladder, and the fortress is our own!' The Earl of Moray, whatever his real thoughts of the enterprise might have been, was not the man to refuse such a challenge. A ladder was provided, and thirty men chosen from the troops; and in the middle of a dark night, the party, commanded by Randolph himself, and guided by William Francis, set forth on their desperate enterprise. By catching at crag after crag, and digging their fingers into the interstices of the rocks, they succeeded in mounting a considerable way; but the weather was now so thick, they could receive but little assistance from their eyes; and thus they continued to climb, almost in utter darkness, like men struggling up a precipice in the nightmare. They at length reached a shelving table of the cliff, above which the ascent, for ten or twelve feet, was perpendicular; and having fixed their ladder, the whole party lay down to recover breath. From this place they could hear the tread and voices of the 'check-watches' or patrol above; and surrounded by the perils of such a moment, it is not wonderful that some illusions may have mingled with their thoughts. They even imagined that they were seen from the battlements; although, being themselves unable to see the warders, this was

Facing Bank-street, and looking up the slope of that short street to High-street, but presenting a back front to the New town, and situated a few paces eastward of the southern end of the Mound, is the office of the Bank of Scotland. This is an edifice of high architectural merit, elegantly ornamented in its front and surmounted by a dome; and was erected at an expense of £75,000. From the area before it romantic and distinctive views are obtained of the groupings of the New town and Calton-hill, with the brilliant scenery which forms the background. The building itself is a marked and beautiful feature of the picturesque and extraordinary city-view of the north side of the Old town.—The General Register house of Scotland, situated at the east end of Prince's-street, and looking down the thoroughfare of North bridge, is one of the most splendid edifices of Edinburgh. It was founded in 1774, and aided in the erection by a grant of £12,000 from George III., out of the proceeds of forfeited estates; but, at first, was completed in only half its present extent, and did not attain the complement of its original plan till 1822. It was constructed from a master-design of the celebrated Robert Adams; and combines the utmost internal commodiousness with interior architectural beauty in the best taste of the simple Grecian style. The building stands 40 feet back from the line of Prince's-street, and is screened by an enclosing parapet and ornamental iron-railing, divided in the middle by a double flight of steps. The front is of smooth ashlar work, 200 feet long, and two stories of visible height, besides a sunk floor; and it is ornamented from end to end with a beautiful Corinthian entablature, and, in the middle, has a projection of three windows in breadth, where four Corinthian pillars support a pediment, in the centre of which are sculptured the armorial bearings of Britain. The entire building is square—200 feet on each side—with a small quadrangular court in the centre. This court is surmounted or canopied by a dome, 50 feet in diameter, which leaves just sufficient space at the four angles for the ingress of light to the inner front of the outer side of the edifice. Each corner is surmounted by a turret, projecting a little from the rest of the building, having clock-dials on the exterior sides, and a cupola and vane on the top. The interior of the edifice is partly arranged into nearly 100 small arched apartments, on both floors, leading off from long corridors. There are also small rooms for the use of functionaries connected with the supreme courts, and larger apartments for the stowage of re-

highly improbable. It became evident, notwithstanding, from the words they caught here and there, in the pauses of the night-wind, that the conversation of the English soldiers above related to a surprise of the castle; and at length, these appalling words broke like thunder on their ears: 'Stand! I see you well!' A fragment of the rock was hurled down at the same instant; and, as rushing from crag to crag, it bounded over their heads, Randolph and his brave followers, in this wild, helpless, and extraordinary situation, felt the damp of mortal terror gathering upon their brow, as they clung, with a death-grip, to the precipice. The startled echoes of the rock were at length silent, and so were the voices above. The adventurers paused, listening breathless; no sound was heard but the sighing of the wind, and the measured tread of the sentinel, who had resumed his walk. The men thought they were in a dream, and no wonder; for the incident just mentioned—which is related by Barbour—was one of the most singular coincidences that ever occurred. The shout of the sentinel, and the missile he had thrown, were merely a boyish freak; and while listening to the echoes of the rock, he had not the smallest idea that the sounds which gave pleasure to him, carried terror, and almost despair, into the hearts of the enemy. The adventurers, half uncertain whether they were not the victims of some illusion, determined that it was as safe to go on as to turn back; and pursuing their laborious and dangerous path, they at length reached the bottom of the wall. This last barrier they scaled by means of their ladder, and leaping down among the astonished check-watches, they cried their war-cry, and in the midst of answering shouts of 'treason! treason!' notwithstanding the desperate resistance of the garrison, captured the Castle of Edinburgh." [Heath's Picturesque Annual. *Scott and Scotland*, pp. 174-7.]

† The soldier's name was William Frank. Mr. Leitch Ritchie here uses the novelist's licence in dealing with the name, and in throwing the story into the form of a dialogue, but the events are faithfully narrated.

gisters. The great room, or library, where are deposited the older records, is in the centre of the building, lined with books over all its walls, and balconied all round, at mid-elevation, with a railed gallery. This salloon is 50 feet in diameter and 80 feet high, lighted from the top by a window of 15 feet diameter; and its roof is divided into compartments elegantly ornamented with stucco-work. From the salloon, communications lead off into 23 subordinate apartments, all occupied in the conservation of documents. The whole establishment is under the immediate management of the depute-clerk register, and is supported by government,—at whose expense the sumptuous and costly edifice was completed.

Opposite the Register-house, and presenting a side front, at a few feet distance, to the North bridge, is the Theatre royal. It is the plainest public building in Edinburgh, of a barn-like appearance, with a front just sufficiently ornamented to indicate that the designer had seen in his boyhood or imagined in his dreams something more elegant than a dead wall perforated with doors; and, though well-situated for subservency, to its intrinsic objects, it obstructs the view of the magnificent Register house from the south, and is a blot upon the most important and crowded thoroughfare of the metropolis. The building was finished in 1769, at an expense—including the paraphernalia of histrionism—of about £5,000. The house is small, and does not bring more of average receipts than £60 or £65 a-night; but it appears quite large enough for the accommodation of the playgoers of Edinburgh.—On the south side of George-street are the Assembly-rooms. The front is plain and unpretending, relieved only by four Doric columns as an apology for a portico. The principal room is 92 feet long, 42 wide, and 40 high; and, besides being appropriated to balls and concerts, is often used for public meetings, political, civic, charitable, and religious.

In St. Andrew's-street, where it forms the east side of St. Andrew's-square, is the elegantly edified office of the Royal bank. The building stands apart from the neighbouring erections, and occupies a considerable recess from the street-line; and it was originally the private mansion of Sir Laurence Dundas.—On the east side of Drummond place, presenting fronts to Great King-street and London-street, is the Excise-office. It is a handsome, though unornamented edifice; and was at one time the mansion of General Scott.—In Waterloo-place, on the south side, stand the Stamp-office and the general Post-office,—the former the central building to the west of Regent-bridge, and the latter the first building to the east. But though the Post-office has a spacious open porch, and both are splendid Grecian edifices four stories high, they are distinguishable from the contiguous erections mainly, if not solely, by the sculpture, in relief, of the king's arms on their summit. The light open colonnades along both sides of the street, and the general magnificence and fine proportions of all the buildings, combined with the overshadowing heights and erections of Calton-hill, surprise and delight every visiter from England or the European continent, and drew from George IV., as he slowly rode, amid his triumphal procession, within range of the view, the impassioned exclamation, "How superb!"

At the east end of Waterloo-place, on the south side, is the Town and County jail, founded in 1815, and finished in 1817. It is an extensive building, in the Saxon style of architecture, somewhat castellated. The front, on the line of street, presents to the observer on the road-way simply a high wall with a massive gateway. But seen from many points of view in the Old town, and especially from the sum-

mit, immediately before it, of Calton-hill, it has a multiform and architecturally—though certainly not in moral association—a very interesting aspect. Along the street-line are apartments for the turnkeys. Behind these, with an area intervening, is the jail itself, 194 feet long, 40 feet wide, and 4 stories high, with rows of small grated windows. In the centre is a chapel with windows larger and not grated. Along the interior run corridors, opening into 48 cells, 8 feet by 6, besides some other apartments of larger dimensions. From the lower flat behind, a number of small airing grounds, separated by high walls, radiate to a point, where they are all overlooked and commanded by a small octangular watch-house occupied by a deputy-governor. Farther back, and perched on the edge of a precipice which overhangs the Old town, is the castellated house of the governor, having in its front a small area of flower-plots. The jail has classified wards, is clean and well-managed, and possesses facilities for the practice of approved prison-discipline; but it is seriously damaged in some of its capacities by being a jail for both criminals and debtors, and wants commodiousness for the due lodgment of both.—Immediately on the east side of the jail, separated from it by a high spiked wall, stands Bridewell. In front of it, shielded by a high wall and ponderous gate on the street-line, is a neat house for the governor. Bridewell itself is of a semicircular form, and has five floors, the highest of which is distributed into store-rooms and an hospital. All round on each floor, at the middle of the breadth, is a corridor, with cells on each side, lighted respectively from the interior and the exterior of the curvature. Those on the inner side are chiefly used as workshops, and can all be surveyed from a dark apartment in the governor's house, without the observer being himself observable. On the low floor is a tread-mill, originally constructed for the manufacture of corks, but now mounted and moved only in cure of idleness, or punishment of special delinquency. The area within the circle is a small court glazed over head. The house is under excellent regulations, and is made, as much as possible, the scene rather of the reclamation and the comfortable industry of its unhappy inmates, than of the punishment of their offences.—On a flat exposed piece of ground, on the summit of Calton-hill, north of the National monument, stands the New observatory. It has the form of a St. George's cross, 62 feet long each way. On each of the four ends or terminating points, are six columns supporting handsome pediments. The centre is surmounted by a dome, 13 feet in diameter; and has a pillar rising up to the dome, 19 feet high, for the astronomica circle. Near it, on the north-west shoulder of Calton-hill, is the Old observatory, a plain, dingy building, three stories high.

The South bridge consists of 21 arches, and was founded in 1785, and opened in 1788. To the eye of a stranger, its existence is not readily obvious. Except at the central arch which spans the Cowgate, and where there are simple ledges, nothing is seen upon it but two lines of neat buildings and spacious shops, forming a level, a bustling, and in all respects, an ordinary-looking street. Three lanes were pulled down in order to make way for its erection; and when a trench was dug for the foundation of the central pier, at a depth of no less than 22 feet, there were found many coins of Edward I., II., and III.—The North bridge was founded in 1763, commenced in 1767, interrupted by the giving way of the vaults and side-walls at the south end in 1769, and completed in 1772, at an expense of about £18,000. It consists of three great arches, two small open-side arches, and a series of small arches at each end which are

occupied as vaults. The width of each of the great arches is 72 feet; the breadth or thickness of each of the piers is 13½ feet; the width of each of the open small arches is 20 feet; the length of the whole open part of the bridge is 310 feet; the length of the entire bridge, from High-street to Prince's-street, is 1,125 feet; the height of the bridge, from the top of the parapet to the base of the great arches, is 68 feet; the breadth, within wall, is, over the open arches, 40 feet, and at each end, 50 feet. Along the south end are very strong buttresses and counterforts, supporting rows of lofty building which run up on both sides to the High-street, and conceal that part of the bridge entirely from view, giving it the appearance of a regular street. On the north end there is a counterfort only on the east side; but on the west side a line of building is carried up from the level of the bridge's foundation, having in the rear about double of the height which it presents on the street-line in its front.—George IV.'s bridge, which goes off at right angles from the Lawn-market opposite Bank-street, and stretches across the Cowgate to a point near the south end of Candlemaker's-row, was projected in 1825; and after being begun, and for some time left in an unfinished state through a failure of funds, was completed in 1836. It is, in all respects, a splendid erection, and has three open double arches over the Cowgate, besides seven concealed arches at the ends. Part of the line is edified with houses and public buildings, and wears the appearance of a street.—The King's bridge, constituting the principal feature of the New Western approach, was projected and completed about the same time as George IV.'s bridge. It spans the hollow ground on the south side of the Castle-rock in a single arch, and has long approaches along the face of the Castlebank to the Lawn-market on one end, and on to a point near Port-Hopetoun on the other.—Regent-bridge, in Waterloo-place, was founded in 1815, and completed in 1819. It has one open arch over the Low-Calton, 50 feet in width, and about the same measurement in height. The ledges over this arch, or in the space where the bridge has not strictly a street-appearance, are surmounted by Corinthian ornamental pillars and arches.—The Dean bridge, over the water of Leith near Randolph crescent, was completed in 1832. It is a stupendous and brilliant structure, carried across a ravine, and consists of four arches, each 96 feet wide. The bridge is 447 feet long, and between the parapets, 39 feet broad. The road-way is higher than that of almost any other bridge in Scotland, passing at 106 feet above the bed of the stream.—The Earthen-mound stretching across the site of the quondam North loch from the end of Hanover-street in Prince's-street, to a point west of the end of Bank-street, though not a bridge, is a succedaneum for one, and may be allowed a place in description where there ought to have been a bridge to be described. The existence of this elongated hill,—this clumsy and enormous and unmoveable apology for a bridge,—this practical satire upon the unique beauty of Edinburgh, which stretches its dark length from the Old town to the New, in seeming derision of the picturesqueness of the one, and the brilliance of the other,—has been justly deplored by almost every topographical writer on the metropolis. Huge as the mass is, it originated in a very trivial and almost accidental operation. When the site of the North loch was in a marshy state, a shopkeeper in the high part of the Old town, who was frequently led from business or curiosity to visit the scene of the building-movements in commencement of the new, accommodated himself with 'steps' across the marsh; and he was followed, in the construction of the convenient path, by other persons

similarly situated to himself, who contributed their quota of stone, wood, or plank, to fill up, widen, and heighten what, in rude compliment to the founder of the rude thoroughfare, was called 'Geordie Boyd's brig.' An apparently advantageous use of earthy or rubbishy deposits having thus been discovered, formal permission was eventually given by the magistrates to lay down, for the elevation and increase of the incipient Mound, the contents of the extensive excavations for the sunk floors of the New town buildings. From 1781 till 1830, augmentations to its breadth and height were continually or occasionally made. But at that date the Mound became levelled and Macadamized, sown with grass on the sides, and, in various ways, embellished in adaptation to its capacities, so as to assume an appearance of being at length completed. It is upwards of 800 feet in length; on the north, upwards of 60 feet in height; and on the south about 100. Its breadth is proportionally much greater than its height, averaging probably 300 feet. It is computed to contain upwards of 2,000,000 of cart-loads; and, on the very moderate supposition that each load, if paid for, was 6d. in value, it must have cost the enormous sum of £50,000.

In the centre of Parliament square is an equestrian statue of Charles II., erected in 1685, at the cost of £1,000, which, in vigour of design and general effect, surpasses any other specimen of bronze statuary in the metropolis.—On the north side of the Castle-hill, or esplanade of the Castle, is a splendid bronze statue of the Duke of York, placed on a pedestal, and erected in 1839.—Looking up St. David's street within the screen along the south side of Prince's-street, is the site of Sir Walter Scott's monument. This erection, when completed, will be highly ornamental to the city. The design is by Mr. G. M. Kemp, and combines the beauties of the most admired specimens of the monumental cross. The erection will cover an area of 55 feet square, and rise to the height of 180 feet. The four principal arches supporting the central tower will resemble those of the transept of a Gothic cathedral; and the lowest arches in the diagonal abutments will be copied from the narrow north aisle of Melrose abbey. The statue, by Mr. Steel, though placed at a lofty elevation, will be fully appreciable for its beauty as a work of art, and for its correctly imaginal representation of Sir Walter; and it will be canopied by a grove roof copied from the compartment, still entire, of the roof of Melrose choir. In many of the details, capitals of pillars, canopies of niches, mouldings, pinnacles, the celebrated abbey so much frequented and so enthusiastically admired by Sir Walter in his lounges around Abbotsford, will be freely followed as a model.—In George-street, at the point of its intersection by Frederick-street, is the bronze statue of Pitt, executed by Chantrey, and erected in 1833. The statue is placed on a pedestal, and possesses considerable dignity of expression.—In George-street, at the point of its intersection by Hanover-street, is the bronze statue of George IV., executed by Chantrey, and erected in 1832. This monument is utterly inferior to that of Pitt, by the same artist; and has the worse effect from suffering comparison by its immediate vicinity. "The majesty of the monarch must be admitted to be somewhat transcendental. The figure is so far thrown back, as to give it the appearance of deriving a share of its support from the drapery behind, an expedient suggesting some particulars in the natural history of the kangaroo, which by no means contribute to sublimity of effect. It must, however, be granted, that by caricaturing the monarch the artist has exalted the minister, for the exaggerated pomp

of the one, powerfully contrasts with the intellectual elevation of the other."—In the centre of St. Andrew's-square, at the east end of George-street, stands Lord Melville's monument. This is a remarkably handsome column, begun in 1821, and finished in 1828, by subscriptions chiefly of naval officers. It rises to the height of 136 feet, and is then surmounted by a statue 14 feet high. The design is, in general, a copy of the Trajan column in Rome; but deviates from that model in the shaft being fluted instead of ornamentally sculptured, and in the pedestal being a square instead of a sphere. The column is 12 feet 2 inches thick at the bottom, and gradually diminishes in its ascent, till it is 10½ feet thick at the top. Up the interior is a spiral staircase, lighted by almost imperceptible slits in the fluting. The base is adorned with some beautiful architectural devices; and the colossal statue, formed of stone, appears, on its giddy elevation, of the natural size of the human figure.—In front of the Royal bank in St. Andrew's-square is a statue, in Roman costume, of the Earl of Hopetoun, erected in 1835. The Earl leans on a charger pawing the pedestal, and is eulogized in inscriptions commemorative of his military exploits.—East of Bridewell, on the same side of the road, standing on an isolated eminence, is Burns' monument. This structure, though elegant, is unpleasing in its proportions; but has in its interior a fine statue of the poet by Flaxman.—Near this monument, in the same locality, is a dark, low circular tower to the memory of David Hume.

On the summit of the highest rocky eminence of Calton-hill stands Nelson's monument,—a conspicuous object in almost every view of Edinburgh from sea or land, and a magnificent termination to the view along Prince's-street from the west. It was commenced shortly after Lord Nelson's death, but was not finished till 1815. Fastidious criticism has, in one instance, described it as "more ponderous than elegant;" and, in another instance, it has forgotten its own dignity by buffoonishly representing the monument as "modelled exactly after a Dutch skipper's spy-glass or a butter churn;" yet, as if fearful of a rebound of the witticism upon itself, has added that the monument, "from the grandeur of its site and the greatness of [its] dimensions, must be admitted to possess those attributes of sublimity which are independent of grandeur of design." [*The Modern Athens.* By a Modern Greek. London, 1825.] The base is a battlemented edifice, divided into small apartments, and occupied by a restaurateur; and has, over its entrance, the crest of Nelson, and sculpture in bas-relief representing the stern of the San Joseph, and, underneath, an appropriate inscription. From this edified base rises, to the height of more than 100 feet, a circular, hollow turret, battlemented at the top, climbed by a staircase within, and surmounted by a flag-staff. Around the edifice are a garden and plots of shrubbery. The precipice from the edge of which the monument rises possesses an outline, which, as seen from a point south of Holyrood-house, is alleged to be a profile of Nelson.—Near Nelson's monument, a little to the north, on the summit of a knoll, stand the twelve pillars of the National monument. This structure was projected in commemoration of the Scotsmen who fell in the land and sea fights consequent on the French revolution; and, with a splendour of design corresponding to the greatness of the object, was meant to be a literal restoration of the Parthenon of Athens. No little enthusiasm was displayed in the prospect of its erection, and promised to draw out the requisite though vast amount of money for its completion; but either it subsided, or felt its energies to be factitious, and, though

sanctioned and aided by Royal concurrence, has, up to 1840, and perhaps permanently, left the monument as commemorative of incompetency of pecuniary means on the part of admiring survivors, as of the deeds and bravery of departed heroes. The monument was founded in 1822, during George IV.'s visit to Edinburgh, and was commenced in 1824. The pillars of it which have been erected are of gigantic proportions, cost each upwards of £1,000, and were designed to form the western range of the entire structure. Within the area of the monument, in apartments commodiously fitted up, is an interesting exhibition of statuary.—On the face of Calton-hill, overlooking Waterloo-place, is Dugald Stewart's monument, erected in 1831. It was built from a design by Mr. Playfair; and is in the style of a Grecian temple,—a restoration, with some variations, of the Choragic monument of Lysicrates.—On the south-east angle of the New observatory is Professor Playfair's monument; a square, unscripted edifice of solid stone, enclosed with a rail.

On the east side of Nicolson-street, south of the exit of Drummond-street, stands Surgeons' hall, or the hall of the Royal college of Surgeons. The building is modern, large, and elegant, with a fine portico, and cost about £20,000. The interior is arranged into several very spacious apartments. The pathological museums are extensive, and well fitted to aid surgical studies.—On the south side of George-street, between St. David's-street and Hanover-street, is Physicians' hall, or the hall of the Royal college of Physicians, built in 1775. It is three stories high, purely Grecian, and has in front four beautiful Corinthian columns supporting a pediment. In one of the apartments is an excellent library of old foundation.—On the north end of the Earthen mound, presenting shorter fronts to Hanover-street and the Old town, and longer ones to the views along Prince's-street, stands a magnificent oblong edifice called the Royal institution. This is one of the most handsome modern buildings in Scotland. It was founded in 1823, and is borne by a substructure of wooden piles and cross-bearers, rendered necessary by the ground being "travelled earth," and formed at a cost of upwards of £1,600. Besides a large central hall for the exhibitions of the Scottish academy of painting, the building contains apartments for the Royal society of Edinburgh, the Board of trustees for the improvement of manufactures, and the Society of Scottish antiquaries. The museum of the Antiquarian society is enriched, among many other curiosities, with some colours carried by the Covenanters during the civil war, the stool which Janet Geddes hurled at the Bishop of Edinburgh in St. Giles' church, and "the Maiden," or Scottish guillotine, with which many noblemen and distinguished persons were beheaded.—In Prince's-street, west of the Mound, is the New club, a sort of joint-stock hotel and reading-room, for the exclusive use of an association of noblemen and gentlemen, the members of which are elected by ballot.—On the lands of Inverleith, nearly a mile north of the city toward the sea, is the Royal Botanic garden, twelve acres in area, and transplanted from a former site in 1822-4. The surface declines slightly to the south, and is disposed in plots and promenades of great beauty and variety. Within the area, are a pond for irrigating the soil of aquatic plants, hot-houses heated by steam for the culture of tropical plants, and a spacious building fitted up as a class-room for the professor and students of botany.

The University presents its main front to South Bridge-street, and forms an entire side respectively of North College-street, West College-street, and South College-street. It is a regular parallelogram,

356 feet long and 225 wide, extending its length east and west, and having in the centre a very spacious court. The main front is of exquisite and stupendous proportions, and superb and Grecian in its architecture; but, in common with the entire building, is so pent up by the pressure of the street that it can nowhere be seen to advantage. Were the University situated in a large park, particularly upon a rising ground, it would appear almost sublime, and be without a parallel among the modern edifices of Scotland; but situated as it is, it makes, upon the mind of a stranger, in its exterior views at least, impressions chiefly of bewilderment and confusion. The building is four stories high, and is entered by very lofty and wide porticoes which penetrate it on the east. At the sides of the main gateway are two elegant columns, each 26 feet high, and formed of a single stone. On the summit is a large stone entablature, with the following inscription: "*Academia Jacobi VI. Scotorum Regis anno post Christum natum M,D,LXXXII instituta; annoque M,DCC,LXXXIX. renovari coepta; regnante Georgio III. Principe munificentissimo; Urbis Edinensis Praefecto Thoma Elder; Academiae Primario Gulielmo Robertson. Architecto Roberto Adam.*" The continuous range of building round the inner court is in a very tasteful Grecian style; and has an elegant stone balustrade, forming a kind of gallery, which is interrupted only by the entrance, and by flights of steps to the Library, the Museum, the Hall of the *Senatus Academicus*, and the several class-rooms. At the angles, and on the west side, are spacious piazzas. The Library-room, situated on the second floor of the south side, is a noble hall 198 feet long and 50 broad, with a beautiful roof of stucco-work, and contains about 80,000 volumes, besides a collection of antiquities, sculpture, and articles of vertu. Accessions to its books are obtained by contributions of a copy of each new work from Stationers' hall, and of 10s. from each student on his matriculation, and £5 from each professor on his induction. The library was founded in 1580 in a bequest of books by Mr. Clement Little, an advocate in Edinburgh, "for the use of the citizens;" yet though it had so popularly-designed an origin, and is supported chiefly by the public through Stationers' hall, it is conducted on decidedly exclusive principles. The Museum, situated on the west side, occupies two rooms, each 90 feet by 30, on separate floors. The lower apartment is appropriated to conserved large animals and other bulky objects; and the upper one, lighted from the roof, and tastefully fitted up with elegant glass-cases and tables for the exhibition of birds, insects, shells, and other small objects of natural history. In addition to the large rooms, are contiguous galleries and smaller apartments, appropriated to minerals, and other details. Though the museum is of recent origin, it is already one of the best in Scotland, and is accessible to a citizen or stranger for the fee of one shilling a visit.—The University building was founded in 1789, the magistrates having resolved, with more zeal for the celebrity of the city than attention to their financial capacities, to bear the cost of the erection; and though, for a brief period, it was briskly carried forward, it had even the front part finished with difficulty, and stood in its slender and fragmentary state about twenty years the monument of combined vanity, rashness, and poverty. But, Government having, in 1815, resolved to expend £10,000 a-year upon it till it should be completed, it was a second time set in progress, and advanced, through intermediate years and by successive additions, to a finished state in 1834.—The University originated in a bequest of 8,000 merks by Robert Reid, Bishop of Orkney, before the Reformation.

The magistrates, who were vested with power to found it, purchased, in 1563, the ground on which it stands; but, in consequence of opposition from the prelates of St. Andrews and Aberdeen, were not able, till 1581, to make a fair commencement. But previous to that date they had, by a remote grant from Queen Mary, and a confirmed and immediate one from James VI., received, towards its erection and support, all the houses belonging to the religious foundations within the city; James IV. besides, watched over the infant institution with paternal care, and endowed it with church-lands, tithes, and other immunities. In 1583 it was opened for the labours of a single professor, the amiable Robert Rollock; and, in 1597, it acquired a second professorship, and was presided over by Rollock as principal. The original building was a tenement which had belonged first to the provost and canons of the Kirk of Fields, and next, as a residence, to the Earl of Arran. In 1617, a college-hall and several apartments for classes were erected. In 1685, it had risen to possess 8 professorships, and was currently attended by a large body of students. Previous to the Revolution, it was disturbed and degraded by the contests of faction; but since that event, it has enjoyed quietude, and been marked by the calm destitution of incident peculiar to a well-managed seat of learning. In 1720, the study of medicine was introduced to its curriculum, and rapidly promoted its prosperity, till it eventually won for the University the proudest name in Europe. No college probably can boast of a longer or more brilliant array of eminent men, whether as professors or alumni. So numerous have the men, in the walks of medicine, of metaphysics, of polite and classical literature, and of the various physical sciences, who, from 1720, have shed lustre over it by their genius and their fame, that a mere list of their names is nearly incompatible with the limits of condensed narrative. An idea of its progress, as well as of the constitution of its senate, will be best formed by glancing at the date, salaries, and class-fees of the professorships. The principalship, founded in 1585, has £151 salary. The professorship of Humanity, founded in 1597, has £87 salary and £1,319 fees. Divinity, founded in 1620, has £196 salary, fees not known. Oriental languages, founded in 1642, has £115 salary and £142 fees. Mathematics, founded in 1674, has £148 salary and £618 fees. Botany, founded in 1676, has £127 salary and £898 fees. Theory of Physic, founded in 1685, has £882 fees. Practice of Physic, founded in 1685, has £1,008 fees. Ecclesiastical history, founded in 1695, has £200 salary and £260 fees. Anatomy and Surgery, founded in 1705, has £55 salary and £969 fees. Public Law, founded in 1707, has £485 salary. Greek, founded in 1708, has £87 salary and £1,171 fees. Natural Philosophy, founded in 1708, has £52 salary and £638 fees. Moral Philosophy, founded in 1708, has £102 salary and £556 fees. Logic, founded in 1708, has £52 salary and £551 fees. Civil Law, founded in 1710, has £100 salary and £151 fees. Chemistry, founded in 1713, has £2,213 fees. Universal History, founded in 1719, has £100 salary and £105 fees. Scottish Law, founded in 1722, has £100 salary and £953 fees. Midwifery, founded in 1726, has £596 fees. Clinical medicine, founded in 1741, has £801 fees. Rhetoric, founded in 1762, has £100 salary and £134 fees. Natural History, founded in 1767, has £100 salary and £714 fees. Materia Medica, founded in 1768, has £1,281 fees. Practical Astronomy, founded in 1786, has £120 salary. Agriculture, founded in 1790, has £50 salary and £63 fees. Clinical Surgery, founded in 1803, has £100 salary and £611 fees. Military Surgery, founded in 1806, has £100

salary and £75 fees. Medical Jurisprudence, founded in 1807, has £100 salary and £18 fees. Conveyancing, founded in 1825, has £120 salary and £462 fees. Pathology was founded in 1831 and Music in 1839; but their salaries and fees are not known. The fees as now stated are those reported by the commission of inquiry into the state of the universities; but they have in many instances been considerably reduced. The foundation bursaries are 80 in number, and aggregately £1,172 in value. Honorary degrees, in all the faculties, are occasionally conferred; and never having been prostituted, as in some other universities, are in high estimation. The number of students has, for a series of years, been considerably upwards of 2,000; and about one-third of them are medical. The periods of attendance are 6 months, from October, for most of the classes, and 3 months, from May, for 5 of the medical classes. The patronage of 7 of the chairs is vested in the Crown,—of 3 jointly in the Faculty of Advocates, the Faculty of Writers to the signet, and the Town-council,—and of all the rest, in the Town-council and Magistrates. The Lord-provost of the city, but only in a titular sense, is Lord-rector.

In Lothian road is the building of the Royal academy for teaching exercises, better known as the Riding-school. It is a large and splendid edifice, and contains suites of apartments, some of which are rented by the Scottish military and naval academy. The Riding-school is superintended by 2 masters, and governed by 18 directors.—The Military and Naval academy has 10 teachers, in a great variety of departments, and is governed by 27 extraordinary, and 14 ordinary directors, with chairman and trustees.—In Adam square, is the School of arts, founded in 1821, and presenting the attractions of a cheap and effective college or academy of science and literature for the operative classes.—Near the foot of St. Mary's-wynd, or the east end of Cowgate, but approached through Surgeon-square on the south, stands—like a jewel in a setting of bogwood, or a flower-plot in the midst of a putrid marsh—a large and elegant school-house, erected in 1840, from the surplus funds of Heriot's hospital. It has piazzas, towers, ornamented windows, and various other architectural decorations, and situated in the most squalid district of the metropolis, and existing for the benefit of the poorest order of children, it seems by the exhibition of its beauties as a foil to the deformities around it, to be a type of the transition which the blessings of education may effect from ignorance and filth, to mental polish and to elegance of character.—In Richmond-street, is a very large Lancastrian school-house, of plain but not unpleasant exterior.—In Niddry-street, is the capacious plain building of the City free-school.—Near the back of the Bank of Scotland, looking out upon Prince's-street gardens, is the Sessional school, a neat and commodious edifice.

On the south face of Calton-hill, a little above the line of London road, stands the High-school. This building is worthy of its magnificent site, and while it commands one of the richest of town and country landscapes of Edinburgh and its environs, is itself a beautiful feature of the scenery with which it is grouped. It is built of pure white stone, and consists of a central part of two wings, extending about 270 feet in front. The central building is a pediment advanced upon a range of Doric columns; and the end buildings are nearly flat-roofed and of plain architecture. Yet seen from below, the entire edifice pleases and delights the eye as much perhaps as any single erection in the metropolis. A spacious flight of steps leads up to it from the enclosing wall in front; and a fine play-ground be-

hind, is overlooked by the entrances to the various class-rooms. The interior is distributed into a large hall, 73 feet by 43,—a rector's class-room, 38 feet by 38,—4 class-rooms for masters, each 38 feet by 26,—a room for a library,—and two small rooms attached to each of the class-rooms. On the margin of the road-way, on a lower site than the main building, are two neat lodges, two stories high; the one occupied by the janitor, and the other containing class-rooms, respectively 36 feet by 18, and 40 feet by 18, for writing and practical mathematics. The area of the school and play-ground is two acres, and was formed into a level by deep cutting in the face of the hill. The edifice was founded in 1825, amid pompous processional pageantry; and cost, with its appurtenances, about £30,000. There are a rector and four classical teachers, each of the teachers carrying a class round a circle of four years of progressive study, and then receiving a new class. Except small allowances from the town-council, the fees constitute the salary, and are 15s. a quarter for the masters' classes, and 16s. for the finishing or maturing class of the rector.—The High-school is traceable under the name of the High grammar-school, as far back as 1519. In 1578, when the magistrates had, for a while, made vain efforts to found an university, a school-house, of respectable capacity, was erected on the grounds which now form the termination, or lie between that termination and Surgeons'-square. In 1777, a new and neat and commodious edifice was reared on the site of the old, but, owing to the plebeian character of its vicinity, and the inodorous and perhaps unhealthy associations of its locality, became distasteful to the citizens of the New town, and continued to sink in estimation proportionally to the growing extension and the rising attractions of that successful rival of the ancient city.

North of Henderson-row, near the water of Leith, is the Edinburgh academy, of similar character and design to the High-school. The school-house is a low, neat building, constructed with reference more to interior commodiousness than to exterior display, yet not unsuited in appearance to the architecturally opulent district in its neighbourhood. The Academy was founded in 1823, by a society who had, by proprietary shares of £50 each, a capital of £12,900, capable of being augmented to £16,000. It is more aristocratic in its plan than the High-school, or rather is conducted on principles which render it less accessible to the children of the middle classes, and has a longer period of study and larger fees,—the former being 7 years, and the latter £7 for the first year, £9 for the second, £11 for the third, and £11 10s. for each of the succeeding years. There are a rector, four masters for classics, two for writing, one for mathematics, and one for English literature.—Near Canonmills is a large and handsome School-house, built and maintained by the congregation of St. Mary's church.

Within a court, off the Canongate, is the Magdalene asylum, instituted in 1797. The building is a large plain house, and accommodates from 50 to 60 females.—In Richmond-street is the Public dispensary, instituted in 1776. The house is plain and neat; and, as well as its appliances of medicine and medical advice, is so incompetent to Edinburgh, that various kindred institutions have been established,—the Western General dispensary, at Port-Hopetoun, founded in 1830,—the Eye dispensary of Edinburgh, in the Lawn-market,—the Edinburgh Western dispensary, for diseases of the ear and eye, in Castle-street,—the New town dispensary, founded in 1815,—and others of less note or more limited sphere, accommodated in private buildings.—In Nicolson-street are two buildings, both originally private

houses, fitted up as asylums for the male and the female blind. That for males was opened in 1806, and that for females in 1822.—In Argyle-square, a slight expansion and westward continuation of North College-street, is Minto-house, a remnant of the dull and antiquated grandeur of a former age, fitted up in 1829, as the Surgical hospital.—In Park-place, behind the north side of George-square, is the Lying-in-hospital, so inadequate, however, to the wants of the metropolis, that five kindred institutions, though unprovided with hospitals, have at various periods been founded.—At Morningside, a village or suburb $1\frac{1}{2}$ mile south of Edinburgh, on the road to the Braid hills, is the Lunatic asylum, founded in 1810. This is a large handsome edifice, surrounded by elegant garden-grounds, enclosed by a high wall, and placed in a remarkably salubrious situation. The building was aided by a government grant of £2,000.—North of Henderson-row, and near the Edinburgh academy, is the Institution for the deaf and dumb, instituted in 1810. The building, raised by subscription, is large, commodious, and of not unpleasing appearance; and the system of training so excellent as to have been a model for similar institutions in other cities.

The city Poor's house, built in 1743, is situated within the angle formed by Bristo-street and Teviot-row, considerably back from the road-way, so as to look down on an open area. The edifice is of four stories, very spacious, but of plain and dingy appearance. In its vicinity are a bedlam and a children's hospital. There are Poor's houses also for Canon-gate and the parish of St. Cuthbert's; the former is situated at the foot of a wynd behind the Canongate Tolbooth, and the latter in a field westward of Lothian road. The three establishments are aggregately maintained at a cost of £12,000 or £13,000 a-year; about one-sixth of which is produced by collections at the churches of the Establishment, and the rest chiefly by assessment, aided by small endowments, bequests, donations, and fines.

The Royal infirmary, built during the reign of George II., stands on the south side of Infirmary-street. The edifice consists of a body and two projecting wings, all four stories high, substantially built, and abundantly perforated with windows. The body is 210 feet long, and, in the central part, 36 feet wide,—in the end parts, 24 feet. Each of the wings is 70 feet long, and 24 wide. The central part of the body projects from the main line, and is elegant in its architecture; a range of columns, being surmounted by a cornice, whence arises a curiously adorned attic structure, bearing aloft a glazed turret. Between the columns are two tablets with sacred inscriptions; and in a recess above the entrance, is a statue of George II. in a Roman dress. The access to the different floors is by a large staircase in the centre of the building, so spacious as to admit the transit of sedan chairs, and by two smaller staircases, one at each end. The floors are distributed into wards, fitted up with ranges of beds capable of accommodating 228 patients,—the smaller rooms for the nurses and the medical attendants,—a manager's room, a waiting-room for students, and a consulting-room for the physicians or surgeons. Two of the wards, devoted to patients whose cases are considered most curious and instructive, are set apart for clinical lectures, attended by students of surgery, and delivered by the professors of Clinical Medicine in the University. Within the attic, in the centre of the building, is a spacious theatre for surgical operations, capable of accommodating 200 students. The house has separate wards for male and female patients, and a ward which is used as a Lock hospital; but, even in ordinary periods, it is utterly

incompetent for the service of Edinburgh, and, during the prevalence of an epidemic, affords a very fractional part of requisite accommodation. The Infirmary was first contemplated in 1725 by the Royal college of Physicians, but was encouraged by only a very small portion of the clergy or influential population; and, in 1729, it was commenced on quite a tiny scale, with the pitiful capital of £2,000. In 1736, the contributors to it having begun to be somewhat appreciated, were incorporated by royal charter. The Earl of Hopetoun, during the last 25 years of his life, when the institution was young and of slender means, contributed to it £400 a-year. In 1750, Dr. Archibald Ker of Jamaica, bequeathed to it an estate worth £200 a-year. In 1755, the Lords of the Treasury gave it £8,000. But the institution owed most to George Drummond, Esq., who was seven times Lord Provost. When the present erection was in progress, he made indefatigable exertion among the principal citizens to find the means of defraying current costs, and prevent it from coming to a pause. A bust of him, executed by Nollekins, was afterwards set up by the directors in the hall, with the inscription: "George Drummond, to whom this country is indebted for all the benefits it enjoys from the Royal Infirmary."

Heriot's hospital, situated on the summit of the southern ridge of Edinburgh, and surrounded by a spacious area or open park, with a main gateway from Laurieston, and an everyday thoroughfare from Grassmarket, is a magnificent and even princely structure. The edifice was commenced in 1628, and finished in 1650, at the cost of £30,000. It is the finest and most regular of the specimens of Gothic architecture designed by Inigo Jones. It is a noble quadrangle, 162 feet each way in the exterior, having an open court measuring 94 feet each way in the centre. This court is paved with square stones, and has a fountain in the centre; and is decorated, on the north and east sides, with piazzas $6\frac{1}{4}$ feet broad, and, on the second story of the north side, with an effigy of the founder, placed in a niche. Over the gateway of the edifice, which is on the north side, fronting the Grassmarket, is a tower, projecting from the main line, surmounted by a small dome and lantern, and provided with a clock. The corners, or end parts of each front, project like the tower, and have the form and adornings of oriental turrets. In the projecting parts the house is four stories high; and in the other parts, three stories. The windows are 200 in number; but, owing to a whim of one of Heriot's executors, are architecturally adorned in a vast variety of ways, and, on a near inspection, give the edifice, which seems so superb and tasteful at a little distance, an offensive and caricatured appearance. On the south side, opposite the entrance, is the chapel, 61 feet by 22, neatly fitted up, and occasioning a projection in the building, which resembles a turret surmounted by a small spire, and gives balance to the tower on the north side. Till a few years ago, the chapel presented to the view only a clay floor and bare walls, with a crazy rostrum for the preacher, and a row of stone seats for the inmates; but now it has a splendid pulpit, a richly-adorned ceiling, and beautiful oaken carvings, and is the principal interior attraction of the edifice.—The hospital originated in a princely bequest of George Heriot, goldsmith, first on a small scale, and in a humble way in Edinburgh, next to Anne of Denmark, consort of James, and afterwards to James VI. himself, both before and after his succession to the English crown. Many readers will form an idea—perhaps not an incorrect one—of his position in the King's household after the removal of the court to London, from the picture drawn of him as "Jingling

Geordie," in the 'Fortunes of Nigel.' On his death, in 1624, the sum of £23,625 10s. 3½d. was found, after deducting from his property payment of other bequests, to be available for maintaining and educating the sons of poor burghesses of Edinburgh. The civil disturbances which broke out in 1639 retarded the progress of the building; and, even after it was finished, occasioned it to be used for 8 years as an hospital for the forces under General Monk. In April, 1659, it was opened for 30 boys; and it was made available, in August of the same year, for 40,—in 1661, for 52,—in 1753, for 130,—and in 1763, for 140,—and eventually for 180. Boys are admitted when from 7 to 10 years of age, and usually leave when about 14. They are comfortably lodged and fed, wear a uniform dress, receive a very liberal education, and at leaving are presented with a bible, and a large supply of clothing of their own choice. Those of them who are destined to become tradesmen, are provided with an apprentice-fee of £50, and, at the close of their apprenticeship, with another supply of apparel, or a present of £5. Those who are distinguished for mental power, or give promise of being able to make fair attainments in scholarship, have their stay in the hospital prolonged, and afterwards receive bursaries of £30 a-year for 4 years, to enable them to attend the university. Ten other bursaries of £20 each for 4 years are given from the funds to aid boys of superior talents and acquirements, unconnected with the hospital. In 1836, the governors obtained parliamentary sanction to extend the benefits of the institution in the erection of free-schools in various parts of the city; and three schools have since been erected. The management of the hospital is vested in the town-council and the city ministers of the Establishment.

George Watson's hospital stands 200 yards south of Heriot's hospital, at the entrance to the meadows, near the back of the north-west angle of George-square. The building is oblong, of extensive dimensions, and presents to the north a long handsome front, the central part of which is higher than the end parts, and bears aloft a spire terminating in the figure of a ship, the emblem of the traffic by which the founder became enriched. The erection was commenced in 1738, and finished in 1741, at the cost of about £5,000. The hospital originated in a bequest of £12,000 by George Watson, first a merchant in Holland, and afterwards an accountant in his native city, Edinburgh, who died in 1723. When the building was commenced, the fund had accumulated to £20,000. Twelve boys originally were admitted on the foundation, but now 80, who wear a uniform dress, and are lodged, fed, educated, and provided for in a similar way to the boys of Heriot's hospital. They are received from 7 to 10 years of age, and remain till 15. Those who leave to become tradesmen, receive an apprentice-fee of £10 a-year for 5 years, and afterwards, at the age of 25, if unmarried and well-conducted, receive a gift of £50; and those who prefer an academic education, and appear qualified for it, receive £20 a-year for 6 years. The managers are a master and twelve assistants, the treasurer of the Merchant company of Edinburgh, retired members of the city magistracy, and the two ministers of St. Cuthbert's.

The Merchant Maiden hospital stands in the meadows, nearly 200 yards west of George Watson's hospital, the lines between these hospitals and Heriot's forming the sides of nearly an equilateral triangle. The edifice is Grecian, 180 feet long, and 60 wide, and has in front a portico supported by four handsome pillars. It was built in 1816, at the cost of £12,250. The institution was founded in 1695, for the benefit of daughters of merchant burghesses in Edinburgh;

and originated in voluntary contributions of the citizens, in a considerable grant by the company of merchants, and in a donation of property of the value of 12,000 merks by Mrs. Mary Erskine, the widow of an Edinburgh druggist. In 1707, the contributors obtained from parliament an act of incorporation. Before the erection of the present edifice, the inmates were lodged in a large tenement in Bristo-street. From 80 to 100 girls are maintained at one time on the foundation; they enter from 7 to 11 years of age, and depart at 17; they receive an education both substantial and ornamental; and, when leaving, each is presented with £9 6s. 8d.—The Trades' Maiden hospital stands on the south side of Argyll-square, and is an edifice of plain exterior. The institution was commenced in 1704, and obtained a charter of incorporation in 1707. The girls eligible for admission are the daughters of decayed tradesmen; they are received at the same age, and have their attention directed to the same departments of education as the inmates of the Merchant Maiden hospital; and, when leaving, at the age of 17, each receives a Bible and £5 11s. The charity was founded and endowed by the incorporated trades of the city; but was greatly aided by Mrs. Mary Erskine, the benefactress of its sister and more opulent institution.

The Orphan hospital is a handsome edifice, built in 1833, at the cost of nearly £16,000, from a design by Mr. Hamilton; and is situated at the north end of Dean bridge, about 250 yards from Randolphrescent. The institution was founded by voluntary contribution in 1733; and next year a large and commodious building, ornamented with a spire, was erected in the hollow between the Old and the New town, immediately east of the central arches of the North-bridge. In 1742, the directors obtained an act of incorporation. Orphans of both sexes are received from all parts of Scotland, and are maintained and educated to the number of about 150 at one time.—John Watson's hospital is situated also near the north end of Dean-bridge; and was finished in 1828, after a design by Mr. Burn. The edifice is of Grecian architecture, large and showy, having in front a splendid portico and range of pillars. About 120 destitute children are maintained and educated,—admissible between 5 and 8 years of age, and dismissed when 14. The course of education is substantial and valuable, but not so extensive or of so lofty an aim as that of Heriot's and George Watson's charities. The institution originated in a bequest of John Watson, a writer to the signet, which was obtained in 1759, and which amounted, in 1781, to £4,721 5s. 6d., but eventually accumulated to upwards of £90,000.—Donaldson's hospital was provided for by a bequest of £240,000, burdened only with some unimportant annuities, by James Donaldson, Esq., a citizen of Edinburgh, who died in 1830.

Trinity hospital, situated at the foot of Leith-wynd, on the west side, is the oldest charitable institution in the metropolis. The original edifice was on the east side of Leith-wynd, and at a remote date became ruinous, and was demolished. The present building was anciently the residence of the provost and prebendaries of Trinity College church; and, though repaired and somewhat altered, is a fine specimen of the architecture and monastic accommodations of the age in which it was erected. It is two stories high, and forms two sides of a square, or rather of a parallelogram. Along the interior of the upper story of the longer side runs a gallery about half the width of the house, lighted from the west, serving at once as a promenade, a library-room, and a grand corridor, and winged with a range of small coats, each of which has a bed, a table, and a chair, for a single occupant. The other parts of the build-

ing are distributed into sitting-rooms, modern bedrooms, and other apartments. The hospital was founded and amply endowed by Mary of Gueldres, consort of James II. What became of the bedesmen who occupied it in the times of popery, or how they were situated as inmates, does not appear. At the Reformation the hospital shared, for a season, the fate of institutions of a similar origin; but was repurchased, for its original purposes, by the town-council in 1585, and afterwards confirmed in its rights by a deed of James VI. Upon its resettlement it was destined for the support of decayed burghesses of Edinburgh, their wives, and their unmarried children, not under 50 years of age. At first only 5 men and 2 women were admitted; but in 1700 the number of inmates had increased to 54. During half-a-century past about 20 men and 20 women have usually been at one time on the foundation; the sexes having distinct accommodations and sitting-rooms, and meeting only at meals and at morning and evening worship. But there is always a considerable body of out-pensioners, who receive an important pittance toward their support. The charity is managed by the magistrates and town-council as governors, and by a regular body of office-bearers and house-directors.

Gillespie's hospital is salubriously situated in an extensive park at the head of the Town-links, near the south-west extremity of the Old town. The edifice is a commodious, oblong, elegant structure; partly in a castellated form, having turrets at the angles, and was built in 1801. The establishment is fitted up for the accommodation and support of persons of both sexes, not under 50 years of age, who have sunk from wealth or competence to destitution; and admits at one time about 50. In its vicinity is a school, opened in 1803, for the education of about 150 boys, who are admissible from 6 to 12 years of age, and are allowed to attend 3 years. Both institutions originated in a bequest by James Gillespie, a tobaccoist of Edinburgh, of £12,000, besides considerable landed property. The governors are the master and 12 assistants of the Merchant company, some retired members of the magistracy, and 2 of the city ministers, who have a charter of incorporation. The sum of £2,000 was set aside from the entire bequest for the support of the school.—Cavvin's hospital, though situated in a wholly landward parish, may be viewed as one of the charities of the metropolis: see DUNNINGTON.—Besides the charitable institutions which have tenements classing as public buildings, there are others, such as the House of Refuge, the House of Industry, and the Old and the New town Repositories, which appear to the public eye only in connexion with the unobtrusive form of private mansions or houses; and a vast number of others which have only some hired or even borrowed room for the meetings of their committees, but are of great value to the afflicted and indigent and friendless,—such as two societies for the relief of indigent aged women, a society for the relief of indigent aged men, a society for the relief of the destitute sick, and a society for clothing the industrious poor.

Ecclesiastical Edifices.

Canongate church, situated on the north side of the Canongate, several yards back from the street line, has a cruciform shape, with nave, transepts, and chancel. But though built in that form to humour the popish fancies of James VII., it is a pitiful imitation of the ecclesiastical structures of a preceding and less enlightened age. On the outside, it has only a little ornament, and that in such poor taste as to be almost a ludicrous apology for the obvious want of means to attempt something more grand.

There is neither tower, spire, pinnacle, nor any piece of adorning which can be called either Gothic or Grecian. The street-front has considerably the appearance of a glazed gable, with a thing intended to do service as a portico at the middle of the base. On the pinnacle of this gable is the absurd ornament of a horned deer's head, surmounted by a cross, copied from the Canongate crest, and allusive to a monkish fable respecting a miraculous cross having been put into the hand of David I, when hunting the stag;—the same cross or 'rood' which gave name to the neighbouring abbey and palace.—For a long period, the parish of Canongate had for its church the abbey-church of Holyrood. After being ejected thence, in 1672, the parishioners were accommodated, for about 15 years, in Lady Yester's church. But having represented to James VII. that 20,000 merks had been bequeathed, in 1649, for their use, they obtained possession of the sum, and got the present edifice erected in 1688. The church is surrounded by a small cemetery.—Trinity-college church, situated on the west side of the foot of Leith-wynd, on the low ground between the Old and the New town, dates as high as about 1470. The building was never completed, and consists of only the choir, central tower, and transepts of the designed erection. An unfinished wall closes up the area where the nave should have commenced. The structure is in the finest style of Gothic; and, in the interior, is seated only over the central area, leaving the beautiful and massive pillars fully exposed to view. On one of the buttresses are sculptured the arms of Gueldres quartered with those of Scotland. This church was founded by Mary of Gueldres, consort of James II. Agreeably to her deed of foundation, its chapter consisted of a provost, 8 prebendaries, and 2 choristers. Before the Reformation, the place was called the Collegiate church of the Holy Trinity; but, since it became a Presbyterian place of worship, it has usually been styled the College kirk.—The Tron church stands isolatedly at the intersection of High-street and South Bridge-street, occupying the north-east angle of the small area called Hunter's-square. Its main front, presented to the High-street, and seen for some way up the ascent of North Bridge-street, is of pleasing appearance. In the middle is the base of a square tower, ornamented with pilasters; and there are 4 semi-Gothic windows, and 3 door-ways. The square tower was originally surmounted by a curious wooden spire covered with lead; but, this having been wholly destroyed by the falling of embers upon it in the great fire of 1824, the tower was, in 1828, decorated and carried aloft with a handsome spire of stone. The Tron church derived its humble and malapropos name from its vicinity to the ancient Tron or public beam for weighing merchandise.

St. Giles' church, the most ancient existing ecclesiastical edifice in Edinburgh, but of unknown or uncertain date, is situated on the north side of Parliament-square, separating the area of that square from High-street. Previous to 1830, during which year, and the two following years, it was greatly altered within, and rebuilt in its facings without, it was of the cathedral or cruciform shape, Gothic, but irregular in its architectural adornments, and undistinguished by the beauty of decoration and the symmetry of proportion found in many edifices of its age and class. Its length was 206 feet; and its breadth, at the west end, 110 feet,—at the middle, 129,—and at the east end, 76. From the centre rises a square tower, decorated at the top with open-figured stonework, and sending off from its angles four arches which have pinnacles in their progress, and a small spire at their point of meeting, and produce the

figure of an ornamented imperial crown. This figure rises 161 feet above the base of the edifice, and, occupying a high and commanding site, is seen from a great distance, and forms one of the most characteristic features of the city landscapes of Edinburgh. St. Giles is first mentioned in a charter of David II., dated 1359. In 1466, it was made a collegiate church, and contained about 40 altars dedicated to different saints. After the Reformation, it was partitioned into four churches, and some lesser apartments; and put into repair by the proceeds of the sale of vessels and paraphernalia belonging to its numerous altars, and the pompous ceremonies of its original worship. From 1633 to 1638 it was the cathedral of the brief bishopric of Edinburgh; and it was the scene of the well-known cutty-stool exploit of Janet Geddes, which acted like a disturber of the perilous equipose on an Alpine summit and sent down upon the whole episcopacy of Scotland an enshrouding and entombing avalanche. In 1643, the Solemn League and Covenant was sworn and subscribed within the walls of St. Giles, by the representatives of the public bodies of Scotland. Near the middle of its south side, are monuments over the remains of Regent Murray and the great Marquis of Montrose; and under a window near the north-east corner is the monument of Napier of Merchiston, the inventor of logarithms. The edifice is now divided into three parts, the High church, the Tolbooth church, and a hall intended for the use of the General Assembly, but found, after its completion, to be unsuitable. The recent changes were aided by a government grant of £10,000, and effected after a design by Mr. Burn, and have given the exterior a very creditable appearance. The High church is attended by the magistrates of the city, the judges of the Court of session, and the barons of Exchequer, in their respective robes of office; and, owing probably to this circumstance—though on a strictly ecclesiastical or presbyterian level with the other parish-churches of the country—it holds a place in popular estimation, and invests its ministers with a species of influence, as the metropolitan church of Scotland,—the St. Paul's of Edinburgh.

Greyfriars' church, Old and New, situated in a recess from Candlemaker-row, immediately north of the city Poor's-house, is externally a plain, slated, oblong structure, with Gothic windows, and internally a place of Gothic construction, with heavy pillars and arches. The entrance to both is by a common porch in the centre. Old Greyfriars' church was built in 1612, and was adorned with a spire; but, in 1718, the steeple was blown up by the ignition of a quantity of gunpowder which had been lodged in it by the authorities of the city. The town-council resolved, instead of re-edifying the towering appendage of the church, to add, by elongation, a new place of worship. This, constructed uniformly with the Old, was finished in 1721. In 1638, the National Covenant was partly subscribed within the walls of the Old church. Greyfriars is remarkable chiefly for its cemetery. Attached to an ancient monastery of Greyfriars, situated on the south side of the Grassmarket, was some fine garden-ground, rising gently to the summit of the southern eminences of the city; and the monastery having been demolished in 1559, this ground was bestowed by Queen Mary to be used as a place of public interment. This cemetery has ever since been the principal one of Edinburgh; and, though embellished with few monuments of architectural or sculptural merit, contains the ashes of many distinguished Scottish characters.—Lady Yester's church, situated on the north side of Infirmary-street, is a plain but agreeable-looking edifice, without a spire. Dame

Margaret Ker, Lady Yester, founded the original building, the predecessor of the present, in 1647, and gave the magistrates 15,000 merks to defray its cost, and aid its support. A small cemetery which formerly belonged to it is now covered with buildings.—Newington church, situated on the west side of Clerk-street, has a Grecian front, and a spire 110 feet high. The building is 162 feet long and 73 wide; and chaste though not showy in appearance, is principally remarkable for its being the first public edifice which meets a stranger's eye on the thoroughfare to the west of England, and central part of the south of Scotland.—St. Paul's church, situated in St. Leonard's-street, though a new building, has a heavy and parsimonious aspect,—indicating a struggle, on the part of its originators, between regard to limitation of means, and desire to render the edifice not unworthy of the city.—Nicolson-street chapel, belonging to the United Secession, presents to the street a showy Gothic front, with pinnacles rising 90 feet above street-level. The arch of the doorway is Saxon, and springs from two sculptured human heads.—Cowgate chapel, originally Episcopalian, but now United Secession, has in its interior some oil paintings by Runciman.

St. Cuthbert's church, situated in the hollow under the north-west face of the castle, a little inward from the angle of Prince's-street and Lothian road, is a huge plain edifice, with a double slated roof; and is redeemed, in the ungainliness of its aspect, only by a lofty handsome spire, rising at its west end, and erected some years later than the church. The interior is very spacious, and fitted up with double galleries. Around the building is an extensive cemetery. The original St. Cuthbert's church is older than Scottish record,—perhaps as old as the age succeeding the demise of St. Cuthbert, the end of the 7th century. It had several grants before the date of the charter of Holyrood; and, with its parish and kirk-town and rights, was granted by David I. to the monks of that abbey. St. Cuthbert's was not only the oldest parish in the lowlands of Mid-Lothian, but the most extensive; and it was the most opulently endowed in Scotland, except that of Dunbar: see ST. CUTHBERT'S.—St. John's Episcopal chapel is situated a few yards north of St. Cuthbert's, in the angle formed by the intersection of Prince's-street and Lothian road. This is the most splendid ecclesiastical structure in Edinburgh, embellished within and without with all the graces of the florid Gothic order. The building is 113 feet long, and 62 feet wide. On both sides are buttresses, the summits of which and of the inner wall are adorned with pinnacles. From the western end rises a square tower, perforated at the base with the main entrance, relieved in its sides by beautiful windows, and terminating at its summit, 120 feet high, in ornamented pinnacles. The entrance, also in the Gothic style, is exquisitely arched. The pillars and arches of the interior are light and symmetrical, and the middle roof is ornamented with mouldings and a profusion of decorations. The great window in the east end is 30 feet high, and painted with figures of the apostles in stained glass. Beneath the chapel are vaults; and around it is a small cemetery. Attached to its east end is a vestry externally in keeping with the main building. The chapel belongs to the Scottish Episcopal body, and, being the scene of episcopal ordinations, is viewed in the light of a cathedral.—St. Patrick's chapel, belonging to the Roman Catholics, and situated in Lothian road, is a showy Gothic edifice.

St. George's church, situated on the north side of Charlotte-square, is, as to its architecture, a debated object among critics,—denounced by some as shape-

less and insufferably dull, and panegyriized by others as the most handsome place of worship belonging to the Scottish Establishment. The edifice is square, and in a massive Grecian style. Its front, 112 feet in length, presents to the eye a lofty portico, supported by four pillars and two pilasters of the Ionic order. From the summit rises a circular tower, surmounted by a lead-covered dome, to the height of 150 feet. This feature of the edifice was designed as a mimic resemblance of the dome of St. Paul's in London; but far surpasses the excellences of a miniature imitation, and attracts the eye, and challenges admiration, from many points of view in the metropolis, but especially when so grouped as to appear on the background.—St. Andrew's church, situated on the north side of George-street, is of an oval form, and was originally without a spire. Its present front gives to the view a portico resting on four remarkably elegant Corinthian pillars, and surmounted by a spire which tapers aloft to the height of 168 feet. The spire is not only the finest in Edinburgh—which it might well be, and still possess an outline or ornaments of somewhat equivocal attractions—but one of the most beautiful in the sky-line of any city.—The United Secession chapel, Rose-street, is a handsome building in the Grecian style.—St. Stephen's church, situated at the end of Fettes-row, fronting the line of St. Vincent-street, is of an order of architecture called the mixed Roman. From an obtuse angle in front rises a massive tower 163 feet high, terminated by a balustrade; and from each angle of the balustrade springs an elegant double cross. But whatever attractions to the taste, or challenges to criticism, the edifice offers to the view, are in a great measure marred by the lowness of its situation, overlooked by the ascent of the whole of the northern New town, and part of the southern toward the summit on the line of George-street.

St. Mary's church, situated in the centre of Bellevue crescent, is of an oblong form, having one of the shorter ends as its front. A range of elegant Corinthian pillars supports a pediment, and bears aloft a high spire of considerable beauty. But the spire, at first square and afterwards circular, is hurriedly closed in at the top; and though elegant in its details, fails, even when aided by the fine portico on which it rests, to convey to a tasteful observer a feeling of unmingled pleasure.—The United Secession chapel, Broughton-place, is in the Grecian style, and has a beautiful portico supported by a range of Doric columns.—The Roman Catholic chapel, Broughton-street, presents to the view a Gothic gable with buttresses and pinnacles, winged by side-pieces of kindred architecture. But the sides of the exterior betray the union of prevailing poverty with the wish for display which struggled to decorate the front. The building is 110 feet long and 57 wide within walls; and lifts the pinnacles of its front to the height of 70 feet. The interior is, on the whole, plain, without attempt to fulfil the promise made by the Gothic architecture of the exterior; and furnished more in accommodation to limited pecuniary means, and the severe taste of the Protestant onlooking community, than to the ceremonial pomp and the earthly opulence of its ritual.—St. Paul's Episcopal chapel, situated on the south side of York-place, in the angle formed by it and Broughton-street, is an elegant Gothic structure. It consists, like St. John's, of a main body and side buttresses, measuring in all 123 feet long, and 73 feet wide. From each of the four angles of the inner walls, rises a small circular turret of open stone-work; and surmounting the outer buttresses are symmetrical pinnacles. The general aspect boldly challenges admiration; but is much impaired by the

near pressure of street-lines of houses, occasioning a very limited field of view.

In addition to the ecclesiastical edifices which have been noticed, are two or three *quoad sacra* parish-churches, and not a few chapels belonging to various bodies of Dissenters, which, though of creditable architecture, and not unworthy of the localities which they occupy in the metropolis, possess no remarkable or distinctive features. Such notices of them as are of any importance will be found in our summary of the ecclesiastical statistics of the city. But before passing from the topic of ecclesiastical edifices we must notice some now defunct, which made a prominent figure at a former period.

The Collegiate church of St. Mary in the Fields was situated on the ground now covered by the university, or probably a little to the southward, very nearly on the site of the present Relief chapel in South College-street. Attached to it were a prebost and 10 prebendaries. From its originally standing beyond the city-walls, though afterwards included within them, it was called the Kirk-of-Field,—the name by which principally it is known in history. Within the church was held the celebrated assembly of Scottish ecclesiastics, convoked by Bagimont the papal nuncio, for the purpose of ascertaining the value of benefices throughout the country. The valuation made by this assembly was made the standard at Rome for taxing the ecclesiastics of Scotland, and, under the name of Bagimont's roll, is a standard authority with historians in glancing at the financial matters of the Scottish ante-Reformation establishment. The prebost house connected with the Kirk-of-Field has been rendered immortally infamous in history as the scene of the murder of Darnley.—The monastery of Blackfriars was instituted by Alexander II., in 1230, and stood within the grounds of the Kirk-of-Field, on the site of the Old High school. The gardens around it occupied the whole space on the south side of the Cowgate, between the Pleasance and Potterrow. The monks received also from the royal founder of their convent a piece of ground long since covered with buildings, and along which extends the narrow street appropriately called Blackfriars-wynd. The monastery had frequently as a resident within its walls the person of its founder; and, in consequence, came currently to be called 'Mansio Regis,' the king's dwelling-house. A building belonging to the monks was an episcopal residence of the archbishop of St. Andrew's which not long ago could be traced in Blackfriars-wynd. In 1528 the monastery was destroyed by fire; and it was hardly re-edified, when, along with its appurtenances, it was swept away by the Reformation. The lands belonging to it were bestowed by Queen Mary upon the magistrates for building an hospital and supporting the poor; and, under James VI., they were disposed of in feus, and the proceeds applied to the building and endowing of Trinity hospital.—The monastery of Greyfriars, situated on the south side of the Grassmarket, nearly opposite the West-bow, was established by James I. The house was so splendid that the first monks, invited from Cologne in Germany, refused for a while to enter it, and were with difficulty prevailed upon to adopt it as their abode. Around it were spacious gardens, which afterwards became the site of the existing Greyfriars church.—East of the convent of Greyfriars was an hospital of remote but unknown antiquity, called Mason Dieu. This structure having, at the beginning of the 16th century, become ruinous, a citizen erected beside it a chapel and hospital dedicated to St. Mary Magdalene. This foundation was designed to accommodate a chaplain and 7 poor men; but it

was endowed with a pitiful annuity, and vested in trust with the corporation of hammermen,—whose poor still reap the benefit of its funds. The chapel still exists; and, though very small, is let and occupied as a place of worship.—About the middle of Niddry-street was a chapel dedicated to God and the Virgin Mary, and founded in 1505 by Elizabeth, Countess of Ross. The corporations of wrights and masons, in 1618, acquired a right to it, and, in consequence, assumed the name of the united corporations of St. Mary's chapel.—Near the head of St. Mary's-wynd, on the west side, were a chapel and convent of Cistercian nuns, and a hospital dedicated to the Virgin Mary. From the last the narrow street has its name.—In Leith-wynd an hospital for the support of 12 poor men was founded in 1479, by Thomas Spence, bishop of Aberdeen, and dedicated to the Virgin Mary. At the Reformation it passed into the possession of the town-council, obtained the unaccountable name of Paul's work, and was converted first into a workhouse, next into a house of correction, and next into a broad-cloth factory. Its name of Paul's work is bequeathed to a court and cluster of buildings on and around its site.—A little north of Paul's work, on the face of the bank leading up to the New town, stood a chapel dedicated to St. Ninian, which, till a recent date, gave to the thoroughfare of Low Calton the name of St. Ninian's-row.—On the west side of the foot of Canon-gate, immediately adjoining the Watergate, was an hospital, founded in the reign of James V., by George Crichton, bishop of Dunkeld, and dedicated to God, the Virgin Mary, and all saints. This was a foundation of great celebrity; and, besides lodging and supporting 7 poor men, provided out-door allowance to 30 poor persons, and a salary to two chaplains to officiate at the altars of St. Andrew and St. Catherine in the chapel of Holyrood. In 1617 the magistrates of Canongate purchased it from the chaplains and bedesmen, and converted it, under the new name of St. Thomas' hospital, into a lodging-house for their poor; and in 1634 they sold it to the kirk-session, to be still used as an hospital. Eventually it suffered an embezzlement of its entire revenues, and, for 30 years before being pulled down, in 1778, was converted into coach-houses.—Immediately without the city-wall, at the east end of Drummond-street, stood a nunnery, dedicated to St. Mary of Placentia. A corruption of its designation survives in the name Pleasance, borne by the street which sweeps past its site.—On the east side of the road to Dalkeith stood a chapel and an hospital dedicated to St. Leonard. The lands belonging to them were granted by James VI. to the magistrates of Canongate as an endowment to St. Thomas' hospital. The name survives in various localities adjacent to the site.—On the east side of Newington stood a chapel of Knights Templars. Its site, a rising ground, or slight eminence, is called Mount Hooley, a corruption of Mount Holy, or the Holy Mount. About a century ago, when the ground was dug up, several bodies were found, cross-legged and accoutred with swords.—South of the Meadows, not far from Grange-house, was a convent of Dominican nuns, founded by the Lady St. Clair of Roslin, and dedicated to St. Catherine of Sienna. A low shapeless ruin still remains, and gives the name Sheens, corrupted from Sienna or Siensis, to a district around it.—South-west from the Grange, on the west end of Borough-moor, stood a large chapel, dedicated to St. Roque. Around it was a cemetery which the citizens of Edinburgh used for about two centuries, and which was the chosen place of interment for persons who died of epidemics.—East of the chapel of St. Roque was another dedicated to St. John the Baptist.—In the suburb of Portsburgh

was a chapel dedicated to the Virgin Mary, which gave to the thoroughfare on which it stood the name of Chapel-wynd.—Near the base of the north side of Arthur's-seat stood the chapel and hermitage of St. Anthony. The site, though in the immediate neighbourhood of a populous city, is still remarkably sequestered, and almost as solitary as a spot in a pastoral or Highland seclusion. The cell of the hermitage still remains, 16 feet long, 12 broad, and 8 high. The rock rises within 2 feet of the stone arch which forms its roof, and overlooks a beautiful crystal rill celebrated in an old Scottish ballad. Nine yards east of the hermitage stood the chapel. This was a beautiful Gothic building, 43 feet long, 18 wide, and 18 high. At its west end rose a tower, 19 feet square, and 40 feet high.—At the north-east base of Calton-hill a Carmelite monastery or friary was erected in 1526; but it was destroyed at the Reformation. On its site was built an hospital for lepers, subject to regulations which evince both the frequent prevalence of leprosy in a former age, and the great dread in which the distemper was held. At the angle of Leith-wynd and Canongate still stands the house which was occupied as a residence by John Knox, and from a window of which he frequently preached to street-congregations. On one of its corners is a sculptured representation of the reformer in the attitude of preaching.—The most celebrated of all the defunct ecclesiastical edifices of Edinburgh, is HOLYROOD ABBEY: which see.

Extinct Edifices, and Progress of Architectural Improvement.

An account of defunct buildings not ecclesiastical may advantageously take the form, to a large degree, of an historical view of the architectural progress of Edinburgh. In 1450, James II. empowered the magistrates to fortify the city with a wall, and to levy contributions from the inhabitants for its erection. The line of this wall, and that of its subsequent enlargements, affords a joint view of the ancient structures, and of the early extent and progress of the city. A wall or defence, constructed before the time of James II., ran, on the west, almost directly north from the reservoir in Castle-street or top of High-street; it was then interrupted by the North Loch, which served as a substitute, and probably the wall was thence continued to the foot of Leith-wynd. From the latter locality to the head of Canongate or foot of High-street, an uninterrupted range of houses on the west side, continued the line of defence. The wall of James II. was strengthened at the foot of the north-east rock of the Castle with a small fortress; it thence ran eastward along the south side of the North Loch till it came nearly opposite the reservoir; it then took a southerly direction till it gained the summit of the hill; and it was there bored with a gate of communication between the town and castle. The wall now ran obliquely down the hill toward the south-east till it arrived at the first turn in the descent of the West Bow; and it was here perforated with a gate called the Upper-Bow-port. From this gate it proceeded nearly due east along the face of the ridge between High-street and Cowgate, till it struck Gray's-close or Mint-close; thence it debouched, north-eastward, till it touched the High-street a little west of the head of Leith-wynd; here, it was intersected by a gate of communication between the city and Canongate; and afterwards it went down the west side of Leith-wynd, and then turned westward to make a junction with its commencement at the north-east foot of the Castle rock. The ancient city was thus shut up within very narrow limits, and consisted of simply the High-street and part of some of the alleys lead-

ing from it, and the whole of others; and was obliged to acquire extension by lifting its buildings upward in the air, rather than by the usual method of extending them along the surface,—especially as, while its area was so small, the fashion of the age urged multitudes of persons to seek residence within the royalty.—In 1513 an extended wall was built. This affected chiefly the southern district, and began at the base of the south-east corner of the Castle rock; it thence extended obliquely to the west end of the Grassmarket, and was there intersected by the gate called the West-port; it now ascended part of the hill called the High-riggs, and, turning eastward, ran along the north side of the part of Heriot's hospital; it next, on touching Bristo-street, debouched northward, passing through part of what is now the cemetery of Greyfriars; it then turned eastward, leaving openings for gates called Bristo-port and Potterow-port, in the line of those streets; it next went southward, for a few yards, from Potterow-port, and then, making an abrupt turn, wended its way along the south side of the present college, and the north side of the present Drummond-street, till it touched the Pleasance; and it there debouched almost at a right angle to the north, and thenceforth pursued its way, intersected by Cowgate-port and St. Mary-wynd-port, to the point of the original wall west of the head of Canongate. Considerable parts of this wall, especially where it touches Bristo-street, and stretches along the north of Drummond-street, and the west of the north end of Pleasance, still exist.—The gate called the Netherbow, with which the wall was pierced on its crossing the High-street, stood originally about 50 yards west of the present termination of High-street; but, being found to occupy a position unfavourable to defence, was superseded, in 1571, by another, on the line of St. Mary's-wynd and Leith-wynd, which was built by the adherents of Queen Mary. A third, and very beautiful gate, supplanted the latter in 1606, and was reared on its site. This port was the principal entrance to the city, and has been rendered famous in history by a bill, in consequence of the indignation excited by what was called the Porteous' mob, having passed parliament for razing it to the ground. The buildings of the port went quite across the High-street, and disappeared in the houses on the sides. The gate was in the centre, perforating a house-like structure of two stories high, springing its arch from the summit of the lower story, and surmounted by a handsome square tower, terminating in battlements, and bearing aloft a tapering hexagonal spire. South of the gate was a wicket for foot-passengers. But the whole structure, pursuant to the decree of parliament, was pulled down in 1764.—At the foot of Leith-wynd was a gate called Leith-wynd-port; beside which was a wicket giving access to Trinity college church.—A wall also was thrown round the Canongate; and on the east was perforated with a gate, still in existence, called the Watergate.—From confinement in space, and in imitation of the Scottish nation's allies, the French, the houses of ancient Edinburgh were piled to an enormous height, rising, in many instances, to twelve stories. The access to the separate lodgings in these huge structures, called lands, was by common stairs, combining the inconveniences of steepness, filth, and darkness.—The earliest architecture of the city consisted, as in other cotemporaneous burghs, of domestic buildings only a degree superior to the primitive cottage, and presenting to the eye, at best, a strongly built ground flat, with a frail superstructure of timber, and a front garniture of a balcony or open gallery. A second stage of the city's architecture exhibited houses of three stories, the first of stone;

and the second and third of timber. A third stage improved upon the second, simply in constructing all the stories of stone, and occasionally aspiring to a fourth story of the same material. A fourth stage, overpowered by an influx of inhabitants, and pent in by walls which assigned it a very limited area, sprung aloft like the lark into the air, and sought those enjoyments in aspiring towards the clouds which could not be obtained by an attempt to move along the surface. A fifth stage, incomparably the brightest and most brilliant of them all, burst the ceremonies of the ancient walls, and walked forth in architectural life and beauty, constructing the North bridge and the South bridge as media of extension towards the wide fields north and south of the hill-ridge of the original site, conjuring up the southern New town between 1774 and 1790, completing the northern New town between 1801 and 1826, branching off into the most splendid part of the Eastern New town between 1813 and 1828, shooting away into the Western New town between 1823 and 1830, and luxuriating in all directions round the ancient city with the freedom of movement and the gaudiness of attire indicative of transition from slavery to freedom, or from incarceration to the breathing of the open air, and the surveying of the joyous scenes of one of the most beautiful landscapes in the world.

But the improvements on Edinburgh, especially the last and the long one, were not unattended by demolitions of important or interesting buildings. The demolished erection which of all others is the most regretted, and, if allowed to remain, would have continued to be the most beautiful and ornamental, was the Cross, situated on the High-street, a little below St. Giles. This was a structure of mixed architecture, partly Grecian and partly Gothic, octagonal in form and 16 feet in diameter; and after rising about 15 feet in height, it shot aloft from its centre an octagonal pillar equal in height to itself, and surmounted by an unicorn embracing an upright spear of nearly twice its own length. At each angle of the main building was an Ionic pillar projecting at the top into a species of Gothic bastion; and between the pillars, before being surmounted by the bastions, were modern arches. Over the arches, in the spaces between the bastions, heads were sculptured in the manner of a modern medallion; and over that which fronted the eastern part of the High-street were sculptured in alto relievo the city-arms. The access to the building was by a door which fronted the Netherbow, and gave ingress to a staircase leading to the platform on the summit. The pillar which rose from this platform was 18 inches in diameter, and had a Corinthian capital, spangled with thistles. The Town-council of the day,—proving themselves to be of the same kidney as the Mohammedan destroyers of the Alexandrian library, the Goth and Vandal desolators of Rome, and the plodding “turn the penny” speculators, once potato-fed weavers, but eventually monied, opulent, and signally illiterate and self-conceited “practical men” of a manufacturing town,—conceived the beautiful cross—such a structure as their booby heads could not have devised in a millennium—to be an obstruction in the thoroughfare of the High-street, where a dozen structures of its bulk might have stood without molesting even the ten thousand carters of Glasgow, had it been placed in that noisiest of all other cities, and much less the few carriage and cab-drivers of Edinburgh; and, in 1756, it was ordered to be pulled down. The demolishers believed, very justly, that they were working for a name among posterity; and they have fully obtained what they sought, though of very different quality from what they desired, their coffins being lodged on

shelf next in the height of ingloriousness to that which exhibits to the view the remains of him who fired the temple of Ephesus. With strange perversity of taste, a huge misshapen hulk of a building, erected in the reign of Charles II., which served as a guard-house to the military police, and had at the west end a dungeon or blackhole for the incarceration of the unruly, and which was situated on the south side of Upper High-street, was allowed to incumber the thoroughfare more than 30 years after the demolition of the elegant cross.—At the head of the Lawn-market, or foot of Castle-street, formerly stood a public Weigh-house, rearing aloft a neat spire. When this erection and the Netherbow and the cross existed, their spires combined with those of St. Giles and the Tron-church, to give the line of High-street an appearance of city architectural decoration greatly superior to what it now possesses. But for some surpassingly strange reason, which is not recorded, the Weigh-house was, about 1666, denuded of its spire, and left, in the naked clumsiness and deformity of its hulk, to disfigure the thoroughfare till 1822.—The principal incumbrance to the High-street was a range of buildings, called the Luckenbooths, rising to nearly the height of the houses on the street-line, stretching parallel with the side of St. Giles, and terminating at the west end in the Old tolbooth of the city. A lane for foot-passengers ran between the Luckenbooths and St. Giles, and was lined on both sides with small shops,—those on the south side adhering like excrescences to the ecclesiastical edifice, and bearing the odd name of the Krames. From the east end of this lane, a flight of steps led off past St. Giles; and from a statue of the Virgin Mary being placed in a niche on the side, was called St. Mary's steps. The Luckenbooths were built to serve as warehouses or shops, probably as early as during the reign of James III.; and the Krames began to be erected in 1555; and both, along with the Tolbooth, were pulled down in 1817,—their demolition laying the north front of St. Giles fully open to the view, and converting the Old High-street and the Lawn-market into a continuous and uniform thoroughfare.—The Old Tolbooth, coeval with the Luckenbooths, was originally used for the confinement of prisoners, for the shops of tradesmen, for the courts of the burgh, and even for the meetings of parliament. But after 1640 it was wholly distributed, on the ground-floor, into shops, and, on the other floors, into the apartments of a prison. The building consisted of two parts: the eastern was a square tower, with a spiral stair, and was closely akin in structure to the numerous strongholds which dotted the border-counties, and were used as residences and rallying-points by the reavers of a marauding age; the western part was a parallelogram of rubble-work, and of later origin than its curious companion. In the tower were first a large room for the use of incarcerated debtors, next and higher up apartments for the confinement of criminals, and over the top of all a strong box for the safe custody of an important and peculiarly dangerous felon. The parallelogram was distributed into apartments for debtors. The Old Tolbooth, under a quaint name popularly applied to it, furnished at once title, incidents, and graphic materials to the novel which more than any other of his productions gave celebrity to Sir Walter Scott,—that of 'The Heart of Mid-Lothian.'—In a small park through which Nicolson-street was cut, stood a pillar to the memory of Lady Nicolson. It was a very neat and chaste fluted Corinthian column, rising 30 or 40 feet from a pedestal which bore an appropriate inscription. When the improvements of the South bridge extension were made, it was 'underfooted,

and in that state it remained for many years at the north end of Nicolson-street; but it was eventually removed in some manner unrecorded, and was not long ago seen as a piece of lumber in the Riding-school.—One of the earliest erections of the New town was Shakspeare-square, which closed up the east end of Prince's-street, and overhung the ravine of Low-Calton. About the middle of the east side, looking down Prince's-street, was the Shakspeare-tavern and Coffee-house, which was the resort of the elite, and the most celebrated house of its class in Scotland. The whole square was ploughed down by the improvements of the eastern approach along Waterloo-place.

Civil and Ecclesiastical Courts.

Edinburgh is distinguished as the seat of a complete establishment for the administration of justice. Some officers of state, such as the Keeper of the Great seal, the Lord-privy-seal, the Lord-clerk-register, the Lord-justice-general, and the officers of the mint, do not necessarily reside in the city, and have either merely nominal duties, or such as are performed by deputies. But the Lord-advocate is an important functionary, and combines in himself a variety of high powers: he performs the functions both of public prosecutor and of grand-jury; he can seize any suspected person without needing to name his informer,—can give liberty to an accused person at any period previous to trial,—and can interfere, even after trial, to avert capital punishment; he is the confidential counsel of the Crown in the national affairs of Scotland; he oversees and watches the whole country as to the conservation of its peace, and presides over or affects its entire executive; and as his functions are so numerous, he delegates a portion of his power to a number of deputies.—The Court of Session is the supreme civil court of Scotland,—a court both of law and of equity, and possesses discretionary power. In fact, the business of this court comprises all that, in England, occupies the court-of-chancery,—the vice-chancellor and the master-of-the-rolls,—the courts of Queen's bench, and of common pleas and exchequer,—the court of admiralty (with the exception of prize cases),—the court of Doctor's commons, and the court of bankruptcy. [Evidence of G. J. Bell, Esq. before the Select committee on Supreme courts of judicature in Scotland, in April 1840.]—The Court of Session at present consists of 13 judges. The Lord-president and 3 senior puisne judges form what is termed the First division of the court; the Lord-justice-clerk and 3 senior puisne judges form the Second division of the court; and these two divisions are termed 'the Inner house.' The remaining 5 puisne judges officiate in what is called 'the Outer house' as Lords-ordinary, each sitting singly; the last appointed of those judges being more particularly occupied during the period of session in what is termed 'the Bill-chamber,' or in those proceedings, of the nature of injunction or stay of process, which require the more summary interposition of the court. The great majority of cases—all cases indeed, with a few exceptions not worth mentioning here—are brought in the first instance, and in their earliest stage, before one or other of the Lords-ordinary; the record is made up before him, and under his superintendence, and the case prepared for decision. It is then argued before him, and, in general, decided by him. From his judgment there lies an appeal to the Inner house, in one or other of its divisions. The judgment of the division is final, subject only to appeal to the House of Lords. There is no appeal from one division to the other, nor from one division to the whole court. But

either division may require the opinion of the other judges; in which case, judgment is given according to the opinion of the majority of the whole court. The party who comes into court as plaintiff has it in his power to select, not only the Lord-ordinary before whom the cause shall in the first instance proceed, but also the division by which the judgment of the Lord-ordinary, if appealed from, shall be reviewed. The two divisions of the court, it may be proper to observe, are thus in all respects of equal and co-ordinate jurisdiction. The same may be said of the Lords-ordinary, with the exception of a few cases reserved for the exclusive determination of the Inner house; each Lord-ordinary having in himself, for the decision of the cases before him, the full jurisdiction of the court of session, and his judgment, if not brought under review of the Inner house, becoming the judgment of the court, not subject to appeal even to the House of Lords, which is only permitted when judgment has been given by the court of session in one of its inner chambers. The court thus constituted has, in virtue either of original or appellate jurisdiction, cognizance of all civil causes and matters, with the exception of those only which are reserved for the Small Debt courts, and of the revenue cases which are reserved for Exchequer. It were unnecessary, perhaps, to enter more minutely into the limits of its jurisdiction, but it may be proper to mention that the jurisdiction is exclusive as regards all questions of real property, and as to all other questions is subject only to this limitation, that no case under £25 value can be brought before it originally. Recent statutes, by abolishing the courts of admiralty and the consistory courts, have thrown into the court of session the whole business which came before those courts respectively. But besides this, though the court of exchequer still remains as a separate jurisdiction, its judicial business is now discharged by two judges of the court of session, sitting as barons of exchequer. A far more important duty, and one of great labour and responsibility, devolves upon the Lord-president, as Lord-justice-general, and the Lord-justice-clerk, and 5 puisne judges of the court of session under a separate commission, by which there is conferred upon them supreme criminal jurisdiction. The court of judiciary sits as occasion requires, in Edinburgh, for despatch of business, embracing there the criminal business of the three Lothians, with such cases as, from their importance or other reason, are brought to Edinburgh for trial. In each year, during the vacations of the court of session, there are three spring-circuits and three autumn-circuits, with an additional winter-circuit for Glasgow. The business of the court of exchequer, and, during vacation, the business of the Bill-chamber department of the court of session, which require constant attendance, are discharged in rotation by those judges of the court of session who are not included in the commission of the court of judiciary. In enumerating the whole business thus devolving on the supreme judges of Scotland, the business of the Teind court (embracing all questions as to the modification of stipends to the clergy, and the respective liabilities of the parties subject to the payment of stipend) must not be overlooked, nor the still more important duty of presiding in the trial of civil cases by jury, where under recent statutes that course of procedure is resorted to. —The Faculty of Advocates consists of between 400 and 500 barristers, who have the privilege of pleading before the supreme courts. Their affairs are presided over by a dean, and managed by a council, a treasurer, and a clerk; and are subject to the authority of the Court of Session. Every candidate for membership is examined on the Roman and the Scot-

tish law, and must pay £100 toward the common fund, and £100 toward the Advocates' library. Members of the Faculty alone are eligible to the judgeships of the Court of Session, the sheriffships of the Scottish counties, and several important offices and dignities connected with the government. The Faculty, till about the commencement of the present century, was exclusive and aristocratic, requiring the adventitious qualifications of rank and noted ancestry, in addition to those which were strictly personal; but, though now more popular in constitution, and looking only to the talents and the scholarship of its members, it is probably the most influential body of the metropolis, and everywhere commands respect. A clerk, appointed by an advocate, is entitled, after paying fees and being found qualified, to act as an attorney in the supreme courts, and is called an advocate's first clerk.—The Faculty of Writers to the Signet includes from 600 to 700 individuals, who are entitled to act in the supreme courts, and have the sole right of making documents valid by the signet or seal of her majesty. They were originally and literally clerks in the Secretary of state's office. Their business was to record and issue writs passing the signet, on which various proceedings took place. They still receive commissions from the keeper of the signet; but, though never erected into a corporation, it has been held that they have acquired the rights and privileges of one by usage. Their advantages over the notaries and lawyers' clerks arose from their keeping together as a body. For a long period after advocates' clerks were recognised as a sort of solicitors, writers to the signet not only excluded themselves, but were excluded by the court from acting as agents. Tempted, however, by the growing emoluments of law-agency, and aided by qualifications superior, it is believed, to most of the advocates' clerks, their interferences, originally surreptitious, were at length acknowledged by the court, and their commission as writers to the signet is now held to authorize their acting also in the capacity of solicitors before all our highest courts. Their peculiar privileges as writers to the signet are of a trifling nature; and their peculiar duties may also be understood in the course of two months. Their library, however, is valuable, and their corporation funds are extensive. Their supporting a lecturer on conveyancing, and a widow's scheme, add to their consequence.—The solicitors before the supreme courts of Scotland are, as agents, on a footing, in every respect, with writers to the signet. The only distinction is, that the latter had a connection with the court, as clerks to the signet, before they had any connection with it as agents. —The High court of Admiralty consisted, after the Union, of a judge appointed by the Lord-vice-admiral of Scotland, and functionaries of inferior jurisdiction appointed by the judges; and, in civil causes, it was subject to review by the Court of Session. At present the magistrates of Edinburgh have an admiralty jurisdiction over the county of the city, and to the midwaters of the frith of Forth, limited on the west by a line drawn from Wardie Brow to the Mickrie Stone; and on the east by a line drawn from the extremity of the Pentland hills, through the mouth of the river Tummel, to the middle of the frith east of Inchkeith.—The Commissary court, or head consistorial court of Scotland, was, as to its business, nearly all merged in the Court of Session in 1830. A power of confirming the testaments of persons having property in Scotland who die abroad, remains with the officers of the defunct court, and when they die out, will devolve to the sheriff of Edinburghshire.—Two deputies perform some unimportant or comparatively trivial duties of the Lyon-court, or, more strictly, of the sinecure office of Lyon-king-at-arms.—The

Sheriff-courts of the county are held in Edinburgh ; but are not different from those of other counties.—The Convention of Royal burghs, a court constituted in the reign of James III., meets annually in Edinburgh, and is presided over by the Lord-provost of the city.—The General Assembly of the Church of Scotland holds a full meeting annually in May, besides several meetings of its Commission. A presbytery of fewer than 13 parishes, delegates to it 2 ministers and 1 elder ; a presbytery of fewer than 19, but more than 12, delegates 3 ministers and 1 elder ; a presbytery of fewer than 25, but more than 18, delegates 4 ministers and 2 elders ; a presbytery of fewer than 31, but more than 24, delegates 5 ministers and 2 elders ; and a presbytery of more than 30, delegates 6 ministers and 3 elders. Each royal burgh sends one member ; Edinburgh sends two ; and each university sends one. The Assembly has an ecclesiastical president or moderator, elected by the votes of its members, and a civil president, or overseer, the representative of her Majesty, or, as he is called, the Lord-high-commissioner, appointed by the Crown. The former is the real president, acting very much as if the civil president did not exist. The Commission of the Assembly consists of a large portion of its members, who are invested with all its ecclesiastical powers to despatch business which cannot be overtaken during the 10 days of its full session, and to watch over the interests of the church throughout the country. The General Assembly met in 1840, and several preceding years, in the Tron church ; but, at that date, was in the way to have a public building for its special use erected.—The synod of Lothian and Tweeddale, and the Established, United Secession, Relief, Reformed Presbyterian, and Original Secession presbyteries of Edinburgh, hold their meetings in the city.—The synod of the United Secession church, or supreme court of that ecclesiastical body, holds the majority of its meetings in Edinburgh, and, in 1840, and preceding years, assembled in their chapel of Broughton-place.—The annual meetings of the Scottish Congregational Union are usually held, on the alternate year, in Argyle-square and Albany-street chapels.—Edinburgh is the seat of a bishop of the Scottish Episcopal church ; it is the residence also of a Roman Catholic bishop.

Municipal Government, &c.

The city of Edinburgh is governed by a Lord-provost, magistrates, and council, who are elected according to the provisions of the Burgh Reform act. The Lord-provost is styled Right Honourable, is *ex officio* High-sheriff of the royalty, and has precedence of all official persons within his jurisdiction. The magistracy consists of a lord-provost, a dean-of-guild, a treasurer, and four bailies, each of whom is *ex officio* a member of the council. The number of councillors is 33. For the purposes of the election the city is divided into wards or districts. The number of municipal electors in 1839 was 3,059. One-third part of the councillors go out of office every year, but are eligible for re-election. The provost, bailies, treasurer, and other office-bearers, are elected by the councillors. The provost's term of office is three years, and he is eligible for immediate re-election. The other office-bearers go out at the expiration of one year, and cannot be re-elected until each shall have been out of his particular office one year ; but this does not prevent their being kept in the council from year to year by their being elected to fill the different offices in succession. Previous to the Burgh Reform act, the corporation was of a close character, though not altogether without an admixture of popular representation. The return made to the house of com-

mons in 1793, describing the constitution as settled by the authority of a decret-arbital of King James VI., 1583 ; a decret-arbital of Lord Islay, 1729–30, and two acts of council, 1658 and 1673, was as follows :—" Council consists of 17 merchants, 6 deacons, and 2 trades' councillors, in all 25. These shorten the leets for 14 deacons, and elect six of them council deacons ; they may continue two years. The 14 deacons are elected as follows :—Each corporation or trade vote a list, or leet of six, which they give in to the council, who return three of the six for the election of a deacon, who is chosen by a majority of the votes of the members of the respective corporations. The 25 members of council elect three merchants' and two trades' councillors. The old and new council, consisting of 30, leet for the office-bearers, who are elected by them and the eight deacons not of the council, making in all 38. Thereafter the council consists, as formerly, of 25 ; but the eight extra deacons have a vote in every case exceeding the value of £1 13s. 4d. The magistrates consist of a lord-provost, dean-of-guild, and treasurer, each of whom may be re-elected for one year more, and four bailies, who cannot be re-elected into the same office the succeeding year ; and they must be out of council one year before they can be put in the leet for bailies ; each of these office-bearers remains in council one year, *ex officio*, as councillors. A baillie, though he cannot be re-elected until he be out of council at least for one year, yet the sett does not prevent his being kept in council a considerable time, by being elected into other offices, such as treasurer, dean-of-guild, and provost, one after the other."—The magistrates possess very extensive jurisdiction, and of various kinds. Besides the ordinary jurisdiction, civil and criminal, common to royal burghs, and exercised in the baillie-court over the royalty, the magistrates exercise, in the same court, over the county of the city, which includes Canongate, Portsburgh, Leith, and Newhaven, the jurisdiction competent to sheriffs and justices of the peace. The magistrates also have a jurisdiction as judges in the police court over a larger territory than the royalty ; they delegate the jurisdiction of an inferior admiralty-court to the magistrates of Leith, and they annually nominate a council to exercise with the dean-of-guild, the jurisdiction of a guildry-court over the ancient and extended royalties and liberties. Besides the ordinary baillie-court, where civil cases are tried according to the forms observed in other burghs, there is a court called the Ten merk court, in which cases not exceeding in amount 11s. 1½d. sterling, (10 merks Scots,) and cases as to servants' wages to any amount, are heard and determined in a summary manner by the magistrates. The magistrates, as justices of the peace, further, under a provision in the act 39 and 40 Geo. III. c. 46. § 21 and 22, hold a court, called the Small Debt court, for the county of the city, in which cases under £40 Scots, or £3 6s. 8d. sterling, are tried agreeably to the forms of the small Debt act. Finally, the magistrates sit in a court usually known by the name of the Council-chamber, which is merely a branch of the baillie court. The distinction between the baillie court and the council chamber is, that the former sits weekly for the disposal of the ordinary civil causes brought before it by summons, while the latter is a daily court for disposing of summary applications by petition, as for removing, sequestration, liberation on sick bills, alimony under the act of grace, &c., and sometimes on matters of contract.—The patronage of the town-council is very extensive and valuable. They appoint 3 assessors, 2 principal town-clerks, a depute town-clerk, a keeper of the council-records, a superintendent and

an overseer of public works, a procurator-fiscal, a chamberlain, town-officers, and some hundred other civil functionaries, not only in the city, but in Leith and Canongate, who have salaries and fees amounting in the aggregate to an enormous sum. The town-clerk of Leith is reported by the corporation commissioners to have paid £1,200 as a consideration for his office. The town-council appoint also to the majority of the chairs of the university, and exercise considerable control over its affairs; and they are patrons of the 13 city parishes, of Currie, Wemyss, and, alternately with the Earl of Stair, of Fala,—of the High school,—of George Heriot's hospital and schools,—and of various other institutions not apparently of a civil character.

The affairs of Edinburgh have, during the present century, been brought so frequently before the legislature and the community, that it seems superfluous to repeat the details of a system of mismanagement which is terminated. There is not sufficient evidence that the disastrous state of the city-affairs has been caused by actual embezzlement or fraudulent malversation. Exaggerated expectations of the continued and indefinite increase of the city in prosperity and size may have led the managers of the corporation into an increase of expense far disproportioned to the really considerable growth of the revenue; offices were multiplied, and salaries raised; a spirit of litigation prevailed, great profusion took place in the expenses of civic parade and entertainments, and extravagant sums were expended on public buildings and other public works, as ill-adapted in general to their object of embellishing the city as they invariably were disproportioned to its finances. The expense of law-proceedings for the city, for the period from 1819 to 1832 inclusive, was £24,162; and for the same period the expenses connected with passing local acts of parliament amounted to £12,156. For the year 1819 the cost of city-entertainments was £782. In 1820, £1,066; and the election dinner of the magistrates that year cost £533. In 1821 the amount of this branch of expense was £755. St. George's church was built on a plan estimated at £18,000, but cost £38,000. The new High school was erected at an expense of £34,199, of which £22,973 was defrayed by the city. This expensive work was undertaken within a few years of the declaration of the insolvency of the city. A separate account, under the head of Petty disbursements, was in use to be kept, which averaged for the last five years of the old regime about £1,200 per annum,

The expense of keeping up the causeways, repairs of property, advances for college and churches, &c., was merely stated as casual payments; and whenever the expenditure exceeded the revenue, reference was made to a large sum of casual payments which, it was stated, would not likely occur again, although they always did occur.—The city having become insolvent as on the 1st of June, 1833, a statute was passed in August 1833, conveying its whole properties and revenues, so far as legally liable for its debts, and attachable by the diligence of its creditors, to trustees. This conveyance does not include the harbour of Leith. At that period the whole heritable and moveable property of the city,—exclusive of the Leith dues, and of the value of the High-school, the council chambers, the court-rooms at Leith, and the church-patronage—amounted in value to £271,657; and the debt to £407,181. The revenue, exclusive of the Leith dues, was £16,260. In the article LEITH will be found a view of the financial affairs of the harbours and docks. It is sufficient here to state that Government has a preferable claim upon the whole duties which the city of Edinburgh derives from Leith—both shore-dues and dock-rates—for certain advances made from 1799 to 1825, amounting in all to £265,000. The terms of the act of 1833, and, indeed, the nature of the obligations which are implied in the gift of common property to a burgh, have given rise to important and very difficult questions between the creditors and the magistrates, as to what part of the common good of the burgh is attachable for its debts. Among several remarkable circumstances which have been developed by the publication of the city's accounts, one relating to a bequest of the late Dr. Bell, has drawn much attention and censure. A sum of £10,000 3 per cent. stock having, from Dr. Bell's fund for the advancement of education, been placed in the hands of the magistrates and council in trust, to apply the dividends to the support of a school or schools in Edinburgh, on the Madras system of training, the functionaries, pressed by the claims of a clamorous creditor, disposed of the stock, and applied the greater part of the proceeds to postpone the evil day of the city's insolvency.—In conformity with an act, 1st and 2d of Victoria, cap. 55, the accounts of the city's revenue and expenditure have been exhibited in two schedules,—the one of the revenues which are wholly conveyed to the city creditors in security, and the other of customs and market-dues, over which the creditors have a security to the extent of £1,000.

Abstract View of the Revenue and Expenditure of the Corporation of Edinburgh—proper to the period from 1st August 1838 to 1st August 1839, and comprised in Schedule A of the Act 1st and 2d Victoria, cap. 55, over the whole of which the security to the City creditor extends:—

The police territory includes the limits of all the de facto town of Edinburgh, and is divided into 32 wards. The general commissioners of police are 48 in number: 12 *ex officio*, 4 elected by public bodies out of their own members, and 32 elected by rate-payers. The official are, the Lord-provost, four bailies, dean-of-guild, treasurer, and convener of the trades, the sheriff of the county and one of his substitutes, the senior resident baillie of Canongate, and the convener of the Southern districts. Those elected by public bodies are chosen by the Faculty of Advocates, the Society of Writers to the Signet, the Society of Solicitors in the Supreme courts, and the Merchant company. There are also 64 Resident commissioners, each ward electing 2. Some idea may be formed of the management of the police established from the following items:—The total income for the year 1839-40, applicable to the watching department, amounts to £13,894 1s. 9½d.; the expenditure in which is £15,292 18s. 2½d.; thus showing a deficiency in the amount assessed for this branch of £1,398 16s. 4½d. The total income applicable to lighting is £6,874 0s. 6½d.; total expenditure £6,819 3s. 2d.; thus showing a surplus of £524 17s. 4½d. The total income applicable to cleaning is £11,815 5s. 4½d.; total expenditure £12,140 2s. 6½d.; showing a defalcation of £324 18s. 2d.; thus leaving a nett deficiency of revenue, or sum short-assessed for the general purposes of the act this year, of £1,198 17s. 2d.; making altogether a total expenditure of £33,782 3s. 11d. On taking a comparative view of the revenue and expenditure of the year at present under notice, and the one previous, it appears that the total income of 1838-9, amounted to £30,439 18s. 6d.; and that of 1839-40 to £32,583 6s. 9d.; being an increase in favour of the latter year of £2,143 8s. 3d. The gross expenditure for the year 1838-9, is £30,982 3s. 0½d.; and that of 1839-40,

* By act of Council, the collection of the one per cent. impost was suspended for 1838-9, and the above sum of £165 1s. 1d. is for arrears of previous years.

£33,782 3s. 11d.; proving a nett increase upon the whole of £2,800 0s. 1½d. This apparently large increase in the expenditure of the last year may in some measure be accounted for by the fact, of £1,371 6s. 6d. having been paid for property purchased for watch and engine-houses, besides other incidental sums which are not mentioned in the disbursements of the previous year.

The freedom or burgess-ship of the city is obtained by payment of a fixed sum, or by serving an apprenticeship in some one of the crafts or trades, by propinquity to former burgesses, or by presentation. The price of a burgess-ticket to a stranger is £16 9s. It is £6 5s. 6d. if claimed in right of a father or wife; and if in right of apprenticeship to a freeman, it is £8. Burgess-ship is an indispensable qualification of eligibility to the magistracy; and the burgesses have also the exclusive privilege of carrying on their respective trades within certain boundaries. There are 14 incorporated trades, which were formerly represented in the town-council:—1. Waulkers; constituted by seal of cause, 20th August, 1500. 2. Surgeons; seal of cause, 1st July, 1505; Crown charters, 13th October, 1506; 11th May, 1567; 6th June, 1613; statutes, 1641, 1670; Crown-charter, 28th February, 1694; statute, 1695. 3. Skinners; seals of cause, 1586, 1630. 4. Furriers; act of council, 7th September, 1593; 5th April, 1665. 5. Goldsmiths; seal of cause, 20th August, 1581; Crown-charters, 3d January, 1586; 14th December, 1687. 6. Hammermen; seal of cause, 2d May, 1483. 7. Wrights; act of council, 15th October, 1475. 8. Masons; act of council, 15th October, 1475. 9. Tailors; seals of cause, 26th August, 1500; 20th October, 1531; 11th November, 1584; royal charters, 18th November, 1531; 4th June, 1594. 10. Baxters; before 1522. 11. Fleshers; seal of cause, 11th April, 1488. 12. Cordiners; seals of cause, 28th July, 1449; 26th November, 1479; 1st February, 1586; Crown-charter, 6th March, 1598. 13. Websters; seals of cause, 31st January, 1475; 27th February, 1520. 14. Bonnet-makers; seal of cause, 31st March, 1530; —, 1684. The corporation of Candlemakers was constituted by charter from the magistrates, 5th September, 1517; confirmed by royal charter, 4th May, 1597; and ratified by act of parliament, 17th July, 1695, which conferred the usual privileges of incorporated trades. The corporation of Barbers, originally united with the Surgeons, had a separate constitution by seal of cause, granted by the town-council in 1722. Neither of these last-mentioned corporations were represented in the conveyenry or the town-council. All the trades choose their own deacons.

Four subordinate districts—Canongate, the Abbey Sanctuary, Portsburgh, and Calton—are included in the parliamentary boundaries and police territory of Edinburgh, and are compact with it in architectural continuity, but have separate burghal jurisdictions. Canongate is one of the most ancient burghs of regality in Scotland, and had charters from David I., Robert I., and Robert III. The abbots of Holyrood had the superiority of the burgh, and are stated to have appointed as its earliest sett two bailies, a treasurer, and council, with right to make burgesses and craftsmen, and to hold courts civil and criminal, with privilege and liberty of chapel and chancellery, by issuing briefs, and serving the same before such courts. These powers and privileges, with certain feu-duties and other property, they afterwards conveyed to the community, reserving nothing but the bare superiority of the burgh. The abbots continued superiors till the Reformation. Robert Stewart, commendator of Holyrood, exchanged the abbacy

for the temporality of the bishopric of Orkney, with Adam, bishop of Orkney. The superiority passed successively into the hands of Sir Lewis Bellenden of Broughton, and others, and was at last acquired by the city of Edinburgh about the year 1630. The only property belonging to the burgh consists of the superiority of certain properties within the burgh the right to levy petty customs, market-dues, and cause-way mail; and an annual allowance from the police-establishment of Edinburgh, "in lieu and place of 1-4th part of the monies arising from the sale of the dung or fuilzie of the streets of Canongate and Pleasance," which had previously belonged to the burgh. The burgh has no debt. The magistrates have not, for a number of years, exercised their burghal jurisdiction in criminal matters. They hold a weekly court for civil causes, in which they dispose of the same classes of questions that are competent to sheriffs and magistrates of royal burghs. They also hold weekly a small debt court, in which causes not exceeding £5 sterling are tried *viva voce*. The magistrates act also as justices of the peace within the territory of the burgh, in all matters falling under the cognizance of justices; and are assisted by an assessor, who is a member of the Faculty of Advocates, and is appointed by the town-council of Edinburgh as superiors of the Canongate. The jurisdiction extends over the whole territory of the burgh, including Canongate Proper, the Abbey of Holyrood house, Pleasance, North Leith, and Coal-hill. None but burgesses or freemen of the burgh are entitled to carry on trade or manufactures within the bounds; and in those callings which fall within the exclusive privileges of the incorporated crafts, it is necessary, besides the qualification of burgess, to be an entered member of the particular craft. The fee for admission as burgess is, to a stranger, £3 3s.; but to the children of a burgess only £1 11s. 6d. The number of burgesses cannot be exactly ascertained; but it has been estimated to amount to about 400. There are eight incorporated crafts, all enjoying exclusive privileges, and possessed of funds, which are appropriated to the support of poor members and the widows of deceased members. These are hammermen, tailors, wrights, bakers, shoemakers, weavers, fleshers, and barbers.

The Abbey court is of a peculiar nature and jurisdiction. During the time of popery the Abbey of Holyrood possessed the privilege of sanctuary in common with many religious houses. After the Reformation it continued as a royal palace, to be regarded as an asylum for debtors, and perhaps petty offenders, and it still retains its privilege of exemption from personal arrest for civil debts. This privilege has been recognised by various decisions of the supreme court, and by an act of the Scottish parliament in 1696, and subsequently by the various acts of the imperial parliament called the Bankrupt acts. The bailie of Holyrood is appointed by commission from the Duke of Hamilton, as hereditary keeper of the palace, and holds his office during pleasure. His commission gives him power to appoint a substitute, and to name fiscals, clerks, and other officers of court. The jurisdiction of the bailie is that of regality; and it was not affected by the act abolishing heritable jurisdictions, being a royal residence and a regality independent of a superior. The jurisdiction is both criminal and civil, and, from the diet-books of court, the bailie seems to have exercised it at different times to a very considerable extent. It is in some respects privative. The bailie alone can grant warrants against persons within his jurisdiction, and his concurrence is necessary to the civil warrant of other judges. The boundaries of the sanctuary are very extensive, reaching beyond the precincts of the

palace, and comprising the King's park, Salisbury-crag, and the greater portion of Arthur's-seat.

The burgh-of-barony of Portsburgh comprehends two districts,—Easter and Wester Portsburgh, which are discontinuous. Easter Portsburgh lies wholly to the east of Bristo-street, and has been described as comprehending the east side of Bristo-street from Bristo port southward, Potter-row, Lothian, and South College-streets, Drummond-street to opposite to Adam-street, and Nicolson-street to nearly the entry to the York hotel on the west, and to the Surgeon's hall on the east. Wester Portsburgh lies wholly to the west of Wharton-lane and the Vennel, and has been described as comprehending the main street of Wester Portsburgh on both sides, from the corn-market and foot of the Vennel to Main point; the whole of Laurieston, both sides, from Wharton-lane to Lochrin, including Portland-place, Cowfeeder-row, on the west, and to Burntsfield-links on the east, including Home and Leven streets. There lies interjected between the two the whole territory lying along the southern boundary of Heriot's work and the old city-wall, comprehending the west side of Bristo-street, Park-place, Teviot-row, the Meadow-walk, the grounds of Watson's hospital, the lying-in-hospital, &c. This burgh has no corporation-property, revenue, or debts. A baron-bailie and two resident bailies are annually appointed, and there are a clerk and procurator-fiscal. These are all officers appointed by the city of Edinburgh in its character of baron and superior; and any expense connected with their establishment is defrayed by the city. There has been no jurisdiction exercised of late years within the Portsburghs, either by the baron or resident bailies. Formerly courts were occasionally held for recovery of debts under 40s., and for deciding summary complaints for thefts, breaches of the peace, &c. But for a number of years past the former have been taken to the small debt courts of the county, and the latter to the police court. There are no burgesses and guild-brethren in Portsburgh; but there are eight incorporated trades deriving their rights from John Touris of Inverleith.

The lands of Calton formed part of the barony of Restalrig, belonging to Lord Balmerino. The magistrates and council of Edinburgh having bought them from Lord Balmerino, obtained, in 1725, a charter from the Crown, disjoining them from the barony and burgh-of-barony of Restalrig, and annexing them to the city of Edinburgh. This charter, however, does not erect the lands into a burgh-of-barony. The town-council appoint each year one of their number to be bailie of Canongate and Calton; but in the latter no judicial functions are exercised by him, nor does it appear that he has right to exercise any jurisdiction. The bailiary of Calton extends from the brewery a little to the eastward of the Shotts foundry at the north back of Canongate, westward along the street so called, including all the houses next the Calton-hill, and turning round and including the High Calton, passing through the archway of the Regent bridge along Calton-street, and down the street leading to Wordsworth's stables, including all the buildings on the side of that street next the hill, and down to the Greenside well at the north-eastern extremity of the city's property of Calton-hill, whence the boundary crosses over the hill by the wall of the Regent-terrace garden and the east end of the High school to the brewery above-mentioned, all the intermediate property being included. As observed, however, in a report by the town-council, "it consists of several fragments, the limits of which, since the erection of the Regent bridge and the extension of the royalty in

that quarter, it is extremely difficult to ascertain." The only corporation connected with the Calton is that of the incorporated trades.

Manufactures.

The manufactures of Edinburgh are of very trivial importance; and, in 1831, employed only 792 males of 20 years and upwards. In 1828 the number of hand-loom throughout the entire county of Mid-Lothian was only 300; and in 1838 they were only 108, of which 48 were factory looms, and 60 plain looms. The making of shawls and plaids, composed of silk and wool, of very rich designs and excellent quality, was for a time the chief. The shawl-weaving is all conducted in factories, and at present yields to the workman 10s. a-week in clear wages. The Edinburgh silk-yarn company, established in 1839, have a large factory employing 32,252 spindles, and 64 dressing-frames. The number of hands employed in 1841-2 was 400. The other departments of manufactures are net-weaving, lace-making, the weaving of haircloth and silk, and coach-building.—The Merchants' company is intimately connected with the guildry, and has the virtual patronage of three public charities. The company was established by royal charter, dated 19th October, 1631, which erected "the then hail present merchants, burgesses, and gild brethren of the burgh of Edinburgh, who were importers or sellers of cloths, stuffs, or other merchandize, for the apparell or wear of the bodies of men or women, for themselves and successors in their said trade in all time coming, in a society or company, to be designed the Company of Merchants of the city of Edinburgh," which was ratified by act of parliament, 1693. A subsequent charter, and two successive acts of parliament, the last dated 28th May, 1827, have regulated the dues of entry, and authorized the company to admit all persons "being merchants, burgesses, and gild brethren, or entitled to be chosen merchant-councillors or magistrates of the city of Edinburgh." The rate of entry-money, as regulated by the last statute, is £63. The company's stock, at September, 1834, was £23,776. The income from interest of money, rents of real property, and entry money, &c., amounts to about £1,100 per annum, and is expended chiefly in supporting widows and decayed members. Edinburgh, as to water, coals, facilities of communication, and relative position, is peculiarly well-situated for manufactures; but hitherto it has expended its physical advantages chiefly in promoting the health and comfort of its inhabitants. Such trade as it has is carried on principally through Leith, and will be noticed in the article on that port.

Publishing Trade.

Literature may, in a sense, be called the staple produce of the metropolis. In the printing of law papers for the legal functionaries, of bibles and school-books for general diffusion over Scotland, of numerous periodicals of national circulation, and of volumes or ponderous works of popular attraction or standard and enduring value, a proportion of operatives and of literary persons—particularly of the former—incomparably greater is employed in Edinburgh than in any other town of the three kingdoms except London. So late as near the close of the 18th century, literature, in the strict sense of the word, was little more an article of manufacture than in any Scottish provincial town; but it started up with an energy, and proceeded with attractions, and increased with a rapidity which have eventually earned for the city the name "Modern Athens," in compliment more to her learnedness and her being the emporium of the nation's means of knowledge, than even

to the characteristic features of her topographical position. The *Encyclopædia Britannica* was the first large work which the Edinburgh press produced; and, bulky and magnificent as it was, it gave but imperfect indication of the spirit of achievement which had been roused. The beautiful and incessant and very varied productions of the Ballantyne press, combined with the princely speculations of Constable, and the corruscations of talent which played from the literary coteries of the Edinburgh Review and Blackwood's Magazine, were the first demonstrations to the world that Edinburgh was taking her place as a manufactory and a mart of literature. But the machinery of publishing was as yet chiefly propelled by one individual, and after his death, seemed, for a time, to be obscured partially from view; but it has since been greatly multiplied in its powers, and advantageously distributed among many possessors, and works with the vigour and the glee of healthful competition. The periodicals of the city—though scarcely a fair index of its productiveness in the more valuable department of standard works and serials—are sufficiently numerous and important to indicate its standing. In 1840 the periodicals were the Edinburgh Review, the Edinburgh Philosophical Journal, the Edinburgh Medical and Surgical Journal, Tait's Edinburgh Magazine, the Phrenological Review, the Journal of Agriculture, Blackwood's Edinburgh Magazine, Chambers' Journal, the Presbyterian Review, the Edinburgh Christian Instructor, the United Secession Magazine, the Scottish Congregational Magazine, the Scottish Baptist Magazine, the Scottish Christian Herald, the Scottish Missionary Record, and several annual publications. The Newspapers of the city are the Edinburgh Evening Courant and the Caledonian Mercury, three times a-week; the Gazette, the Observer, the Advertiser, the Scotsman, the New North Briton, and the Scottish Pilot, twice a-week; and the Weekly Chronicle, the Weekly Journal, the Saturday Evening Post, and the Edinburgh, Leith, and Glasgow Advertiser, once a-week.

Banks, Societies, &c.

The chartered Banks of Edinburgh are three,—the Bank of Scotland, established in 1695, originally upon a stock of £100,000; the Royal Bank of Scotland, established in 1727, on a capital of £111,000; the British Linen company, instituted in 1746, on a capital of £100,000. These all, after their establishment, very greatly increased their capitals. The Joint-stock banks are four,—the Commercial Banking company of Scotland, established in 1810, on 500 shares of £500 each; the National Bank of Scotland, established in 1825, on a very large number of shares of £100 each; the Eastern bank of Scotland, and the Edinburgh and Leith bank. The private banks are two,—that of Sir W. Forbes, J. Hunter & Co., and that of Alexander Allan & Co. There are also branch-offices of the Clydesdale banking company, and the Western bank of Scotland.—Of the Insurance companies belonging to Scotland, and branch-offices of English companies, the list is numerous. The Friendly Insurance company was established in 1720 for the private benefit of its founders, but has since become a public institution. The Caledonian Fire Insurance company was instituted in 1805, and received a royal charter in 1810. Its capital is £15,000, divided into shares of £100. The Hercules Fire Insurance company was instituted in 1809, with a capital of £75,000, by shares on the same plan as that of the Caledonian. The North British Fire-office was established in 1809, with a capital of £500,000. The Scottish Widows' Fund and Life Assurance society was established in 1813, on the model of the

Equitable society in London. The Insurance Company of Scotland was instituted in 1821, on a very wide scale of proprietary. The Standard Life Assurance company has a capital of £500,000. The Edinburgh Life Assurance company was established in 1823, with a capital of £500,000. The Scottish Union Insurance company was instituted in 1824, with a capital of five millions, in £20 shares. A native Sea Insurance society was established in 1816. The following have branches in Edinburgh:—The Sun Fire-office of London; the Royal Exchange Fire and Life Assurance company; the Clerical, Medical, and General Life Assurance society; the Norwich Union Fire and Life Insurance societies; the West of Scotland Fire Insurance company; the Scottish Amicable Life Assurance company; the West of Scotland Life Insurance and Endowment company; the European, the Atlas, the Alliance, the Guardian, the Palladium, the West of England, the Scottish Equitable, the Law Life, the Economic, the Pelican, the Eagle, the Westminster, the Asylum Foreign and Domestic, the Universal Life, the Dissenters, and the Yorkshire Fire and Life societies. Among Provident societies may be named the Grand Lodge of the Free Masons of Scotland; the Ministers' Widows' Fund, instituted in 1744; the Society for the Sons of the Clergy, established in 1790; the Friendly Society of Dissenting Ministers, instituted in 1797; the Medical Provident Institution of Scotland, established in 1820; the Society for Relief of the Widows and Children of Schoolmasters, established in 1807; the Friendly Society of the Ministers of the Relief Synod, instituted in 1792; the Widows' Fund of the United Secession Synod; the Episcopal Fund; the Caledonian Gardeners' society, established in 1792; besides numerous societies and funds connected with particular professions, institutions, or localities.—The Public libraries, additional to the three great ones which have been noticed, are the Edinburgh Subscription-library, instituted in 1794; the Edinburgh Select Subscription-library, South-bridge, instituted in 1800; the Edinburgh Mechanics' Subscription-library, 7, James' Court, instituted in 1825; the Edinburgh Subscription and Circulating Select library, 7, South St. Andrew-street; the Edinburgh Southern District Subscription-library, 1, Nicolson-square, instituted in 1816; and the Bakers' library, St. David's Lodge, Hyndford's-close, instituted in 1828.—A considerable number of miscellaneous societies belong to the metropolis. The Wernerian Natural History society was formed in 1808, and the Plinian society in 1823, for promoting the study of Natural History. Other societies indicate their objects by their titles. Such are the Diagnostic society, instituted in 1816,—the Medico-Chirurgical society,—the Royal Physical society,—the Royal Medical society,—the Hunterian Medical society,—the Harveian society, instituted 1782,—the Speculative society,—the Select Forensic society,—the Juridical society, instituted 1773,—the Scots Law society, instituted 1815,—the Philalethic society, instituted 1792,—the Adelphi-Theological society, instituted 1758,—the Theological society, instituted 1776,—the Edinburgh Academical club, instituted 1828,—the Phrenological society, instituted 1820,—the Edinburgh Harmonists' society,—the Edinburgh Royal Naval club,—the Caledonian United Service club,—the Anatomical society, instituted in 1833,—the Classical society, instituted in 1827,—the Church Law society, instituted in 1827,—the Jurisprudence society,—the Edinburgh Ethical society for the study and practical application of Phrenology,—the Edinburgh Society for the Diffusion of Information on Capital Punishments,—the Royal Northern Yacht club,—the Skating club,—the Duddingston Curling

society,—the Edinburgh Company of Golfers, instituted 1744,—the Bruntsfields Links Golfing society,—the Edinburgh Burgess Golfing society,—the Thistle Golf club,—the Brunswick Cricket club, established in 1830,—the Edinburgh Chess club, instituted in 1822,—and the Edinburgh Quoiting club. The Celtic society was instituted in 1820, for promoting the general use of the ancient Highland dress in the Highlands of Scotland, and the encouraging of education in that part of the country, by distributing prizes among its schools. The Highland club, instituted in 1825 for objects of a similar nature, has an annual fete—frequently on the island of Inchkeith—at which there are gymnastic exhibitions, games, and prize-shooting. St. Fillan's Highland society, instituted 1819, also for objects of a similar nature, has an annual fete at St. Fillan's, in Perthshire, where there are games. The Six Feet club was instituted in 1826, chiefly with a view to the practice and encouragement of gymnastic exercises, and games. The members—who must be all six feet in height—have an annual fete and dinner. They are also constituted a guard-of-honour to the hereditary Lord-high-constable of Scotland. The Royal Company of Archers was instituted in 1703, by a charter of Queen Anne, and is the Queen's Body-guard in Scotland. The association has a great number of members, chiefly in the upper ranks of society, who are distinguished by a very tasteful dark-green tartan uniform. The company has a hall of meeting in Buccleugh-street, near the end of the Meadows, where they practise archery.

The Religious and Philanthropic institutions are numerous. Most are sufficiently described by their titles. Such are the Edinburgh Bible society,—the Edinburgh Church of England Missionary association,—the Scottish Bible society,—the Edinburgh Auxiliary Bible society,—the Edinburgh Auxiliary Naval and Military Bible society,—the Scottish Missionary society,—the Edinburgh and Leith Auxiliary of the Irish society,—the Baptist Home Missionary society for Scotland,—the Edinburgh Auxiliary to the London Missionary society,—the Edinburgh association in aid of the Moravian missions,—the Society for promoting Christianity among the Jews,—the Society for propagating Christian knowledge, incorporated in 1709,—the Society for promoting Religious knowledge among the Poor, instituted in 1786,—the Edinburgh City mission, instituted in 1832,—the Society for promoting Christian knowledge,—the Edinburgh Gratis Sabbath-school society, instituted in 1797,—the Edinburgh Village Sabbath-school society, instituted in 1818,—the Sabbath-school Union for Scotland,—the Edinburgh Auxiliary to the Irish Evangelical society,—the Society for the support of Gaelic schools,—the Edinburgh Ladies' association in aid of the Society for the support of Gaelic schools,—the Edinburgh Religious Tract society, instituted in 1793,—the General Assembly's Committee for the propagation of the Gospel in Foreign parts,—the Edinburgh and Leith Seaman's Friend society, instituted in 1820,—the Highland Missionary society,—the Edinburgh society for promoting the Religious interests of Scottish settlers in British North America,—the Antipatronic society of the Church of Scotland,—the Edinburgh Young Men's association for promoting the interests of the Church of Scotland,—the Voluntary Church association,—the Edinburgh Young Men's Voluntary Church association,—and the Edinburgh society for the suppression of Intemperance.

Markets, &c.

Edinburgh is well-supplied with all civic appli-

ances for the health and comfort of its population. A public market, for the sale of cattle and country produce, is held weekly in the spacious area of the Grassmarket, so situated both as to relative position to the other localities of the town, and avenues of access from the great roads, as to occasion little nuisance by the influx and efflux of the stock, live or inert, which is brought for sale. In the afternoon of the market-day, the area of the market, after having been freed from cattle, is occupied by horse-dealers exposing to sale their horses. Annually, in November, All-Hallow fair is held during two days for the sale of horses, sheep, and cattle. The town-markets of the city, situated under the North bridge, consist of a series of terraces, terminating, in the hollow, in a large quadrangular area which is surrounded by a covered piazza, and partitioned into various departments. Large quantities of fish are brought from the coast, chiefly from the fishing-towns of Newhaven and Fisher-row, and sold, in a fresh state and at low prices, on the streets. Smaller town-markets than the central suite, are open in West Nicolson-street, in Dublin-street, and at Stockbridge; and a sort of dismembered market is dispersed, in the form of single or clustered shops, for the sale of flesh or vegetables, throughout almost every part of the city.—Edinburgh is brilliantly lighted at night with coal-gas; and first enjoyed the luxury in the winter of 1818. The Edinburgh Coal Gas company were formed in 1817, and incorporated in the following year, with a capital of £100,000, in shares of £25. Their premises are on the north side of the North back of the Canongate, opposite New-street. A company for lighting the city with gas manufactured from oil was formed in 1824; but, having entirely failed in attempts to achieve its object, it became united to the Coal Gas company. A second coal-gas company, known as the Edinburgh and Leith company, was formed a few years since, and is now in full and successful operation. Edinburgh is abundantly and facilely supplied with coals for fuel by means of the Union canal, the Dalkeith railway, and ample communication with coal-pits in its vicinity. The fuel is good in quality, and, in general, moderate in price.

Water Company.—The city is supplied with water from the northern declivity of the Pentland hills. In 1621 the magistrates obtained an act of parliament empowering them to cast "seuchs and ditches" in the lands between the city and the Pentlands, and to construct means of bringing water; but, during half-a-century, they seem to have found no engineer, or to have themselves wanted resources to execute their project. In 1674, they paid Peter Brusch, a German, £2,950 for laying down a leaden pipe, 3 inches in diameter, from Comiston, 4 miles west from the city, to a reservoir on the Castle-hill. Soon after new springs were added to the fountain, and produced more water than the pipe could convey. A new pipe of 4 inches in diameter now began to be laid, but was slowly carried on, and not completed till 1722; and then it had to be fed with the waters of additional springs. A new act of parliament was obtained, authorizing supply to be brought from any lands within 3 miles of the original fountain at Comiston. In 1787, a cast-iron pipe, 5 inches in diameter, was laid as an additional medium of supply. In 1790, another, 7 inches in diameter, was laid from springs on the lands of Swanston. But the supply being found inadequate to the increased demand, a joint-stock company was formed in 1810, and incorporated in 1819, to carry pipes from two great springs, 8 miles distant, at Crawley and Glencorse. The present supply, however, is still unsatisfactory.

Canal and Railways.—The numerous facilities of communication which Edinburgh enjoys by sea, as well as its modes of communication with Fife and the north-east of Scotland, will appropriately fall to be noticed in the articles GRANTON, LEITH, NEWHAVEN, and GREENGLASS. Its land-communications by coach, waggon, and cart, are too many and minute to bear even an attempt at enumeration. The Union canal and the railways, however, are so important to the city, and so immediately connected with it, as to demand a moment's attention.—In 1817, an act of parliament was obtained, giving power to a joint-stock company to cut a canal from Edinburgh to the Forth and Clyde canal, at a point about 4 miles before the latter's communication with the Forth. The canal was begun in the same year, and completed in 1822. The chief objects of it were the transmission of heavy goods, and the conveyance of passengers between Edinburgh and Glasgow, the importation to Edinburgh

of large supplies of coal from places to the west, and the exportation of the manure of the city. The eastern termination, called Port-Hopetoun, is on a plain, half-a-mile south-west of the castle, and has occasioned the erection around it of an important suburb. The canal, though a great benefit to the town, has drained heavy losses from the shareholders: see UNION CANAL. The Great line of railway between Edinburgh and Glasgow was begun to be cut in 1839: see article EDINBURGH AND GLASGOW RAILWAY.—The Dalkeith railway has been described under the head DALKEITH.—The Leith, Granton, and Newhaven railway commences at the new terminus of the Edinburgh and Glasgow railway, at the east end of Prince's-street gardens, and proceeds, by a tunnel, under the northern ridge of the city to the foot of Scotland-street, and thence to Trinity suspension pier, in nearly a straight line. The whole length of the railway to Trinity is 13,000 feet, or about 2½ miles; that of the tunnel—opening at Canonmills—about 2,800 feet. Immediately after crossing the water of Leith, it sends off a branch to the harbour and docks of Leith; and another branch, or rather an extension of the line, proceeds from Newhaven to Granton: see articles GRANTON, NEWHAVEN, and LEITH.—From Granton pier, the line of communication will be continued northwards by the ferry to Burntisland, and thence by railway to Perth: see BURNTISLAND; while another railway line is projected from a point on the Edinburgh and Glasgow railway about 5 miles distant from Edinburgh to Queensferry; starting on the north shore of the frith at Inverkeithing, and thence running through Fifeshire and Kinross-shire to Perth, a total distance of 43 miles: see PERTH.—The North British railway will place the Edinburgh and Glasgow railway in connexion with the Berwick and Newcastle, and thus complete the railway connexion with London. It proceeds along the eastern coast by Dunbar, sends off a branch to Haddington, and will be 59 miles in length. The Edinburgh and Hawick railway, a prolongation of the Dalkeith railway, will be 45 miles 28 chains in length, and it is contemplated to extend the line to Carlisle: see HAWICK. By the Caledonian railway also Edinburgh will be placed in connexion with Carlisle by a line traversing the central districts of the south of Scotland, by Lanark, Moffat, Lockerby, and Ecclefechan.

Church and School Statistics.

Since 1834 several additional *quoad sacra* parishes have been created. The ancient royalty of Edinburgh, which composed the whole city till the year 1767, comprehends 9 parishes. In that year, and on three subsequent occasions, viz., in 1785, 1786, and 1809, the boundaries of the city were enlarged by the addition of what is now called the extended royalty of Edinburgh; and within this extended royalty four additional churches were erected, and parishes were assigned to them, at different periods, prior to the year 1834. The Canongate forms another parish, which, although a suburb, and virtually a part of the city, is subject to a separate but subordinate magistracy; and there is likewise the parish of St. Cuthbert, or West Church, which is, in the legal acceptance of the term, a landward or rural parish, although large portions of the suburbs of the city are contained in it. In the year 1834, the General Assembly passed an act declaring the ministers of chapels-of-ease entitled to the same ecclesiastical status as the ministers of parochial churches, and appointing them to the charge, *quoad sacra* or *spiritualia*, of certain districts adjacent to their respective chapels, which were then erected into parish churches. In this way 6 new parishes, *quoad spiritualia*, were erected within the city of Edinburgh and its suburbs; and the General Assembly also formed what was called a seventh parish, which, however, has no territorial limits assigned to it, but comprehends all the Highland population of Edinburgh and Leith, for whose benefit service is performed in the Gaelic language in what was formerly the chapel-of-ease. The 14 old churches in the royalties and Canongate were built at different periods, and are endowed from certain public funds.

HIGH CHURCH. This parish, situated in one of the most dense parts of the Old town, has an area of one-sixtieth part of a square mile, or 51,222 square yards. Population, in 1831, 2,614; in 1841, 2,785. Number of inhabited houses, in 1841, 466; of families, 646. According to an ecclesiastical census of 1835, the population was then estimated at 2,557; of whom 905 belonged to the Estab-

fishment, 1,383 belonged to other denominations, and 269 were of no ascertained religious connexion. The parish-church—part of St. Giles—is of remote but unknown date, and was repaired in 1817 and 1830. Sittings 1,399. The charge is collegiate. As to this parish, and all the following, down to the 13th, or St. Stephen's inclusive, whether collegiate or single, the patron is the Town-council, and the stipend is variable, but, in 1834–5, was £548 4s. 6d.—The Scottish Episcopal congregation of St. Paul's is of remote origin, but is supposed to have been established about 1688. The church is situated in Carrubber's-close, and is believed to have been built before the year 1688. The building—originally a ware-room—is supposed to have been occupied, in its upper floor, by one of the Edinburgh bishops in 1688; and was purchased by the congregation, partly in 1741 and partly in 1786. Sittings 360. Stipend variable; but, in 1835, £125 10s.—A congregation which assembled in Carrubber's-close, and assumed no particular denomination, was established in August, 1833, under the ministry of the Rev. Walter Tait. The chapel was private property, and rented at £20 a-year. Sittings 700. Stipend variable; but, from 22d February till 23d November, 1835, it was £199 14s. 2d.—There were in the parish, in 1834, 5 schools, attended by a maximum of 516 scholars. All were non-parochial; one was a Roman Catholic school for females, attended by about 250.

OLD CHURCH. This parish, situated in the Old town, is extremely limited in extent, measuring less than 800 feet from east to west, and not more than 500 feet from north to south, and containing only one-hundredth part of a square mile, or 30,522 square yards. Population, in 1831, 1,952; in 1841, 2,949. Houses, in 1841, 433. According to an ecclesiastical census of 1835, the population was then only 1,704; of whom 729 belonged to the Establishment, 887 belonged to other denominations, and 88 were of no ascertained religious connexion.—There were, in 1834, 3 schools, all non-parochial, attended by 244 scholars.

TOLBOOTH. This parish does not extend in any direction more than $\frac{1}{4}$ of a mile, lies wholly within the Old town, and is very densely built. Population, in 1831, 3,016; in 1841, 2,216. Houses, in 1841, 297. According to an ecclesiastical survey of 1835, the population was then 2,465; of whom 1,205 belonged to the Establishment, 980 belonged to other denominations, and 109 were of no ascertained religious connexion. The parish-church—part of St. Giles—is of remote but unknown date; and was altered and enlarged in 1831. Sittings 1,397.—A Primitive Methodist congregation was established in 1828; and, in 1835, met in a hall in James'-court, rented at £10. Sittings 250. Stipend £36 8s., with an allowance of £5 15s. for a dwelling-house.—There were, in 1834, 7 schools, attended by upwards of 800 children. One was the Sessional school, intended for the benefit of all the parishes of Edinburgh; supported by contributions from the congregations of the various parish-churches, and attended by 343 scholars, who each paid $\frac{1}{2}$ d. per week.

TRINITY COLLEGE. This is an original parish, wholly in the town, and contains an area of 52,711 square yards, or one fifty-eighth part of a square mile. Population, in 1831, 4,244; in 1841, 2,314. Houses, in 1841, 359. According to ecclesiastical survey, in 1835, the population then was 3,630;* of whom 1,894 belonged to the Establishment, 1,655 belonged to other denominations, and 171 were not attached to any religious sect. The parish-church

was built about 1,470, and was considerably altered in its internal arrangements about 1812, and again in 1835. Sittings 797.—The congregation of Lady Glenorchy's chapel was established in 1775, by Lady Glenorchy, as a chapel in connexion with the Church of Scotland. It has now a *quoad sacra* district attached to it, of which the population, in 1841, within the College parish, was 501. Sittings 1,514. The charge, in 1835, was collegiate. Stipend of the first minister, £400; of the second, £200. There is attached to the chapel a school attended by 100 or 120 poor children. In 1834 there were in the parish 3 schools, attended by 210 scholars.

NEW NORTH. This parish is believed to have been formed, by authority of the town-council, about the year 1599. It lies wholly within the ancient royalty, and is of exceedingly contracted extent, containing only 22,354 square yards, or one hundred and thirty-eighth part of a square mile. Population, in 1831, 1,350; in 1841, 2,627. Houses, in 1841, 337. According to an ecclesiastical survey of 1835, the population then was 577;† of whom 419 belonged to the Establishment, 291 belonged to other denominations, and 67 made no ascertained profession of religion. In 1835 the congregation of the Establishment met in Brighton-street chapel, in St. Cuthbert's parish. Sittings 1,257. The only place of worship within the parish, in 1835, was a preaching-station in the Lawnmarket.—There were, in 1834, 3 schools, attended by 240 scholars, and supported by the voluntary contributions of the parishioners.

TRON. This is wholly a city-parish, situated in the Old town, and contains an area of 34,822 square yards, or one eighty-eighth part of a square mile. Population, in 1831, 3,009; in 1841, 2,498. Houses, in 1841, 401. According to ecclesiastical survey, in 1835, the population then was 2,632; of whom 1,186 belonged to the Establishment, 1,278 belonged to other religious denominations, and 168 were of no ascertained religious connexion. The parish-church was built in 1641, and resealed in 1815. Sittings 823.—The United Secession congregation of Cowgate was established in 1828. The chapel was built in 1771 by the congregation of Episcopalians now in St. Paul's chapel, York-place; and was purchased by its present occupants. Sittings 1,792. Stipend £210, with £12 allowance for sacramental expenses. A city missionary is supported by the congregation to attend to the district of the Cowgate.—The Scotch Baptist congregation meeting, in 1835, temporarily in Freemasons' hall, Niddry-street, was one of two recent sections of a congregation established in 1766. Their original meeting-house, situated in the Pleasance, cost £3,800; but was sold in 1835.—The Original Burgher congregation of Skinner's-close, was established in 1801. The meeting-house, originally an Episcopalian chapel, was purchased in 1808 for £560. Sittings 355. Stipend £100, with £12 sacramental allowance.—There were in the parish, in 1834, 7 schools, attended by 560 scholars. One of them was 'the City school,' Niddry-street; and 2 of the others were Roman Catholic schools.

OLD GREYFRIARS and ST. JOHN'S. This parish lies wholly within the ancient royalty, and contains 44,627 square yards, or one sixty-ninth part of a square mile. A narrow section of it runs into the New North parish. Population, in 1831, 4,345; in 1841, 2,580. Houses, in 1841, 401. The charge was formerly collegiate; but has recently been divided into two distinct charges: one of which is now known as the parish of St. John's. Population

* The apparent decrease of the population between 1831 and 1835, or even 1841, is accounted for, in this instance and some others, by the reduction of the size of the parish in the intervening *quoad sacra* arrangement.

† The reason of the decrease in the interval from 1831, was, in this instance, the dilapidation of dwelling-houses to make way for new streets; 200 persons having been dispossessed of their houses in 1834, and 400 in 1833.

of St. John's, in 1841, 2,140. Houses 272. According to ecclesiastical survey, in 1835, the population of the old parish was then 4,247; of whom 1,697 belonged to the Establishment, 2,290 belonged to other religious denominations, and 260 were not attached to any religious sect. The parish-church was built in 1612. Sittings 1,061.—The Gaelic church, situated in the parish of Old Greyfriars, ranks as a *quoad sacra* parish-church by the Act of Assembly 1834; but it has not annexed to it any separate or definite territory. The church was built by subscription in 1809, and cost very nearly £3,000. Sittings 1,166. Stipend £280.—The Scotch Baptist congregation, Argyle-square, is one of two recent sections of a congregation established in 1766. Their place of meeting is held on a sublease, at a rent of £30. Sittings 240. The Berean congregation, Cowgate, was established near the end of the 18th century. For 35 years they occupied the Magdalen chapel; they met in a school-room rented at £2. Sittings about 50.—The Independent congregation, North College-street, was established about 1802. The chapel was built in 1802, entirely at the expense of the Rev. Mr. Aikman, its first minister, and cost upwards of £3,000. It has been recently altered and improved. Sittings 1,226. There were 2 ministers, whose joint emoluments, in 1835, did not exceed £300.—There were in the parish, in 1834, 7 schools, attended by 400 scholars. One of these was the Trades' Maiden hospital, conducted by 6 teachers.

LADY YESTER'S. This is wholly a town-parish, situated in the Old town, and contains 64,472 square yards, or one forty-eighth part of a square mile. Population, in 1831, 2,890; in 1841, 1,800. Houses, in 1841, 275. According to a survey made by a committee of Dissenters, in 1835, the population was then 2,149; of whom 702 belonged to the Establishment, 1,251 belonged to other denominations, and 196 were not known to belong to any religious body. The parish-church was built previous to 1647, and rebuilt in 1804 or 1805. Sittings 1,212.—The congregation of Original Seceders was established in December, 1820, in the parish of New Greyfriars, and removed in April, 1822, to their present place of worship. The chapel, built in 1822, cost nearly £2,400. Sittings 1,203. In 1835, the charge was collegiate; and the stipend then was £300, equally divided between the two ministers.—There were in the parish, in 1834, 13 schools, all non-parochial. The parish includes the University of Edinburgh; and, till 1839, contained also the High school.

NEW GREYFRIARS. This parish, situated in the Old town, has an area of 96,493 square yards, or one thirty-secondth part of a square mile. Population, in 1831, 4,536; in 1841, 2,481. Houses, in 1841, 344. According to ecclesiastical survey made in 1835, the population was then 3,087;* of whom 749 belonged to the Establishment, 1,332 belonged to other denominations, and 1,006 were not of any ascertained religious connexion. The population consists principally of labourers, many of them Irish. The parish-church was repaired and newly seated in 1818, at an expense of £1,518. Sittings 1,302. The United Christian church, Heriot-bridge, was established in 1828; and meet in a building, formerly a shawl manufactory, which they rented at £42. Sittings 340. Stipend about £50.—There were in the parish, in 1834, 5 schools, attended by 710 scholars. One was George Heriot's hospital, conducted by 5 teachers, and affording board and education to 180 boys; another was the Workhouse Charity school for the whole city, conducted by 2 masters, and affording board and education to 180 children;

* Between 1831 and 1835 many houses in the parish were taken down to make way for new streets.

and a third was an Infant model school, superintended by one master, and attended by 120 children.

ST. ANDREW'S. This parish, situated in the New town, was divided from St. Cuthbert's, and erected into a separate parish, by act of parliament, in 1785. Since that date, parts of it have been assigned to several parishes of more recent erection. Population, in 1831, 7,339; in 1841, 4,440. Houses, in 1841, 696. According to ecclesiastical survey, in 1835, the population appeared to be stationary, and, exclusive of the populous district of Greenside, amounted to 4,681; of whom 2,145 belonged to the Establishment, 2,184 belonged to other denominations, and 352 were not known to belong to any religious sect. The parish-church was built in 1785, and cost £7,000. Sittings 1,053. The charge is collegiate.—The United Secession congregation, Rose-street, was established in 1786. The chapel was built, in 1830, upon the site of the original church and manse, and cost £3,042 18s. 8½d. Sittings 1,363. Stipend £400, with £12 sacramental expenses.—The Scottish Episcopal congregation of St. George's, York-place, was established in 1794. The chapel was built in 1794, and cost £3,000. Sittings 642. Stipend from £280 to £290.—The Baptist congregation, Leith Walk, was formed in 1798. The chapel is the upper part of a building belonging to a private individual, and built in 1801, at a cost, it is believed, of £6,000. Sittings 1,000. The Wesleyan Association congregation was formed in December 1835, and rented for their use the Calton Convening-hall at from £30 to £35. They had also, in Chalmers-close, Trinity college parish, a place of worship, which contained about 500 sittings.—The Independent Baptist congregation, Clyde-street, was established in 1824. Their place of meeting is the hall of the Phrenological society. Sittings 200. No stipend.—The Roman Catholic congregation, Broughton-street, will be noticed under the parish of St. Cuthbert.—In 1834, there were in the parish 17 schools, attended by 1,265 scholars. All the schools were non-parochial.—The district of Greenside has been erected into a parish, of which the population, in 1841, was 3,105. Houses 526.

ST. GEORGE'S. This parish, situated in the New town, was disjoined from St. Andrew's and St. Cuthbert's, about the year 1814, by the town-council and presbytery of Edinburgh. It is partly landward, extending from Hanover-street to the farthest boundary of Coates; and is probably 1½ mile in length, and ½ a mile in breadth; but almost all the inhabited houses are within the town. Population, in 1831, 7,338; in 1841, 5,518. Houses, in 1841, 980. According to an ecclesiastical survey of 1835, the population then was 7,523; of whom 3,471 belonged to the Establishment, 2,688 belonged to other denominations, and 1,364 were not known to belong to any religious sect. The parish-church was built in 1814. Sittings 1,687.—The Baptist congregation, Rose-street, was established about 1806. The chapel originally belonged to an Episcopalian congregation; and, in 1818, was purchased, altered, and enlarged, at a cost of £2,500. Sittings 750. Stipend about £105.—In 1834, there were in the parish 28 schools, attended by 1,330 scholars.

ST. MARY'S. This parish, situated in the New town, was separated from St. Andrew's in 1824, by the town-council and the presbytery of Edinburgh. Population, in 1831, 6,587; in 1841, 6,724. Houses, in 1841, 1,127. According to ecclesiastical survey, in 1835, the population, exclusive of districts in which there might be nearly 1,000 persons, was then 5,877; of whom 3,144 belonged to the Establishment, 2,528 belonged to other denominations, and 205 were not

of any ascertained religious connexion. The parish-church was built in 1824, and cost about £13,000. Sittings 1,646.—The Episcopal congregation of St. Paul's, York-place, was formed about 1735, and removed to its present place of worship in 1818. The church was built in 1818, and cost £13,533 11s. Sittings 1,036. The charge is collegiate. Stipend of each minister £300.—The Independent congregation, Albany-street, was established in 1808 in the parish of St. Andrew's, and removed to its present place of worship in 1817. The chapel was built in 1816, and opened in 1817, and cost £4,009. Sittings 878. Stipend £200.—There is, in the parish, a Glassite congregation; and Mr. Tait's congregation, mentioned in High Church parish, has erected a neat chapel adjoining to the Independent chapel.—In 1834, there were 26 schools, attended by a maximum of 647 scholars.

ST. STEPHEN'S. This parish, situated in the New town, was disjoined from the conterminous parishes in 1828, by the presbytery of Edinburgh and the teind court. Population, in 1831, 5,772; in 1841, 6,754. Houses, in 1841, 1,092. According to ecclesiastical census, in 1835, the population then was 6,689; of whom 3,713 belonged to the Establishment, 2,343 belonged to other denominations, and 633 did not profess attachment to any religious body. The parish-church was built in 1828. Sittings 1,784.—In 1834 there were 12 schools. Three were subscription-schools; a fourth was the Edinburgh Academy for Latin and Greek, attended by 300 boys; a fifth was the Circus school, attended by 290 children; a sixth was the Institution for the Deaf and Dumb, attended by 60 young persons.

CANONGATE. This parish contains 484 Scotch or 605 English acres; and measures, in extreme length, $1\frac{1}{2}$ mile, and in extreme breadth 1 mile and $\frac{1}{4}$ ths of a furlong. It is partly landward and partly town; but the whole population, excepting two on three families, is within the burghs of Canongate and Portsburgh. Districts containing a population, in 1841, of about 3,810 were detached from it in 1834, to form the *quoad sacra* parishes of Leith-wynd and New-street. Population of the parish *quoad civilia*, in 1831, 10,175; in 1841, 8,932. Houses, in 1841, 1,499. Population, *quoad sacra*, in 1835, about 6,072. The parish-church was built in 1688, and reseatd in 1817. Sittings 1,295. The charge is collegiate. Patron, the Crown. Stipend of each minister £240. The first minister has a manse; and the second £40 for house-rent.—In 1834 there were in the *quoad civilia* parish 14 schools, attended by 1,020 scholars.

NEW STREET. This is a *quoad sacra* parish, lying wholly within the burgh of Canongate, and was disjoined from Canongate parish by act of General Assembly in 1834. In superficial extent it is very small. Population, in 1841, 1,932. Houses, in 1841, 351. The parish-church was opened in 1794 as a chapel-of-ease to the parish of Canongate, and cost from £2,800 to £2,900. Sittings 1,150. Stipend £150.

LEITH-WYND. This is a *quoad sacra* parish, erected by act of General Assembly in 1834. Its territory is densely peopled, situated chiefly in the burgh of Canongate, and partly in the ancient royalty of Edinburgh; but is so limited that a person may walk round its boundary-line in 20 minutes. Population, in 1841, 1,878. Houses 326. According to an ecclesiastical census taken in 1835, the population was then 1,703; of whom 654 belonged to the Establishment, 634 belonged to other denominations, 375 were not known to belong to any religious sect, and 40 concerning whose religious condition no information could be obtained. The parish-church was built in 1792. Sittings 1,094. Stipend £80.

ST. CUTHBERT'S. This parish is believed to have anciently contained the city of Edinburgh, the burgh of Canongate, and the parish of Corstorphine and Libberton. In its greatest length, *quoad civilia*, in 1835, it measured upwards of 5 miles, and, in its greatest breadth, about $3\frac{1}{2}$. But, in 1834, territories were detached from it and erected into the *quoad sacra* parishes of Buccleuch, St. Bernard's, Newington, and Roxburgh. It is partly landward and partly town; but, as regards its population, it is chiefly the latter. Population, in 1831, 70,887; in 1841, 71,984. Houses, in 1841, 12,784. Supposed population, *quoad sacra*, in 1835, 60,000. The parish-church was built in 1775. Sittings 2,400.—Gardner's Crescent chapel was purchased by the kirk-session in 1831, and cost them £2,500. Sittings 1,300. The charge of the parish is collegiate. Patron, the Crown. Stipend of each of the ministers, variable; but, in 1833, it was £338 4s. $1\frac{1}{2}$ d., and, in 1834, £365 16s. 1d. One of the ministers has a manse, and the other £60 for house-rent. Each receives £15 for communion expenses, and some small additional emoluments.—The United Secession congregation, Bristo-street, was established in 1740. The present church was built in 1802, and cost £4,084 8s. 3d.; and has since been enlarged and altered at an expense of £1,515 7s. 2d. Sittings 1,671. The charge has, for some years, been collegiate. Stipend of the first minister £350, with £16 sacramental expenses; of the second minister £200.—The Reformed Presbyterian congregation, Lady Lawson's Wynd, was established in 1804. The present church was built in 1835, and cost £1,150. Sittings 540. Stipend £130.—The Episcopal congregation of St. James', Broughton-place, was established about 1820. The chapel was built about the same date, and cost about £4,000. Sittings 850. Stipend £500.—The United Secession congregation, Broughton-place, was established about 1785, and formerly occupied a chapel in Rose-street. The present chapel was built in 1821, and cost £7,095. Sittings 1,599. Stipend £450, with £12 sacramental expenses.—The Episcopal congregation of St. John's, Prince's-street, was established in this parish in 1818. The chapel was built in 1817, and cost £16,013 14s. Sittings 821. Stipend £550.—The Relief congregation, Bread-street, was established in this parish in 1831. The chapel was built at the same date, and cost £2,600. Sittings 1,050. Stipend £150, with £10 sacramental expenses.—The United Secession congregation, Potterrow, was established in 1792. The chapel was built in 1793, and cost £1,290; and was repaired in 1831, at an expense of £300. Sittings 885. Stipend £280, with £20 sacramental expenses.—The Relief congregation, Pleasance, originally occupied the chapel in Brighton-street, which was used in 1836 by the congregation of New North parish. Their present chapel, together with another building, was purchased in 1835 for £2,100. Sittings 690.—The Original Seceder congregation, Richmond-street, was established in Potterrow about 1794, and removed to Richmond-street in 1813. The meeting-house was built at the latter date, and cost £2,300. Sittings 760. Stipend £250.—The chapel of the Baptist congregation, Elder-street, was built in 1814; and, along with a dwelling-house with which it is connected, cost £1,500. Sittings 480. Stipend £200.—The Wesleyan Methodist congregation has existed since about 1795, and was established in this parish in 1815. The chapel was built at the latter date, and cost about £6,800. Sittings 1,278. Connected with the chapel are a house for the minister, and a double dwelling-house. Stipend upwards of £150, with a house estimated at £28.—The Roman Catholic community, having chapels in Lothian-street and Broughton-place, has partially

existed, and met in various localities from time immemorial. In 1835, the number "in and about Edinburgh," as estimated by their bishop and one of their priests, was from 12,000 to 14,000. Broughton-street chapel was opened in 1814. St. Patrick's chapel, Lothian-street, was opened in 1835, to supersede an old and inconvenient chapel in Blackfriars-wynd. There are also two private chapels,—one at St. Margaret's convent, and the other for the Sisters of Charity at Milton-house. Sittings in Broughton-place and St. Patrick's jointly, 1,443. The community have a bishop and four clergymen, who have unitedly a house connected with Broughton-street chapel. Emoluments of each of the four clergymen, £41. The convent or nunnery of St. Margaret's was founded in 1834, and, in the following year, had 18 religious. Two resided at Milton-house, in the Canonate, and devoted themselves to the duties of Sisters of charity, having under their charge three schools for the poorer female Roman Catholic children, attended by 319. There is also in Edinburgh a Roman Catholic boys' poor school, which was attended, in 1835, by 264 boys.—The Unitarian congregation of St. Mark's chapel, Castle-terrace, were established in their present position in 1835, but previously met in a chapel in Young-street. St. Mark's was built in 1835, and cost about £2,000. Sittings about 700. Stipend £200.—The Society of Friends have had a meeting-house in Edinburgh since about 1685. The present one, situated in Pleasance, was built about 1790, and cost about £1,000. Sittings 400.—The United Secession congregation, Nicolson-street, was established in 1747. The present chapel was built in 1819, and cost £6,000. Sittings 1,170. Stipend, variable; but, in 1835, it was £250. At that date also £150 was paid annually to the former minister.—The United Secession congregation, Lothian-road, was established in 1827, in Gardner's Crescent chapel. The present place of worship was built in 1831. Sittings 1,284. Stipend £225.—The United Secession congregation, Vennel, was established in 1792. The present chapel was built on the site of a former one in 1828, and cost £1,947 19s. Sittings 832. Stipend £210.—The Relief congregation, St. James's-place, was established in 1796. The chapel was built in 1800, and cost £3,600; and was repaired in 1828, at an expense of £650. Sittings 1,540. Stipend £350.—The Relief congregation, South College-street, was formed in 1765. The present chapel was built in 1797, and cost about £2,000. Sittings 1,667. Stipend £350.

BUCCLEUCH. This is a *quoad sacra* parish, disjoined from St. Cuthbert's by act of General Assembly, 1834. It is $1\frac{1}{2}$ mile long, and $\frac{1}{2}$ a mile broad; and is a town parish. Population, in 1841, 3,130. Houses, in 1841, 621. The population, according to ecclesiastical census in 1835, was 2,834; of whom, 1,715 belonged to the Establishment, 1,071 belonged to other denominations, and 48 were not known to belong to any religious body. The parish-church was built as a chapel-of-ease, in 1755, and cost £650. It was afterwards repaired; and, in 1808-9, it was re-seated at an expense of £1,300. Sittings 1,374. Stipend £300. In 1834 there were 8 schools, attended by about 400 scholars.

NEWINGTON. This is a *quoad sacra* parish, disjoined from St. Cuthbert's in 1835. It is single and suburban, but covered with buildings; and extends, in extreme length, about $\frac{3}{4}$ of a mile, and in extreme breadth, about $\frac{1}{4}$ of a mile. Population, in 1841, 3,310. Houses, in 1841, 636. The population, according to ecclesiastical survey in 1835, was 2,950; of whom, 1,345 belonged to the Establishment, 952 belonged to other denominations, and 653 were of no ascertained religious connexion. The parish-

church was built as a chapel-of-ease in 1823, and cost £6,372. Sittings 1,623. Stipend £350.—In 1834, there was an unendowed parochial school, attended by from 160 to 200 scholars. There were also 7 other schools, attended by a maximum of 212 scholars.

ST. BERNARD'S. This is a *quoad sacra* parish, detached from St. Cuthbert's in 1834. It is single and suburban, and is nearly $1\frac{1}{2}$ mile long, and about $\frac{3}{4}$ of a mile broad. Population, in 1841, 4,751. Houses 854. The population, according to ecclesiastical census in 1835, was 4,043; of whom, 2,372 belonged to the Establishment, 1,601 to other denominations, and 70 were not known to belong to any religious sect. The parish-church was built as a chapel-of-ease in 1822, and cost £4,200. Sittings 1,309. Stipend £450.—The United Secession congregation, Dean-street, Stockbridge, was established in 1829. The chapel was built in 1828, for a Relief congregation, and purchased, in an unfinished state, in 1829. It ultimately cost £2,100. Sittings 1,200. Stipend £200, with £12 sacramental expenses.—In 1834 there were in the parish 7 schools, attended by a maximum of 338 scholars.

ROXBURGH. This is a *quoad sacra* parish, disjoined from St. Cuthbert's in 1834. It is single and town, and not above $\frac{1}{4}$ of a mile square. Population, in 1841, 3,683. Houses 686. The population, according to ecclesiastical survey, in 1835, was 3,292; of whom, 1,171 belonged to the Establishment, 1,702 belonged to other denominations, and 419 had not any ascertained religious connexion. The parish-church was built as a Relief chapel in 1809, and altered in 1814. The original cost was £2,960; and the value, in 1835, about £1,400 or £1,500. Sittings 830. Stipend £200.—The Relief congregation, Roxburgh terrace, assemble in a place of worship which was originally a dwelling-house, and was afterwards transmuted into the form of a church. Sittings 369. Stipend £105.—The Independent congregation, Richmond-court, was established in 1833. Their place of worship till 1840, was built about 1795 by a congregation of Baptists. Sittings 325. In 1840, a new and capacious chapel was opened.—The Hebrew congregation, Roxburgh-street, was established in 1817. In 1835, the number of families was 20, and of individuals about 106 or 110. The place of worship, originally a dwelling-house, was purchased in 1824 for £350, and converted into a synagogue at an additional cost of £80. Stipend of the minister or reader £55.—The Episcopalian congregation of St. Peter's, Roxburgh-place, was established in 1791. The place of worship consists of the first and second flats of a five-story tenement, and was originally built at the sole expense of a clergyman, who first let it at a rent of £105, and then sold it for £1,575. Sittings 420. Stipend £78 15s., together with the whole amount of the collections and offertories.

ST. DAVID'S. This is a *quoad sacra* parish, disjoined from St. Cuthbert's since 1835, and having for its parochial church the quondam Gardner's Crescent chapel, which—as noticed in the statistics of St. Cuthbert's parish—was, in that year, occupied as a joint parish-church for the whole parish, *quoad civilia*. Population, in 1841, 2,910. Houses 534.

ST. PAUL'S, DEAN, AND MORNINGSIDE. These are *quoad sacra* parishes disjoined from St. Cuthbert's since 1835, and accommodated with new churches. The church of the first is situated in St. Leonard-street; population, in 1841, 2,845;—of the second, in the vicinity of Dean-bridge; population, in 1841, 1,920;—of the third, in the village of Morningside; population, in 1841, 1,648.

History.

Edinburgh is of so high antiquity as to be seen, in the remote distance of its annals, enveloped in the thick haze of fable and uncertainty which ancient history throws round almost all its objects. Most writers, whatever opinions they entertain respecting the origin of the city, are agreed that the Castle-rock was fortified by the Ottadini long before their subjugation by the Romans. The most ancient name on record applied to the rock is *Castell-Mynydd-Agned*, which means, in the language of the Britons, 'the Fortress of the hill of Agnes.' Either, therefore, the rock was fortified after the time of St. Agnes, or it was bereft, in the Christian era, of its original name. At a later date, when a monkish fable was fabricated as to its having been the residence of the daughters of the Pictish kings, it was called *Castrum Puellarum*. About or after the year 617, when the Anglo-Saxon domination in the Lothians had been established, and when Edwin, a powerful Northumbrian prince of that race, began his reign, it acquired the name of Edwin's-burgh. The Celtic population, moulding the name into affinity with their language, called it *Dun Edin*, and, at the same time, made the name descriptive of the site,—the words *Dun Edin* meaning 'the Face of a hill.' The town probably owed not only its name, but its origin, to the residence of the Northumbrian Edwin; for, according to the statements of Simon of Durham, it must have been a considerable village in 854.

In 1093 the Castle was the refuge of the widow and children of Malcolm Canmore, at the period of his being slain; and was besieged by Donald Bane, the brother of Canmore, and the usurper of his throne, with the view of seizing the heir to the crown. In the reign of David I. the town, though consisting of thatched and mean houses, had grown to be one of the most important in Scotland, and appears to have been for some time erected into a burgh. David I., in his charter to the canons of the Abbey of Holyrood, gave liberty to construct the burgh of Canongate; and recognised the previous existence of the church of St. Cuthbert's. William the Lion made Edinburgh castle his frequent residence, and materially promoted the progress of the town. But having been made prisoner during a hostile incursion into England, he surrendered it, in 1174, to Henry II., and did not regain it till his marriage, in 1186, with Ermengard the English princess, who brought it as a dowry. In 1215 Edinburgh was the scene of the first parliament of Alexander II., and, in 1239, of a provincial synod held by Cardinal L'Aleran, legate of Pope Gregory IX. Alexander III. resided in the Castle, and made it the depository of the regalia and the archives; and he suffered in it a sort of invasion from the Earl of Dunbar, at the head of a party attached to the English interests, who expelled the patriot nobility, and dictated terms to the king.

The wars of the succession which followed the death of the Maid of Norway, grandchild to Alexander, involved Edinburgh in serious disasters. In 1291 Edward I., as the acknowledged superior of Scotland, received a surrender of the Castle, and next year he received the fealty of the abbot of Holyrood. The Castle having been withdrawn from him he captured it, in 1294, after the battle of Dunbar; and, in 1296, he received the fealty of the magistrates and inhabitants of the burgh. In 1313 the Castle was re-captured by Sir Thomas Randolph, Earl of Moray; and it was afterwards stripped of its fortifications by Robert Bruce. In 1322 the abbey of Holyrood was plundered by the army of Edward

II.; in 1326 it was the scene of one of the parliaments of Robert Bruce; and, in 1328, it accommodated the celebrated parliament in which the representatives of burghs were first admitted among the seats, and which confirmed the treaty of Edward III. acknowledging the independence of Scotland. In 1334 the usurper and vassal-prince, Edward Baliol, held a parliament in Holyrood, and agreed to surrender to Edward III. the Castle, town, and county of Edinburgh. In 1336 Guy, Count of Namur, approaching the town with an army in the service of the English king, the Earl of Moray encountered him on Borough moor, drove his forces in headlong confusion into Edinburgh, and pent up a portion of them to slaughter in the narrow lane of St. Mary's-wynd, and chased the rest to a precarious and temporary retreat on the bare rock of the Castle. In 1337 Edward III. rebuilt the Castle, and left it in charge of a strong garrison. In 1341, by means of as expert a stratagem as a fertile imagination could have invented, or a brave heart carried into execution, Sir William Douglas, the Black Knight of Liddesdale, recovered the Castle to the patriots, and greatly contributed by the event to the expulsion of the English from Scotland.

The hostile incursions of the English being suspended, Edinburgh grew into more consideration. Robert Bruce had already bestowed on the burgh the harbour and mills of Leith. During the reign of David II. it was the seat of numerous parliaments, and the source of frequent issues of coin, and confessedly the chief town, though not yet the actual capital, of Scotland. During the reign of Robert II., in 1384, a company of French knights having arrived in the town to aid the arbitrary schemes of the king, the church of St. Giles was occupied as the scene of deliberation respecting a predatory warfare on the borders. Edinburgh, then the royal residence, was called by Froissart, who accompanied the French knights, the Paris of Scotland, and described as consisting of 4,000 houses, so poor that they could not afford the knights due accommodation. In 1385 Richard II. making an excursion into Scotland, gave St. Giles, the abbey of Holyrood, and the whole town to the flames; and, after looking on for five days in vengeful triumph, left all in ashes except the Castle. John Stewart, Earl of Carrick, who acted as the king's lieutenant, and who soon after succeeded to the throne under the name of Robert III., now granted permission to the citizens to raise habitations within shelter of the Castle-walls. In 1400 the Castle was repeatedly assaulted by Henry IV., but successfully defended by the Duke of Rothesay, the heir-apparent to the Scottish crown. In 1402 a parliament was held in Edinburgh to inquire into the assassination of the Duke of Rothesay. While James I. was a prisoner in England, Edinburgh partook of the desolation which swept generally over the country. In 1416 the Castle was taken by Archibald, fourth Earl of Douglas, but restored in 1418; and, in 1423, when a ransom was proposed to be given for the king's release, the town had advanced so far in prosperity as to be able to contribute to the object 50,000 merks of English money. After the king's return, in 1424, he often honoured Edinburgh with his residence; and, in 1429, he received, before the high altar of the church of Holyrood, the abject submission of Alexander, the rebellious Lord of the Isles. In 1430 the queen was delivered of twins, one of them the future James II., in the abbey of Holyrood. In 1431 the town was scourged with pestilence; and, in 1436, it was the scene of the last parliament of James I.

On the murder of James I., in 1436-7, Edinburgh became, in every sense, the metropolis of Scotland.

From the reign of David II. it had, in all public transactions, held the place of primary burgh, and had been frequently the seat of parliaments and the royal abode; but it shared its honours with other towns, and wanted in point of favour what it might have justly claimed in point of paramount importance and power. Now, however, its title to entire metropolitan dignity became fully recognised. Neither Perth, Stirling, nor any other resort of the king and court possessing sufficient means to protect the royal family from the murderous attacks of ferocious nobles, James II.—then only 7 years of age—fled or was conveyed, after the assassination of his father, to Edinburgh castle; and, in the same year, was crowned and held his first parliament in the abbey of Holyrood, and set up in the city the machinery of his government. During the years 1438, 1439, and 1440, the Castle was the scene of frequent contests and intrigues respecting the keeping of the king's person. In 1444 Crichton, the ablest man in Scotland, having, as the victim of faction, been dismissed from the high office of chancellor, provisioned the Castle and gave defiance to Douglas of Balveny, the royal favourite. Next year, his estates having been escheated by a parliament held in the city, and partly laid waste by military emissaries of the favourite, Crichton sallied from the Castle, and, after inflicting severe retaliation, returned within its walls. Being now besieged by the king in person, he defended himself with such skill and resolution that the Castle was gladly accepted from him, in 1445-6, on terms of capitulation, which involved his restoration to his office and to the royal favour. During these troubles, and up to 1456, James II. lavished upon the city such grants and immunities as made it much more indebted for its prosperity to him than to any other monarch. Among other favours, were permission to fortify the town with a wall, and levy a tax to defray the cost,—exemption of burgesses from the payment of any duties except a petty custom,—a grant of all the vale between Craigie gate on the east, and the highway leading to Leith on the west,—and a grant of the 'haven silver' and customs on ships entering the roadstead and harbour of Leith. In 1449 Mary of Gueldres, after having been espoused by proxy to James II. at Gueldres, was married to him in person, and pompously crowned in the abbey of Holyrood. In 1460 James II. having been killed by the bursting of a cannon at the siege of Roxburgh castle, was brought a corpse to the city he had enriched with his munificence, and interred on the spot where he had received his crown. His queen, who had imitated his taste in raising the dignity of the metropolis, and had founded and endowed Trinity church and hospital, died three years after him, and was laid in the church which she had reared.

James III., throughout his inefficient reign, conferred on Edinburgh the advantages of his residence and of several immunities. In 1461 Henry VI., after his defeat at Towton, sought refuge in Scotland, and was honourably entertained for a time in the capital. In 1469 the Princess Margaret of Denmark was married to the King, and crowned, amid splendid pageantry, in the abbey of Holyrood. In 1475 the city was so desolated with pestilence that parliament, though summoned, failed to assemble. In 1477 James III. gave to the city a charter minute, and now very curious, establishing the sites of its markets. In 1478 began those intrigues at Edinburgh of the king's brother, the Duke of Albany, to supplant him in the throne, which issued in extensive disasters to the town and country, and eventually terminated in the king's death. Albany, having been imprisoned in the Castle, effected his escape to France; and passing

thence, in 1482, into England, bargained with Edward IV. to hold the crown of Scotland under him, as superior of the realm. The Duke of Gloucester, deputed by the English king, marched on Edinburgh; and meeting no resistance, was induced by Albany to spare the town from a destruction with which he had menaced it, "only taking such presents," saith Hall, "as the merchants genteelly offered him." The English Garter King-at-arms now ascended the platform of the cross, and summoned the Scottish king, who had taken refuge in the Castle, to perform all he had promised to Edward IV., and to pardon Albany. The citizens, evincing both their wealth and their patriotism, agreed to repay to the English king certain sums which he had advanced in consideration of a concerted marriage between his daughter and James' son; and, the Duke of Gloucester having been wiled away by the permanent cession of the town of Berwick, and the Duke of Albany having been pardoned by a formal act of forgiveness, the provost and citizens, assisted by the latter, processed to the Castle to escort the king from his durance. James III. and Albany mutually embraced, and then rode together to Holyrood-house, amid the tumultuous joy of a deluded people; and the king bestowed on the inhabitants some munificent expressions of his gratitude for their patriotism in the season of his distress. At the close of 1482 Albany, immediately after having been received into favour, and injudiciously constituted Lieutenant-general of the realm, intrigued once more against the king. James III., however, by retiring into the Castle, and rousing the citizens, disappointed his purposes of treason. Edinburgh, by its loyalty to the sovereign, and especially by its prompt performance of all its stipulations with England, obtained great praise, and, in reference to the ample resources which it evinced itself to possess, was called by the Continuator of the Annals of Croyland "ditissimum oppidum." Early in 1488 the king, hard pressed by a powerful combination of insurgents, and obliged to leave the city and flee to the north, deposited his treasure and valuable effects in the Castle, and supplied it with ordnance and provisions to sustain a siege; but he was assassinated in the same year, and proved to have been only heaping up store for his murderers.

Late in 1488, the first parliament of James IV. assembled in Edinburgh, amid the guilty triumphs of rebellious faction; and for some time succeeding the early part of the next year, the castle, town, and shire were under the domination of Patrick, Earl of Bothwell. As James IV. grew up in years, he frequently invited the knights of every country to tournaments at Edinburgh, and took great delight in rendering the city a busy scene of magnificent entertainments. In 1503 the king was, with gorgeous parade and pomp, married, at Holyrood-house, to Lady Margaret, the eldest daughter of Henry VII. In 1508 the printing-press was introduced to Edinburgh by Chapman & Millar, under a royal charter; and it produced curious specimens, some of which are still preserved in the Advocates' library. About the same time, the king, continuing to reside in the capital, entertained the French ambassador at great expense, and with coarse profusion. In 1513, while a dreadful plague had broken out and was desolating Edinburgh, James, preparing for a hapless war, busied himself in inspecting his artillery in the Castle and the outfit of his navy at Newhaven; and, having summoned the whole array of his kingdom to assemble on the Borough-moor, he marched thence to his disastrous defeat and violent death on the field of Flodden.

The magistrates and numerous burgesses of Edinburgh having followed the late king in his fatal expe-

dition, drew upon the city apprehensions of fearful retaliation. All men able to bear arms were instantly ordered to stand, if necessary, to the defence of the walls; and other vigorous measures were adopted to maintain a stern resistance. But the privy-council withdrew for some months to Stirling; and there James V. was crowned. Early in 1514 the magistrates of Edinburgh, fearful of disasters with which the city seemed menaced, raised a permanent city-guard of 24 men, levied £500 Scots for the extending of the fortifications and the purchase of artillery, and ordered the erection of the second or southern wall, considerable part of which at Laurieston and Drummond-street still stands. In 1515 the putative Duke of Albany, to whom all eyes were turned for giving stability to the fragile and shattered government, and vigour to the Scottish arms, was received in Edinburgh with unwonted magnificence and processional demonstrations of feeling; and he proclaimed at the cross the peace for Scotland which France had negotiated with England. In the same year a parliament which assembled in the city, appointed him protector and governor of Scotland during the minority of the infant king. But Albany, though residing at Holyrood-house, and wielding all the power of royalty, thought himself insecure unless he should obtain command of the young king and his mother's persons, who had retired to the Castle. Forceful measures were adopted which first drove the queen to take flight with the young prince to Stirling,—next compelled her to yield up the fortress of that town, and return to Edinburgh castle,—and next converted the latter place into a state-prison for the infant monarch. In the meantime, the town became the scene of frequent tumults and copious bloodshed, from contentions among the nobles, and from strifes for superiority in the magistracy. On one occasion, upwards of 200 men were slain on the streets in a meleé, popularly commemorated under the odd name of “Cleanse the causeway,” between the Hamiltons and the Douglasses. On another occasion, there was an encounter with similar results, between the partizans of the Earls of Huntly and Moray, and those of Lords Rothes and Lindsay. These facts, and others of kindred character which occurred, evince that, under the regency of Albany, the metropolis enjoyed neither the amenity of civilized manners, nor the most ordinary protection of common law. In 1519 and 1520, while Albany was absent in France, the city lay prostrate beneath the twofold scourge of devastation by the plague, and of the ascendancy of lawless violence maintained with the aid of an armed force from the borders. In 1522, Albany having returned from France, a parliament held in the city authorized the removal of the young king from the Castle to Stirling, but was too feeble to reform the popular profligacy of manners, or to strengthen the weakness of the laws. At the close of 1523, Albany met the parliament at Edinburgh for the last time; and in May 1524, he departed for ever from Holyrood-house to France, leaving the Scottish government and the police of the metropolis in a state of utter confusion.

In July 1524, the queen brought James V., now in his 13th year from Stirling to Edinburgh, and caused proclamation to be made that he had assumed the government. In November of this same year, while parliament was sitting, the Earl of Angus, who had been married to the queen, broke into Edinburgh, with several other chiefs and 400 armed followers; and, having vaunted or proclaimed themselves at the cross to be good subjects, went to the council of state, and demanded that the queen should be deprived of the guardianship of the infant king. The Castle immediately fired upon the town, and

killed several innocent persons; and Angus, menaced, along with his fellow-insurgents, by a body of back-butters who had been called out against him, and having received a mandate from the king to retire from the city, withdrew to Dalkeith. Early in 1525, a coalition and division of patronage having been effected between the queen and her opponents, the young king, who had taken refuge in the Castle, removed his residence to Holyrood-house, and afterwards went in person to meet his parliament in the Tolbooth, his crown being borne before him by Angus. In 1525, Angus acquired such an ascendancy as, while he dictated to the whole kingdom, enabled him to subject the metropolis to the will, and impoverish it for the pampering of his creatures; and, from that date till his final disgrace and forfeiture in 1528, he occasioned continual disturbances and tumultuous movements both in Edinburgh and throughout the country, in opposing first the queen and next the monarch. About 1528, additional excitements arose in the city from the private diffusion of the principles of the Reformation. In May 1532, after various establishments for the administration of equity had been tried and rejected, the college of justice, or system of national law-courts the same *in limine* which exists at present, was founded. This event was the greatest in intrinsic importance which had yet graced the annals of the city, and immediately raised the dignity and influence of the city, and occasioned it to become the resort of many families from among the best portion of the community who possessed a competency of worldly wealth. In the same year, and during two or three years following, the magistrates, and even the parliament, adopted measures to remove nuisances which hitherto had defiled or obstructed the streets, and diffused putridity among the lanes, and occasioned the lampoonings of wit and the severities of satire; and they now ordered the thoroughfares to be paved, lanterns to be hung out at night, the meal-market to be removed from High-street to “some honest place,” where it would be no obstruction, and a substantial wall to be built from Netherbow to Trinity College church. In August 1534, Norman Gourlay and David Straiton were tried and condemned, at Holyrood-house, for the heresy of the Protestant faith, and executed at Greenside. In 1537, Magdalene, the first consort of James V., arrived from France at Leith, made a triumphal entrance into Edinburgh amid magnificent processions and joyous acclamations, and, in forty days, was carried a corpse to the royal tomb in Holyrood abbey. In July 1538, Mary of Guise, James V.'s second wife, entered Edinburgh amid similar greetings to those which had been accorded to her predecessor, and was treated by the citizens with rich presents, and “with farces and plays.” At the close of 1542, James V., having died at Falkland, was buried in Holyrood by the side of his first wife.

The regents Arran and Beaton having rejected some ambitious schemes of Henry VIII. respecting the person of their infant Queen Mary, who was only a week old at her father's death, the Earl of Hertford arrived in the Forth with a numerous fleet and army, and, besides inflicting numerous devastations on other towns and the country, set fire to Edinburgh, burnt the abbey and palace of Holyrood, and made an unsuccessful attempt upon the Castle. In 1548, the city, after being again menaced by an English force, was garrisoned by part of a French reinforcement of 6,000 men under D'Esse. In 1551, the queen-dowager, after conveying her infant-daughter to France, was received, on her return to Edinburgh, with distinguished honours; and in 1554, having been constituted regent of the kingdom, she

encouraged plays in the city, and cajoled the magistrates to defray much of the expense. In October 1555, John Knox arrived in the city, and speedily occasioned a shifting of its scenes. Next year a concourse of people assembled in and around Blackfriars' church, to protect him from the hostile proceedings of an ecclesiastical judicatory. Early in 1557, Knox having gone to Geneva, Harlow and Willock, two other reformers, arrived, and successfully preached their doctrine in Edinburgh and Leith. In December of the same year, a few nobles signed the first covenant in Edinburgh, and were the germ of "the Congregation." In June 1558, an invasion from England being apprehended, the burghesses of Edinburgh voluntarily agreed to maintain upwards of 700 armed men for the defence of the city. Next month, the reformers and the queen-regent came to an open rupture. On the anniversary of St. Giles, when the priests carried an effigy of the patron saint with great processional pomp along the streets, the populace flamed forth in indignation, dispersed the ecclesiastics, and tore the effigy in pieces. In 1559, Knox having returned from Geneva, and the army of the congregation approaching the town from the north, the magistrates ordered all the gates except two to be shut, and these two to be guarded; and they sent commissioners to meet the reformers at Linlithgow, and treat with them; and placed a guard of sixty men to protect St. Giles' church. When the army of the congregation entered Edinburgh, they took possession of the mint, and of the offices of government; but found the work of upsetting popish altars, and destroying the paraphernalia of popish ceremonies, and converting monasteries into private dwellings, sufficiently accomplished by the populace. Open hostilities now occurred in regular warfare between the troops of the reformed, and the troops of the queen-regent. Leith, which was in a fortified condition, was the head-quarters of the Romish or government party, who were aided by the opportune arrival of an auxiliary force from France; Edinburgh was the head-quarters of the reformed party, and entirely in their possession; and the fine plain which stretches between the Calton-hill and Leith, was the scene of frequent skirmishes and resolute onslaughts. The irregular troops of the reformed could ill cope with the well-disciplined auxiliaries from France; but, eventually aided by a force from Elizabeth of England, they succeeded, about the middle of 1560, to expel the queen-regent's forces from the kingdom, to dismantle Leith, and to remove every hinderance to the ascendancy and the civil establishment of the principles for which they contended. Edinburgh, now in undisputed possession of the reformers, and entirely freed from the influences which had hitherto swayed it, underwent an almost entire change of moral aspect, yet did not pass through the transition without some ebullitions of popular feeling, and some riotous movements on the part of small portions of its people. Women were prohibited from keeping taverns; the market-day was changed from Sunday to Saturday and Monday; measures were adopted for the suppression of immorality; the reformed religion was introduced to all the places of worship, and enforced on the attention of the whole population; and on the 20th December, 1560, the first General Assembly of the Kirk assembled under the local sanction of the magistrates.

In August 1561, Mary, the young queen, arrived at Leith from France; and she made a public entry into Edinburgh amid clamorous and showy demonstrations both of welcome to her person, and of caution against interference with the recent changes in religion. Splendid dresses were prepared; the

public streets were ornamented; and as she issued from the Castle, where she dined, a boy descended, as if from a cloud, and delivered to her a Bible, a psalter, the keys of the Castle gates, and some verses containing "terrible significations of the vengeance of God upon idolaters." Having arranged her government at Holyrood-house, she set out on a progress to visit her principal towns throughout the country, and left the metropolis, as she found it, wholly under the power of the reformers. In June 1562, the town-council ordered the figure of St. Giles to be displaced from the banner of the city, and substituted by the thistle; and ordained that no one should be eligible to any civic office who was not of the reformed faith. In May 1563, the queen, dressed in her robes and wearing her crown, met her parliament in the capital, and concurred in an act of oblivion as to the proceedings of the Lords of the Congregation. Edinburgh, with Knox for its minister, and the General Assembly for its most influential court, now gave tone to the whole country, and lifted the spirit of religious reform up to a point of high dominance which was sufficiently menacing to the adherents of popery, and little careful of pleasing the monarch. On the 28th July, 1565, Lord Darnley was proclaimed king at the market-cross; and at 5 o'clock on the following morning was married to the queen within the chapel of Holyrood. On the 9th March, 1566, David Rizzio was assassinated in the queen's presence in her supper-apartment at Holyrood; and on the 19th June of the same year, she was delivered, in a small room in the Castle, of her son James. On the 10th February, 1567, Darnley, then lying in a convalescent state in the house of Kirk of Field, was blown up with gunpowder; and on the 15th May following, Bothwell, who was believed to have been the author of Darnley's murder, and who had repudiated his wife, was married to the queen in Holyrood, by Adam Bothwell, bishop of Orkney. On the 6th of June, a smouldering popular indignation having begun to belch up in flames, Mary and her husband fled from the city, pursued by 800 horsemen. On the 11th, the associated insurgents, amounting to 3,000 men, marched upon Edinburgh, and though the gates were shut against them, easily entered, and took possession of the seat and the powers of government. On the 14th, she was brought from Carberry-hill (see CARBERRY-HILL) to Edinburgh, and conducted through the streets, amid popular insults, to the house of Sir Simon Preston, the provost; and next day, she was sent off a prisoner to Lochleven castle. Her valuables within Holyrood-house were seized; her plate sent to the mint to be converted into coin; and her chapel in Holyrood spoiled of its furniture and ornaments, and generally demolished. The last of these acts, however, was chargeable, not on the body of the successful insurgent chiefs, but only on the Earl of Glencairn: see HOLYROOD.

A government was now formed in the name of James VI., the infant son of Mary; and on the 22d of August, 1567, the Earl of Murray was proclaimed, at the cross of Edinburgh, the regent of the kingdom. At the coronation of the infant king in the church of Stirling, three of the magistrates of Edinburgh attended to represent the city. In 1568, when the nation was violently excited by Mary's escape from her imprisonment and the brief civil war which followed, the metropolis was in arms to repress insurrection, and was, at the same time, desolated with pestilence. On intelligence of the regent Murray's assassination in January 1569-70, at Linlithgow, the city was thrown into great confusion, and put under a strong guard night and day; and the Lords of the court of session were with difficulty

dissuaded from abandoning it as too tumultuous a scene to be the seat of their court. The chiefs of the queen's party marched upon Edinburgh from Linlithgow, and were received within the walls by Kirkcaldy, the governor of the Castle, the provost of the town, and one of the ablest soldiers of the period. Kirkcaldy ordered all who opposed the queen to leave the town within six hours, seized the arms of the citizens, planted a battery on the tower of St. Giles', and repaired the walls and strengthened the gates of the city. A war now commenced within the limits of the metropolis and its suburbs, the miseries of which did not soon come to an end. In May 1571, two parliaments sat in the harassed city,—the one on the queen's side, in the Tolbooth,—and the other, on the king's side, in the Canongate. While the two legislatures fulminated forfeitures at each other, their respective partizans fought frequent skirmishes in the neighbourhood and the streets. The Castle was kept for the queen, with great superiority of advantage; and Holyrood-house was retained for the king by the regent Lennox. A small army, sent from Berwick by Elizabeth, eventually crushed the queen's party, and, on the 29th May, 1573, forced the Castle to capitulate. Kirkcaldy and his brother, though they surrendered on the understanding of being favourably treated, were hanged at the cross. The quick succession of four regents, who fell amidst the furies of civil war, neither quieted the nation, nor brought peace to the metropolis.

At length, in March 1577–8, James VI. himself came upon the unsettled stage. Having summoned a parliament to meet in Edinburgh, and resolved to remove his residence from Stirling, he made a magnificent entry into the metropolis on the 17th October, 1579, and passed to the palace of Holyrood, with a cavalcade of 2,000 horse. In December 1580, the Earl of Morton was called to account by the privy-council for his many crimes, and, in particular, for being accessory to the murder of Darnley. He was first warded in Holyrood, next sent to the Castle, next removed under a strong guard to Dumbarton, and eventually brought back to Edinburgh, and guillotined with the infamous instrument called "the Maiden," which he himself, it is believed, introduced to the country, and which afterwards drank the blood of patriots and martyrs. When the king's provocation of his reformed subjects by his attempted extensions of the royal prerogative, led, in 1582, to his capture in the raid of Ruthven, the conspirators brought him to Holyrood-house, and demanded of the magistrates a body of hackbutters to guard him in the palace. In January 1583 two ambassadors arrived from France to solicit his freedom. The king ordered the magistrates to entertain them with a banquet. But the ministers of the city appointed the day of feasting to be a day of fasting, and occupied the whole of it in successive religious services in St. Giles', in the course of which they used language less measured than the taste of a later age would approve respecting all the parties connected with the banquet. The king, having freed himself from thralldom, established a guard of forty gentlemen on horseback for the protection of his person, and made adequate provision for the governor of the Castle. Having arrived, in 1587, at the legal age of twenty-one, he made a royal banquet in Holyrood-house for reconciling his factious nobles; and, with puerile conceit, made irascible men walk hand in hand to the cross, and there partake a collation of wine and sweetmeats provided by the magistrates, and pledge one another in the juice of the grape to mutual forgiveness and future amity. When intelligence arrived in August 1588, of the approach of

the Spanish Armada, the magistrates commanded the citizens to provide themselves with arms in order to guard the coast, and raised a body of 300 men to defend the city. James was in the practice of ordering the magistrates to entertain his friends, and, by draining their coffers with the costs of banquets, he brought the metropolis into a less opulent condition than had graced it during several preceding reigns; and now, in the prospect of his marriage with the princess Anne of Denmark, he commanded the magistrates to find suitable accommodation and entertainment for the royal bride, from the time of her arrival at Leith till Holyrood-house could be duly fitted out for her reception. The magistrates paid 5,000 merks to be excused; and afterwards, when the bride was driven back by adverse winds, and when James himself, with more enterprise than he was supposed to possess, determined to cross the ocean and convey her home, they provided him, at enormous cost, with a beautiful and commodious ship for the voyage. In May 1590 the royal pair arrived at Leith, and were received in Edinburgh with acclamations of welcome; and six days after their arrival the queen was crowned in Holyrood. In December 1590 the Earl of Bothwell having broken into the palace at the hour of supper, and laboured by fire and demolition to overcome obstructions in his way to the king's apartment, the citizens ran to the rescue, forced Bothwell to flee, and captured eight of his followers, who were executed on the morrow. In September 1593 James vainly renewed attempts, which he had formerly made, to dictate to the city in the choice of its council and magistrates; and in November he even issued a proclamation, forbidding any person to enter Edinburgh without his leave. In February 1594, when the queen was delivered of Prince Henry at Stirling the town-council of Edinburgh presented the king with ten tuns of wine, and sent 100 citizens, richly accoutred, to attend the baptism; and next year, when Bothwell continued to raise treasonous tumults, they appointed the sovereign a body-guard of fifty citizens. In September 1595 the boys of the High school broke into rebellion; and one of them fired a pistol from the school-house, and shot one of the magistrates who had been summoned to reduce them to order. In August 1596, when the princess Elizabeth was born, the magistrates were invited to the baptism in Holyrood-house; and they made a promise of 10,000 merks to be paid to the princess on the day of her marriage,—a promise which not only was fulfilled, but raised to 15,000 merks. In December 1596 the clergy and citizens, irritated and alarmed at what they believed to be menacing interferences of the king with religious liberty, a serious tumult broke out in the city, and rolled along toward the town-house to attack the king and his council, who sat in consultation. The provost and magistrates opportunely came upon the theatre, and, by skilful management, assuaged the storm. James fled from the city, issued a proclamation which painted in dark colours the objects of the uproarious but harmless tumult, and sent a charge to the magistrates to arrest the ministers, and, in consequence, obliged the latter to flee from the country. The privy-council also declared the tumult to have been traitorous; the several judicatories were removed to Leith; and the Court of Session was directed to sit at Perth after January 1597. The town-council, as well as the inhabitants, were now completely alarmed, and sent a deputation of citizens to Linlithgow, to make unqualified submissions, and to sue for pardon. James made a public entry into the city with great ceremony, and, in March 1597—moved partly by the people's tears and 30,000 merks of their money, and partly by the in-

terposition of Elizabeth of England—formally pardoned the tumult, and drank with the provost and magistrates in token of reconciliation. In 1599 the king came once more into collision with the ministers of Edinburgh, he having invited to the city a company of English players, and the presbytery denouncing histrionic performances as positively sinful. This company of actors was the first who appeared on a Scottish stage after the Reformation, and is supposed to have included Shakspeare. In 1600 Robert Bruce, the favourite minister of the city, and four of his clerical brethren, were banished by proclamation at the cross, and forbidden, on pain of death, to preach or to come within 10 miles of the king's residence, for the crime of being sceptical as to the reality of the Gowrie conspiracy; and the dead bodies of the Earl of Gowrie and his brother were brought from Perth to Edinburgh, and hung up at the market-cross as the bodies of traitors.

James having succeeded to the crown of England by the demise of Elizabeth, on the 24th March, 1603, many persons hastened from London to Edinburgh with the welcome news. On the 31st March the nobility and the Lyon King-at-arms proclaimed the event at the cross. On the Sabbath previous to his departure for England, he attended public worship in St. Giles', and, at the close of the sermon, delivered a formal valedictory address. At this period, and during some subsequent years, Edinburgh, in common with other Scottish towns, severely suffered by frequent visitations of plague. In 1608 James empowered the magistrates to wear gowns, and to have a sword of state carried before them in their processions. In 1616 the king, in fulfilment of a promise made at his departure, paid a visit to Edinburgh. Arriving at the West Port, he was received by the magistrates in their robes, and some citizens in velvet habits; and was treated to an oration by the town-clerk, abounding in the most fulsome and rhapsodical flattery. The citizens afterwards entertained him with a sumptuous banquet, and presented him with 10,000 merks of double golden angels, in a silver basin. In June 1617 James convened his 22d parliament in Edinburgh, and sanctioned, or rather instigated, its passing decrees for the resuscitation of prelacy, and the improved support of the Castle. After presiding at a scholastic disputation of the professors of the university, he departed in September 1617 for London. News of his death, in March 1625, having arrived, the ministers of the city praised him, in funeral sermons, as a most peaceable and religious prince.

On the 31st March, 1625, Charles I. was proclaimed at the cross; and the town-council agreed to advance to him the assessment of the city, and to contribute to the maintenance of 10,000 men; and they, at the same time, provided for the city-guard, and for the discipline of all the citizens. On the 12th June, 1633, Charles visited Edinburgh, to be crowned king of Scotland. He was received at the West Port by the magistrates in red furred gowns, and 60 councillors in velvet dresses; and conducted along the streets with a display of pageantry more gorgeous than had graced the public entry of his father, and indicating an increase in civic wealth. On the 18th he was crowned in the Abbey church of Holyrood with unwonted splendour; and on the 20th he assembled his first Scottish parliament, mainly for the purpose, as would appear, of carrying out his projects in favour of prelacy, and the introduction of a liturgy. By the acts of this parliament, and by the erection of the bishopric of Edinburgh, his brief residence, though hailed at the moment with demonstrations of delight, ignited a smouldering, and far-spreading, and fierce fire of discontent. Scarcely had he re-

turned to London when the hidden fire burst forth into a blaze. When the liturgy, which was chiefly copied from that of England, was read in St. Giles', a tumult ensued. In October 1637 a great concourse of persons of every rank resorted to Edinburgh to avow their discontent, and declare their opposition. A proclamation, commanding them to disperse, only produced a new tumult. The withdrawal of the privy-council and the court of session to Linlithgow was followed by increased uproar and confusion. During 1638 discontent was animated into organized insurrection. A convocation assembled in Edinburgh to oppose the liturgy, and adopted the strong measure of renewing the Covenant. The magistrates now ordered the citizens to prepare for war; and the Covenanters, on their side, drew to arms. On the 22d September proclamation was made—but at too late a date, and in too exacerbated a condition of the popular feeling—that the liturgy was abandoned. In December the Covenanters beleaguered the Castle, and were aided by the town-council with a force of 500 men, and a subsidy of £50,000 Scotch. But a pacification taking place in May 1639, at Berwick, the Castle was delivered to the Marquis of Hamilton as the King's officer. A parliament, which sat in Edinburgh in December 1639, broke up amid mutual criminations of unconstitutional conduct. In 1640 fresh preparations were begun for determined war. The magistrates appointed a night-guard, exercised the citizens in arms, and raised fortifications to defend the town against the Castle. Ruthven, the governor of the Castle, fired upon the city; but being invested by Lesley, the general of the Covenanters, was forced to surrender. The treaty of Ripon put an end to hostilities. In August 1641 Charles revisited Edinburgh, and pardoned and conciliated the insurgents. Having been well-received by the magistrates, and sumptuously entertained at the cost of £12,000 Scotch, he departed in November. The magistrates still adhered to the Covenant, and raised for its support a regiment of 1,200 men, at the expense of £60,000 Scotch. In October 1643 the Solemn League and Covenant was sworn in St. Giles'. In March 1645 a plague again desolated the city; but happily was the last with which it has been afflicted.

After the execution of Charles I. Edinburgh joined in the national engagement in favour of Charles II., and engaged to contribute a quota of 1,200 men. But, in lieu of the men, the town-council afterwards offered to pay £40,000 Scotch; yet, in consequence of impoverishment by plague and civil war, they were in so disastrous a predicament that they first thought of borrowing the money, and next pleaded exemption from paying it, on the ground that it had been promised in an unlawful cause. In May 1650 the Marquis of Montrose was brought a prisoner into the city, conveyed along the streets in ignominious parade, tried and condemned by the parliament, and publicly executed at the cross. Having obtained the consent of the exiled Charles II. to be their king, the magistrates, in July 1650, proclaimed him at the cross. Lesley, the commander of the Scottish troops, having been subdued at Dunbar, on the 3d September, by Cromwell, who had crossed the Tweed and menaced the metropolis, Edinburgh was abandoned to its own fears, and left by the magistrates without a government. On the 7th September Cromwell took possession of the city, and three months later forced the Castle to capitulate. In December 1651 the magistrates returned and resumed the government. Commissioners from Cromwell for ruling Scotland having arrived, in January 1652, at Dalkeith, the citizens of Edinburgh were so humbled that they felt obliged to ask their

consent before proceeding to elect new magistrates. The metropolis now enjoyed, for several years, a degree of repose to which it had long been a stranger; but it was so impoverished that scarcely a person was able to pay a debt,—the city itself being unable to satisfy a claim upon it for £55,000 sterling. When intelligence arrived in 1660 of the Restoration, the town-council addressed a letter to the king, congratulating him on his recovery of the throne; the town-clerk made a journey to London, and presented £1,000 sterling for the royal acceptance; and the citizens expressed their joy by partaking of a sumptuous feast at the market-cross. Charles ratified some old privileges, empowered the magistrates to levy a new civic tax, abolished the English tribunals in Scotland, and directed a parliament to meet at Edinburgh for the adjustment of the national affairs. Parliaments which met in January 1661, and May 1662, abolished presbytery, condemned the covenants, restored prelacy, and, in consequence, incited the Covenanters to arms, and threw the metropolis and the country into confusion. Edinburgh was put into a posture of defence; the gates were barricaded; ingress or egress was prohibited without a passport; the gentlemen of the neighbouring territory were called in to afford their aid; and the courts of law placed its members under arms. In December 1666 ten of the Covenanters who had been captured in the action of Rullion-green, were executed in Edinburgh. During the whole period of Charles II.'s reign, from the year 1663, the metropolis was the scene of the trial, torture, and execution of vast numbers of Covenanters, many of them the best and brightest men of the age. But the tyranny which was exercised, the inquisitorial proceedings which were carried on, the martyrdoms which were perpetrated, the demonstrations of a ferociously persecuting spirit which were made, and the military manoeuvres of a standing army which were practised, did not for an hour awe the inhabitants into submission, and scarcely succeeded in even repressing them from attempting bold though hopeless deeds of insurrection. At the execution of one Mitchell, who was concerned in an attempt to assassinate the archbishop of St. Andrews in the High-street, bands of women assailed the scaffold, and made a strenuous endeavour to effect a rescue. During 1679 the Duke of York—the future James VII.—resided in Edinburgh, was magnificently entertained by the magistrates, and introduced the drama and other appliances of fashionable dissipation. In 1680 the students of the university having, in contempt, probably, of the Duke of York's religious creed, resolved to burn the Pope in effigy, the magistrates interposed, and a tumult ensued. The college was now, for a time, shut up; and the students exiled under a prohibition not to approach within twelve miles of the town. In May 1682 the Duke of York, after having utterly effeminized the capital, and diffused an idle and ruinous taste for show and extravagance, and lured the magistrates into numerous acts of mean servility, took his departure for London.

Intelligence having arrived of the demise of Charles II., in February, 1685, a stage was erected at the cross, the militia drawn out, and proclamation, amid pompous displays, made of the accession of James VII. On the 20th June the Earl of Argyle was brought into Edinburgh, paraded along the streets, bound, uncovered, and preceded by the hangman, and publicly executed with every accompaniment of ignominy. On the 1st of November, a letter from the king, dispensing with the test, and indicating favour to papists, was read at the privy-council. Early in 1686 an order, dictated by the king, was issued by the privy-council, forbidding the

booksellers of Edinburgh to print or sell any document which reflected upon popery. A subsequent order, authorizing the public and open celebration of mass, occasioned a popular tumult. A journeyman baker, who was concerned in the tumult, having been ordered by the privy-council to be whipped along the streets, a mob rose to his rescue, beat the executioner, and continued all night in riotous possession of the town. The king's guards and soldiers from the Castle were brought out to the assistance of the town-guard, and, firing upon the mob, killed two men and a woman. Next day several of the rioters were scourged amid a double file of musqueteers and pikemen; a drummer was shot for having uttered an expression of strong antipathy to papists; and a fencing-master was hanged at the cross simply for having expressed approbation of the recent tumults, and drunk the toast of 'Confusion to Papists.' On the 29th of April, 1686, a parliament was convened at Edinburgh, to which was read a letter from the king proposing indulgence to the Roman Catholics; which included among its members the Lord-chancellor Perth, who was a Papist, and had not taken the test required by law; and which, though sufficiently pliant, was not so servile as the king desired in adopting and enforcing his religious schemes. James, persecuting and spurning the sturdier members for their votes, did by his own authority what the parliament refused to do,—he took the Roman Catholics under his protection, assigned them for the exercise of their religion the chapel of Holyrood abbey, commanded the magistrates to be conservators of their privileges, and promoted as many of them as possible to places in the privy-council, and the offices of government. Watson, a popish printer, was appointed by the king the printer to the royal family, and by the privy-council the printer of all the prognostications in Edinburgh; and he carried through the press the numerous books whose imprints indicate their having been printed during the reign of James II. "in Holyrood-house." Some minor particulars mentioned by Lord Fountainhall sufficiently indicate the deep undercurrent in the direction of popery which flowed beneath the surface of the king's public enactments. "On the 23d of November, 1686," says he, "the king's yacht arrived from London, at Leith, with the altar, vestments, images, priests, and their apurtenants, for the popish chapel in the Abbey of Holyrood. On St. Andrew's day, the chapel was consecrated, by holy water, and a sermon by Wederington. On the 8th of February, 1688, Ogstoun, the bookseller, was threatened, for selling Archbishop Usher's sermons against the papists, and the History of the French Persecutions; and all the copies were taken from him; though popish books were printed and sold. On the 22d of March the rules of the popish college, in the abbey of Holyrood, were published, inviting children to be educated gratis." But James VII. had now run his race of religious folly, and was about to forfeit for himself and his heirs the crowns which he had meretriciously adorned with Roman gems. Throughout the months of September and October, 1688, his officers of state at Edinburgh acted as if they expected an invasion from Holland. Throughout August and November the court of session almost ceased to sit, considering its functions to have ceased from the apparent dissolution of the government. On the 3d December the students of the university, acting as the tools of more influential parties, burned the Pope in effigy, and clamoured for a free parliament. At length the Chancellor, the Earl of Perth, in whose person rested the whole government of Scotland, indicated, by his flight from Edinburgh to the Highlands, that the metropolis and the country were freed from the

caprices and the tyrannies of the dynasty of the Stuarts.

No sooner was it known that William, Prince of Orange, had landed, and that the regular troops were withdrawn from Scotland, than Edinburgh was peopled with crowds of Presbyterians pouring into it from every part of the country, and became a scene of tumultuous confusion. A mob rose, drums were beat through the streets, and a rush was made upon every thing identified with popery. The populace and the students ran to the abbey of Holyrood to demolish the chapel; but were fired upon and repulsed by the guard, 12 of their number being killed. Wallace, the captain of the guard, refusing, when called upon, to surrender, another rush was made upon his party, and terminated in the slaughter of some, and the capture of the rest. The mob now pillaged the Abbey church and private chapel of Holyrood, pulled down the Jesuits' college, plundered and sacked the religious houses and private dwellings of Roman Catholics, burned at the cross the paraphernalia of the chapels for saying mass, and made a general demolition of whatever was popish, or connected with the ecclesiastical policy of the dethroned monarch. Guards were now placed throughout the city to prevent further tumults. Nor—owing to the discretion of the Duke of Gordon, the governor, who yet refused to resign his command—did the Castle fire upon the town during the season of violence. On the 25th December the students paraded, with the college-mace before them, and a musical band, to the cross, and there again burnt the pope in effigy,—the town-council, and the portion of the privy-councillors who had not fled, looking on with approbation. The magistrates, notwithstanding their former sycophantish submission to James, were among the first to offer their services to the Prince of Orange; and on the 28th December they addressed him, congratulating him on his success, and assuring him of their cheerful concurrence in preserving their religion and their liberties. On the 14th of March, 1689, a convention of Estates was held at Edinburgh; and declared the forfeiture of James VII., offered the crown of Scotland to William and Mary, abolished prelacy, and re-established presbyterianism. On the 26th of March the magistrates of the city gave their oath of fidelity to the Estates. On the 11th of April William and Mary were proclaimed at the cross king and queen. During the sitting of the convention 6,000 Covenanters from the west protected its members, and preserved the peace of the city. Viscount Dundee, better known as Graham of Claverhouse, prowled about the city for a while with a small armed body of about fifty horse; and when about to retire before the forces which were accumulating within its walls, he climbed up the western side of the Castle-rock to a postern now closed up, and held a conference with the Duke of Gordon, who still maintained possession of the fort. An alarm now arose that the Castle was about to bombard the Parliament-house, and scatter the convention; but was magnanimously quelled within doors by the president, the Duke of Hamilton, who turned the lock, and declared that members should not depart till there was actual danger. The adherents of the revolution were suddenly summoned to the streets by beat of drum; and, in crowding together into masses, gave the city the appearance of hurried preparation to resist a menacing attack. On the 13th of June, 1690, the last hopes of the Jacobites having been slain at Killiecrankie, the Castle was surrendered by the Duke of Gordon. Several Jacobite plots were at various periods discovered in the city, but were easily crushed. In July 1690 the magistrates were empowered to raise a revenue for maintaining the city-guard. An act

was soon after passed, though not without opposition, to enable the corporation to pay its debts. During the whole of the reign of William the city was disgraced with the practice of torture, in nearly as cruel a degree as under the later Stuarts. In 1698 a statute was enacted by the Scottish parliament, against erecting houses in Edinburgh of a greater height than five stories, or of less thickness of wall in the ground story than three feet. On the 3d of February, 1700, a dreadful conflagration broke out on the south side of Parliament-square, and consumed the Treasury-room, the old Royal exchange, and extensive piles of building on the south and east sides of the square. Early in the same year the whole of the printers of Edinburgh, and some other parties, were severely prosecuted for the publication of pamphlets reflecting on the government. As the year 1700 advanced, the massacre of Glenco, the disregard of the Scottish privileges at the treaty of Ryswick, and particularly the opposition of the king to the recently formed company for trading to Africa and Indies, and the failure of the settlement which this company attempted to establish on the isthmus of Darien, exacerbated the people of Edinburgh and provoked them to open violence. On the arrival of news which were temporarily favourable respecting the Darien settlement, a mob obliged most of the inhabitants to illuminate, committed outrages on the houses which were not lit up in obedience to their dictation, secured the avenues to the city, and burned the doors of the Tolbooth, and set at liberty the victims of prosecution for libel upon government. When news shortly after arrived that the settlement was destroyed, and the hopes and capital of the trading company demolished, the mob were so furious that the officers of state and the royal commissioner to parliament fled from the city to escape becoming victims to the popular indignation.

Intelligence having arrived in March, 1702, of the demise of William, Queen Anne was proclaimed at the cross with the usual ceremonies. In March, 1704, a large quantity of popish paraphernalia, consisting of sacerdotal habiliments, communion-table linen, pictures, chalices, crucifixes, whipping-cords, rosaries, consecrated stones, relics, remissions and indulgences, were, by order of the privy-council, carried to the cross, and there burned or otherwise destroyed. In March, 1705, a vessel belonging to the English East India company having put into the Forth, the crew were suspected of piracy, aggravated by murder, upon the crew of a Scottish vessel in the East Indies; and—more in retaliation of the uncompensated seizure in the Thames of a vessel belonging to the Scottish African company, than in due appreciation of their imputed conduct—they were tried in Edinburgh, and condemned. The evidence against them appearing slender, intercessions were made for the royal mercy on their behalf. But the populace were deeply enraged, and, on the day appointed for the execution, congregated in vast numbers round the Parliament-house, where the privy-council and the magistrates were assembled in deliberation whether and how the victims should escape. The magistrates, aware of the revengeful fury of the mob, assured them that three of the criminals were ordered for execution. But the Lord-chancellor, emerging from the privy-council to his coach, some person shouted that the magistrates had cheated them, and that the criminals had been reprieved. The mob now stopped the chancellor's coach at the Tron-church, broke its glasses, insulted and ill-treated the chancellor, and could eventually be appeased only by the criminals being brought out for execution.

In 1706, when the measure of the national union

came before the Scottish parliament, the inhabitants of Edinburgh rose in insurrection against the constituted authorities. Even while it was known to them only *in limine*, they were under strong irritation; but when it became known in its details, they pressed in vast crowds toward the Parliament-house, and hooted and insulted every member of parliament who was believed to favour it. On the 23d of October they attacked the house of Sir Patrick Johnston, their late provost, who was a strenuous advocate for the Union, and compelled him to seek refuge in a precipitate flight. Increasing in numbers and in fury, the mob scoured the streets, became absolute masters of the city, and seemed as if proceeding to shut up the gates. The commissioner ordered a party of soldiers to take possession of the Netherbow, posted, with the consent of the magistrates, a battalion of foot-guards in Parliament-square and other suitable localities, and speedily succeeded in quelling the riot, and restoring order. But so deep and general was the popular rage, and so strong the panic it had excited, that nothing less than the whole army, encamped in the vicinity, was deemed a force sufficient to protect the parliament and the city. Three regiments of foot were constantly on duty in the town,—a battalion of guards protected the Abbey,—and the horse-guards attended the commissioner. Thus strongly protected, yet not undisturbed by popular hootings and insults, the parliament continued its deliberations on the Union, and at length, on the 16th of January, 1707, ratified the articles. But the members encountered severe difficulties, and submitted to remarkable privations, and adopted devices not a little curious, in order to authenticate by their signatures the popularly detested contract, first retiring in small numbers to a summer-house behind the Earl of Moray's house in the Canongate; next, when discovered and scared away by the mob, taking refuge, under the darkness of night, in an obscure cellar in the High-street; and then, before they could be discovered by persons early a-foot in the morning, taking a precipitate leave of the city, and starting off for London.

From the consummation of the Union on the 1st of May, 1707, Edinburgh, during half-a-century, lay prostrate and stunned under the blow which had been inflicted on her importance, stripped off the jewels and ornamented raimentings of her once courtly character, and pouring on the dust, unlamented by her nobles, the crimson hearts'-blood of her metropolitan pride. The city—as to nearly every thing which had rendered it opulent and illustrious—was utterly forsaken, and appeared to have lost all its attractions; and a thick gloom, such as had never before darkened its sky, hung over the dwellings and the hearts of its citizens. But eventually the Union, the occasion of temporary and afflicting disasters, worked indirectly out for it an amount and a brilliance of well-being which have, in some respects, made it the envy and the wonder of every other city in the world. From the date of the Union down to the present day, only five events in its history are of sufficient importance, or so detached from the history of particular institutions, and unanticipated in the early portions of this article, as to require notice. These events are the rebellion of 1715, the Porteous mob, the rebellion of 1745, some tumults before and after the period of the French Revolution, and the visit of George IV.

The rebellion of 1715 commenced with an unsuccessful attempt to capture Edinburgh castle by surprise. Some well-concerted measures were arranged; but they were discovered before the appointed hour of action, and easily disconcerted. The Bank of Scotland was immediately subjected to an extraor-

inary demand upon its specie, and compelled, for a short time, to suspend payment. Fifteen hundred insurgents passed the Forth from Fife, and marched upon Edinburgh; but they found it so well-prepared by the exertions of the magistrates in fortifying it, and the presence of a military force under the Duke of Argyle, to give them a warm reception, that they declined to attack it, and filed off, first to nestle in the decayed fort of Leith, and next to seek death and discomfiture in the south. The arrival, immediately afterwards, of 6,000 Dutch troops to aid the king's measures, prevented Edinburgh from being the scene of any further event during the brief remaining period of the rebellion.

In 1736 occurred the strange tumult called the Porteous mob, famous in the city's annals, and graphically described in the tale of the Heart of Mid-Lothian. Two smugglers—who had violated revenue laws recently extended from England to Scotland, and who attracted the sympathy rather than the reprehension of the populace—were tried, convicted, and condemned to death. On a Sabbath while at church, between two guard soldiers, one of them suddenly started up, and sprung upon the soldier at the side. The other, whose name was Wilson, now seized both the soldiers, and held them fast till his companion escaped; and he, in consequence, won no stinted meed of praise from the general population of the city. On the 14th of April, when Wilson was led out to execution in the Grassmarket, the mob pelted the executioner and the city-guard. John Porteous, the captain of the guard, enraged at the attack, ordered his men to fire. The guard, in the first instance, fired over the heads of the mob; but, enjoined by their angry captain, fired next among them, killing six persons, and dangerously wounding eleven. Porteous was tried for murder and condemned; but was reprieved by the Queen-regent Caroline. An opinion having gained general credit among the excited and exasperated populace that Porteous would get a second reprieve, and even that, on the day named for his execution, he would be adroitly transferred for safety to the Castle, a formidable conspiracy was formed with profound secrecy, and executed with singular promptitude. On the night preceding the day named for his execution, a mob, disguised in dress, broke into the jail, set at liberty all the prisoners except Porteous, drove off some gentlemen who attempted to lure them from violence, carried Porteous to the Grassmarket, suspended him on a dyer's pole till life had fled, and then dispersed with the utmost quietness and order. Great indignation was excited at court, and Edinburgh was menaced with a fearful retaliation. The lord-provost was taken into custody, and not admitted to bail till after three weeks of confinement; and he was commanded, along with the bailies and three lords of justiciary, to appear before the House of Lords. A bill passed the upper house to unfrock the provost, to confine the provost in close custody for a year, to abolish the city-guard, and to destroy the city-gates; but in the lower house this severe bill was transmuted into an order upon the city to pay the widow of Porteous £200 a-year. Though a reward of £200 was offered for the discovery of each person who had acted in the conspiracy, and though it was accompanied with a proffered pardon to any accomplice who should turn informer, not one individual concerned in the affair was ever brought to justice, or even traced.

At the breaking out of the rebellion in 1745, the city-guard was augmented to 126 men, the trained bands were ordered to be in readiness, 1,000 men were raised by subscription, and placed under the direction of the town-council, a part of the king's

forces were brought into the vicinity, the walls were repaired, ditches were thrown up, inquisition was made respecting strangers lodging in the city, the money of the banks and other public offices was removed to the Castle, and all preparatory measures were adopted which might contribute to the defence or safety of the metropolis. On the 13th of September the Pretender crossed the Forth with 2,000 men, some miles west of Stirling; and on the 15th he had reached Linlithgow, and driven Gardiner's dragoons before him in retreat. The city's regiment and town-guard, marching out to assist the king's forces, in making a stand a mile to the westward of Edinburgh, saw the troops whom they went to support in full retreat, and fell back upon the city only to witness universal consternation among its inhabitants. While negotiations were attempted with the rebel camp for the safety of the city, 800 Highlanders, under Cameron of Lochiel, took advantage, on the afternoon of the 17th September, of the opening of the Netherbow for the admission of a carriage belonging to the negotiators, to rush quietly into the town, overpower the guard, and take immediate and entire possession of the streets. On the same day the Chevalier led his little army into the King's park, fixed his camp at Duddingstone, entered Holyrood-house, commanded the magistrates, on pain of military execution, to furnish stores which cost 2s. 6d. per pound on the real rental of the inhabitants, ordered the citizens to give up their arms, proclaimed James VIII. of Scotland at the cross, and at night held a splendid ball in the palace. On the 18th Charles was joined by Lord Nairne, with 1,000 men from the North. On the 20th he marched out to the field of Prestonpans; and on the 21st won his easy victory, [see PRESTONPANS,] and returned in triumph to Edinburgh. On the 25th the Castle, alarmed by some noise among the rooks, fired upon the Highland guard at the West port. Charles now cut off communication between it and the city; and the Castle being scantily supplied with provisions, the governor threatened a cannonading if the blockade should not be removed. A severe firing was now commenced upon the city, and filled all quarters with terror and confusion, demolished and burned a number of houses, and killed and wounded many of the inhabitants as well as of the Highland soldiers. At the end of two days, Charles removed the blockade, and restored quiet; and on the 31st of October, he, at the head of his army, left Edinburgh for England. After the final defeat of Charles, 14 standards taken at Culloden were ignominiously burned at the cross of Edinburgh; and the Duke of Cumberland visited the city in his way to the South, and occupied apartments in Holyrood-house. Archibald Stewart, Esq., who filled the office of lord-provost when the rebels entered the metropolis, was brought before the justiciary-court, for malversation favourable to the Jacobites; but after a trial of six days, as remarkable for its interesting character as for its length, was acquitted.

In 1778 the Earl of Seaforth's Highland regiment, then quartered in the Castle, being required to embark for India, broke into mutiny, and encamped on Arthur's-seat; but were brought to allegiance through the interposition of Lords Dunmore and Macdonald. In 1779, a mob—exasperated by measures in progress to repeal the penal laws against Roman Catholics—burnt one popish chapel, plundered another, and destroyed considerable property belonging to Romish priests and people, and even to some Protestant advocates of their civil rights. Military assistance was called in, and quelled the disturbance without loss of life or recourse to violence: but the city was afterwards obliged to com-

pensate damages to the amount of £1,500. When the French revolution broke out, several citizens of Edinburgh were brought to trial for treason and sedition, and visited with rigorous punishment. During the atrocities of the French reign of terror, the city made zealous demonstrations of loyalty. After the breach of the peace of Amiens, four volunteer regiments were raised in the city, constituting a force of between 3,000 and 4,000 men. On the night of the 31st December, 1811, a body of youths, united by previous conspiracy, and armed with bludgeons, scoured the streets, indiscriminately plundered persons in their way, drove the police headlong before them, killed one person and mortally wounded several others, and, during a considerable part of the night, maintained mastery over the town. Three of the youthful rioters were afterwards brought to trial, and publicly executed in the High-street. Some affecting incidents connected with their execution, and especially the horrors of the scene which caused it, excited salutary, general, and permanent feelings, both of aversion to the bacchanalian festival of celebrating the transition from an old to a new year, and of concern for the education and moral training of the young.

George IV.'s visit to Edinburgh in 1822, is so well yet succinctly narrated in a sketch by James Browne, Esq., attached to W. H. Lizars' 'Picturesque Views of Edinburgh,' that, after looking at voluminous materials before us, we prefer the adoption of it to any attempt at a compilation of our own. "His Majesty's gracious intention to visit Scotland was communicated officially to the lord-provost of Edinburgh on the 17th of July; and it was further intimated that he might be expected to reach the capital about the middle of August; that is, immediately after the rising of parliament. The time for making the necessary preparations for his Majesty's reception was therefore short; but the proper authorities exerted themselves with so much zeal, that wonders were performed. The apartments in Holyrood-house were cleaned, repaired, and fitted up with suitable elegance; a new approach was formed from the south side of the Calton-hill to the front of the palace; the road through the King's park was opened for the convenience of his Majesty travelling to and from Dalkeith-house, where it was intended he should reside; the Weigh-house was removed to clear the passage to the Castle; a barrier, like the gates of a city, was constructed in Leith-walk, nearly opposite Picardy-place; and triumphal arches were erected at Leith, where it was presumed his Majesty would land, but in case that should not be found expedient, a communication was opened with Trinity chain-pier. At the same time an encampment was formed on Salisbury-crag and the Calton-hill, where guns were stationed, and poles erected for displaying the royal standard; and, in a word, every effort was used to receive his Majesty with becoming pomp and splendour. Meanwhile, crowds of people from all parts of the country, and equipages of every description, from the superb fashionable chariot-and-four to the humble Glasgow noddie, poured in daily; all was bustle, anxiety and expectation, the novelty of the approaching spectacle heightening the interest with which it was anticipated, and raising to the highest pitch of excitement the loyal feelings which seemed to animate every bosom. The session of parliament having been closed by his Majesty in person on the 6th of August, he embarked at Greenwich for Scotland on the 10th. On the 14th the royal squadron arrived in Leith roads; but the state of the weather being unfavourable, it was announced that the landing would be deferred till the morrow. On the 15th, which proved a remarkably fine day, all was bustle

and preparation. The whole of Leith-walk was lined with scaffolding on each side; every corner was crowded with well-dressed people; and the windows in every street through which the procession was to pass, exhibited clusters of heads densely packed together. Exactly at noon a gun from the royal yacht announced that his Majesty had embarked; and soon after, the royal barge entered the harbour amidst the thunder of artillery, and the still more gratifying peals of enthusiastic acclamations, sent forth by the immense multitude who had assembled to witness this magnificent spectacle. At the landing-place, which was a platform covered with scarlet-cloth, his Majesty was received by the Duke of Dorset, the Marquis of Winchester, the Earl of Cathcart, the Earl of Fife, Sir William Elliot, Sir Thomas Bradford, the judges of the supreme courts, and the magistrates of Leith, all of whom he shook cordially by the hand. His Majesty then proceeded to his carriage, which was opened at the top; and after being seated with the Duke of Dorset and Marquis of Winchester, it drove off at a slow pace, guarded by the company of royal archers, under the command of the Earl of Elgin, and a detachment of the Scots Greys. The train of the procession, which moved by Bernard-street, and Constitution-street, along Leith-walk, was of a more splendid kind than had ever been seen in Scotland, and consisted of all that rank and pomp could contribute to grace the ceremonial. The head of the cavalcade reached the barriers of Edinburgh about one o'clock, when the lord-provost, accompanied by the magistrates, presented his Majesty with the silver-keys of the city, which his Majesty immediately returned with a short and courteous speech. The procession then moved forward by York-place, and St. Andrew's-square to Prince's-street, and turning to the eastward, proceeded to the Regent-bridge, Waterloo-place. On entering Prince's-street, where, on the one hand, the picturesque irregularity of the Old town, surmounted by its venerable and majestic Acropolis, and, on the other, the elegance and splendour of the New town, with the Calton-hill in front, terraced with human beings, burst upon the view, his Majesty was charmed with the scene, then enlivened by every accompaniment that could heighten the feeling of admiration, and waving his hat, exclaimed, 'How superb!' About two o'clock his Majesty reached the palace of Holyrood-house, and his arrival was announced by salutes fired from the Castle and from the guns placed on the Calton-hill and Salisbury-crags. After receiving the congratulations of the magistrates and other authorities, his Majesty set out in his private carriage for Dalkeith-house. Fireworks were exhibited in the evening, while a beacon blazed on the summit of Arthur's-seat; and the night following there was a general illumination. On the 17th his Majesty held a levee in Holyrood-house, which was most numerous and splendidly attended; on the 19th he received the addresses of the Commission of the General Assembly of the Church of Scotland, of the four universities and of other public bodies; and on the 20th he held a drawing-room, which was graced by about 500 ladies, the most distinguished for rank, beauty, and fashion, which Scotland could boast of. On the 22d, his Majesty went in procession from Holyrood-house to the Castle, which would have proved a gorgeous pageant had not the effect of the spectacle been impaired by almost incessant rain. On the following day he reviewed a body of about 3,000 cavalry, chiefly yeomanry, on Portobello sands; and the same evening attended a splendid ball given in honour of the royal visit by the peers of Scotland. On the 24th a splendid banquet was given to his Majesty in the

great hall of the Parliament-house by the lord-provost, magistrates, and town-council, on which occasion his Majesty honoured the city by creating the lord-provost a baronet; and the following day, being Sunday, he attended divine service in the High church.—Dr. Lamont, moderator of the General Assembly, officiating on the occasion. A ball given by the Caledonian Hunt was attended by his Majesty on the 26th; and on the 27th he made his last appearance before his Scottish subjects in a visit to the theatre, where, with his accustomed good taste, he had commanded the national play of 'Rob Roy' to be performed, and where, both at his entrance and departure, he was hailed with long-continued and enthusiastic acclamations from all parts of the house. On the 29th his Majesty, after partaking of a splendid repast prepared at Hopetoun-house, embarked on board the royal yacht at Port Edgar, near Queensferry, amidst the cheers and cordial adieus of a vast body of spectators, assembled from all parts of the adjacent country."

Subsequent noticeable events in the history of Edinburgh have chiefly been connected with particular institutions, or the architectural extension of the city, or have otherwise been of such a nature as to have been incidentally noticed in the earlier portions of this article.

EDINBURGSHIRE, or **MID-LOTHIAN**, situated in the eastern part of the southern division of Scotland, has a somewhat serrated outline, yet has proximately the figure of a half-moon, whose body rests on the frith of Forth, and whose horns stretch away south-east, and to the north of west. On the north it is bounded by the frith of Forth; on the east by Haddingtonshire, Berwickshire, and Roxburghshire; on the south by Selkirkshire, Peeblesshire, and Lanarkshire; and on the north-west by Linlithgowshire. It lies between $55^{\circ} 39' 30''$ and $55^{\circ} 59' 20''$ north latitude; and between $2^{\circ} 52'$ and $3^{\circ} 45' 10''$ longitude west from Greenwich; and measures in extreme length from east to west 38 miles, in average breadth from north to south 15 miles, and in superficial area 358 square miles, or 229,120 English acres. These are the measurements of the recondite and generally accurate author of 'Caledonia;' and they are rather authenticated than invalidated by those of the 'Agricultural Survey of Mid-Lothian,' which make the superficial area 1,288 English acres less. The line of the county along the Forth, from west to east, is about 12 miles; along the eastern boundary, from north to south, about 23 miles; along the southern boundary, from east to west, about 36 miles; and along the boundary of Linlithgowshire, or the course, with one brief exception, of Breich water and Almond water, from south-west to north-east, about 19 miles.

Edinburghshire may, in the most general point of view, be considered as consisting of an inclined plane or hanging level, descending northward or eastward of north toward the frith of Forth; and a section, 11 miles in length, of upland ploughed by streams, and inclining southward at its south-eastern horn.—The most prominent hills are the Pentlands, which come in upon the county in continuous and parallel ranges from Peeblesshire, and sweep northward nearly along its middle, over a distance of 12 miles, till they terminate in bold outlines 6 miles from the sea, or 4 from the capital. East-Cairn-hill, near the middle of a continuous group of eminences not greatly inferior to it in elevation, rises 1,802 feet above the level of the sea at Leith: see article **PENTLANDS**. Next to the Pentlands, the Moorfoot hills, which are a continuation of the Lammermoor hills, are the most conspicuous ranges. From Coatlaw, on the west side of Moorfoot water, the most northerly one of two

ranges, coming in from Peebles-shire, stretches about 10 miles east-north-east, and terminates in Cowberry hill, near the source of Gala water. This range cuts off the parishes of Heriot and Stow from the main body of the county, and forms a line between waters which flow northward, and the sources of the southward streams which are carried off toward the Tweed. The other range of the Moorfoot hills also branches off from Coatlaw on the western point, and extends, with a wider spread than the former, about 10 miles, in a south-east direction, over the country which is drained by the Heriot and the Luggate waters. The two Moorfoot ranges may, as to the geographical lines which they form, be regarded as two sides of a triangle which has Gala water on the east as its base. The area of this triangle, and the stripe along the Gala water, are irregularly studded by hills of the transition series, generally round, sometimes insulated, and nowhere linked into a continuous range.— Along the extensive inclined plane which stretches between the Pentland and the Moorfoot ranges and the sea, are several brief hilly chains, or remarkable congeries of elevations. The most singular, romantic, and curiously agglomerated are those which partly environ and partly bear aloft the capital, and which were briefly described in the articles, ARTHUR'S SEAT, CALTON, and EDINBURGH. Between the parishes of Cranston and Crichton on the east, and the parishes of Dalkeith and Cockpen on the west, a continued ridge of hill stretches nearly 6 miles from north to south; but, though rising in various places from 550 to 680 feet above the level of the sea, does not much obstruct a road which crosses its centre from Edinburgh to Coldstream. Through the parish of Corstorphine run the hills of the same name, in a curving direction from north-west to south-east, over a distance of 2 miles; but, rising only 474 feet above the level of the sea, they derive their conspicuousness of appearance, partly from some remarkable indentations in their summits, and chiefly from their being surrounded with a rich extensive plain. In Ratho-parish a small congeries of hills, called the Plat-hills, rising 600 feet above the level of the sea, runs about $1\frac{1}{2}$ mile from north to south. In the southern extremity of the same parish, at the head-springs of the Gogar burn, are three trap hills in a line, called Dalmahoy-crags, two of which rise respectively 660 and 680 feet above the level of the sea. Other hills in the county are either rising grounds of inferior note, or spurs of the Pentland range.

The northern and western sections of the county are in general arable, fertile, and variegated only to an agreeable and highly beautiful degree with rising grounds; and the southern and south-eastern sections, especially the latter, are, to a large extent, pastoral. About one-third of the whole county may be estimated as the proportion of hill or grounds inaccessible to the plough. On the great inclined plane which forms the northern division, is a tract of upwards of 50,000 Scotch acres of arable and fertile lands, stretching about 15 or 16 miles from east to west, and 6 or 8 from north to south. The hills and rising grounds which diversify this tract, while they greatly embellish the landscape, abound in fine pasture, and are nearly equal in territorial value to the level grounds. Farther south, and nearer the mountain-ranges, is another tract of plain country, situated from 600 to 900 feet above the level of the sea, with a northern exposure, having in general a good soil, not unfriendly to vegetation, abounding in warm and wealthy spots which carry luxuriance up to the very base and along the lower face of the mountains, and containing stretches of moorland and moss which, in many instances, have accepted opulence and adornment from the hand of culture. In-

terspersed among the mountains, especially among the Moorfoot ranges, are several dales or valleys, consisting of good arable land. The pasture in the hilly and unploughable districts is in general sweet and healthy, and enriches the country with the breed of sheep which it supports. The soil of the county is much diversified. Clay, sand, loam, and gravel, are all, in many cases, to be seen on the same farm, and frequently in the same field, with many variations of quality; and they are so blended, and compete so briskly for pre-eminence, that one cannot easily determine which predominates.

“Almost the whole of the county may be seen at once from the summit of Allermore, the most elevated of the Pentland hills to the north. Its waters may be traced by the fringe of wood with which their banks are generally ornamented. The numberless villas in the vicinity of Edinburgh, and gentlemen's seats, all over the county, are seen beautiful and distinct, each in the midst of its own plantations. These add still more to the embellishment of the scene from the manner in which they are disposed; not in extended and thick plantations, which turn a country into a forest, and throw a gloom upon the prospect, but in clear and diversified lines, in clumps and hedge-rows, or waving in clouds on the brows of hills and elevated situations, useful as well as ornamental; protecting, not injuring, cultivation. In fact, Mid-Lothian, when viewed on a fine summer-day from almost any of its hills, displays a prospect of as many natural beauties, without being deficient in those embellishments which arise from industry and cultivation, as perhaps can be met with in any tract of the same extent in Great Britain. The expanse of the Forth, which forms the northern boundary, adds highly to the natural beauty of the scene; and the capital, situated upon an eminence adjoining to an extensive plain, rises proudly to the view, and gives a dignity to the whole. Descending from the hills to the low country, the surface, which had the appearance of an uniform plain, undergoes a remarkable change to the eye. The fields are laid out in various directions according to the natural figure of the ground, which is unequal, irregular, and inclined to every point of the compass. The most part, however, of the land lies upon a gentle slope, either to the north or the south, in banks which are extended from west to east all over the county. This inequality in the surface contributes much to the ornament of the country, by the agreeable relief which the eye ever meets with in the change of objects; while the universal declivity, which prevails more or less in every field, is favourable to the culture of the lands, by allowing a ready descent to the water which falls from the heavens.” [‘Agricultural Survey of Mid-Lothian.’ Edin. 1792. 8vo, pp. 23, 24.]

Edinburghshire is well-watered; though, from its peculiar configuration, it is washed by no stream of sufficient length or volume to be called a river. All the numerous streams, which touch or intersect it, are designated either Burns or Waters. But its deficiency as to natural inland navigation is abundantly compensated by the sweep along its northern boundary of the broad navigable sea-waters of the Forth. The frith where it rolls past the county is from 7 to 12 miles broad, and swarms with white fish and herrings, and profusely scatters on the beach some of the best kinds of shell-fish. But for many ages it has been making encroachments on the land; and, in consequence, it stretches out in long shallows from the shore, and offers greatly less and fewer facilities for navigation than would seem to be promised by the expanse of its waters, and the declivity of its coast. Almond water, the most westerly stream of the county, comes down upon it at the

northern angle of the parish of West-Calder from Linlithgowshire, intersects a wing of the parish of Mid-Calder, and, thence to the sea, forms the north-western boundary-line. The water of Leith rises in the south-eastern extremity of the parish of Mid-Calder, and flows generally in a deep channel between wooded banks, over a distance of 20 miles to the sea at Leith. The Esk—the largest stream in the county—is composed of two main branches which unite below Dalkeith, and fall into the sea at Musselburgh; and, by its head-waters and its numerous tributaries, it drains the whole country lying between the Pentland and the Moorfoot ranges of mountain. The Tyne rises near the north-east termination of the Moorfoot hills, and after flowing 7 miles northward in the county, debouches to the east, and passes away into East Lothian. The Gala rises in the northern limit of the Moorfoot hills, and flows 10 miles southward through the parishes of Heriot and Stow, receiving from the west the waters of the Heriot and the Luggate, and leaves Edinburghshire at its south-eastern angle. All these streams form the subject of separate articles in the present work.—The lakes are so inconsiderable as to be fit objects of notice only in the articles on the parishes.

A continuous bed of coal, nearly 15 miles in length, and from 7 to 8 in breadth, extends across the county from Carlups to Musselburgh, in a northerly direction, stretching beneath the vale of the North Esk. Coal is worked, however, chiefly in the lower part of the vale, and there occurs in seams from 20 to 25 in number, partly on edge and partly flat, and from 2 to 15 feet in thickness. In one estate, in the parish of Lasswade, coal appears to have been worked as far back as the beginning of the 17th century. The quantity annually disembowelled from the earth during many years, was so considerable as to yield a rental for the pits of about £12,000; and has been materially increased since the construction of the Edinburgh and Dalkeith railway. But owing to the prevalence of 'dikes,' the great expense of working the mines, and the spirited competition of the Fife and Western coal-districts, it has not yielded large remuneration to proprietors. In the rising ground south of Newbottle, on the estate of the Marquis of Lothian, fine parrot-coal occurs in abundance, and is thence carried to Edinburgh for the manufacture of coal-gas.—Limestone abounds in the coal-district, and also between that district and the hills by Middleton, Crichton-Dean and Fala, as well as in the south-west angle of the county, in the parish of East Calder. The most remarkable and abundant strata are near Gilmerton, in the parish of Libberton. One mine—which has been abandoned from time immemorial, and which evinces that limestone was first worked in localities where it looked out from the surface—"presents the appearance of an immense series of arcades upon a considerable declivity, reaching from the surface to a most profound depth under the incumbent fields, and forming quite a local wonder."—Sandstone of excellent quality and various kinds is abundant. One principal quarry is at Craigleith, in the parish of St. Cuthbert's, and near the metropolis; and has produced the immense quantity of beautifully white and very durable stone, of which the greater part of the New Town of Edinburgh is built. The six columns in front of the college, each consisting of one stone 23 feet by 3, and supposed to be superior to any similar pillars in Britain, are from this quarry. Another principal quarry is at Hales, in the parish of Colinton, about 4 miles west of Edinburgh, and yields a slaty stone which is easily worked, and of great value for pavement. Several other quarries of inferior note occur in various localities. Granite and whinstone are found in every par-

ish of the county, and have been not only used for local buildings, and for paving the streets of Edinburgh, but transported in considerable quantity to London. Millstones, petrifications, and beautiful specimens of marble, are produced in the parish of Penicuik. Lead was, at a former date, found on the south side of the Pentlands, at the head of the North Esk. Copper is believed to exist in several parishes; but, though tried for a time in Currie, is not sufficiently abundant to be remuneratingly worked. Iron is much more frequent, particularly in the vicinity of coal. Gems are now very rarely met with, but anciently were not altogether scarce. The Arthur-seat pebble, a species of jasper, was, at no remote date, occasionally seen.—Mineral waters, chalybeate and sulphureous, spring in two localities near Edinburgh,—in Cramond, Mid-Calder, and Penicuik, and in various other districts.

However early, during rude and tumultuous ages, the plough may have been introduced to Mid-Lothian, agriculture appears to have there made some progress before the close of the 11th century. At that epoch, and for ages afterwards, the county was for the most part covered with forests. But while the feeding of flocks among the woods and in vast pastures on the Gala water was pursued by the opulent, husbandry was practised by the poor. David I. raised agriculture in the popular estimation, and threw around it the dignity and eclat of royal adoption; becoming himself the greatest farmer in Mid-Lothian, and maintaining many agricultural establishments. David I. also showed his people an example of horticulture; and speaks, in his charter of Holyrood, of his garden under the castle. Horticulture was generally practised in Scotland during the Sæto-Saxon period; and commanded much attention, in the instance of the royal gardens of Edinburgh, during the disastrous reign of David II. But the prevalence of groves and shrubberies long obstructed, in every shape, the cultivation of the soil. Edward III. did much to abridge the domination of the forests; yet even he left large clusters of native oak to spread their dark wings over the rich plains, and send down their hungry roots into the productive soil, so late as the 16th century. While woods lifted their umbrageous covering over the country, and warriors and freebooters prowled beneath them to trample upon luxuriance, and break through the fences reared by the hand of cultivation, agriculture could not make material progress. Mills, kilns, and breweries, indeed, were not few in number, and afforded no unambiguous intimation that the farmer was quietly and unostentatiously resisting the soldier, as well as subduing the asperities of the soil. Yet the lower orders of the inhabitants—those chiefly who practised agriculture—were the slaves rather than the tenants of the land-owners, and laboured unwillingly for others, rather than willingly for themselves. The tillers of the ground—especially when coin was scarce, and the circulation of it nearly unknown—could not, in consequence, possess sufficient capital to enable them advantageously for either their families or the population around them, to follow the plough. The tenant, therefore, rented from the landlord—who copied the example of the freeholders of England—not only the land but the materials with which it was stocked; and was bound to deliver up all he possessed whenever he vacated his farm. The strange tenure by which the cultivator of the soil thus held the lands on which he expended his labour, was called steelbow, and long and almost hopelessly obstructed the progress, or rather the beginning of improvement. A patient, persevering, and assiduous course of quiet industry,—a course possessing these properties in a degree

inconceivable by an age of stir and speculation, and rapid evolutions,—was indispensable in combination with frugal economy to carry up the value of agricultural capital from the cypher of the steelbow age, to the flourishing and opulent period of identity of farmership with independence, luxury, and social greatness. The era of improvement, to an extent fully visible, was so low as about the end of the first quarter of the 18th century. At that period a society of Improvers formed in Edinburgh, and now, according to the usual ingratitude of the world, almost entirely forgotten, issued agricultural instructions, and illustrated them by example. Other parties, near and after the same date, followed in their wake. In particular, Sir James Macgill, and, 60 years later, Sir John Dick of Prestonfield in Duddingston, carted away manure from Edinburgh, and demonstrated how, by artificial appliances, a barren soil may be converted into the seat of luxuriance and agricultural wealth and beauty. At later dates, down toward the close of the 18th century, Sir John Dalrymple of Cousland, Hamilton of Fala, Thomas Hope of Rankelior, and the Duke of Buccleuch, aided or directed by Dr. Carlyle of Inveresk, and Dr. Irvine of Dalkeith, achieved great improvements in the introduction of grasses and succulents, of hedges and ditches, and of economical ploughs, and well-adapted implements of husbandry. The present state of agriculture in the county is as high and prosperous as modern science and capital can well desiderate. A territory around the metropolis is extensively laid out in nurseries and garden-grounds, and is maintained or forced in its luxuriance by the importation of manure from the city. A district beyond is distributed chiefly into potato fields, enriched and supported by the same manurial appliance; and this district, patched with spots of the former territory, has been extended away westward, in consequence of the facilities for conveying manure which have been afforded by the opening and traffic of the Union canal. The ulterior and larger parts of the arable division of the county are laid for crops of wheat, barley, oats, pease, beans, potatoes, summer tares, rye-grass, and clover. In the moorlands, though a few miles of ascent from the plain reveals a difference of almost as many weeks in the date of harvest, cultivation rapidly extends, striding along heath and bog, and even making a considerable ascent up the acclivities of the hills. Well-constructed fences, sheltering plantations, draining, manuring, and all the arts of improvement, are contributing their quota to enhance the opulence of wealthy soils, and confer value and ornament upon poor. The farmers are well-educated, experimental, generally affluent, and distinguished by the bearing of independence and reflection.

During the reigns of the earliest Scoto-Saxon kings, the people must have enjoyed the benefit of those domestic fabrics without which society can hardly exist. Yet at that period manufactories were represented only by the achievements of handicraftsmen. The making of salt, and the art of distillation, were the sole and miserable indications of progress at the demise of Alexander III. During the 14th and 15th centuries, an independent but ruined nation scarcely enjoyed the most common handicrafts; nor could two centuries of distractions, subsequent to the reign of James I., give much energy to the incipient, the hardly-existing, manufactures of the county. Legislation, during that period, vainly interposed encouragements to men without skill or capital or social support to engage in the useful labours of the loom; and even after the Restoration it strove assiduously, but without success, to introduce various manufactures. A hundred and twenty years

ago, or little more, the fabrication of linen was, almost perceptibly and on a very small scale, introduced. The board of trustees for encouraging manufactures in North Britain, aided by several of the nobility and gentry, soon made a strong and favourable impression. In 1729 a number of Dutch bleachers from Haarlem commenced a bleachfield on the water of Leith, a few miles west from Edinburgh; and soon exhibited to the gaze and the imitation of Scotland the printing and stamping of all colours. Extensive bleachfields still exist in the neighbourhood of the city, and on the banks of the Esk, particularly in the parish of Lasswade. At Kirkhill, south from Edinburgh, is a very large establishment for the preparation of linen-yarn. Woollen and linen fabrics are woven, though not by any means to an amount proportioned to the bulk and facilities of the county, in Edinburgh, Leith, and Musselburgh. At Stobbs and Roslin are the only manufactories of gunpowder in Scotland. Mid-Lothian, however, while possessing high advantages equal or superior to those of many a district whose manufacturing industry has made its weavers princes, and has covered its surface with a swarming population, is exceedingly and almost unaccountably deficient in the amount and spirit of its manufactories. Its principal factorial produce consists of salt, soap, candles, glass, intoxicating liquors, pottery, leather, iron, paper, and books. A cluster of large buildings, called the Castle Silk mills, have been erected since 1835 on the banks of the Union canal, west of the city, and have introduced the manufacture of silk into the county. Paper of home-made manufacture first issued from Edinburghshire; and is now made at Lasswade, Balerno, Melville, Penicuik, Colinton, Polton, Auchindinny, and various other places on the waters of Leith and Esk; and, though not able to compete in the finer qualities with the paper of the south of England, supplies nearly all Scotland with the best material for the press. Edinburghshire, viewed in the aggregate, is far from being a manufacturing district, and appears, by its factorial produce, rather to apologize for its indolence, or its aristocratic spirit, or its fondness for luxuriating in the wealth and finery of its landscape, than to offer competition to the plodding and matter-of-fact districts of the kingdom.

Edinburgh is the only royal burgh in Mid-Lothian; and Dalkeith the only burgh of barony. Musselburgh, Leith, Canongate, and Portsburgh—the latter two incorporated with the metropolis—are burghs of regality. Portobello, Newhaven, Inveresk, Mid-Calder, and Penicuik, are considerable villages. Lesser villages are Joppa, Corstorphine, Currie, West-Calder, Gilmerton, Loanhead, Roslin, Lasswade, Ratho, Bonnyrigg, Cramond, Pathhead, and Slateford. There are also various hamlets. The seats in the immediate neighbourhood of the city belonging to the wealthiest class of its population, are very numerous.—In 1831 the county contained 30 parishes, including St. Cuthberts and North and South Leith; but excluding Canongate and the parishes within the royalty of Edinburgh. Since that date 9 *quoad sacra* parishes, principally in the town or suburbs of Edinburgh, have been erected out of St. Cuthberts. Portobello, Newhaven, St. John's of Leith, Gilmerton, Buccleuch of Dalkeith, Roslin, and Musselburgh or North Esk, have also been made parishes *quoad sacra*.—The county sends one member to parliament; and has its polling-places at Edinburgh, Dalkeith, and Mid-Calder. Parliamentary constituency, in 1839, 2,315. The court of lieutenancy is divided into 6 districts.—The valued rental, in 1674, was £191,054 Scotch; and the assessed property, in 1815, £770,875. Population, in

1801, 122,954; in 1811, 148,607; in 1821, 191,514; and in 1831, 219,345. The population, in 1831, was distributed into 665 occupiers of land employing labourers; 274 occupiers of land not employing labourers; 3,637 agricultural labourers; 7,695 labourers not agricultural; 1,267 manufacturing operatives; 23,780 persons employed in retail trades and handicrafts; 8,257 capitalists; 1,803 male servants; and 1,544 female servants. The total number of families, in 1831, was 47,415; of inhabited houses 19,744. —The number of parochial schools, in 1834, was 32, conducted by 40 teachers, and attended by a maximum of 3,400 scholars; and of schools not parochial 325, conducted by 442 teachers, and attended by a maximum of 13,176 scholars.

The maritime traffic of Mid-Lothian, and also of East and West Lothian, Peeblesshire, and Selkirkshire, is concentrated at Leith, and is of considerable extent. Fisherrow or Musselburgh is a port for fishing-boats; and Newhaven, besides being a fish-port, is a post of communication with the coast of Fife. Steam-vessels ply many times a-day between the piers at Newhaven and Burntisland, Pettycur, Kinghorn, and Kirkcaldy, on the opposite shore, and connect Mid-Lothian and the capital with the eastern division of Scotland northward of the Forth. The Union canal, stretching between Edinburgh and the Forth and Clyde canal at a point near Falkirk, traverses the parishes of St. Cuthberts, Colinton, Currie, Ratho, and Kirkliston: see UNION CANAL. A railway to communicate between Edinburgh and Glasgow is in progress, and will run in the same direction as the canal, intersecting the county a little farther to the north: see EDINBURGH and GLASGOW RAILWAY. A completed railway communicates between Edinburgh and Dalkeith, and sends off short branches along the coast; and another railway now executing communicates between Edinburgh and Newhaven. There are still various projects before the public for the completion of a line of railway communication between Edinburgh and London. In our article HADDINGTONSHIRE we have given, in a note, an outline of the projected East coast line. Another line has been proposed by Mr. Millar starting from near Hillwood, at the 7th mile from Edinburgh, on the Edinburgh and Glasgow railway,—taking a course up the valley of the Almond by the north side of the Pentland range,—passing about a quarter of a mile to the north of the village of West-Calder, and attaining its summit, at a point 835 feet above sea-level, on the boundaries of the counties of Mid-Lothian and Lanark, and 18½ miles from Hillwood. It then descends into the valley of the Clyde, following for some distance the course of the Mouse, which it crosses within 150 yards of the village of Carstairs, whence it proceeds to the village of Pettinain, and forms a junction with Mr. Locke's proposed Glasgow and Carlisle line, at the village of Thankerton [see articles HAMILTON and THANKERTON]. The total length of this line to Thankerton is 37 miles 41 chains; and the total length to the Carlisle and Newcastle line, 97 miles 44 chains.—Another branch line has been projected proceeding from Symington, about 2½ miles south-east of Thankerton, along the south side of the Pentlands, direct to Edinburgh. This line would be 31 miles 3 chains in length.—All the great lines of road in the county diverge from the metropolis. One leading to Haddington, Berwick-upon-Tweed, and the east of England, runs down to Portobello, and thence proceeds along the shore. Another, leading to Lauder, passes through Dalkeith, and leaves the county near the village of Fala. A third, leading through Selkirk and Hawick to Carlisle, and through Jedburgh to Newcastle-on-

Tyne, passes a little to the west of Dalkeith, and traverses the parishes of Newbottle, Borthwick, Heriot, and Stow, running along the banks of Gala water from near its source till, in its company, it leaves the county. A fourth, leading to Peebles, breaks off from the former in the parish of Libberton, and thence intersects the parishes of Lasswade and Penicuik. A fifth, leading to Biggar and Dumfries, goes through the village of Morningside, skirts the eastern part of the parish of Colinton, and intersects the parishes of Glencorse and Penicuik. A sixth, leading to Lanark, passes through the villages of Slateford and Currie, and leaves the county near Crosswoodhill. A seventh, leading to Glasgow by way of Whitburn, passes through the villages of Hermiston, East-Calder, and Mid-Calder. An eighth, leading to Glasgow by way of Bathgate, passes the village of Corstorphine, and leaves the county a mile south of the village of Kirkliston; and it sends off, in the parish of Corstorphine, a slightly diverging branch which leads to Linlithgow and Falkirk. The ninth and last great line of road passes through the metropolitan suburb of the Dean, and intersects the parish of Cramond, leading on to Queensferry, there to communicate by steam-boat across the Forth with the great road to Perth. Every part of the county, or at least its non-pastoral districts, is freely intersected with intermediate and cross roads.

The antiquities of Mid-Lothian, most instructive and valuable, though least noticed and but partially interesting, are the traces, in the names of its localities, of the presence and influence successively of the Britons, the Romans, the Anglo-Saxons, and the Scots-Irish. The Ottadini and the Gadeni, the British descendants of the first colonists, enjoyed their original land during the second century; and left memorials of their existence in the names of the Forth, the Almond, the Esk, the Leith, the Breich, the Gore, and the Gogar, and of Cramond, Cockpen, Dalkeith, Dreghorn, Inch-keith, Roslin, and Pendreich. The Romans, though untraceable in the topographical nomenclature, have left roads, encampments, baths, and sepulchres sufficient to attest their temporary dominance. The Anglo-Saxons, who came into Mid-Lothian in fewer numbers than into Berwickshire and East Lothian, have bequeathed a much smaller proportion of names than in the latter counties, but have left sufficient indications of their presence in the names Stow, Newbottle, and Lasswade, and in the occurrence in the south and south-east of *Law, Rig, Dod, Shiel, Lee, Dean, Hope, Ham, Burgh, Law, Cleugh, and Holm*. But there does not occur in the county the word *Fell*, applied to a mountain, or any intimation of the presence at any period of a Scandinavian people. The Scots-Irish, who came in from the west, and acquired entire ascendancy, are abundantly commemorated in the local nomenclature, and have bequeathed Gaelic names too numerous to be exhibited in a list, and so obvious as to be noticeable by even a careless observer. The Gaelic names were imposed partly after the year 843, when the Scottish period commenced; but chiefly, perhaps, after the year 1020, when Lothian was ceded to the Scottish king. Owing, probably, to the comparatively recent superinduction of English names upon Gaelic ones, the proportion of Anglo-Saxon in the nomenclature of the county is about four times more than that of the Celtic or British.

British antiquities, though not abundant, occasionally occur. Druidical circles appear in the parish of Kirknewton and on Heriot-town-hill. Cairns, which may be regarded as funeral monuments of the Britons, exist in the parishes of Borthwick and Colinton. Tumuli, which mark the scenes of British

conflict, and whence stone coffins were dug, occur in the parish of Mid-Calder, and were levelled at dates not remote in the parishes of Newbattle and Lasswade. Oval or circular camps, indicating by their form that they owed their construction to the Britons, may be traced, or are still of conspicuous outline, in the parishes of Penicuik, Borthwick, Crichton, Lasswade, and Libberton. Strengths, which probably were, in their original shape, fortlets of the Britons, are the maiden castles of Roslin and Edinburgh. The caves of Hawthornden, though improved by warriors of a later date, were very likely hiding-places of the British tribes.—The Romans, who entered Mid-Lothian toward the conclusion of the first century, and did not finally retire from it till after the lapse of 360 years, seized the best places of defence, and secured their power by a ramification of camps, forts, and roads, which have left so numerous traces as to draw largely on attention in minute topographical description, and they reared altars, baths, granaries, and other works of art, which still occasionally meet the eye, and dropped innumerable coins and weapons, and other minor relics, which have for generations arrested the delighted gaze of many an antiquary, and continue, to the present hour, to be not unfrequently disclosed to view in turning up the soil.—The Anglo-Saxons and the Scots bequeathed numerous castles and strengths, many of which have totally disappeared, while others are wholly or partially in a ruinous condition. The most remarkable are Craigmillar castle, in the vicinity of Edinburgh; Crichton castle, 10 miles south-east of Edinburgh; Borthwick castle, 2 miles farther south; Dalhousie castle, in the parish of Cockpen; Hawthornden and Roslin castles, in the parish of Lasswade; Ravensnook castle, in the parish of Penicuik; Dalkeith castle, now obliterated by the hand of modern improvement; Cusland castle, in the parish of Cranston; Lennox tower, in the parish of Currie; Catcune castle, on the Gore water; Locherwart castle, near the sources of the Tyne; Luggate castle, on Luggate water; and Fala tower, on the northern side of Fala moss. Many of these form the subject of separate articles in the present work. Of all the castles, Craigmillar, both for the beauty of its situation, and for its extensive means of defence, is most worthy of notice. See CRAIGMILLAR CASTLE.

The ecclesiastical antiquities of the metropolis and its suburbs are numerous and interesting, and are noticed in the articles EDINBURGH and HOLYROOD. Extensive monasteries existed at Newbattle, Temple, and Torphichen. Corstorphine church, and the church of Duddingston, are curious remains, still in use, of a considerably high antiquity. On Soutra hill, in the parish of Fala, are remains of an ancient hospital. In the parish of Cranston are the ruins of some buildings and enclosures which are conjectured to have been monastic. But the most beautiful ecclesiastical relic of antiquity out of Edinburgh, is Roslin chapel, in the parish of Lasswade: See ROSLIN.—The Roman legionaries, who delighted to dwell along the salubrious shores of Mid-Lothian, possibly enjoyed, to some extent, the surpassingly rich religious benefits of the Christian dispensation. The Saxon colonists of the county derived much religious instruction from the efforts of Baldred, and from the more excursive and productive labours of Cuthbert. The bishopric of Lindisfarne, established in 635, appears to have included Mid-Lothian; but was obliged permanently to renounce it at the abdication of the authority of the Northumbrian Saxons. After the ascendancy of the Scottish kings the county was annexed to the bishopric of St. Andrews, and continued to be attached to it till the period of the Re-

formation. Under the reforming processes of David I., the churches of Edinburghshire were probably placed under the subordinate authority of the deans of Lothian and Linlithgow. Anciently, the archdeacons and deans of Lothian were persons of great consideration, and acted a conspicuous part in national affairs; rising, in many instances, to the rank of bishops, serving occasionally as chancellors of the king, and wearing, in one case, the hat and the dignity of cardinal. The office of archdeacon, however, became eventually merged in that of the official of Lothian. This was a person who ranked high, and wielded prodigious influence; and he usually resided in Edinburgh, and acted a conspicuous part in the public conventions and the royal councils. In general, the ecclesiastical affairs of the county were fitfully managed till the Reformation freed them from the noxious influences of the Romish superstitions and errors, and placed them under the popular regimen of presbyteries and synods. In 1633, Charles I., in the prosecution of his wild and fatal scheme for imposing episcopacy upon the reformed and presbyterian Scottish people, erected Edinburgh into a bishopric, and gave the incumbent prelatic domination over all Mid-Lothian, and various other territories; but though he thus, at the latest practicable hour, technically raised the metropolis to the dignity of a city, he could not prevent the new bishopric, only five years after its erection, from falling permanently to ruin amid the summary overthrow of the whole episcopal fabric of the kingdom.

Fields of battle, with the reminiscences which they suggest, hold a middle place between antiquities and history, and partake the character of both. Every foot of ground covered by the metropolis and its environs, and many a spot throughout the county, were the scenes of sanguinary contests which, in many instances, involved the fate of the kingdom. Places in which the successive colonists, conquerors, and lords of the ascendant during the lapse of thirteen centuries, fought for victory or possession, are either identified with the castle and town of Edinburgh, or so obscurely intimated as to be, in a great degree, matter of conjecture. Near Roslin, in the parish of Lasswade, a Scottish army of from 8,000 to 10,000, led by Sir Simon Fraser and Sir John Cumyn, achieved three successive victories, on the 14th of February, 1303, over an aggregate English force of 30,000 men under Ralph Confrey, treasurer to Edward I. The Borough-moor, in the vicinity of Edinburgh, was, in 1334, the scene, after a desperate conflict, of the utter discomfiture and dispersion of an English force under Count Guy of Naumur, by the Scottish patriots the Earls of Murray and March, Sir Alexander Ramsay, and their followers. A spot in the parish of Crichton witnessed, in 1337, another sharp conflict between the Scotch and English troops; and various other localities in the county were drenched with blood during the sanguinary and prolonged wars of the succession. Sir Alexander Ramsay of Dalwolsie, the ancestor of the present noble family of Dalhousie, often sallied from the caves of Hawthornden, and chased the mercenary forces of England from the vicinity of the metropolis. In 1385, Mid-Lothian was, in many places, devastated by pillage and conflagration during the retaliatory incursion of Richard II.; and a century and a half later, it considerably suffered in several localities from the invasions which were made by England, to resent the disarrangement of Henry VIII.'s plan of marrying his son to the young Scottish Queen. In 1547, the field of Pinkie, lying between the village of Inveresk and Wallford and Carberry, witnessed a disastrous slaughter, in which 10,000 Scottish troops were killed.

and 1,500 made prisoners, by an English force, commanded by the Duke of Somerset. In 1567, Carberry-hill, in the parish of Inveresk, was the scene of a battle array, though not of an actual conflict, and of the surrender of Queen Mary immediately prior to her imprisonment in Lochleven-castle. In 1666, on Rullion-green, in the parish of Glencorse, an armed body of Covenanters twice repulsed a party of the King's troops under Dalziel; but, on a third attack, were routed, and upwards of 50 of them slain.

The history of Mid-Lothian is, in most particulars, so identified with that of the metropolis, which has already been sketched in the article EDINBURGH, and in others has been so anticipated in our views of its agriculture, antiquities, and fields of battle, that little remains to be told except the facts which refer to territorial distribution, and the erection of the district into a county. Mid-Lothian, very probably, was placed under the salutary regimen of a sheriff, as early as the epoch of the introduction of the Scots-Saxon laws. A sheriffdom is apparent from the reign of Malcolm IV. down to the restoration of David II.; and appears, during this period, to have extended over Haddingtonshire on the east, and Linlithgowshire on the west. But from the time of David II., down to its adjustment in its present form, the sheriffdom or shire suffered successive limitations; in every age it was abridged in its authority by various jurisdictions within its bounds; and, for a considerable period, it was confused in its administration by distribution into wards, each of which was superintended by a sergeant. In August, 1744, James, Earl of Lauderdale, succeeded his father in the sheriffdom, and was the last who held the office under the old regime. The first sheriff under the present improved practice, was Charles Maitland of Pitrichie, who received his appointment in 1748, with a salary of £250. A constable was attached, from an early period, to the castle of Edinburgh; and, as early as 1278, appears to have exercised civil jurisdiction.—From the year 1482, the provost of Edinburgh had the power of sheriff, coroner, and admiral, within the territories of the city, and those of its dependency of Leith.—The abbot of Holyrood acquired from Robert III. a right of regality over all the lands of the abbey, wherever situated, and particularly over the barony of Broughton in Mid-Lothian. The jurisdiction was acquired after the Reformation by the trustees of Heriot's hospital, and, at the epoch of the abolition of hereditary jurisdictions, was compensated by £486 19s. 8d.—The monks of Dunfermline obtained from David I. baronial jurisdiction over the manor of Inveresk, including the town and port of Musselburgh, and maintained their lordship and regality till the period of the Reformation. The jurisdiction was bestowed by James VI. upon Sir John Maitland, sold in 1709 to the Duchess of Buccleuch, and eventually compensated, in common with all the baronial jurisdictions of the Buccleuch family, by £3,400.—The regality of Dalkeith was obtained by the Douglasses of Lothian; passed into the possession of the family of Buccleuch; and ceased in 1747.—The barony of Ratho, when Robert II. ascended the throne, was erected, in common with the other estates of the Stuarts, into a royal jurisdiction, and given by Robert III. to his son James; and it was disjoined from Mid-Lothian and annexed to Renfrewshire, when the sheriffdom of Renfrew was settled by dismemberment from Lanarkshire.—The extensive estates in Mid-Lothian which belonged to the archbishop of St. Andrews were erected into a regality, and were under the control of a bailie appointed by the proprietor.—The baronies or lands of Duddingston, of Preston-hall, of Carington, and

of Carberry, were also all regalities administered, in the case of the first, by a bailie, and in the case of the others, respectively by the Duke of Gordon, Lord Dalmeny, and Sir Robert Dickson.—In addition to all the privileged authorities now enumerated—which in the aggregate must have greatly embarrassed the civil administration of the county—there existed from the reign of Malcolm IV., a justiciary of Lothian, who exercised a greater power than even the sheriff, and must have very materially abridged and restrained the jurisdiction of the sheriffship. The power of the Archbishop of St. Andrews, both baronial and ecclesiastical, must likewise have thrown impediments continually in the way of the sheriff's movements; and even after the Reformation, when prelacy and its appliances were abolished, continued for a time to be perpetuated as to its effects. The overthrow of all hereditary jurisdictions, in 1747, was one of the happiest events in the diversified history of Mid-Lothian.—The civil affairs of the county are now managed by the class of functionaries common to the several counties of Scotland; and by about forty deputy-lieutenants, distributed among six districts into which the county is divided.

EDINBURGH, DALKEITH, AND LEITH RAILWAY. This railway, constructed under sanction of acts passed in 1826, 1829, and 1834, extends from Edinburgh to the South Esk river, a distance of 8½ miles. It has branches to Leith, Dalkeith, and Musselburgh, making an extent of about 14 miles. It is all a double line, except the Musselburgh branch, and about 1 mile at the south extremity. The main line was opened in the year 1831. It intersects or receives branches from the principal coalfields of Mid-Lothian, the produce of which is stored at the Edinburgh terminus, in a depot about eight acres in extent, and also at Leith and Fisherrow, by means of branches to these ports.—From St. Leonard's depot, at the Edinburgh terminus, the main line descends 116 feet, by an inclined plane of 1 in 30, worked by a double fixed engine of 50 horsepower. From the bottom of the plane, the line runs level for 3 miles; after which it has a regular ascent to the south extremity, at the rate of 1 in 234. The Leith branch descends from the main line to the level of Portobello, at the rate of 1 in 70; and the Musselburgh branch from the main line to the level of Musselburgh, at the rate of 1 in 52. Owing to causes which could not be avoided, there are many curves,—so many as eleven between Edinburgh and Dalkeith, a distance of scarcely 7½ miles, and several of them about 500 feet in radius. The whole railway—except the Edinburgh inclined plane—is worked by horses, which make tolerable performance, notwithstanding the bad gradients, and the levels being disturbed by coal-wastes. In the goods traffic, one horse draws from 15 to 20 tons gross from the country inwards, at from 3 to 4 miles an hour. In the coach-traffic, an ordinary stage-coach-horse draws a coach with from 30 to 40 passengers, weighing in gross 5 tons, at the rate of 8 miles an hour, including stoppages; the delays in taking on and off passengers, and in passing the slow traffic, being made up for by a speed of 10 to 14 miles an hour on the level and less difficult gradients. The annual traffic has been about £20,000 tons, and from 250,000 to 300,000 passengers, and on holidays, there have been from five to seven thousand in one day. The railway and branches cross or pass along so many as 17 highways or streets on a level; yet, during all the ten years it has been in operation, not one serious accident from collision has taken place; nor has any serious accident ever happened to a passenger in the coaches. The coach-fares average about a penny per passenger

per mile; while the coaches are superior in accommodation to those of the second class on other railways. The cost of haulage on this railway is 26-100ths of a penny per passenger per mile.

EDINBURGH AND GLASGOW CANAL. SEE UNION CANAL.

EDINBURGH AND GLASGOW RAILWAY.
This magnificent work, an act for which was obtained on the 4th of July, 1838, after a Parliamentary contest of three sessions, was begun at the end of that year, and was opened on Tuesday the 18th of February, 1842. It is 46 miles in length, being 2 miles longer than the Bathgate road betwixt the two cities, and 1 mile shorter than the Cumbernauld-road. When carried into the heart of Edinburgh, at the North loch, as proposed, its length will be 47 miles. With the exception of an inclined plane at Glasgow, which is worked by a stationary engine,—it presents nearly a level line throughout, the ruling gradient being 1 in 880, or 6 feet a-mile, and that only for a few miles. The gauge or width of the rails is 4 feet 8½ inches, and their weight 75 lbs. to the yard. They are laid with 4 feet bearings on cast-iron chairs. Its eastern or Edinburgh terminus is at present at the Haymarket, at the western extremity of the city. The height of this point above the quay at Leith is 147 feet. From this point, pursuing a course to the south of west, through St. Cuthbert's parish, the line is carried across the Water of Leith, at the distance of 1 mile from the terminus, by a viaduct of three arches. One mile beyond this it enters Corstorphine parish; and thereafter runs for about half-a-mile through the parish of Currie, in which it passes the hamlet of Culton. It then enters the parish of Ratho, through which it runs for a distance of nearly 3½ miles, bending nearly due west after crossing Ratho-burn, but again turning to the south of west after leaving Norton-mains, in which direction it enters Kirkliston parish in Linlithgowshire, through which it sweeps, in a curve of 1½ mile radius, a distance of 3½ miles. Hitherto the line has passed through a fertile and beautiful country, by an easy line presenting no extensive embankments or deep cuttings; but shortly after entering Linlithgowshire, it is conducted across the valley of the Almond by a stupendous viaduct, consisting of 36 arches, of 50 feet span each, with piers 7 feet wide, and varying from 60 to 85 feet in height; which is connected by a lofty embankment with another viaduct of 7 arches of 60 feet span, known as the Broxburn viaduct, by which the line is carried across the turnpike-road to Glasgow. The view from this part of the line is magnificent; but the eye of the amateur would have been still further gratified had the line of arches been continued between the two viaducts in place of the present lofty and ponderous, though probably less expensive embankment. From the Broxburn viaduct the line proceeds in a north-west direction, impinging on the Union canal, passing the solitary ruin of Niddry-castle on the right, and then plunging into a tunnel of 367 yards in length, by which it is conducted, at the depth of 100 feet, through a ridge of whinstone-rock at Winchburgh, soon after emerging from which, it enters Abercorn parish at the 11th mile from Edinburgh. A deep cutting of nearly 2 miles in length occurs in this parish, through which the line pursues a course more nearly west. Until the completion of the 12th mile from Edinburgh the ascent has been gradual, amounting only to 63 feet; that is, on an average, only 1 in 1,000; from this point to the viaduct by which it is conducted across the Avon, and leaves Linlithgow parish, a distance of about 4½ miles, it has an inclination of 1 in 1,056. The line now skirts the ancient town of Linlithgow on the south, passing between the town and the

Union canal, and commanding a fine view of the palace and the adjacent lake. The Avon, and the finely-wooded valley through which that romantic stream runs, is crossed by a viaduct of 20 arches of 50 feet span, and 3 of 20 feet, some of them upwards of 90 feet in height, and of beautiful light masonry, from which the magnificent aqueduct by which the Union canal is led across the same valley, at a point a little higher up the stream, is visible in its full extent. The surface of the Avon viaduct is only 38 feet above the level of the Edinburgh terminus. It conducts the line into Muiravonside parish in Stirlingshire, through which it runs nearly due west for a distance of above 2 miles, passing the ruined castle of Almond on the left. A little beyond the 20th mile, it enters the parish of Polmont, in which it passes to the south of the village of Redding. From the 23d to near the 30th mile, it intersects the parish of Falkirk, in a line nearly parallel with the Union canal. The high ground immediately south of Falkirk, and part of Callendar-park, the seat of Mr. Forbes, is pierced, at the depth of 130 feet, by a tunnel of 830 yards in length, 27 feet wide, and 20 feet in height; shortly after emerging from which, at a point only 68 feet 8 inches above the level of the Edinburgh terminus, a branch-line, six furlongs in length, and descending 1 in 40, will lead off on the right to the thriving town of Falkirk, whence, or from a point more to the west, another railway-line may probably, at no distant period, strike off to Stirling, and from thence across the Forth to Perth. At the Falkirk station are erected the company's coke ovens. A little beyond the 25th mile the line is conducted across the Union canal locks by a viaduct of a striking appearance and great solidity, the principal arch in which—a segment arch of 24 feet 6 inches rise—has a span of 131 feet. The other arches here are 2 of 20 feet, 2 of 16, and 1 of 63 feet span. The view on the portion of the line from the western extremity of the Callendar tunnel to the last-mentioned viaduct is very magnificent, presenting the rich carse of Falkirk stretching away towards the east, with that town close under the eye of the spectator,—the windings of the Forth and Stirling-castle, with the rich level carse-ground between, in the centre,—and the towering heights of Benledi and the Ochils, Benlomond and the Grampians, in the distance. It adds to the interest of the scene, that we are here traversing the ground on which the battle of Falkirk was fought in 1746. Passing Tamfuirhill, and crossing Bonnymuir, a little beyond the 29th mile, the railway enters Cumbernauld parish in the shire of Dumbarton, through which it runs in a waving line—having the Forth and Clyde canal on the right—a distance of nearly 6 miles. In the neighbourhood of Castlecary it crosses the road from Falkirk to Cumbernauld, and the deep ravine of the Red-burn, by a viaduct of 8 arches, each of 50 feet span, and nearly 90 feet in height,—the one end terminating on a forced embankment, the other resting on the far-famed remains of the Roman camp at this spot. Castlecary, 15 miles from Glasgow, is the station for Stirling and other towns to the north of the Forth. From a little beyond Castlecary the general direction of the line to its western terminus is to the south of west. Passing about a mile to the north of Cumbernauld, it continues on, through rather a rough country, but commanding an extensive view of the valley stretching along the southern base of the Campsie-hills, till it approaches Croy-mill, which is the summit of the line, being 79 feet above the level of the eastern terminus, and 49 feet above the top of the inclined plane at the Glasgow terminus. The cutting of the great ridge of whinstone-rock at Croy was a work of

vast labour and expense. Towards the centre of the ridge, the rock rises to a height of 70 feet above the level of the rails. Running through Drumshanty moss, upon a formation of dry turf, on which layers of brushwood and sand are placed, and across the Luggie, by a 6th viaduct of 4 arches of 30 feet span, it is carried, a little beyond the 39th mile, over the Monkland and Kirkintilloch railway, by a 7th viaduct of 1 arch of 44 feet, 3 of 30 feet, and 1 of 15 feet span, with a height of from 33 to 48 feet. Near this latter point is the Kirkintilloch station. Entering the county of Lanark in Calder parish, the line proceeds, with a few moderate cuttings and embankings, through a rude district of country, exhibiting the struggles of the husbandman with a niggarly soil, until it crosses the Kirkintilloch road near Bishopbriggs, and enters the Barony-parish at the 43d mile. From this point to the head of the inclined plane at Cowlairs, there is some heavy cutting and embanking. At the head of the inclined plane near Cowlairs, the engine establishment is erected; and here are placed the fixed engines which work the tunnel terminating in the depot in Queen-street. These engines are high-pressure, of 80 horse-power each. The inclined plane is 2,077 yards in length, consisting of open cutting, and a tunnel divided by eyes or openings of 40 feet each in length, into three portions of 550, 300, and 297 yards. Its fall is 1 in 43. It is lighted by 43 gas-lamps. The length of the rope employed on the inclined plane is $2\frac{1}{2}$ miles. It weighs 13 tons, and cost £538. The depot in Queen-street opens into George's-square; and is within 200 yards of the Royal Exchange, and 75⁰ of the Clyde.

The capital of the company consists of £900,000, held in 18,000 shares, with power to borrow £300,000.

EDINGTON-CASTLE, an ancient fortalice, of which the southern side still remains, 2 miles east of the village of Chirnside in Berwickshire.

EDINKILLIE. See **EDENKILLIE**.

EDLESTON. See **EDDLESTON**.

EDNAM,* a parish on the northern verge of Roxburghshire; bounded on the north and north east by Berwickshire; on the south-east by Sprouston; on south-west by Kelso and part of Berwickshire; and on the west by Stichel. It approaches being of the figure of a parallelogram lying from south-west to north-east; but has sinuosities in the outline, and expands at the north. Its greatest length, from Spittal on the south to the boundary beyond Girth-ridge-hall on the north, is $3\frac{1}{4}$ miles; and its greatest breadth, in a line drawn over High-ridge-hall, is $2\frac{3}{4}$. The Tweed forms the south-east boundary-line; and the Eden intersects the parish from east to west, dividing it into not very unequal parts. Along the banks of both rivers are beautiful and rich low grounds. The district, as a whole, is low and level, but delightfully diversified. The generally flat ground gently rises, in some places, into inclined plains; and, in two spots, swells into fine elevations, one near the village called Edenham hill, and the other between the Tweed and the Eden called Henderside hill. The land is among the best in the Merse, and is well-cultivated, well-enclosed, and agreeably variegated with plantation. The parish is traversed along the Tweed, by the road from Kelso to Coldstream, and through its centre by the road from Kelso to Berwick by way of Swinton.—James Thomson, the author of 'The Seasons,' and the son of the first minister of the parish after the Revolution, was born in 1700, in the manse of Ednam. An

obelisk to his memory, 52 feet high, and built in 1820, stands on a rising ground about a mile from the village.—Ednam village is beautifully situated on the Eden, $2\frac{1}{2}$ miles north-east of Kelso. In 1558, it was burnt by the Earl of Northumberland. Population of the parish, in 1801, 598; in 1831, 634. Houses 124. Assessed property, in 1815, £8,847.—Ednam is in the presbytery of Kelso, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £158 6s. 8d.; glebe £15 1s. 8d. The parish-church was built in 1800. Sittings about 260. Schoolmaster's salary £30, with about £35 or £36 school-fees. As early as the 12th century, the mother or parish-church of Ednam had two dependent chapels; one at Newton, now Newton-don; and the other at Nathanthorn, now Nanthorn; and, along with these chapels, it belonged to the monks of Kelso. The kings had at Ednam a mill, whence David, in 1128, granted to the monks of Kelso, 12 chalders of malt, with the turbary in the moor of Ednam.

EDROM,† a parish in the district of Merse, Berwickshire. In form it presents extreme angles to the north, south, and east, and would be nearly an equilateral triangle, but for having a deep indentation and a small wing on the west, and a less considerable indentation on the south-east. It is bounded on the north by Buncle; on the north-east by Chirnside and Hutton; on the south-east by Hutton and Whitcome; and on the south-west and west by Fogo, Langton, and Duns. Its greatest length is $7\frac{1}{2}$ miles; its greatest breadth 4 miles; and its superficial area 13 square miles. Except in the north-west division, where there are inconsiderable rising grounds, the surface is flat. Whittadder water comes down upon the parish at its north-west angle, and, over a distance of 6 miles, forms its northern and north-eastern boundary-line. Blackadder water comes in from the south-west, forms, for $1\frac{1}{2}$ mile, the boundary-line with Fogo, and then runs 5 miles north-eastward through Edrom, and falls into the Whittadder at the village of Allantown. Langton-burn, and another brook flowing from the west, unite with the Blackadder, the former drawing, for $2\frac{1}{2}$ miles, the boundary-line with Duns. Near Langton-burn, on the Edrom side, is a mineral well, called Duns spa, which was long celebrated for its reputed medicinal qualities, but has latterly fallen into disrepute, and become quite neglected. The soil, on a small part of the district, is naturally moorish, but in general is rich and fertile, and, excepting about one-eighth of the area, tastefully or necessarily devoted to plantations, buildings and roads, is all arable. Pools and lochlets formerly generated marsh and rendered the climate insalubrious; but they have been completely drained, to the benefit alike of health and of agricultural produce. On the estate of Kimmergham on the Blackadder is a valuable bed of shell-marl, which has contributed much to the enrichment of neighbouring soils. Sandstone abounds, and is worked in several quarries. Blackadder-house, on the right bank of the Blackadder near its embouchure, is an elegant modern edifice, accompanied with extensive shrubberies and green-houses, and a beautiful Gothic conservatory which was constructed at the cost of several thousand pounds. Allanbank-house, Kelloe, and Kimmergham, all on the same stream, Brooin-house on the Whittadder, and Nisbet, a seat of Lord Sinclair, at the western boundary, are all mansions possessing the attractions either of architecture or of

* Ednam is sometimes written Edenham, and is a contraction of that word,—signifying the village on the Eden, and appropriately descriptive.

† *Adder* or *Ader* is the Cambric *Avedur*, 'a Running water'; and *Ader-ham*—first twisted into Ederham, and then abbreviated into Edrom—means 'the Hamlet on the running water', and well describes the position of even the modern hamlet and the church, overlooking the stream of Whittadder.

beautiful demesne and cheering situation. The parish, though not intersected by any main line of road, is abundantly provided with facilities of communication. Over the Whittadder are two bridges, and over the Blackadder four, but two of the latter are only for foot-passengers. At Broomhouse on the Whittadder, and Allanbank on the Blackadder, are extensive paper-mills. Allanbank is celebrated as the scene, in 1674, of a Covenanters' conventicle, between 3,000 and 4,000 in number, to whom the eminent and devout ministers, Blackadder and Welch, assisted by three of their brethren, preached and dispensed the Lord's Supper. The hamlet of Edrom stands on the north-west corner of the parish, $3\frac{1}{2}$ miles north-east of Dunse, on the road between that town and Berwick, and is the seat of the parish-church and delightfully situated. The village of Allanton, with a population of 250, has an endowed school, and three inns. See ALLANTON. Population of the parish, in 1801, 1,355; in 1831, 1,435. Houses 272. Assessed property, in 1815, £14,288.—Edrom is in the presbytery of Chirnside, and synod of Merse and Teviotdale. Patron, the Crown. Stipend £242 16s. 7d.; glebe £15. Unappropriated teinds £337 13s. 11d. Schoolmaster's salary £34 4s. 4½d., with about £15 school-fees. According to an ecclesiastical survey in 1836, the population was then 1,458; of whom 835 belonged to the Establishment, and 623 to other denominations. The dissenters have no place of worship in the parish, but are connected with congregations at Dunse, Horndean, and Chirnside. The parish-church is supposed to have been built about the year 1499; and was repaired in 1696, reseatd and repaired in 1782, and subsequently fitted up with two private galleries. Sittings 407. Robert Blackadder, first archbishop of Glasgow—whose family derived its surname from the river of the parish—built to the ancient church a vaulted aisle, part of which is still standing. A gallery in front of the pulpit is over the burying vault of the Kelloe family. The church, with its lands, was granted by Gospatrick, Earl of Dunbar, and afterwards confirmed by David I., to the monks of Coldingham; and continued to be held by them, and served by a vicar, till the Reformation. During the minority of James V., the most murderous contests for the lands of Blackadder continued between the Homes on the one side, and the Blackadders of Blackadder on the other, and violently, though not rightfully, terminated in favour of the Homes.

EDZELL, a parish in the north-east of Forfarshire. It is of a triangular form, but with a protrusion on the southern angle; and is bounded on the north-east and east by Kincardineshire, on the south-west by Strickathrow and Lethnot; and on the west and north-west by Lochlee. From its southern angle at the confluence of the East and West waters, to its northern angle at Mount Batlock, it measures $12\frac{3}{4}$ miles; and from its western angle at Clash, to a curve in its eastern boundary near Dorly, it measures $6\frac{1}{2}$ miles. For $4\frac{1}{2}$ miles, the south-eastern part is a sort of peninsula, the East and the West waters flowing along its limits, and forming a confluence, under the name of the North Esk, at its extremity. Both of these streams approach the parish from the west: the former intersecting it over a distance of $5\frac{1}{2}$ miles in passing to the eastern limit, there to become its boundary-line. In the western and northern sections the parish is hilly; but in the southern section, and in places traversed by the East water, it is more open, and well-sheltered with plantation. The greater part of the district being bleak and unsheltered, the air is generally sharp and piercing, but is not insalubrious.—Three of those monuments of antiquity, called Druidical temples, are in this parish; two

within a few yards of each other, at Culindir, and one at Dalbogg. They consist of tall upright stones, enclosing elliptical spaces, the area of the largest being 45 feet by 36.—The castle of Edzell is a magnificent ruin. It consists of two stately towers, in different styles of architecture, and evidently built at different periods; but connected by an extensive wall, and formerly winged with buildings in the rear. The proprietors of this castle, the Lindsays of Glenesk, surpassed in power any other family in the county. One of them became heir to his cousin, Earl Crawford, but did not retain the peerage in his family. Another, about the beginning of the 16th century, built in Edzell a small castle, called Auchmull; and in Lochlee, another called Innermask; and was compelled to burrow in them as hiding holes from the inquisition made after him for the murder of Lord Spynie.—Edzell is provided with two lines of road spread along the vale of the East water, one on each bank, and with numerous cross-roads in its peninsular division. Population of the parish, in 1801, 1,012; in 1831, 974. Houses 214. Assessed property, in 1815, £1,375.—Edzell is in the presbytery of Brechin, and synod of Angus and Mearns. Patron, the Crown. Stipend £158 6s. 8d.; glebe £9. Schoolmaster's salary £34 4s. 4½d., with other emoluments £30.

EGLINTON CASTLE, a noble mansion, the seat of the Earl of Eglinton, situated on the banks of the Lugton, in the south of the parish of Kilwinning, district of Cunningham, $2\frac{1}{2}$ miles north of Irvine in Ayrshire, and 26 from Glasgow. This edifice is of a castellated yet modern and very stately and magnificent structure, and was built about the year 1798. A spectator, looking upon it from any part of the lawns, has high conceptions of its grandeur, and of the taste and opulence of its proprietor; and the more minutely he surveys it, he experiences these conceptions becoming more lofty and brilliant. There is a large circular keep, and at the corners are circular turrets joined together by a curtain,—to use the language of fortification. The whole is pierced with modern windows, which in some degree destroy the castellated effect, but add to the internal comfort. The interior of the fabric corresponds with the magnitude and the beauty of its exterior. From a spacious entrance-hall, a saloon opens, 36 feet in diameter, the whole height of the edifice, and lighted from above; and from this the principal rooms enter. All the apartments are spacious, well-lighted, and furnished and adorned in the most superb manner. One of them in the front is 52 feet long, 32 wide, and 24 from floor to ceiling. Every thing about the castle contributes to an imposing display of splendid elegance and refined taste. Nor are the lawns around it less admired for their fine woods, and varied surfaces and beautiful scenery. The park around the castle is 1,200 acres in extent, and has one-third of its area in plantation.—The first of the ancient and originally Norman family of Montgomery, who settled in Britain, was Roger de Montgomery, or Mundegumbrie. Under the banner of William the Conqueror—to whom he was related—he obtained great distinction; and, accompanying that monarch into England, he, in 1066, commanded the van of his army at the battle of Hastings. In guerdon of his bravery, he was created Earl of Chichester and Arundel, and afterwards Earl of Shrewsbury, and, in a short period, lord of no fewer than 57 lordships throughout England; and, at the same time, received extensive possessions in Salop. Having made a martial incursion into Wales, he captured the castle of Baldwin, and imposed upon it his own name of Montgomery,—a name which not only it, but the romantically situated town in its vicinity, and the
